

*"I honestly don't know where I'd be right now if Yamauchi hadn't made that phone call. The Nintendo/Sony deal, the deal that shaped...practically the last 20 years of video gaming, I can't even envision a world where that deal didn't go down. Certainly not a world where I'd still be playing video games."- Dan "Shoe" Hsu, managing editor of *Electronic Gaming Monthly*, June 2011*

*"Working with Victor and working with everyone in that industry for six great years absolutely prepared me for everything that's happened to me down the road. I can't call myself a gamer, but video games definitely opened the door for me. So I still have kind of a soft spot for them."- Jennifer Stigile, season 1 American Idol winner, in the June 20, 2005 issue of *People* magazine*

*"You know, I almost thought of suing to break them up, like what happened to us in 1999. They were so huge at that time. But I was never one to back down from a challenge. There was a niche for us. A small niche but a niche nonetheless. But it was always going to be an uphill battle."- Bill Gates, in a 2005 *Forbes* interview*

-

## **June 24, 1991**

Howard Lincoln and Minoru Arakawa, two high-ranking Nintendo representatives, were eating a quick breakfast in Amsterdam before their meeting with representatives from Philips in Eindhoven later that day. The meeting would solidify Nintendo's new business partnership with one of the top electronics companies in the world, a partnership to design a new add-on for the Super Nintendo Entertainment System. The console had yet to debut in North America or Europe, but the future already looked bright for the system, which had been selling well in Japan. The new CD add-on would help to futureproof the console against efforts by competitors, especially their growing rival Sega, to outmuscle their SNES with new technology.

The men were nervous. They knew the company was reneging on a deal it had already made to produce a CD add-on with Sony. Still, the stakes were too high and Sony's demands were too much. Philips, they were told, would give much better terms and would allow Nintendo more control over its properties, especially the highly lucrative Mario franchise, which had become one of the most recognizable in the world. It was far too risky to allow a company like Sony that much control over an icon like Mario. While the men, especially Arakawa, had their trepidations, both of them preferring a partnership with Sony over the unfamiliar company Philips, it was a deal that had to be made if the SNES-CD was going to happen the way that Nintendo wanted it.

Half a world away, Nintendo's president Hiroshi Yamauchi sat in the company's Kyoto headquarters, reading and re-reading his company's contract with Sony. The contract, which Nintendo had made back in 1988, gave Sony complete control over all games created for the SNES-CD add-on, including games featuring the company's flagship characters such as Mario, Link, and Donkey Kong. Nintendo, which had built a dominating market presence by maintaining complete control over its games and properties, was ceding an unacceptable amount of control to Sony through the contract. Sony would be allowed to publish anything it wanted for the add-on. Intellectual property concerns aside, this opened the floodgates to the kind of shovelware and porno games that had nearly destroyed the entire industry in

1983.

But the idea of partnering with Sony, the company that had developed the Super Nintendo's cutting-edge soundchip, was an intriguing one indeed. The company's knowledge of hardware and advanced computer tech was nearly unparalleled and their add-on could give the SNES an incredible amount of muscle. Then there was the question of honor...breaking the agreement by going behind Sony's back would almost certainly be met with anger, perhaps even lawsuits. Yamauchi read the contract again, his eyes scanning over the most troubling clauses. He was in a no-win situation and he knew it. The best solution he saw was partnering with Philips and he'd sent two of his best men to their HQ in the Netherlands to hash out a deal with them, one that would allow Nintendo far more control over its properties.

But as much as the idea of giving up so much control troubled Yamauchi... every time he closed his eyes he saw the potential that Sony brought to the table. He could see the games that could be made for the system, the possibilities that abounded. He was far more unsure of what Phillips brought to the table. Their CD-I technology was impressive, but Sony had already proven itself. Ken Kutaragi had risked his CAREER because he saw the potential of the SNES. If Nintendo made this deal, it would always have a champion in Kutaragi, a brilliant and gifted man, a visionary...

Yamauchi put his head in his hands and took a deep breath. With shaking palm, he reached for the phone.

"This is Yamauchi. I want to speak with Mr. Ohga right away. I need to see him as soon as possible."

-

Howard Lincoln: We spent about an hour with the Philips reps in Eindhoven. The meeting had gone pretty well. We go back to Amsterdam, enjoy the city for the rest of the day, we go to bed. As soon as we get up the next morning we've got a note saying to come down and get a call from the lobby. Mr. Yamauchi was in a meeting with Norio Ohga, from Sony. And of course we were told before going to Europe that the Sony deal was off and that we were going with Philips. They asked us how the talk had gone, we said it had gone well and they tell us that Yamauchi wanted to use that as leverage to get Sony to negotiate. So here we are, in a hotel in Amsterdam wondering what the hell's going on back in Japan.

(You had no idea that this was going to happen?)

No, none. Minoru and I went to Holland knowing, or thinking that we knew, that the Sony deal was out the window and we were going with Philips. We hadn't put pen to paper yet with them, which of course was good, but we didn't have a clue that entire time that Mr. Yamauchi wanted to go back to the table with Sony. And by the time we got that call they'd finished talking, it was.... well it was in Japan so it must've gone down while we were sleeping.

(They signed the deal while you guys were sleeping in Amsterdam?)

Mr. Yamauchi wanted us both to come back to Kyoto immediately. He hadn't signed

anything else with Sony but it was pretty much going to happen.

-Taken from a June 2007 interview in Game Informer magazine

Mr. Ohga was furious. He didn't show it during the conversation he had with Yamauchi but you could tell that the two were just about as mad as you could be in a civil conversation. Both of them were fuming. I was there watching the whole thing, just sitting there like....like you know how when two parents are fighting and the child just sits there and watches, trying not to make either of them any angrier? That's how I was during that conversation, just wearing a stone-faced expression and trying my best not to make either of them notice me. Later on, Mr. Ohga told me that Yamauchi had called him a scoundrel. I hadn't heard it but Ohga kept saying that he'd implied it. I remember, in a roundabout way I think Yamauchi did call him that. He did say that the contract as he saw it was unfair and it gave Sony far too much control over Nintendo's properties. Then Mr. Ohga asked him if he'd even read what he signed three years ago. They kept talking and then Yamauchi brought up that two of his men were negotiating with Philips in Amsterdam. I thought I saw Mr. Ohga turn red at that point, I thought he might come across the table and there would be a fight, but it never happened. It was clear what Nintendo was doing, using the prospect of that deal as leverage to get us to alter our contract with them. I guess Mr. Ohga thought that 50 percent of billions was better than 100 percent of nothing, because he agreed to work on a new deal pretty soon after that. Things were so tense in that room but I'm glad the way it worked out how it did because I'm pretty sure my career would've been over if Yamauchi had walked out of that room without us agreeing to make a new deal.

-Excerpted from a translated Ken Kutaragi interview in Japan Tech News on December 8, 2001, shortly after Norio Ohga's death from a cerebral hemorrhage

-

## **June 27, 1991**

Nintendo's new deal with Sony was hashed out rather quickly, with both companies wanting to finalize negotiations over the SNES-CD before CES 1991 began in less than two weeks. Representatives from Nintendo, including Hiroshi Yamauchi and Minoru Arakawa, met with Sony reps including Norio Ohga and Ken Kutaragi in Kyoto. Representatives from Sony and Nintendo's American divisions were patched in via conference call. The new terms were far more favorable to Nintendo than before. Nintendo would retain complete control of all first party games developed for the SNES-CD, which included its Mario, Zelda, Metroid, and other franchises, along with any developed by Nintendo first or second parties in the future. Sony would be given complete control over any games it developed for the SNES-CD via its own game development division or any subsidiary second parties, allowing the company to begin developing its own stable of characters for the system. Control of third party games would be split 50/50, with Nintendo and Sony consulting regularly on what games to include on the new CD software. As it pertained to quality and content control, Nintendo would retain a "right of first refusal" of sorts, but would have to show cause that any games it did not wish to release on the system would cause serious detriment to the company's brand or its profits.

A point of contention between Sony and Nintendo was the latter company's censorship policies, particularly with games it released in North America and Europe. Certain third parties, most notably Squaresoft and Konami, had expressed to Sony their desire to create

more mature-themed games, without the at times heavy-handed censorship guidelines given to them by Nintendo. While Howard Lincoln pointed out that changes between Japanese and American versions of games were small at best, Squaresoft's Hironobu Sakaguchi, one of the third party representatives who had been patched into the conference call, noted that Squaresoft at times had to self-censor its own games before releasing them in Japan, to keep changes between the Japanese and North American versions to a minimum. He said that while he had no interest in creating overly violent or sexualized content, he wanted to be able to have more creative freedom when it came to his games, with the inclusion of more mature storytelling themes. The discussions over the inclusion of more mature content lasted for nearly an hour before Howard Lincoln and Hiroshi Yamauchi decided on a compromise: First and second party Nintendo SNES-CD and regular SNES games would remain subject to Nintendo of America's censorship guidelines in the West, while third party SNES-CD games and Sony-produced games would be exempt, subject to a few restrictions on violent and sexual content. Also, such games would include a rating descriptor that would advise would-be purchasers of any potentially objectionable content. Sony and the third party representatives thought this was agreeable and it became part of the contract.

The negotiations, which began early in the morning and paused only a few times for meal breaks, went very late into the night, but when the meeting ended, there was a new contract in place. There would be an SNES-CD add-on, along with a combo system which contained both the SNES and the CD add-on built in. Ken Kutaragi and Howard Lincoln would appear together at CES to show off the add-on and console, while third parties and Nintendo itself could begin to plan out the first generation of games.

Though the deal had been made, Norio Ohga was still fuming, already unhappy about all the concessions he'd made. Kutaragi reassured him.

-

*"I remember what I told him right after we closed the deal with Nintendo. 'Our new soundchip was already a resounding success. This deal will put CD players in millions of homes around the world. This will be the best business deal we have ever made.' I forget how many times I told him that same thing over the next 10 months. It would have to be the sales figures that convinced him, because I really couldn't!"- Ken Kutaragi, Japan Tech News, December 8, 2001*

-

*"The 1991 Summer CES was dominated by video games, demonstrating the increasing strength of the electronic entertainment industry. The industry has swollen to the point that it's nearly as large as the film and television industries, something that would've been regarded as unthinkable seven years ago during the darkest point of the industry crash. This year's CES featured a number of surprise announcements, but the most important was certainly the public announcement of the alliance of the home electronics titan Sony Corporation with the very powerful video game company Nintendo Co., Ltd. for work on a brand-new peripheral for the Super Nintendo Entertainment console, set to be released in North America in just two short months. The peripheral in question is a CD-ROM attachment, and while much is yet unknown about the device, it will be able to play both CD-ROM based video games and audio CDs, greatly enhancing the new console's multimedia*

capabilities. In other news, Sega announced the production of a similar peripheral, already announced in Japan but now confirmed for a 1992 release here in the States, after a holiday 1991 release in Japan. Along with the NEC TurboGrafx CD, this means that all three of the major Japanese video game consoles will be able to utilize the burgeoning CD format, a massive boon for the format which is already growing rapidly in popularity. Computer Chronicles can only wonder what this means for the future of both the music and electronic entertainment industries, but at the moment that future seems bright indeed."

-Closing words of Computer Chronicles' 1991 Summer CES Special

"The news of Sony and Nintendo's alliance at CES made big waves among my colleagues and I. I remember that some NEC people were wary of the implications, back in Japan, since NEC had a de facto monopoly of the CD-ROM tech us before us but they were still getting dominated in sales by Nintendo. They feared that the CD add-on would be the coup de grace, so to speak, and of course we know what happened at the end. It spooked us over here at Sega too, but there was a silver lining. The add-on will take time to enter the market, we'd have about a nine month head start, so we would have the chance to gain market share and endear ourselves to consumers pretty early. Were we intimidated? Of course not, even if the Mega-Drive, as it was called in Japan, was taking a beating against the SNES, here in America thanks to Sonic the Hedgehog we were having our biggest holiday sales ever. I was waiting for Nintendo to make its move, whatever happened, it was definitely gonna be interesting."

-Tom Kalinske, Former President of Sega of America, in a 2002 interview with Sega Retro

"Even if the negotiation in Japan were... rough, to say the least, here in the States the whole deal went a lot smoother, mostly thanks to both Mr. Arakawa and Mr. Lincoln being more easygoing and stable than Mr. Yamauchi back in Japan. Of course, Nintendo had to have its own way in the deal, particularly concerning their own interests, and that was about our new role as co-publisher for the peripheral and how we should be in line with Nintendo of America's 'Content Guidelines'. I mentioned the new 'Videogame Board of Content Control' proposed in Japan, with warning labels and age designations for certain games. Nintendo was planning to suggest to its retail partners not to sell certain games to anyone under 17, which we hoped would avoid any problems or controversy. Then, of course, was our contract to produce content for Sega. It was expiring in 1992, and since Sony was partnering with Nintendo, we made the decision, pretty easy at the time, that we would cease support for Sega and decline to re-up the contract when it expired. We'd be making games for Nintendo now and that was fine with us."

-Excerpted from an interview with Ólafur Jóhann Ólafsson, President and CEO of Sony Interactive Entertainment, Inc., in the July 1995 issue of Electronic Gaming Monthly

-

## **August 23, 1991**

The Super Nintendo launched in North America with relatively little fanfare. It wasn't due to the 1992 release of the CD peripheral. Instead, it was largely consumer apathy that kept SNES sales unspectacular. Indeed, Nintendo was still primarily focusing on their NES console, which was still dominating hardware sales and even beating the much more

powerful Sega Genesis. The Super Nintendo came packaged with two controllers and the newest Mario title, Super Mario World, all for the price of \$200. The other launch games, F-Zero and Pilotwings, weren't exactly system movers, though both were well-reviewed.

As for worries that the announcement of Nintendo's CD peripheral would slow sales, these worries turned out to be largely unfounded. For every person who claimed that the CD-ROM drive made them skeptical of the SNES's staying power, there was another gamer who claimed that the peripheral made them want to buy the system all the more, anticipating the possibility of playing CD-ROM based games and music CDs once it was released. Most consumers, however, didn't even know of the CD-ROM drive's existence, as the average consumer and even the average gamer didn't follow the big trade shows, and even the popular gaming magazines of the time mentioned the peripheral in passing, perhaps in a small article that people skimmed over for other sections of the magazine such as the game previews.

For the most part, Nintendo shrugged off news of the Super Nintendo's mediocre North American launch, anticipating much larger sales as Christmas drew near.

-

*"By December 1991, the Super Nintendo's sales had picked up enough in both Japan and North America that we could begin to focus our attention on developing our launch window games for the SNES-CD add-on. Yamauchi-san was pushing Miyamoto-san very hard to have a Super Mario game available at launch, which in Japan was just eight months away. Miyamoto-san had just finished the work on Zelda 3, which he was VERY happy with, and his mind was flooded with ideas for the new Mario game, he knew he wanted to do a sequel to Super Mario World, which had been very well received, but it became clear from the start that this was going to be a much larger game than the original. Every day, he had a new idea for a level, or an enemy, or a power-up, and the game just got bigger and bigger and bigger. At the same time, we were working on a two-player kart racing game, and we had decided that we were going to incorporate Mario characters into that. So I was working on the maps for the new Mario World game at the same time that I was directing this kart game, which we ended up calling Super Mario Kart. Originally we had planned to make it an SNES cartridge."*

-Hideki Konno, N-Sider interview, September 2007

*"The thing about Shigeru Miyamoto is that he always wanted to make his games as good as they could possibly be, and of course that sometimes takes time. What was it he said once, 'a delayed game will eventually be good but a bad game is bad forever'? Either way, it became a huge point of contention between Miyamoto and Yamauchi over not having Super Mario World 2 ready for the SNES-CD launch, since Nintendo had ALWAYS launched with a Mario game. You had Super Mario Bros. on the NES and Super Mario World on the SNES, and so it was becoming a sort of tradition to have that strong Mario platformer packed in. But with all the stuff Miyamoto wanted to do with Super Mario World 2, that wasn't going to happen. So that's when, I think, the proposal was made to have Super Mario Kart as the pack-in game."*

-Nintendo historian Jeff Ryan, interview with Kotaku.com, October 13, 2011

*"And then came the issue of the two extra ports on the CD-ROM attachment. Could Super Mario Kart work as a four-player game? Was the co-processor strong enough to enable four*

*players at once? The big selling point of the game was that it would allow two players to play, unlike F-Zero which had only allowed one. Once we learned that it was possible to have the four players, I was all for it but Miyamoto-san didn't like the idea of not being able to have all the stages and levels available, since the more complex stages would slow down the game. He didn't want to have the four player mode at all, but once we showed him how fun it would be he gave us the task of designing specific four-player stages for the game, ones that would be fun but that would not slow down the game. And so that was a fun challenge and that's why Super Mario Kart ended up having four-player support."*

-Hideki Konno, N-Sider interview, September 2007

-

Chihiro Fujioka (director of "Final Fantasy: New Generation" and "Super Mario RPG"): Late 1991, that was a hectic time at Square. We'd gotten word that the SNES-CD deal had been done, so development went full-steam ahead on Secret of Mana. Final Fantasy IV had been wrapped and work on Final Fantasy V was in progress for the 1992 release.

RPGamer: When did the word come down that Square wanted something done for the North American market?

Fujioka: That came to me probably around the time work on Final Fantasy V began. We had all intentions of bringing that game to the West as Final Fantasy III, and we were hoping to have it ready for the launch of the SNES-CD in both territories, but that wasn't going to be possible, development on V was more of a challenge than we'd thought it would be. Also, RPGs weren't an easy sell in North America and it was widely believed that they were too hard for American gamers, there had been complaints about the original Final Fantasy and sales hadn't been strong enough to bring over the other NES games.

RPGamer: I know the original idea behind what became Final Fantasy: New Generation was to create a beginner-level Final Fantasy. What was your opinion on the matter?

Fujioka: Well, Sakaguchi-san always believed that the challenge was part of the game, but he also had an eye on the business side of things and he wanted stronger sales in North America. But the SNES-CD, I think that was a game changer. We had gotten the go-ahead to bring some more mature games to the system, and Sakaguchi-san felt that that included more challenging games, that if the console was going to be played by more mature gamers that they would appreciate the challenge. So we retooled our intended game entirely.

RPGamer: What inspired the "New Generation" part of the title?

Fujioka: It was intended that this would be a Final Fantasy for a new generation of players, so to speak. We took some of the things we'd included in IV...the new Active Time Battle system, and we included it in the game, along with a fully CD audio soundtrack. (Ryuji) Sasai-san, he'd already started work on the soundtrack and had done some great work, so it was easy to transfer that over and produce a richer sound with the new technology. And then (Yasuhiro) Kawakami, he had been working on it with Sasai and expressed how pleased he was with the enhanced audio capabilities, he was so pleased that he was able to come up with two more songs right before the deadline!

RPGamer: And that was one of the things that got the biggest praise with the game, was that soundtrack.

Fujioka: Absolutely. We also tweaked some of the other aspects of the game, we made it a three-character party, we made it so the characters all stayed with you instead of leaving, tweaked the boss difficulty, added spells, added bosses and towns and dungeons, made it a more complex game for a more complex audience, and those changes we hoped would get the response we wanted and also we hoped this game would tide Americans over for Final Fantasy V which we'd release in 1993 contingent on how well this game did. 1993, with Final Fantasy V and with Mana, we hoped would be a big, big year for Square and would change the way RPGs were perceived in North America.

RPGamer: But it all started with New Generation.

Fujioka: That it did! \*laughs\*

-Excerpted from an RPGamer.com interview with Chihiro Fujioka, December 2003

-

This holiday season was one of the most robust in recent memory, partially thanks to the surge in sales for the new electronic gaming consoles, the Super Nintendo and the Sega Genesis. While the Super Nintendo was able to build its install base via the release of new games and through a fierce promotional blitz for the new system with its "Now You're Playing With Power" campaign, the Sega Genesis used the popularity of its exciting new mascot Sonic the Hedgehog to drive sales and gain a large chunk of market share, cutting into market leader Nintendo's sales in a significant way for the first time since the launch of the NES in 1985. With 1992 comes new games and the North American launches of the CD-ROM peripherals for both the SNES and the Genesis. Will 1992 be remembered as the dawn of the optical age? Only time will tell.

-Computer Chronicles, December 27, 1991

-

### **Contra III Won't Come To SNES-CD, Snatcher Coming Instead?**

The highly anticipated Contra III, SNES successor to the original two Contra games for the NES, will not be getting a version for the upcoming SNES CD-ROM peripheral, according to Konami's Nobuya Nakazato. Nakazato stated his desire to create a new Contra game, presumably Contra IV or perhaps a spin-off title, for the SNES CD-ROM when it is released. Contra III: The Alien Wars, is set to be released in North America for the SNES in April.

In other Konami related news, Hideo Kojima, designer of the Metal Gear games, is said to be in talks with Nintendo to port his cult classic PC-8801 game Snatcher to the SNES CD-ROM. There is a rumor that the game is to be ported with the assistance of HAL Laboratory, which is also set to release Kirby's Dream Land for the Gameboy later this year, after young designer Masahiro Sakurai and Nintendo executive Satoru Iwata showed interest in a potential port. The port is still in the early development stages and will likely receive a 1993 release.

-Article in Electronic Gaming Monthly, February 1992

-

Another test of Street Fighter II on SNES CD-ROM today, game showed excellent frame rate even with arcade-level character detail. Processor very fast, special cartridge handles all co-processing enabling the SNES to run this game flawlessly with the CD-ROM. Will keep running tests but this was definitely the best one yet.

-Internal Capcom memo from February 18, 1992, translated from original Japanese

-

### **SNES-CD UPDATE!**

While Nintendo is still keeping most details of the upcoming CD-ROM peripheral for the Super Nintendo close to its chest, they did share some very promising morsels of info with Nintendo Power so that we can keep our readers informed!

Work on the peripheral is nearing completion in preparation for its unveiling at this June's CES and its anticipated August release in Japan, but one of the things Nintendo's designers are still hashing out concerns the video resolution of the new hardware. As some of you know, the Sega CD was recently released in Japan, and one of the major criticisms is that its video resolution just isn't up to snuff! The limited resolution of the Sega Genesis keeps full-motion video cutscenes confined to a small portion of the average television screen. This is a hurdle that the SNES CD's designers are dealing with as well, but we're assured that the peripheral will increase the progressive resolution of the SNES, enabling it to display full motion video that will fill your whole TV screen! We can't spill too much info on the CD-ROM's revolutionary co-processing until the big reveal at CES, but rest assured that Nintendo and its partner Sony are hard at work to make the SNES CD-ROM the next step in Nintendo's excellent gaming history.

-Article in Nintendo Power, April 1992

-

*"Back in Japan, the launch of the Mega-CD had been pretty rocky. We had to use mostly internal tech and that drove the cost way up, all the way up to 49,800 yen, which at the time was \$380 in US dollars. \$380! More than twice the cost of the Genesis! I knew we up-marketed toward business types and high-profile consumers who demand the latest technology, but you compare that to the price tag of the PC-Engine CD or the rumored price of Nintendo's machine, both of those were launching at around 25,000 yen, 30,000 at the most. And our launch window games, shooters mostly, we didn't have a single killer app to move this thing, so there was nothing to justify paying top dollar for something when you could just wait for a price cut. Nothing to show off the capabilities of the new format to justify the price. Heavy Nova was the best we had and the Super Nintendo had better games than that. We'd lost our contract with Sony Imagsoft when Sony agreed to the deal with Nintendo, so that put us behind in a big way when it came to getting good games on the Sega CD. We started signing deals with movie studios, hoping we could snag a big licensed game... I remember signing with Virgin and doing the Aladdin game, that ended up being huge for us, but that was way down the road. At the time, we were getting killed and*

*a huge part of that was Sony pulling out."*- Tom Kalinske

"In retrospect, the PC-Engine was a console stuck between a rock and a hard place. First in innovation, but now trapped between two big players in Sega and Nintendo. Without proper developer support, stuck with trying endless hardware revisions in a vain attempt to catch up, the PC-Engine was doomed from the start in a lot of ways. The PC-EngineDuo was, in a lot of ways, what the system should have been from the first place. First out with the HuCard technology and the first major console to use CD-ROM, there was plenty of power behind the console... but NEC found itself squeezed out by the growing monster that was Sega and the rampaging beast that was Nintendo, soon to be the mighty Nintendo-Sony alliance. Despite ranking second internationally at the time, behind only Nintendo, NEC was falling rapidly behind and would be overtaken by Sega later in 1992. It's hard to believe it today, but at one time, the partnership of NEC and Hudson could well have shaped console gaming as it is today instead of falling into irrelevancy almost as quickly as it had risen to prominence."

*-PC-Engine/TurboGrafx-16, A Retrospective, IGN.com*

### **Philips Lawsuit Likely To Be Thrown Out, Deal With Sega Not Happening**

There's a bit of interesting news concerning the ongoing legal battle between Nintendo and the European electronics titan Philips. Sources claim that Nintendo, which is currently working on the SNES-CD with the help of Sony, was looking to negotiate more favorable terms which would allow them to retain more control of games made for the new system. To gain leverage, Nintendo entered negotiations with Philips, which then claimed, after Nintendo changed its terms with Sony and re-entered into a deal with them, that Nintendo acted in bad faith and filed a lawsuit for damages related to expenses incurred during the negotiations with Philips. A judge in the Netherlands is now expected to throw out Philips' suit, agreeing to Nintendo's claim that it could have entered into a deal with Philips at any time and that Philips should have done its due diligence before taking the time to meet with Nintendo reps.

Philips was also rumored to be meeting with Sega earlier this year but those rumors turned out to be false.

*-Electronic Gaming Monthly, May 1992*

-

### **Summer CES - June 15, 1992**

*"The best CES that I've ever been to, I have to say, was in 1992. You had what was ultimately the beginning of the big CD boom in video games being unleashed on the public that year, with Phillips, Sega, and Nintendo all showing off their shiny new CD-ROM machines. By then Phillips' machine had already been out for a year but this was the first time they were really pushing it hard, probably in response to the CD-ROM add-ons for the big game companies. Speaking of which, you had Sega showing off the Sega CD that year and it looked fantastic, definitely something I knew a lot of Genesis owners would want to have. And then there was Nintendo and Sony's machine. Holy shit, that was some serious tech. Right away I knew it would be the one to have, the graphics were unbelievable and everything was moving so smoothly on the machine, I mean, it was more powerful than the Neo Geo for the cost of what, a Neo Geo GAME? The TurboGrafx guys didn't even show up,*

*they knew they were done. If you're asking me when the 16-bit war was won, it was that day at CES 1992."*

-Ed Semrad, former editor-in-chief of Electronic Gaming Monthly, January 2008

*"Oh, I had tons of fun at CES that year! Broderbund and Nintendo invited me up to Chicago after we'd finished all the work on Carmen Sandiego and they asked me to spend the day at the Carmen Sandiego booth. I know nowadays at the trade shows they have these "booth babes" or whatever they call them, but it was much classier then, it helped that I was in my full costume and not some silly bathing suit or something! I mean, with the trenchcoat and the fedora I still looked pretty nice and I got a lot of looks. Everyone was really nice and it was a lot of fun, people did double takes when they were playing the game and they saw me standing there watching them. And teaching high school drama, of course I'll still have students on occasion come up to me and ask me if that's me in the game, even though none of them now were even alive when the game was released, I'll still get people asking!"*

-Jasmine Herrera, excerpted from "20 Years Later: Catching Up With Carmen" on IGN.com, February 23, 2013

*"I think we need to go back to the drawing board."*

-overheard near the Sega booth at the Summer 1992 CES

-

## **Video Games At The Summer 1992 CES!**

Everyone's been looking forward to the big Consumer Electronics Show in Chicago, eagerly anticipating the latest offerings from Sega, Nintendo, NEC, Phillips, Atari, SNK, and all the other major hardware and software producers. In the spotlight this year are the CD-ROM peripherals for the Sega Genesis and the Super Nintendo, so let's give you the skinny on those right now!

First off, the Sega CD is bringing some major power to the table, but it'll cost you some major coin. It was unveiled at this summer's show and will be appearing on store shelves in October with a \$299 price tag. That's a big investment, but you'll be getting the latest tech for your buck. The Sega CD, renamed from the Mega CD (its Japanese name), is packing a 12.5 Mhz processor under its hood, and that will be on top of the Genesis' 7.67 Mhz processor, taking "Blast Processing" to a whole new level! It will display full-motion video at 15 frames per second, which, while not quite cinematic quality, is still good enough to display beautiful animated cutscenes and real-life video footage. Tom Kalinske, Sega's president, mentioned some very intriguing titles for the new system, including Night Trap, a full-motion video game where you'll be able to take control of the action, using tricks and traps to save a group of beautiful girls from some deadly killers! There's also an arcade-quality Final Fight game, a massive new installment of the popular RPG series Ultima, and, perhaps most intriguing of all, a game based on this year's hit movie Batman Returns, integrating real scenes from the movie into the gameplay. Kalinske has also promised a brand new Sonic game exclusive to the add-on. While the Sega CD itself was not on display at the show, prototypes of the system along with a few of the games were available to play and what we saw was definitely impressive.

Next up was Nintendo's unveiling of the Super Nintendo CD, the official name for its CD-

ROM peripheral. The peripheral will hit store shelves in December, and with a surprisingly economic \$199 price tag. Hitting store shelves at the same time, for those who don't yet have a Super Nintendo, is something called the Nintendo Playstation Combo Pack, featuring a Super Nintendo with an integrated SNES CD built right in! That will retail for \$349. Now, early adopters who bought the Super Nintendo for \$199 may feel ripped off that they're paying \$50 extra for the added peripheral over people who buy the Playstation combo, but Nintendo has them covered, announcing that a \$50 coupon that can be used toward the purchase of any SNES CD game is included in all \$199 add-on packages. In addition, Super Mario Kart, which Nintendo had on demonstration at the show, will be included with both the stand alone peripheral and the combo pack. The SNES CD is a technical marvel, and Sony has clearly done some impressive work. It clocks in at 21.477 Mhz, making it by far the most powerful video game device ever released. Nintendo has also addressed the problem of the SNES' limited memory, which would not allow it to utilize the full power of the SNES CD on its own. A special cartridge, which Nintendo calls "H.A.N.D.S." (Hyper Active Nintendo Data-transfer System), is plugged into the Super Nintendo's cartridge slot while the SNES CD is in use. This cartridge allows the peripheral to do most of the heavy lifting, giving the SNES console enough memory to take advantage of the SNES CD's power. The SNES CD also adds two extra controller slots to the system, allowing for four controllers to be plugged in at once (similar to the NES "Four Score" device). One of the games taking advantage of this is the aforementioned Super Mario Kart, which had its special 4-player mode available for demonstration at the show. Other games on display included Super Mario World 2, the sequel to the SNES' launch hit Super Mario World. While this game won't quite be ready for the SNES CD's launch, it is expected to be released sometime in the spring of 1993. Also appearing at the show: Final Fantasy: New Generation. The game is in a lot of ways similar to Final Fantasy II, only with three playable characters at a time instead of five, and with the ATB time bar appearing on screen instead of being hidden as it was in Final Fantasy II. Squaresoft had the game on display at CES, where we were able to play through one of the game's dungeons with the characters Benjamin, Kaeli, and Tristam. It was fun and fast-paced, with a more upbeat and rock-inspired soundtrack than Final Fantasy II, and should be more than enough to tide people over until Final Fantasy V (which will likely be renamed Final Fantasy III in the West) makes it to our shores. Dragon's Lair, said to be a launch title, was also demonstrated at the show, and is a very faithful reproduction of the arcade classic. Also appearing was a version of the popular "Where In The World Is Carmen Sandiego?" computer game with full-motion video cutscenes (in fact, the actress who portrays Carmen in the game was demonstrating the game at the booth!) and Capcom's Ghouls 'n Ghosts CD, a sequel to the ultra-challenging Super Ghouls 'n Ghosts. Capcom also had Street Fighter II available for demonstration, but it was the version for the normal SNES, with the SNES-CD version only present via a video showing how smoothly the game would run on the CD peripheral.

Ultimately, we felt that the Super Nintendo CD had the most impressive showing, and the game of the show would have to be Super Mario World 2. Even from the few levels available to play, it's clear that Nintendo's gone the extra mile to make this a worthy sequel to the SNES classic, with excellent music, very colorful and smooth graphics, and level design that rivals or exceeds its SNES predecessor. We wish Sega had had more to display, particularly from its Sega-CD Sonic game, but though we were more impressed with what Nintendo and Sony brought to the table, it's clear that both CD-ROM add-ons are going to be a tempting (if expensive) purchase for owners of their respective consoles.

-Excerpted from the debut issue of GameFan, September 1992

-

"Hello, everyone, and welcome to the Summer 1992 CES. I have just a few words from everyone here at Nintendo of America as we eagerly look forward to our company's latest offerings. Our booth at CES 1992 was heavily geared toward promoting our new Super Nintendo CD add-on, and I just want to say that we have never been more excited to release a product. Our partners at Sony have exceeded expectations in creating a peripheral that works in tandem with the excellent Super Nintendo to bring gaming into the next generation. I know that you'll all be as impressed with their work as I have, and I hope that this device will not only create new opportunities for Nintendo developers and fans, but that it will also bring the exciting new medium of compact discs to the public at large, making the Super Nintendo your one stop shop for gaming, interactive multimedia experiences, and high-fidelity music.

We at Nintendo are proud of our reputation as a family-friendly company, and our partner companies are breaking new ground in interactive content. Some of the games for the Super Nintendo CD may not be for all of our players, and as fans grow and mature, some of their games are growing and maturing with them. We've created a brand new system for rating video game content that we'll be revealing in more detail in the coming months and working with our retail partners to ensure that our games are played by the appropriate people. We also want to address the worries of fans who just purchased a Super Nintendo last year and earlier this year, and who might be thinking of buying one in the months to come. The Super Nintendo CD will present unique gaming opportunities, but it is meant to compliment the Super Nintendo, not supplant it. Games will be released for both the regular SNES and the CD-ROM add-on for years to come, and indeed, though we have many CD-ROM games scheduled, we have more games scheduled for the Super Nintendo than we do for the CD-ROM add-on, and we will also continue to support the NES with exciting new games like Kirby's Adventure. The Super Nintendo is still the primary focus of our creative endeavors, while the SNES CD will allow us to expand our horizons and provide gaming experiences that would not be possible on a cartridge based system. Developers, both first-party and third-party, will have unparalleled freedom to create the games that you, the consumer, will want to play. At Nintendo, we have always been and will always be about the games, and with the Super Nintendo and our new CD-ROM add-on, the possibilities are, and will always be, endless.

Thank you all for coming.

-Keynote speech by Howard Lincoln at the 1992 Summer CES

-

*"It has been two years since the release of our Super Famicom, the natural evolution of our old and venerable Family Computer. A decade ago, we had a vision for the Famicom, that it would be a tool in every family's home for the amusement of people both old and young, and we have succeeded in those aims beyond our wildest dreams. Today as I speak, we are about to release not one, but two new Nintendo products, which were made possible thanks to the support and technical skill of our new business partner, Sony Corporation. These two products will continue the evolution of the market of electronic entertainment.*

*The Super Famicom Computer Disk System, much like its predecessor the Famicom Computer Disk System which we released after the original Famicom, will allow our Super*

*Famicom to play bigger and better games, as technically advanced as those currently available in the computer market. As I speak, these games are nearing completion. We have just finished work on our first Mario game for the new Computer Disk System, Super Mario Kart, which will allow four people to experience fast-paced racing action simultaneously. We are also previewing at Spaceworld the sequel to our Super Famicom hit Super Mario World, on which Shigeru Miyamoto has been hard at work. These two games will demonstrate how our new amusement machine will be at the cutting edge of entertainment and bring Nintendo games to an entirely new scope for consumers and developers.*

*I believe that the CD-ROM is the future of the market, but Nintendo will continue to develop for and push the limits of our cartridge format for years to come. I believe Nintendo's consumers will be excited as they discover what the future has in store."*

-Translated transcript of Nintendo president Hiroshi Yamauchi's keynote speech at Nintendo Spaceworld, August 10, 1992

*"Hello everyone. It's a pleasure being here today, speaking to the press, video game retailers, and fans here at Spaceworld 1992. For those who don't know me, my name is Ken Kutaragi. I'm an electronics engineer, some of you probably know me better as "Crazy Kutaragi", you said I was crazy when I decided to make the SPC sound chip for Nintendo, but had I not done that we wouldn't be here today so I think I don't look quite so crazy now!*

*Many of you here have seen the new CD-ROM add on for the Super Famicom, you've gotten to play with it and look at some of the games. The colors are improved, the graphics move much more smoothly but I think the most important aspect of this add-on is the improvements to the sound of the Super Famicom. Don't get me wrong, I'm very proud of my work on the SPC sound chip but here, with the Audio CD Redbook capabilities, you can have the sound of a real orchestra in a game, or even full voice acting which was not possible on the Super Famicom. We have 4-player games available right out of the box, similarly to some hit arcade titles. Speaking of arcade hits, you've also seen our version of Capcom's Street Fighter II which I believe moves much more smoothly and realistically. We also have the capability to provide a full cinematic experience as demonstrated in Dragon's Lair, which Sony is publishing, this classic arcade game has been compared to an interactive movie and I think you'll agree when I say that this is the most arcade accurate version of the game to date, in fact with the Super Famicom CD's improved color palette, it looks even better than it does in the arcade.*

*There are other advantages to this system, utilizing the Super Famicom's cartridge port we will be able to create additional functionality for the consumer. We've explored karaoke as an option, very popular here in Japan but we may expand its popularity throughout the globe by enabling any family to have a karaoke device in their own home, perhaps utilizing a Sony music player as well. Having had a long relationship with Nintendo since 1988, when my own audio chip was accepted as the device that would power the Super Famicom's sound, and continuing through the meeting that created this alliance between Nintendo and Sony that will bring not only the Super Famicom Compact Disk System but the dual combination console known as the Play Station, I am glad to see our alliance opening up the potential of new markets via the proliferation of audio and photo CD technology. These new technologies, combined with the Disk System's incredible video game capabilities, are only the first step into this new potential market, which I call 'interactive entertainment'."*

-Translation and transcript of a speech by Ken Kutaragi at Nintendo Spaceworld 1992

-

### **Space World 1992 - Super Nintendo CD Unveiled!**

Here in Japan at Nintendo's annual Shoshinkai Software Exhibition, also known as Space World, the main focus of the show has been the new gadgets in town, born out of the partnership between Nintendo and Sony. The Super Nintendo CD, an add-on for the Super Nintendo Entertainment System, and the Nintendo Playstation, which combines the SNES and the new add-on into one super-console. The Super Nintendo CD will cost 29,980 yen, which translates to around \$210 here in the States. As for the Playstation, it will cost 49,800 yen, or around \$350. That's MUCH less than the price of purchasing both the Genesis and the Sega CD together, which in American dollars would currently run you about \$500 when the add-on drops in October. That's before the recently announced price cut from Sega, which has cut the price of a Mega CD in Japan to 46,000 yen. That's a significant price cut, but it has yet to be seen whether they'll slash the price in the States. Just how will the company of the blue hedgehog fare? Much of that will depend on the games for both systems.

As for Nintendo, their early offering for the new CD-ROM is Super Mario Kart. Western gamers will see the game offered as a pack-in when the Super Nintendo CD drops in December, but Japanese gamers will have to buy it separately. Nevertheless, it's an exciting product, with a full range of 256 colors and fast-paced action with a high frame rate. The game's cast of characters is strong, featuring Mario, Luigi, Princess Toadstool, Toad, Yoshi, Donkey Kong, and even a Koopa Troopa and King Bowser will be playable. The game will be the first to take advantage of the added controller ports on the add-on with 4-player capabilities! While only a few tracks will offer the 4-player option, as opposed to the 2-player modes which will allow grand prix play and full selection of all tracks, the game offers some serious multiplayer madness and there were long lines at Nintendo's booth for this game.

Also demonstrated here in Japan, playable for the first time, is the CD-ROM version of the ultra-popular Capcom fighting game Street Fighter II. Based on the new arcade release "Street Fighter II: Champion Edition", the game is simply amazing, running as smoothly as and in some spots even better than the arcade version. The four boss characters from the original are now playable, and all characters have new moves. The game is full of new graphical detail, with hundreds of voice samples included. Another advantage is that in Japan, the price will be lower than the SNES cartridge, owing to the cheaper price of CDs as opposed to ROM cartridges. This may end up being a general rule, allowing perhaps for the CD-ROM add-on to pay for itself over time via cheaper game purchases. Also announced for next year is a new version of the game, Street Fighter II: Hyper Fighting, which will bring some of the Champion Edition enhancements to the normal SNES and may see a release for the SNES CD as well.

Aside from Nintendo, Squaresoft had a decent presence at Space World as well, with a Japanese version of their American launch title Final Fantasy: New Generation. The Japanese version is expected to be released in 1993. Another prospective 1993 title is something called "Project Mana", no footage was shown but Square staff did briefly discuss the game which has been in the works for nearly two years now. Whatever Square comes up with for this game will surely be a surprise and likely a pleasant one at that.

-Excerpted from an article in the October 1992 issue of Electronic Gaming Monthly, written by Peter Molyneux

-

### **August 24, 1992**

The Super Famicom Computer Disk System, along with its Play Station combination console, launched in Japan with great fanfare. 500,000 units of the add-on and 150,000 units of the combination set were shipped, and most would sell out in the first few days, owing to the Japanese fervor over new technology and the extensive marketing campaign Nintendo had launched in Japan for the console. There were three games available at launch: Super Mario Kart, Street Fighter II: Arcade Edition, and Dragon's Lair, with most purchasers of the add-on and console buying Super Mario Kart and Street Fighter II at the same time. The early sellouts bode well for Nintendo's plans to launch the system in the West later that year and in Europe early in 1993, and with profits from early sales, Nintendo began the marketing and promotion campaigns for the West in earnest.

-

*"I remember, last year I was going to put my foot down and say no to the Super Nintendo, I explained how it was just a marketing tool to make you spend more money, but I relented and I ended up buying it for him for his birthday, and now they're coming out with this new thing? I'm pretty ticked off but it just proves that I was right, they just keep squeezing more and more money out of you and this is the trick they use, they sucker you in and make you spend more and more. Well fool me once, shame on you, fool me twice... I won't get fooled again."*

-a concerned mother, quoted from a news report on the Super Nintendo CD, December 2, 1992

*"Parents are in a fury, as expected, on the eve of the release of Nintendo's hot new CD-ROM peripheral, fresh on the heels of Sega's CD peripheral release earlier this year. Those who already spent \$200 on Nintendo's shiny new toy are feeling ripped off at the news of a \$200 upgrade barely more than a year after the Super Nintendo's release, and the Super Nintendo CD as it's called is not expected to be a hot seller this holiday season."*

-Phillip Elmer-DeWitt, Time magazine, December 7, 1992

*"Am I excited, yeah I'm excited, this thing is gonna be awesome. You get to play CDs, there's Street Fighter, you can play with four people and I heard that maybe you could watch movies on it some day? I'll definitely be gaming on it as much as I can, I've got a lot of stuff going on right now but whenever I get some downtime I know what I'm gonna be doing."*

-Leonardo DiCaprio, Entertainment Tonight, December 1, 1992

*"...have I heard about the new Nintendo what? ...no, I'm sure it'll be a big boost to the economy. Kids love the games."*

-President-elect Bill Clinton, MTV News, December 3, 1992

-

*Over the past decade, Nintendo has brought you high quality interactive family entertainment. Now, as we prepare to launch our Super Nintendo CD peripheral, we see that our fanbase has grown exponentially, and that many of our fans who started out playing games such as Donkey Kong in arcades or Super Mario Bros. on the NES are growing and maturing. These fans have made it known that they want some of their games to mature with them. In addition, several of Nintendo's software partners have expressed their desire to produce more mature, story-driven games for our new CD peripheral, with content similar to what you would see in highly acclaimed movies such as the recent Silence of the Lambs or Terminator 2. While Nintendo will always be family company first, we have decided to allow our software partners to pursue new creative avenues on the Super Nintendo CD, and as a result, some of the games that we will be approving for the system may not be suitable for all of our players.*

*Nintendo strives to remain a family-friendly company supporting entertainment that all ages can enjoy. We have created a new ratings system for our CD-ROM games, that will be clearly displayed on all games approved for sale, letting you the consumer know the appropriate audience for a certain game. The ratings symbols are as follows:*

*A green symbol will be marked with **GA - General Audiences/Appropriate For All Ages**, letting you know that this game adheres to Nintendo's standards for family-suitable entertainment. All first-party Nintendo games will conform to the standards for this rating.*

*A yellow symbol will be marked with **13 - Parental Advisory/13 And Up** with additional ratings descriptors. These games may contain mild or moderate violence, mild language, and/or thematic elements that may be objectionable to certain audiences.*

*A red symbol will be marked with **17 - Mature Players Only/17 And Up** with additional ratings descriptors. These games may contain strong, realistic violence, strong language, and/or some sexual themes. We strongly encourage all of our retail partners not to sell any 17 rated games to anyone under 17 without the presence of a parent or guardian.*

*Please also note that Nintendo will never approve games that contain highly graphic violence or strong sexual elements regardless of our ratings system. We encourage parents of children who plan on purchasing the new Super Nintendo CD peripheral to educate themselves on the ratings descriptors with our convenient pamphlets at retail locations wherever Nintendo games are sold, or by watching our brief videos at Nintendo kiosks. We will also be rolling out a television ad campaign alongside our promotional campaign to further educate parents and other concerned individuals about Nintendo's new ratings system.*

*With the new Nintendo ratings system in place, our talented software producers will have far more creative freedom to make the games that all Nintendo fans will want to play. We hope that the Super Nintendo CD ushers in a new age of interactive entertainment, where gamers of all generations can come together and enjoy the best of what Nintendo has to offer.*

-Nintendo president Howard Lincoln, from the opening segment of a Super Nintendo CD informational video played at retail kiosks starting in October 1992

-

### **Super Mario Kart**

Steve: 8

Ed: 9 (quote: "The 4-player action is this game's biggest attraction, even with only 6 of the tracks and 2 of the battle stages available in 4-player mode, you'll want to race them over and over again with three of your buddies, though all the shells and bananas lying about in the game might test some friendships!")

Martin: 9

Sushi-X: 8

### **Street Fighter II: Arcade Edition**

Steve: 9

Ed: 9

Martin: 9

Sushi-X: 10 (quote: "The greatest fighting game ever released on any home console, bar none. Save your quarters and buy an SNES CD with this game, the action is just as fast and fierce and the character animations are as smooth as anything you'll see at the arcade. Plus, you can finally take M. Bison and his super-powerful moves for a spin.")

### **Final Fantasy: New Generation**

Steve: 9

Ed: 8

Martin: 9 (quote: "Better than Final Fantasy II? It's awfully close, but the fact that you get to choose your characters puts this over the top for me. Take your party of three for a spin and restore the crystals as you traverse a colorful new world. The game's rock-inspired soundtrack really shines on the SNES CD's high-fidelity audio.")

Sushi-X: 7

### **Sewer Shark**

Steve: 7

Ed: 6

Martin: 8

Sushi-X: 7 (quote: "It's like playing a Hollywood blockbuster. The only problem is that it's too short, but it's a good show of what the peripheral is capable of. The video plays in a lot more of the screen than on the Sega CD's movie games.")

### **Dragon's Lair**

Steve: 5

Ed: 4

Martin: 7 (quote: "It's the same as back in the day but a lot more colorful. There are a couple of added scenes but nothing too special, it's still an arcade classic and it's the perfect game for younger players.")

Sushi-X: 5

-Electronic Gaming Monthly reviews the SNES CD launch titles, February 1993

-

\*Several kids are shown running into the room and turning on a Super Nintendo, having fun with Super Mario World and Zelda: Link To The Past before one of the kid's dads comes into the room with a new box.\*

Kid: Hey dad, the Super Nintendo's great!

Dad: Don't you wish it could be even better?

\*Some of the kids laugh.\*

Kid 2: There's no WAY you could make the Super Nintendo any better.

\*The dad opens the box and takes out the Super Nintendo CD, connecting it to the Super Nintendo as the kids watch curiously.\*

Dad: You wanna bet? \*pops in a CD\*

\*Suddenly, the screen is filled with the high-speed action of Super Mario Kart as the kids look on in awe. Dad brings out two more controllers and suddenly him and three of the kids are playing Super Mario Kart, having the time of their lives.\*

Narrator: The hottest thing in video games just got even hotter!

\*Now scenes of all sorts of games are shown, from Street Fighter II: Arcade Edition to Sewer Shark and Final Fantasy: New Generation, along with Super Turrican, Double Switch, and even a couple of quick scenes of Super Mario World 2, interspersed with scenes of the dad and the kids having a great time.\*

Narrator: Ten times the speed, four times the colors, with hi-fi CD audio for maximum immersion! The Super Nintendo CD-ROM peripheral connects to your Super Nintendo Entertainment System, creating richer, fuller, LOUDER experiences that you've never seen or heard before. Play all new games like Super Mario Kart and Super Mario World 2, play your favorite music CDs, play all new interactive movies that bring your favorite games closer to reality than ever before. It's the Super Nintendo CD.

\*Shows both the add-on console and the SNES/SNES-CD combo\*

Narrator: Available as an add-on for your existing Super Nintendo or as the Playstation Combo Set. Comes with Super Mario Kart, an additional controller, and accessory kit.

***The Super Nintendo CD. Take it to the next level.***

-Super Nintendo CD's initial American launch commercial, first shown during the Cowboys/Giants NFL game on Thanksgiving Day 1992 and played throughout the holiday season. Commercial also displayed a release date of December 4, 1992, after that day it displayed an "Available Now" message.

-

## **December 4, 1992**

The Super Nintendo CD launched in North America. 600,000 add-on units were shipped with an MSRP of \$199, while 150,000 Playstation Combo Sets (SNES/CD-add on combined) were shipped with an MSRP of \$349. Included with the add-on was Super Mario Kart, an SNES controller, a set of connecting cables, and a coupon for \$50 off any Super Nintendo CD game. The Playstation Combo Set shipped with Super Mario Kart, two SNES controllers, and connecting cables. The launch, though covered by many news outlets, was not nearly as successful as the Japanese launch, with few sell-outs reported in the first week of sales. With the economy still flagging and North American buyers reluctant to purchase an expensive new peripheral so soon after the launch of the Super Nintendo, Nintendo expected the low sales, though sales were a bit lower even than their projections. The CD add-on launched with five games: Super Mario Kart (the pack-in title), Street Fighter II: Arcade Edition, Final Fantasy: New Generation, Sewer Shark, and Dragon's Lair. Among the launch games, Street Fighter II was the highest seller, with a very high purchase rate among add-on buyers (particularly ones who shelled out the full \$349 for the SNES/CD combo). As the launch week wore on, Nintendo hoped that the upcoming Christmas season would pick up sales.

-

*"We had a lot of units shipped. Sega only shipped 50,000 of their Sega CD back in October and they sold through very quickly, while we were hoping that we could provide an SNES CD for everyone who wanted one. And sales in Japan were good, so we shipped far more of them. said we should have shipped around 250,000. Shipping 600,000 units and only selling about 100,000 or so in the first couple of weeks, that looked bad at the time. But we were outselling the Sega CD and our sales were constant. They weren't dropping, we weren't having 100,000 sell one week and only 20,000 the next. People were saving money. They were thinking about the new big game. So that was a good sign. It was still the Super Nintendo generating the big Christmas numbers, but the SNES CD was doing well even with all the unsold units on shelves."*

-excerpt from an interview with Nintendo of America president Howard Lincoln, Forbes magazine, March 24, 1997

-

## **IT'S HERE!**

The Super Nintendo CD hits store shelves this month, and you've never seen anything like it. It's 32 bits of power-packed visuals and incredible sound that will take your SNES to the next level. We've got 56 pages of coverage on every single launch game, giving you the tips and tricks you'll need to power your way through these tough new adventures. We'll also take you under the hood of the SNES' newest peripheral to find out just what makes this baby tick. While not every Nintendo fan will be able to purchase the SNES CD right away, we here at Nintendo Power absolutely recommend making the leap at some point in the future. From everything we've seen so far, the possibilities of this thing are absolutely endless!

-Introduction to Nintendo Power's coverage of the SNES CD launch, December 1992

-

## **SUPER NINTENDO CD-ROM**

### **Nintendo Co. Ltd./Sony Corporation**

The Super Nintendo CD-ROM peripheral connects to the Super Nintendo Entertainment System to provide arcade-quality gameplay and high-fidelity sound for your favorite video games. Of note: Super Mario Kart, a fast-paced go-kart racer that can support four players simultaneously.

-Popular Mechanics, "Design and Engineering Awards 1993", January 1993

-

*The Super Nintendo CD is undoubtedly an impressive piece of technology. The processor and storage capacity of the games not only rivals the hyper-expensive Neo Geo, it surpasses it. Street Fighter II plays just like it does in the arcade, maybe even a little bit better. The Mode 7 action of Super Mario Kart zips by just as fast as anything in Sonic the Hedgehog, and there's no slowdown in 4-player mode, even if only a limited selection of tracks are available. The FMVs of Sewer Shark fill MUCH more of the screen than Sega CD's version and the visuals are significantly clearer, making the Sega CD seem outdated by comparison. Make no mistake, Nintendo is going all out in supporting this thing and if it catches on, it's likely this will end up being a successor console to the Super Nintendo rather than a mere add-on. While Nintendo promises to continue supporting the Super Nintendo and while their policy requiring publishers who put out a game for the CD to also produce an SNES cartridge game, either a dual-release of the same game or a cartridge-specific title should keep the SNES alive and ticking as long as the NES has been in the post-SNES release world, the fact that Super Mario World 2 will be a CD-ROM game and not a cartridge game is telling. Normally I'd be worried about such a thing but I'm so impressed with the Super Nintendo CD that I for one welcome our new optical overlords. Let's hope that Sega learns from what Nintendo is doing and puts more support toward its new CD peripheral. Sonic CD is looking excellent and there are some other promising titles on the horizon. 1993 is looking quite promising indeed.*

-Dave Halverson, GameFan Magazine, February 1993

*In conclusion, we didn't get quite enough time with the Super Nintendo CD to provide a numerical rating in time for this year's buyer's guide, but my initial impressions were all positive. The SNES CD seems like much more of a natural progression than Sega's peripheral, with an increased focus on the gameplay rather than just showing off the tech. At \$199, the price is surprisingly low for what you actually get, and indeed, for new SNES buyers I'd recommend springing for the \$349 combo set. If you're unsure (or on a tight budget), reviews for Super Mario World 2, the system's first truly major game, will show up in EGM sometime around May or June. Again, despite the lack of a numerical score, my two word summation of the SNES CD thus far is this: "Highly recommended."*

-Ed Semrad, 1993 Electronic Gaming Monthly Video Game Buyer's Guide

-

**December 25, 1992**

In Petaluma, California, an 11-year-old girl opened her last Christmas present. It's a big box and even her mother doesn't have a clue what's inside.

"Oh my God, dad!" shouted the girl as she looked at the large box sitting in front of her, a brand new Playstation Combo Set. "This is so cool!"

The girl's mother looked incredulously at her husband, glad that her daughter liked the gift but unsure if a \$350 video game system was the best thing to be buying for her.

"We needed a CD player too," said her father. "Her birthday's coming up next week, figured this could count for both. The guy at the store showed me one of the games, it looked really fun."

The girl's mother still wasn't quite sure but the smile on her daughter's face as she looked at the back of the box removed some of her doubts... plus, she did want to hear some of her favorite songs on CD if she could find them in the stores.

"Okay... but she can only play it an hour a day. On weekends."

"Sure," said the girl, still looking at the pictures on the back of the box. "This Carmen Sandiego game looks kind of fun. Is it...around here somewhere?"

"The guy at the store said they only had four games for it but it comes with a game," said the girl's father, pointing out the Super Mario Kart logo on the box. "I asked about other games and he said they'd be coming later on."

"Here, you should open up your last present now, Marc," said the girl's mother, handing her husband a much smaller box. The girl pushed the Playstation Combo Set gently aside to watch her father open the gift. Unlike many of the other lucky kids who'd gotten the expensive new toy that year, she wasn't an avid gamer and could contain her excitement enough to wait until the Christmas festivities were concluded before tearing open the box and playing the SNES CD.

But make no mistake, when she got back to school, Polly Klaas would be the envy of her friends when she told them about what she got for Christmas.

-

*"I remember when the call came in from Square in January 1993. The early sales figures from New Generation were out and they were going to make a really quick decision on whether or not to bring Final Fantasy V over. I know it was really close. The game had sold well, but it wasn't a major hit like Street Fighter II was. I got the call at work in the afternoon. Final Fantasy V, which would be called Final Fantasy III in the States, was a go. They wanted a summer 1993 release which gave us about three months. I told them I could do it in two."*

-Ted Woolsey, excerpted from an interview with RPGamer.com in 2002

*"If you're asking about the moment when my sister and me decided that we wanted to make video games for a living, it had to be when we first got Pickton Lake. Ariel and I got it*

*with the Super Nintendo CD for our 8th birthdays and it was the best birthday ever. That game was amazing, I know it's more of a cult classic now but for us it was just awesome, those two kids were just like us and we loved the spooky atmosphere and fun dialogue. We couldn't stop playing it, we'd take turns beating it over and over trying to get through it the fastest or get all the secret items. It was so much fun. It was a big inspiration for our first game, Terror Trip. The idea of the brother/sister protagonists? So Pickton Lake."*

-Alex Hirsch, co-founder of Pyramid Games, excerpted from the Kotaku.com article "Meet The Twins Who Are Taking The Indie Gaming World By Storm", January 14, 2013

*"The definitive version of 'Where In The World Is Carmen Sandiego?' appeared on the Super Nintendo CD in February 1993. Considered the first major post-release title for the add-on, it featured challenging new geography puzzles, a variety of memorable suspects and characters, and it was one of the first games to use both live-action and animated FMV sequences. Yes, some of the acting seems cheesy now, but it helped set the mood of the game and kept things fun and interesting."*

-Quoted from "The Top 10 Educational Video Games Of All Time: #2- Where in The World Is Carmen Sandiego? (SNES CD)" on Screw Attack

*"The new CD-ROM peripheral for the Super Nintendo video game system may have its first controversy. Mad Dog McCree is a new western-based video game where you use a realistic-looking play gun to shoot characters, played by real life actors, on screen. While there's no blood or guts in the game, some say that gunning down real people is beyond the pale. It's the first game to earn a rating of 17 from Nintendo's in-house ratings board, but parents say that retail stores often ignore the ratings to sell this game to kids. Tonight at 11, we'll talk to some local parents who think that the fun's gone too far."*

-reporter at WKRC-TV, Cincinnati, from the March 25, 1993 newscast

*"You let go of my sister you bug-eyed vampire creep!"*

-Cody, Level 16, Pickton Lake

*"I would've loved to stay in Paris, but they ran out of crepes. It seems you just missed me. Better luck next time, kids."*

-Carmen Sandiego (Jasmine Herrera), *Where In The World Is Carmen Sandiego?* (SNES-CD version)

-

*And at the end of January, the Super Nintendo CD finally gets some post-launch love with a pair of new games sure to tickle the fancy of anyone who's starting to get bored of Super Mario Kart. On the 18th, it's Atlus' Run Saber. Also releasing for the Super Nintendo, the CD-ROM version features enhanced audio, two additional levels, and a higher level of graphical detail. Then we've got Double Switch, launching on the 25th. While we wait to hear any word about the controversial but sexy Night Trap on Nintendo's peripheral, Double Switch is a much more family-friendly trap 'em up game sure to appeal to older kids and their parents alike. You have to work to free the game's protagonist, Eddie, from a basement before criminals and mobsters get to him. With a little bit of Universal-style horror thrown in, the game is actually considered somewhat better than Night Trap and*

*should be a welcome addition to the SNES-CD's growing FMV library.*

### **Nintendo Working With The Jim Henson Company?**

Nintendo recently announced a partnership that they've been keeping secret for the last year, but that we can finally announce here in Nintendo Power. Nintendo creative staff have been in talks with the Jim Henson company on a number of still-secret projects, one of which is an upcoming video game for the SNES CD peripheral. In fact, Shigeru Miyamoto and puppeteering legend Frank Oz recently appeared together at the Jim Henson Company Lot, where a Nintendo creative team has been working for several months. More details are soon to come and we can't wait to announce them in a future issue!

-Excerpted from the January 1993 issue of Nintendo Power

-

### **February 15, 1993**

"Where In The World Is Carmen Sandiego?" was released for the Super Nintendo CD. Based on the classic educational PC game, the Super Nintendo CD version featured a brand new set of crimes and clues and an interface optimized for the Super Nintendo CD. While keyboard support, utilizing the optional keyboard peripheral that had been quietly released a few weeks after the SNES CD's release, was available, the game also offered a non-keyboard mode that allowed for multiple-choice guessing for most of the game's inputs. The game was influenced heavily by the successful PBS game show released a couple of years earlier, and Lynne Thigpen played The Chief in some of the game's live-action segments, while relatively unknown actress Jasmine Herrera played the tricky thief Carmen Sandiego. The game also featured about 30 minutes worth of animated segments, notably the intro video (utilizing Rockapella's theme song from the game show, with the line "Monday thru Friday at 5!" changed to "Super Nintendo CD!") and some animated travelogues of the various geographic locations in the game.

-

### **Pickton Lake**

*Take brother and sister Cody and Cassie through 16 levels of platforming horror action in this exciting new game for the SNES CD as they try to rescue their abducted friends from spooky ghosts and zombies. While comparable to the NES horror game Friday the 13th, this is a FAR better made game and you'll actually have quite a bit of fun. With the ability to detour off the beaten path for hidden items and with about 300 different voice acted lines, the game utilizes the SNES CD's capabilities well while remaining a super-fun platformer at its core.*

Graphics: 4.5

Sound: 4.0

Control: 4.0

FunFactor: 5.0

Challenge: Intermediate

### **Super Turrican**

*An incredibly fun run-and-gun game in the vein of Contra, it's comparable to Contra III in terms of play-style and with the SNES CD's enhanced graphics it's in some ways the superior game, offering a lot in terms of smooth animation and graphical detail. We're glad Seika decided to create this game for the CD peripheral in lieu of the planned SNES version, though a dual release might have been nice for those who have yet to hop on board with the peripheral yet. Make no mistake, this might just be the best game for the SNES CD to date.*

Graphics: 5.0  
Sound: 5.0  
Control: 5.0  
FunFactor: 5.0  
Challenge: Advanced

### **Mad Dog McCree:**

*This light-gun game, the SNES CD's first, is a fun diversion despite its cheesy dialog and at times spotty controls. The option to use the SuperScope for those who have it from the SNES is nice, but you'll do a lot better with the Justifier gun (though it's sold separately). It's definitely fun, but a little bit on the short side, making it a difficult sell if you're buying at full price. It's a nice demonstration of the SNES CD's abilities but hopefully we get a meatier light-gun game in the future.*

**April 1, 1993**

Hiroshi Yamauchi reviewed the sales numbers from the first four months of Super Nintendo CD sales in North America. Nearly 350,000 units had been sold, more than half of them before Christmas 1992. Sales had been progressing at a slow but steady pace after the sharp drop-off from the holiday season. There'd been a brief spike in sales from the Carmen Sandiego game, but it was a very small spike and sales were beginning to dip slightly. The true test, of course, would come once Super Mario World 2 was released later that week. It had already been released in Japan in February and had done extremely well, pushing total sales of the SNES CD in Japan past the one million mark, while reviews had been excellent, including the first ever perfect 40 from Famitsu.

Yamauchi couldn't be blamed for his trepidation. The Sega CD was outselling the Super Nintendo CD in North America, though it was by a very small margin. Big games could only do so much, if sales didn't pick up soon, more than a few people would start to consider the peripheral a failure. Only Ken Kutaragi's words of encouragement over the last few days calmed his fears, though Kutaragi had been doing that for Norio Ohga as well. He thought about calling up Howard Lincoln and telling him to think up ways to boost sales, but he didn't want to cause friction with his North American branch the way that Sega had begun to do. The continued robust sales of the Super Nintendo were another comfort to him. The company hadn't placed all of its eggs in one basket...indeed, with the continued success of the Gameboy and even the old NES, the company had four. There would be time to worry about the future of the SNES CD later. For now, Hiroshi Yamauchi would be content to wait and see.

-

*"Super Mario World 2 is the best Mario game I've ever played and quite possibly the best video game I've ever played. The world is enormous, the music and graphics are quantum leaps from the original game...indeed, it makes the original Super Mario World look like a tech demo. You wanted a reason to buy the Super Nintendo CD? Here it is."*

-Ed Semrad, from his 10/10 review of Super Mario World 2 in the May 1993 issue of *Electronic Gaming Monthly*

*"So you finally get to the final boss, which of course is Bowser, and he's in this big tank thing, which looks awesome and has so many moving parts, way more than anything seen in a Nintendo game before. The background is this hellish firescape of burning parapets, it's like Toadstool's castle but in an Ozzy Osbourne video or something, and then Toadstool (she's Peach now of course) is lowered on a rope and she's tied up and gagged, and you see her eyes go wide when she sees Mario and then she kind of moves around a bit (great animation here too by the way), and the gag comes down and she lets out this loud "MAAAAAARRRIIOOOOO!!!!" before she gets lifted back up and the fight starts. We've never even HEARD her talk before but that yell for Mario gets you so hyped up for the fight. I mean you knew this was going to be awesome."*

-Ravi Arkanian, from the article "Mario Memories: Super Mario World 2" on IGN.com, published February 17, 2009

*"I must confess, the big reason for the delay of Super Mario World 2 from the SNES CD launch to the following spring was mostly on me. Miyamoto-san asked if I would create*

*some extra music for the game, of course we remembered the last Super Mario World only had a few basic themes for the level music but he wanted about 15 different tracks to be played, instead of just the three or four from the original game, so it took a few months longer to compose those. Miyamoto-san and I both wanted them to be perfect, it was pretty much the last thing we nailed down was the score for the game."*

-Koji Kondo, Game Informer interview, January 2007

*"You collected all eight parts of my time machine! Thank you so much! It's time for me to take you to the Mushroom Kingdom of the future!"*

-Professor Toadstein, preparing to take Mario to the first of two secret worlds once all eight time machine parts are gathered in *Super Mario World 2*

-

## **SUPER MARIO WORLD 2: The Basics**

Super Mario World 2 is a direct sequel to the SNES cartridge game Super Mario World. The game takes place almost immediately after the original. Upon returning from Dinosaur Land, Mario, Luigi, and Princess Toadstool throw a massive party at Toadstool's castle, celebrating their return and also honoring Yoshi for his help. The party, however, is crashed by an angry Bowser and his Koopalings, who kidnap Toadstool and Yoshi and send the brothers flying to the other end of the Mushroom Kingdom. Bowser's Koopa Troop has taken over the entire kingdom and the two Mario brothers must fight their way back to Toadstool's castle to save her.

The game has eight main worlds, unlike the original which had only seven. Also unlike the original, each level has a name, so instead of something like "Yoshi's Island 1", you'd have "1-1: Koopas On The Beach". There are 120 total "goals", with around 75 total levels spread out over the eight main worlds and two secret worlds. Once the second secret world is clear, you can elect to play as Luigi in a single-player game (otherwise he's only available for multiplayer). The eight worlds are as follows:

World 1: Mushroom Beach (A beach-themed world similar to Yoshi's Island in the original, with a few more swimming parts added in.)

World 2: Steamy Jungle (A jungle-themed world)

World 3: The Crystal Sea (An entirely aquatic based world except for a large undersea dome at the end where a couple of levels take place)

World 4: Creepy Caverns (A world of caves and mysterious passages, somewhat similar to Vanilla Dome)

World 5: Heroic Heights (A sky-themed world with a mountain level or two)

World 6: Toad City (A big city with towering crystal buildings)

World 7: Barrel Volcano (Fire-themed worlds)

World 8: Bowser's Factory (Bowser's stronghold, a massive factory complex he's built around Toadstool's castle)

Secret World 1: Mushroom Kingdom 3000 (A group of futuristic levels)

Secret World 2: Rainbow Road (Based on the Rainbow Road from Super Mario Kart, features

eight ultra-challenging levels, equivalent to SMW's Special Zone)

The game can be regarded as sort of the Super Mario Bros. 3 to Super Mario World's Super Mario Bros., more of an incremental update than a total gameplay overhaul. Graphics and sound are vastly improved, the SNES CD allows for improved animation on the characters and very detailed and animated backgrounds, with a well-defined soundtrack. Gameplay-wise, a double jump has been added to Mario's repertoire, if he's running he can jump once and once he lands he can jump again to reach new heights. The Fire Flower and Cape return, along with the Frog and Tanooki Suits from Super Mario Bros. 3. In addition, there's a Mini Mario "power-up" that allows Mario to get smaller to reach secret passages, and finally there's a Jet Mario powerup that enables him to travel incredibly fast (some critics pointed out that this seemed to be deliberately aimed at Sonic's speedy reputation), when Mario is running fast he can blast right through enemies and leap long distances but it takes a while to slow down so pitfalls become a major hazard. The Koopa Kids return as bosses, one per world, with Iggy first as usual, then followed by Larry, Roy, Morton, Wendy, Lemmy, and finally Ludwig. The Koopa Kids don't fight Mario directly, however. Instead they either mount huge machines or summon large creatures to battle Mario, always related somehow to the world's main theme. Secret exits are of course still present, with one secret exit even present in the initial beach world. The game is a BIT more difficult than Super Mario World overall but still a fairly easy game for platforming veterans, however, the level design is much more intuitive and creative. Branching paths in some levels give players more choices about what sorts of challenges they want to tackle (and add to the replay value of the game), other levels (particularly ghost houses, fortresses, and castles) feature a variety of hidden doors and traps to keep players guessing.

The game also notably featured the debut of Charles Martinet as the voice of Mario and Luigi. Mario's voice could be heard mostly in the form of shouts or a few words as he made his way around levels. The game introduced the idea of a more mild-mannered, friendly Mario, as opposed to the gruff Brooklyn voice from previous adaptations of the game. The game featured a few cutscenes (not animated, but shown in a series of images and on-screen narration) between worlds, showing Mario and Luigi adventuring, or Toadstool in Bowser's castle (sometimes trying to escape, sometimes showing kindness to the Koopa Kids or once even to Bowser). It gave the main characters of the series some personality and the game received praise for its limited but amusing narrative which added a bit of flavor and plot to the action of the game.

-

### **April 5, 1993**

Super Mario World 2 is launched in North America for the Super Nintendo CD (the PAL release would come on April 26). The game is launched to rave reviews from a variety of gaming publications, including two of a possible four perfect 10s in Electronic Gaming Monthly, a perfect 40 in Famitsu (the first ever), perfect 5s from Gamepro, and many many more. The game sells over 200,000 copies on launch day in North America, making it thus far the biggest opening day for an SNES CD game. The game gets a 24-page cover story in Nintendo Power, which covers the first five worlds of the game (the magazine teases the

remaining three worlds and mentions the existence of at least one secret world, then advises readers to buy the 204 page Official Player's Guide for more tips). It also becomes the second SNES CD software release to get coverage on mainstream news stations (the first being the controversial light gun game Mad Dog McCree) and the first to be mentioned in a positive light. It drives sales of the peripheral and combo set in both North America and Japan, the former to its largest sales week to date (in Japan the launch week was slightly better). Nintendo executives, particularly Hiroshi Yamauchi, are pleased with the game's success. There are two other games released for the Super Nintendo CD on that day: Classics Of Great Literature, more of an educational tool than a game, which featured the texts of ten great classic novels and offered quiz games based on them, and an adaptation of SimEarth: The Living Planet, which would later that year make its way to the Super Nintendo cartridge system in a slightly less detailed version. Due to being overshadowed by the juggernaut release of Super Mario World 2, the game becomes an instant cult classic, though it's not as well loved as the SNES' 1991 release of SimCity. Super Mario World 2's release signals to the gaming world that the SNES CD is here to stay, and signals to Sega that Sonic CD will need to be an all-time great to top it.

-

"Super Mario World 2 was THE killer game of April 1993 for the Super Nintendo CD, but hey, what about all the other games that got released that month? Yes, there were other games that got released that month and I played them all. Here are some mini-reviews. You're welcome.

Classics Of Great Literature (released April 5): Wait, this isn't a game! And I'm not about to read all ten of these books. I've read two of them, Moby Dick and Tom Sawyer. They were okay, I guess. This was the first game in a line of educational software that all the optical-based systems seemed to have in spades. Nobody bought this. 1/5

SimEarth: The Living Planet (released April 5): Hell yeah, it's SimEarth! I had fun with this game back in the day. Actually this was the only game from this month besides SMW2 I played back in the day. It was pretty killer on SNES CD. They gave you a lot more options and the graphics were much better. 4/5

Dragon's Destiny (released April 12): This was a kind of 3-D graphics game they tried out but the graphics were pretty lousy. Basically you fly around on a dragon and there's another guy on a dragon and you're trying to kill each other. Remember Firebreather on Action 52? It's like that but not god awful. But still pretty bad. 2/5

Sherlock Holmes: Consulting Detective (released April 19): An FMV game, this puts you in the shoes of Sherlock Holmes. There are three different mysteries to solve and you can look for clues. The acting's pretty lousy but I still had some fun with this. As far as FMV games go, it's okay. 3/5

P.T.O.: Pacific Theater Of Operations (released April 19): This was actually a really neat

little war game and Koei put some nice graphical touches on it for the SNES-CD. The maps look a LOT less awkward. There are some pretty cool in-battle animations and several more battles to play. One of the system's best turn-based strategy games and probably the month's best game besides Super Mario World 2. I had trouble putting this down to finish the article. 4/5

Katie Corner (released April 19): I wasn't expecting much from this at ALL. Basically there's a little girl named Katie, who is actually played in some cutscenes by a real child actress, and she helps you solve puzzles and play mini-games and stuff. It's supposed to be an educational game but I had actual fun with parts of this. I'm astonished. This game is rare as balls today, by the way. Like \$150 on Ebay rare. 3/5"

-article from Captain Retro at Games Of The Past, June 8, 2011

-

### **No SNES-CD? No Problem!**

While Super Nintendo players who don't have the CD peripheral may feel left out in the cold in the wake of the release of killer app Super Mario World 2, there's little to be bummed out about this month, with nearly a dozen new releases set to land on the SNES in April alone. Headlining them is the first game to use the SNES' heralded Super FX Chip, "Super Squadron X". Featuring out-of-this-world polygonal graphics, Super Squadron X is the sequel of sorts to the cult Gameboy classic X, a Japan-only release. Created by Argonaut Software, the game is a space shooter that centers around an effort by an elite team of starfighters to liberate a besieged planet. Originally, Star Fox was planned to be the first Super FX chip release, but that game is headed to the SNES CD this summer. Also scheduled to be released is Battletoads and Double Dragon, which hits the SNES in June. Perhaps the biggest SNES release of all, at least over the next 12 months, is Super Metroid, the third game in the Metroid series, which will feature the legendary bounty hunter Samus Aran once again battling space pirates on Zebes. We'll have more information about Super Metroid in the coming months, but it's clear that Nintendo is keeping its promise to support both the cartridge and CD incarnations of the Super Nintendo, and it doesn't look like that will be changing any time soon.

-excerpted from GameFan Magazine, May 1993

-

### **BREAKING NEWS: Nintendo Teams Up With The Jim Henson Company For "Star Fox"**

We've been sitting on this bit of juicy info for quite some time, and now we can finally give

you the first scoop! We've reported that Nintendo has been teaming up with the Jim Henson Company, famous for its work on "The Muppets", "Sesame Street", and many other hit properties across the film and television worlds, but now we can reveal that the company has also provided resources for the in-game cutscenes that will appear in Star Fox, coming to the SNES CD in June. During your flights through the game's levels, you will be occasionally hailed by your wingmen, commanding officer, or even some of the dastardly villains, and all of these animations, including the voice acting, were done by the Jim Henson Company, very closely partnered with Nintendo. The company's staff of writers, camera crews, and "Muppeteers" were all on hand to provide the game's nearly one hour of FMV footage, which Nintendo's talented programmers have seamlessly integrated into the fast-paced action of the game. We'll be able to give you more looks at Star Fox in next month's issue, but for now we're all eager to start playing and be the first to let you know what an awesome game this is shaping up to be!

17. Shadowrun - 2,980
18. Snatcher - 2,457
19. MechWarrior - 2,124
20. Battletoads II - 2,056

-

*"If April 1993 was all about Super Mario World 2, the following month was about diversity. May 1993 was when the SNES-CD's lineup really started to fill out with quality games. You had Super Bomberman CD, which was an excellent four-player game, you had the arcade hit Lethal Enforcers which was by far the best lightgun game to date, there was Alien 3, an outstanding adaptation of the hit movie, there was MechWarrior, one of the best PC games to be adapted to the system, and finally you had the great cult classic Shadowrun. Even that Scatterbeans game was a fairly addicting puzzler. By the end of that month you had no less than a dozen games that were at least decent, with Star Fox AND Final Fantasy III coming out that summer. I think a lot of us were starting to realize that SNES owners on the fence about buying the CD add-on were running out of excuses. Nintendo was doing everything right and sales were increasing every week. It was around that time that Sega began to get somewhat desperate."*

-Former GameFan staffer Tim Lindquist, quoted in "The 90s: A Decade Of Gaming – 1993", on Gamespot.com, July 21, 2001

*"The game that convinced ME to get the SNES CD add-on was Shadowrun. Really great graphics, really fun gameplay, and such a mature narrative, I had to remind myself I was playing this thing on a Nintendo system. The SNES CD is still probably my favorite console of all time and Shadowrun was one of my favorite games for it. A shame it didn't sell very many copies."*

-Adam Sessler, from the X-Play SNES-CD 20th Anniversary Retrospective, December 7, 2012

-

*And "Fallout: The Boneyard" Week continues with our interview of actor/comedian Ray Combs, who voices a sadistic gameshow host who forces your character into a fight for their life (and the lives of several innocent wastelanders). Combs is probably best known for his hosting of Family Feud in the early 90s and his stint on the late 90s sitcom "Fair Play".*

(...)

UGO.com: This isn't the first video game you've worked on.

Combs: Right, I did the Family Feud video game back in.... 1993 I believe?

UGO.com: For the Super Nintendo CD, yeah. That looked like a lot of work that you did, you had to read over 1000 questions and film quite a bit of footage for the FMV scenes.

Combs: The game was pretty involved from what I could tell, I don't play games myself but the footage I saw was pretty cool, it looked a lot like the real show and I got paid pretty well for the sessions, so it wasn't bad. I enjoyed it for the most part. It was kind of a rough time for me though, it was just before I got fired from the show and I was pretty depressed for a while afterward.

UGO.com: We did read about that, I don't know how much you want to talk about it but-

Combs: No, no, it's okay, I've given some motivational talks where I relate my experiences with depression. I think I was just about at my lowest point when I nearly got into a car accident one day, the guy just barely missed me but it was a close and scary call and I started to really re-evaluate my life, I realized even with everything that was going on I had a lot to live for and that's when I started getting help.

UGO.com: We talked to Mary Kay Bergman yesterday, she voices a lot of the female characters in the game and she told us about her own struggles with depression and anxiety.

Combs: Oh, I did a guest voice on South Park a few years back and I got a chance to talk to her, she's a wonderful person and she's made such a good recovery. People don't understand how bad it can be, mental health struggles should be getting a lot more attention. With the shooting at North Carolina State last year, I think it's been getting more coverage in the news but it's still not enough.

UGO.com: People are blaming the games!

Combs: Yeah, they don't want to confront these issues. But I got the help I needed so I'm doing better now. If you're struggling with it, depression or anger or whatever it is, there's help out there.

UGO.com: One more question, would you ever go back to hosting Family Feud?

Combs: I don't think so, Bernie Mac is doing such a good job. He's hilarious isn't he?

UGO.com: He is!

-Excerpted from an interview on UGO.com, November 18, 2008

## **Super Bomberman CD**

Ed: 9

Danyon: 10 (quote: "The most fun I've ever had with a multi-player game. With a huge slate of options, eighteen different arenas, and tons of items and power-ups, grab three friends and bomb the night away with this amazing game! The single-player mode is a ton

of fun as well.”)

Al: 9

Sushi-X: 9

### **Scatterbeans**

Ed: 7

Danyon: 7

Al: 8 (quote: “Really reminded me of Bust-A-Move, but shinier, more colorful, and it moved a lot faster. Probably the best puzzle game available on the SNES-CD, it provides addicting gameplay and some serious challenge.”)

Sushi-X: 5

### **Lethal Enforcers**

Ed: 7

Danyon: 6

Al: 9

Sushi-X: 9 (quote: “A pitch-perfect adaptation of the arcade game and the number one reason to buy a Justifier gun, the arcade hit shines here with thrilling action, tricky stages and lots of ways to rack up points and rescue hostages.”)

### **Alien 3**

Ed: 9

Danyon: 9

Al: 8 (quote: “It's not faithful to the film but it doesn't need to be, it's a great work all its own, with its dark environments and intuitive action, the SNES-CD version of the game is the best looking and best playing and if you're a fan of the film, you're missing out if you don't pick this up.”)

Sushi-X: 8

### **Family Feud**

Ed: 5

Danyon: 5

Al: 9

Sushi-X: 6 (quote: “I'm not a gameshow fan but this is about as close to being on the show as it gets. The FMV is smooth and there are lots of questions to keep you from having to play through repeats for quite some time.”)

### **VideoMash**

Ed: 2

Danyon: 1

Al: 4

Sushi-X: 2 (quote: “When are companies going to learn that we don't want to use our CD add-ons for remixing crappy music videos? This is worse than Make My Video and that's really saying something. They actually went out and filmed original music videos just for this game. A huge waste of time and money for both the makers of the game and anyone who buys it.”)

## **MechWarrior**

Ed: 8 (quote: "A fun adaptation of the PC hit, MechWarrior puts you in the cockpit of a giant robot and sends you to battle other robots across a huge battlefield. The graphics are updated from the PC version, with colorful backgrounds that put you right in the thick of battle.")

Danyon: 8

Al: 7

Sushi-X: 8

## **Shadowrun**

Ed: 9

Danyon: 9 (quote: "The best RPG available for the SNES-CD, this makes Final Fantasy: New Generation look positively old-hat. This game is the future of the RPG genre.")

Al: 9

Sushi-X: 9

-

## **New Software Bundle And An Exciting New Peripheral For Music Lovers!**

With two of the most anticipated SNES-CD releases, "Star Fox" and "Final Fantasy III", set to debut this summer, Nintendo is giving people more reasons than ever to purchase the SNES-CD! Starting in May, which means that these bundles are already in stores as you're reading this, Nintendo will be including the critically-acclaimed hit "Super Mario World 2" with every SNES-CD add-on and Playstation Combo Set! For those who pine for the four-player racing action of Super Mario Kart, don't fret, as the game is still available for separate purchase on store shelves everywhere. In addition, music lovers will want to buy the Nintendo CD Companion. The CD Companion is a control deck which includes a set of stereo speakers and an LED display, so that you can use the Super Nintendo CD as a stand-alone CD player without the use of a television. The CD Companion will retail for \$49.99 and will be available for purchase starting in late May.

-

## **SNES-CD Power Charts – May 1993**

(*italics* signifies an unreleased game without sales figures included, **bold** signifies a newly released game with sales figures included for the first time)

1. Super Mario Kart – 16,418

2. Street Fighter II: Arcade Edition – 16,370

3. *Super Mario World 2* – 14,389

**4. Where In The World Is Carmen Sandiego? - 11,105**

5. Final Fantasy: New Generation – 10,884

6. *Star Fox* – 8,705

7. *Final Fantasy III* – 8,364

8. *Super Turrigan* – 7,906
9. *Run Saber* – 5,606
10. *Lethal Enforcers* – 4,851
11. *Alien 3* – 4,700
12. *Sewer Shark* – 4,158
13. *Super Ghouls 'n Ghosts CD* – 3,712
14. *Battletoads II* – 3,155
15. *Mad Dog McCree* – 2,840
16. *Double Switch* – 2,750
17. *Shadowrun* – 2,667
18. *Dragon's Lair* – 2,253
19. *Super Bomberman CD* – 1,886
20. *Final Fight II* – 1,824

-

*"Frank Oz and Mr. Miyamoto bonded right away. I mean they were really inseparable during the months they spent working on Star Fox. Sure, there was the language barrier, but I think the language of creativity sort of bridged the gap. I have never seen Mr. Miyamoto so happy as when he was working on that game with the people at the Jim Henson Company, but especially Frank Oz. I think if it was up to Mr. Miyamoto, he'd have worked on all his games with him. It was just a really close connection, and I think that's why the original Star Fox was as good as it was. I think it kind of got lost in the fold a bit among some of the other great games that came out in '93, but that game was Mr. Miyamoto's favorite, I think, out of all the games he did for the SNES-CD."*

-Howard Lincoln, interview with TIME Magazine, July 1, 2002

*"Final Fantasy V brought me out of my rut in a lot of ways. I had done New Generation of course, but this game was much more fulfilling. It was the first time that Squaresoft really let me do a translation without so many restrictions, of course back in the early SNES days there had been a lot of restrictions because of Nintendo's content policies, but here, I could do a bit more of a mature script. I mean, I wasn't going to go overboard, I think I ended up using 'damn' twice and 'hell' once, but it was a big step for a game series that had previously been so squeaky clean in terms of language in the US. I guess the censorship policies brought us 'you spoony bard', but that was about it in terms of the good that they did. I self-censored for the most part, but having the extra freedom was nice."*

-Ted Woolsey, excerpted from an interview with RPGamer.com in 2002

*"A lot of people don't know this, but the first character to swear in an American Final Fantasy game was Faris, a woman. I actually remember the first time I saw the words on screen: 'Damn it, Syltra!' as her beloved sea dragon was sinking into the whirlpool. Of course at that point the game was still trying to make you think Faris was a man, but the fact that the first swear word in a game that Nintendo promoted heavily in the United States came out of a woman's mouth was a groundbreaking moment for gender in video games. Yes, the series and the medium had a LONG way to go for gender equality, but Faris and her potty mouth were an oasis in a desert of male domination."*

-Anita Sarkeesian, "Tropes vs. Women In Video Games Part 2", Youtube.com, May 17, 2013

*"Do a barrel roll! To barrel roll, press L or R twice!"*

-Peppy Hare, *Star Fox*

*"By CES 1993, it was clear to me that Nintendo wasn't interested in what we could do for them, they were happy with the direction that Sony was taking them. With the success they'd been having with their CD add-on we couldn't really blame them, but there was another intriguing offer that I knew was worth a second look."*

-Ed McCracken, CEO of Silicon Graphics, interview with Wired Magazine in October 1999

-

\*Sergeant Pepper, in animated form, is shown seated at his desk.\*

Pepper: Star Fox, we need your help! Andross has invaded the Lylat System and only you can stop him!

\*A variety of quick scenes from the game are shown, showing off the graphics and the fast-flying action.\*

Pepper: You must hurry! Soon, Lylat will be- \*the screen goes static and soon Pepper's face is replaced by that of Andross, laughing loudly\*

Andross: Don't even try to do battle with me! I control the galaxy and I will not be stopped! \*laughs again\*

\*More scenes of the game are shown as the narrator speaks.\*

Narrator (Don LaFontaine): It's Nintendo's most epic adventure yet, an interplanetary war with you at the controls of the Arwing, the fastest, most heavily armed fighter ship in the galaxy! Join up with your wingmen and take the fight to Andross as you fly across more worlds than you can imagine. Will good prevail or will Andross conquer all? Only you can save the Lylat System in Star Fox, the newest game for the Super Nintendo CD. Take it to the next level!

-Nintendo's commercial for Star Fox, which began running in May 1993

-

## **Star Fox: The Basics**

Nintendo's Star Fox, released in North America on June 7, 1993, stood as its second biggest first-party release for the SNES-CD in 1993, and the game was groundbreaking at the time in terms of FMV production values. The Jim Henson Company directed and created the game's full-motion video, which appeared during between-mission cutscenes, pre-mission briefings, and most ubiquitously, during missions in brief clips that would play as various characters conversed with Fox McCloud, whether they be Fox's wingmen, Falco, Peppy, and Slippy, or the various enemy characters who populated the stages, including the game's main antagonist, the planetary conqueror Andross. The game itself was a fairly standard space shooter, though the SNES-CD's fast processing and memory capacity allowed for polygonal graphics at a fast framerate, providing arcade-quality visuals as your Arwing zipped through the game's stages. At the start of the game, you would choose one of three routes to take on the planet Corneria, an easy route, a medium route, or a hard route. Depending on the route taken, you would advance to a different second stage, with a total of seven stages in all. On the easy and medium routes, hidden objectives in the second and

fourth routes would allow you to advance up a stage, so for example, if you were on the easy route for stage two, you could complete the hidden objective and advance to the medium route for stage three and onward. These hidden objectives were added late in production to allow a variety of routes through the game's stages so that there were more than three possible runs the player could take, the route changes enabled the potential for eight different runs through the game, with a total of fourteen worlds and eighteen stages (three different Cornerias and three different Venoms). The cutscenes themselves were integrated fairly seamlessly into the gameplay, they were criticized among some game journalists for being cheesy or silly, but compared to other FMV efforts on the SNES or Sega CD, they were downright excellent, especially with veteran Muppeteers like Frank Oz, Jerry Nelson, and Fran Brill, among others, providing the voices.

-

### **Star Fox**

*There's a new star in town and it's Star Fox, the exciting new space shooter from Nintendo. Take your team of hot-shot space pilots through more than a dozen worlds as you seek to take down the galactic conqueror Andross! Some of the FMV is a bit silly at times but it adds atmosphere and character to this already excellently produced game.*

Graphics: 5.0  
Sound: 5.0  
Control: 5.0  
FunFactor: 5.0  
Challenge: Adjustable

### **The Lost Vikings**

*Blizzard's Amiga hit comes to the SNES-CD and out of all three console versions it's the best of the bunch, with graphics far outstripping its SNES and Genesis cousins. The gameplay hasn't changed though, and taking Erik, Baleog, and Olaf through the game's challenging levels has never been more fun!*

Graphics: 5.0  
Sound: 4.0  
Control: 5.0  
FunFactor: 4.5  
Challenge: Intermediate

### **ClayFighter**

*This irreverant fighting game looks great on the SNES-CD, but while we got lots of laughs while playing it, it's still no Street Fighter II, and with Mortal Kombat coming to home consoles in a few months, we don't think we'll be spending much time with this one. If you're looking for something sillier than your usual fighting fare, this is great, but if you're looking for something more robust, look elsewhere.*

Graphics: 4.5  
Sound: 3.0

--Excerpted from GamePro's reviews of June 1993's SNES CD releases, from their August 1993 issue

-

\*Several people are sitting outside an office. There's a voice from inside the room.\*

Voice: Next!

\*A young man sits down across from the person behind the desk.\*

Employer: What makes you think you can handle saving the world? What are your skills?

Applicant: Well...

\*A succession of applicants are shown seated in the chair, each one names one of their "skills" which happens to be a skill in the game. There are five in all, some are shown more than once.\*

Applicant: I can wield a sword...

Applicant 2: I'm the world's greatest thief!

Applicant 3: I can rain fire down on enemies!

Applicant 4: I can summon powerful magical creatures to do my bidding!

Applicant 5: I can make the earth open up beneath the battlefield!

Applicant: I can wield TWO swords at once!

Applicant 3: I can strike over and over in the blink of an eye!

Applicant 2: I can do whatever the last guy does.

Applicant 5: I can mix any two things together and cook up something awesome!

Applicant: I got a huge cannon!

Applicant 4: I can take flight on the wings of a dragon!

Applicant 3: I use my enemy's own attacks against them!

Applicant: I can freeze time!

Applicant 2: I can toss money to destroy my enemies!

Employer: \*has a stone-faced expression and then he smiles\* Great! When can you start?

Applicant 1: Right away! So...what job did I get?

Employer: All of them!

\*Scenes from the game begin to play.\*

Narrator: Use the brand new Job system to defeat your enemies and save the world in the brand-new Final Fantasy III, the biggest adventure ever to hit the Super Nintendo CD. Create any team you want and explore the world, but watch out because the evil Exdeath doesn't mess around. It's Final Fantasy III and it's only on the Super Nintendo CD. Take it to the next level!

-North American advertisement for Final Fantasy III, which began playing in June 1993

-

### **Final Fantasy III: The Basics**

Final Fantasy III, originally released in Japan as Final Fantasy V on the SNES, is virtually unchanged in gameplay terms from its SNES cousin, save for the addition of two new jobs, the Pirate and the Gladiator. The graphics, however, were given a bit of an overhaul, particularly the character sprites. Squaresoft had been working on advanced character sprites for Final Fantasy VI, but they got their first test drive on the SNES-CD Final Fantasy V, allowing for significantly more character animation and expression. The monsters also got a bit more detail, and the music was enhanced for CD audio, though it too remained largely unchanged from the original score by Nobuo Uematsu, with only the addition of more instrumental clarity enhancing the game's songs. The game, released on July 12, 1993 in North America, saw a release in September 1993 in Japan as "Final Fantasy V: Special CD Edition".

-

### **The Shores Of Whitespace**

*A fairly bad FMV game, this fantasy-based adventure tries to spice things up by playing like an old-school RPG dungeon crawler in the vein of Dungeons and Dragons, but hopelessly difficult gameplay and terrible acting don't make this game worth the trouble. Get Final Fantasy III instead.*

Graphics: 3.5  
Sound: 2.5  
Control: 2.5  
FunFactor: 2.0  
Challenge: Advanced

### **Time Gal**

*A quirky but rather fun FMV-based anime adventure, Time Gal has some show-stopping moments if you can navigate your way through its tricks and traps. It's not quite Dragon's Lair but anime fans should love it and it's heroine is fairly endearing.*

Graphics: 4.0  
Sound: 3.5

Control: 3.0  
FunFactor: 3.5  
Challenge: Intermediate

### **Final Fantasy III**

*Squaresoft's epic adventure is the best Final Fantasy game yet. It's tough as nails, but the Job system lets you customize your party to meet a variety of challenges. Believe me, you'll need to get VERY familiar with it to make it to the end of this game.*

Graphics: 5.0  
Sound: 5.0  
Control: 4.5  
FunFactor: 4.5  
Challenge: Advanced

### **Dark City**

*This FMV detective game takes after the old film noir serials, where you're a detective in a grungy place called Dark City and you have to take down a gang of nasty thugs who have kidnapped the husband of your beautiful client. While there are a few redeeming moments, the game can be rather frustrating at times and the clues it gives you to solve the mysteries are really vague. Only the most hardcore FMV or detective game fans need apply.*

Graphics: 3.5  
Sound: 4.0  
Control: 3.0  
FunFactor: 2.5  
Challenge: Advanced

### **Clue**

*Based on the classic board game and somewhat on the movie, this fun FMV game is perhaps the best detective game to hit the SNES CD. In a sea of FMV games this month, this is the only game that potentially rivals Final Fantasy III as being the best game of the month. All your favorite characters are here and you never know who's the killer until you solve the clues. A really good execution on the SNES CD.*

Graphics: 4.5  
Sound: 4.0  
Control: 4.0  
FunFactor: 4.5  
Challenge: Intermediate

--Excerpted from GamePro's reviews of July 1993's SNES CD releases, from their September 1993 issue

-

*"This is really, I think, a game that just wouldn't have been possible without the SNES-CD, and that's the first game we've done at Squaresoft that we can honestly say that about. I designed this game with that extra memory capacity in mind, this world and this quest is*

*just so huge that this game could only have happened on the CD-ROM. The complexity of the music and all the things going on on the screen at once, this is the reason why we pushed so hard for this unity between Nintendo and Sony."*

-Koichi Ishii, designer of *Secret of Mana*, translated from comments in Famitsu magazine, August 1993

*"So I'm hearing all the praise for Final Fantasy III, which is a well-designed game from a production aspect, but in terms of the gameplay it can hardly be called a role-playing game. There's a scene in there where a main character dies and there's nothing you can do about it. No choice, no freedom, you just have to watch him die. But in Ultima, a game where you have limitless freedom, you could save a character like that. Your actions determine everything that happens in the game, for better or for worse. The Ultima series has always been about the freedom to determine what kind of hero you're going to be, and that's why I think that ultimately, players enjoy the Ultima series more than any other role-playing game. Including non role-playing games like Final Fantasy."*

-Richard Garriott, excerpted from an interview at the Summer 1993 CES promoting Sega-CD's version of *Ultima Underworld II: Labyrinth of Worlds*

### **Summer 1993 CES Special**

Summer 1992's CES was all about the new optical CD add-ons on the video game front, but this year it's all about the games, and all the major players in the industry had something to show at this year's event.

The Nintendo booth was a fun place to be, with a variety of games on display for the Super Nintendo and its CD add-on, as well as the Gameboy. Super Mario All-Stars was the headlining game at the Super Nintendo display, with a massive banner promoting the game and a large number of demo kiosks. This game is an updated re-release compilation of the NES Mario Bros. titles and even includes the original Super Mario Bros. 2, which has been re-branded as the Lost Levels. Street Fighter II Turbo, which brings most of the gameplay enhancements of the SNES-CD's Arcade Edition, along with a new Hyper Fighting Mode, was also prominently displayed here. We got a glimpse of Super Metroid, which wasn't yet playable, as well as Star Tropics II, which was originally announced for the NES, but is now making its way to the Super Nintendo sometime next spring. One more title that we were really intrigued by was "Earthbound", a remake of a very quirky NES RPG called "Mother". The game has had a lot of work done on it, including graphical enhancements and re-balanced difficulty, along with a re-scored soundtrack that should make it a big hit among RPG lovers.

The SNES-CD had plenty to show off as well. We got a quick preview of Hideo Kojima's PC hit "Snatcher", which looks to make its way to the SNES-CD sometime early next year. We also got glimpses of movie-based games "The Terminator" and "Jurassic Park", and a playable demo of Battletoads II, which looks really nice and should be out this December. The SNES-CD's most intriguing title for this year, however, appears to be a game that's more than two years in the making. It's the long-awaited Project Mana, known in Japan as "Seiken Densetsu 2" and has been revealed as Secret Of Mana in the West. The game looks extremely promising, Nintendo and Squaresoft are saying that the main quest has over 60 hours worth of gameplay and the graphics and sound are among the best we've ever seen in a video game. The game also takes advantage of the SNES-CD's multiplayer capabilities, allowing three people to play at once, a first for an RPG such as this. A nearly-completed version was available for demonstration at the SNES-CD booth and it was one of the most crowded booths at the show.

Sega also had an impressive CES, something they needed in the wake of Nintendo's rising sales. They showed off the Sega Genesis and Sega CD versions of Disney's Aladdin and the game looked quite good, especially the Sega CD version of the game, with very fluid animation and lively music. Gunstar Heroes was one of the more surprising hits of the Sega booth, rivaling Secret of Mana's display as one of the most crowded of the whole show. The very fun run-and-gun shooter game from Treasure looks to be one of the best Genesis exclusives of the year and it's one we can't wait to review. There were two huge Sega CD games on display, the first being Sega's answer to the hit Super Mario World 2... Sonic CD was fully playable and looked amazing, the gameplay involves time travel as Sonic travels between past and future versions of worlds to make changes that effect one or the other. The graphics looked as good as anything we've seen on a console and the music is typical Sonic awesomeness, perfectly fitting the stages and levels it accompanies. For our money, Sonic CD is in a dead heat with Secret of Mana as our Summer 1993 CES "Best Of Show", with our editors unable to decide who comes out on top. Sega was also keen to show off its newly acquired property, the Ultima series, just purchased by the company to provide an RPG rival of sorts to Nintendo and Squaresoft's Final Fantasy. The Sega CD's Ultima Underworld II looks like a perfect port of the PC version and Sega is really hyping it up as one of their biggest games of the year, it's a classic dungeon crawler where you explore a dark labyrinth while fighting countless hordes of enemies, and Richard Garriott was present at Sega's booth to answer every question that reporters could throw at him. The SNES-CD has had an outstanding year but if Sega's CES was any indication, this company is poised to strike back in a big way, and this Christmas could go down as the holiday that Sega finally knocks Nintendo off its throne.

-Electronic Gaming Monthly's Summer 1993 CES recap, from their September 1993 issue

-

### **SNES-CD Power Charts – June 1993**

(*italics* signifies an unreleased game without sales figures included, **bold** signifies a newly released game with sales figures included for the first time)

1. Super Mario Kart – 16,982
2. *Super Mario World 2* – 15,774
3. Street Fighter II: Arcade Edition – 15,081
4. Final Fantasy: New Generation – 11,486
5. **Super Turrigan** – 11,374
6. *Star Fox* – 9,648
7. Where In The World Is Carmen Sandiego? - 8,845
8. **Mad Dog McCree** – 8,742
9. *Final Fantasy III* – 8,405
10. **Pickton Lake** – 6,075
11. *Lethal Enforcers* – 5,629
12. *Alien 3* – 5,051
13. Run Saber – 4,645
14. *Battletoads II* – 4,113
15. *Super Ghouls 'n Ghosts CD* – 3,611
16. Sewer Shark – 3,218
17. *Super Bomberman CD* – 2,842
18. *Shadowrun* – 2,804
19. *Final Fight II* – 2,114

20. Double Switch – 1,995

### **SNES-CD Power Charts – July 1993**

1. **Super Mario World 2** – 37,186
2. Super Mario Kart – 14,382
3. Street Fighter II: Arcade Edition – 13,906
4. Final Fantasy: New Generation – 10,766
5. *Star Fox* – 9,841
6. *Final Fantasy III* – 8,641
7. Where In The World Is Carmen Sandiego? - 6,642
8. Super Turrican – 6,124
9. *Lethal Enforcers* – 6,066
10. **SimEarth: The Living Planet** – 4,865
11. Mad Dog McCree – 4,772
12. *Battletoads II* – 4,305
13. **Dragon's Destiny** – 3,862
14. Pickton Lake – 3,730
15. *Alien 3* – 3,641
16. **P.T.O.: Pacific Theater of Operations** – 3,179

18. *Super Bomberman CD* – 2,826
19. *Super Ghouls 'n Ghosts CD* – 2,617
20. Run Saber – 2,446

-

### **July 23, 1993**

James Jordan slept in his car just off Interstate 95 in Lumberton, North Carolina. He was heading back home from attending a funeral, and he'd pulled off the road after he felt himself getting sleepy behind the wheel. No sense in risking another hour on the road, not when he had so much going well for him. His son Michael was the greatest basketball player in the world, having just won his third straight NBA championship. He loved seeing his son succeed. Michael had talked to him just recently about having become bored with the game and intimated to him an idea about taking up baseball, the sport James loved to play. How had Michael put it? He had "no more mountains to climb"? But James knew of plenty more accomplishments for his son to go after. He still had seven fingers without rings, after all. Or currently, nine fingers, as James was holding onto two of his son's championship rings as he slept in that car that warm summer night.

The sound of sirens stirred the man from his slumber. He sat up just in time to see a car speeding past with three police patrol vehicles in hot pursuit. The two 18-year-olds inside the speeding car had just shot a truck driver to death, just to steal a few of the video game consoles he'd been hauling.

James didn't care about video games and he had no idea why that car had been going so fast. All he knew was that he'd been having a good dream about his son winning a fourth NBA championship and the police chase had roused him from sleep.

"Damn fools," James muttered to himself, rolling over in an attempt to get back to sleep. He needed his rest. He still had quite a drive tomorrow.

-

## August 2, 1993

Ken Kutaragi couldn't help but smile as he read the latest sales reports from North America. The Super Nintendo CD had had another outstanding month, posting its biggest sales month yet in fact. Star Fox had been a major hit, and Final Fantasy III was currently the fourth fastest selling SNES-CD game in North America, behind only Super Mario World 2, Star Fox, and Super Mario Kart. It was even outselling Street Fighter II, though that would likely change as the game's initial sales rush died down. The SNES CD was rapidly catching up to the Sega CD in total sales and it would only be a matter of time at the current pace before Sega's peripheral was overtaken. Though the future of Nintendo and Sony's joint venture had seemed in doubt just three months before, things were looking brighter every day.

At the same time, Kutaragi had something else to be overjoyed about. The promise he'd made to his boss Norio Ohga about music CD sales was coming true. CD sales were soaring around the world, the highest they'd ever been, and business and music news sources were all in agreement: The Super Nintendo CD was a major factor. Indeed, the peripheral was the world's best-selling CD player of 1993, with tens of thousands flying off the shelves daily. Every CD sold was money in Sony's pocket and the money they'd put into production and development of the SNES-CD was rapidly being replenished. Even Norio Ohga was cracking a smile from time to time. As humble as Kutaragi tried to be, he couldn't help but feel that the gratification he got from Mr. Ohga made all of the risks he'd taken worthwhile.

-

Across the world in Redwood City, California, Tom Kalinske had been expecting a call for the last few days. While his bosses at Sega of Japan had told him that his latest endeavor was not something he should be pursuing, he had promised that if this venture paid off, it would be Sega's ace in the hole, the one thing they had that could counter the powerhouse combination of Nintendo and Sony. If this venture failed, Kalinske knew that Sega would be playing catch-up for years...indeed, that they might never recover.

Kalinske's phone rang. He picked it up and when he heard the voice on the other end of the line, a smile crossed his face. He even let out a small chuckle.

"Mr. Kalinske, this is Ed McCracken with Silicon Graphics. How are you doing today?"

"I'm quite good, thank you," Kalinske replied. "I was actually waiting for your call."

"Ahhh, that's a good sign I think," said McCracken with a chuckle of his own. "So that means it's a go?"

"Yeah," said Kalinske with a nod. "If your company's willing to help us with Project Saturn then it's absolutely a go. My bosses are gonna need some convincing, how soon can you start work on a tech demo?"

"We've got one ready to go. We can fly to Japan this week. We're really looking forward to working with you."

"So am I, Ed, so am I."

-

*"I did my best not to look it, but I was so nervous during that meeting. The future of Sega hinged on what the guys in Japan thought of Ed's presentation. In order for them to give the go-ahead to working with Silicon Graphics, we'd have to convince them that this technology was the right way to go for Project Saturn. I wasn't used to letting someone else do most of the talking for me, but Ed and the Silicon Graphics people really blew them away. I had to keep myself from cracking a smile every time I saw one of those stoic Japanese businessmen raise an eyebrow at what they were seeing on the screen. It was like the World Series of Poker in that room, everyone trying not to show what they were really thinking. Of course, like in poker, the only thing that mattered was having the best hand, and Silicon Graphics was holding a royal flush that day."*

-Tom Kalinske, "The Sega Saturn Story (Part 1 of 3)", IGN.com, September 16, 2005

*"When we first got the Project Saturn dev kit, which at that time was super top-secret because Sega did NOT want Nintendo to know what they were up to, I was pretty blown away at the kind of things this new game system was capable of, way more than anything on the Super Famicom or even their new CD system. Aladdin for the Super Famicom had just come out and it had been a big hit, so I was pretty confident that I could do something with this new hardware. I had an idea for a game, it was kind of like that old Sweet Home game for the Famicom, something that would involve horror, and it was really the kind of thing you couldn't do yet on any of the Nintendo devices. The Super Famicom CD was doing some nice stuff with point and click, but this game I wanted to be in real time and Sega's new console would be the first home gaming device capable of that."*

-Shinji Mikami, interview in Famitsu magazine, February 1998

*"We're not too worried about what Sega's doing with their new partner. We have a big year ahead at Sony and we're looking forward to putting out the best games on the market for the Super Nintendo CD."*

-Ólafur Jóhann Ólafsson, interview at the 1994 Winter CES

*"Sega CD: A whole new world of entertainment."*

-*"Whole New World"* marketing campaign for Sega CD, which began airing a new series of commercials in October 1993

-

## **August 10, 1993**

Tom Kalinske couldn't have been more pleased with how the meeting between Sega's top brass in Japan and the team from Silicon Graphics had gone. They'd put together a demo package of gameplay that utilized one of their newest graphics chips, a chip that could be put into Sega's next console to provide PC-quality visuals on a home gaming device. They'd shown how their chip could make Sega's console capable of real-time 3D graphics that far outstripped anything the Sega CD was capable of, with four times the processing power and speed that made Sega's "Blast Processing" look archaic. Hayao Nakayama had personally given his approval to Tom Kalinske to make Silicon Graphics' new chip a critical component of Project Saturn. While most of Sega's creative energy would continue to be put into the Sega Genesis and its CD add-on, development on Project Saturn, Sega's next generation

console, would now begin in earnest, with a target release date sometime in 1995.

-

*Once I had Silicon Graphics behind me, and Japan's support, I knew the real work was about to begin. I had to get third-party support for this thing, which I was having trouble securing for the Sega-CD. However, once we started sending out feelers toward potential partners, the responses we got were extremely encouraging. Capcom was behind us from the start, which was fantastic and was something I couldn't help but do some celebratory fist pumps over. I knew there was no way we'd be able to poach them from Nintendo but they'd been playing both sides of the console wars for quite some time and they were happy to continue doing so in the future. We learned that one of their development teams had been given the go-ahead to start working on this horror game for the new hardware, and what they were able to produce after a few months was really promising. We also heard from a team of British developers, Core Design, about this idea for an action-adventure game starring a woman protagonist, and as a guy with daughters at home, it was nice that there was going to be a hero that girls could possibly identify with. I mean, Nintendo did have Samus, but she was kept hidden in a suit for all of her games, and the other major female characters at Nintendo were all damsels-in-distress! Then there was Crystal Dynamics, who were working on games for 3DO at the time. They were EASY to convince to start working on Project Saturn games, because they were struggling with the 3DO's limitations. It was rumored that the 3DO wasn't even as powerful as the Super Nintendo CD, and Trip Hawkins wanted to charge \$700 for it? When the 3DO became one of the biggest flops in gaming history, I think it more than justified their decision to hop on board with us. Then there was Silicon Knights, who'd been so impressed by our Project Saturn specs that they not only offered to make games for it, but also agreed to port their Fantasy Empires and Dark Legions games to the Sega CD in 1994, which boosted that system's library at a time that we sorely needed it.*

*It's hard to express how happy I was to have picked up Silicon Graphics after Nintendo snubbed them for development of their own next generation console. It was funny, because they'd told us that they'd sought out Nintendo before us BECAUSE of their alliance with Sony, and then Nintendo's alliance with Sony was the reason they'd turned Silicon Graphics down! Nintendo had been stealing our thunder for quite some time. I remember one of the moments when I was quite annoyed with them, we were all set for the Sega CD launch in 1992 and we'd gotten a really good slogan, "Welcome To The Next Level" to use in our advertising. We go to trademark it and lo and behold, Nintendo had trademarked "Take It To The Next Level" for their Nintendo CD just three weeks before we came up with our slogan. We had to launch the Sega CD with some other silly phrase, I don't even remember it off the top of my head, and I know it hurt our sales once the Super Nintendo CD was out. We eventually borrowed "A Whole New World" from Disney around the time they helped us with our Sega CD Aladdin game, we used "A Whole New World Of Entertainment" for our big Sega CD promotional push in late 1993 and I think that moved some CD add-ons for us, so it came out all right in the end. But I knew that picking up Silicon Graphics after Nintendo turned them down would be a huge coup for us.*

*And, for a time at least, I was right.*

-Tom Kalinske, "The Chase: Sega's 20 Year Struggle To Take Down A Giant", released in May 2014

-

*"Going into the winter of 1993, we had damn good reason to be confident. Super Nintendo CD sales had passed those of the Sega CD, but we were still selling more Genesis consoles than Nintendo was selling Super Nintendo systems. In addition to that, the SNES CD's holiday lineup looked pretty lousy. Their big three games of the holiday season were looking to be The Terminator, Secret Of Mana, and Battletoads II, while on the Sega CD, we had Aladdin, Ultima Underworld II, and Sonic CD. The Sega CD's Aladdin was set to be THE definitive version of the game. There were versions coming out for the Super Nintendo and our own Genesis, but the Sega CD version had smoother animation, better music, more levels, and it was the only one that was going to have cutscenes from the movie itself. We were working with Disney on putting together a big marketing push and it was going to be a big system seller. Then we had Ultima Underworld II, which was going to include the original Ultima Underworld as a pack-in. That was two games in one, and we were going up against a totally new franchise in Secret of Mana. At that time Ultima was THE premiere name in video game role-playing, and on name recognition alone we felt confident that we could outsell Secret of Mana no problem. Finally was Sonic CD, that was the big one and we thought it would put CD units in homes the same way Super Mario World 2 had done for Nintendo. Tom was going to slash the Sega CD's price to \$149.99, and on top of that, if you bought a \$99.99 Genesis that holiday season, you'd get a \$20 mail-in rebate on the Sega CD! That meant you could get both for \$229.99. Even though we knew Nintendo was about to cut the Super Nintendo's price down to \$149.99 and the price of their Playstation CD combo set to \$299.99, we'd still be coming in at \$70 less. With all those games AND Sonic 3 set to come out for the Genesis, buying Sega consoles would be a no-brainer that year and we were going to launch an aggressive marketing blitz to that effect. We knew that the biggest battle of the console wars would be waged over Christmas 1993, and we were going to throw everything into it."*

## **RPG Update!**

Nintendo is set to release big RPGs for the Super Nintendo this winter, both here and in Japan! First is an update on "Earthbound", which is still set for release for the Super Nintendo this December. From the mind of Shigesato Itoi, Earthbound is a remake of the 1989 NES RPG "Mother", about a young boy who sets out on an incredible adventure to battle a mysterious alien menace! It's a bit stranger than some of the role-playing games you might be used to, but we think that players will be pleasantly surprised at how quickly the story will pull players in!

Meanwhile in Japan, the third installment of Nintendo's Fire Emblem series is set for release for the Super Famicom. It's the console's first ever 24-bit cartridge and we have to say it looks absolutely fantastic, putting every one of those 24 bits to work! So far, there aren't any plans to release the game in the United States, but with the success of the Super Nintendo CD add-on, the fourth installment of the series could well find its way to Western shores! Stay tuned!

*-From the August 1993 issue of Nintendo Power*

17. Pickton Lake – 3,548
18. Final Fight II – 2,981
19. P.T.O.: Pacific Theater of Operations – 2,504
20. Family Feud – 2,014

-

*"So on the Super Famicom CD, we have this new technology that allows for full-motion video. And my philosophy has always been and probably always will be that it's unnecessary. If the game is fun to play, it doesn't need the full-motion video. But it can be nice....to have it, in a game, a little bit of it. I see it like, it's ketchup. And a good game is like a delicious hamburger. And if you put a little bit of ketchup on the hamburger it can make it taste better. But you wouldn't want to eat an entire bowl full of ketchup and nothing else, right? \*laughs\* So these games that are just full-motion video and nothing else, if it was up to me we wouldn't have them on here at all. I know the Sega CD system has lots of them, and we're seeing more and more of them on the Super Famicom CD, but I don't want them. There's a terrible game, a game that was on the Sega CD, with these girls in a house, and it showed video of the girls and you clicked buttons to set off traps and trap the girls or something like that. And some people wanted to put it on the Super Nintendo CD and I was absolutely against it, I rarely get mad but when I thought about the possibility of a game like that on there I was furious. That's not a game. That's just a movie that you push buttons to. It wasn't up to me but I made my opinion known. I think....I think the idea behind some of the full-motion video is that companies are trying to fill the whole disc. You have these compact discs, and they have so much memory and you can put so much on them, but you don't have to fill up the whole disc! It's like, when we were making Super Mario World 2. We had all that space and that let us put more music on there, rich music, and that took up most of the memory of the game if I recall. We had better animations for the characters, and some voice clips, and it let us put more levels in the game, more secret levels which are nice, but we had...I think it was a little more than half the disc was just empty space! And that was fine. There might have been the temptation to put animated scenes on there but we told our story with the still shots and the on-screen narration and we did it very effectively. We didn't need to fill up the disc. I don't see why there's this big need among all these game makers to fill up the whole disc. We could put 10,000 Super*

*Mario Bros. games on one of these discs. As long as the game is fun, it doesn't matter."*  
-Shigeru Miyamoto, translated from an interview in the October 1993 issue of Famitsu magazine

*"One of my favorite Super Nintendo CD moments is at the end of Deadman Sam, the underworld wedding scene! That scene was adorable, you have Sam and Nellie and all their little friends in the afterlife, and it doesn't matter that it's a skeleton marrying a ghost, it's just the cutest thing! That was one of my favorite games."*  
-Comment from a "Talk Amongst Yourselves: SNES-CD 20th Anniversary Memories" post on Kotaku.com, December 5, 2012

*"And he's off! And we're off on the 1993 Super Toy Run! And he's going right for the Super Nintendo CD! He's going right for it first thing and he's grabbing it and all the games he can carry! Holy cow look at all those games!"*  
-Mike O'Malley, announcing the 1993 Nickelodeon Super Toy Run

-

Though the Super Nintendo CD featured many installments of long-running video game franchises, the add-on launched a number of franchises of its own. By 1993, when it was entering its full swing, the SNES-CD played host to a growing number of original franchise games. People remember games like the kiddie horror classic Pickton Lake, but it was Deadman Sam, which was released in North America in August of 1993, that was perhaps the system's biggest early franchise launch. Created by Tecmo, Deadman Sam is a horror platformer somewhat comparable to Ghouls 'n Ghosts, though it's considerably easier and more forgiving. You can pick up a variety of weapons and powers to help defeat the myriad of enemies standing in your path. The game's graphics were considered quite good for a 1993 Super Nintendo CD game, featuring excellent animation on the character of Deadman Sam and a great variety of colorful and spooky levels to venture through, eighteen in all over the course of the game. The music is both upbeat and haunting, with the game using the SNES' CD capabilities to full effect, providing one of the most audibly deep soundtracks on the system. There's also voice acting, not much but in certain scenes, Sam, Nellie, Scagwell, and a few other characters have some spoken lines. It PROBABLY could have been done on the SNES (and was done on the Gameboy in 1995 in Deadman Sam's Spooky Quest, a scaled down sort-of remake of the original featuring only seven levels), but the Super Nintendo CD really brings Sam's world to life, allowing for the kinds of animation and auditory detail that wouldn't have been possible on the vanilla SNES. You could tell that the SNES CD's capabilities inspired the creators of this game and that without it, Deadman Sam the game and franchise (with nine main series games and seven portable and side games) probably wouldn't exist.

The game's storyline is a bit macabre but in its own sweetly fun little way. You're put into the role of Samuel, a young nobleman engaged to be wed to the beautiful Nellie. But on the eve of Samuel's wedding night he is the victim of murder most foul at the hands of Baron Scagwell, a rival for Nellie's hand. Samuel is sent to the underworld, where he becomes a skeletal hero now known as Deadman Sam. As Deadman Sam ventures through the underworld in order to liberate its denizens so that they might afford him a chance to see Nellie once more, Scagwell, who has gotten away with the crime, woos Nellie and eventually arranges a wedding between the two of them (though it is Nellie's cruel parents and not Nellie, who is suspicious of Scagwell and investigates the crime while Sam is venturing through the underworld, who insist upon Nellie marrying him). Eventually, Deadman Sam defeats the cruel demonic tyrant who is making the lives of his new underworld friends a

living, well, hell, and he is afforded a chance to return to the world of the living (though still in his skeletal form which he has gradually taken a liking to). Meanwhile, Nellie has solved the mystery of Sam's death and confronts Scagwell...which turns out to be a fatal mistake. Just as Sam arrives, Scagwell murders Nellie, who whispers her last words of love to Sam just as she passes away. Sam and Scagwell engage in single combat, but as Sam seemingly defeats the murderous baron, he invokes a dark spell to transform into a hideous monster. Just as all seems lost, Nellie returns as a ghost of pure light, taking the form of a magical sword that Sam uses to defeat Scagwell once and for all. The skeletal Sam and the ghostly Nellie then descend to the underworld where they have a glorious wedding surrounded by all of Sam's new friends.

While Deadman Sam was overshadowed both in sales and critical reception by some of the other great games to come out for the Super Nintendo CD that year, it's an enduring reminder of what great technology can inspire in the minds of game creators, and it still holds up to this day.

### **Super Caesars Palace CD**

Steve: 6

Ed: 5 (quote: "This slightly upgraded version of the SNES game features unnecessary FMVs and little else to distinguish it from its cartridge cousin. If you want Vegas on your home console, stick to Vegas Stakes.")

Martin: 8

Sushi-X: 6

### **Nancy Drew and the Hardy Boys**

Steve: 5 (quote: "The classic characters don't really make this stand out from the other point-and-click mystery games for the SNES-CD, and the lousy acting from the actors playing the titular characters made me pine for the books instead.")

Ed: 6

Martin: 7

Sushi-X: 3

### **Final Fight II**

Steve: 8

Ed: 7

Martin: 8 (quote: "This virtually arcade perfect brawler is better than the original! Mike Haggar returns in this fast-paced and really fun beat 'em up, and while not much has changed from the first game, the smooth graphics and realistic sounds offered up by the SNES-CD make this game refreshingly fun.")

Sushi-X: 7

### **Dune**

Steve: 7

Ed: 9 (quote: "An incredible adaptation of the classic Frank Herbert science fiction novel,

blending adventure and strategy elements into a fantastic quest. The music is probably the best part of this game and it shines on the Super Nintendo CD. Now you no longer need a computer to experience this instant classic.”)

Martin: 8

Sushi-X: 8

### **Syndicate**

Steve: 8

Ed: 7 (quote: “A brutally fun strategy game offering up a variety of weapons to eradicate your foes. Between this and Dune it's been a really good month for sci-fi strategy games on the SNES-CD.”)

Martin: 8

Sushi-X: 8

### **Flashback: The Quest For Identity**

Steve: 9

Ed: 9

Martin: 9 (quote: “This sequel to Out Of This World features the best graphics I've ever seen on a home console game. It looks like a cartoon come to life and the full-motion video sequences take up the entire screen. A beautiful showcase for the SNES-CD's abilities.”)

Sushi-X: 8

### **Deadman Sam**

Steve: 9 (quote: “This spooky action game from Tecmo is a breath of fresh air. Great music and lovable characters make this one of my favorite platform games of the year!”)

Ed: 8

Martin: 9

Sushi-X: 8

### **The Swarm**

Steve: 7

Ed: 7

Martin: 7

Sushi-X: 7 (quote: “This game puts you in the shoes of a hotshot pilot who's trying to take down an alien invasion. I'm not a big fan of flying games but as far as those go, it's decent enough. The play controls are nice and if Starfox is a bit too corny for you, give The Swarm a shot.”)

-reviews of August 1993's SNES-CD releases in the September and October 1993 issues of *Electronic Gaming Monthly*

-

*“Yeah, I remember when Syndicate came out, in August 1993 I believe, we had some problems with that. There'd already been a bit of controversy over Mad Dog McCree, but that had blown over fairly quickly. We put out Syndicate, completely uncensored with a 17 rating and we still saw some complaints about the level of violence, with all the blood and the fact that you could kill lots of people. Mad Dog McCree, it was realistic but there was no*

*blood and all the people you killed were criminals. Here, in Syndicate, the graphics weren't very detailed, but, you know, the number of people you could kill in the game, it was a lot more and there were parents who got the game who wrote us some angry correspondences. We'd made the decision to allow pretty much any game on the Super Nintendo CD though, so we were ready for all of that.*

*And, of course, compared to the shitstorm that we were about to face, well...let's just say people forgot about Syndicate very quickly."*

-Peter Main, excerpted from an *Electronic Gaming Monthly* interview, June 2006

-

### **Nintendo and Telenet Japan Team Up For Future SNES-CD Projects**

It's been announced today that Nintendo has signed on software producer Telenet Japan for a series of Nintendo exclusive games, particularly focusing on the Super Nintendo CD! What's more, they're planning to have these games available for both Japanese and American consumers, with Telenet Japan particularly citing North America as a great new source of potential sales. Telenet Japan recently released the FMV game "Time Gal" for both the Super Nintendo CD and Sega-CD systems, though this new deal covers games in many different genres.

First up is "Soulqueen", set for a release next spring. It's a space shooter in the style of *Gradius* and *Axelay*, but in addition to its fast-paced space shooting action, the game's story will be told through animated full-motion video sequences between levels and through voiced lines during the levels themselves. Said a Telenet Japan representative, "The presentation capabilities of the Super Nintendo CD will open up new opportunities to create memorable characters and worlds." Space shooters are frequently cited as a way to test the capabilities of a game system, and with an SNES-CD version of *Axelay* coming out next month, Telenet Japan's "Soulqueen" may well be striking while the iron is hot!

As for other future projects, no information has been officially stated, but the rumor mill is buzzing that the action series "Valis" may receive an SNES-CD installment sometime in the future. There's also some news that Telenet's development division Wolfteam has caught the eye of Nintendo and that a possible fantasy-based project could be in the early stages of development. Watch this space for further details!

-excerpted from an article in *Gamepro*, August 1993

-

Interviewer: Tell us about *Night Trap*, because... looking back, I cannot believe that Sony was prepared to fight so hard to get it onto the Super Nintendo CD. Of all the games that they could have invoked their "show cause" clause over...

Tom Zito: Oh, I know. I mean, here's the thing. *Night Trap* had been released for the Sega-CD, like almost a year before. At launch. And it WAS going to be a launch game for the Super Nintendo CD, but Nintendo kept stonewalling Sony, who had our backs and wanted it on there. Howard Lincoln kept saying it was never gonna happen. We heard Shigeru Miyamoto had thrown a fit when the idea of this game being released on the SNES-CD had been floated over there in Japan. Miyamoto! A fit! Can you believe it? But we thought, at the time, that it'd be a huge hit. It had sold well enough to turn a profit, they loved it over in England, we thought if we released it in like October 1993 it would fly off the shelves that

holiday season.

Interviewer: But Nintendo kept saying no.

Tom Zito: They kept saying that they absolutely weren't going to allow it, and of course they had right of first refusal on any potential SNES-CD games...but Sony had a clause that would force them to show cause for that. They'd have to go up in front of an arbitrator and explain why Night Trap would hurt Nintendo. And, of course this was before all the Congressional hearings and all the Joe Lieberman stuff, this was in like summer of 1993. So they had no reason, besides, you know, it being a bad game...

Interviewer: Yeah, I think we had it ranked like...third worst game of all time in our recent list? One slot behind "Who Kidnapped Santa Claus?"

Tom Zito: Yeah, that's another thing, they approved Who Kidnapped Santa Claus the very next year, but not Night Trap? Are you kidding me? But Nintendo had put their foot down and they were prepared to fight to keep the game off their system. But at the same time, Sony also wanted Nintendo to allow them to put an uncensored version of Mortal Kombat on the Super Nintendo CD, with all the blood and gore and everything. And Nintendo relented on that to keep Sony from pushing the Night Trap issue.

Interviewer: Are you still bitter? I know at the time you thought Sony had sold you out.

Tom Zito: Well, now, I mean, it's the best thing that could've happened probably. I was mad about not getting our game on there, sure, but looking back...Night Trap really wasn't that good. I defended the hell out of it in front of Congress, but even among the games we did, Corpse Killer, Maximum Surge, those games were a lot better. And those made it to the SNES-CD. And in the meantime, Nintendo had to face the full front of all the backlash from putting uncensored Mortal Kombat on their system. When I wasn't up there sweating it out in front of those Congressmen, I was laughing, because they took a beating up there.

-interview with Tom Zito, CEO of Digital Pictures, from *GameInformer* magazine, March 2004

-

### **SNES-CD Power Charts – September 1993**

### **September 13, 1993**

On what was known throughout the gaming world as “Mortal Monday”, the home console version of Mortal Kombat was released on the Super Nintendo, the Sega Genesis, the Gameboy, the Sega Game Gear, and the Super Nintendo CD. Though the Super Nintendo, Gameboy, and Game Gear versions were all censored, with all the blood, gore, and the worst of the game's brutal “Fatality” moves cut out, the Sega Genesis and Super Nintendo CD versions had the blood and gore completely intact...the Genesis version required the entry of a code to unlock the uncensored game, while the Super Nintendo CD version, which came with a larger than normal, red, 17 and up label that took up nearly a quarter of the space on the front of the CD case, did not. The Super Nintendo CD version was also the only version to feature arcade quality graphics that easily surpassed those available on the Sega Genesis.

Though the Genesis version was the top seller from the start, easily dwarfing sales of the censored Super Nintendo version, the Super Nintendo CD version was close behind...and like Super Mario World 2 had done five months earlier, Mortal Kombat was moving add-on consoles and combo sets at a significant pace. Needless to say, both Nintendo of Japan and Nintendo of America had incredible trepidation over allowing this bloody and brutally violent game on any of their home consoles, even with a big red warning label on the cover and explicit and repeated instructions to all their retailers not to sell the game to anyone who even looked like they were younger than 17.

“I regretted it as soon as I gave my approval,” Nintendo president Hiroshi Yamauchi would later be quoted as saying. Over the next few weeks, the decision to port the uncensored version of Mortal Kombat to the Super Nintendo CD would be both the dumbest...and the most brilliant decision Nintendo had ever made.

*“Since 1985, Nintendo has been committed to providing a family-friendly entertainment experience. Our company chose to put limits on the kind of content that we would allow on our systems. The Nintendo Entertainment System and the Super Nintendo Entertainment System both have restrictions on the kinds of games that are allowed to be produced for those consoles. When we decided to allow less restrictions for our CD-ROM accessory, we knew we were making a conscious decision that more violent and more potentially controversial games would be allowed and that those games might end up in the hands of younger players, IF we did not do our due diligence to inform our retail partners that those games were not to be played by anyone under the age of 17. Nintendo has gone above and beyond to inform retailers, advertisers, and most importantly, parents about the kinds of content in certain games released for the device. Nintendo has spent millions and millions of dollars in advertisements and retail kiosks to allow parents to make informed decisions about the kinds of games that their children will be allowed to play. We are proud to be an industry leader in establishing a ratings system for those games, a rating system which, I must remind the committee, Sega did not have until June of this year.”*

-Howard Lincoln, testifying before a Senate committee on the effects of violent video games, September 30, 1993

*“The problem, Mr. Lincoln, that I have with your games, is that when you go to buy a video*

*game in the store, the violent games, the sexually explicit games, are right next to the games intended for children. You've got Mortal Kombat right next to the uh, the Carmen Sandiego game, and when a kid looks up at those games, which one is he going to want to buy? A parent might be trying to buy a game to encourage their child to learn but when they see the Mortal Kombat game, you think they're going to want to get something educational? I mean...you wouldn't see a store putting the vibrators and the fuzzy handcuffs next to the Barbie dolls would you?"*

-Senator Joseph Lieberman, Senate committee on the effects of violent video games, September 30, 1993

*"This gun, this automatic machine gun that Nintendo puts out for their games... \*holds up the Super Scope 6\* this can be used for Yoshi's Safari. This is for a game they've got rated for general audiences. This game came out three days ago. For a kids' game with a green dinosaur and fun, colorful graphics, this gun is used. Oh, and this is the newest issue of Nintendo Power, their official magazine that they put out every month. \*holds up the October 1993 issue of Nintendo Power\* They have The Terminator on the cover, this is their big game this month. This is based on a rated-R movie."*

-Bill White, testifying before a Senate committee on the effects of violent video games, September 30, 1993

*"And that was like the kill shot, right there. Once Bill pulled out that gun and that magazine, I could just see the look on Howard Lincoln's face. He'd been so composed for that whole time but once that took place he kind of lost his cool a bit and I could see that Bill was getting a lot more comfortable. And you see Lieberman and Kohl, they're kind of looking at each other and sort of nodding their heads, I mean, Nintendo had totally lost the moral high ground and for the first time that day it was Sega starting to look like the good guys. I knew we were all sort of in the doghouse with the Senate but if Nintendo got the worst of it it'd be a lot better for us."*

-Tom Kalinske, "The Chase: Sega's 20 Year Struggle To Take Down A Giant"

*"Well, I know that my movie The Terminator came up, and I looked at the game, and it's not as violent as the movie, there's no blood or anything like that. I'm not a big fan of the video games anyway, I think that America's youths need to be out exercising, I think that the games are putting a lot of kids on the couch, and they don't realize how fun physical activity can be. I don't know if the government should step in and censor games but I know they should be doing more to encourage physical activity in schools."*

-Arnold Schwarzenegger, from an Entertainment Tonight interview on October 2, 1993

-

### **September 17, 1993**

Bill Andresen could hear some very loud noises coming from the TV in the living room. His son Chris was having some friends over, and one of his friends had brought the newest sensation for the Super Nintendo CD: Mortal Kombat. Bill had never seen the game in person before, and he decided to take a look at just what was making his son and his son's friends so excited.

He entered the room and watched the action on the screen. The vivid colors and lifelike animation showed a fairly realistic looking fight between two characters, Sub-Zero and Raiden. His son Chris was using Sub-Zero and was winning quite handily, delivering a flurry of fierce blows before freezing his opponent solid.

"Well that's pretty neat..." Bill thought, before Raiden went into a daze and the words 'FINISH HIM!' appeared on screen in bright red letters.

"Oooh, yeah yeah yeah, rip his head off, rip his head off!" shouted one of the boys, prompting Chris to input a series of button presses on the controller that triggered Sub-Zero's fatality. Sub-Zero walked over to Raiden, yanking Raiden's head right off his neck with a shower of blood. Raiden's spine dangled limply from his severed skull. Bill's eyes went wide with horror as Chris and his friends cheered and laughed at the gruesome sight.

"What in God's name...?" said Bill, walking over to the television. "Chris, turn that game off, that's the worst thing I've ever seen in my life!"

"Awww, dad.... it's just a game, it's not even real."

"I don't care, you need to turn that game off right now," said Bill, looking around the room at Chris' friends. "Which one of you boys brought this kind of filth into my house?"

"Uh...sorry Mr. Andresen, I mean, Kevin and Rick's parents are cool with it..." said one of the boys with a sigh, going over to the SNES-CD and ejecting the disc before turning off the console.

"Sorry Mike," said Chris apologetically, embarrassed that his dad had caused such an abrupt end to the fun. "Dad....!"

"I don't ever want you playing that game again." Bill said, wondering just how these games could have gotten so violent. He hadn't had any problem letting his son play games like Super Mario World 2 or Star Fox, heck, he thought the Muppet characters in that game were really funny. But this was completely over the top, especially on a Nintendo system! He knew Sega had violent video games but he thought Nintendo knew better than that.

The next day, Bill's boss would be hearing all about what he'd seen his son and his friends having so much fun playing together.

Bill's boss? Senator Joseph Lieberman.

-

*Tonight on Nightline... there's a new video game that's sweeping the nation, but parents everywhere are mortified that the graphic violence featured in the game might be causing the nation's children to become more violent themselves. We'll talk to Senator Joseph Lieberman, who's calling for a Senate hearing into the increasingly violent and graphic content of today's most popular games.*

-Ted Koppel, ABC's Nightline, September 20, 1993

-

### **Nintendo Brings The Action Of The Big Screen To The SNES-CD!**

Two of the hottest Super Nintendo releases of the year are set to come out over the coming weeks, and we've got the scoop on both of them! First up is Jurassic Park, based on the hit

Steven Spielberg film that took the box office by storm this summer. Ocean is releasing a different version of the game for each of Nintendo's four big systems, the NES, the Game Boy, the Super Nintendo, and the Super Nintendo CD, and the CD-ROM version of the game looks outstanding! It's a mixture of real-time action and a point and click adventure game that involves hunting for mysteries and clues as you try to escape the mysterious island where a pack of dinosaurs have broken loose! Once you've completed your search, you're dropped into various action scenes that involve running and gunning your way through hordes of dinosaurs. The game is Super Scope compatible for extra accuracy when hunting down dinos.

Then there's *The Terminator*, released for the Super Nintendo CD by Virgin Games. It's similar to the version released earlier this year for the Sega CD, which was renowned for its acclaimed musical score. The Super Nintendo version adds a few minutes of FMV cutscenes to the mix, depicting the horror that the Terminators have wreaked on Kyle Reese's desperate future and adding some pathos to the game's quest to take the Terminators down. Nintendo's actually pushing this game fairly hard and they expect it to be a top seller this fall. With Sega CD starting to push their big movie-based game in *Aladdin*, it's clear that cinematic games will have a huge bearing on how this holiday season goes in the world of video game sales!

-From *Gamepro* magazine, October 1993

### **Axelay:**

Steve: 9

Ed: 8

Martin: 10 (quote: "A downright flawless upgrade of the SNES original. This challenging but oh-so-addictive shooter looks and sounds beautiful on the CD-ROM. An instant classic.")

Sushi-X: 9

### **Battle Chess:**

Steve: 8

Ed: 8

Martin: 8 (quote: "Chess has never been more fun than in Battle Chess! Play against the computer with over 20 difficulty levels, or play against your friends and watch your pieces whale on each other.")

Sushi-X: 6

### **Mortal Kombat:**

Steve: 9

Ed: 8

Martin: 9

Sushi-X: 8 (quote: "This is the best home console version of Mortal Kombat for sure. The fighting is a bit clunkier than Street Fighter, but the game's realistic graphics make it fun to play nonetheless.")

### **Red Line: F-1 Racer**

Steve: 7

Ed: 5 (quote: "This ho-hum racing game moves just a bit more quickly on the SNES-CD, but there are much better racing games out there. Wish it could have made better use of the CD-ROM's capabilities.")

Martin: 7

Sushi-X: 5

### **Jurassic Park:**

Steve: 7

Ed: 8

Martin: 8 (quote: "This hybrid action-shooter-point-and-click sometimes tries to be too much at once but is still a great adaptation of the film.")

Sushi-X: 8

### **Axes Of Avenglia:**

Steve: 8 (quote: "This Taito RPG features some of the best graphics I've seen in any SNES-CD game and a very good soundtrack as well. The story isn't quite as good as the SNES' Lufia, but it's a really nice glimpse at what the system is capable of putting out.")

Ed: 6

Martin: 8

Sushi-X: 7

### **Art of Fighting:**

Steve: 8

Ed: 7

Martin: 7

Sushi-X: 9 (quote: "Just as good as on Neo-Geo, Art of Fighting brings one of the best fighting games in the arcade home to your SNES-CD. There's even more character detail and animation than Street Fighter! Mortal Kombat might get more sales and more press but this is the month's best fighting game.")

### **Yoshi's Safari:**

Steve: 8 (quote: "This rail-shooter makes great use of the Super Scope 6 and looks absolutely great on the SNES-CD. It's not quite as pretty as Star Fox but the cutesy graphics are appropriate and this game's a bit easier for younger players.")

Ed: 8

Martin: 6

Sushi-X: 6

### **Ghouls 'n Ghosts CD:**

Steve: 7

Ed: 9

Martin: 8 (quote: "The staggeringly difficult series gets a brand new edition for CD-ROM in this sequel to Super Ghouls 'n Ghosts. The difficulty is definitely intact in this one but the great character animation and CD soundtrack are a huge plus.")

Sushi-X: 8

### **Frantic Flight:**

Steve: 9

Ed: 9 (quote: "Frantic Flight is a fantastic airplane combat game, featuring a huge amount of ship customization and procedurally generated wingmen that make every mission feel brand new. Koei did a great job capturing the feel of a PC dogfight game in this SNES-CD original.")

Martin: 9

Sushi-X: 8

### **Ys Collection:**

Steve: 7

Ed: 6 (quote: "Nihon Falcom's classic Ys series arrives on the SNES-CD in the form of a collection of the first three games. It's a faithful collection but maybe a bit too faithful, the graphics and gameplay are just too dated when compared with other RPGs on the system.")

Martin: 7

Sushi-X: 4

### **The Adventures of Willy Beamish:**

Steve: 5

Ed: 5

Martin: 4

Sushi-X: 3 (quote: "Another example of a crap point and click that bored me to tears. I hated this brat and I hated this game.")

### **The Terminator:**

Steve: 8 (quote: "This was a really fun run-and-gun shooter in the style of Contra. It featured some of the best music on the system to date, and while it wasn't a straight-up movie adaptation, it still felt like it could be a part of the Terminator universe.")

Ed: 8

Martin: 8

Sushi-X: 8

### **True Golf: Wicked 18:**

Steve: 4

Ed: 5

Martin: 4

Sushi-X: 1 (quote: "Even if I LIKED golf I would have hated this game. It barely looks like an SNES game, let alone an SNES-CD game, and the play controls were god awful. True golf? I doubt it.")

### **Super Detective Club:**

Steve: 7

Ed: 9 (quote: "Even with all the other point and click detective games available for the SNES-CD, this one stands out. I'm really glad Nintendo decided to bring this game (actually two games, it's both Famicom games in one!) to our shores. You'll be gripped by the mystery and won't want to stop playing until it's solved.")

Martin: 7  
Sushi-X: 7

-From *Electronic Gaming Monthly's* reviews of September and October 1993's SNES-CD games in their October, November, and December 1993 issues

-

*Super Detective Club is the first American release of the Famicom Tantei Club series originally released in Japan for the Famicom system. This remake of the first two games combines all the cases of the Famicom titles into a graphically enhanced detective adventure for the Super Nintendo CD! With three fun cases to solve, you'll spend hours delving into the incredible mysteries within.*

-from a *Nintendo Power* "Pak Watch" article in the October 1993 issue

*"Super Detective Club, of course known as Tantei Club here, was one of those games that I did not think would be a success with Western players. We had a long discussion about releasing it there, but Yamauchi-san thought that the more older players of the Super Nintendo CD would appreciate the game. If I recall properly, it did very modest sales, but sold just enough to justify the decision to localize it. I know there is a devoted fanbase in America to this game who appreciates the fact that we did release it there. I am looking forward to seeing their reaction to the sequel, as it has sold extremely well here in Japan."*

-Gunpei Yokoi, translated from the September 1997 issue of *Famitsu* magazine

-

### **September 30, 1993**

A three-and-a-half hour long Senate hearing into the effects of violent video games took place in Washington, DC. It was chaired by Senators Joe Lieberman of Connecticut and Herb Kohl of Wisconsin. Of particular concern to the senators' was Nintendo's decision to allow violent and graphic games, particularly the uncensored version of *Mortal Kombat*, on their Super Nintendo CD-ROM device. Of additional concern was Sega's strange advertising campaigns involving the use of seemingly 'subliminal' messages and their reliance on marketing games such as *Mortal Kombat* to court older players. Both Howard Lincoln of Nintendo and Bill White of Sega testified extensively at the hearing, along with Parker Page from the Children's Television Resource and Education Center, Marilyn Droz from the National Coalition on Television Violence, and several other experts from the fields of juvenile justice and child psychology.

-

Howard Lincoln: These games are very clearly marked with ratings symbols that show that these games are not appropriate for children. Here, on the *Mortal Kombat* case, we have a huge red box that takes up about a fourth of the cover, with a big "17" on it as plain as day. No parent who buys this game for their child will be able to do so without seeing that 17 and the big letters saying "MATURE PLAYERS ONLY", and an additional ratings descriptor that says "GRAPHIC VIOLENCE".

Joseph Lieberman: But parents are buying these games for their kids anyway. My chief of

staff, his son's friend brought the game over just a couple weeks ago.

Howard Lincoln: It's not up to us what parents decide to purchase for their children, that choice is up to the parents and the ratings boxes-

Joseph Lieberman: But my friend's son was exposed to this when his friend brought it over. Kids are being exposed to this content without their parents even knowing about it. Are parents going to have to ask about these games every time they let one of their children sleep over? This game gets out there and eventually all the kids are going to hear about it and see it. It's all they talk about at school.

Herbert Kohl: Mr. Lincoln, I understand that you don't like being put in a position to censor your own games. But you've got to take a position of responsibility here. Parents can't be looking over their kids' shoulder all the time. There's got to be some limitations because sooner or later, every child is going to see something from these games whether the parents like it or not.

Howard Lincoln: I feel that the parents of America are responsible enough to keep these games out of their homes if they don't want their children exposed to them. Time and time again, I've gotten letters from parents thanking me for implementing this rating system. I understand that there's still a possibility that these games are going to be played in situations that parents haven't given their consent for, but I feel that part of the job of being a parent is being there and making sure that if you don't want your child to play one of these games, that you're there to say no to it.

Joseph Lieberman: I know a lot of single mothers, they have to work 60, 70 hours a week to support their children. They don't have the money to hire a sitter, so their kid has to be home alone two, three hours a day. Two hours of Mortal Kombat a day, that's going to damage a kid beyond repair.

-

Bill White: So Nintendo has been pushing their bazooka and their Terminator game, and they've got Mortal Kombat and they say that this CD-ROM device is for adults but then they release all kinds of little kid games for it and push it for families.

Herbert Kohl: But they don't advertise those games in the same way that your company does. You're advertising Mortal Kombat and you're pushing the Sega Genesis in the same commercial. We've talked about Nintendo having these violent games but at least they don't advertise them for little kids.

Bill White: We don't either. The average age of the Sega Genesis player is nineteen.

Herbert Kohl: But you show a teenage boy in the commercial.

Joseph Lieberman: I mean, it's clear that the video game companies are trying to push these games onto our children. Nintendo just takes a more passive approach about it.

Bill White: We absolutely, unequivocally do not try to push violent video games onto young players. We have a ratings system just like Nintendo does and our Mortal Kombat game is rated for 13 and up.

Joseph Lieberman: But you have just as much violence as Nintendo's game does. It's hidden behind a code but every schoolboy in America knows that code by now.

-

*"I remember that we were both getting burned pretty badly by the senators during that hearing. Howard was doing the best that he could up there and he did make some of the senators understand that Nintendo's rating system was effective in keeping violent video games mostly out of the hands of children. It was just that damn Mortal Kombat game that got everyone in such an uproar...but of course while all of this was going on, it was just driving sales of the game up more and more. I think there was even a rumor that we were going to recall Mortal Kombat for the SNES-CD, and once that rumor was floated, sales spiked even more! People were so scared that we'd recall it and censor it that they rushed to buy the game because they were worried it was the only chance they'd have to play it!*

*As I recall, Mr. Yamauchi did think seriously about recalling it, but he decided not to pull the trigger at pretty much the last moment. I don't think we'll ever know for sure if he really considered it or not, but I'm sure glad that rumor got out there. It went a LONG way toward putting the SNES-CD into people's homes at the end of 1993 and for that, I've even got to thank Vice President Lieberman."*

-Peter Main, excerpted from an *Electronic Gaming Monthly* interview, June 2006

-

Howard Lincoln: The reason we even decided to relax our censorship policies in the first place is because our third parties wanted to make certain games that would appeal to older players. We had spent a long time, and I mean a LONG time censoring our games, but our partnership with Sony over these last couple of years has been very constructive and even I've started to see that Nintendo has had to change with the times. The vast majority of Nintendo games are still appropriate for families and for the select few that are only appropriate for mature players, we have the ratings system.

Joseph Lieberman: I feel like this was a move to make money. You wanted to appeal to older players with more money to spend on games and you allowed these violent, graphic games to attract more sales.

Howard Lincoln: We were doing just fine before the SNES-CD was released. We controlled 90 percent of the gaming market. We didn't need these games to make money. We did it to protect creative freedom. I want to show you some footage from a video game called Final Fantasy III, released by one of our third party partners, Squaresoft, who was one of the biggest advocates for relaxing our censorship policies. This is a game that's rated 13 on our rating system, it explores some mature themes but doesn't contain any graphic violent or sexual content, but it wouldn't have been possible without the relaxation of our rating system.

-

*"I was fudging the truth a bit there, I'll admit. We'd censored Final Fantasy IV for Western audiences and we could have done the same with Final Fantasy V. But I wanted to show the committee the possibilities that you had when you released games with more mature content. We showed the senators the scene where Galuf is killed by Exdeath. It's a very emotionally charged scene. I think it moved a couple of the older senators, the ones with*

grandchildren. I know Marilyn Droz was interested in the game because it featured three female protagonists. I think we won her over a bit with Final Fantasy V.

*In the beginning, I was one of the biggest advocates for Nintendo's censorship policies. I'd mentioned before that if it wasn't for Nintendo, the industry would be full of pornography. But when I went in front of that Senate hearing I was put in the position of defending the right of video game producers to make any kinds of games they wished to make. I hated Mortal Kombat, I never would have let my kids play such a game. But I was defending Nintendo and I had to hitch myself to that wagon. That was part of my job, being an attorney before I joined up with Nintendo meant that sometimes I had to defend people and practices that I disagreed with.*

*But ultimately, I don't regret the direction Nintendo went. I knew that kids were always going to be able to get their hands on these games no matter what ratings we put on the box. But part of our job at Nintendo was making sure that those games stayed out of the hands of as many of those kids as possible, and I think we did a fine job of that. I never set out to profit off of kids playing violent video games. But if I could profit off of transforming the industry and expanding the creative horizons of game creators everywhere, I was just fine with that."*

-Howard Lincoln, from an interview with *GameInformer*, September 2008

*"I think on that day, that was the start of the Super Nintendo CD becoming something that would replace the Super Nintendo intend of merely supplementing it. With the opening of the gates for more mature games, which is something Sony had pushed for from the very beginning, it made the transition to the Super Nintendo CD a true evolutionary leap in the production of video games. Nobody knew it at the time of course, and it wouldn't happen for at least a couple more years, but when the news from those Congressional hearings got back to Japan, everyone here at Sony was extremely pleased. I wish I could have been there."*

-Ken Kutaragi, from an interview on IGN.com, October 17, 2010

*"I was very dismayed at all of the controversy these games had created. I had merely set out to create toys, not so much create something that would be regarded as violent or graphic or bad for children. I was very troubled by all of this, and so I asked my friend Mr. Frank Oz what he thought of the whole situation. He told me about Jim Henson and that though Mr. Henson had set out to create something children could enjoy as well, he always believed that children were very smart and could handle many things that adults did not believe they could. He told me of their very lovely film The Dark Crystal and how it had been controversial at the time as well, and that I should not worry so much about children being harmed or scared by these games. It was this conversation that encouraged me to ask Yamauchi-san to allow our friends at Argonaut to go ahead with their follow up game to Star Fox. Squad Four, I believe they called it, was said to be just a bit too mature for the audiences Nintendo wanted to appeal to, and at first I had agreed, but after talking to my friend I encouraged Yamauchi-san to reconsider. I was very pleased when he told me he would."*

-Shigeru Miyamoto, translated from an interview with Famitsu, March 1995

-

**October 1, 1993**

Senator Lieberman had not been entirely pleased with the responses from either Nintendo or Sega at the Senate hearing. If it had been entirely up to him, he'd have likely moved forward with his plan to push a bill through Congress requiring federal oversight of video game content, or at the very least, a mandatory, government-controlled game ratings system.

But...Howard Lincoln had held his own at the hearing, and the senator knew that any government bill regulating the sale of video games would mean a tough fight against an increasingly powerful industry. He also knew that the representatives from the game industry, particularly Lincoln, had won over a few of his colleagues with their call to allow creative freedom in video games, and his promises that Nintendo would do even more than they were already doing to raise awareness of their (admittedly very effective) ratings system, including threatening to withhold shipments of certain video games from stores that did not comply with Nintendo's ratings policies and using secret shoppers to enforce that compliance. The fact that Howard Lincoln said that he'd even promised to pull games from Walmart, the growing retail giant, if it didn't do a better job of avoiding selling violent video games to children, impressed some on the committee even more.

In the end, Lieberman and Kohl decided that they'd give the game industry a chance to regulate itself, though another hearing would be called in February 1994 to assess its progress in fulfilling its promises. Those promises would lead to something called the Entertainment Software Ratings Board, or ESRB for short, that would introduce the ratings of EC (Early Childhood, 3 and up), E (for Everyone), T (for Teen, 13 and up), M (Mature, 17 and up), and AO (Adults Only, 18 and up), utilizing Nintendo's green (for EC and E), yellow (for T), and red (for M and AO) color coding scheme in their ratings symbols. The first games to be rated by the ESRB would begin to roll out in March 1994, with Konami's Snatcher being the first M-rated game for the Super Nintendo CD.

The congressional hearings of 1993 wouldn't be the last time that video games faced the threat of censorship and regulation from the government, but the game industry had weathered its first major storm of controversy, and Nintendo's decision to agree to Sony's terms when it came to video game content censorship had been justified at last, despite those tenuous weeks when Hiroshi Yamauchi and Howard Lincoln believed they'd made a fatal mistake.

-

### **SNES-CD Power Charts – October 1993**

1. Super Mario World 2 – 25,780
2. Star Fox – 22,164
3. Final Fantasy III – 18,056
4. Super Mario Kart – 14,988
5. Street Fighter II: Arcade Edition – 12,750
6. Super Bomberman CD – 9,641
7. Clue – 7,540
8. Final Fantasy: New Generation – 7,316
9. Lethal Enforcers – 6,252
10. The Lost Vikings – 6,148
11. Alien 3 – 5,992
12. ClayFighter – 5,651
13. The Terminator – 4,372

14. Battletoads II – 4,052
15. Where In The World Is Carmen Sandiego? - 3,951
16. MechWarrior – 3,544
17. Dark City – 2,988
18. Shadowrun – 2,957
19. Time Gal – 2,544
20. Secret Of Mana – 2,206

-

*“Over the last couple of weeks, video games have been in the news for all the wrong reasons and last Thursday, there was a Congressional hearing into the detrimental effects of video game violence on today's youth. But a few nights ago in Petaluma, California, a video game device is being credited with possibly saving lives in a most unlikely fashion. Richard Allen Davis is being charged with burglary, criminal confinement, assault with a deadly weapon, and a host of other charges after he attempted to abduct a young girl from her home. He'd broken into the house during a slumber party, brandishing a knife at a girl and her friends before ordering the girl to leave the house with him. But as he was dragging the girl away, he tripped over a Super Nintendo CD-ROM console that the girls had been listening to music on. Davis fell into a dresser, sustaining a head injury that knocked him out long enough for the would-be victim to free her friends before summoning her parents for help. While her father kept the injured Davis at gunpoint, police were called and Davis was arrested.*

*When asked about the incident, the relieved father told reporters that he'd told his daughter several times not to keep the game device on the floor in the middle of her room because people might trip on it, but that he was glad that she hadn't listened to him this time. He was then asked about the ongoing video game violence controversy, and he replied that he didn't let his daughter play any of those violent games and that she enjoyed playing Carmen Sandiego. It seems that the Super Nintendo CD is catching criminals in both the virtual world and in the real world. This has been the NBC Nightly News. I'm Tom Brokaw, goodnight.”*

-from the NBC Nightly News, October 4, 1993

-

*“This is, without a doubt, the greatest video game I've ever played. It far surpasses Final Fantasy II and III, and even A Link To The Past. It's a perfectly polished, truly epic, and all-around brilliant video game that absolutely justifies the purchase of a Super Nintendo CD. It touched my heart on a level that a video game has never done before, and I'm telling you right now, go out and buy this game. It is a flawless video game and one hell of an adventure.”*

-from Martin Alessi's 10/10 review of Secret Of Mana in the December 1993 issue of Electronic Gaming Monthly

*“I can't say all video games are bad. I got the opportunity, thanks to some of my younger interns, to play a game that I thought was really fun and really well made. I had an hour or so to kill and some of my interns invited me to play this game, it was called, I think, Secret of Mana. And it wasn't a really violent game, you had a sword but you were fighting*

*monsters, it was a lot like the Lord of the Rings books I read as a kid and I really loved those. And you could play with two other people, and they let me play it for about an hour and it was a lot of fun. It had....it had the kind of music you wouldn't expect to hear in a game. I mean, not bleeps and bloops like in the old games but real music, like in a movie. And everything was so colorful and I had a lot of fun playing it. You could tell the people who made it put a lot of heart and work into it. So I do think that there is a redeeming value to video games. I mean, if all of them were more like that Secret of Mana game, I don't think there would've been a problem."*

-Al Gore, Larry King Live, November 22, 1993

*"Oh yeah, one of my very first acting gigs was in this video game called 'Nightfall'. It was like this fantasy game, I think, like a medieval slasher type game, REALLY cheesy and campy but it was a lot of fun to work on. I played this witch who helped the main character, and I wore all these outfits that kept showing off my boobs. I mean this was around the time that Nintendo was in trouble with the government, so one of the games that got a lot of press was this Nightfall game because it was all violent and sexy. Of course compared to some of the games now it was REALLY tame, but I have good memories of working on it."*

-Kelly Hu, from the September 2010 issue of Maxim

*"Sheex, no matter what happens to me I am not letting you go, not again, do you hear me? Dammit...the Empire's closing in....stay with me, I'm sorry I pulled you back into this but stay with me!!"*

-Jerrica, boss of the "Scorpion Army", Secret of Mana

*"This was, without a doubt, the work I'm most proud of in my entire career. This was the translation I'd waited my whole career to do. I poured my heart and soul into it, but the game deserved nothing less and I'm glad Squaresoft gave me the time I needed to see it through to completion. I still get praise for it to this day and it warms my heart to know how much people appreciated the work I did."*

-Ted Woolsey, recalling his work on Secret of Mana in an RPGamer.com interview, March 3, 1999

-

## **November 8, 1993**

Secret of Mana is released in North America for the Super Nintendo CD, three months after a blockbuster release in Japan. In Japan, the game was critically lauded, receiving only the second 40/40 ever from *Famitsu* magazine (with Super Mario World 2 receiving the first earlier that year). The game was three years in the making, an enormous undertaking of time and energy from Squaresoft, the collaboration of dozens of talented game makers. Simply put, this game was the reason that Squaresoft lobbied so hard for Nintendo and Sony to come to an agreement, with a large chunk of its development already completed before pen was put to paper. Its North American release was accompanied by a large promotional push by Nintendo, who was somewhat determined to make the public forget about the Mortal Kombat controversy. Secret of Mana was as critically praised in North America as it was in Japan, perhaps even more so. It scored a 37/40 from Electronic Gaming Monthly, 5s across the board from Gamepro, a perfect score from Gamefan, and was awarded Game of the Month in nearly every magazine where such an award existed, even over Sega's massive November release Sonic CD. The reviews used words such as "epic", "brilliant", and even "masterpiece" to describe the game. The game sold 46,000 units on the day of its release in North America, which paled in comparison to smash hits

like Super Mario World 2 and Mortal Kombat, but for the genre it was an unprecedented number. It would top 100,000 North American sales by the end of the week, and the coming holiday season and glowing reviews kept its legs strong. Eventually, after several years of sales and "greatest hits" reprintings, it would become the first JRPG to achieve one million sales in North America, an absolutely incredible milestone. But more importantly, it, like Super Mario World 2 and Mortal Kombat had done before it, would sell SNES-CD systems. Lots of them.

-

## **Secret of Mana – The Basics**

Secret of Mana's status as a CD-ROM game provided it with graphics that mildly exceeded those of its OTL counterpart (mostly in backgrounds and animation quality). What the CD medium truly allowed was that it made Secret of Mana a much bigger, longer, more epic game. The Empire and the Republic were fleshed out massively, with several large areas added to each. The game didn't have any voices or animated cutscenes, instead, the majority of data on the CD was actually taken up by its sprawling, epic musical score, now in full CD glory without any of the audio glitches that plagued the OTL game. It could also have much more text, especially in the North American version, which did away with the fixed width font that Squaresoft had used for previous English translations. This gave Ted Woolsey incredible flexibility with the translation quality, making it much more accurate to the original intent of the script. He was also given three months time to complete the translation, unlike the one month afforded to him IOTL.

The game's battle system, involving active attacking and defending by the player, was the same as IOTL. However, because of the additional boss battles, the player was given enough weapon orbs that weapons, including the Mana Sword, reached level 9 as a matter of just playing through the game instead of hunting down secret orbs for the final level (with enemy difficulty in the final dungeons rebalanced to keep pace). The item and equipment ring system was kept the same as OTL. You were limited to five of any one item at a time, but you have a reserve that you can access outside of a battle at any time by pressing Start to switch items/equipment into your active inventory (a system introduced IOTL by Seiken Densetsu 3).

The game also fleshed out and expanded upon a number of minor characters, particularly those of Emperor Vandole's lieutenants, Sheex, Fanha, and Geshtar. It also greatly expanded on the "Scorpion Army", particularly its boss, now given the name of Jerrica and a much nobler purpose revealed late in the game. Dyluck was given more of a personality and the player was given more time to get to know him and the nature of Thanatos' dealings with the underworld were revealed. In brief, here's how some of the characters were expanded in game.

Dyluck- Remains the true love of Purim (the girl), though the prophecy surrounding him ("one born in darkness and raised in the light of Mana") gets explained in game: The god of the underworld created him with the express purpose of serving as a body for Thanatos, but Thanatos was attacked by knights of the Republic before completing the ritual and was raised as Jema's son with Luka serving as a surrogate mother to him.

Geshtar- Trained since birth to be the Empire's perfect fighter, though we later find out that he seeks a destiny other than being the Empire's lap dog. We also eventually learn that he and Fanha are lovers.

Fanha- Born a sorceress in a Republic village that rejected her because of her strange powers, she joined the Empire for the purpose of getting revenge.

Sheex- Originally born in the Underground City as one of the last members of Silvira, the ancient futuristic civilization that once dominated the planet, he rejected a life in hiding and used the cybernetic implants given to him to serve the Emperor. However, he still holds lost feelings for Jerrica, leader of the Scorpion Army (aka the Keepers of Silvira)

Jerrica- "Boss" of the Scorpion Army, ostensibly seeking out Mana energy for their own nefarious purposes but in truth her group is attempting to keep the Underground City of Silvira going, since without Mana energy their technology will fail and the lives of her people depend on her group's work.

Krissy- Still the leader of the Resistance but we see a bit more of her as the Empire part of the game is expanded. She develops a very close friendship with Purim's friend Phanna.

Phanna- Purim's best friend, though the two are currently fighting because Purim stole Dyluck from her. Phanna later restores her friendship with Purim and is also deeply close with Krissy, to the point where fans suspect that the two of them may be a couple (indeed, it's confirmed by the game's creator in 2013 that Krissy and Phanna indeed do become a couple, with Phanna being revealed to be bisexual, of course it couldn't be confirmed in the actual game itself, only very VERY vaguely alluded to)

The plot of the game itself is greatly expanded from the OTL game, with the possibility for three different endings. The game is essentially divided into three main parts, which are...

### **Part I: The Early Quest**

This is the part of the game most similar to the game IOTL, with only a few minor differences. It essentially consists of the hero Randi's journey beginning with him pulling out the sword, being banished from Potos, teaming up with the sprite Popoi and the girl Purim and gathering up the powers of Undine, Gnome, Sylphid, and Salamando. Again, it's very similar to how this part of the game was IOTL with a few minor differences (the first visit to Pandora is somewhat longer, you meet Dyluck and Purim first there, see the tension between Purim and Phanna, and even spar with Dyluck). Another part that gets expanded a bit is when the heroes pass out in Kakkara Desert and are taken aboard Morie and Meria's ship, you get some more background on the war between the Republic and the Empire, and Fanha tags along with Geshtar, you also see him actually getting into his motorcycle armor to fight you for the first Mech Rider fight. Morie also acts like a bit less of a jerk and we see that he genuinely has feelings for Purim, this will come into play later on.

### **Part II: The Empire Wars**

Here's where things start to change significantly from OTL's Secret of Mana. The Southtown/Norhtown segment is largely the same, though there's a boss to challenge you in the sewers instead of you just emerging into the Resistance's headquarters. Instead of the Emperor's palace being in Northtown, it's just a fort, Fort Vandole (named after the Emperor), and Geshtar doesn't burn it down because he's crazy, he burns it down because he legitimately considers the minor fort expendable. After Flammie rescues you, King Truffle points you to Tasnica instead of to Sage Joch, and in Tasnica, you're given the task of liberating three villages from the Empire. One of them is controlled by Sheex whom you

fight in his Dark Stalker form after a brief quest, the second is controlled by Fanha (it's her childhood village and we get some sympathetic background on here), and the third is controlled by Thanatos. It's during this third quest that you actually free Dyluck from Thanatos and he joins the Republic Army here. Once the villages are liberated though, this is when you notice the King acting strangely. Indeed, the power of Lumina has taken a hold of him, and he and the Republic become hostile for a time, causing the party to seek out help from the Resistance. You're pointed to the Lofty Mountains, which are also greatly expanded, as an old Silviran city used to be on the mountain (those mysterious radios from the OTL game, this expands on those). You run into the Scorpion Army, who has kidnapped Sage Joch and wants Shade's power in trade for him, but instead of giving them what they want, the party fights them and they run. Joch points you to Shade as the only power that can contain Lumina, but that the party must be strong enough to contend with the darkness within their souls, leading to the maze from the first game where you fight your doppelgangers. After getting Shade's power, the party then visits a lighthouse (this was also a location expanded on from the OTL game, it's now a dungeon) to sever the King from Lumina's power. After doing that, the party returns to Tasnica, where Lumina tests you by sending out a boss monster (that's weak against Shade's magic) before also joining your group. With the King restored to normal, the final assault on the Empire can begin. There's a big battlefield that the party must traverse to reach the Empire's City of Gold (no longer a random island as IOTL but instead it's the Empire's capital city), as the party crosses it, fighting the empire's troops along the way, you can actually see the Empire's and Republic's troops fighting one another, it's a pretty epic scene. Finally, the party reaches the capitol and climbs up the Emperor's palace, a huge tower of gold to face the Emperor (another boss monster). Defeating the Emperor seems to take out the Empire for good, but in fact it's just a diversion, the Emperor was a fake and the huge battle a farce to divert attention away from the Moon Palace, where Thanatos is once again trying to collect more Mana energy (you learn the Empire's true goal here, to break the seals and raise the ancient Mana Fortress). Dyluck has already gone out ahead in an advance team to try and head off the Emperor. The party returns to the desert only to see Admiral Meria's ship under attack, there's a brief quest where the party helps him, then it's off to the Moon Palace. After a fight at the palace gates with the party vs. Sheex, Fanha, and Geshtar (all in their normal human forms but still a very tough fight with Sheex using speed, Geshtar straight up brute force, and Fanha powerful magic), the party manages to reach the Moon Palace staging room where Thanatos is waiting, the party stops him from breaking the seal but he manages to re-capture Dyluck. Next it's off to the Forgotten Continent where the Tree Palace awaits, here the party battles a transformed Sheex (as a giant plant monster, as IOTL), but in this game defeating him here doesn't kill him, it just opens up the rest of the palace (which is an actual dungeon), the party can't stop Thanatos and the Emperor from breaking all the seals and as IOTL, the continent and the Grand Palace are raised, thus ending part two of the game.

### **Part III- The Hero's Decision**

After the events in the Tree Palace, Geshtar and Fanha confront the heroes outside, demanding to know what happened to Sheex. It seems that some masked people have abducted him and the two lieutenants blame the heroes, who decide to flee. During the course of their fleeing, they fall down a trap door to the Underground City. Unlike the game IOTL, the Underground City is not just one quest or dungeon but a series of them, during which you learn the full truth behind the Scorpion Army and its leader, Jerrica, and also the truth behind Sheex, whom Jerrica is trying to convince to return to helping them. You also learn the truth about the Mana Tribe...it's not entirely as benevolent as it seems, it in fact was somewhat of a quasi-religious organization, keeping technology down all in the name of

preserving the power of Mana, and they heavily persecuted the Silviran civilization, leading it to ruin. Eventually, the Empire's troops invade the Underground City, though Jema and the forces of the Republic bravely clash against them. The party is presented with a choice...help Sheex and Jerrica defend themselves from Thanatos, or help save Jema's army from being routed.

Saving the Republic Army (Ending 1- "Harmony"): Saving the Republic Army immediately locks you into the first ending path. Sheex sacrifices his life to save Jerrica while the Republic army is saved from destruction after the party wins a boss fight. This leads to the ending most like the original game. You go on to the Grand Palace, where Fanha meets her end transformed into Hexus and Geshtar meets his transformed into the final Mech Rider (though in this version of the game, their deaths are tragic and noble, Fanha dies confronting Thanatos and Geshtar dies trying to avenge her). You move on to the Mana Holyland (the Pure Land IOTL), fighting five of Thanatos' monsters along the way, Thanatos wipes out the Mana Tree, you then go to the Mana Fortress and battle two more of his monsters before the final confrontation. Here, however, things once again divert from OTL's game. Instead of fighting Thanatos as the Dark Lich, you fight Jerrica as a huge scorpion monster (in her grief over Sheex's death, she hunts down Thanatos but is transformed by him and you have to fight and kill her), and then Thanatos in Dyluck's body. Despite being in a normal human body, this is probably the toughest final boss, with an incredible array of powerful magic and physical attacks. Once you defeat Thanatos, the hero, Popoi, and Purim manage to heal Dyluck, saving his life. The game ends with humanity free to choose its own destiny, with Dyluck and Purim as king and queen of a free and victorious Republic, and Randi as their loyal knight. It's considered the "canon" ending and probably the best ending as well. Though Mana is depleted, it's not entirely gone, and humanity is free to progress its technology, embrace the light of Mana, or both. Popoi's fate is left somewhat ambiguous but it's implied he'll eventually return as well.

However, if you go to save Sheex and Jerrica instead, you're locked out of Ending 1 and instead fight another boss before progressing to the Grand Palace. Here things progress as somewhat normal, but in the room where the Snapdragon would normally be, you're confronted by Jema instead. His entire army was killed by the Empire's troops and he barely made it out alive. He demands to know why Randi seems to have rejected his destiny. It's then that Jerrica shows up and says that Randi should fight Jema, that Jema is just like those self-righteous Mana Tribe people who decimated her civilization.

Defeating Jema (Ending 2: "Silvira"): Defeating and killing Jema locks you into this ending. After Jema's defeat, you confront Thanatos on the roof of the Grand Palace, and he decides to initiate the ritual to send himself into Dyluck's body. Dyluck fights him off but Thanatos is able to transform him into a monster before fleeing. Defeating Dyluck breaks Purim's heart but she steels herself and it's off to the Mana Holyland where the hero is to confront the Mana Tribe. After battling through six bosses sent by the holy power of Mana (the same bosses as IOTL's game), the hero finds the Mana Tree and learns the truth about Mana from his mother, that the women of the tribe are forced to become the tree, that they didn't volunteer to do so as Randi was once told. She says that the power of Mana is worth protecting and preserving but that the Mana Tribe has become corrupt and that is what led to the rise of the Mana Fortress and the world's downfall. Before she can say anything more, however, she is struck down by Thanatos' magic. The heroes, along with Sheex, Geshtar, Fanha, and Jerrica, journey to the Mana Fortress to liberate it from Thanatos. In this ending path, the final bosses are the same as in IOTL's game, you fight Dark Lich Thanatos, followed by the Mana Beast (this time a vengeful being sent by the Mana Tribe to destroy the fortress and human civilization). Defeating the Mana Beast leads to the second

ending...the return of Silviran civilization will mean a great flourishing of human technology, and you have successfully redeemed Sheex, Geshtar, Fanha (who forgives the people of her old village), and Jerrica, but Mana is dying out and without it the world faces an uncertain future. In addition, Dyluck and Popoi are dead and gone for good.

Sparing Jema (Ending 3: "Mana Knight"): If you spare Jema's life, Jerrica angrily lashes out at the heroes, piloting a large mech in an attempt to kill them. After a boss fight, a dying Jerrica forgives the party and apologizes to them, but it's too late, her wounds from the battle prove fatal. The party goes on to confront Thanatos on the roof of the tower. This time, Dyluck sacrifices his life, and Thanatos confronts the party in human form (but still wielding formidable magic). After Thanatos' defeat, the party goes to the Mana Holyland, but after they leave the palace, the underworld forces decide to take advantage of an enraged and grief-stricken Geshtar, along with Sheex and Fanha, corrupting their souls for good and compelling them to make war on Mana itself. As the party ventures through the Mana Holyland it comes face to face with dangerous mechanical creatures attacking them, culminating in the Mana Fortress, controlled by the trio, opening fire on and destroying the Mana Tree. The Mana Tree still tells of corruption within the Mana Tribe, but her tone is more forgiving and it's revealed that there were many good people in the Mana Tribe as well, including the hero's brave father, and that without the Mana Tribe's measures, the Silviri would have taken over and destroyed the entire world. The party then goes to the Mana Fortress. After fighting a boss powered by stolen Mana energy (that takes the form of each of the eight elements in turn after one is defeated), the final boss is an enormous mecha controlled by Sheex, Fanha, and Geshtar. After the mecha is defeated, the ending takes place. Mana flourishes in a world ruled by the hero, influenced by the Mana Tribe, who even may be able to restore his mother to life in human form. However, though the natural world flourishes, human innovation and freedom are somewhat suppressed and even Jema questions the hero's choice.

The three endings are presented with their own pros and cons. Though there is one ending considered by fans to be the "good" ending, all three can be considered happy endings with their own caveats, letting the player truly choose their own path according to their own actions.

-

*"Thank you, thank you from the bottom of my heart for letting me make this game the way I wanted to make it. Secret of Mana wouldn't have been possible without you. Thank you, thank you, thank you."*- Koichi Ishii, while bowing repeatedly to Ken Kutaragi during a private meeting in Kutaragi's office shortly after the Japanese release of *Secret of Mana*. Kutaragi would later recall this as one of the three moments that most justified his work on creating the Super Nintendo CD in a 2004 interview.

-

## **Actraiser 2:**

Steve: 9 (quote: "The SNES-CD really shows off its ability to create great music in this game. It's incredibly tough, but the atmosphere tops pretty much any other game on the system.")

Ed: 9

Martin: 9

Sushi-X: 9

**Nightfall:**

Steve: 8

Ed: 6

Martin: 6

Sushi-X: 7 (quote: "This is an FMV game actually worth playing. It's gritty, though cheesy at times, and you'll find yourself actually wanting to play things through to the end and find all of the hidden scenes.")

**Secret Of Mana:**

Steve: 9

Ed: 9 (quote: "Three years of hard work from Squaresoft is worth the wait. This is the best RPG on the system, hands down, and one of my favorite games of the year. It features one of the best soundtracks ever and it's a long and rewarding journey. You won't want this game to end.")

Martin: 10

Sushi-X: 9

**Ninja Warriors:**

Steve: 5 (quote: "This silly beat-em-up by Taito features some nice character detail, but as far as actions goes it's pretty repetitive and the music can be annoying at times.")

Ed: 4

Martin: 5

Sushi-X: 3

**The Simpsons:**

Steve: 7

Ed: 8

Martin: 9

Sushi-X: 9 (quote: "I love seeing faithful arcade translations and this game is as faithful as they come. It's right up there with TMNT IV as one of my favorite beat-em-ups on a home console. Forget Bart's Nightmare, this is THE definitive Simpsons game and you can take the whole family for a spin with three of your friends.")

**Cliffhanger:**

Steve: 3 (quote: "It's a shame that this game couldn't be as good as the movie was, and the movie itself was pretty bad. I guess The Terminator spoiled me on movie-to-game adaptations because this is just awful.")

Ed: 6

Martin: 6

Sushi-X: 5

**Neighborhood Wars:**

Steve: 5

Ed: 7 (quote: "A pretty fun game that puts you in the role of a kid trying to hit other kids with water balloons and various other implements of mischief. I know the humor's pretty

juvenile and the sound bites are dumb, but the gameplay was still pretty solid.")

Martin: 4

Sushi-X: 2

-From *Electronic Gaming Monthly's* reviews of November 1993's SNES-CD games in their December 1993 and January 1994 issues

### **Sonic CD:**

Steve: 9

Ed: 9

Martin: 9 (quote: "The best Sonic game yet is on the Sega CD! With a great CD soundtrack and lots of fun levels, expanded greatly by the game's excellent use of time travel, Sega really shows what this franchise is capable of and it rivals Super Mario World 2 as my favorite action platformer of the year.")

Sushi-X: 8

### **Ultima Underworld II:**

Steve: 7

Ed: 8

Martin: 8

Sushi-X: 7 (quote: "This is a really good dungeon crawler, offering tons of ways to create your character as you explore one of the spookiest dungeons to ever appear in an RPG. Giving us two games in one is a nice deal too, but I did take some issue with how repetitive the dungeon crawling got to be after a while.")

-from *Electronic Gaming Monthly's* reviews of Sega-CD games in their December 1993 issue

-

\*The familiar blue sky with white clouds appears on the screen, followed by a chorus singing that iconic title... "The Simpsons...."\*

\*Various scenes are shown of Homer, Lisa, Marge, and Bart fighting off enemies with various silly weapons.\*

Narrator: America's favorite family arrives on the Super Nintendo CD, and they're fightin' mad!

\*Homer is shown fighting off a variety of enemies, only to get hit a couple times and shout "D'oh!"\*

Narrator: Now you can play the hit arcade smash at home with three of your friends any time you want! Use Homer, Bart, Marge, or Lisa to do battle against a variety of Springfield's nastiest foes!

\*More scenes of the game are shown, featuring Bart and Lisa, we hear Bart shout "Ay carumba!"\*

Narrator: It's "The Simpsons", for your Super Nintendo CD! Take it to the next level of power!

-Advertisement for The Simpsons for Super Nintendo CD, which began airing in November 1993. Along with Secret of Mana, it was one of the first commercials to combine Nintendo's "Take it to the next level" slogan for the SNES-CD with the SNES' classic "Now you're playing with power", to form a new slogan, Nintendo's subtle marketing attempt to get people who hadn't yet bought an SNES at all to buy the combo pack.

-

### **Out of the games Enix America published during the SNES and SNES-CD era, which were the most successful?**

Well, our collaborations with Quintet were fantastic, I mean, you had Illusion of Gaia sold a lot of copies on both, and of course there was the original ActRaiser. That was probably the most popular game. I mean, then we had Terranigma, and that was an SNES-CD exclusive. It was definitely the most complete and probably the best game that Enix ever released on a Nintendo system. It came out toward the end of the SNES-CD's life, of course, but I think it did pretty well and the review scores reflect that. I believe it even outsold Dragon Quest VI, which was pretty amazing.

### **And which didn't perform as well as you'd hoped?**

Well, there was ActRaiser 2, which we decided to do SNES and SNES-CD versions of. The SNES-CD version flopped, despite it being the more complete version. Obviously coming out right before Secret of Mana really hurt us, but that was Enix of Japan's decision, not mine.

### **I remember that Dragon Quest V was localized around that time and it almost didn't get localized.**

Well you can thank Squaresoft for that one. With them focusing a lot on the SNES-CD, and kind of neglecting the regular SNES at that time, Enix saw an opportunity to kind of slide a game in there and we got the go-ahead to localize Dragon Quest V for Spring 1994 despite the expense. It made a profit, if I recall correctly. We did a lot of dual-releases at that time, ActRaiser 2, E.V.O., and Illusion of Gaia were all released for both the cartridge based and the CD-ROM, but Enix kept Dragon Quest V as a cartridge and it did really well in both territories.

-excerpted from a Gaming.moe interview with Robert Jerauld, former Enix USA producer, November 24, 2014 (OOC: inspired by this OTL interview from November 15!  
<http://gaming.moe/?p=331> )

-

### **November 16, 1993**

Sonic CD is released for the Sega CD in North America. The game was heavily promoted by Sega in the months leading to its release, and Tom Kalinske wanted it to be the game that put Sega CDs in every household in America. A huge amount of Sega's creative efforts went into the creation of the game and it even went a month beyond its expected release of October, but as long as it was ready for the holiday season, Kalinske would be satisfied.

But despite glowing reviews, many of which called Sonic CD the best Sonic game ever and a

sure-fire Game of the Year contender, Sonic CD wasn't doing the one thing Sega needed it to do...sell Sega CDs. Sure, it was selling plenty of copies among Sega CD owners, and would eventually become the best selling Sega CD game of all time. But most Genesis owners were content with waiting for Sonic 3, which was just three short months away. A new Sonic game just wasn't enough to get them to put down 150 bucks. Ultima Underworld II had been similarly disappointing on a sales front, and though it was good on its own, nearly every game critic who compared it to Secret of Mana said it paled in comparison.

Aladdin was coming next month, but even Tom Kalinske had his doubts about the game being able to get people to buy a Sega CD. Sonic CD had been the game that was going to do that, and Sega CD sales were barely showing a minor blip, certainly not the massive spike he'd anticipated. The Super Nintendo CD was crushing the Sega CD in America and humiliating it in Japan. The one tiny consolation Kalinske had was that the Sega Genesis was still beating the original Super Nintendo in sales...though when sales of the Playstation Combo Set were added to the figures, it became a dead heat.

It was going to be a long holiday season. And it was about to get even longer.

"*FUCK!*" -Tom Kalinske, throwing a crumpled-up sheet of fax paper across his office, November 22, 1993

-

*"What a lot of people don't know is that we needed to use a lot of tricks to get the Super Famicom CD to do exactly what we wanted a lot of the time. A lot of the games that used CD-based audio, we couldn't put the whole soundtrack on the CD for some of the games, especially some of the big ones like Secret of Mana or Final Fantasy VI. We could have, if we'd done multiple discs, but we didn't start doing that until a little while into the system's lifespan, so we had to make do with only having, maybe half of the soundtrack, the best songs, on the CD and then using the soundchip for the others. It let us do some neat things later on, like dynamic soundtracks, and the CD system had a more advanced soundchip than the Super Famicom itself, so the music quality, a lot of times you couldn't tell unless you listened really hard that it wasn't coming from the CD. I get a lot of people asking, was it hard to program for? And there were certainly things that were challenging, but in actuality the H.A.N.D.S. cartridge that Sony and Nintendo came up with to use really mitigated a lot of those issues. It kept the load times to a minimum. There were obviously still loading issues with some games but for things like entering a menu, or entering a building, those load times were cut down to a bare minimum or eliminated entirely for most games. The ones that were programmed well, anyway."*

-Akihiko Matsui, Squaresoft video game developer, translated from a March 2003 Famitsu interview

*"That big price cut for the US in the holiday season of 1993, I remember that being an issue of contention at first. When Nintendo asked if we could get the price down, I remember that we were going to lose money on each CD add-on we sold, so there was some internal friction when it came to that. I was in favor of it because I knew we could sell more CDs and more games, and we were making lots of money on the games, especially on Mortal Kombat and later on Secret of Mana. That was the reason we were able to do the price cut, because of that extra money we'd gotten. And Nintendo agreed to give us a few percent more of a cut on third-party game sales and that helped convince the brass at Sony to let them cut the price!"*

-Ken Kutaragi, speaking about the 1993 SNES-CD price cut in a January 2005 *Electronic Gaming Monthly* interview

*"The reasons for the big 1993 price cut were two-fold. One, and this was an increasingly pressing issue with all the developmental effort we were putting into the SNES-CD and its games: we had to get it into more households. At that time, only about, maybe 15 percent of SNES buyers had the SNES-CD. And with some of our best games coming out for it, we had to get that number up. Our goal was 50 percent, I was hoping for 60, but I would've been happy with 40. That \$350 price point, \$300 with occasional sales and promotions but essentially \$350, was a tall order even if we had the games to back it up. At \$250 though, I*

*knew that would be the magic number for people to start buying it. Secondly, at that point, Sega was reeling, and an animal is most dangerous when it's wounded. I knew the Sega CD was coming down to \$150, I knew it was at that \$250 price point and I didn't want them to get their foot in the door at all, so that was the other big reason for the price cut was to cut off any chance of the Sega CD getting a leg up on us that year. We were already beating them in sales but now we had to put the nail in the coffin."*

-Howard Lincoln, speaking in a Comic-Con 2014 panel promoting the book "The Chase"

*"Well, what about the Sega CD? You can get a Sega CD and a Genesis for Christmas."*

*"I don't want the Sega CD, I want the Super Nintendo CD! The Sega CD doesn't have any good games!"*

*"You heard what the worker said, they might not have any more in until after Christmas, you'd be okay with waiting until after Christmas?"*

*"Yeah, yeah, I'm okay with it, I can wait! I want a Nintendo CD, it has all the Mario games!"*

-overheard at a Walmart electronics display, December 20, 1993

*"You Battletoads have annoyed me the for last time! I've had enough of this, I'm going to tear you all limb from limb!"*

-the Dark Queen, just before the final boss battle of *Battletoads II*

-

"This season's hottest toy is flying off the shelves, and stores are struggling to keep it in stock. It's the Super Nintendo CD, a CD-ROM based attachment for the popular Super Nintendo game console. The attachment was actually released for last year's holiday season, but a sparse game selection and high price tag kept skeptical parents at bay. Nintendo's slashed the price of the add-on to just \$149, and if you don't already have a Super Nintendo, you can get them both along with a collection of their popular Mario games for \$249. The most popular games? Super Mario, of course, along with The Simpsons, Secret Of Mana, and the controversial Mortal Kombat. We asked parents who were out looking for the Super Nintendo CD just why they couldn't resist the allure.

We took a trip to an area Target store, where a new shipment of the Super Nintendo CD has just arrived. Already, we've seen three area parents pick up the item, and we asked them about this season's latest craze."

Woman: Oh yeah, this was all they asked for, this and the new Simpsons game. I think it's a lot to spend, since we just got them a new system two years ago, but they've been asking for this for a year now and I finally, you know, caved in.

Interviewer: Are you worried that in a couple more years there will be another new thing that you'll have to buy?

Woman: Well, there's always something new. I mean, it's Christmas and they kept their grades up so, you know, they earned it I guess.

"We also talked to a father who was in buying a Super Nintendo CD, including this year's most controversial game, Mortal Kombat."

Man: Well, my two boys are 13 and 11.

Interviewer: And it says right there on the case, 17 and up. Are you worried about your

sons playing such a violent game?

Man: I mean, it's just fantasy. It's not real and they know it's not real. It's no more violent than the movies I let them watch. And it's the only game they want.

Interviewer: They're not interested in Super Mario Kart?

Man: Oh no, they don't like Mario games. They play the Street Fighter, and uh, the wrestling game. They watch a lot of wrestling.

"We also talked to a grandmother who was here with her grandson to purchase the device. She says that she doesn't understand these games, but her son couldn't stop talking about the games he was planning to play."

Grandma: He's not getting it until Christmas, I just brought him here so he could pick out the games he wants.

\*A tall skinny boy wearing glasses who looks to be about twelve holds up *Secret Of Mana* and *Final Fantasy III* to the camera.\*

Boy: These are the best games, right here. Secret of Mana, this one is supposed to be awesome. You can fly a dragon and you have a sword.

Grandma: I'm not getting him that violent game I saw on the news, that Mortal Kombat game. That game is vile.

Boy: I don't want Mortal Kombat, it looks stupid.

Grandma: Good, it is stupid.

"Of course, judging from sales figures, many people would disagree. Mortal Kombat is thus far the second best selling game of the holiday season, behind only Super Mario All-Stars on the Super Nintendo. We got a chance to speak with Nintendo of America president Howard Lincoln about the company's recent success."

Howard Lincoln: We feel like the Super Nintendo and the CD-ROM peripheral are perfectly positioned to sell very well this Christmas. We feel like there's a lot to offer on both the Super Nintendo and the CD-ROM.

Interviewer: You recently cut the price, do you think that's going to move a lot of game systems this year?

Howard Lincoln: Oh, absolutely. We believe that, for those families that might have waited to buy in to the Super Nintendo, that now is the perfect time. If you're in the market for a CD player, that \$250 price tag is comparable to most CD players currently on the market, and you're getting the capability to play both cartridge-based and CD-ROM games as a bonus. And with the combo set, we have both Super Mario All-Stars, which in this case is a special edition packaged with Super Mario World, AND the new Super Mario World 2 game, those games are free and you don't have to worry about anything else, you can just buy the set and you'll already have six Mario games to play, all six of our main series Mario games, because we feel that Nintendo's built its legacy on the back of Super Mario and so those games are perfect to represent what Nintendo's all about, so that anyone who buys any

Nintendo product this year will hopefully be a Nintendo fan for life.

-from a WISN-TV evening news report on December 14, 1993

-

\*A man parodying pitchman Ron Popeil stands in front of a crowd, showing off his latest item\*

Pitchman: It's time for the next item on "Incredible Innovations", and let me tell you, this is the best thing we've ever seen! It's the Super Nintendo CD Playstation Combo Set!

Crowd: What does it do?

\*The pitchman speaks while footage from various SNES and SNES-CD games plays on the screen.\*

Pitchman: It plays Super Nintendo game carts like Street Fighter II Turbo, Super Squadron X, and the brand new adventure game Earthbound! It plays the hottest new Super Nintendo CD games, like Secret Of Mana, Battletoads II, and The Simpsons! It even plays your favorite music CDs!

\*Shows the pitchman and some attractive ladies jamming out to some music\*

Pitchman: But that's not all! It also comes with Super Mario All-Stars AND Super Mario World 2! That's six of Mario's greatest adventures! See Mario jump, see Mario throw fireballs, see Mario race into the air, see Mario race on the ground, see Mario shrink down to miniature size, see Mario visit dozens of worlds, hundreds of levels, hours upon hours of endless Mario fun!

\*The crowd cheers wildly\*

Pitchman: With all of that, what do you think this incredible innovation costs?

Crowd Member: \$1500!

Pitchman: No way!

Crowd Member: \$1000!

Pitchman: Are you kidding me?

Crowd Member: \$700!

Pitchman: Not even close!

Crowd member: \$500!

Pitchman: \*just laughing\*

Crowd Member: \$349.99!

Pitchman: That's what it USED to cost, before I went completely insane! Because I'm now offering the Super Nintendo CD Playstation Combo Set, that plays game carts, game discs, music CDs, AND comes with six awesome Mario games for the brand new low price of \$249.99!

\*The crowd goes wild\*

Pitchman: The Super Nintendo CD Playstation Combo Set! Take it to the next level of power!

\*Another strange item is brought out.\*

Pitchman: \*points at it\* I have NO idea what that thing is!

-from a commercial for the SNES-CD combo set that aired in December 1993

-

### **Battletoads II:**

Steve: 9

Martin: 9

Ed: 9 (quote: "A great game that takes full advantage of the CD-ROM format to provide excellent graphics and sound, while also featuring seven more levels than the NES classic. It's not quite as punishingly difficult as the original game but it's pretty tough.")

Sushi-X: 9

### **E.V.O.: The Search For Eden:**

Steve: 8

Martin: 8 (quote: "This game is great on both the SNES and the CD, though this CD-ROM version provides improved graphics and enhanced music, along with a few extra nifty evolutions.")

Ed: 7

Sushi-X: 7

### **Utopia: The Creation Of A Nation:**

Steve: 8 (quote: "It's not instantly fun like SimCity, but Utopia is still a really fun god-sim for the SNES-CD. It's a bit confusing with all the different variables involved, but once you learn everything it offers a level of customization that surpasses even SimEarth.")

Martin: 7

Ed: 8

Sushi-X: 5

### **Mansion Of Hidden Souls:**

Steve: 7

Martin: 9

Ed: 8

Sushi-X: 8 (quote: "This was a really enthralling horror game, relying on atmosphere instead of blood and guts to scare players. It might not be as action packed as some other

games on the system, but it makes up for that in providing a suspenseful adventure that you won't be able to easily put down.”)

### **Super Carnival:**

Steve: 4 (quote: “Like a real carnival midway, you should stay far away from this game if you don't want to waste your money. I wanted to punch the guy playing the carnival barker in the face, he was THAT annoying and the games are just as boring and impossible to win.”)

Martin: 5

Ed: 5

Sushi-X: 3

### **Novastorm:**

Steve: 6

Martin: 6 (quote: “It does nice things with full-motion video, but so did Starfox and that game had the gameplay to boot. This one doesn't, it's just some occasionally pretty FMV sequences interspersed with unimaginative and repetitive gameplay.”)

Ed: 8

Sushi-X: 4

-reviews for December 1993's SNES-CD games in the January and February 1994 issues of *Electronic Gaming Monthly*

-

### **December 6, 1993**

*Battletoads II* is released on the Super Nintendo CD. It had replaced Rare's original plan to make a Super Nintendo Battletoads game, “Battletoads in Battlemaniacs”, though the Battletoads/Double Dragon crossover game had been released on the Super Nintendo in June with some level of success. The game was a fairly basic sequel, returning the popular Battletoads to a brand new adventure. The game featured 20 levels that took the Battletoads across a variety of environs and saw them facing a number of bosses, some of them quite large and graphically impressive. The game took a few aspects from the scrapped “Battlemaniacs” game, but for the most part was an entirely new creation, dropping Silas Volkmire and focusing on the Dark Queen as the sole major villain, the game spent some time fleshing out her personality and showing some of her origins, adding a somewhat sympathetic aspect to her character, though she remained a wicked villainess for the most part, committing a variety of evil deeds throughout the game. The game allowed for three players at once, featuring Rash, Pimple, and Zitz as playable characters (in the original Battlemaniacs, Zitz was intended to be held hostage by the villains). The game features some voiced lines by the Battletoads, some of the villains, and the Dark Queen, but cutscenes take the form of still pictures and sprite animations, forgoing animated FMV sequences to tell its story in the form of in-game animation. After the Dark Queen is defeated, she vows revenge as she did in the previous Battletoads game, living to fight another day. The game sells decently well in its position as a major holiday release and is considered a success for Rareware.

-

## December 10, 1993

The first-person shooter *Doom* is released as shareware for the PC. While barely a blip on the radar to those embroiled in the Nintendo vs. Sega console wars, for PC gamers it's a revelation and a soon-to-be sensation that would eventually sell millions of copies and become one of the most beloved and controversial video games of all time.

Even before the game's release, however, both Nintendo and Sega had been paying attention to the game's development. Nintendo, which had begun to woo PC game developers and had plans to port such PC games as *Secret of Monkey Island* and *Cannon Fodder* to their Super Nintendo CD, began to explore what it might take to make a game like *Doom* run on their CD-ROM peripheral as smoothly as possible. They knew they might be courting even more controversy than they had with *Mortal Kombat*, but they hoped that by the time any prospective *Doom* port was completed, such issues would die down. For the moment, the game would remain a computer phenomenon.

-

*"The news about that holiday price drop for the Super Nintendo CD was a big shock. We'd known they were going to drop the Super Nintendo to \$129 and maybe to \$99, but hearing that the CD was coming down too, well... that and the fact that Aladdin failed to push any Sega CDs for Christmas '93...I mean, the writing was pretty much on the wall. Once 1994 rolled around, we knew that the Sega CD wasn't going to be able to beat Nintendo's CD add-on no matter how hard we pushed it. We decided that we were going to redouble our efforts to push the Genesis, which was still beating the Super Nintendo in America in head-to-head sales. We had Sonic 3 coming down the pipeline and that was a damn good thing. Hell, the Genesis port of Aladdin, the one without the animated cutscenes, barely half the levels, and good but not great music, it was selling like hotcakes, we probably sold ten times more of those than we sold on the Sega CD! So we knew that while the Sega CD was pretty much a non-starter, we still had a winner in the Genesis and I was damned if I was going to let it fall below the Super Nintendo. The going was getting tougher and we'd just have to get tougher with it.*

*I remember though, one moment that Christmas that hurt more than anything else. I was on my couch, about a week before Christmas, and my oldest daughter walks in. And she's kind of got a look on her face like 'oh, I'm in trouble', so I thought, you know, she'd gotten a D on her report card or something, which would've been pretty surprising because she's always been a great student. So I ask her what's wrong and she says that she played a game at a friend's house, and it was a really amazing game and that she wanted it for Christmas. And I was thinking 'oh no, it's Mortal Kombat, you're not getting that', but no, she had been playing Secret of Mana on her friend's Super Nintendo CD. And she loved it. And she wanted us to get a Super Nintendo with the CD attachment so she could play Secret of Mana. And of course, I told her no, that daddy can't get you a Nintendo system because that's our competitor and if anyone saw me buying it....but she was really REALLY begging for this thing. And I wasn't mad at her, I mean...Nintendo had some amazing games, that's why they were such a damn tough competitor. But for my own daughter, my own flesh and blood to be begging for a NINTENDO system? I felt...betrayed! Just...how could she do that to me? \*he laughs, obviously he's joking and being overdramatic\* I told her I couldn't get her the game. I told her she could play it all she wanted at her friend's house but that for the time being we couldn't have anything Nintendo. And she said she understood, and then I promised her that I would make sure that Sega would have a game like Secret of Mana someday. That it would be like Secret of Mana, but better."*

-Tom Kalinske, in a 2002 interview with Sega Retro

-

### **Enix Looks Toward 1994**

Enix has had a big last couple of months with a pair of cross-platform game releases! Both the SNES and its CD add-on saw versions of ActRaiser 2 and E.V.O.: The Search For Eden, and that cross-platform strategy will continue into next year as they release Illusion of Gaia, their follow up to the SNES cult classic Soul Blazer. Made in collaboration with the game studio Quintet, this action-RPG is slated for release sometime late next year, and the company is said to be pushing it hard, hoping it will join Secret of Mana from rival company Squaresoft as a big action-RPG hit for Nintendo.

While Enix continues to release versions of most of its games across both the SNES and the SNES-CD, it will have two big exclusive games early next year, one for each of Nintendo's big consoles. First up, it's February's Phaedra's Heart, exclusive to the Super Nintendo CD. It tells the story of a goddess seeking to regain her power by finding human companions, in a somewhat similar story to the previously mentioned Soul Blazer, though unlike Soul Blazer, this game is a more traditional RPG in the vein of Final Fantasy. It did big business in Japan when it was released there in September and Enix is hoping it will repeat that success in the West! Coming exclusively to SNES carts in April is Dragon Warrior V, a game that was not expected to make it to our shores. It's a tale of a young warrior who must overcome a difficult struggle, including becoming a slave and even being turned into stone, in order to reunite with his family and save the world from a terrible evil!

It's clear that Enix is making plans for a big 1994, but can they find the same success that Squaresoft has found in 1993? Only time will tell...

-from an article in *GameFan* magazine's 1994 preview in their January 1994 issue

-

*"I was very pleased to have the opportunity to see Mother released in the West. It took more than four years and a complete remake of the game, but I feel that my original vision remained intact and the translation was, I was told, handled very well. The game was received well in the West. Sales were decent, reviews were great, and I enjoyed seeing the reaction to the game from a different set of players, whose culture was quite different from mine."*

-Shigesato Itoi, commenting on the Western release of the first Mother game, known in the West as "Earthbound", in a 1996 Japanese TV interview translated by Earthbound Central

### **December 13, 1993**

Earthbound, the remake/localization of the Famicom's *Mother*, is released for the Super Nintendo in North America. The game received significant changes from its Japanese counterpart, including a reduction in difficulty to reduce the need for grinding present in the original game, a major graphics overhaul, and an enhanced soundtrack. Unlike Nintendo's OTL marketing for Mother 2/Earthbound, which missed the mark by centering on some rather juvenile aspects of the game (scratch 'n sniff ads, etc.), TTL's Earthbound marketing was more subtle, with Nintendo playing up the game's similarities to the real world and positioning its protagonist Ninten as a sort of "everyboy" hero in a marketing campaign that enabled Earthbound to carve out just enough sales to justify the game's translation and

release (the fact that it had few other quality SNES RPGs to compete with at the time certainly helped). The game had been released in Japan for the Super Famicom in October and had performed excellently there, outselling the Famicom original by about 50,000 copies. Work would soon begin on Mother 2 for the Super Nintendo CD and Nintendo planned to release it as Earthbound 2 in the West, sometime in 1995.

-

### **SNES-CD Power Charts – December 1993**

1. Mortal Kombat - 38,440
2. Super Mario World 2 - 24,817
3. Star Fox – 17,165
4. Final Fantasy III – 13,468
5. Jurassic Park – 12,907
6. Super Mario Kart – 12,568
7. Street Fighter II: Arcade Edition – 12,421
8. Final Fight II – 9,868
9. Deadman Sam – 9,407
10. Yoshi's Safari – 8,060
11. The Terminator – 6,851
12. Super Bomberman CD – 6,244
13. Secret Of Mana – 5,794
14. Final Fantasy: New Generation – 5,506
15. Axelay – 5,287
16. Lethal Enforcers – 4,763
17. Art Of Fighting – 4,154
18. Syndicate – 4,086
19. ClayFighter – 3,850
20. Battletoads II – 3,749

-

*"So we'd been working on Donkey Kong Country for a few months, that was of course our next big Super Nintendo game, and the next game we were doing after Battletoads II, which had sold pretty well for the Super Nintendo CD. I get a call, it's from the big man himself, Hiroshi Yamauchi. And he wanted to know.... if we could make Donkey Kong Country for the CD instead. An exclusive CD game. This was the game we'd been making to push the limits of the Super Nintendo, to show off the capability of that system, and he wanted us to do it for CD instead. In some ways of course it'd be easier, but we knew it would be a challenge too because now we'd be pushing the CD system's limits and those were a lot higher."*

-Dan Owsen, project manager for *Donkey Kong Country*

*"We had acquired a large portion of Rare in 1993, and we had given them permission to make a Donkey Kong Country game. At the time, we were looking at that as a big Super Famicom title for holiday season 1994. But the more and more popular the Super Famicom CD-ROM had gotten, the more that people within Nintendo, myself included, were looking at the possibility of making this game for the CD-ROM system instead."*

-Hiroshi Yamauchi, president of Nintendo

*"And of course, there were many within Nintendo who were adamantly opposed to this*

*move, because...all of us knew that if Donkey Kong Country became a Super Nintendo CD game, it would mean...it would mean the end of the cartridge-based Super Famicom. Not right away, of course, we were planning on supporting the Super Famicom well into 1995 and 1996, but... the writing on the wall would be pretty clear that the CD had supplanted the cartridge. Miyamoto-san, he was very much opposed to it. Kutaragi, from Sony, of course was heavily in favor and he had Ohga-san pushing very hard for this as well. Myself and Howard Lincoln, we were both very neutral on the situation but we understood the gravity of moving Donkey Kong Country to be on the CD exclusively. It was an enormous decision, and it was Yamauchi-san's to make."*

-Minoru Arakawa

*"Yamauchi-san asked to see two people before he made his decision on Donkey Kong Country. He asked for Arakawa-san of course, and then... well, if he had asked Miyamoto-san to speak with him, I knew that it might have gone the other way. But once I'd heard that he was calling on me to speak with him, I knew the decision had already been made."*

-Ken Kutaragi

*"For those who could read between the lines, the real announcement that Nintendo made at the end of 1993 wasn't that Donkey Kong Country was going to be released on the Super Nintendo CD... but that the Super Nintendo CD was now the successor console to the Super Nintendo and not just an add-on peripheral. Sooner or later, the CD-ROM drive was going to supplant the cartridge games entirely. There would be Super Nintendo cartridges released for a few years afterwards... but the Super Nintendo would pretty much peak with Super Metroid a few months later. For the Super Nintendo and for cartridge-based games in general, it was all downhill from there."*

-Blake Harris, "The Chase: Sega's 20 Year Struggle To Take Down A Giant"

-

*"When 1993 ended, we all kind of took a step back and saw how much things had changed in just one year. We'd gone from the SNES-CD kind of just being something neat to add on to the Super Nintendo to being the focal point of our creative endeavors. We hadn't gone in intending for this CD peripheral to consume so much of our time and attention, but the consumer response really did justify that shifting of our effort. We ended that holiday season with more than 30 percent of SNES owners owning the SNES-CD as well, either as the add-on or as part of the combo set. We were still splitting our consumer base quite a bit, but that rift was closing rapidly."*

-Howard Lincoln in a 2011 interview with Forbes magazine

*"I knew the Genesis was good enough to compete for those lower-middle class families if Nintendo abandoned them. I knew that the more Nintendo shifted their development to the CD, the more of an advantage our console would have on theirs. It didn't matter how good their games were if the majority of consumers couldn't afford to play them. This was where we were going to make our stand. At least until the Saturn came out."*

-Tom Kalinske, "The Chase: Sega's 20 Year Struggle To Take Down A Giant"

*"One of the questions people asked me is, 'why put all your good Neo-Geo games on the Super Nintendo CD? You're shooting yourself in the foot if you offer the same product on a much cheaper console, why not have your best games be Neo-Geo exclusives?' At SNK, we were in the games business. That was it. I didn't care how we sold our games as long as we*

*were selling them. The only reason we even offered the Neo-Geo for home console sales is that people were willing to pay \$600 for it. For us, it was just a means to an end of selling our games, and if the Super Nintendo CD was a better means to that end, why not? The thing could run our games just as well as our arcade machines did. Kids all over the world would play our games at the arcade or at the mall or at the pizza place and then go to the store and buy our games for their home console. We made a ton of money off Super Nintendo CD software. A ton."*

-Eikichi Kawasaki, excerpted from a June 13, 2009 Kotaku.com interview in the article "The Legacy Of Neo Geo"

*"The Game of the Year award for 1993 was the biggest rout in the history of this publication. No game this year came close to Secret of Mana. Not Mortal Kombat, not Super Mario World 2, nothing else could even contend. Gamefan's Game of the Year award by unanimous decision: Secret Of Mana."*

-Dave Halverson, in the March 1994 issue of GameFan Magazine

-

**Top Selling Super Nintendo CD Games Of 1993** (pack-in sales included, only sales during the 1993 calendar year are counted):

1. Super Mario World 2
2. Super Mario Kart
3. Mortal Kombat
4. Star Fox
5. Street Fighter II: Arcade Edition
6. Where In The World is Carmen Sandiego?
7. Secret Of Mana
8. Final Fantasy III
9. Super Bomberman CD
10. The Simpsons

-

### **1993 Nintendo Power Editors' Choice Top Ten SNES-CD Games**

1. Super Mario World 2

*It was a close one between this and Secret Of Mana, but we couldn't get enough of Mario's latest adventure! With dozens of amazing levels to explore and colorful graphics, this is the best Mario game yet!*

2. Secret Of Mana

*This epic quest spans over 40 hours and features one of the most beautiful soundtracks of any video game we've ever played. With three different endings, we had to play through this game over and over again.*

3. Star Fox

*This high-flying space adventure brought cinema-style gameplay to our home consoles! Thanks to all the work from Jim Henson's great studio, Fox, Peppy, Slippy, and Falco blasted*

*their way into our hearts!*

#### 4. Battletoads II

*Rip across 20 fun and challenging levels with Rash, Pimple, and Zitz as the struggle to take down the Dark Queen is more fun than ever. The three-player action comes highly recommended!*

#### 5. Final Fantasy III

*While Squaresoft's latest wasn't quite as exciting as Secret Of Mana, this quest traversing three worlds gave us an unforgettable feeling as we gutted through this challenging game.*

#### 6. Mortal Kombat

*The at-times controversial Mortal Kombat was one of our favorites to play in the office, featuring some of the best fighting action we've ever seen on a console game!*

#### 7. Deadman Sam

*This tale of a murdered nobleman out to reunite with his lost love took us through many spooky levels on our way to win true love once again!*

#### 8. The Lost Vikings

*Erik, Baleog, and Olaf fight their way through many dangers in this outstanding action puzzler featuring a surprising amount of challenge and lots of addictive fun.*

#### 9. Where In The World Is Carmen Sandiego?

*We never thought we'd have so much fun learning geography, but the hilarious cutscenes and excellent play controls made this game hard to put down.*

#### 10. The Simpsons

*The Super Nintendo CD showed off its arcade chops in this port of one of our favorite brawler games based on America's favorite family!*

-featured in the January 1994 issue of Nintendo Power as part of their Super Power Club bonus insert

**1993 Nintendo Power Awards ("The Nesters")**- compiled from fan voting, not a complete list of awards

Best Graphics and Sound (SNES-CD)

1. Secret Of Mana
2. Star Fox
3. Super Mario World 2

Best Challenge (SNES-CD)

1. Final Fantasy III
2. Star Fox
3. Battletoads II

#### Best Play Control (SNES-CD)

1. Super Mario World 2

*"What you're holding in your hand is Issue 0 of Nintendo Power CD, a new treat for all of our Super Power Club members! These two discs can be played in your Super Nintendo CD,*

*and will bring you the latest in news, tips, tricks, and even special game demos! Every three months, a new issue of Nintendo Power CD will arrive with your monthly magazine. We'll be charging a little extra for new subscribers, but current subscribers will continue to receive issues of Nintendo Power CD for free until their current subscription runs out. Nintendo Power CD comes jam-packed with all the cool stuff you're used to seeing in your Nintendo Power magazine, but now in video form! You'll get to watch some of the Nintendo game counselors play through some of the trickiest sections of SNES-CD games. You'll get to see special video previews of games we've got coming up. And much more! Also included is a disc just for demos of upcoming games. We've partnered with companies producing new games to provide exclusive demos that you'll only find on Nintendo Power CD, so you can try out games before you buy them at the store! Nintendo Power CD will help take your Super Power Club membership to the next level of power!"*

-quoted from the insert included with Issue 0 of Nintendo Power CD, which came with subscribers' issues of Nintendo Power in January 1994. Nintendo Power CD was also regularly sent to Nintendo's retail partners, for the purposes of playing preview videos at kiosks or having the demo disc available for play

## **Nintendo Power CD (Issue 0)- Winter 1994**

### *Disc One Contents-*

Classified Information- secret codes for 27 SNES-CD games, including Street Fighter II: Arcade Edition, The Terminator, The Simpsons, and others

### Counselors' Corner-

Video 1: "How do I beat the Tree Segments in Final Fantasy III?"

Video 2: "How do I access Rainbow Road in Super Mario World 2?"

Video 3: "How do I reach the Central Computer in time in Flashback: The Quest For Identity?"

Video 4: "How do I access the Black Hole in Star Fox?"

Power Charts- A countdown of Nintendo editors' current top 10 SNES-CD games. In subsequent issues, readers would help vote for these charts.

Pak Watch- Preview videos for NBA Jam, Secret Of Monkey Island, Kid Icarus CD, Ren and Stimpy, Daywalkers, Icebiter, Soulqueen, and Phaedra's Heart

### *Disc Two Contents-*

Demos for the following games:

Secret Of Mana

The Simpsons

Battletoads II

Icebiter

Utopia: The Creation Of A Nation

Eskrima Warriors

Secret Of Monkey Island

Cannondale CD

-

## **Electronic Gaming Monthly 1993 Editors' Choice Awards** (selected)

Game Of The Year: Secret of Mana (Super Nintendo CD)  
Runner-up: Samurai Shodown (Neo-Geo)

Super Nintendo Game Of The Year: Street Fighter II Turbo  
Runner-up: Super Mario All-Stars

Sega Genesis Game Of The Year: NHL '94  
Runner-up: Gunstar Heroes

Super Nintendo CD Game Of The Year: Secret Of Mana  
Runner-up: Super Mario World 2

Sega CD Game Of The Year: Sonic the Hedgehog CD  
Runner-up: Aladdin

Best RPG: Secret Of Mana (Super Nintendo CD)  
Runner-up: Final Fantasy III (Super Nintendo CD)

Best Fighting Game: Samurai Shodown (Neo-Geo)  
Runner-up: Street Fighter II Turbo (Super Nintendo)

Best Action Game: Super Mario World 2 (Super Nintendo CD)  
Runner-up: Gunstar Heroes (Sega Genesis)

Best Music: Secret Of Mana (Super Nintendo CD)  
Runner-up: Actraiser 2 (Super Nintendo CD)

### **System Reviews:**

Super Nintendo CD:

Ed: 10 (quote: "Last year I said it was highly recommended. This year I'm glad to have been vindicated. Even if you have to shell out an extra \$150, it's the best value in gaming, with a ton of great games and more still to come.")

Danyon: 9 (quote: "While it could do with a few more sports games, and there are a few FMV stinkers in the lineup, there aren't too many gripes to be had with the Super Nintendo CD. It's already the best peripheral ever made.")

Martin: 10 (quote: "Did I think at the beginning of the year that the Super Nintendo CD would have a better year than the Super Nintendo? This is an absolute must-buy now. For Secret of Mana alone, this is worth the price.")

Sushi-X: 10 (quote: "The best system for fighting games there is. You've already got the definitive versions of Street Fighter II and Mortal Kombat, and Samurai Shodown is coming next year. What the hell are you waiting for?")

Super Nintendo:

Ed: 8 (quote: "I'm really pleased with all the games that are coming out for this and the Super FX chip shows a lot of potential, and that you don't need to shell out the extra cash for an SNES-CD to have great 3-D visuals on a home Nintendo console.")

Danyon: 8 (quote: "What worries me is that more of the good games seem to be coming

out for the Super Nintendo CD. Will Nintendo keep pushing more good games to it to get people to spend the extra cash? But in the meantime, there's plenty to love about the good old SNES.")

Martin: 9 (quote: "You can't go wrong with the Super Nintendo, not with great games like Zombies Ate my Neighbors, Super Squadron X, and Mega Man X, along with stuff like Super Metroid and Dragon Warrior V coming down the bend.")

Sushi-X: 8 (quote: "For 100 bucks, if you don't have a Super Nintendo yet you should seriously consider buying one. The fighting games aren't quite arcade quality but in most cases they're damn close.")

Sega CD:

Ed: 7 (quote: "The Sega CD made a nice little push at the end of the year with great games like Aladdin and of course, Sonic CD. The problem is that I'm worried about this system's future prospects, it definitely doesn't look as bright as the Super Nintendo CD.")

Danyon: 7 (quote: "A console/CD combo might be just the thing to get the Sega CD sales going again. \$199, \$50 below the Super Nintendo CD combo, would be a great price point and there's a lot of value there with games like Sonic CD and Lunar.")

Martin: 6 (quote: "The Sega CD got its butt kicked this year by the Super Nintendo CD and deservedly so. There just isn't a good base of games to justify the purchase of this thing.")

Sushi-X: 7 (quote: "I've been having a lot of fun with Ultima Underworld II, but RPG fans have better options (AKA the Super Nintendo CD), and so do fighting game fans. It just might not be worth the purchase right now.")

-excerpted from the 1994 Electronic Gaming Monthly Video Game Buyer's Guide

### **Gamepro 1993 Editors' Choice Awards** (selected)

Super Nintendo Game Of The Year: Super Empire Strikes Back

Runners-up: Street Fighter II Turbo, Super Squadron X

Sega Genesis Game Of The Year: Gunstar Heroes

Runners-up: Aladdin, Street Fighter II Special Champion Edition

Super Nintendo CD Game Of The Year: Secret Of Mana

Runners-up: Mortal Kombat, Super Mario World 2

Sega CD Game Of The Year: Sonic the Hedgehog CD

Runners-up: Ultima Underworld II, Aladdin

Fighting Game Of The Year: Samurai Shodown (Neo-Geo)

Runners-up: Mortal Kombat (Multiplatform), Street Fighter II Turbo (SNES/Genesis)

Action/Adventure Game Of The Year: Super Mario World 2 (Super Nintendo CD)

Runners-up: Flashback: The Quest For Identity (Super Nintendo CD), Deadman Sam (Super Nintendo CD)

Role-Playing Game Of The Year: Secret Of Mana (Super Nintendo CD)

Runners-up: Earthbound (Super Nintendo), Ultima Underworld II (Sega CD)

-

*"1993 was a tale of two experiments: Nintendo and Sega's experiments with optical gaming. For Nintendo, the Super Nintendo CD was a revelation, a way to expand their fanbase into older gamers with more disposable income, who would play challenging and edgy games such as Secret Of Mana, Final Fantasy V, The Terminator, and of course, Mortal Kombat. Nintendo's efforts paid off, striking a chord they never expected to strike and unwittingly but gratefully laying the groundwork for the true course of their fourth-generation console. The company ended 1993 at a crossroads, but it was becoming increasingly apparent that their optical experiment was becoming the wave of the future. For Sega, the Sega CD's shortcomings were amplified by the Super Nintendo CD's success, and being outsold 2-to-1 over the course of the year was a sign that they were going down the wrong road. Though Sega's future still lay in the CD medium, it was clear that they would need something with a lot more power to challenge Nintendo and Sony's technological might. Sega ended 1993 with a renewed commitment to the Genesis, hoping to win over those gamers who might not be able to afford a CD upgrade, and hoping to take advantage of Nintendo's increasing shift away from their cartridge-based console. The year ahead would see the Genesis in an interesting position, fighting a battle similar to the one the NES had faced in the months before the Super Nintendo's release. There were still far more Genesis consoles out there than there were Super Nintendo CDs, and if Sega was going to keep their market share up until relief arrived in the form of the Saturn, they'd have to take full advantage of that fact. Because with every hit game that came out on the Super Nintendo CD, Sega was running out of time."*

-

This isn't an actual update, just a bit of an aside to give a bit more information on 1993's "original" franchise SNES-CD games. Most of the SNES-CD games scheduled for 1993 were either OTL games or part of existing OTL franchises. As the butterflies flap and the timeline advances, there will be more and more franchises original to TTL that will appear (over 40 original franchise games are planned for the SNES-CD in 1994). Here is a list of all the original franchise games that appeared and a brief description of them:

-

Scatterbeans: A colorful puzzle game that involves lining up colored spheres to form combos, somewhat like Bust-A-Move but the spheres shatter and disperse when combos are formed, it's a very fast-paced game.

Dark City: Another mystery game, more of a detective noir game taking place in a grungy town called Dark City.

Dragon's Destiny: A pseudo 3-D game where knights battle on flying dragons. A promising concept but the execution is poor and the game gets mostly bad reviews.

The Shores Of Whitesea: An FMV based fantasy game with some RPG elements, the game is a cult classic in some circles but is thrashed by critics and is later bashed memorably in an Angry Video Game Nerd video.

Super Carnival: An FMV carnival game simulator. Known mostly for its VERY cheesy acting which puts this game firmly in the "so bad it's good" category.

Classics Of Great Literature: An educational game with the text of ten classic novels included and quizzes on those novels. Strictly an educational game, somewhat rare and valuable in 2013.

Axes Of Avenglia: A fairly standard JRPG by Taito with CD enhanced music and some pretty good graphics for the time. A decent game but not really a standout.

Nightfall: A horror FMV game that becomes one of the more controversial games of the time due to its violent content. Regarded as one of the better FMV games on the system. Notable for featuring a young Kelly Hu as a beautiful witch.

Katie Corner: Another educational game, this one featuring puzzles and some live-action cutscenes. Gets decent reviews (especially for an educational game) but sells horribly, also somewhat rare and valuable today.

Deadman Sam: A platformer starring a skeleton named Deadman Sam. Regarded as a pretty good game (especially the animation on Deadman Sam), and it gets sequels and the franchise survives to this day.

The Swarm: A pretty standard shooter involving a hotshot pilot who takes down an alien invasion. Average reviews, average sales.

Frantic Flight: Another shooter game, much more complex than The Swarm as you're able to customize your ships and it even randomizes your wingmen. A very well reviewed game that gets terrible sales, becomes one of the system's hidden gems.

VideoMash: Though Nintendo kept the "Make My Video" series off the SNES CD, this game, similar to the Make My Video series but with original music videos specifically designed for the game, was published and released. Another game with horrible reviews but with a "so bad its good" following in the modern era of Youtube mash-ups.

Neighborhood Wars: A somewhat silly strategy game featuring rival gangs of kids battling it out with water balloons and other humorous weapons. Somewhat below average reviews, the humor is rather juvenile.

-

*"It's about making Sonic 3 the best Sonic game ever. We just need a little more time to get everything ready, but I absolutely promise that Sonic 3 will be worth the wait, and when April 18th rolls around, you won't be able to stop playing."*

-Tom Kalinske, announcing the delay of Sonic the Hedgehog 3 from February 2 to April 18, 1994 at the Winter 1994 Consumer Electronics Show

*"It's archaic. It's a totally underpowered piece of garbage. And video gamers are going to be able to do the math and see that we have the most powerful piece of video game hardware ever created, and that we're going to have the best games too. That's just a fact."*

-Atari CEO Sam Tramiel, discussing the Super Nintendo CD in an interview with Newsweek

magazine hyping the Atari Jaguar, February 21, 1994

*"We knew that the Atari Jaguar was a more powerful system than the Super Nintendo CD. It had two processors and both of them by themselves were faster, they were around 26 Mhz and we were 21. But, and this was why we weren't worried, or at least I wasn't... Atari did not take software publishers' needs into consideration. They put out a very powerful, very nice piece of hardware that was very difficult to develop for, while we at Sony cultivated relationships with software publishers and used their input the entire time we were making the Super Nintendo CD. Square, Konami, Capcom, Tecmo, we listened to them and we created a platform that they enjoyed making games for. The Jaguar had all of that power but no one was ever able to take advantage of its full potential."*

-Ken Kutaragi, in an interview with *Popular Mechanics*, January 1998

*"We've got a pair of big games coming out this month for the Super Nintendo CD that I think a lot of people are going to love. It's been such a pleasure working with Nintendo, and I'm looking forward to us putting out a lot of games for the SNES CD in the future."*

-Olaf Olafsson, from an interview with *Computer Chronicles* at the 1994 Winter CES

-

### **January 7, 1994 – Winter 1994 CES**

*It's that time again, time for all the big electronics companies to show off their latest gadgets and gizmos in Las Vegas, and this season's Consumer Electronics Show is proving to be the most exciting one yet. We're going to be taking a look at the latest video games today, and all the major players are putting their best foot forward. We're even seeing the legendary Atari on the comeback trail with their new 64-bit Jaguar system that promises 3-D graphics and interactivity on a level not yet seen on a home console device. The Atari Jaguar has already launched in select cities and will be rolling out across the country in the coming weeks. Atari CEO Sam Tramiel has promised a big slate of games for consumers to purchase as the system is made available. At the Winter CES, Atari showed off *Cybermorph*, a 3-D shooter game that hopes to compete with games like the hit *Star Fox* on the Super Nintendo's CD peripheral. Tramiel has promised a networked link-up accessory for the Jaguar so that players can connect and play multiplayer games with one another from across the country, a device that could give it a leg up on its established competitors. With two powerful co-processors, the Jaguar is perhaps the most powerful video game system ever launched, but only time will tell if Atari can reclaim the throne it held so strongly in the 1980s.*

*We've also seen new games promoted for the Panasonic 3DO, a powerful but expensive gaming console that was promoted very heavily at the time of its release last fall, though a high price tag and the rise of CD peripherals for Nintendo and Sega's systems have kept sales slow.*

*The biggest splashes at the Winter CES, as always, have been made by arch-rivals Nintendo and Sega, who showed off games for both their cartridge and CD systems at the show. Nintendo has been heavily promoting their home console versions of the arcade hit *NBA Jam*, while their partner Sony has begun rolling out its own stable of games for the CD peripheral, with *Icebiter* and *Skyblazer* both set for release this month. Nintendo is also promoting a version of the CD-ROM adventure hit *Secret of Monkey Island* that looks to be a major hit with some of the system's younger players in the same way that *Where In The World Is Carmen Sandiego?* was last year. Nintendo has been making headlines by*

*purchasing the MLB's Seattle Mariners, and the company's baseball game, featuring baseball superstar Ken Griffey Jr., will release in cartridge form for the Super Nintendo just in time for the upcoming baseball season.*

*On the Sega front, the company showed off the latest game in the Sonic the Hedgehog series, which has been pushed back from its scheduled Groundhog Day release date to later in the spring, giving the game's creators time to add even more levels and an all new character named Knuckles. Sega is also promoting a pair of sports games, including its own baseball game and a new version of John Madden Football for the 1994 NFL season. There wasn't as much focus on Sega's CD peripheral this year, though a version of Mortal Kombat was shown off at Sega's booth. The company has stated its renewed commitment to the Genesis system, though competition from the Super Nintendo CD may also be a factor, the company's CD peripheral outsold Sega's by a 4-to-1 margin during the holiday season and consumer analysts say that the Nintendo CD is at this time the better buy.*

*Whether it's Atari, Panasonic, Nintendo, or Sega, video games put on an impressive show at this year's Winter CES, and we'll keep you posted on all the exciting news ahead.*

-from the *Computer Chronicles* report on the Winter 1994 CES, January 9, 1994

## **Winter CES Update!**

There's a ton of games headed your way in 1994, and we got the first scoop on the biggest games of the year at the Winter 1994 CES! Both Nintendo and Sega's booths were jam-packed with their latest offerings, and though we had to fight serious crowds to play some of the biggest games, we came away with all the juicy details on every single game at the show.

Nintendo's booth was split between their cartridge and CD games, but the biggest game of all was undoubtedly Super Metroid, coming to the SNES this April. It's the third installment of the popular Metroid series and it'll see bounty hunter Samus returning to Planet Zebes to fight the vicious Space Pirates. We were treated to a sneak peek at an incredible battle with Kraid that's sure to blow players' minds, as the huge green baddie now takes up two whole screens! We also got a look at Nintendo's new baseball game, Ken Griffey Jr. Presents Major League Baseball. Featuring all the real MLB teams, the game lets players experience a full season in the big leagues or kick back with a Home Run Derby. The graphics look great and the sound effects make you feel like you're really at the ballpark. We also got to spend some time with Mega Man X, which should be available in stores by the time you read this. There was also the really fun Star Tropics II: Zoda's Revenge, and we got to play Dragon Warrior V as well. From what it sounds like, Dragon Warrior V is the series' best game to date and it's the first game to appear on the Super Nintendo, which means it's bringing enhanced graphics and sound to the table. We also got to check out Kid Icarus CD on the Super Nintendo CD, and it's a LOT better than the NES original. It's a whole new adventure for the hero Pit, and it plays a bit like Metroid but with a Zelda II twist to it, you can explore a huge series of worlds and gather experience points and new equipment as you try to battle the evil Medusa and her wicked minions in a quest to save Greece. It's a really fun action game and we look forward to playing the full game when it gets released in April. A game we're REALLY excited about is Castlevania: Rondo of Blood, a new Castlevania game for the Super Nintendo CD that emphasizes exploration more than the NES or SNES Castlevania games did. Then there's Soulqueen, a really fun looking space shooter from Telenet Japan. It plays a lot like Axelay, but with great cinematic elements and a fun (and really hot!) heroine named Cleopatra, we're ready to blast off with this one when it comes

out this spring.

On the Sega front, we REALLY liked what we saw from Sonic the Hedgehog 3, though we're not happy it's been delayed to April. We trust Sega though, and we know that it's going to be worth it when we finally get to play, the parts of the game that were playable here at CES looked amazing. Sega had their own Castlevania game to show off as well. Called Castlevania: Bloodlines, it was even more action packed than Rondo of Blood, and might indeed be a more exciting game than its slower paced CD cousin. Sega also showed off a great version of Super Street Fighter II for the Genesis. While we're looking forward to seeing what the Super Nintendo CD version of the game is capable of, Sega's version looked arcade fast and jam-packed with characters and features. It's clear that Capcom isn't leaving its loyal Sega fans out in the cold.

-from the Winter 1994 CES article in the March 1994 issue of *Electronic Gaming Monthly*

-

Interviewer: I'd like to thank you for taking the time to talk to us about *Snatcher*, if only briefly. We've been hearing about this game even since before the Super Nintendo CD was released, and it's taken quite some time to get it to market.

Masahiro Sakurai: Kojima-san and I have taken a lot of time working together to optimize *Snatcher* for the Super Nintendo CD. We think it's absolutely going to be worth the wait!

Interviewer: I played some of *Snatcher* and it's a really impressive game, though it's not like anything that's come to market before. Do you think such an unorthodox game can be a hit with Western audiences?

Masahiro Sakurai: I'm very confident that Western audiences will love *Snatcher*. It takes a lot of influence from the classic sci-fi films *Blade Runner* and *Terminator*, both of which were very successful here in the States. Nintendo is planning to promote this game to older players who will really get into the cinematic elements of it. Kojima-san really created something special here and I'm glad I get to help share it with Nintendo players!

Interviewer: I can see there's a big crowd around the booth, I'm going to let you get back to promoting the game but thank you very much for this interview.

Masahiro Sakurai: Thank you for enjoying *Snatcher*!

-from an interview with Masahiro Sakurai for the Life and Times section of the Seattle Post-Intelligencer

-

## **January 8, 1994**

At the Alexis Park Hotel in Las Vegas, Tom Kalinske sat with some of his partners at Sega of America, discussing the company's latest strategy with Sega president Hayao Nakayama. Nakayama, along with some of the executives at Sega of Japan, were convinced that the company needed some sort of stop-gap measure before the release of the Sega Saturn. Nintendo's CD peripheral had dealt a seemingly mortal blow to the Sega CD, and now they were looking for anything they could throw up against it to compete. Nakayama had

managed to convince his fellow executives not to go through with pushing Project Mars, a 32-bit successor console to the Genesis, but it hadn't been easy, and he'd needed help from Tom Kalinske to demonstrate the folly of such a move. Ultimately, it had been two factors that prevented them from forcing through Project Mars.

The first factor was the system's proposed technical specifications. It would be more powerful than the Super Nintendo CD, with a faster processor and better 3-D graphics capabilities... but it wouldn't be significantly more powerful. Not enough to provide a budget-priced alternative to the Saturn when it was barely more powerful than its competition to begin with. The second factor was that Sega of America, which had seemed so powerful in 1992, had had its success wane during 1993 due to the rise of the Super Nintendo CD. With the sense that SoA and SoJ were "struggling together", so to speak, Nakayama was able to convince his fellow executives in Japan that Kalinske was still the "man with the plan", that there was no need for Japan's branch to exert its authority over SoA. Not yet, anyway.

"I bought you time," said Nakayama, as the conversation finally drifted to the subject of a Genesis stop-gap. "But the suits in Japan, they want something to bridge the gap between the Genesis and the Saturn, and if not Project Mars, then what...?"

"Well, that's the thing," said Tom Kalinske, a smile crossing his face. "Silicon Graphics has been working hard on the Saturn, but we've had them working on a couple other projects as well, and with the delay of Sonic 3..."

"Something else they're not happy about in Japan," Nakayama replied sternly.

"We need to do something with that lock-on technology. Originally, we were going to use it to connect Sonic 3 to its companion game which would be coming out later this year. But now that we're going ahead and releasing Sonic 3 complete, that lock-on tech is a solution in search of a problem. I think we've found our problem."

"Project Phobos," said Shinobu Toyoda, reaching into a briefcase and pulling out a manila folder. He placed it on the table for Nakayama and his fellow SoJ executives to peruse.

"It's a lock-on cart packed with several co-processor chips," said Kalinske. "as many as we can pack into a \$50 accessory. You hook it up to a game, it'll pump up the processing power, a lot like the Super FX chip did for that Super Squadron X game on the Super Nintendo. We can use it to add 3-D elements to Genesis games, make them run faster, store more in internal memory....games enhanced with this will run faster and look better than anything the Super Nintendo can produce. It's not quite the level of enhancement we'd have gotten with Project Mars, but it'll be enough to bridge the gap until the Saturn's ready."

Nakayama looked over the contents of the folder. He seemed intrigued, but some of the other executives looked skeptical.

"You say that they would not have bought Project Mars, what makes you think they will purchase this?" asked one of them.

"We'll pack it in with certain games. We can pack it in with Sonic 3, not at the game's launch but as a 'special edition' later in the year. Or that Virtua Racing game that's coming out. I think we can port some of the Sega CD games with this too." Kalinske's mind was

racing with ideas, he got so inspired when he had a good idea that he knew would help Sega take Nintendo down, and he was convinced that Project Phobos would give the Genesis the winning edge. He just hoped the SoJ brass would be convinced.

"We'll...go back to Japan and discuss this," said Nakayama. "In the meantime, you need to make sure that it wasn't a mistake to delay Sonic 3. We're losing ground to Nintendo with every passing day."

Kalinske already knew that, and he was already working his tail off to make sure Sonic 3 would be a success. It would take a LOT of effort for the team to have the game ready with all the Knuckles content by April 18th, but he had allocated every possible resource he could to make it happen. The April 18th date was deliberate...it was the date Nintendo was planning to release Super Metroid. He was going head-to-head with the Super Nintendo's biggest cartridge game of the year and he was planning to blow it right out of the water.

CES had been, by all accounts, a success for Tom Kalinske. And he hoped that meant it would be a success for Sega as well.

-

### **Cannondale CD:**

Ed: 6 (quote: "Knocking people off their bikes is fun, but this cycling game's graphics are pedestrian at best, and the racing gets rather old after a while.")

Danyon: 7

Al: 5

Sushi-X: 5

### **Fatal Fury 2:**

Ed: 8

Danyon: 7

Al: 8

Sushi-X: 9 (quote: "This exciting fighting game is one of SNK's best, featuring a huge cast of characters and some really fast-paced action.")

### **King Of Dragons:**

Ed: 7

Danyon: 7 (quote: "A really fun hack-and-slash game somewhat reminiscent of Zelda II with its leveling-up system. This CD version features a ton of spoken dialogue as you make your way through the levels.")

Al: 8

Sushi-X: 7

### **Lester The Unlikely:**

Ed: 6

Danyon: 3

Al: 2 (quote: "It's unlikely that I'm ever going to play this game again. This platformer is a horrendous mess.")

Sushi-X: 2

### **Magician Lord:**

Ed: 6

Danyon: 8

Al: 5 (quote: "The graphics are nice but other than that this is just a really mediocre game. It's too hard and the slow-paced platforming makes this one a slog.")

Sushi-X: 6

### **Skyblazer:**

Ed: 8

Danyon: 9

Al: 9

Sushi-X: 8 (quote: "A terrifically fun side-scroller featuring great pacing, combat, and a HUGE variety of power-ups.")

### **Icebiter:**

Ed: 7 (quote: "This game's not perfect, but its rapid-fire weapon combat and great music make it one of the SNES-CD's best platformers.")

Danyon: 9

Al: 8

Sushi-X: 7

-from reviews of January 1994's SNES-CD games in the February 1994 and March 1994 issues of *Electronic Gaming Monthly*

-

*"January 1994 was a big month for us, because that was the month that the first game we had an actual creative hand in was released. That game would be Icebiter. It was...sort of comparable to Treasure's Gunstar Heroes game for the Sega Genesis. You had a guy whose village was sort of frozen by this huge ice monster, and there was a legend about this monster, he was the Icebiter who came from the depths of winter to get vengeance on humanity. The story was really silly but it was the gameplay that I thought stood out, the developers did a great job on the combat in particular. Basically, Icebiter kept sending all these different monsters at you throughout the levels, and as you made your way through them you picked up stronger and stronger weapons to use until you got to the Icebiter himself. The game got decent reviews and we sold a pretty good amount, nothing like Deadman Sam did or anything like that but we definitely turned a profit. Ultimately it was a sign that we could go out and actually get these developers together and not just publish games, but create our own studio and make games, and Icebiter was a big part of that success.*

*I remember we ended up competing with ourselves in that month because we also had Skyblazer come out, it wasn't one we made but it was one that we published, and it was similar in a lot of ways and it got better reviews. Not quite as good sales, but better reviews. It was an excellent game. Now, around that time we also got approached by this company called Gamefreak who had an idea for a platformer game. Now that's another story, and we all know what Gamefreak did later on, but not a lot of people know that they really kind of got their start working with us."*

-Olaf Olafsson, "The Sony Imagesoft Story (Part 1 of 3)", excerpted from an article on IGN.com, October 24, 2010

-

### **SNES-CD Power Charts – January 1994**

1. Mortal Kombat – 26,917
2. Super Mario World 2 – 23,360
3. The Terminator – 16,775
4. Star Fox – 15,182
5. Final Fantasy III – 13,884
6. Super Ghouls 'n Ghosts CD – 12,761
7. Super Mario Kart – 12,408
8. Street Fighter II: Arcade Edition – 11,587
9. Jurassic Park – 9,152
10. Secret Of Mana – 8,457
11. Yoshi's Safari – 7,800
12. Deadman Sam – 7,551
13. Final Fight II – 6,604
14. Frantic Flight – 4,887
15. Super Bomberman CD – 4,615
16. Battletoads II – 4,417
17. Final Fantasy: New Generation – 4,122
18. Secret Of Monkey Island – 3,581
19. Super Detective Club – 3,227
20. Lethal Enforcers – 2,911

\*Cover of the insert shows a cloaked and masked spy, rappelling down next to a window and peeking in with binoculars on what looks like a board meeting between Nintendo characters like Mario, Luigi, and Link. The caption reads "There's A Spy In Our Midst..."\*

*Here at Nintendo, we've got more games coming out than ever before. That's why you need the inside scoop, and that's what you'll get when you join the Nintendo Super Power Club. For just \$59.99, you'll get three years worth of information on all the latest games. You'll get 36 issues of Nintendo Power, our monthly magazine featuring tips, tricks, and the exclusive Nintendo news you can't get anywhere else. You'll get also 12 issues of Nintendo Power CD. Every three months, a two-disc issue will arrive with your monthly Nintendo Power magazine. Nintendo Power CD contains hours of exclusive video, featuring interviews with developers and fans on the latest Nintendo games. You'll also be able to see the expert game counselors at Nintendo playing through the trickiest parts of some of the toughest games around. Plus, every issue of Nintendo Power CD contains a special demo disc that'll let you play upcoming games before anyone else. And, if you subscribe now, you'll get a special gift: your choice of one of three strategy guides. Choose between Super Mario World 2 or Secret of Mana, our most jam-packed guides to date, each with over 200 pages of information on one of the Super Nintendo CD's biggest games. Or you can choose our new Super Nintendo CD Player's Guide, with tips and hints on over 40 Super Nintendo CD games that will give you a leg up on the enemies. When you're in the Nintendo Super Power Club,*

*it's like having your very own spy at Nintendo HQ.*

-from an insert included with Super Nintendo CD software during the first few months of 1994

-

*"Am I bitter about my time at Sony? I think, the way that the gaming market was going at the time, it was hard for anyone to predict what would happen with the games Sony and Nintendo were localizing. I said Secret of Mana would be a commercial failure, it ended up selling half a million copies in its first three months of release in the West. I could have done without Ken Kutaragi coming to my office personally and showing me the sales figures. Contrary to popular belief, I don't hate RPGs. I never did. But when I got into the industry, they weren't big sellers."*

-Bernie Stolar, former executive vice president of Sony Computer Entertainment America, in an interview with Kotaku.com in July 2013.

*(Note: ITTL, Stolar is the current president of Mattel, where he's infamously known for rejecting an idea for a doll line featuring the daughters of famous fictional monsters. Now known as Monster High, the doll line became a huge hit for Hasbro and along with its sister series Ever After High, the two shows are enormous hits for the Hub network and were a huge part of the Hub becoming part of most basic cable packages starting in 2014.)*

*"Secret of Monkey Island had to be my favorite Super Nintendo CD game of all time. It was really challenging but a lot of fun and one of the funniest games I've ever played. If I ever do a personal top 5 list of best Super Nintendo CD games, you're definitely seeing Monkey Island on there. By the way, that movie they made of it in 2005? I kinda like to think I had a hand in that since I did suggest it to the powers that be at Nickelodeon while I was working on All That."*

-Lisa Foiles, in a February 2011 interview with The Nerdist

*"This fleet's the biggest one yet! I see four capital ships....you'll need to assemble the Crusher Ray to have a shot at taking them down. Just collect the parts that come off the Xerus fighters and your ship's mechanic-bot will do the rest. Good luck soldier, you'll need it!"*

-Colonel Caster in level 13 of *Meteora*

*"Here's a picture of me when I was 11, reading the strategy guide for Phaedra's Heart. Is that enough 'gamer cred' for you?"*

-Anita Sarkeesian, in a Twitter post from August 23, 2014

-

## **February 7, 1994**

*The Secret Of Monkey Island* is released for the Super Nintendo CD. It's largely the same as the 1990 PC original, though a few new puzzles, areas, and songs are added for this version. The release comes after a major advertising campaign for the game, possibly the biggest for an SNES-CD game since *Star Fox*, on networks such as Nickelodeon and Fox Kids. The campaign is a major success, sales are excellent for the game, despite some skepticism from the gaming media that kids with short attention spans may not want to

play a tricky point-and-click puzzle game. It's the first exposure that a lot of gamers have to the *Monkey Island* franchise, which has had yet to be released on any home console, and the Super Nintendo CD version becomes the most well known version of the game. Critical reviews are excellent as well, the game even beats out highly regarded games such as *Meteora* and *Phaedra's Heart* for Game of the Month in most publications. It's the first successful PC game to come to the Super Nintendo CD and see similar success, and its success will encourage other software companies to consider SNES-CD ports of their own.

-

*"Phaedra's Heart is probably my favorite video game of all time, and I have a lot of fond memories of playing it as a young girl. I got it, along with The Secret Of Monkey Island and the Super Nintendo CD itself, for my 11th birthday, and both games had a major effect on me and what I understood strong female characters to be. The main character of Phaedra's Heart is the goddess Phaedra, who is stricken of her powers by a mysterious evil force and cast down into the world of the mortals. From there, she begins a journey to reclaim her powers while simultaneously befriendng and aiding a group of humans to overthrow their corrupt ruler. While the game is full of tropes, being a 90s RPG, it's refreshingly absent of nearly all of the harmful tropes associated with female characters in games. Despite losing her powers, Phaedra is never portrayed as being weak or in distress. She's a fully fleshed-out character with a variety of emotions that are expressed in very natural ways throughout the game. She DOES get a love interest, sort of, but she's never defined by her romantic attachment and at the end of the game she chooses her true essence over her love interest. Her "duty" is never portrayed as something explicitly feminine or something she's required to do, but instead it's her duty to herself, something that she chooses to undertake for the benefit of her friends and for her people, but also for her own benefit. She is one of the best examples that exist of a strong female character with her own agency and her own defined goals and is an example that all who make video games should follow. It's been 20 years since Phaedra's Heart was released and yet very little progress has been made."*

-Anita Sarkeesian, "Tropes vs. Women In Video Games Part 3"

*"We really expected this game to do well everywhere. When Phaedra's Heart released in Japan, we released the same week as the CD version of Final Fantasy V, and we sold more copies! We beat Final Fantasy, and I really wanted the same success in the West, but that didn't pan out. We sold....I think 40,000 total in North America, which was extremely disappointing."*

-Keiji Honda, president of Enix, translated from an article in *Famitsu* magazine, October 1995

*"A lot of people asked me why I never did any more voice acting after Phaedra's Heart. Don't get me wrong, I loved doing the voice of Phaedra, it was a great opportunity for me. But I got the job I wanted as a teacher and I just chose to continue with my teaching career. I don't regret anything but I'm always grateful when anyone praises my work in that game. I really did have a good time."*

-Jessica Kalenz, voice of Phaedra in *Phaedra's Heart* and now an eighth-grade English teacher, excerpted from an interview with *Working Mom* magazine in November 2013

Enix's *Phaedra's Heart* is an exciting new RPG for the Super Nintendo CD! When the goddess Phaedra is cast down to the mortal world, she'll have to make new friends and battle fierce enemies to reclaim her powers and save her people! This RPG from the makers of *Dragon Warrior* and *Soul Blazer* will really test your mettle, but Nintendo Power is here to guide you through the first two dungeons and get you started out on one amazing quest!

-from the February 1994 issue of *Nintendo Power*

*You are bidding on a North American copy of **Phaedra's Heart** for the Super Nintendo CD, complete with instruction manual and all inserts. No scratches on the disc, no scuffs on the case. Only about 40,000 copies of this game were released in the States, this game is VERY RARE especially in this condition! Included with the game is the Prima Secrets of the Games Strategy Guide for Phaedra's Heart, in very good condition with no creases on the cover or marks on the pages. Only 5,000 of these guides were made!*

*Selling my husband's Super Nintendo CD collection after he was killed in a robbery on June 23, 2014. Need money to pay for funeral expenses.*

Price: USD: \$267.50 (17 bids)

-taken from an Ebay auction on July 20, 2014

-

### **Lemmings 2:**

Ed: 8

Danyon: 9 (quote: "Even better than the original! The puzzles are as tough as ever, but it's one of the most addictive games I've played in a while. There are a lot of skills you can use to guide your lemmings to safety.")

Al: 8

Sushi-X: 9

### **The Secret Of Monkey Island:**

Ed: 9

Danyon: 9

Al: 9 (quote: "This PC port is a revelation, featuring the classic tale of swashbuckling and silliness in all its glory. You won't want to stop playing until you see how this thrilling story ends.")

Sushi-X: 9

### **Daywalkers:**

Ed: 7

Danyon: 7

Al: 6

Sushi-X: 7 (quote: "This game mixes platforming and horror really well, depicting a cop's quest to kill vicious vampires that are taking over his city. A lot of other games would shy away from blood and guts but this one doesn't.")

### **Phaedra's Heart:**

Ed: 9 (quote: "One of the best RPGs I've played on the system. The voice acting is superb, adding a real cinematic element to what's otherwise a great traditional role-playing game.")

Danyon: 9

Al: 9

Sushi-X: 8

### **Meteora:**

Ed: 9

Danyon: 8 (quote: "Probably the best acting I've seen in any FMV game on the system. That's not really saying much but in this game it really is. It's Wing Commander meets Star Fox in a lot of ways.")

Al: 7

Sushi-X: 7

### **Eskrima Warriors:**

Ed: 8

Danyon: 8

Al: 8

Sushi-X: 8 (quote: "A really good fighting game with a variety of characters. The best weapon-based fighting game since Samurai Showdown, plus I got to learn what the martial art of eskrima is.")

### **Infiltrator:**

Ed: 7

Danyon: 6

Al: 6 (quote: "Basically, you're a spy that's got to break into a variety of locations and collect items, or documents, or sometimes you have to kill someone. It's an all right game but some of the tougher levels can be needlessly frustrating.")

Sushi-X: 7

### **Kings And Knights:**

Ed: 3 (quote: "Maybe it's because I just got done playing Meteora, but my God the acting in this game is hideous. The quest to get back Excalibur has never been so awful as it is in this fully-FMV based turd of a game. The actor playing the king is worse than a mall Santa.")

Danyon: 5

Al: 1

Sushi-X: 1

-Reviews of February 1994's SNES-CD games from the March and April 1994 issues of *Electronic Gaming Monthly*

*"And here's Cheer High Detective Team. This is a kind of visual novel game, I guess somewhat like Super Detective Club, where you've got a bunch of cute high school girls and you're trying to solve a mystery. I mean, I guess it's supposed to be for young girls or something, because all these characters are teenage cheerleaders....you see all their fashion accessories, purses, they drive around in a nice pink car, but.... this game, I'll tell you.... \*shows three of the detectives walking around in one piece swimsuits\* this game has a lot of stuff in it that, uh... \*shows two of the detectives sitting back to back, tied up and gagged as a bomb is about to go off next to them\* kind of makes it seem like they were doing this on purpose. \*shows all six of them in cheerleader outfits kicking and waving pom-poms\* I mean, everywhere you turn, there's some kind of fanservice thing going on! \*shows four of the girls splashing around in the school swimming pool\* Literally. Everywhere. And it's not even that good of a game, I mean, Super Detective Club is way*

*better than this. The mysteries are easy as shit to solve, I swear the real challenge is finding all these fanservicey scenes. Like, fucking up bad enough to get one of the girls captured, or, visiting the pool just to see them in swimsuits, so.... you gotta wonder who this game was really trying to appeal to."*

-The Angry Video Game Nerd from his 85th video, "Detective Games", talking about another February 1994 SNES-CD release, *Cheer High Detective Team*

-

## **February 25, 1994**

Tonya Harding looked up at the podium next to her. There was Nancy Kerrigan, her fierce figure skating rival, getting the gold medal after being Russia's Oksana Baiul by just a tenth of a point. Harding would have to settle for the bronze, and for a moment she'd wondered what it would've been like if her ex-husband had been able to carry out his plan to sabotage Kerrigan's Olympic hopes. The night of the United States figure skating championship, which Kerrigan had won, Harding's ex-husband Jeff Gillooly had called her to apologize. He'd told her that he'd hired someone to attack Nancy Kerrigan a couple weeks before but that the attacker had gotten caught up in playing a video game and had forgotten to carry out the attack. She remembered yelling at Gillooly and demanding to know what the hell he'd been thinking, but deep down in the bottom of her mind she'd found herself wishing the attack had gone off as planned.

Now, watching Nancy Kerrigan claim the gold medal that she'd felt she deserved, Harding couldn't help but think those same dark thoughts again. But then again... an attack like that, so close to the Olympics? It would've been glaringly obvious who had been responsible. In the end, it would've been more trouble than it was worth.

"Maybe..." thought Harding, "*this was the way it was meant to be. And....there's always the next Olympics...*"

-

*We're continuing our FMV Games Week here at Gamesradar.com with Meteora, a classic space shooter game for the Super Nintendo CD. Meteora combined some really nice full-motion video cutscenes with exhilarating space shooter action to provide one of the best FMV games to come out for the system. As part of the Meteora-related fun, we've got an interview with the game's lead designer, Brad Richards, who is now best known as the creator and CEO of Excitech Games.*

Interviewer: We're here talking to Brad Richards, lead designer and scenario writer for the Super Nintendo CD space shooter *Meteora*. Thanks for sitting down to talk to us.

Brad Richards: Sure thing, I'm always happy to talk about one of my games.

Interviewer: *Meteora*, as I recall was originally supposed to be a PC game, and then a 3DO game. What convinced you and your team to develop for the Super Nintendo CD?

Richards: Well, the PC already had a lot of FMV-based space shooter games, it was a really saturated market at the time with stuff like Wing Commander, so we knew the competition would be tougher. And we weren't quite as impressed with the 3DO as I thought we'd be when we started developing for it. It was easier to make games on the Super Nintendo CD

and that's what really appealed to our team.

Interviewer: When *Meteora* was released, did you expect the critical reception that you got?

Richards: I was pleasantly surprised to see the review scores, and it was a definite pleasant surprise to get the kind of sales that we did. We didn't beat *Monkey Island* obviously, but I was really pleased that the game sold even moderately well.

Interviewer: I had to do a little digging but of all the games that came out for the SNES-CD that month, *Meteora* was #2 in sales.

Richards: Well yeah, a distant second but second place is still damn good.

Interviewer: What was it like working with Giancarlo Esposito and Milla Jovovich? I mean, they're both pretty famous now.

Richards: Not back then though! \*laughs\* Well, Giancarlo, I knew him from *Do The Right Thing* and I was really happy to get him. He played, uh, he played Colonel Caster. He was really good, I mean he took this thing really seriously and kind of raised the level of the whole production, which was nice. I know other FMV games, the acting was REALLY bad, like in *Night Trap*, that game was awful but we wanted to do something good for the players especially. You were paying \$50 for a game, you deserved to get something at least halfway decent, especially when you could go to a movie for \$5 and see great acting in that. Milla Jovovich, she was SO young back then but she was great too, she was really professional and I wish we'd have given her a bigger role than we did. I mean knowing how famous she is now, I would've had her be the main character or something instead of his tomboy best friend.

Interviewer: You know, a lot of people really liked her character in the game, she had some of the best lines. Where'd you come up with-

Richards: From the end of level 8? \*laughing\*

Interviewer: Yeah, you remember it don't you?

Richards: She ad-libbed that. I swear to God, she ad-libbed that and cracked us the hell up. The line I wrote for her for that scene, I don't even remember it but I know it sucked. I should've known then that she was gonna be a star.

-excerpted from an interview at Gamesradar.com, January 18, 2011

-

### **SNES-CD Power Charts – February 1994**

1. Super Mario World 2 – 20,415
2. Secret Of Mana – 19,171
3. Mortal Kombat – 18,842
4. Star Fox – 14,994
5. The Simpsons – 14,277
6. Super Mario Kart – 13,231
7. Final Fantasy III – 12,310

8. Street Fighter II: Arcade Edition – 10,784
9. Super Ghouls 'n Ghosts CD – 9,187
10. The Terminator – 8,988
11. Battletoads II – 7,654
12. Actraiser 2 – 6,800
13. Yoshi's Safari – 6,154
14. Jurassic Park – 6,060
15. Super Detective Club – 5,574
16. Deadman Sam – 5,224
17. Final Fight II – 4,826
18. Super Bomberman CD – 3,711
19. Kid Icarus CD – 3,442
20. Final Fantasy: New Generation – 3,398

-

### **March 1, 1994**

Tom Kalinske was very pleased with what he'd been hearing from Yuji Naka and the rest of Sonic Team, and he'd just gotten to see the fruits of their labor first hand. The new Sonic 3 looked incredible. There were a staggering amount of levels to play, the Knuckles gameplay looked top-notch, and the game itself ran smoothly with no major bugs or hiccups to report. The few bugs that remained could be squashed quickly, which left plenty of time for the game to make its April 18th release date. The biggest problem facing this new Sonic 3 game was the cartridge itself.... it would be a special 34-megabit cartridge specifically designed for the revamped game. It would be quite expensive and the game would launch with an MSRP of \$59.99... but Sega fans had already shown they were willing to pay a premium for quality games, as those who'd shelled out \$80 for Phantasy Star on the Master System had proven. Kalinske already had visions of a special edition of Sonic 3, packed with the Sega Mega Charger (the name they were going to use in North America for "Project Phobos"), selling this holiday season for that same \$80 price point, a killer value once people realized how much the new lock-on coprocessor cart could do.

It did bug Tom Kalinske that the top selling game of the last month, *The Secret of Monkey Island*, was a game he'd once coveted for the Sega CD, before LucasArts decided to port it exclusively to the Super Nintendo CD instead. Nintendo kept one-upping him at every turn. Super Nintendo CDs were flying off the shelves faster and faster and the peripheral was dragging Super Nintendo sales upward as well, that console had outsold the Genesis now in the United States for each of the past four months. But April 18th was going to be different. Tom Kalinske knew that not only was Nintendo releasing *Super Metroid* for their Super Nintendo that month, but a slew of games were releasing for both the SNES and the SNES CD. And he wanted nothing more than to crash Nintendo's party.

"Mr. Nakayama," said Tom Kalinske, speaking with his boss on the phone. "Did you get a chance to see the new Sonic 3 in action?"

"I did," Hayao Nakayama replied. "I was very impressed. I was right to trust you on this. I just hope you're right about Phobos, the brass still really wanted to go ahead with Project Mars."

"One thing at a time, sir. One thing at a time."

-

*"The release of Snatcher for the North American Super Famicom CD was a real high point in my career as a video game designer. I really had this sense that it was the right game at the right time and the sales figures justified that feeling completely. It paved the way for so much, both in my own career and in the genre of interactive novel games as well."*

-Hideo Kojima, Famitsu magazine, January 2001

*"I couldn't be more proud that I helped bring Snatcher to Western shores! It's a game that fulfills all the promises of 'interactive entertainment' that Kutaragi-san at Sony made when the Super Famicom Compact Disc System was released. I really hope that players give it a chance, it's not the kind of game they're used to but it's a new step in the development of video games."*

-Masahiro Sakurai, in the March 1994 issue of Nintendo Power

*"I've dabbled in playing video games before. I did check out some of the Terminator games, most of which weren't very good, which is unfortunate. One of the stunt people on True Lies told me about a game on CD-ROM called 'Snatcher', and I was supremely impressed with it. The level of storytelling was absolutely superb. I think as technology marches forward, the people who make video games are starting to think in the same way as the people who make movies. I'd like this trend to continue. Who knows, maybe some day Hollywood film directors will be working on games?"*

-James Cameron, in an interview with Entertainment Weekly, July 15, 1994

*"I remember NBA Jam being our first really big sports hit. A lot of the game companies that do sports games, particularly Electronic Arts, were kind of sitting out the first year of the SNES-CD, wanting to see how sales would go, so it took a while to get a hit like NBA Jam was. Of course, it was kind of a hit for everybody, including Sega, but it was still a game that drove sales for us that spring."*

-Peter Main

*"That SNES CD port of Alone in the Dark was a complete mess and we all knew it. The system was powerful but we had no clue how to get that kind of 3-D to work that early in the console's lifespan and Sony wouldn't work with us like they did with companies like Squaresoft and Konami, so we were really in the dark and the results were understandably horrible. We did our best but if you compare the SNES-CD version with the 3DO's....there's obviously no comparison, 3DO is way better. It's a shame too because judging from some of the games that came out later on, we might've been able to do a much better job if Sony had been more open to us about how to program for it. The system just wasn't capable of advanced 3-D without some really nifty hardware tricks that we weren't privy to. I'm sorry to anyone who had to suffer through that port, I'd refund your money if I had it to give."*

-Shaun Hollingworth, co-founder of Krisalis Software, from an interview with Electronic Gaming Monthly in September 2005

*"I heard that Dragon Warrior V almost wasn't released. Thank you to everyone at Nintendo and Enix who decided to bring this wonderful game over here to the United States. I enjoyed every minute of playing it. I'm looking forward to the next one as well!"*

-Edith Jeter, from a letter in the September 1994 issue of *Nintendo Power*

-

Mr. Burns: And here we have the latest in interactive entertainment! The newfangled Ultra Compact Disc Game Enjoyment Device!

Bart: It's a Super Koki-yama CD, man! \*grabs the disc from Mr. Burns and puts it in\*

Mr. Burns: This game is based on the novels of Agatha Christie!

Bart: \*looking at the case\* Cool, "The Tale Of Twelve Murders"! \*playing it....quickly getting bored\*

\*The screen briefly shows a point-and-click interface, Bart randomly clicking on things in a stuffy looking mansion but nothing's happening\*

Bart: Hey, what gives?

Mr. Burns: Yes, this is the latest technology!

Bart: \*clicks on something and makes a shelf move\* Where's all the murders? ...this game blows. \*tosses down the controller\*

-from *The Simpsons* episode "Burns' Heir", April 14, 1994

-

### **Welcome To NBA Jam!**

"Jam Day" is March 4th, the day when NBA Jam launches for the Super Nintendo, Sega Genesis, and the Super Nintendo and Sega CD-ROM systems! With so many ways to play this thrilling arcade hit, you can finally bring all the rough-and-tumble action of NBA Jam into your living room! We got our first copies of the game to review, and all four home console versions are superb, with great graphics, lifelike sound effects, and superior gameplay. Whether you game it up with Nintendo or Sega, cartridge or CD, be sure to pick up NBA Jam if you're a basketball fan.

Graphics: 5.0

Sound: 5.0

Play Control: 5.0

Fun Factor: 5.0

*(Note: The Super Nintendo CD version, with detailed character graphics and the most voice samples, is the closest version to the original arcade game, though again, all four versions play pretty much identically to the one you've been spending quarters on for the last year.)*

-from Gamepro's review of NBA Jam in its April 1994 issue

*"NBA Jam leads all other video games in sales for the month of March. It dominated sales rankings and completely swept the top three best sellers for the month, with the Genesis version narrowly outselling the Super Nintendo CD and Super Nintendo cartridge versions of the game. Other games of note include Ken Griffey Jr. Presents Major League Baseball for the Super Nintendo, Madden '94 for the Sega Genesis, Wario Land: Super Mario Land 3 for*

*the Nintendo Gameboy, and Snatcher for the Super Nintendo CD."*  
-The Wall Street Journal, April 8, 1994

*"The home console version of NBA Jam is a smash hit, but it's created some controversy with its release. Basketball superstar Michael Jordan, whose Chicago Bulls have been in a fierce battle with the New York Knicks for first place in the Eastern Conference and the Atlanta Hawks for the Central Division lead, has refused to appear in either the arcade or home console versions of the game. Indeed, his contract with the NBA Players' Association has precluded him from appearing in any sports video games in recent memory, with his last appearance in a basketball game being his appearance in last year's NBA Showdown. When asked about why he chose to remain absent from the hit game, Jordan had no comment other than stating that he wanted to focus on basketball as his Bulls fight for playoff position. Unlike his basketball counterpart, baseball's biggest star Ken Griffey Jr. has embraced the virtual limelight. He'll be the star of a brand new baseball game appearing later this month on the Super Nintendo."*  
-Keith Olbermann, reporting on SportsCenter, March 7, 1994

-

\*Our world is shown in the present day.\*

Narrator: In 1996, a terrifying plague of our own making brought humanity to its knees.

\*Brief scenes of chaos are shown, along with a scene of lights all over the world blinking out as humanity dies off\*

Narrator: But we rose from the ashes, and built new cities. We were destined for a new, bright future.

\*A futuristic city is shown as a nervous but brave detective, armed with only a pistol, runs through an alley.\*

Narrator: It's now the year 2046, and cybernetic killers called "Snatchers" prowl the streets. Created in a lab to look like typical human beings, these cyborgs are the super-criminals of the future, and only the "junkers" can stop their reign of terror.

\*The detective sees one of these cyborgs pinning a cowering woman against a wall, its eyes glowing red. The detective moves in.\*

Narrator: I'm Gillian Seed and I'm one of those junkers. It's up to me to take them down.

\*Seed shoots the cyborg, sending sparks flying from its head. He helps the woman to her feet, but as she gets away, someone shoots Seed from behind, bringing him to his knees.\*

Narrator: But lurking just behind the surface is an even deeper conspiracy...one that I may not be able to unravel.

\*Seed is being hauled away by two of the cyborgs\*

Narrator: That's where you come in. Unlock the mystery of the snatchers, and save the future... before all of humanity is replaced.

\*As this narration is playing, scenes from "Snatcher" are shown on the screen. Then the scene returns to Seed. He's being hauled into a lab and there's growing horror in his eyes. The scene fades to black.\*

**SNATCHER** – *From the creator of the Metal Gear series*

*Coming March 14, 1994, only for the Super Nintendo CD.*

-from a commercial that played during prime-time television in late February and March 1994

**March 14, 1994**

*Snatcher*, the CD-ROM remake of the 1988 original for the MSX2, is released for the Super Nintendo CD in North America. Nintendo chooses to have a unique advertising campaign in which the game is directly marketed to older players on prime-time television. Masahiro Sakurai, who assisted Hideo Kojima with the Super Nintendo CD port of the game, is extremely confident that the game will sell well, and when it was released in Japan during the previous November, it was a smash hit. While the game is outsold by hits like NBA Jam and Ken Griffey Jr. Presents Major League Baseball, it becomes a moderate hit for Nintendo, surprising most of the company's North American brass. The game receives mainstream media coverage and is praised by *Entertainment Weekly* and *Variety*. Most notably, the game is mentioned, though not glowingly, by Roger Ebert during his weekly TV show *Siskel and Ebert At the Movies*. While Ebert says that from what he's seen of the game (he hasn't played it), that he still doesn't believe video games will ever be art, he says that a game like *Snatcher* has the potential to elevate games to something more than merely toys, and he and Siskel then briefly debate whether games can be art (Siskel admits to playing some of *Snatcher* on the recommendation of a friend and enjoying what he played). The game also receives some controversy for its violent and at times sexual content, a 14 year old (who appeared nude in the game) was aged up to 18 for the North American release, and the game is the first game to ever be rated "M" by the nascent Entertainment Software Rating Board, or ESRB. In later years, *Snatcher* would be considered a very "soft" M rating, actually somewhat on the border between T and M, though in those early months the ESRB did "over"-rate some games out of an abundance of caution.

*Snatcher* becomes known as one of the games that truly solidified video gaming as no longer being just a medium for kids, but something that could be enjoyed by grown adults. The trend that was somewhat begun by Sega in 1992 was now running its course in full effect. Though the game doesn't reach a million sales in North America, or even half a million (indeed, it would finish around 400,000), it would be recognized as one of the most groundbreaking games in the history of the Super Nintendo CD.

-

*Congratulations on the North American Snatcher release! First week sales were almost twice Nintendo's estimate and it's already on pace to sell a lot more than the original. Would love to work with you again in the future. Busy with Kirby at the moment but if you have any more ideas for games I would love to hear them. -Sakurai*

*Konami wants you in charge of Tokimeki Memorial port for Super Famicom CD if you're interested. I would love to revisit Metal Gear in the future but unsure if Super Famicom CD is capable of what I have in mind. Any word on when Nintendo will be sending dev kits for new console? -Kojima*

*Not a clue about new console, I'm curious too! Seems like it will be a while yet. Probably couldn't tell you even if I knew, Nintendo is very secretive about such things! -Sakurai*

-a translated series of faxed notes between Masahiro Sakurai and Hideo Kojima exchanged in April 1994, included in the "Konami Complete Works (1993-2002)" volume

-

### **March 28, 1994**

"See, that's exactly why we're going to smash Nintendo once the Saturn comes out," said

Tom Kalinske. He and Al Nilsen were looking at some gameplay footage of the Super Nintendo CD's port of *Alone in the Dark*, and seeing how slow and glitchy the game was made him feel a sense of perverse glee. "They're already bumping up against the limits of their Nintendo CD. Hell, I bet we can get this game looking better than this on the Mega Charger."

"Should we call up Infogrames and offer to have them port it to the Genesis?" asked Nilsen, thinking a Genesis port of *Alone in the Dark* that looked better than what the SNES-CD was capable of would strike a fierce blow for the Genesis' superiority and would be just the thing to help push the Mega Charger to skeptical consumers.

"...we'll think about it," said Kalinske. While *Alone in the Dark* was a popular, critically-acclaimed game, it wasn't a system seller, and Sega wasn't interested in fighting the Super Nintendo CD with Genesis games. They were out to strike a blow against the Super Nintendo cartridge system. *Dragon Warrior V* was releasing that day and reviews were highly favorable, better than any RPG Sega had released in recent memory. Of course, *Dragon Warrior* was no threat to *Sonic 3*. "Seen the latest NBA Jam sales? The Genesis version is #1."

Kalinske knew that Nintendo buyers of NBA Jam were split between the cartridge and CD versions, but a win was a win and the Genesis needed a hit. NBA Jam had been a big part of Sega's marketing ramp-up to push the Genesis in the months before *Sonic 3*'s release. Even the Sega CD version of the game had outsold hits like Sega CD's *Aladdin*.

"Three more weeks," said Kalinske, still watching the screen. "Three more weeks until we put the nail in the Super Nintendo's coffin."

"You really think *Sonic 3* will do it?" asked Nilsen, sipping from a cup of coffee.

"Let me dream," replied Kalinske with a sigh. "And let's hope Nintendo can't program better games than this."

-

#### **SNES-CD Power Charts – March 1994**

1. Secret Of Mana – 21,711
2. Super Mario World 2 – 21,496
3. Battletoads II – 17,284
4. Mortal Kombat – 16,651
5. Star Fox – 15,735
6. Super Mario Kart – 14,160
7. The Simpsons – 11,984
8. Final Fantasy III – 10,275
9. Street Fighter II: Arcade Edition – 9,660
10. Super Ghouls 'n Ghosts CD – 7,064
11. The Terminator – 5,774
12. Kid Icarus CD – 5,417
13. Yoshi's Safari – 5,210

19. Secret Of Monkey Island – 2,940
20. Snatcher – 2,826

-

*“That last stretch on Sonic 3 was the most difficult ordeal of my entire career. 16-hour days, sleepless nights, such a massive crunch toward the end that none of us thought we'd make it through. But seeing those first reviews and seeing the early sales figures made it all worthwhile. It was the culmination of everything we'd created Sonic the Hedgehog to achieve.”*

-Yuji Naka, in a 2011 interview with *Sonic Central*

*“I've been playing a lot of video games lately, not really thinking about music but playing a lot of games. That Secret of Mana's really good, you know? But I kinda lose track of time when I play and it pisses Courtney off so I gotta be careful.”*

-Kurt Cobain, speaking with MTV News on February 22, 1994

*“So we've been getting a lot of static about the 'perfect' score we gave Sonic the Hedgehog 3 a few months back. Everyone at EGM absolutely loved the game but some of our readers feel that only perfect games should get perfect scores. Fair enough. Starting with this issue, the Review Crew will only issue 10s to truly flawless games. We're also going to a half-point ratings system, so unless a game is truly flawless, the best score you'll see a game get in EGM is 9.5 out of 10. As always, 5 is average and we're saving our 0 rating for truly irredeemable crap.”*

-Ed Semrad, *Electronic Gaming Monthly* editor-in-chief, from an editorial in the October 1994 issue of *Electronic Gaming Monthly*

*“There's no way we're moving Super Metroid. I'm not scared of Sonic the Hedgehog. Never have been, never will be.”*

-Howard Lincoln, in an internal Nintendo memo from April 5, 1994

-

## **April 4, 1994**

Nintendo releases Kid Icarus CD for the Super Nintendo CD. In a month featuring more than a dozen Super Nintendo CD releases in North America, Kid Icarus CD is the biggest. It's the third game in the series, following up the 1991 Game Boy sequel, featuring Pit returning to save Angel Land. Kid Icarus CD becomes the highest selling SNES CD game of the month and is a moderate success for Nintendo, though it is outsold significantly by Super Metroid.

### **Kid Icarus CD – The Basics**

The difficulty of the game has eased significantly from its NES predecessor, and the game plays a bit like a hybrid of Metroid and Zelda II. Pit explores various realms and over the course of the game, including dungeons, forests, and towns, where he can interact with various townspeople and mythical figures. He can upgrade his weapons throughout the game and learn new angel powers as well, becoming stronger as the game goes on. The

game features an orchestral, epic musical score and graphics typical of a high-end SNES game with no 3-D used. There's no voice acting but there are some animated cutscenes in certain parts. The game is divided into five major parts, in the first segment of the game, Pit must once again take on the evil Medusa. After defeating Medusa, however, Pit is cursed by the jealous sea god Poseidon and set adrift to a mysterious island where he must fight his way back to Angel Land, defeating Poseidon at the end of the quest. Once he arrives, he discovers he's been branded a traitor and is being hunted down by the warrior goddess Athena, while his friend Palutena wants nothing to do with him. He must gradually win back Palutena's trust, unraveling the complex relationship between her and Athena. He eventually gets Palutena back on his side and the two work together to defeat Athena, who confides to Pit after she's beaten that the gods have been under the control of a mysterious dark force. The next part of the game involves Pit rising up against and defeating Zeus, and finally, Pit discovers that the gods have been under the control of the evil Titan Kronos, who seeks revenge for being defeated by Zeus eons ago. Pit enters the Hall of the Titans and he slays Kronos, freeing the gods and Angel Land. Pit and Palutena ask Zeus to allow humans to control their own destinies. Zeus accepts, on the condition that Pit becomes the protector of the humans from this point on. Pit agrees and a new pact is forged, allowing the humans of Angel Land to become truly free.

### **Beavis And Butt-Head:**

Ed: 7

Danyon: 7 (quote: "This game makes nice use of the CD medium to add plenty of funny sound clips from the show. The bonus music videos are a nice touch in this otherwise mediocre platformer.")

Al: 8

Sushi-X: 7

### **Castlevania: Rondo Of Blood:**

Ed: 8

Danyon: 8

Al: 10 (quote: "The best Castlevania ever and it's not even close. This is a true adventure masterpiece, with one of the best soundtracks I've ever heard in a video game.")

Sushi-X: 8

### **ESPN Baseball Tonight:**

Ed: 7

Danyon: 5

Al: 5

Sushi-X: 6 (quote: "The ESPN production values are nice but the baseball itself is just ok.")

### **Joe And Mac CD:**

Ed: 8

Danyon: 8 (quote: "This SNES-CD exclusive Joe and Mac game is a better looking alternative to Joe and Mac 2 for the cartridge system but the gameplay is fairly similar. Still, the huge dino bosses are really fun to fight!")

Al: 6

Sushi-X: 8

**Kid Icarus CD:**

Ed: 8 (quote: "This world is so much bigger than the world of the original NES game, and it's a lot more fun to explore now that I'm not worried about getting killed every few seconds.")

Danyon: 8

Al: 7

Sushi-X: 9

**The Masked Rider: Kamen Rider ZO:**

Ed: 4

Danyon: 3

Al: 4

Sushi-X: 2 (quote: "This FMV game is hideous and I weep for all the good Japanese games that haven't been brought over. Instead, they send us this awful thing.")

**RBI Baseball CD:**

Ed: 7 (quote: "The best pure baseball experience yet on the SNES-CD, though I still can't recommend it over Ken Griffey unless you REALLY need to hear more commentary. And if you do, you'd probably prefer ESPN's game.")

Danyon: 7

Al: 7

Sushi-X: 6

**Snow White: Happily Ever After:**

Ed: 5

Danyon: 6 (quote: "This isn't a terrible platformer, it's quite colorful and the music is excellent.")

Al: 7

Sushi-X: 5

**Space Ace:**

Ed: 6 (quote: "It's Don Bluth's classic laserdisc game in all its arcade glory. The problem is that if you've played it in the arcade hundreds of times like I have, you're not getting anything new.")

Danyon: 8

Al: 4

Sushi-X: 3

**Super Bases Loaded CD:**

Ed: 7

Danyon: 7

Al: 6 (quote: "It's a pretty damn fun game of baseball if you don't need authentic MLB teams. I liked this franchise a bit better on its cartridge form but this game features some really creative animation.")

Sushi-X: 6

### **Wolfenstein CD:**

Ed: 9

Danyon: 7

Al: 8

Sushi-X: 9 (quote: "Now this is what I'm talking about! Killing Nazis has never been so fun and this version features some rocking music as well. Now when are they gonna get Doom up and running on this thing?")

### **Bumblebee: Zooble's Hive:**

Ed: 8

Danyon: 9 (quote: "Konami really knows how to do a platformer. This game was clearly designed with little ones in mind, but after putting out so many grown-up games, it's good that their quality control doesn't suffer even when doing a game for younger audiences. I've never seen a bee kick so much butt!")

Al: 9

Sushi-X: 5

### **Gun Warrior:**

Ed: 8 (quote: "Tecmo does it again! This game mixes crazy gunplay action with a medieval theme and is just pure unadulterated fun. There are so many guns in this great run-and-run game that you'll have trouble picking a favorite.")

Danyon: 8

Al: 9

Sushi-X: 8

### **Soulqueen:**

Ed: 9

Danyon: 9

Al: 9 (quote: "One of the toughest shooters I've ever played, it's essentially Gradius with a plot. You'll get frustrated for sure but you'll want to keep playing to see what happens to Cleopatra next.")

Sushi-X: 9

### **Dazzler:**

Ed: 6

Danyon: 7

Al: 5

Sushi-X: 5 (quote: "Believe it or not, this colorful puzzle game got boring quite quickly. You connect sparks of light, you get rewarded with more sparks of light, but I just couldn't get addicted to it like I got with games like Dr. Mario and Tetris. Too bad, really.")

### **Tomato Tommy:**

Ed: 3 (quote: "I'd rather chug a bottle of ketchup than keep playing this unimaginative platformer starring an anthropomorphic tomato. The music is grating and repetitive and

getting through even simple levels was a chore. I had to wash my eyes out with Sonic 3 after too much of this mess.”)

-from *Electronic Gaming Monthly's* May 1994 Review Crew column. The 40/40 awarded to Sonic the Hedgehog 3 would be the first perfect score ever awarded in *Electronic Gaming Monthly*. Following reader backlash over the practice of giving out perfect 10s, no other game would receive even one 10 from a Review Crew member until *Goldeneye 007* in April 1998, after EGM re-relaxed their scoring policy.

-

*“Nirvana lead singer and guitarist Kurt Cobain checked himself back into rehab today, after climbing a fence to leave the rehab facility a few days earlier. In a statement made through one of his bandmates, he said that he'd been thinking suicidal thoughts for the last two weeks, and that he needed to get his head clear of drugs so that he could re-discover what gave him pleasure in life. Recently, he's also been dealing with a break-up from his girlfriend Courtney Love. The two had been in a series of violent arguments over the last few months, centered around, among other things, Cobain's drug use and his frequent playing of video games. One of these arguments put Cobain in the hospital for treatment of a slash wound to his shoulder. The troubled singer is being placed under 24-hour observation in the facility until he is considered to no longer be a danger to himself. In another statement, Cobain's ex-girlfriend Love stated that she believed Cobain's obsessive playing of video games to be the root cause of his depression, though the singer has repeatedly claimed inspiration from them in the past.*

*And speaking of video games, and on a more tragic note, local rap musician Marshall Mathers, 21 years of age, was found dead in his apartment today of three gunshot wounds to the chest. Police believe that Mathers' friend, 21-year-old Darrell Johnson, had come to Mathers' apartment to take a video game console that the two of them had purchased together and were sharing. When Mathers refused to give up the device, police claim that Johnson allegedly shot Mathers, then attempted to flee the scene, only for police to close in on him shortly thereafter. Johnson is currently being held without bail at the Wayne County*

*Jail."*

-From a WKYZ-TV news broadcast on April 6, 1994

-

*Soulqueen didn't sell well.*

"Soulqueen didn't sell well. We didn't think it would be a great seller, with all the competition from all the other big games coming out that month, and it was a very difficult game, so we knew it'd be a tough sell, especially in North America. I was pleased with the reviews, and I was pleased with...with the reception to Cleopatra herself, the main character of the game. We wanted to create with her a type of protagonist that you weren't used to seeing, especially not in a space shooter game where typically it's just you and a ship and the enemy ships. We felt the player would be more inspired if they got to know the person in the cockpit of the ship. We sold...I think just 51,000 copies in North America, which was a shame but that character Cleopatra has had such a cult following, people still doing fanart of her and the like. I mean, there's as much fanart of her as there is of Yuuko from Valis and those games sold a lot better!"

*She has a really distinctive design though, the messy green hair, the facial markings, her pretty smile...*

"And players who played the game were REALLY endeared to her. It's a shame we had to release the game a week before Sonic 3. That game blew everything out of the water."

-excerpted from a ValisNet.com interview with Telenet Japan president Kazuyuki Fukushima, on October 8, 2006

-

\*A boy is shown playing Mario games on his Super Nintendo CD.\*

Narrator: Hey kid, is that the Super Nintendo CD?

Boy: Yeah, it's really something!

Narrator: It's true, there's a lot of things the Super Nintendo CD can do. But the one thing it'll never be able to do is play the best video game of all time!

Boy: Huh?

Narrator: The reviews are in, and *Sonic the Hedgehog 3* is the best video game ever made! With perfect scores from dozens of video game magazines across the country, it's Sonic's biggest and best adventure yet!

\*Rapid-fire scenes from Sonic 3 are shown as the narrator continues to talk.\*

Narrator: Explore more than a dozen worlds with Sonic, Tails, and the all-new hero Knuckles the Echidna! He's got a serious spin and serious attitude and he can reach places never before reachable in a Sonic the Hedgehog game! Use the Chaos Emeralds to transform into Hyper Sonic or take Hyper Tails and Hyper Knuckles for a spin!

\*More Sonic scenes are shown as the boy watches the screen, his mind completely blown by all the awesome stuff he's seeing.\*

Boy: This game looks AWESOME!

Narrator: There's only one problem... you'll never, ever, EVER be able to play it on Nintendo! Only on the Sega Genesis!

Boy: Nooooooooooooooooo!!! \*holding his head in dismay\*

Narrator: It's Sonic 3 and it's too awesome for Nintendo CD! But you can go to the store and buy Sonic the Hedgehog 3, or buy the all new Sonic 3 Sega Genesis combo pack for only \$129.99!

\*The boy is shown continuing to panic and despair around the TV as his Super Nintendo CD sits sad and unused in the middle of the room.\*

## **SEGA!**

-from a *Sonic the Hedgehog 3* commercial that played in April and May 1994

-

## **April 18, 1994**

In what would become the biggest selling day in video game history to that point in time, a slew of games including Sonic 3 and Super Metroid were released in North America. On the Super Nintendo CD front, two of the month's three baseball games, ESPN Baseball Tonight and Super Bases Loaded CD, were released, along with Beavis and Butthead, Bumblebee: Zooble's Hive, Snow White: Happily Ever After, and Space Ace were released. Super Metroid alone outsold all six of those games combined on release day by a factor of more than double.

Sonic the Hedgehog 3 outsold Super Metroid that day 11 to 1.

The game, with pre-orders counted, became the first video game ever to sell a million copies on its first day of release. The delayed release, along with the slew of incredible reviews and massive advertising campaign by Sega, built anticipation to a fever pitch and the release of Sonic 3 wasn't just an event in the gaming world but was recognized by the general media as well, raising awareness of the game's release in the general public to an incredible level.

Sonic the Hedgehog 3 received perfect scores by nearly every North American video game magazine, including *Electronic Gaming Monthly*, *GamePro*, and *GameFan*. *Famitsu* magazine awarded the game a 38/40. The game features 18 levels, all of them playable by Sonic, Tails, or the new character, Knuckles the Echidna, with a variety of added Special Stages and Bonus Stages to play through as well. The game featured even more content than the massively-hyped Sonic CD, considered a miracle for a cartridge game, even one that utilized a special 34-megabit cartridge.

The game succeeded in pushing nearly a quarter of a million Genesis systems in its first week of release, causing the Genesis to soar past the combined sales of the Super Nintendo

and its CD peripheral, and it would stay in that position for many weeks to come.

Super Metroid was received extremely well at the time of its release, with its fantastic graphics, excellent musical score, and brilliant exploration-based gameplay. History would eventually come to regard Super Metroid as the superior game to Sonic 3 and its impact on the medium itself would be far greater. Between it, Castlevania: Rondo of Blood, and Kid Icarus CD, April 1994 would not be known forever as Sonic the Hedgehog 3 Month, but as the month when a new sub-genre of adventure video game began to take shape, a genre that would eventually become known and loved as "Metroidvania".

But for now, it was Tom Kalinske and his fellow Sega executives popping corks and sipping champagne. They had earned it, and they could be forgiven for gloating.

-

*"Thanks for waiting! As a special bonus for pre-ordering Sonic the Hedgehog 3, you'll not only receive this exclusive limited edition CD, but you're also getting this extra gift: a \$10 coupon for the Sega Mega Charger, a new Sega Genesis accessory coming this summer. Featuring our patented 'lock-on technology', it'll let you enhance the graphics and sound of your games even further than before, unlocking 'Mega Blast Processing' for an awesome new experience! This coupon is good toward the Sega Mega Charger accessory or any Mega Bundle of a Genesis game and the Mega Charger. Expires 12/31/94."*

-from an insert included with *Sonic the Hedgehog 3* pre-order bonus CDs

Tom Kalinske stood in front of a podium, smiling from ear to ear. It was the morning of April 18, 1994, and Sega had called a special press conference to celebrate the release of Sonic the Hedgehog 3. A week before, Sega had formally unveiled the "Mega Charger" lock-on device to the general public for the first time, the device that had been known internally as "Project Phobos".

"As you all know, today is the day that Sonic the Hedgehog 3 launched in stores across the country, and I couldn't be prouder of all the effort put forth by the dedicated individuals at Sonic Team. Without your tireless effort and long hours, none of this would be possible. When I asked Sega to delay Sonic 3 until April, I knew that it would take a Herculean effort to put this game together in time for the release, and all of you came through. The reviews are in and Sonic the Hedgehog 3 is the greatest video game of all time!"

As Kalinske spoke those words, a massive cheer went up through the gathered crowd of Sega supporters. He continued.

"Now, as you all know, we here at Sega have already begun our effort to usher in the next generation of video games. That next generation starts with the Sega Mega Charger, a device that will allow Genesis games to display 3-D graphics and feature cinematics previously only possible on CD-based devices. While we will continue to support the Sega CD, we here at Sega think that our customers shouldn't have to spend an arm and a leg to get great quality graphics and cinematics on their game consoles. We'll be launching the Mega Charger at a price of \$49.99, which is the cost of a single Genesis game. In addition, we'll be bundling the Mega Charger with some of our biggest hits, including Sonic 3 and two of our future arcade hits, Virtua Racing and Virtua Fighter, so that fans will be able to save even more money by buying both at once. We'll also be bundling the Mega Charger in with a special Genesis bundle that we'll unveil in the coming weeks."

Kalinske held up the Mega Charger, a device that looked just like a normal Genesis game with a small lock-on attachment on top. Originally, this technology was to be used to link up two Genesis games together, and would have connected the two halves of Sonic the Hedgehog 3 if Sonic Team hadn't been able to succeed with Kalinske's request to combine the two games back into their original and complete one. Now, it would be used as a bridge between Sega's present and Sega's future.

"With the release of Sonic 3 and the soon to be released Mega Charger, Sega continues to be the best value in video gaming today!"

-

-

### **May 2, 1994**

Minoru Arakawa and Ken Kutaragi had spent the morning reading some of the North American sales reports as the two of them sat in a lounge at Nintendo headquarters in Kyoto. Super Metroid had been a hit. The sales numbers were great....they just looked terrible if you looked at them next to what Sonic 3 had done. Of course, if you did that, every game's sales figures would've looked terrible.

"I see Sega is quite happy with how their new Sonic game performed," said Arakawa, sipping from a cup of coffee with a stoic expression on his face. It didn't bother him how well Sonic 3 had done, but he was disappointed that none of Nintendo's games could pull in those kind of numbers. Even Super Mario World 2's opening week sales were dwarfed by what Sonic the Hedgehog 3 had done. Another troubling takeaway was that a number of people who purchased a Genesis to play Sonic 3 already had a Super Nintendo. Buying two systems was almost unheard of at the time, either you had a Super Nintendo or you had a

Genesis. If Sonic 3 was good enough to convert Nintendo's loyal fans, then maybe Nintendo *did* have a problem.

"Have you seen the latest footage of Donkey Kong Country?" Kutaragi asked, a smile on his face. "It's really something, what that Rare company is able to do with our hardware."

Arakawa looked up from his coffee and shook his head. He'd been meaning to ask Rare for an update on the game, but analyzing April's sales figures had kept him busy.

"Oh, you need to see it. I think there's a copy of the video they sent to Sony here as well."

What Kutaragi had seen blew him away. He'd already seen what Rare had done on Super Nintendo hardware, enabling the cartridge to render the familiar character of Donkey Kong in incredible 3-D. Once they'd gotten on the CD though....that was a game-changer. The processing power of Sony's peripheral allowed Rare to create animated three-dimensional backgrounds, feature twice as many on-screen enemies, and jam-pack more levels into the game, bringing the game from a projected 30 levels or so up to somewhere north of 50.

And then there was the work David Wise had done. His brilliant musical talent had a full showcase with the enhanced CD audio, he was adding tribal chants to his music now and was planning to work with a live orchestra for some of the game's tracks. *Donkey Kong Country* was shaping up incredibly well, and was poised to be the biggest game of the year.

Perhaps, Kutaragi thought, and opined to Arakawa, even bigger than *Sonic the Hedgehog 3*.

"I'll believe it when I see it," said Arakawa with a chuckle as the two men entered a small room where a Nintendo staffer was already setting up the video Rare had sent.

"Well, you know what they say," Kutaragi replied as he and Arakawa both took a seat to watch the film footage. "Seeing *is* believing."

*"Right around the spring of 1994 was really the time that the Super Nintendo CD was catching on not just as a family gaming console but as kind of a mainstream phenomenon, which we hadn't anticipated would happen. We had adults, lots of adults, buying the combo set and I think it was the first time where we had more than 50% of SNES buyers also buying the add-on, which was an incredible rate. It was still the time the Genesis was outselling us but we were putting so many CD peripherals in homes that we were turning more of a profit. Minoru Arakawa told me around this time that whenever he'd meet with Ken Kutaragi, there'd be this huge smile on Kutaragi's face, kind of an 'I told you so' smile. I told him once, if you'd been able to see from the very beginning the kind of mainstream thing this CD peripheral would become, we've got something called the lottery here and you might want to start playing numbers because you're some kind of a psychic."*

-Howard Lincoln, from a 2009 interview with *Forbes* magazine

*"Um, yeah, I did have my name on a video game once. After I won the gold in Lillehammer, they put my name on the Winter Olympics video game that came out later that year. I never played it though! Was it any good? ...oh, I'm sorry to hear that. \*laughs\*"*

-Nancy Kerrigan, in a 2006 interview with Fox Sports Net

*"Day of Malcarius was kind of the first real RPG effort we put forth on the Super Famicom*

*CD after leaving Game Arts. I felt, well, we all kind of felt that the Super Famicom CD was a much more RPG-friendly platform than the Sega CD, but our game didn't get nearly the reception that Lunar did, at least not from a sales standpoint. We learned plenty of valuable lessons though."*

*-Kozezuki Himura, lead character designer for the SNES-CD original RPG Day of Malcarious, in an interview with RPGPulse.com on July 13, 2010*

*"The Super Nintendo CD is the first video game console I really remember playing. I mean I remember I played Zelda on the NES a lot with my dad but the first game I actually have memory of playing is Carmen Sandiego on the SNES-CD. My dad says I played that game all the time when I was little and I believe him, and I thought it was just the most awesome thing to actually see video of Carmen doing some crime and then going to catch her. So yeah, I'm nostalgic as hell for the SNES-CD."*

*-Zelda Williams, in an interview with IGN.com on July 23, 2014*

*"With Virtual Bart, after The Simpsons had sold so well on the Super Nintendo CD, that we got the license to do the SNES-CD version of that game. Acclaim did the other one, kind of a Bart's Nightmare sequel action game for the Super Nintendo and the Genesis, and then for the CD version on Super Nintendo CD we got to make it a four-player beat-em-up like The Simpsons arcade game. We had four playable characters, Bart and Lisa of course, and they were joined by Nelson and Milhouse. With only a three month development time, that's where we kind of ran into some problems. Particularly...the balance for the new characters. Nelson was really really good, and Milhouse was really really bad. And we didn't have time to really fix that before we had to launch the game in June of 1994. I think the game was fine otherwise, we didn't have to do too much besides come up with the new levels and enemies which didn't take long. It was just balancing Milhouse and Nelson that we ran into trouble with. Reviews were still good, sales were still good, I mean we had way less dev time than Acclaim did and still got way better scores, but we were all glad to have a lot more lead time for the Itchy and Scratchy game. And as for Milhouse, I know a lot of people online do challenge runs of the game with him now, so something good even came out of that!"*

*-Jared Reely, localization/project manager for Konami of America, in a 2009 interview with Nohomers.net*

*"With the first pick in the 1994 NBA Draft, the Boston Celtics select... Grant Hill, out of Duke University."*

*-David Stern, announcing the first pick of the 1994 NBA Draft on June 29, 1994*

-

*It's becoming abundantly clear that video games aren't just for kids anymore. Indeed, it seems that the latest games have begun seeping into all parts of pop culture, with the so-called "console wars" becoming a hot topic among Hollywood's biggest celebrities!*

*Some of the brightest stars on Hollywood have been touting the virtues of the Super Nintendo CD, the CD-ROM attachment for the Super Nintendo Entertainment System. While Nintendo's been pushing family friendly games at American kids for nearly a decade, some of the biggest hits on the Super Nintendo CD are decidedly NOT for kids.*

*\*scenes from Mortal Kombat begin to play\**

*Case in point, Mortal Kombat. One of the biggest arcade hits of 1992 and one of the biggest*

home entertainment hits of 1993, it features violent, bloody fighting and some brutal finishing moves, and stars like Roseanne's Johnny Galecki and the Fresh Prince Of Bel-Air's Will Smith can't get enough of the game.

*Johnny Galecki: Oh yeah, Mortal Kombat, we play it all the time, definitely. We hook up the CD and then start ripping each other's heads off, it's a lot of fun.*

*Will Smith: I'm lucky enough that I got both, I got the Genesis and the Super Nintendo, so I kinda go back and forth. We got a Genesis hooked up in the dressing room, but that Super Nintendo CD, it looks a lot more realistic and we got that hooked up on a big TV and it's even better than the arcade. And I just got the new Castlevania game, and that's really something too, all those creepy vampires. I tried to get Tatyana (Ali) to play that game but it creeps her out. \*laughs\**

*There's also the sci-fi mystery game Snatcher, about a dark future where evil cyborgs attempt to steal human identities. The praises of the cinematic game have been sung by directors such as Quentin Tarantino, and even Siskel and Ebert have shown interest in Snatcher's cyber-noir storyline.*

*The Super Nintendo CD has been capturing the same kind of attention that Sega has been attempting to capture with its Genesis console for the past three years. Sega has been a familiar sight at celebrity events, and the company and its familiar characters have had a presence at the MTV Video Music Awards since 1992. Now, it seems like the new generation of video games, featuring sophisticated multimedia and three-dimensional graphics, are putting Nintendo into the spotlight in a big way. Actress Winona Ryder, famous for her recent role in "Bram Stoker's Dracula", discusses her recent escape into the world of Soulqueen, a video game where you take the role of a hotshot female pilot as she rockets across the galaxy shooting down aliens.*

*Winona Ryder: I'm not normally one to play video games, but a friend showed me this really beautiful game where you're this awesome pilot named Cleopatra, and these animated scenes play out between you shooting down other ships. And she's just awesome, if they ever make a movie of it then sign me up. I've never seen anything like that from a video game before but whenever I have some free time I'm playing it. And Monkey Island too, it's a lot slower paced but there's so much to do.*

*Celebrities playing video games is nothing new. Courtney Love recently attributed her breakup with Nirvana frontman Kurt Cobain to his video game habit, and there's one A-list actor who can't get enough of Nintendo's latest hits.*

*\*Footage is shown of Robin Williams playing Where In The World Is Carmen Sandiego? on the SNES-CD with his daughter Zelda.\**

*Robin Williams, known for such hits as Mrs. Doubtfire and Good Morning, Vietnam, is a long-time gamer who even named his daughter after the titular character from The Legend Of Zelda on the NES. He's another big fan of Nintendo's CD-ROM system, and plays games like Where In The World Is Carmen Sandiego? with his daughter every chance he gets.*

*Robin Williams: These games, they're just getting better and better. They've got real voice acting now, and they're filmed just like movies, it's amazing.*

*\*The footage shows Williams and his daughter right in the middle of capturing Carmen.*

Zelda is celebrating, pumping her fists while Robin points at the screen and yells "Yeah! You go DIRECTLY to jail, you do not pass go, you do not collect \$200!" as the screen shows a dejected looking Carmen Sandiego behind bars.\*

*When we asked Williams about some of the Super Nintendo CD's more mature games, he showed enthusiasm for them as well, though as the father to a four-year-old girl, he's careful about what games he lets her play.*

*Robin Williams: Well of course, I love Snatcher, and Meteora's a good one. But I don't let Zelda play those. I mean, she can be in the room when I'm playing Snatcher sometimes. But she prefers Carmen Sandiego, and Secret of Mana, those kind of games. She's playing Monkey Island now, we're playing through that together and it's a lot of fun. You know, we're waiting for the next Zelda game. You know Nintendo's working on that one, don't you? They're going to have it out next year. \*he catches himself, laughing\* Oh, I don't think I was supposed to tell you about that! \*laughing some more\* Oh, they're not gonna be happy with me.*

*Director Joel Schumacher has mentioned that he's been somewhat inspired by some of the latest video games as he gets ready to film the third Batman film, set for release next year. And as technology improves, and games get closer and closer to films in terms of production quality and content, we're likely to see even more crossover between Hollywood and the gaming world.*

-From *Entertainment Tonight*, May 23, 1994

-

*"When I'd heard that Robin Williams kind of broke the news about Zelda 4 a bit early on Entertainment Tonight, I was kind of worried at first. We'd told him about the game hoping he'd keep mum about it until we could announce formally that we were working on it at next month's Summer CES. But, you know, he hadn't signed anything like an NDA or anything like that, we hadn't even really told him to keep it close to his vest. But, ultimately it wasn't a big deal. You didn't have the internet back then, at least not in the form we have it in today, so there wasn't much in the way of viral buzz generated by the comment he'd made. Not many of our fans even watched Entertainment Tonight, so that was another thing that kind of kept this contained. And finally, most people who did see it probably thought he was joking. Just, you know, Robin being Robin. So we couldn't get mad at him for the slip-up. How the hell are you supposed to be mad at Robin Williams anyway?"*

-Howard Lincoln, from a 2012 Kotaku.com article: "Nintendo and Robin Williams: A Whimsical History"

-

## **FIFA World Cup '94:**

Ed: 7

Danyon: 7 (quote: "A fun soccer game that captures the excitement of the World Cup perfectly. Controls are a bit clunky but the graphics and sound effects are nice and it has all the teams!")

Al: 9

Sushi-X: 6

### **Jeopardy:**

Ed: 8 (quote: "It's the best Jeopardy experience on the home console. The full-motion video brings Alex to life like never before and there are over 5,000 questions and answers, so you'll have to play a LOT of games before seeing any repeats.")

Danyon: 8

Al: 7

Sushi-X: 7

### **Nobunaga's Ambition: Lord Of Darkness:**

Ed: 8

Danyon: 8

Al: 7

Sushi-X: 8 (quote: "An incredibly detailed turn-based strategy game, one of the best available for the SNES-CD. The historical content is a big plus.")

### **Thrillseeker:**

Ed: 9 (quote: "This REALLY ambitious virtual board game won't be for everyone, but I had a lot of fun with it. When you can get three friends together it's the best multiplayer game since Super Bomberman.")

Danyon: 5

Al: 8

Sushi-X: 7

### **Day Of Malcarius:**

Ed: 8

Danyon: 8

Al: 8 (quote: "As far as RPG plots go, it's pretty generic. A group of young heroes rise up to challenge an evil wizard. It's clearly inspired by Lunar which makes sense since the people who made the game actually branched off of the Lunar creators. That said, it still boasts really beautiful graphics and an amazing soundtrack, so I can't knock it too badly for being a little bit of a rehash.")

Sushi-X: 8

### **Fireball:**

Ed: 7

Danyon: 6

Al: 6

Sushi-X: 6 (quote: "This shooter game is pretty much Asteroids with fireballs instead of asteroids and somewhat better graphics. If you're desperate for an arcade-style shooter, try your luck with this, though you'll find better on the SNES-CD.")

### **Invasion 2022:**

Ed: 5

Danyon: 4 (quote: "A REALLY forgettable X-Com ripoff, it's not even the best turn based strategy game of the month (that honor goes to Nobunaga's Ambition). You can skip this one.")

Al: 6  
Sushi-X: 4

### **3 Ninjas Kick Back:**

Ed: 4  
Danyon: 5  
Al: 2 (quote: "Horrible, horrible, horrible platformer. If you suffered through the movie you might survive this game. Otherwise, take a pass.")  
Sushi-X: 3

### **ClayFighter: Tournament Edition:**

Ed: 7  
Danyon: 7  
Al: 8  
Sushi-X: 8 (quote: "Last year's hilarious fighter is back with new characters, new moves and updated graphics. If you've never played the original, this is the one to get. If you have, you might wanna rent this first.")

### **Mad Dog II: The Lost Gold:**

Ed: 6 (quote: "It's not bad but it's significantly shorter than the first game, which was short enough on its own. If you liked the first though, you'll probably want to check this out even if you have to pay full price.")  
Danyon: 6  
Al: 6  
Sushi-X: 6

### **Nancy Kerrigan Olympic Gold '94:**

Ed: 4  
Danyon: 7 (quote: "It's not a terrible Winter Olympics game. The play controls on the figure skating could be better, which is a shame since it's the feature game of the entire package.")  
Al: 5  
Sushi-X: 5

### **Spectre:**

Ed: 9  
Danyon: 7  
Al: 6  
Sushi-X: 7 (quote: "The addictive computer shooter comes to the SNES-CD, which I felt did a great job rendering the excellent vector graphics of the original. It's not the best shooter out there but it's really pretty to look at.")

### **Tetris CD:**

Ed: 9  
Danyon: 8  
Al: 9 (quote: "You can't really go wrong with Tetris, and this updated version features great

musical selections and a lot of fun modes, including a Challenge Mode similar to the terribly difficult Japanese arcade games. The definitive home console version of Tetris for sure.")  
Sushi-X: 8

### **The Incredible Hulk:**

Ed: 7

Danyon: 7

Al: 7

Sushi-X: 7 (quote: "It's a pretty standard action platformer for the most part, but the graphics are awesome, with really good animation on the characters and enemies. If you're a Hulk fan be sure to check this out, even if you have to smash other people out of the way to get it up to the counter.")

### **The Lion King:**

Ed: 8 (quote: "This game continues the streak of excellent Disney adaptations that started with Aladdin. The soundtrack is amazing and it pretty much covers the whole movie, meaning that you'll have hours of fun reliving Simba's adventures.")

Danyon: 7

Al: 9

Sushi-X: 8

### **The Simpsons: Virtual Bart:**

Ed: 8

Danyon: 7 (quote: "I feel like this game COULD have been better. It straight-up lifts the excellent engine from last year's Simpsons arcade game, but the character balance is a bit screwy (don't pick Milhouse, whatever you do!). While a fun game, it seems like it was a bit rushed to make a quick buck after the first one was such a hit.")

Al: 9

Sushi-X: 7

### **WWF Raw:**

Ed: 8

Danyon: 7

Al: 7 (quote: "I really enjoyed this wrestling game, especially for its variety of moves and detailed character animations. Probably the best WWF game to come to a home console.")

Sushi-X: 7

### **After The Lights Go Out:**

Ed: 6

Danyon: 3 (quote: "If you're going to make ANOTHER detective game, try not to retread the same old cliches in every other detective game out for the console. And try to include some decent acting for crying out loud!")

Al: 6

Sushi-X: 5

### **Heavily Armed Princess:**

Ed: 6

Danyon: 6

Al: 9 (quote: "This game certainly lives up to its title. Pretty much everything your princess character can find is a weapon, and there are more than 30 in all. People might not like the over the top violence in a game that seems so sweet and girly at first, but I laughed my butt off the whole time I played. Tremendous fun.")

Sushi-X: 4

### **Fatal Strike:**

Ed: 9

Danyon: 9

Al: 9

Sushi-X: 9 (quote: "One of the best beat-em-up games on the Super Nintendo CD, in this game you're a warrior named Notukaga who has to punch, kick, and slash his way through hundreds of foes on your way to find the shogun who ruined his life. With such variety in enemies and stages and some of the best graphics I've seen on an SNES-CD game, I can't recommend Fatal Strike enough.")

-from *Electronic Gaming Monthly's* reviews of May and June 1994's SNES-CD games, in the June, July, and August 1994 issues

-

*There were a LOT of games that came out for the SNES-CD in June 1994. We got some classics like Tetris CD, Virtual Bart, Fatal Strike, and The Lion King, all really awesome games, but I'd like to talk about two of the stranger and more obscure titles that we saw for the system in the month of June 1994.*

*First up we have The Incredible Machine. This game was a port of a PC game about making Rube Goldberg devices, and I have to say that the SNES-CD's interface was pretty good. You could use the Mario Paint mouse or you could use a controller, and honestly either one of them works well here. It plays pretty much the same as the one on the PC, with the difference here being that you get some Mario themed items to use. You can have Yoshi eat something and then spit it back out, or lay an egg, that's pretty nice.*

*Next up, Hurricane Season '94. This is an educational game, specifically a hurricane tracking/simulating tool. You can actually plug in variables and simulate a hurricane from formation to landfall, or to it going out to sea. It only does Atlantic hurricanes but it's actually a fairly detailed simulator and I'm surprised they made a game like this. It sold....very few copies, less than 20,000, most of those to educational institutions but I was able to find this on Ebay for 25 bucks. It's kinda fun to mess around with, if you're into hurricanes and the weather.*

*So that's two of the really obscure, weird games to come out for the Super Nintendo CD in June of 1994. Next video, we're doing July and August 1994. And yeah. That means we're doing Oops!. That's gonna be fun.*

10. Lemmings 2 – 6,351
11. Final Fantasy III – 6,274
12. Kid Icarus CD – 5,800
13. Fatal Fury 2 – 5,471
14. Snatcher – 5,056
15. Daywalkers – 4,771
16. The Simpsons – 4,700
17. Icebiter – 4,365
18. Super Ghouls 'n Ghosts CD – 3,882
19. The King Of Dragons – 3,759
20. Phaedra's Heart – 3,400

#### **SNES-CD Power Charts – June 1994**

1. NBA Jam – 30,417
2. Snatcher – 23,218
3. Super Mario World 2 – 18,088
4. The Secret Of Monkey Island – 16,443
5. Secret Of Mana – 14,287
6. Mortal Kombat – 9,713
7. Super Mario Kart – 8,453
8. Alone In The Dark – 7,800
9. Star Fox – 7,471
10. Battletoads II – 6,988
11. The Next Champion – 6,755
12. Final Fantasy III – 5,972
13. Furious Heart – 5,581
14. Kid Icarus CD – 5,372
15. Power Instinct – 5,334
16. Street Fighter II: Arcade Edition – 5,244
17. Meteora – 4,980
18. Ren And Stimpy – 4,471
19. Lemmings 2 – 3,618
20. Phaedra's Heart – 3,287

-

Charlie Steiner: After last night's 94-87 loss in Game 3 of the NBA Finals, Michael Jordan is vowing revenge. His Bulls are down on the Houston Rockets 2 games to 1, but game 4 Tuesday night is in Chicago, and Bulls fans will be roaring for their team to tie this series. While Jordan was fuming after the loss, he had high praise for Rockets center Hakeem Olajuwon. Olajuwon posted 38 points, 12 rebounds, and 7 blocks in last night's Rockets'

victory, including two blocks on Jordan in the same play.

\*A brief clip of Michael Jordan in the locker room after the game is shown.\*

Michael Jordan: He's an incredible athlete. I've gotta give credit where it's due. He was unstoppable. But I'm coming back, this team is coming back and we're gonna be right back here in Chicago Tuesday night and I'm giving it everything I've got. I can guarantee that.

Reporter: Can you guarantee that the Bulls will win Game 4?

Michael Jordan: Well, anything can happen. But I guarantee that I'm going to lay it all out on the court for Game 4 and there is no way I'm going to let that game get away like this one did.

\*Back to the SportsCenter anchor desk.\*

Charlie Steiner: \*looking back behind him and holding his ear like he's listening to something in his earpiece, he has a rather shocked expression on his face\* ....is that...is that confirmed? \*inaudible mumbling behind him, he turns to face the camera\* Uh, uhm, we've got a story now out of Los Angeles, and this is somewhat beyond belief but it is a tragic story that has just broke and I'm reporting it to you as I'm hearing it. O.J. Simpson, NFL Hall of Famer, a sports legend who is beloved around the world, has been found dead, along with his ex-wife Nicole Brown Simpson, in her Los Angeles home just a few minutes ago. And we're being told, and this is preliminary barring any autopsies but this is what the Los Angeles Police Department is reporting...we're being told that this appears to be a murder-suicide, that O.J. Simpson allegedly murdered his wife and then shot himself fatally immediately afterward. Again, we are reporting this story as soon as we're hearing it and obviously a very shocking and tragic report now out of Los Angeles. O.J. Simpson, NFL Hall of Famer, dead at 46 and, if what we're hearing is correct, in one of the most shocking ways imaginable. \*shaking his head somewhat in disbelief\* Unreal.  
-from the 12:00 AM broadcast of ESPN's *SportsCenter*, June 13, 1994

-

*The following commercial aired on Nickelodeon during the last week of June and the first days of July in 1994.*

The Fourth of July!

Food! \*images of hamburgers and hot dogs are shown\*

Fun! \*images of a friendly backyard football game are shown\*

Fireworks! \*Fireworks footage\*

...and the year's most exciting video games! \*rapid-fire footage of a variety of Nintendo and Sega games is shown\*

Join Mike O'Malley at the 1994 Consumer Electronics Show in Chicago, as Nickelodeon gives you the scoop on 1994's biggest and best video games! Sega! Nintendo! One awesome half-hour special!

\*Footage is shown of Mike O'Malley playing a bunch of games\*

Mike O'Malley: This is gonna be HUGE.

### ***The Nickelodeon Video Game Spectacular July 4th***

***6:30/5:30 central***

Mike O'Malley: Only on Nick!

-

*"The Mega Charger, as Sega called it in North America, was the first thing Sega did since I had started working on the Super Famicom CD that really impressed me. From a technical standpoint it was quite advanced and a really well made device. It got some of the people at Nintendo worried as well! I remember at the time we were talking about what we might do to counter it. People were talking about making a new H.A.N.D.S. cartridge to pump up the power of the Super Famicom CD, or maybe doing a lock-on cart for the regular console, but I wasn't worried and none of those things came to pass. We really didn't need them. Once Squad Four and Donkey Kong Country came out and everyone remembered what our CD add-on was really capable of, the worries about the Mega Charger sort of faded."*

-Ken Kutaragi

*"Would you like a free copy of the Squad Four Origins comic while you're waiting to play the game? It's the first issue of a comic we're going to be publishing in Nintendo Power starting with next month's issue, it's the perfect introduction to the characters and the world of the game!"*

-overheard at Nintendo's Squad Four booth at the Summer 1994 CES, Nintendo workers handed out free copies of the first issue of Nintendo Power's Squad Four comic to people waiting in line to play

*"Lunar Silver Star on the Genesis, that was news to me. Nobody had told me that Sega asked Game Arts to do a Genesis port of the game. I was pessimistic from the start and when I got to see what they did to the game I was pretty pissed off. Even with that lock-on cart they had to cut about half of the spoken dialogue, they pretty much butchered the game and of course it was going to sell like shit. The problems between me and Sega started when they decided to put Lunar on the Genesis."*

-Victor Ireland, speaking to The Gaming Intelligence Agency in a March 1999 interview

*"Going up to Chicago for the 1994 CES, that was a pretty fun trip. Nickelodeon put me up in a real nice hotel and I got to play a lot of the games before a lot of other people did. I mean, I've never been much of a gamer. I've played a few games, I played, uh, that Chrono Trigger game, I played a little bit of that because Mo (Quirk) did some voices in it and I wanted to see how she was doing. I'll play Madden with friends sometimes, maybe a little Call of Duty that kinda thing. But I didn't mind, it was 1994, the technology wasn't so good but it was great for the time and like I said, I had a lot of fun. My favorite game from the*

*show? Madden, obviously. I think it was Madden 95? I still remember the guy from Sega showing me the Genesis one. I don't remember much about the game itself but I remember having a ball with it."*

-Mike O'Malley, *Entertainment Weekly*, July 2014

-

## **June 22, 1994**

It was the night before the 1994 Summer CES, and Tom Kalinske and some of his fellow Sega executives were enjoying the end of Game 7 of the NBA Finals at one of Chicago's best sports bars.

"Bulls down by three, Armstrong bringing the ball up the court, 25 seconds to go..." Marv Albert's voice echoed through the bar as Tom Kalinske and Al Nilsen watched the game together. They were enjoying the game of course, but they had plenty of other things on their mind as well. Kalinske would be giving a big speech the next day, where he'd not only be pitching the Mega Charger, but would be teasing Sega's next generation system as well.

"They really think it's a good idea to tease the Saturn, do they?" asked Nilsen, keeping one eye on his friend and one eye on the game.

"Armstrong gets it to Jordan, down to 15 seconds now...." The Houston defenders began crowding around Michael Jordan while Olajuwon hung out by the rim, determined not to let Chicago's star player get an easy layup.

"Well, it's coming out in Japan this December, we gotta say something about it...." Kalinske replied. He was glad to have Al Nilsen by his side. Nilsen had contemplated leaving Sega the previous year, but Kalinske had been able to convince him to stay. Sega was lucky to have him, and they'd need all the help they could get if they were going to win this latest round of the console wars. "Don't worry. This is the Genesis' show and I'll make sure it stays that way."

"Jordan drives, Olajuwon's there....he flips the ball out to Scottie Pippen who's wide open for three!"

The crowd in the bar, including Kalinske and Nilsen, stood up as Pippen took the three point shot that could tie the game. Everyone held their breath.

"Pippen, for the tie.... bounces off the rim! Olajuwon's got it and he's fouled with five and three tenths seconds to go!"

There was a loud groan in the bar and the sound of swearing and butts collapsing into seats could clearly be heard, while on the TV, the crowd in Houston erupted into euphoria. Kalinske shook his head and took another sip of his beer as Hakeem Olajuwon made the free throws that would ice the game and the championship for the Houston Rockets.

"Tough break, eh?" Nilsen said, thinking that his friend was bummed about the result of the game.

"Not really," Kalinske replied with a shrug and a smile, leaning in and whispering. "Can you imagine how tough it would've been to get back to our hotel if the Bulls had won?"

Al Nilsen stifled a laugh.

-

Mike O'Malley: I'm here at the Consumer Electronics Show in Chicago, and I'm headed to Sega's booth, Sega, you know them, they make Sonic the Hedgehog, they make the Sega Genesis, they make Toejam and Earl, they've got the hottest selling game console out there and I'm about to get the scoop on what they've got going on!

\*He walks over to a display that's showing Virtua Racing and begins to play.\*

Mike O'Malley: This here is Virtua Racing, it's the newest, fastest, most exciting racing game you can buy. Check out the 3-D graphics, they're so lifelike you'll think you're really cruising down the road.

\*Footage of Virtua Racing is shown on the screen\*

Mike O'Malley: Now this game's actually been out for a while on Sega Genesis, but I'm playing it on the new and enhanced Mega Charger. And to get all the details about the Mega Charger, there's one guy I gotta see.

\*Now Mike O'Malley is standing with Sega's Tom Kalinske\*

Mike O'Malley: I'm here with the head honcho, the big man himself, this guy is the president of Sega of America, Mr. Tom Kalinske, and he's got all the top secret info on this awesome new Mega Charger device.

Tom Kalinske: \*holds up the Mega Charger\* That's absolutely right and here it is.

Mike O'Malley: All right then, there's something we like to say on my show *Guts*, and if you guys watching at home are a fan of the show you'll know what's coming up next, so Mr. Tom Kalinske, spill...your...guts!

Tom Kalinske: \*chuckles\* Well all right Mike, this is the Sega Mega Charger and it's a brand new peripheral that will bring arcade-quality graphics to a lot of the Sega Genesis games we've got coming up. As you can see here, it looks an awful lot like a Sega Genesis game, and what you do is you put it into your Genesis just like a game. You'll then take any of our Mega Charger compatible games and you'll just plug it right into the top like this... \*it shows him putting Sonic 3 onto the Mega Charger, easy as pie\* and our patented lock-on technology will do the rest.

Mike O'Malley: It's that easy?

Tom Kalinske: It's that easy. Now this Mega Charger contains a lot of technology in a very small package. You've got a pair of processor chips, one of them is for 2-D, things like animation, so that our games can look more like the cartoons you might see on Nickelodeon, or for example in Street Fighter, you can have a lot more detail on the characters and animations. And the second processor chip is for 3-D, things like Virtua Racing, so the game can run a lot more smoothly and quickly, just like in the arcade.

Mike O'Malley: I saw Virtua Racing, I gotta say, it is really fast. I mean the game moves by

at a blistering pace, and it was really exciting, I think the people at home are gonna have a lot of fun playing it.

Tom Kalinske: We hope they do. The Mega Charger also has a pair of extra memory chips and an enhanced sound chip for things like voice samples, so that characters will be able to talk and sing just like they can do on film or on TV.

Mike O'Malley: Well, this Mega Charger sounds pretty awesome. You know, on Guts we've got a little something called the Mega Crag, so this is just perfect, Mega Charger, Mega Crag!

Tom Kalinske: There you go!

Mike O'Malley: It's, it's a step up from what you had going on before. So now that we've gotten acquainted with the Mega Charger itself, care to show us some games?

Tom Kalinske: Absolutely. First off of course is Sonic the Hedgehog 3, not only the fastest selling video game of all time but the best reviewed video game of all time as well. It's the best video game ever. But the Mega Charger makes it even better.

Mike O'Malley: Okay, so let me get this straight...you're taking the best video game of all time, and you're making it better?

Tom Kalinske: That's right. \*smiles proudly and nods his head\* When you hook your Sonic 3 cartridge up to the Mega Charger, it'll open up nine new levels on top of the 18 there already are in the game. In addition to that, it'll add some new 3-D minigames which you can see here....

\*The screen shows one of the Mega Charger enhanced 3-D minigames, Sonic is sort of flying through the air shooting at creatures that appear on the screen, the 3-D is quite smooth and quite fast\*

Mike O'Malley: Now that looks REALLY impressive, let me play that for a little bit.

\*As Mike O'Malley plays, Kalinske continues.\*

Tom Kalinske: We've also got a Mega Charger exclusive Sonic 3 theme song and, and this is really nice, we've got a brand new final boss that appears if you beat all the new levels. This new final boss is even tougher than Dr. Robotnik, he's the toughest boss we've ever put in a Sonic game, he's really hard to beat.

Mike O'Malley: \*having a bit of trouble with the minigame\* This game right here, this is pretty hard to beat... \*he laughs and puts the controller down\* it was fun, but man, that's not easy.

Tom Kalinske: This new final boss is WAY tougher than that game.

Mike O'Malley: Would you say beating this new final boss is even tougher than climbing the Mega Crag?

Tom Kalinske: \*laughs\* That's a tough one, that Mega Crag looks like a serious challenge but....I'm gonna say, yeah. It will be tougher to beat this guy than it is to climb the Mega

Crag.

Mike O'Malley: \*looks at the screen\* You heard it here first, this new final boss....even tougher than the Mega Crag. \*turns to Kalinske\* Thanks again, that was a lot of fun.

Tom Kalinske: Any time Mike!

\*A bit later, we see Mike O'Malley at the booth for Lunar: The Silver Star, talking with a random Sega employee\*

Employee: This is Lunar and it's appearing on Genesis for the first time, only on the Mega Charger.

\*It shows one of the characters talking\*

Mike O'Malley: This is pretty neat, it's kinda like a storybook come to life to hear them talking like that.

Employee: \*he nods\* This is one of the most well-known Sega role playing games.

Mike O'Malley: Well, this is a cool game here, but you know, role playing games aren't really my thing, I'm more of a sports game kinda guy, you got any sports games to try out?

Employee: We absolutely do, right this way please!

\*The next scene shows O'Malley at the Madden '95 booth with the Mega Charger enhanced version of the game\*

Employee: You know, Sega's bread and butter has always been sports games, we've always prided ourselves on delivering the best sports experiences on a video game console and Madden NFL '95 is no exception.

Mike O'Malley: \*playing the game with a smile on his face\* Well this is great, I'm gonna be the Patriots here and maybe get a little revenge on the Bears for what they did to us a few years back in the Super Bowl.

Employee: \*laughing\* Well don't let some of the locals here see that!

Mike O'Malley: Oh, I'm gonna invite some of them over here to watch! \*he begins playing\* I can already tell, the players look really lifelike on this game.

Employee: Right, the Mega Charger delivers enhanced player animations and more detailed sprites for a richer and fuller experience. We've also been able to include a lot more voice samples for more realistic commentary from John Madden and Pat Summerall.

\*Pat Summerall's voice is heard commentating on a play, it's still quite stunted and unnatural but it's a lot more detailed commentary than most other console sports games of the time.\*

Mike O'Malley: It sounds just like the game on Sunday afternoon, this is great! \*he scores a touchdown\* I'm having a ball here.

Employee: You haven't even seen the best part. This is a feature exclusive to the Mega Charger, you won't see it on Nintendo or even the Nintendo CD. If you exit the game-

Mike O'Malley: I don't wanna exit the game, this is too much fun! \*laughs as he exits the game out to the main menu\* All right....

Employee: Now you'll see that we have a Play Editor. With this, you can actually create your own customized plays.

Mike O'Malley: Are you serious? \*they go into the Play Editor and there's a bevy of options\* I can make the patented Mike O'Malley Super-Duper Fumblerooski?

Employee: \*laughing\* You can make any play you want, you can save up to 16 of your own custom plays and access them during a game at any time.

Mike O'Malley: That is just awesome. That really puts this game over the top.

Employee: Madden NFL '95 will be coming out a few weeks after the Mega Charger, so once you buy the game for the Genesis, if you have the Mega Charger you'll be able to access this mode and start making your own plays.

Mike O'Malley: This just blows me away!

-from the *Nickelodeon Video Game Spectacular* that aired on Nickelodeon on July 4, 1994

-

"While Sega's big push at the 1994 Summer CES was clearly their new Mega Charger peripheral, there were a huge variety of games featured at the show, some that will take advantage of the new peripheral and some that won't. We were quite impressed with the long awaited sequel to *Ecco the Dolphin*, *Ecco the Dolphin: Tides of Time*. The game features beautiful graphics and sound and while we were told that the game wouldn't be compatible with the Mega Charger, it was a fun and gorgeous game regardless. It picks up right where the first game left off, and it should be a blast to play when it's released this August.

We also saw a couple of great comic book games featured for the Genesis system. First up was *Spider-Man: Maximum Carnage*, featuring the vicious villain from the comic book and TV show. The game uses a really neat comic book style of animation to punctuate the action appearing on screen and I think it looks like it'll be the best Spider-Man game ever made. There's also *The Adventures Of Batman and Robin*, which looks to be based more on the animated series than the comic book. Unlike Spider-Man, this game has some enhanced Mega Charger features including the actual voices from the show itself, which makes this game maybe the closest thing we'll get to being able to play the actual cartoon.

Sega's also pushing *Earthworm Jim*, and this game was one of our favorites at the show. It features some great graphics (which are even better if you use the Mega Charger), and off-the-wall humor. It's clear that they're trying to push Earthworm Jim as the next big video game mascot and if this game is any indication, they might just succeed. We're not quite sure if he's up to Sonic's level but time will certainly tell!

Of course, the biggest thing at the show was the Mega Charger, and we were quite

impressed by what we saw. The peripheral, which you plug into your Genesis console like an ordinary Sega game, enables some very advanced graphics and sound via the use of a number of special chips embedded in the device, surpassing even the great graphics in Super FX chip games like Super Squadron X. While not quite up to par with some of the very best Super Nintendo CD games, as developers get more time to program for it we could see some efforts matching what Nintendo's CD marvel can do, and at \$50, it's priced at just a third of the cost of the Super Nintendo CD. We really liked what it did with Virtua Racing and Sega has promised to bring Virtua Fighter to the device by early next year. We also got a glimpse at a very good version of Doom for the Mega Charger, while Nintendo's rumored Doom port was a complete no-show. With Sonic 3 still burning up sales charts and Doom as a potential killer app, the future looks very bright for Sega and its fans.”  
-from *Electronic Gaming Monthly's* August 1994 article summarizing the Summer 1994 CES

-

“Hi, I'm Tom Kalinske and I'd like to welcome everyone to the Summer 1994 Consumer Electronics Show. As you all know, Sega is devoted to providing the best video games to players all over the world, and at this summer's show we're pleased to announce the beginning of a new era for our company. In six months, our newest game console, the Sega Saturn, will launch in Japan. And while we and our partners at Silicon Graphics are very pleased with how the new console is turning out, we'd like to remind everyone that the Sega Genesis remains and will continue to remain the number one selling game console in the world. We've topped worldwide charts for the past two months now and this month is shaping up to make it a third. Those of you in North America thinking that you're being left out, let me assure you that on August 1st, the next generation of game consoles will begin for Genesis owners everywhere. That's when we'll be launching the Sega Mega Charger peripheral. This device, the size of a Sega Genesis game, will make the Genesis console four times faster and able to display many more colors on screen. It will enable games to be three times bigger and feature beautiful 2-D animation, life-like 3-D graphics, and enable sounds and sights that you've never seen before on a home game console. With our all new “Mega Blast Processing”, a Genesis console fitted with a Mega Charger will have more processing power than a Super Nintendo CD. And this little device will be available for the cost of a single Sega Genesis game. In some cases, less than the cost of a Genesis game. We'll be launching it for \$49.99, but we've also made a Genesis console bundle available that will include Sonic the Hedgehog 3 and a Sega Mega Charger for only \$129.99. And for those of you who already own a Genesis, we have five special bundles on launch day that will include both the Mega Charger and a Mega Charger-compatible game. Those bundles are: Sonic the Hedgehog 3, Super Street Fighter II, Virtua Racing, Lunar: The Silver Star, and Silpheed. The Mega Charger game bundles will be available for the low price of \$79.99. Those of you who remember that Virtua Racing cost \$99.99 when we launched it on Genesis a few months back, you'll know that those bundles are an incredible deal. But even if you don't purchase the Mega Charger, the vast majority of our upcoming Genesis library will be playable without one. Games that require the Mega Charger, and games that don't require it but are enhanced by it will be clearly marked on the outside of the box so that consumers will be able to pick the games that correspond with their device. With that said, we are hoping that most Genesis owners will consider the Sega Mega Charger a good deal, and that Sega will continue to provide the best value in home entertainment for years to come. Thank you, and enjoy the show!”

-Tom Kalinske's keynote speech at the Summer 1994 Consumer Electronics Show

-

Mike O'Malley: We've seen Sega's games, we've seen what they've got coming up and it looks awesome. Now we're headed over to the Nintendo booth to get the latest scoop on what's going up with Mario and all his friends, let's go!

\*We see him at a booth for the upcoming SNES *Rocko's Modern Life* game\*

Mike O'Malley: Here we've got *Rocko's Modern Life: Carnival Of Horrors*. This game, of course based on the newest Nicktoon, and here, we have the director of *Rocko's Modern Life* himself, Steven Hillenburg, to talk about the game.

Steven Hillenburg: Hello again Mike, here of course you can see we have *Rocko's Modern Life* for Super Nintendo.

Mike O'Malley: Now this game, based on your very funny cartoon show, and you guys had a hand in this game correct?

Steven Hillenburg: We certainly did, we were involved in it every step of the way. With the earlier game, *Spunky's Dangerous Day*, that game actually started production before the cartoon even premiered! But Nickelodeon wanted there to be another *Rocko* game and we started on that last fall, right after the show started. We've kind of got a Halloween theme going here, *Rocko's* at the carnival and getting into all sorts of trouble.

\*Scenes are shown from the game, *Rocko* is going into a tent and getting attacked by a psychotic clown\*

Mike O'Malley: *Rocko* appears to be in some trouble here, I'm gonna throw a baseball at this clown.

\*The baseball knocks the clown back\*

Steven Hillenburg: We actually included several characters you can play as in this one, try using Heffer, he's got a body slam attack that does a bit more damage here.

\*Mike switches to Heffer and slams the clown, it seems to knock him back a little bit more\*

Mike O'Malley: Hey, that worked! That was pretty good.

Steven Hillenburg: We had a lot of fun in the writers' room coming up with ideas for the game and there were some really talented programmers that took our ideas and brought them to life.

Mike O'Malley: Well, just like it takes a big team of hard working people to put a cartoon together, it's the same way with video games and I can tell they worked really hard on this one, can't wait to play it.

Steven Hillenburg: We're hoping to have it out in October, thanks again for stopping by!

\*A bit later, we see Mike O'Malley at the *Fire Emblem* booth\*

Mike O'Malley: This game looks really fun, it's called *Fire Emblem* and I'm here with the head honcho of Nintendo, Mr. Howard Lincoln, who looks really excited to tell me about this game. I don't even think I have to tell him to tell me about it but I have to say it, Mr.

Howard Lincoln, spill...your...guts!

Howard Lincoln: Well this is Fire Emblem, it's making its first appearance stateside after being exclusive to Japan for the past few years, we're bringing the latest Super Nintendo game over to America and we know our fans are going to love it.

Mike O'Malley: You seem pretty confident.

Howard Lincoln: I'm really confident about this game. In Fire Emblem you're the commander of an army and you're placed into a battle with your enemy's army, and you get to sort of micro-manage them, so each of your soldiers gets one move every turn. You can equip them with different weapons and armor and gain experience in battle to make them the strongest soldiers they can be.

Mike O'Malley: So it's like in the real army, how they have that slogan "be all you can be", it's kind of like that?

Howard Lincoln: That's absolutely right. So here we have a battle from the game and you're just going to click on your guys and send them into battle.

Mike O'Malley: \*messing around with the controls a bit\* Okay, I'm gonna send him right up into this guy's face.

Howard Lincoln: Now you have to be careful, you have to really watch out because in this game, when one of your soldiers gets killed, that's it, he's gone for good. Even if you win the battle, you don't get to revive him.

Mike O'Malley: Whoa, are you serious? That definitely ramps up the challenge in a game like this.

Howard Lincoln: Right, and we also think it makes you care a lot more about each soldier in your army, knowing that every battle is for keeps.

Mike O'Malley: Yeah, you should've told me that before I moved my guy right into the line of fire here. \*it shows on the screen Mike's soldier taking damage but surviving with 5 HP\* Well, it looks like he survived this time.

Howard Lincoln: You got lucky. \*laughs\*

Mike O'Malley: Well- \*he turns to the camera\* Remember that when you play Fire Emblem, WATCH YOUR GUYS.

\*Now we see Mike over by the Donkey Kong Country booth, an absolutely huge booth with lots of people crowded around it\*

Mike O'Malley: This is one of the biggest games at this year's show, it's for the Super Nintendo CD, it's Donkey Kong Country and Howard Lincoln from Nintendo is going to tell me all about it.

\*Footage from some of the game's early levels is shown, the pre-rendered graphics and moving backgrounds look quite amazing\*

Mike O'Malley: It certainly looks awesome and this line is really long, but thanks to Howard here I've got a copy of the game all to myself, and I've got the inside scoop on one of the year's biggest games.

Howard Lincoln: Well, this is Donkey Kong Country and this is the game that we're really pushing for this holiday season. We're working with a company called Rare, who's also responsible for the Battletoads games, and their work on this game has been quite impressive as you can see.

Mike O'Malley: These graphics, they're just mind-blowing. The characters look great, there's so many things moving in the background, but I gotta ask, is the game good?

Howard Lincoln: Play it for yourself and see. \*he smiles as Mike begins to play the game's first level\*

Mike O'Malley: This is a lot like the Mario games, a lot of running and jumping involved, really fast paced. I have to ask though, I'm Donkey Kong here and isn't he supposed to be a bad guy? I remember playing Donkey Kong in the arcade and he was kidnapping princesses and throwing barrels, and this Donkey Kong seems a lot more fun.

Howard Lincoln: Well this is actually a different Donkey Kong. It's the grandson of the original Donkey Kong and this one is a lot more relaxed, instead of kidnapping damsels he just hangs out in the forest and eats bananas and throws parties.

Mike O'Malley: That sounds like my kinda guy.

Howard Lincoln: These Kremling guys, these alligator looking things, they took Donkey Kong's banana stash and now he's trying to get it back.

Mike O'Malley: \*continues to play\* Well, you never want to mess with a monkey's bananas. I've got to say, I'm enjoying this game a lot. Who's this little guy with Donkey Kong, is that his son?

Howard Lincoln: That's his friend Diddy Kong, they kind of have a big brother little brother thing going on, Diddy hangs out with Donkey Kong and they party together in the jungle, and he helps Donkey Kong get his bananas back. The two of them have different sets of moves, Donkey Kong is the bigger, more powerful character and Diddy's a lot quicker and more acrobatic.

Mike O'Malley: Yeah, these flips are amazing. I'm having a blast with this game!

\*Mike plays for a little while longer before turning and shaking Howard Lincoln's hand, he seems really impressed with what he's seen.\*

Mike O'Malley: Thanks, that really was a lot of fun.

Howard Lincoln: I hope everybody watching Nickelodeon gets a chance to play this game, I think they'll have a blast just watching you play it.

Mike O'Malley: Well it looks really good, I'm sure they will.

\*We next see Mike O'Malley at the Squad Four booth, holding a comic book in his hand.\*

Mike O'Malley: They're giving out comics over here! This is the booth for Squad Four, it's Nintendo's latest original game and this booth looks really busy too, so I'm gonna go over here where we've got this guy giving me a private demo. Your name is?

Dylan Cuthbert: I'm Dylan Cuthbert with Argonaut Games, we designed Squad Four exclusively for Nintendo.

Mike O'Malley: Tell us a little bit about Squad Four.

Dylan Cuthbert: Well, Squad Four is a group of four space adventurers who explore the galaxy in search of adventure, fighting evil and stopping space criminals. It's a little bit like our earlier game Star Fox, but unlike Star Fox, which was a space shooter, these four heroes actually get out of their ships and fight on the ground, they're kind of like interplanetary space soldiers.

Mike O'Malley: I'm already excited about this game and I haven't even touched a controller yet! So who are these guys in Squad Four?

Dylan Cuthbert: Well, you've got Shad, he's the leader of the team, very brave and heroic. You've got Marcus, he's a bit of a hothead, very brash, very foolhardy. There's Rebecca, she's calm and collected but with a really fierce heart, and then there's Lane, he's the team computer expert, a bit of a nerd but also really brave. In Squad Four, these four heroes crash-land on a planet and while they're searching for parts to repair their ship they get caught up in a sort of planetary civil war that's taking place, they've got to figure out which side they're on and get off the planet alive.

\*Mike takes the controller and begins playing. The game is in a sort of third-person perspective, you can move in all directions but the action is sort of on rails, with automatic lock-on shooting and branching paths to explore and find secrets.\*

Dylan Cuthbert: This game really focuses a lot on exploration, you'll want to search every nook and cranny for weapons and items that'll help you out against the different enemies you'll be fighting, which include alien life-forms and enemy soldiers.

\*Mike seems to be having some trouble with the controls at first but once he gets used to it he gets better as the footage goes on.\*

Mike O'Malley: I'm not used to playing a game like this, there's a lot going on isn't there?

Dylan Cuthbert: There is, you'll have times when you're under attack from all sides and you've got to move around quickly to take out the enemy before you get taken out. But there's also places you can kind of relax, natural breaks in the scenery and there are also towns to explore and people to talk to.

\*We see footage of Mike up against an early boss monster, a giant yellow frog, he gets some good hits on it and gets its boss meter down pretty low but it kills him and sends him back to the checkpoint.\*

Mike O'Malley: \*he laughs\* Well that didn't go so well. \*puts the controller down and shakes Dylan's hand\* Squad Four looks like a really fun and unique game, I'm gonna go read this comic and try to learn a bit more about the characters, and maybe come back for

another go at that frog.

Dylan Cuthbert: I'll be right over here if you come back, thanks for checking out the game!

-from the *Nickelodeon Video Game Spectacular* that aired on Nickelodeon on July 4, 1994

-

"Nintendo didn't fail to impress with their offerings at the 1994 Summer CES. We saw a variety of games for both their cartridge and CD systems, and a couple of them stood out as potential rivals to *Sonic 3* for Game of the Year.

Let's start off by making something abundantly clear. Nintendo's current direction is trending toward the Super Nintendo CD and it doesn't seem like a course that's going to be reversed any time soon. Though Nintendo's cartridge games, which included the excellent Japanese import *Fire Emblem* (actually an adaptation of the third *Fire Emblem* game, though it's the first to see Western release), *Crystalis II*, a sequel to the NES classic, and the dark action platformer *Blackthorne*, were quite impressive, they pale in comparison to the Super Nintendo CD's blockbuster offerings. If you have the Super Nintendo but not the CD peripheral, you WILL be missing out on an increasingly growing number of Nintendo's best games. Sega has offered a budget alternative to Nintendo's pricey peripheral in the form of the impressive Mega Charger, but we do think that those who spring for Nintendo's CD system will get a ton of bang for their buck.

We were most impressed with *Donkey Kong Country*, which clearly emerged as the game of the show in the eyes of most of the people who saw and played it. The game features tremendously impressive rendered graphics that give everything, from the characters to the backgrounds, a highly polished 3-D look that blows anything appearing on the Jaguar or 3DO away. The game features eight worlds and more than 50 playable levels, rivaling *Super Mario World 2* in terms of sheer game content. While we didn't hear any voice acting from the game, its musical soundtrack is a thing of absolute beauty. We've been told the game will feature more than 40 music tracks across a variety of genres, from pounding hard rock to ancient pirate shanties to epic orchestral pieces, this game is creating a new level of atmosphere in a platformer and if what we saw at CES is any indication, it represents the future of video gaming.

Speaking of the future of video gaming, *Squad Four* was the second Nintendo game to truly impress us. While not quite as graphically polished as *Donkey Kong Country*, it was impressive nonetheless. The 3-D graphics were quite smooth and moved along at a good clip, unlike the atrocious slowdown seen in the less visually impressive *Alone In The Dark*. Again, Jaguar comparisons are quite appropriate for the level of what we saw in this game. Nintendo also seems to be heavily pushing this game's storyline angle. It features voice acting (and from what we heard, impressive voice acting), numerous cutscenes, and its main four character cast seems highly fleshed out. Nintendo was even handing out comic books to people standing in line, giving a brief insight into the origins of the four characters and how they came to be in this group together. Argonaut Games is clearly picking up with this game where *Star Fox* left off, and when the rumored *Super Squadron X* sequel is released for the SNES-CD next year, we'll all be eager to see what they have in store for us next.

We also REALLY liked what Nintendo showed us with *F-Zero CD*, the sequel to 1991's SNES launch game. The game moves faster than ever and there are more than 10 playable

characters this time around, as well as the addition of a multiplayer mode. *Alien vs. Predator*, originally intended to be an Atari Jaguar game, will instead hit the SNES-CD, as Rebellion Games, the company behind the game, told us that they would have an easier time developing the game for CD. The graphics are right up there with *Squad Four* in terms of detail, perhaps even exceeding it, and even though Nintendo isn't getting *Doom* this year, *Alien vs. Predator* looks like a damn good consolation prize. Activision's *Jewels Of The Realm* looks like another fantastic game, it's a colorful adventure platformer that gives you the ability to mix and match special power jewels to enhance your character's abilities. The voice acting, which featured actress Alyson Court from TV's *Beetlejuice* and *X-Men: The Animated Series* is top-notch and quite humorous and it looks to be a game that will appeal to all ages when it comes out this August. For those of you into FMV games, *Wing Commander* and *Corpse Killer* should appeal to that segment of the SNES-CD's fanbase, while those of you craving military strategy games will love *Cannon Fodder*, which looks like it didn't miss a step from its excellent Amiga version."

-from *Electronic Gaming Monthly's* August 1994 article summarizing the Summer 1994 CES

-

"I'm Howard Lincoln, president of Nintendo of America, and here at Nintendo we've been hard at work making the industry's best games. Whether you own a Super Nintendo CD or you've stuck with our SNES cartridge system, there are hundreds of games to choose from, and we've got hundreds more in store over the next year. Our partnership with Rare has produced a game that I think will be recognized as the best video game yet. *Donkey Kong Country* will be receiving a massive marketing push leading up to its upcoming November release, and I think that every Nintendo fan will agree that this game was worth the wait. We'll be bundling it with all of our Nintendo CD peripherals and combo sets starting this December, but for those of you who purchase a Nintendo CD now for the Mario World 2 bundle, we'll be including a \$10 coupon good for a copy of *Donkey Kong Country* when it launches this November 21st. We've also continued our partnership with Jim Henson's Muppet studios. Their company did an excellent job on last year's hit game *Star Fox*, and this December, our new game *Muppet World* will let SNES-CD owners explore the incredible world of the Muppets for the very first time, with a variety of games and adventures that will let players experience one of the greatest entertainment franchises of all time. Our newest original property *Squad Four* will be launching in October, and players will be teaming up with a squad of space heroes who have crash landed on a mysterious planet torn apart by war. On the Super Nintendo cartridge system we've got a treasure trove of role-playing games for fans to dive into this fall, including our very own *Fire Emblem*, a blisteringly difficult strategy game that will require every ounce of ingenuity our players possess! We've got *Crystalis II* coming out as well, along with Enix's amazing world-traveling adventure *Illusion of Gaia*, which launches for both our cartridge and CD-ROM based systems this October. It's been an incredible ride for us these past three years, and I just want to thank all the great Nintendo fans out there who have been playing and enjoying all of our Nintendo systems as we head into the second half of 1994. This year we'll be launching our new 'Play It Loud' campaign, showcasing some of the amazing new audio and visual experiences that Nintendo is working on for our newest and latest games. The campaign will begin with the launch of our new Game Boy Pocket device next month and will be heavily featured in our ad campaigns for this fall's biggest games. I do have one final bit of news to report at this time. As some of you might have seen on *Entertainment Tonight*, our good friend Robin Williams, one of the best actors in the world, mentioned a new *Zelda* game for the Super Nintendo CD that we plan to release next year. While he spoke a bit sooner than we would've liked him to, we would like to say that yes, we are planning to release a new *Zelda* game and are indeed hard at work on Link's next amazing

adventure, and that it will appear on the Super Nintendo CD sometime next year. While we don't have anything from the game to show at the Summer CES, we are planning a big presentation for the Winter CES in January, so until then, please be patient and remember that Nintendo is always working on the next big thing. Thanks for coming, and we'll see you out on the floor!"

-Howard Lincoln's keynote speech at the Summer 1994 Consumer Electronics Show

-

\*Mike O'Malley stands off to the side of the convention floor after his Sega and Nintendo segments.\*

Mike O'Malley: We've seen the big games from Sega, we've seen the big games from Nintendo, and I gotta tell ya, it's way too close to call. Both these companies brought it big time at this year's Consumer Electronics Show, and I had a great time playing both their games! That's what I love about competition, it's just like on Guts, you've got these two big companies pushing each other to be their best and giving it their all and laying it all out there on the floor and we get to sit back and enjoy it all. If I was Mo, scoring this one, I'd give them both 300 points. It's just too bad we can't get Mario and Sonic up there on that Mega Crag to settle it because right now there's just no way to pick a winner! But you know what? I think we're all winners this time. I hope you had fun, now get outside and watch some fireworks! This is Mike O'Malley signing off and telling you to 'play on!'"

-from the *Nickelodeon Video Game Spectacular* that aired on Nickelodeon on July 4, 1994

-

## **June 30, 1994**

Ken Kutaragi sat in Norio Ohga's office at Sony headquarters in Tokyo, Japan. The two men were discussing the latest developments between Sony and Nintendo, and Kutaragi was excited over what was in store for the partnership between the two companies.

"All reports from the CES are that *Donkey Kong Country* was the game of the show," said Kutaragi, "and *Squad Four* didn't fare too badly either. I don't care what people are saying about that Hyper Drive (the European and Japanese name for the Mega Charger) device Sega's got coming, we've got them beat."

"I'm confident as well," Ohga replied, though the look on his face said that he had something else on his mind. Kutaragi was too excited to notice, and he had something else on his mind as well.

"And did you see what we just finished working on with Rare? The new 3-D fighting game? *Killer Instinct*, I think it's called. It's launching in arcades in a couple months and I think we can port a really good version of it to the Super Famicom CD."

"I have seen it, it's quite impressive," said Ohga, staring at Kutaragi from across the table. "I've been watching the news on Sega's latest console...the Saturn."

Kutaragi nodded in response. The latest reports on the Saturn had been nothing short of amazing. Game footage had started to leak out and the visuals blew away anything the SNES-CD was even remotely capable of. Once it launched in North America sometime next

year, it would be very stiff competition even with the new Zelda game coming out.

"Nintendo's probably going to be asking us about contributing to their follow-up console pretty soon," said Kutaragi, who'd already heard whispers about Nintendo's next console when he'd visited the company's Kyoto headquarters. "I already have some ideas in mind but I'd like to have Sony's approval this time around..."

"That...could be a problem," said Ohga, who was now getting to the point of what he'd called Ken Kutaragi into his office to discuss. "Some of the directors don't like what we've been doing with Nintendo. Our profits haven't been up to their expectations, especially with the losses we continue to take on each peripheral and combination set we sell."

"But...we've been raking in record profits on software and music CDs, more than enough to cover the losses," Kutaragi replied, referring to the age-old strategy of 'giving away the razors to sell the blades'.

"The three biggest Nintendo games coming this winter are all first-party games," said Ohga. "*Squad Four*, *Donkey Kong Country*, *F-Zero*, all first-party games. Our cut is much smaller on them, we barely get anything at all. We will sell plenty of copies of the new *Street Fighter* and *Mortal Kombat* games, yes, but will it be enough to satisfy everyone in the company? I doubt it will...."

Kutaragi slumped in his seat. Ohga continued.

"Right now....it is about 50-50 that we will not be helping Nintendo on their new console. In fact...there are some within the company who wish for us to work on our own device, separate from Nintendo."

"Well, that would be.....I have no doubt it'd be successful but without Nintendo's games....we'd have a lot of trouble."

Kutaragi knew that Sony had already contracted several big game projects for 1995 and that the company had begun establishing its own separate partnerships for its burgeoning video game production company. But he was doubtful that Sony would have the kind of third-party support that Nintendo could expect to have.

"If we could convince Square and Konami to produce games for us, we might have a chance at going it alone but....I still think we should stick with Nintendo. And they're going to be asking us about the next console soon."

"Then you should start working to convince the members of the board that we need to continue this partnership," said Ohga, giving Kutaragi a very serious look. "I'm willing to put my trust in you when it comes to this matter, but if you can't convince them we'll have to go another direction and I'll need your cooperation in that, am I understood?"

"Absolutely sir," said Kutaragi, nodding his head. "Whatever Sony decides is best, I'm on board."

"Good."

The two men stood up and Kutaragi graciously bowed to his superior before turning to leave the room. While Sega's immediate future was very clear, Nintendo's, it seemed, was about

to become very clouded indeed.

-

*"In a lot of ways, July 1994 was the 'calm before the storm' in terms of the console wars, the month before a slew of big games including Super Street Fighter II and Jewels Of The Realm were released on the SNES-CD, and a month before the Mega Charger was released for the Genesis. All I know is that it was the month I got an SNES-CD for my 7th birthday."*  
-excerpted from an anonymous blogger relating his experiences with gaming, from the start of the SNES-CD section of the article

*"Though games titled Final Fantasy II and Final Fantasy III have been released in North America, in reality, those games are actually Final Fantasy IV and Final Fantasy V respectively. Contained on this disc, for the first time on Western shores, is the true Final Fantasy II and Final Fantasy III, fully re-mastered for your Super Nintendo CD."*

*Final Fantasy VI – Coming Spring 1995"*

-from an insert included with North American copies of *Final Fantasy Origins*, which included remastered versions of the first three Final Fantasy games

*"Damn, I'm way too good at this!"*

-Major Hazard, one of the many random comments he makes during the game *Major Hazard*

-

(What was the thought process that went into the release of *Final Fantasy Origins*?)

Hiranobu Sakaguchi: Originally of course, when the Famicom was popular, we intended to release Final Fantasy II and Final Fantasy III in the West. But by the time that we were working on the localization for those games, the Famicom was fading in popularity and we were too busy with working on Final Fantasy IV and its localization, so it was decided to scrap those projects and retitle IV as Final Fantasy II for the West. With the popularity of role-playing games on the Super Famicom CD console with Western players, particularly Final Fantasy V and Secret of Mana, we decided that we should localize the collection that we were doing for Japan. It had already been released as The Final Fantasy Collection in Japan in December 1993, and since we had a bit of a lull between the release of Secret of Mana and the release of Final Fantasy VI, we decided to ask our North American division to localize this collection as well.

(Did you worry that there would be some confusion among American players, considering that North America already had a Final Fantasy II and a Final Fantasy III?)

Hiranobu Sakaguchi: We did our best to make it very clear what these games were. We did not label them on the cover at all, we simply titled the collection "Final Fantasy Origins" and put some text, I believe it said something like "two all new games never released in the West" or something of that nature. (editor's note: The exact text was "Includes two Final Fantasy adventures never before played on Western shores!") It was only once players bought the collection that we had the insert in the case that explained what these games were. Also in the lead-up to the release of Final Fantasy VI, which was the first game to be

correctly labeled in North America, we had plenty of press releases to explain that this was the sixth game and that the other five games were available under other names, so by the time we did the CD remake of IV and released it there in September 1995, people understood that it was actually Final Fantasy II. I believe that people who play our games are quite smart!

(Did you believe that before or after the release of Final Fantasy V in the West? I know that Squaresoft thought that American gamers couldn't handle a game that was that difficult which is why we almost didn't get it at first.)

Hiranobu Sakaguchi: I admit that before I learned the sales numbers, I thought the game would do quite poorly in the West, as New Generation barely did enough sales to convince us to allow V to be localized. I was one of the people pushing to localize it but it was a difficult decision. I was so pleased that it did well and I was VERY pleased at how Secret of Mana did! After Secret of Mana did so well I knew that Western gamers were willing to buy quality role-playing games. It was why I had no problem localizing Alcahest for the Super Famicom. I remember, we were in a bit of a panic after Capcom wanted to publish Breath of Fire for themselves, because of that rule requiring Super Famicom releases (editor's note: When the Super Nintendo CD was first released, companies that published games on the Super Nintendo CD were also required to publish at least one game on the Super Nintendo during that same calendar year. If they failed to meet this release quota, they risked having their Super Nintendo CD game fail to be approved, or in the case of canceled SNES releases, risked having to pay a heavy fine to Nintendo. This rule was scrapped starting with the 1995 calendar year.), we had no Super Famicom games scheduled that year but then we realized we could localize Alcahest and we satisfied the requirement with that, and it did decent numbers at least considering what we expected.

(Did Final Fantasy Origins match your sales expectations? I remember it doing fairly well.)

Hiranobu Sakaguchi: It didn't sell quite as much as Final Fantasy III did but it made a profit for us, so that satisfied me!

-excerpted from an interview with Hiranobu Sakaguchi for GameInformer magazine in August 2004

-

### **ESPN National Hockey Night:**

Ed: 7 (quote: "The presentation is this game's strong point, featuring some nice filmed segments with ESPN's Bill Clement. As a hockey video game, it's only average.")

Danyon: 7

Al: 7

Sushi-X: 7

### **Final Fantasy Origins:**

Ed: 8

Danyon: 8

Al: 8 (quote: "While the gameplay might have aged a bit, this trilogy of NES role-playing classics gets a nice upgrade with Final Fantasy III quality visuals and CD audio. The third game is definitely the strongest one of the bunch. The best thing about this collection is that

for the first time, all five Final Fantasy games are available in America!")  
Sushi-X: 7

### **Liberty Or Death:**

Ed: 7  
Danyon: 6 (quote: "This strategy game by Koei is pretty tough to get into, but it does a great job capturing the feel of a Revolutionary War battle.")  
Al: 7  
Sushi-X: 7

### **Princess Maker:**

Ed: 5  
Danyon: 8  
Al: 6  
Sushi-X: 5 (quote: "What a weird game this is. Part RPG, part life-sim, it was way too girly for me but if you ever wanted to raise up a princess, this is the game to play, I guess.")

### **Total Eclipse:**

Ed: 8 (quote: "The graphics in this space shooter are REALLY hard to beat, it features some of the best visuals of any game on the system, though the gameplay's not quite up to the level of Starfox and it runs a bit slow compared to the one on the 3DO.")  
Danyon: 6  
Al: 7  
Sushi-X: 8

### **Monster Wars:**

Ed: 8  
Danyon: 8 (quote: "Of the two Koei strategy games released this month, this game, which features hordes of vampires, frankensteins, werewolves, mummies, and many more creepy monsters in turn-based combat, is a lot more silly and a lot more fun. George Washington is cool enough but sending a gang of vampires to fight a gang of pumpkin men is just awesome!")  
Al: 7  
Sushi-X: 7

### **Astra:**

Ed: 5  
Danyon: 7  
Al: 6 (quote: "This is a pretty standard RPG featuring a group of typical heroes sent out to fight a deadly dragon. While RPG fans will probably enjoy it, I myself preferred the much more dated and yet much more engrossing Final Fantasy Origins.")  
Sushi-X: 6

### **Logjam:**

Ed: 8 (quote: "This platforming game featuring a plucky lumberjack was a pleasant surprise for me. The variety of levels and obstacles you have to dodge rivals any other action game

on the system, though the music could've been a bit better.")

Danyon: 6

Al: 7

Sushi-X: 6

### **Major Hazard:**

Ed: 8

Danyon: 8

Al: 9 (quote: "This was my personal game of the month. This top-down action shooter game features a Rambo-like hero with way more guns and a really funny mouth, and the graphics were excellent as well. I'd go to war with Major Hazard any day!")

Sushi-X: 8

### **Fearleaders:**

Ed: 4

Danyon: 4

Al: 6

Sushi-X: 3 (quote: "This platformer was absolutely as generic as they come and the ability to switch between the five cheerleading heroes on the fly was no help considering there was no difference between the characters except their hairstyles.")

-

Keith Olbermann: And it's been three weeks now since O.J. Simpson brutally murdered his ex-wife Nicole Brown before taking his own life. In those three weeks there have been a number of clarion calls for the NFL to investigate what many are calling an epidemic of domestic violence among the league's players. It has become common knowledge now that Simpson regularly committed domestic violence during the couple's marriage, and the horrific murder has led a number of brave women to step forward and report domestic violence in their own lives. Commissioner Paul Tagliabue has not commented on the issue as of yet but there are growing number of critics who say that the commissioner can't remain silent forever. So far, no suspensions or fines have been issued despite several incidents of domestic violence being reported to the league within the past month.

Charlie Steiner: Chris Webber is said to be taking his time to get adjusted to his new team the Chicago Bulls, but coach Phil Jackson says that he's looking forward to the challenge of working with someone he calls a "one of a kind talent". The Chris Webber trade was the biggest story on draft night, as the Bulls sent B.J. Armstrong, Horace Grant, Toni Kukoc, and a king's ransom of draft picks, five in all over the next four years, to the Golden State Warriors in exchange for 1993's number-one pick. The Bulls...

-

### **Top 5 SNES-CD Games (July 1994)**

Howdy there! It's Jackbob1985 again and this time we're looking at July 1994's crop of SNES-CD games. I played all nine American releases (well, as much as I could stand to....shame on you, Fearleaders) and here's my top five.

#### *5. Princess Maker*

This was an SNES-CD version of the classic MSX2 life-sim game that allowed you to raise a young girl to become a beautiful princess. It contained some RPG elements but was for the most part a life-sim, similar to games like Harvest Moon. I'm actually surprised this game was localized for North America and it did pretty poorly, selling only around 30,000 copies. The North American version had a LOT of stuff taken out, things like the prostitute ending were obviously scrapped for Western sensibilities but other bits of dialogue and violent scenes were removed to get this game down to an E rating (Nintendo tried marketing it for young girls but it didn't take). Compared to Princess Maker 2 which never saw an official American release, this game was pretty plain but a semi-fun diversion nonetheless. I had to play this one on an emulator because the original disc is going for over \$100 on Ebay!

#### *4. Total Eclipse*

This was a port of a 3DO space shooter game known for outstanding pre-rendered graphics. While the SNES-CD should have been capable of running this game as well as the 3DO did (faster processor), it was a bit slower in framerate because the developers had trouble with the port. Regardless, it's still a great looking and decent playing game and worth checking out if you're a fan of space shooters.

#### *3. Monster Wars*

This game was the start of one of my favorite Koei franchises, and whoever had the idea to pair classic horror monsters with the RTS genre is a genius. Basically, you're the general of an army and you can pick between a variety of creepy people to use, there's like a Vincent Price guy, an Elvira ripoff, all of them kind of based on various scary character tropes, and you raise up an army of classic monsters and do battle across a variety of stages. There are some hilarious voice samples in the game and the music wasn't bad either. My favorite characters to use were definitely the vampires. They could drain enemies of their life points and they had some slick "magic" attacks at their disposal. You could use witches for magic too but they were glass cannons.

#### *2. Major Hazard*

Major Hazard is a game that was done by Activision, it's a top down third-person run and gun shooter game (think Duke Nukem meets Zombies Ate My Neighbors) where you play as Major Hazard, a trigger-happy, roided up soldier who commands a squad of hapless soldiers on a number of battlefields. He's as gung-ho as gung-ho can be and you get a variety of awesome weapons and cool items to help you out against endless hordes of enemies across 12 maze-like battlefields. This game was so much fun to play as a kid, it wasn't quite as foul-mouthed as Duke Nukem (Activision wanted to make sure it got a T rating) but the good major still had plenty of attitude, spouting off hilarious one-liners as you gunned down wave after wave of enemies (again, to keep it at a T rating there was no blood). This was actually, if the sales figures I got are right, the best-selling new SNES-CD game for the month of July 1994, barely beating out the #1 game on my list. I still remember the commercials for it and of course the game became a decently popular franchise.

## 1. Final Fantasy Origins

What else could be number one but this awesome collection of the three NES Final Fantasy games? This was the first time American audiences got to experience two of these games (II and III) and Squaresoft did a really good job with the presentation, giving them SNES quality graphics and CD quality sound. Not too much was changed in terms of the gameplay, these games were classic Nintendo Hard, though it was easy to break II in terms of difficulty if you knew what you were doing. They DID add an overworld save feature to all of the games, which especially helped in terms of Final Fantasy III since otherwise you would've had to go back through two whole dungeons if you had been killed by the (VERY difficult) final boss. I remember back then that this was when Squaresoft started using the "true" numbers for the series' games, so II became IV and III became V. It was confusing at the time.

-

*This month in Nintendo Power, it's the very first issue of our special "Squad Four: Origins" comic series. Before you play the game this fall, join Shad, Marcus, Rebecca, and Lane on their very first mission with this all-new comic drawn by Benimaru Itoh, who also drew last year's Star Fox comic and this year's Super Metroid comic!*

-introduction to the first of 12 installments of Nintendo Power's *Squad Four: Origins* comic, which ran monthly in the magazine from July 1994 to June 1995

-

## **SNES-CD Power Charts – July 1994**

1. NBA Jam – 24,533
2. Kid Icarus CD – 21,744
3. Super Mario World 2 – 17,280
4. Snatcher – 16,977
5. Secret Of Mana – 13,164
6. Gun Warrior – 11,753
7. Secret Of Monkey Island – 11,424
8. Castlevania: Rondo Of Blood – 9,056
9. Super Mario Kart – 8,605
10. Beavis and Butthead – 7,741
11. Mortal Kombat – 7,420
12. Joe And Mac CD – 6,574
13. Wolfenstein 3D – 5,742
14. Bumblebee: Zooble's Hive – 5,325
15. Star Fox – 5,289
16. Battletoads II – 4,327
17. Final Fantasy III – 4,060
18. Super Bases Loaded CD – 3,821
19. Street Fighter II: Arcade Edition – 3,780
20. The Next Champion – 3,774

-

\*Scene shows a boy playing Sonic the Hedgehog 3 on his Genesis\*

Narrator: The Sega Genesis is already the greatest video game console of all time.

\*Scene shows the same boy playing Virtua Racing\*

Narrator: But now the time has arrived.

\*Suddenly the game is yanked from the console. The boy looks around, bewildered.\*

### **MEGA-CHARGE IT!**

\*The Mega Charger is jammed into the Sega Genesis and Sonic 3 is put back on. Footage from the game's Mega Charger enhanced levels is shown. The boy's eyes go wide as he plays. Then Virtua Racing is put on the system and the game's 3-D graphics whiz by with incredible speed.\*

### **MEGA-CHARGE IT!**

\*Footage from more games including Super Street Fighter II, Silpheed, Spider-Man: Maximum Carnage, Streets of Rage 3, and Star Wars Arcade is shown, including the boy's awestruck reactions as he plays.\*

### **MEGA-CHARGE IT!**

Narrator: It's time to Mega Charge your Genesis with the Sega Mega Charger. Featuring 64 bits of built-in memory, an all new Mega Audio chip for lifelike sounds, and introducing Mega Blast Processing with four times the processing speed. Your Sega Genesis will never be the same.

\*The footage continues as the boy looks more and more excited with every game he plays.\*

### **MEGA-CHARGE IT!!!**

\*Finally the controller drops and the boy is left twitching on the floor. The camera shows us his face, frozen in ecstasy. He mouths the Sega scream.\*

### **SEGA!**

-an advertisement for the Sega Mega Charger that began running in late July 1994

-

*"You think this game's bad now, like 20 years after the fact? Have you forgotten what a hot mess this thing was on the SNES-CD?"*

-Pat

*"Yes, this is the latest technology!"*

*"This game blows."*

-Matt and Pat, quoting "Burns' Heir"

*"Why did the Super Nintendo CD never get a port of the X-Men game? It's super unfair!"*  
*"Because, Woolie, it would have been the LITERAL EXACT SAME GAME with the sprites swapped, and even in the 90s, no one was stupid enough to buy the same game twice."*  
-Woolie and Pat, discussing the X-Men arcade game

*"Don't tell that to all the people who bought Street Fighter 2 like, 4 times."*  
-Liam, in response to Woolie and Pat

*"Stay tuned for the next Best Friends Beat 'Em Ups, where we'll play Virtual Bart. Pat gets Milhouse!"*

*"Fuck off, Matt! You play fuckin' Milhouse!"*  
-Matt and Pat, on Milhouse

-From Zaibatsupedia, the Two Best Friends Play wiki, article "The Simpsons Arcade Game." November 20, 2013.

-

*"Damn, the Genesis outsold us again? That makes four months in a row....and if I have to read about another Mega Charger sellout I'm gonna puke."*

-overheard at Nintendo of America HQ sometime early in August 1994

*"So if we gather more jewels we'll keep getting stronger? That's good to know, but won't the bad guys just keep getting stronger too? It's gonna take more than just pretty rocks to save the kingdom!"*

-Lily (Alyson Court), during level 1-2 of *Jewels Of The Realm*

*"Welcome to John Madden NFL Football 1995. I'm John Madden."*

-from the title screen of *Madden NFL '95* on the Sega Mega Charger

*"Awww no, that Power Ranger game sucks, get the CD one, the CD one!"*

-overheard at a K-Mart, two boys discussing whether the Genesis Power Ranger game or the Super Nintendo CD Power Ranger game was better. The Genesis wouldn't get a Mega Charger-compatible Power Rangers game until 1995.

*"So in August of 1994, we were just about done with our work on the Saturn for the Genesis launch and the Mega Charger, which we'd contributed some chips to, was selling great, and Tom Kalinske and some of the other Sega execs want to take us to Vegas for a night on the town. Well of course, we accepted, there was no better way to celebrate a job well done. It was one of the best nights I can remember, and it was on that trip to Vegas that I knew we'd chosen the right company to cast our lot with.*

*...at least, you know, at the time."*

-Ed McCracken, of Silicon Graphics, from an interview with Sega Retro on February 13, 2010

-

**START. YOUR. ENGINES.**

\*Scenes are shown from *Virtua Racing* on the Mega Charger\*

Narrator: *Virtua Racing*, the hottest arcade racing experience around is now Mega Charged for your Sega Genesis. With the all-new Mega Charger, the critically acclaimed international hit is now playable in the comfort of your home in full arcade quality.

\*More scenes are shown of the game\*

Narrator: And this....is from the other guys.

\*Scenes are shown from *Stunt Race FX* on the Super Nintendo...the game is graphically impressive but runs much much slower\*

Narrator: Left in the dust!

\*More scenes are shown from *Virtua Racing*, the cars whiz by on the screen, the game appears in the whole screen and looks fantastic...then more scenes are shown from *Stunt Race FX*\*

\*Some teenagers come by and look at the *Stunt Race FX* game on a monitor, laughing at the chugging graphics and cutesy cars\*

Girl: It's...almost kinda cute!

\*The teenagers all laugh and then pile onto a couch to play *Virtua Racing*, having a blast while the monitor showing *Stunt Race FX* sparks and sputters like a broken down car\*

Narrator: If you're not Mega Charging, you're roadkill. *Virtua Racing* on the all new Sega Mega Charger. Nothing's faster.

**SEGA!**

-

\*The scene shows a fancy restaurant with a sign that says "Chez Super Nintendo CD". A boy is seated at a table, playing *Jewels Of The Realm* on the Super Nintendo CD.\*

Waiter: And how are you enjoying your advanced graphics and lifelike voices, sir?

Boy: \*nods, looking satisfied\* It's pretty good.

Waiter: Your bill, sir. \*hands him a bill, the boy reads it... it says "ONE ARM, ONE LEG"

Boy: Huh?

\*A scary looking doctor with a chainsaw comes up to the boy, who screams. Cut to some kids at home, playing one of the 3-D stages of *Sonic the Hedgehog 3* on the Sega Mega Charger and having a great time.\*

Boy: These 3-D graphics are awesome, and check out Sonic's voice!

\*A clip of Sonic speaking from the Mega Charger version of the game is played\*

Boy 2: Awesome! Hey, don't they have 3-D graphics and voices at that fancy restaurant down the street?

Boy: Yeah, but I heard they charge an arm and a leg!

\*The boys laugh and keep playing\*

Narrator: Get advanced graphics, lifelike voices, and blazing fast animation with the all new Sega Mega Charger. Available as part of the new Sega Mega Bundle with the Sega Genesis and Sonic the Hedgehog 3 for \$129.99. Because you shouldn't have to pay an arm and a leg to get the latest in awesome video game technology.

\*Cut to the boy from the restaurant strapped to a table as the scary doctor prepares to operate.\*

Boy: \*lets out the Sega scream\*

## **SEGA!**

-from a pair of commercials that began running in early August 1994

-

## **August 1, 1994**

On a date advertised as "Mega Monday", Sega launches the Sega Mega Charger in North America for \$49.99. A PAL release would come the very next week, while Japan would get the Mega Charger at the end of the month. The Mega Charger is included in \$79.99 bundles with the games *Sonic the Hedgehog 3*, *Virtua Racing*, *Super Street Fighter II*, *Lunar: The Silver Star*, and *Silpheed*, and in a \$129.99 bundle with the Genesis and Sonic 3. The Mega Charger is an immediate hit, selling out in many stores, with some parents forced to buy the Lunar or Silpheed bundles to get their hands on one (indeed, up to half of the sales of those games may have been attributed to people who bought them just for the Mega Charger bundled with them). The peripheral receives rave reviews from publications like *Electronic Gaming Monthly* and *GamePro*, the later of which devotes a cover feature to it in its August 1994 issue. Coming off of four straight months of excellent sales for the Genesis driven by the release of Sonic 3, the Mega Charger continues the momentum, and it would lead to the Genesis outselling the Super Nintendo and CD peripheral for the fifth straight month.

-

### *Sega Mega Charger specs*

The Sega Mega Charger is a device shaped like a Genesis cartridge with a lock-on slot on top where a Genesis game can be placed. It doesn't need its own power source (unlike the 32X OTL), you just stick it into the system like you would any other Genesis cartridge.

It contains:

-2 11 Mhz processor chips, one used for 3D graphics acceleration (like the SuperFX chip),

the other used for 2D sprite graphics (to bring Genesis games near the Neo-Geo in terms of sprite detail), this effectively brought the total processing power of the Genesis to a smidge under 30 Mhz.

-8 MB (64 Megabits) of re-writeable memory. Mega Charger enhanced games contain a certain amount of extra content in compressed form. When a game is locked on to the Mega Charger, it decompresses that data and copies it to the re-writeable memory in a process that takes anywhere from 30 seconds to 2 minutes. When a different game is locked on, it erases that data so it can decompress another game. This meant that if you kept playing the same game, you wouldn't have to sit through a decompression sequence every time you booted up, but if you switched games often you might have to do it more often. Considered a mild annoyance but back in 1994 people played individual games longer.

-128KB of RAM, 96KB of video RAM

-An advanced sound chip somewhat better than the SPC chip in the SNES, could be used to play enhanced music samples (though not quite as good as the CD audio on the SNES-CD) or voice clips.

Sega and Silicon Graphics lost money on each one sold, though they made that back through game sales, plus the \$399 price tag of the Saturn basically included a hidden "Mega Charger tax" that would also offset the losses from peripheral sales IF the Saturn sold well.

The majority of Genesis games, around 70% of them, had no Mega Charger-enhanced data, though many of the bigger games would at least be enhanced somewhat by locking in with the device, and a few dozen future Genesis games (including launch titles *Lunar* and *Silpheed*, along with the later *Virtua Fighter* and *Doom*) would require the peripheral.

-

(Looking back at that Mega Charger launch, we noticed that the five games that you chose to have bundles with the Mega Charger initially kind of paralleled Nintendo's launch line-up for the SNES-CD. You both had a Street Fighter game, you both had an RPG, Nintendo had Final Fantasy and you guys had Lunar, you both had a racing game, your Virtua Racing vs. their Mario Kart, you both had a kind of shooter game, they had Sewer Shark, you had Silpheed, and finally both you guys had a sort of family game, you had Sonic 3 and they had Dragon's Lair. Was that deliberate or just a coincidence?)

Tom Kalinske: \*chuckles\* It was a coincidence, I mean I didn't even notice that until you told me, but wow, strange world huh? But no, our idea with the Mega Charger bundles was to make sure there was something for everybody. We could've just done a Sonic 3 bundle, but a lot of people already had Sonic 3 and we'd have lost a lot of potential sales if we didn't have options. So instead, we looked at the most promising games, tried to have a variety and then, you know, put the bundles together. Looking back, Nintendo did a pretty good job on that launch. I mean they were always pushing us hard, they were the industry leaders, so a lot of the stuff we did that looked like we were imitating them, we did it just because it made good business sense.

(Speaking of good business sense, could you explain some of the strategies you had going into the Mega Charger launch, and what difficulties you experienced with everything?)

Tom Kalinske: Absolutely. The strategy was to accentuate the value of our Mega Charger versus Nintendo's CD. And I remember we had a three-pronged ad campaign with the launch, we ran three different advertisements at the time. The first one was just us promoting the Mega Charger with that "Mega Charge It" ad that got a lot of rave reviews, it

was kind of our self-promotion ad. Then we did a pair of attack ads against Nintendo, the first one was kind of an update of our old race car ad that we did when Mario Kart came out and we showed it compared to Sonic. Here, we had their Stunt Race FX game, which ran at a pretty atrocious framerate on their cartridge system, and put it up against our Virtua Racing. Because at the time, our Genesis/Mega Charger bundle was selling for the same price as their cartridge SNES bundle with Mario All-Stars. And we were showing that we were the better value. And then, then we did that famous "arm and a leg" ad that showed how much of a value we were compared to the SNES-CD. The Genesis/Mega Charger combo was half the price of the SNES/CD combo. We could deliver a similar experience for half the price, and we did a whole campaign over the next few months where we kept saying that Nintendo would take your arms and legs if you bought an SNES-CD from them. \*laughing\* I mean here's the thing. Until 1995, they sold the SNES-CD by itself for \$150. And you could get a Genesis AND the Mega Charger AND a game for \$130. So, what I wanted to do, and at the time this was considered to be almost impossible, but I wanted to convince parents whose kids owned a Super Nintendo already and were thinking of getting the SNES-CD to say, okay, look, there's like 150 games for that one, and on the Genesis there's over 500 games and counting. And instead of getting the SNES-CD, you could get a Genesis instead. We wanted to take Nintendo families and make them Sega families. At the time, you didn't buy two systems unless you were rich. But if you were going to spend all that money on a Super Nintendo CD, we were saying "hey, why not a Genesis instead?"

(Did that work?)

Tom Kalinske: Actually, yes. We got letters from parents who said they had done just such a thing. We would have liked to have gotten more, but that strategy paid off in some ways.

(Until the Saturn launched at \$399.)

Tom Kalinske: \*laughing\* Yeah, we had to scrap a really good ad campaign when the Saturn came out.

(I know that there were a lot of games ready for the Mega Charger launch. You guys had just announced it a few months before. Did third parties have longer to prepare?)

Tom Kalinske: Well, you have to understand that the Mega Charger began its life as a lock-on cart for Sonic 3. We'd been working on the technology for years. Then Silicon Graphics came on board, right around the time the Super Nintendo was using the Super FX chip, and I asked them if they could work on a little side project for us. I asked, basically, "what's the most chips you can pack into a cart and keep it right around the price of a game?" And they came back a few weeks later with the Mega Charger specs, and then I shopped those around to our third-party partners and said "this is technology that we're going to have in some form in 6-8 months, start planning games around it". I mean, if I hadn't gotten my way on Project Mars, those Mega Charger games would've just ended up Project Mars games. So it wasn't too big of a risk, and we had plenty of Mega Charger games for that late 1994 release window.

-excerpted from an interview with Tom Kalinske on 16-Bit Life, January 8, 2012

-

Anchor: The new "Mega Charger" from Sega hits store shelves today. The device, the size and price of a Sega Genesis game, allows players to bring arcade-quality graphics into their

living rooms. The device has been the subject of a lot of hype for the last few weeks, and when we hit the stores today, we found a lot of unsatisfied shoppers, and not for the reasons you might think.

\*Scenes are shown of shoppers at a local Walmart store\*

Reporter: Sega's Mega Charger is here and it's a hit...much to the chagrin of shoppers looking to buy one.

Woman: Uh, it was sold out.

Reporter: That's the story all over Charlotte. In fact, we called eleven local electronics stores, and only one of them had the device left in stock...and by the time we got there, it was sold out too.

\*A scene is shown of another local woman with a Mega Charger box in hand.\*

Woman: I think we got the last one! \*she laughs\*

Reporter: The new Sega Mega Charger promises to enhance the graphics and sound of your favorite Genesis video games. Just hook up the device to your favorite game and voila, the game moves faster, 2-D becomes 3-D, and new sound enhancements like spoken lines are added. Advertisements touting the device have been playing for weeks now and it looks like players can't resist Sega's newest toy. We asked some shoppers if the device's cost has been a deterrent but parents agreed, it's a lot more economical than some of the alternatives.

Woman: Well, we've always been a Sega family because they respect the consumers' budget. I mean, Nintendo wants more than a hundred dollars for their game things, but this is the same cost as a game so we can justify it a lot more.

\*They ask another woman buying the device with two young girls with her.\*

Woman: We always get good deals on Sega stuff. We bought this with the new Sonic game they've been wanting, it's nice to be able to get them both at once and we got a good deal on it.

Reporter: Sega has promised that there will be enough Mega Charger devices to meet demand, but so far it looks like not everyone is satisfied that they'll meet their end of the bargain.

Boy: Um, it really stinks that we can't get one today. Why'd they sell out?!

Anchor: And not only has Sega promised more Mega Charger devices will be available, but more games as well, the popular arcade game *Virtua Fighter* is planned to hit stores next month, and Sega has announced another Sonic game starring his pal Knuckles will be out some time next year.

Danyon: 4

Al: 8

Sushi-X: 4

-

*Two of the Super Nintendo CD's best original games were released in August 1994. Jewels of the Realm and Solus were outstanding original titles, one of them becoming a major hit and a franchise and the other becoming one of the system's biggest cult classics.*

*Jewels of the Realm was an Activision title and was one of the best selling games for the Super Nintendo CD in 1994. It took place in a medieval sort of kingdom and focused on two children, Chris and Lily, whose village is destroyed by the tyrannical wizard king Luxor. The children set out on a massive quest to stop Luxor and save the kingdom before he conquers it all. The game takes the form of a stage-based action game, not so much a platformer but kind of a test of combat skill like the Kirby games. There are 7 levels in all, divided into 4 stages each for a total of 28 stages. You can control either Chris or Lily, who can use a variety of powers to fight enemies and make traversing the stages either. You get your powers from colored gems you collect, you get five slots for gems and different gem combinations allow you to use different powers. There were eight different colors of gems, red, yellow, blue, green, orange, purple, white, and black, and over 60 different powers, depending on which combinations you had. Some powers took two gems, some took three, some took four and some took five. Some single gems could enhance certain powers as well, so if you had four gems and a certain color you could use an enhanced version of that power, if you had one combination of two and another of three you could use two powers at once, etc. It was amazingly fun and on top of that the game had stellar production values, Chris and Lily were voiced by Hadley Kay and Alyson Court respectively. If you remember, they were prolific in Canadian cartoons in the late 80s and early 90s and Alyson Court still voice acts with regularity today. The game sold well upon release and there have been several sequels, the most recent in 2009 with one planned for later this year as well.*

*Solus, on the other hand, was a bit more esoteric of a game. A level-based Super Scope rail shooter, the game had 12 levels and one of the best storylines ever seen in an on-rails game. Developed by Nintendo's R+D 1 division as a follow-up to Metal Combat, your character is a man who's been trapped in a mysterious arena by a group of unseen villains and is forced to fight for his life against other similarly trapped combatants. For the first five levels, you have to shoot down hazards and creatures in pursuit of your opponents, who you fight in a series of fast-paced boss matches. However, at the end of the fifth level, your female opponent, named Marie, is able to free the two of you just before you land the finishing blow. The two of you spend the next three stages looking to free other combatants while being pursued by increasingly dangerous waves of enemies, and then spend the last four stages taking the fight to the people who put you in the arena in the first place. While on-rails, the game offers several divergence points to choose your path through the levels, and what you do at those points determines the fate of some of the characters, including Marie's. The game was extremely well received critically but despite Nintendo promoting the game well, sales are still poor. You didn't even need the Super Scope, you could use the Justifier to play but it still sold fairly poorly and no sequel or even spiritual successor has been made since.*

*These two excellent games were released amidst a slew of hits in August 1994. One*

*succeeded and thrived and the other survives as a cult classic, but both are a reminder of the creativity inspired by the Super Nintendo CD.*

-excerpted from a Nintendolife.com article on January 28, 2012

-

*Amiga ports to the Super Nintendo CD were in a lot of ways a mixed bag. While the Super Nintendo CD, in a lot of ways, provided the platform that would give the spotlight to many games that otherwise might not have gotten the mainstream recognition that they did, it also did a lot to undercut the Amiga's success and might have been a catalyst for the platform's eventual decline.*

*1994 was a big year when a lot of the Amiga success stories began to be ported to the SNES-CD. The Secret Of Monkey Island was obviously the biggest and one of the best sellers of the year, but there were also games like Cannon Fodder and Sam and Max Hit The Road. I remember when Cannon Fodder came out, Nintendo hyped it quite a bit. The American magazine Nintendo Power even gave it the cover of the August 1994 issue. The game turned out to be a moderate success for them, nothing like Monkey Island but still a success. Sam and Max, of course, well...in retrospect I wish they'd given that game the cover instead. It had everything going for it...lovable characters, great voice acting, an amazing story, awesome gameplay... but instead of being a mega-hit like it should've been, it barely sold 50,000 copies in North America and only broke even because of PAL territory sales. What went wrong? The lack of hype and advertising for the game didn't help. The existence of family games like Power Rangers and Jewels of the Realm made for stiff competition. Even the release of the Sega Mega Charger that month probably harmed it somewhat.*

*More Amiga ports would come to the SNES-CD throughout its lifespan. Some of them would do well, others would flop like Sam and Max. While us die-hard Amiga fans will swear up and down that the Super Nintendo CD was no substitute for the Amiga, there's no doubt that for better or worse, it provided a much larger mainstream audience for games that would've otherwise been played by a devoted few.*

-

Angry Video Game Nerd: You know, for such a shitty game, Nintendo sure hyped this one up. \*showing articles from Nintendo Power magazine about the game "Oops!"\* This game was made by Sony for Nintendo, it was an FMV game and Nintendo hyping it up so much I think was their way of saying "We're sorry we didn't let you put Night Trap on our system so here, you can make this one instead." And that's basically what it is, Night Trap for little girls. I mean, even Night Trap was kinda fun! At certain parts. But this game, it's so boring! And the acting is so lousy, I mean, check out this blonde girl here. She's the main character and she's the one who sets all the traps.

\*The girl goes to another room and begins to place a bunch of thumbtacks on the floor.\*

Girl: Are you sure these thumbtacks will stop the bad guys? If they're wearing shoes you might want to have me put down sticky glue instead! Oh well, it's too late now!

AVGN: And sure enough, here come the bad guys wearing big old shoes. They go right over the thumbtacks and this girl's totally trapped!

Girl: Oh no! They're gonna get me!

AVGN: But wait, look, press a button and you'll send Stephanie into the room instead. So the bad guys are grabbing Stephanie now, but she's got a joy buzzer! She's really zappin' em now. You know, joy buzzers really aren't very useful. And why are they called joy buzzers? I mean if you're getting shocked by them you're probably not very joyful! But it's not much of a shock, so what kind of joy is the person shocking you getting either? I tell ya, joy buzzers, that's some fucking false advertising right there.

\*Later on in the review....\*

AVGN: So if you do everything right, and believe me, that's a lot easier to do than in Night Trap, you catch all the bad guys and the cops show up. Hooray, ya win. Not like that's all that big of an accomplishment. I mean, even if you get caught, there are SO many outs that it makes losing practically impossible! In Night Trap there were some real stakes, if you got caught it was game over. Hell, there was even a Congressional hearing about it! Can you imagine if there was a Congressional hearing about this game? I imagine it going something like this.

\*Cuts to AVGN dressed as Bill Clinton\*

AVGN: Well, I think that Oops! is a detriment to the American people and a threat to the free world. It's an awful, awful game, and playing it makes me want to quit being president and go live under a rock. Also, it doesn't have Dana Plato in it. Which means at least I can play it when Hillary's around. What say you, president of Nintendo?

\*Now he's dressed up as Howard Lincoln\*

AVGN: Uh...oops?

\*Now he's dressed normal\*

AVGN: Oops? You're abso-fucking-lutely right oops! This game is a turd, a shitstain on the mostly spotless record of one of the greatest video game consoles of all time. They made it for little kids, but I think the reason they really made it was to get all the little kids to stop playing so they could put another Mortal Kombat game on there! I mean Mortal Kombat II came out the very next month, that can't be a coincidence. If this is what Nintendo is spoon-feeding to the kids who played this console, then it's gonna take a lot more than a fucking airplane to get me to swallow it down, it's gonna take a whole god damn fleet of airplanes while FDR, Dwight D. Eisenhower, and General George S. fucking Patton hold me the fuck down and cram it into my throat, and even then I'm gonna puke it back up onto all of them because this game is a fucking piece of shit! And another thing, the actress who played the little girl is a no-talent hack who-

\*Jennifer Morrison comes up behind the Nerd\*

Jennifer Morrison: You trashing my acting?

AVGN: Uh....no honey, you were great in this game. I was just telling the viewers that your

performance in this game was an Oscar-worthy-

Morrison: You don't have to bullshit me, I know this game was fucking trash. \*smiles and leans in, kissing him on the cheek\*

AVGN: ....well, there you go, if even the star of the game thinks it's trash, then it's REALLY FUCKING TRASH!

Morrison: \*under her breath\* But not as trashy as the Angry Video Game Nerd movie... \*smirks\*

AVGN: ...huh?

Morrison: Nothing, nothing. So what's the next game you're gonna do?

AVGN: Well, since you're the star of Once Upon A Time, how about helping me review some shitty fairy tale games next week?

Morrison: Well how shitty are we talking about here?

AVGN: Fairy Tale Friends for the Sega Saturn. \*holds it up\*

Morrison: You know, I think I'll take my chances with the Evil Queen....

AVGN: \*now dressed up as Rumplestiltskin\* Ah, but we have a deal, dearie! \*laughing\* One cleaning of the house for one shitty game review!

Morrison: But you ALWAYS clean the house.

AVGN: Well then, you owe me a whole SLEW of shitty game reviews! \*holds up a bunch of bad fairy tale games\* Mwahahahaha!!

-from AVGN #91, "Oops!"

(Yes, ITTL the Angry Video Game Nerd is married to actress Jennifer Morrison. It doesn't butterfly too much with his reviews except that his budget is somewhat bigger. I'll share more on how they get together in a future post...)

-

### **SNES-CD Power Charts – August 1994**

1. NBA Jam – 20,286
2. Kid Icarus CD – 17,988
3. Super Mario World 2 – 16,586
4. Secret Of Mana – 14,086
5. Snatcher – 12,287
6. Secret Of Monkey Island – 9,065
7. Gun Warrior – 8,426
8. Super Mario Kart – 7,844
9. Castlevania: Rondo Of Blood – 6,953
10. Mortal Kombat – 6,504

11. Wolfenstein 3D – 5,183
12. Star Fox – 4,764
13. Joe And Mac CD – 4,511
14. Thrillseeker – 3,967
15. Beavis And Buttthead – 3,504
16. Final Fantasy III – 3,485

18. Bumblebee: Zooble's Hive – 2,843
19. Battletoads II – 2,757
20. Phaedra's Heart – 2,401

-

### **August 24, 1994**

Howard Lincoln met with Minoru Arakawa at Nintendo of America headquarters on a bright Wednesday morning in Redmond, Washington. The two gentlemen were discussing the latest sales figures...it looked like the Mega Charger was about to power the Genesis to its fifth straight month of topping Nintendo in sales, but there was encouraging news. Super Street Fighter II: Arcade Edition was driving major sales for both the Super Nintendo and the SNES-CD, while Mighty Morphin' Power Rangers had exceeded sales expectations on the CD and Jewels of the Realm had been a major hit at well. SNES-CD sales were seeing an upswing, just not enough to topple the Genesis' lead. Not yet.

"The latest estimates are that we're going to be trailing Sega until Squad Four is released in the West," said Arakawa. "The game just released in Japan and it's dominating the charts there, it's the biggest game debut this year."

"I expected as much," Lincoln replied, though the idea of the Super Nintendo spending half a year behind the Genesis in sales was still troubling....and it could be even more than that. "I'm worried we won't pass the Genesis until Donkey Kong Country is released."

Donkey Kong Country was, like Super Mario World 2 had been before it, the company's ace in the hole. The game had been generating hype for months and now that it was near completion, the game was being seen in its full glory by both Nintendo employees and game industry journalists. The consensus was that the game was incredible and it topped anything the Mega Charger was even remotely capable of.

"Then there's the question of the Saturn's release in Japan..." said Arakawa. "The launch lineup is taking shape....they have the Virtua games and a few others including a game called Panzer Dragoon...it is like our Star Fox but....you're riding dragons. Early footage is impressive."

"It looks better than Donkey Kong?" asked Lincoln. Arakawa replied with a nod. Of course it looked better...it was on a next generation system. And speaking of which... "Ken Kutaragi called again the other day...it seems some of the people at Sony are really dead set on parting ways with us."

Arakawa shook his head....the news was deeply distressing, though he knew that Kutaragi would always be a champion for Nintendo. There was still plenty of time to work with him...but they needed to finalize plans for a next-generation console soon. Sega was already going to get at least a year's head start...that was all they needed.

"Keep working him," said Lincoln, patting his friend on the shoulder. "You know he's better than anybody at convincing the Sony brass that they need to see things his way."

"I have a feeling it's all going to depend on Donkey Kong," said Arakawa, forcing himself to smile. "Just like it did 13 years ago."

Howard Lincoln let out a chuckle and walked with Minoru Arakawa to the break room, giving his reply as they walked.

"Some things never change..."

December 1994: F-Zero CD (OTL: Earthworm Jim)

-

*1994 is well remembered for being the peak of the console wars, but what a lot of people don't know is that it was also the peak for animated TV shows based on video games. There were a lot of these shows in the mid 90s, and 1994 was possibly the biggest year for them in general.*

*At the time, of course, the biggest cartoon shows were the two shows based on Sonic the Hedgehog, particularly the Saturday morning cartoon series that featured Sonic and his friends as heroic freedom fighters out to stop the evil Dr. Robotnik. Toward the end of the show's second season, it was struggling in the ratings against the mighty juggernaut, the Mighty Morphin' Power Rangers. In fact, the show barely got a third season at all! It was later said by one of the show's writers that the show was about 20,000 viewers above the threshold for cancellation when it was green-lighted for a final season of 20 episodes that aired during 1995. It was likely that the runaway success of Sonic the Hedgehog 3, which had been released earlier that year, gave the cartoon the extra bump it needed to get those episodes. The show's survival was by such a narrow margin that Sega knew these episodes would be the last and got plenty of time to wrap up the show's ongoing storyline, which featured the wizard Nagus supplanting Dr. Robotnik as the final villain. It also saw Sally's*

computer NICOLE transforming back into her original human form, and Sonic and Knuckles (who appeared with nine episodes remaining in the show) briefly fighting for the affections of Princess Sally, creating tension leading up to the epic final showdown with the dark wizard.

Another show that debuted that fall was the cartoon version of Mega Man, which appeared in syndication and featured characters from the hit NES series of games. Though characters from Mega Man X showed up toward the end of the show's run, budgetary problems put an untimely end to the show in late 1995. 1995 would see the start of a TV show based on the hit game Earthworm Jim, starring Dan Castellonetta as the titular hero. The show appeared on Kids' WB and was a moderate success, lasting two seasons in all. One of the most successful video game based cartoon shows was Where On Earth Is Carmen Sandiego?, based on the hit educational game series. Featuring a superb voice cast including the debut of veteran video game and cartoon voice actress Jennifer Hale and the EGOT-winning entertainer Rita Moreno as Carmen herself, the show was a major hit for FOX Kids which already had hits in shows like Power Rangers and X-Men. The success of the Super Nintendo games bolstered the success of the show, which lasted more than five years before finally ending in late 1999.

Speaking of Nintendo, the company was juggling a pair of TV show ideas in 1994, based on their hit games for that year's holiday season. They initially intended an animated series based on Squad Four, but the company's creative wing was unable to decide on a suitable premise. Squad Four would later receive a successful 52 episode anime series in 2000, the anime made it Stateside in 2001 on Cartoon Network. Nintendo got closer to having a Donkey Kong Country animated series, the idea was to have a CGI-based series that would begin airing in 1996, but the idea fell through when the Canadian company that Nintendo intended to have make the show instead picked up a traditionally animated series based on Activision's hit Jewels Of The Realm video game franchise. Nintendo also mulled the idea of another Legend Of Zelda series, a more serious show based on their 1995 video game The Legend Of Zelda: Ocarina of Dreams, but that idea barely got past the planning stages.

With all the video game-based animated series being conceived and aired during the mid 90s, it's a surprise that Nickelodeon, which had done a couple of video game specials with Mike O'Malley and had aired Nick Arcade in 1992, never picked up one of these shows for their own network. During the fall of 1994, of course, Nickelodeon was preparing to debut their fifth Nicktoon, Klasky Csupo's "Aaah! Real Monsters!" The network was also finalizing a deal for what would become their sixth Nicktoon, based on a pitch from two writers on another hit Nicktoon "Rocko's Modern Life". Their new show, about two inventive young boys who get into all kinds of crazy adventures while their older sister tries in vain to tell their mother, would ultimately become one of Nickelodeon's most successful shows.

"Compared to the situation we had in 1993, with all the media controversy and getting

*dragged up before Congress and all, the release of Mortal Kombat II in 1994 went by with pretty much no fanfare at all. There wasn't even a problem with putting it on the cover of Nintendo Power. So much had changed in just a year, we had games like Snatcher performing well and with the T-rated Squad Four coming out the very next month, Nintendo had turned a crossroads. There were still people within the company who thought that we shouldn't be doing everything so fast, but the industry itself was changing and we were just going with the flow."*

-Howard Lincoln, "The Chase: Sega's 20 Year Struggle To Take Down A Giant"

*"Doing two Contra games at once was quite an ordeal but I think things went really well! It was actually a lot of fun getting to utilize the new tech provided to us by Sega and Nintendo. Our experience with those games cemented the idea that Contra games were really fun to make."*

-Nobuya Nakazato, director of Contra, speaking with Famitsu in December 1995

*"The World Series might be canceled but in MLBPA Baseball, enhanced by the Sega Mega Charger, you can have your own World Series in the comfort of your own home, with lifelike graphics just like the games on TV!"*

-from a magazine advertisement for the Sega Mega Charger's sports line-up that began appearing in fall 1994

*"Once we saw what Sega was planning to do with its next generation system, and how much success Nintendo was having with its own CD system, we just felt it would be the best thing for our company to back out of the arrangement with Bandai. The time just wasn't right for an Apple video game console."*

-Steve Jobs, in an interview with Wired magazine, August 2003

-

\*Al Bundy is just finishing setting up the device on his television as Bud walks into the room.\*

Al: Son, this is a great day for the Bundys. You know why?

Bud: You finally started washing your socks?

Al: ....no! The Bundys have a CD player!

Bud: \*looks at the device, his eyes go wide\* Dad, that's not just a CD player, it's the best video game console ever made! It plays the newest video games with high-definition graphics and arcade-quality sound! Oh man, I can finally play that new ultra-violent shooter I can't afford to play at the mall!

Al: Bud, you're not gonna be playing any games on this thing. \*holds up a CD\* Your dad is going to be using it to listen to the soundtrack to *Hondo*!

Bud: But dad, you can't use the best video game machine ever as a CD player!

Al: I can and I will! Son, do you know how long I've been hiding money from your mother to afford this thing? I had to hide money in places that....well frankly I don't want to talk about!

Bud: \*shudders\* How did you even get the people at the store to take your money?

Al: It's money, Bud. People don't care where it's been. Where do you think they got the term "filthy stinking rich" from? Now unless you want to listen to the soundtrack of the greatest movie ever made, I suggest you go upstairs and read your little girly magazines and play with your joystick.

Kelly: \*leans in from behind the couch\* Yeah, I hear Bud's got all the high scores.

Sushi-X: 7.5

### **Snakey Snakington:**

Ed: 4

Danyon: 3.5

Al: 2.5 (quote: "Another crap platformer on the SNES-CD. You're better off waiting for Donkey Kong Country.")

Sushi-X: 3

### **School Daze:**

Ed: 1 (quote: "The acting in this game makes Saved By The Bell look like an Oscar-winning movie. Even at its worst, high school was NEVER as lame as it is in this FMV stinker.")

Danyon: 1

Al: 2.5

Sushi-X: 2

### **My Name Is Silence:**

Ed: 6.5

Danyon: 9

Al: 8.5 (quote: "Perhaps the best FMV game on the SNES-CD, this cryptic but addicting thriller puts you in the shoes of a reluctant assassin caught up in a web of international political intrigue. It's almost like getting to play a James Bond movie. Even the acting is really good, which makes this game a must buy for anyone starved for FMV games.")

Sushi-X: 6.5

### **Hunter:**

Ed: 4.5

Danyon: 5.5

Al: 4.5

Sushi-X: 4 (quote: "This painfully generic run-and-gun shooter features terrible level design and lousy play controls and I'd stay as far away from it as possible.")

-from *Electronic Gaming Monthly's* reviews of September 1994's SNES-CD releases in their October and November 1994 issues

-

### **The Story Of Contra IV**

*Contra III: The Alien Wars* is hailed as one of the greatest Super Nintendo games of all time. Initially, it was to receive a port to the SNES-CD some time in 1993, but instead,

Konami decided to utilize the Super Nintendo CD's technology to produce a new Contra game using ideas already conceived for a potential Genesis installment of the series. This would lead to the development of *Contra IV: Hard Corps* for the Super Nintendo CD peripheral. The game featured four playable characters and branching storyline paths that allowed the player to earn one of several endings. The multiple ending concept was not new to video games, having been utilized by, among other games, the hit 1993 RPG *Secret Of Mana*, as well as the space shooter *Star Fox*, but it added a great deal of replay value and storytelling quality to *Contra IV* that hadn't yet been seen in the series. Like many other SNES-CD games, it featured voice acting for all four main characters and a number of the villains, as well as proper narration for storyline scenes. It proved to be one of the top selling games of September 1994 for the Super Nintendo CD, outsold only by *Mortal Kombat II* among new release titles, and the critical reception for the game matched and at times even exceeded that of its acclaimed predecessor.

The Sega Genesis, on the other hand, received an entirely different Contra game. Called *Contra: Probotector*, the game starred a pair of freedom fighters, Ken Severn and Ashley Steelgard, seeking to fight off an invasion of killer robots led by a sadistic and hyper-intelligent AI. It differed, however, from such man vs. machine plots as the *Terminator* film series by teaming the heroes up with benevolent robots and AI programs, putting the two heroes in the middle of a sort of robotic civil war, where they were usually tasked with either protecting or rescuing heroic AIs or scientists that would help provide better weapons or other devices for the heroes. The game featured only one ending but differed in that your choice of character deeply affected how the game would play out in terms of gameplay. Ken was a more brash, run-and-gun type of character with more powerful weapons, but Ashley had a better relationship with the robots and had access to better utility devices to weaken the robots she had to fight. Players could choose between a more action-type game experience with Ken, or a more strategic experience with Ashley. When linked up with the Sega Mega Charger, the game was enhanced with three more stages, bigger (and tougher) bosses, and a limited amount of voice acting. It wasn't quite as well received critically as *Hard Corps* but was still one of the Genesis' most successful games of the fall of 1994.

-From the article "Konami: The Untold Story Of The Company's Greatest Games" in the February 1997 issue of *GameFan*

-

(Can you tell me what exactly happened with Victor Ireland around that time?)

Well, the roots of the end of Sega's relationship with Working Designs probably had roots in the decision to do a Mega Charger port of *Lunar: The Silver Star*. Looking back, I think it would have been smarter to bring over *Lunar 2: Eternal Blue* for the Mega Charger instead, because at least there, it was something people hadn't played before. We wanted to give Genesis fans who never had the Sega CD to play this great RPG. We tried to get as much of the original content in the game as possible. We kept most of the animations in. We kept the soundtrack mostly intact in terms of quality. We kept about half the spoken dialogue. But Victor, from the very beginning he hated it. And he's always been really difficult to work with. So when the Genesis port of Lunar failed, and I mean it utterly flopped, we sold less than 30,000 copies... you combine that with the Sega-CD pretty much tanking out around that time and we just couldn't financially justify localizing *Lunar 2* for either the Genesis or the Sega CD. And Victor...did not take it well. When I told him that we weren't going to bring *Lunar 2* over, he completely went berserk. He swore at me, pointed his finger at me, I mean he used pretty much every obscenity you could think of. And I kept my cool, I stayed

professional. I mean he wasn't going to hit me or anything like that, he just kept swearing and when he was done I asked him calmly, "are you done?", and he replied "yeah, we're done, we're f-ing done" and then he swore at me again and stormed out of my office. And that's how we lost Working Designs. When they popped up a year later working with Nintendo on their big RPG for 1996, I wasn't surprised. I was kind of relieved actually, I was thinking "well, he's your problem now!".

### **The Sad Tale Of The Bandai Solaris**

When Apple told Bandai that they were backing out of their partnership to make a Macintosh-based next-generation video game console in the fall of 1994, Bandai probably should have just cut its losses and scrapped the entire thing. But the company, flush with money from Power Rangers merchandise and confident that with Nintendo and Sony having yet to reach a deal on their own next-generation console that there was room for another player in the video game market, pressed forward. They ended up making the same mistake that Phillips, Pioneer, Atari, and 3DO had made before them: the combined juggernaut of Nintendo, Sony, and Sega was just too tough of a nut to crack.

While Bandai was unable to use the Pippin name, they conceived of a new name for the console: Solaris, a name that conjured forth images of the shining sun. With Apple allowing Bandai to retain use of its technology in order to avoid a potential lawsuit for backing out of the deal, Bandai believed that the console, a powerful 66 Mhz system three times faster than the SNES-CD and comparable to Sega's upcoming Saturn, could compete when it launched in the fall of 1995. It launched with an all-new Power Rangers game, as well as a Japan-exclusive game based off the popular Gundam anime series. But with little else in the way of software support, practically nothing from third parties and a difficult user interface, the console flopped hard, selling less than 100,000 copies over its lifespan. Despite the initial failure, Bandai pressed on, pouring millions upon millions of dollars into game development to support what was rapidly becoming a white elephant.

When the console ultimately failed in late 1996, it plunged the company into a state of near-bankruptcy, saved only by the continued success of its Power Rangers merchandise. In desperation, the company sold its idea for a virtual-pet toy, known as the Tamagotchi, to the toy company Hasbro for just enough money to stay afloat through 1997. The Tamagotchi later became an enormous hit franchise for Hasbro and was said to be the beginning of a nearly two-decade era of success that continues to this very day with franchises such as *My Little Pony* and the popular *Monster High* and *Ever After High* toy lines. Bandai's ultimate liquidation and acquisition in 1998 for a song by, in the ultimate irony, Sega, was born out of its desire to compete in the very same industry that Sega had succeeded in.

17. Star Fox – 4,665
18. Wolfenstein 3D – 3,880
19. Final Fantasy III – 3,389
20. Mad Dog II: The Lost Gold – 3,024

-

1994 was the year that defined me a connoisseur of comic books even though I did not realize it at the time. Like most ten-year-olds at the time, I was heavily into video games and between that and my LEGO obsession; I only had enough money to buy an occasional issue of *Superman* and *Spider-Man*. One of those issues was the first part of "Power and Responsibility" in *Web of Spider-Man #117*, which reintroduced Ben Reilly to the Spider-Man canon. Unfortunately, this was a time when Spider-Man appeared in four interconnected titles (*Amazing*, *Spectacular*, *Web*, and *Adjectiveless*), which was more than what my meager allowance could pay for. I spent most of 1995 and 1996 busting my hump—working various chores and oddjobs to pay for a Sega Saturn just in time for Christmas '96. Needless to say I learned a valuable lesson about the virtues of hard work and persistence, but missed out on what was likely the most seismic event in comic books that decade.

The success of *The Death and Return of Superman* and *Knightfall* was not lost on the powers that be at Marvel. Both events saw the death (or incapacitation in the case of the latter) and replacement of Superman and Batman, but also increased sales in what was then a hot collectors market. Marvel decided to draw from a relatively obscure storyline from the seventies, or at least obscure to those who were under twenty-five at the time, to shake up the status quo once more: Marvel brought back the Spider-Man clone from *Amazing Spider-Man #149*. Peter Parker was undergoing something of an identity crisis at the time; the machinations of the Chameleon and the late Harry Osborn (as the second Green Goblin) saw him pushed to the verge of insanity when they inserted robot duplicates of his parents, Richard and Mary Parker, into his life. Combined with Aunt May's deteriorating health, Peter estranged himself from Mary Jane and withdrew from his life. Aunt May had been speaking with a stranger whose the artists kept hidden on the phone months prior and when said stranger finally appeared on the last page of *Web #117*, we learned at it was the clone who now went by "Ben Reilly."

*Power and Responsibility* unfolded over six months with Peter headlining *Amazing* and *Web* while Ben took over *Spectacular* and *Adjectiveless*. Peter's issues focused on his reconciliation with Mary Jane and the revelation her pregnancy while Ben's focused on forging a life for himself in New York City. However, the arc climaxed not with an epic battle with a supervillain but the quiet passing of Aunt May in the beautifully written *Amazing Spider-Man #400* by J.M. DeMatteis and Mark Bagley. "A Death in the Family" will go down in the annals of comic book history as the most significant issue of Spider-Man since "The Night Gwen Stacy Died" because of Peter's decision to assume the responsibilities of husband and father, and retire as Spider-Man.

Superheroes rarely if ever passed on the torch unless they died or sustained heavy injury. Jay Garrick and Alan Scott, the Golden Age Flash and Green Lantern, faded into obscurity in the early fifties; the second Flash, Bally Allen died so that Wally West could become the third in the eighties; and Superman and Batman's replacements were temporary. Ben Reilly will always be a polarizing figure in the Marvel fandom. Older fans from the sixties to the eighties typically pine for Peter Parker whereas newer fans from the nineties onward accepted Ben Reilly as their Spider-Man. It has not helped that subsequent animated series and movies featured Peter and not Ben, which confuse the readership even further because of the complex continuity behind Ben Reilly,

The ugly truth was that Marvel had written themselves into a corner with Peter's marriage to Mary Jane. Writers on the books were never fond of the marriage because Peter's troubles with his love life were often a central pivot in his storylines where his sense of responsibility as Spider-Man conflicted with any potential romance. Making Ben Reilly the "one true Spider-Man" seemed to be the best idea at the time. Ben Reilly was single and struggling with his professional and personal lives, plus the fact that he did not cultivate relationships with New York's heroes added an interesting wrinkle to his interactions with the *Avengers*, *X-Men*, and *Fantastic Four*. (I highly suggest you read his crossover with the pre-*Onslaught* *Fantastic Four*. His banter with the Human Torch is hilarious.) However, Ben Reilly was and is a satellite character of Peter's because of his nature as a clone.

I believe one of the reasons why Ben Reilly has endured so long despite being persona non grata on television and the movies is due to the video games. *Spider-Man: Power and Responsibility* for the Super Nintendo CD and Sega Genesis (I advise you play it with the Mega Charger), the sequel to *Maximum Carnage* for the "vanilla" SNES/Genesis, introduced Ben to a whole new audience. Nearly every Spider-Man video game released afterward featured Ben Reilly as Spider-Man, which created a significant contingent of diehard fans. Though former Marvel Editor-in-Chief, Joe Quesada said that he wanted Peter to return as Spider-Man in several interviews, and even joked that he would even sell Peter's soul to Mephisto to do it. However, nothing came of it—and personally, I am glad that Joe Quesada was not serious when he said that. Imagine all the Ben AND Peter fans that would burn him in effigy if it had actually happened.

One reason why I believe why Ben Reilly endured as long as he has is because his status of a clone had constantly searching for identity and second-guessing himself. It spoke to many Spidey fans of my generation who came of age in the Ben Reilly era. There was nothing wrong with Peter, but his decision to retire so that he could become a family man was a natural growth of the character. What one needs to remember is that Ben Reilly IS Peter Parker, or rather, a Peter Parker with different life experiences and how is coming into his own as a realized being. The trouble with Superman and Batman is that they have remained static over the decades and that neither Clark Kent or Bruce Wayne will vacate their respective mantles. I would say the status quo is god, but the Grant Morrison and Mark

Waid's "millennium" revamp of the Superman titles proved that wrong (another post for another day.) Marvel prides itself on being more realistic than its distinguished competition, or as realistic as it can get with purple giants devouring planets, and the only way to bring Peter back is to wipe the slate clean with a Crisis-style reboot. Rumors of that persist, especially with a new iteration of *Secret Wars* on the horizon, but until Marvel gives us confirmation, Ben Reilly is here to stay.

*-from the blog "The Musing Platypus" by B. Ronning, January 3, 2014*

-

*"Right after we started working on the SNES-CD port of Doom, Nintendo gave some of us a tour of their studio, and the game that impressed me most was Squad Four, easily. Yeah, Donkey Kong Country might've had smoother graphics but I absolutely loved what they were doing with Squad Four and it's clear they took some inspiration from Doom with the psuedo 3-D environments and really creative uses of sprites to create depth. It was then that I knew that the SNES-CD was the only system capable of handling the definitive home console port of Doom. It's still one of my favorite games on the system. Hell of a game."*

*-John Carmack, co-founder of Id Software, in an interview with Electronic Gaming Monthly, June 1998*

*"But the best Nintendo Power cover art of all time was the October 1994 issue with Squad Four. Benimaru Itoh, the guy who did the Squad Four comic for them, did a great piece of original art that had all four characters on Planet Velna, posed perfectly, there's Shad sitting there looking up at the sky with this hopeful expression, Marcus kinda off to the side looking like a badass, Rebecca with her twin energy swords looking up like Shad is and then Lane's sitting there looking straight up with his hands in his lap like a kid at a playground. The sky is full of stars and it's such a beautiful piece of art, like an old-timey movie poster. When I saw the October 1994 issue of Nintendo Power, I wanted this game. I didn't wanna wait for Christmas, I wanted it right fuckin' now!"*

*-The Angry Video Game Nerd, "Nintendo Power Retrospective"*

*"My first voice acting role was on the video game Squad Four. We had just finished up with The Party and I was kind of at a crossroads in my career, still really young, about to start doing musicals but I heard about this audition, they needed voices for a video game. I'd always wanted to do voiceover and this was kind of a chance to get my feet wet, so I auditioned and I got it, I was SO surprised because I was 18 and this was my first role ever but Nintendo thought I was the best for the part. It's been 20 great years since. I love doing Rebecca and I hope I can keep voicing her as long as I can do the part!"*

*-Deedee Magno Hall, "Q+A with the cast of Steven Universe", IGN.com, December 22, 2013*

*"Yeah, that created some tension between Enix and us, the whole Illusion of Gaia thing. We'd been giving all this hype and promotion to Squad Four and it became apparent that the two games were going to release at about the same time and Enix wasn't happy about us sort of shafting their game in promotions. We'd offered to delay the game until the following spring but they didn't want to compete with Final Fantasy VI. We tried to position the games as sort of counter-programming to each other and also tried to heavily push the SNES cartridge version but that just made the CD version undersell quite badly. Enix blamed us for botching the release and I really don't blame them for doing so, but at the same time they needed to realize that we had a LOT of games coming out that month."*

-Nintendo executive Peter Main, recalling October 1994's competing releases

*"It's part of the mission we signed up for! If there's people in trouble, we gotta help 'em. It doesn't matter who they are, it's what Squad Four does!"*

-Shad, during Mission 14 of *Squad Four*

*"Forgive me, Leonardo, but my loyalty to my father trumps anything else. Rest assured, I won't enjoy killing you."*

-Karai, just before you fight her in *TMNT V: Wrath of the Foot*

-

\*Scenes from the opening of *Squad Four* are shown, we see four young people on a spaceship heading for a crash on a distant planet.\*

Narrator (Don LaFontaine): Four heroes crash-land on a distant world. Cut off from Mission Control, they can only rely on themselves...and each other.

\*More scenes from the game are shown, showcasing the beautiful scenery of the mysterious world the group has crashlanded on. The four main characters can be seen waking up apart from each other.\*

Narrator: Now, you'll need to master the skills of all four heroes if you want to survive. Take these brave space warriors on a journey beyond imagination. Battle dangerous enemies, befriend mysterious strangers, and wield powerful weapons as you fight to stay alive in this space charting adventure.

\*More scenes are shown, Rebecca wields her dual energy blades against some aggressive soldiers, Shad is shooting at monstrous birds in the sky, Marcus rolls to avoid an attack from a two-headed lizard beast, and Lane runs through the forest dodging bolts of lightning from above.\*

Narrator: This amazing story comes to life with hours of real dialogue from dozens of characters and lifelike animations that put you in the center of the story. Will these four brave young souls survive, or will they meet their doom light years from home?

***SQUAD FOUR, from the makers of Star Fox, only for your Super Nintendo CD. For a limited time only, buy a Super Nintendo CD peripheral and receive Squad Four as part of a special bundle pack.***

***PLAY IT LOUD.***

-

**October 17, 1994**

*Squad Four* is released for the Super Nintendo CD in North America. The release is the culmination of a massive marketing campaign involving commercials and magazine ads along with months of coverage leading up to the game's release. The game is the first Nintendo first-party game to receive a Teen rating from the ESRB, though it's on the softer end of that rating scale. The game receives great to excellent reviews upon release from most publications, it's not considered a true classic like Super Mario World 2 or Secret Of

Mana, but overall reception is very favorable. Among many reviews, it receives a 36/40 from Famitsu with solid 9s across the board. It very narrowly misses out on a perfect score from GamePro, getting perfect 5s in all categories except Play Control, for which it receives a 4.5. It becomes the third fastest selling Super Nintendo CD game to date, behind only Super Mario World 2 and Mortal Kombat, with nearly a quarter of a million sales in its first week. It receives a special SNES-CD bundle that includes the Squad Four game and the SNES-CD peripheral, though it doesn't replace the very popular Super Mario World 2 bundle, instead becoming a limited-time special edition bundle like Nintendo released for Star Fox during the summer of 1993. The game's release is the beginning of a massive holiday season for Nintendo, just over a month before the release of *Donkey Kong Country*. It would later come to be known as the start of the "second era" of the Super Nintendo CD, when games truly started to push the capabilities of the peripheral and when the cartridge-based Super Nintendo began to recede into the background. Though the SNES-CD was released in December 1992, it was *Squad Four* that may truly have kicked off the fourth-and-a-half generation for Nintendo.

-

### **Squad Four: Origins**

From July 1994 – June 1995, *Nintendo Power* ran a twelve-issue comic in their magazine based on the very first adventure of the main characters of Squad Four. The comic was drawn by Benimaru Itoh, who is also known for his work on the *Star Fox* and *Super Metroid* comics (which ran in Nintendo Power IOTL, both comics are also featured ITTL but *Star Fox* has some significant storyline changes). These are brief summaries of the twelve issues:

Issue One - "Graduation Day" (July 1994): Introduces Shad, Rebecca, Marcus, and Lane and shows them graduating from Lockstar Academy and being placed into Squad Four together.

Issue Two - "The Mission" (August 1994): Squad Four is assigned its first mission, but there's already tension between Shad and Marcus.

Issue Three - "The Price Of Failure" (September 1994): A suspect slips away from the squad because of squabbling between Marcus and Shad. Marcus decides to sneak away from the group and investigate a potential enemy base, while Rebecca follows him.

Issue Four - "Sneaking Suspicion" (October 1994): While infiltrating the enemy base, Marcus and Rebecca are captured. Shad tries to help Lane become more confident.

Issue Five - "Within The Fortress" (November 1994): Marcus and Rebecca escape the enemy base while Shad and Lane attempt a rescue. The squad reunites.

Issue Six - "Where There's A Will..." (December 1994): Rebecca and Lane help Shad and Marcus reconcile just in time to catch a dangerous fugitive.

Issue Seven - "No Rest For The Weary" (January 1995): The squad is commended for apprehending the criminal, but all of them feel there's more they can do.

Issue Eight - "Third Time's A Charm" (February 1995): Squad Four takes a big risk in order to find out what their enemy is really planning.

Issue Nine - "Best Laid Plans" (March 1995): Squad Four's actions cause a crisis at headquarters, putting the group at risk of becoming criminals themselves.

Issue Ten - "Shad's Gambit" (April 1995): Shad proposes a last-ditch idea to help he and his friends redeem themselves, while Dr. Barris plans his final move.

Issue Eleven - "The Madness Of Dr. Barris" (May 1995): The mastermind behind the group Squad Four has been investigating unleashes his devastating plans on an unsuspecting Planet Lockstar and our heroes are the only one who can stop it!

Issue Twelve - "The End Of The Beginning" (June 1995): Squad Four and their allies finally put a stop to Dr. Barris' evil plans. At the end, there's a flash-forward to two years later with Squad Four getting deployed on the mission depicted at the start of the game...

-

### **Squad Four: The Basics**

Squad Four was developed by Argonaut Software as their follow-up to 1993's *Star Fox*, though unlike *Star Fox*, the main characters are all human and not the anthropomorphic animals of the *Star Fox* series. The gameplay is a sort of hybrid of *Star Fox*, *Sin and Punishment*, and *Jet Force Gemini* in terms of gameplay. The game is divided into 26 missions, though unlike *Star Fox*, which was an arcade-style game that could be played and beaten in a half-hour, *Squad Four* is much more of an adventure game. The missions are longer and divided into several parts and the game will take a first time player about 10-12 hours to complete. There are three types of gameplay. The first and most common type of gameplay is an on-rails walking section similar to the gameplay of *Sin and Punishment*, where your character runs and guns at creatures and enemies coming at them. You point your weapon and shoot, though there's also a melee weapon you can use to strike at enemies who get close (somewhat like in *Kid Icarus: Uprising*). The second type of gameplay is an exploration mode, where your character is given free range of 3-D movement and can wander around an enclosed area. Sometimes this can be part of a wilderness environment or a segment of a temple. Other times it's a town where you can actually talk to people and purchase things. Because of the hardware limitations of the SNES-CD, these are somewhat limited segments, but they're still numerous and nearly every mission has at least one (some have several). Finally, there's all-range combat mode which allows for combat with enemies with 3-D movement. You can get close and use your melee strike (indeed, your projectile weapon is better in the on-rails segments while your melee weapon is better in the 3-D segments most of the time), or you can shoot at enemies. To shoot, you hold down the R button which plants your character's feet in place, you can then use the directional pad to turn in any direction (while holding down R in this mode, your character will automatically lock onto enemies, you can switch the lock-on with the X button). Again, this fixed-movement shooting style is due to the SNES-CD's hardware limitations, later installments of the game allow for full movement while shooting.

During the game, you have a limited number of lives (you start with 5 and can acquire extra lives through various means). Each mission has several checkpoints, if you die during a mission, you'll return to the checkpoint, but if you lose all your lives you have to start the mission over. Unlike in *Starfox*, you only have to start at the beginning of your current mission, you automatically save at the end of each mission and you can return to a previous mission to replay it, go for a higher score, or look for power-ups. During a mission, your character can acquire or purchase various upgrades to their weapon or life bar. These

upgrades aren't permanent like in an RPG-styled game, but more like the weapon upgrades in *Star Fox*, you keep them until you get a game over. Each of the four main characters has missions that you are required to use them for, but for some missions (eight in all), you are free to use any of the four playable characters.

The game features a mix of sprite-based and polygonal graphics. Where things would get overly blocky if presented as polygons (such as human characters or highly detailed monsters), sprites are used, and the environments look rather like those presented in games like *Doom*. The frame rate is a tad slow when a lot is happening on the screen but for the most part the game is designed to run as smoothly as possible, using graphical tricks wherever possible to make things look as good as they can within the limits of the SNES-CD software. The game features more voice acting than any previous SNES-CD game, with dozens of characters having spoken dialogue (and the main characters having lots of it). Spoken dialogue is particularly featured during important storyline scenes, and at one point, Deedee Magno's character Rebecca even sings a short lullaby to a child character (the directors were directly influenced by Magno's history on the 1990s Mickey Mouse Club show and as part of the band *The Party*, suggesting the scene for her character). The voice acting is considered to be perhaps the best ever featured in a video game to that point, with Charles Martinet's performance receiving particular praise (up until then he'd only been known for voicing the wacky Mario characters, his performance as the brave young hero Shad was a surprise to many who didn't know his talents). This was also one of the first roles for Michael Reisz and Tom Kenny, the latter of whom was mostly known at the time as a sketch comedian and for voicing Heffer on *Rocko's Modern Life*.

#### *The Squad:*

Shad (voiced by Charles Martinet): The leader of the team, a brave and idealistic young man who has very heroic ideals. In the Five Man Band archetype, he'd be The Hero, while in the Four Temperament Ensemble, he'd be Sanguine. His long-range weapon is a pistol while his melee weapon is a long sword.

Marcus (voiced by Michael Reisz): Also brave and heroic, but somewhat more cynical than Shad and clashes with him often. Hot-headed at times. In the Five Man Band archetype, he'd be The Lancer, while in the Four Temperament Ensemble, he'd be Choleric. His long range weapon is a shotgun while his melee weapon is a spear.

Rebecca (voiced by Deedee Magno): A bit more reserved than Shad or Marcus but still a very tough woman who can easily hold her own with them, not a damsel in distress by any means. In the Five Man Band archetype, she'd be The Big Guy, while in the Four Temperament Ensemble, she'd be Phlegmatic. Her long range weapon is a sniper rifle while her melee weapon is a pair of twin energy blades.

Lane (voiced by Tom Kenny): The team tech-nerd and computer expert, he can be a bit cowardly at times but is just as heroic as the others. In the Five Man Band archetype, he'd be a cross between The Smart Guy and The Chick, while in the Four Temperament Ensemble, he'd be Melancholic. His long-range weapon is a bolt thrower while his melee weapon is a taser.

#### *The Plot:*

The game starts out with the team en route to a disturbance on a distant planet where space pirates are attempting a coup. However, the ship passes too near a gravitational

disturbance, and it crash-lands on the planet of Velna, a rather primitive jungle world. During the crash, the group is forced to eject in separate escape pods, and so, starting with the second mission (the first is a tutorial mission taking place in a combat simulator), you take turns controlling one of the four characters on their own separate paths as they try to survive in the wilderness while meeting the denizens of Planet Velna. During these first missions, you learn that the planet is embroiled in a civil war between two rival factions with grievances that seem equally valid, and that Squad Four finds themselves taking sides. Shad and Lane seem to gravitate toward the more law-and-order Krills, the current rulers of the planet, while Marcus and Rebecca side with the rebel Hadro faction, who seem to be in the right despite their at-times ruthless tactics. About halfway through the game, the four characters re-unite and for a few missions you can choose which one to control. However, later on there's a disaster and the squad is once again separated, for a somewhat briefer time this time around. During this third phase of the game, you learn that the Krills are indeed the faction in the wrong, and that the ruthless tactics of the Hadro are necessary because the Krills have discovered a way of gaining partial immortality by forcing the Hadro to gather mysterious minerals that the Krills use to brainwash and create super-soldiers out of captive Hadro. At the end of Mission 22, the Krills are preparing to subject Shad to this process when it is interrupted by Marcus, Rebecca, and Lane coming to his rescue. The final four missions revolve around the once-again reunited Squad Four as they battle the remaining hostile Krills to save the Planet Velna from oppression. At the end of the game, the liberated Krill survivors and the appreciative Hadros reconcile and the planet Velna knows peace once more. The grateful Velnians give Squad Four a new ship, and the game ends with the squad flying off to complete their true mission.

### **Bubsy CD:**

Ed: 6.5

Danyon: 5

AI: 5.5 (quote: "This middle of the road platformer is made interesting only by Bubsy's at times irreverent quips.")

Sushi-X: 5.5

### **Eye Of The Beholder:**

Ed: 7

Danyon: 7 (quote: "This RPG based on an Advanced Dungeons and Dragons campaign is as hard as they come, but it's nice to have an old-school dungeon crawler appear on the SNES-CD.")

AI: 7.5

Sushi-X: 7

### **Firestriker:**

Ed: 8 (quote: "This action game can be quite entertaining and addictive despite its rather simplistic, pinball-like gameplay.")

Danyon: 7

AI: 7

Sushi-X: 4.5

### **Illusion Of Gaia:**

Ed: 8.5

Danyon: 9

Al: 8.5

Sushi-X: 8.5 (quote: "One of the most epic RPGs to come to the Super Nintendo CD, this globe-trotting adventure is a big improvement on the already impressive classic Soul Blazer.")

### **NBA Live 95:**

Ed: 7

Danyon: 8.5

Al: 9 (quote: "The NBA Live series takes graphics to the next level with this excellent SNES-CD version of the game that features excellent commentary and detailed player animations.")

Sushi-X: 7

### **Nightmare Busters:**

Ed: 9 (quote: "As far as run-and-gun games go, this off-the-wall game is a true original, and I had fun with its card-slinging hero for hours on end.")

Danyon: 9

Al: 8.5

Sushi-X: 8.5

### **SimCity 2000:**

Ed: 8

Danyon: 8.5

Al: 7.5 (quote: "While not as instantly addictive as the 1991 SNES classic, this is still a worthy follow-up with a lot more options and opportunities to build your perfect city.")

Sushi-X: 6.5

### **Street Hockey '95:**

Ed: 4

Danyon: 3.5 (quote: "Compared to NHL '95, this hard hitting arcade-style hockey game should be spending five minutes in the penalty box.")

Al: 7

Sushi-X: 3.5

### **Super Adventure Island CD:**

Ed: 8 (quote: "The primitive hero Higgins makes the jump to the SNES-CD in a really fun action game featuring great graphics and a swinging soundtrack.")

Danyon: 8

Al: 7

Sushi-X: 7

### **TMNT V: Wrath Of The Foot**

Ed: 8

Danyon: 9

Al: 8

Sushi-X: 9.5 (quote: "Making me choose between this game and Turtles In Time is like having to pick between my own kids. Can I just say they're both instant classics?")

#### **Squad Four:**

Ed: 9

Danyon: 9

Al: 8.5 (quote: "While the controls in all-range mode take a bit of time to get used to, it's worth it to experience this game's amazing visuals and good storyline.")

Sushi-X: 8

#### **Slumlord:**

Ed: 6 (quote: "This overly violent brawler where you control a brutal crime boss who roughs up everyone who crosses him is a pretty ho-hum game, it's clear the developers are hoping that shock value is the main selling point.")

Danyon: 7.5

Al: 6.5

Sushi-X: 7.5

#### **Dunk Star:**

Ed: 5

Danyon: 5

Al: 4.5 (quote: "Lousy play controls and the worst announcer this side of the Jaguar's *White Men Can't Jump* make me recommend staying far away from this awful basketball game.")

Sushi-X: 5

#### **Real GT Racing:**

Ed: 7.5

Danyon: 7

Al: 7.5 (quote: "The graphics and variety of cars in this racing sim make it one of the best racing games available for the SNES-CD. We just wish there were more tracks!")

#### **Illusion Of Gaia Special CD Offer!**

While you can pick up *Illusion of Gaia* for the Super Nintendo, complete with a free T-shirt for a limited time, if you have a Super Nintendo CD the game comes with even more excellent bonuses. The special bundle, retailing for \$79.99, comes with a t-shirt just like the one in the cartridge edition, a cloth map of the game's world, a CD soundtrack containing selections from the game's score, a special hardcover instruction book/strategy guide with a full walkthrough of the game, AND included on the disc is a port of the Super Nintendo classic *Soul Blazer*, the predecessor to *Illusion of Gaia*. We hope all this cool extra stuff

encourages you to discover *Illusion of Gaia* for yourself when it releases in stores this month!

-a blurb at the end of the *Illusion of Gaia* article in the October 1994 edition of *Nintendo Power*

-

### **So what exactly was the deal with *Illusion of Gaia*?**

It was the last major game that we released as a cross-platform release for the Super Nintendo and the Super Nintendo CD. In fact, it was one of the last major games of ANY kind to receive such a release. At the time, we had a deal with Nintendo where they would publish and promote the game, and we were hoping that this would mean a big boost in sales for us. But then we got stuck in October amidst all kinds of competition. There was *TMNT V*, there was *NBA Live 95*, and then there was Nintendo's *Squad Four* game. And as a result of that, Nintendo kind of buried our game. I know that Nintendo had been planning on *Squad Four* and working on it for a long time but they could have given our game more of a platform instead of making it an afterthought. It wasn't just that that was our big problem, it was Nintendo's close relationship with Squaresoft which grew even closer during 1995 and especially during that huge year in 1996. Nintendo and Squaresoft were really close and we felt that we were being treated as the red-headed stepchild, so to speak. And this was after our *Dragon Warrior* games had sold so well for the company.

### **Would you say it was *Illusion of Gaia* that started the problems Nintendo and Enix had with each other in 1995 and beyond, or was it at an earlier or later point?**

It definitely started there. I mean, we still did all right on the SNES cartridge system, but we got buried on CD. Less than 100,000 copies sold, and this was with all the extras we'd packed in to try and encourage people to buy it. After *Illusion of Gaia*, the prevailing mood started to be that Nintendo didn't appreciate Enix, and that led to the problems that came later on.

-excerpted from a Gaming.moe interview with Robert Jerauld, former Enix USA producer, November 24, 2014 (OOC: inspired by this OTL interview from November 15 <http://gaming.moe/?p=331> )

-

And now we have the series' fifth game, "Wrath Of The Foot". Konami did a fifth *Teenage Mutant Ninja Turtles* beat-em-up game for the arcades in 1993, and this was the first game actually designed from the ground up for the optical home console peripherals. When the Sega CD version got deep-sixed due to declining sales, it became exclusive to the SNES-CD (though the *Mega Charger* would get a separate *Turtles* game to make up for it in 1995, we'll be looking at that one next). *Wrath Of The Foot*, as the title would indicate, focuses on the *Foot Ninja*, the servants of *Shredder*, particularly his daughter *Karai* who plays a BIG role in this game. In fact, for most of it she's the main villain, deploying her seven ninja servants to battle the *Turtles* throughout the stages. As this game was designed for the CD medium, it's got a good amount of voice acting and much more detailed characters than the previous game, it even has full-motion video cutscenes for certain parts. Of course, those of us who know *TMNT* lore know that *Karai* isn't ALL bad and indeed, she even harbors feelings for *Leonardo* in this game. After a climactic battle with *Karai* in the next-to-last level, she

surrenders to the Turtles and Shredder takes over as the proper villain in the final epic level. The game let you control any of the four Turtles, with a slightly different storyline and dialogue depending on which Turtle you played as (in four-player games, the first player's Turtle would be the storyline focus). The gameplay didn't change, just the dialogue for the most part. Here's where the FUN part comes in: in the SNES-CD version, after beating the game, you could replay it...as Karai! The storyline changed to that of a rebellion against her fellow Foot Ninja, with dialogue focusing on Karai's inner struggle and her fellow ninjas considering her a traitor. During the next-to-last level, Shredder revealed that he had kidnapped and brainwashed Leonardo to fight against you, making for a REALLY fun fight where you actually got to fight Leonardo as a boss. This all led up to the final emotional showdown between Karai and her father and one of the most beautiful endings in the history of the series....indeed, a lot of TMNT fans actually consider Karai's path to be the true path through the game. This game got really good reviews, and though initial sales were disappointing due to having to go up against Squad Four and Donkey Kong Country in its first couple of months, the game showed a lot of legs and is overall considered to be a success for Konami. Sadly though, by the time this game was released the TMNT fad was considered to be winding down, and the SNES-CD didn't see any more Teenage Mutant Ninja Turtles games. It's a shame, but at least the series went out with a bang!

-from "TMNT: Turtles In Review", an article on Kotaku.com posted on July 11, 2012

-

#### *SimCity 2000-*

This version of the popular PC classic, released as a sequel to the classic SimCity game featured on both the PC and the Super Nintendo, was somewhat modified from the PC version like the original SimCity to more closely resemble a Nintendo game. Like the SNES game in 1991, this version allowed you to have Bowser wreck your city, and as you achieved different levels of population, a different background song would play for your city. Despite the changes, it still featured the same level of depth and complexity as the original PC game, featuring the addition of water lines, arcologies, and a huge host of other features that made it a far more involved game than the original. It proved to be one of the month's best sellers, trailing only *Squad Four* and *TMNT V: Wrath of The Foot* on the October SNES-CD new release sales charts.

#### *Nightmare Busters-*

One of the system's quirkiest action games, *Nightmare Busters* almost didn't make it to fruition at all! The company Nichibutsu had originally conceived the game as a Super Nintendo release, but the capabilities of the Super Nintendo CD encouraged them to retool the game from the ground up as a CD release instead, and it was published in October 1994. Despite good reviews for its spooky atmosphere, fun gameplay and tough difficulty, it had trouble finding an audience amidst the slew of great games released for the SNES-CD that month, and sales were middling at best.

#### *Real GT Racing-*

Though it may seem like an SNES-CD precursor to Gran Turismo, Polyphony actually had nothing to do with this racing game, though it shares that series' proclivity for real cars and lifelike driving. Despite the decent graphics and realistic cars, the track selection featured only a few mostly cookie-cutter racetracks and the racing itself got quite dull after a while of

playing. Without the license system and car purchasing that *Gran Turismo* is known for, there was no variety to spice up this game's pretty visuals and sales and reviews hovered around the mediocre mark.

### *Home Improvement-*

Yes, there was a Home Improvement game for the SNES-CD released in October 1994. No, it did not do well.

-Excerpt from "The SNES-CD Games Of 1994" article on 16-Bit Life, published March 17, 2013

-

### **SNES-CD Power Charts – October 1994**

1. Final Fantasy Origins – 15,960
2. Super Mario World 2 – 15,894
3. Secret Of Mana – 11,226
4. Kid Icarus CD – 10,585
5. Major Hazard – 8,866
6. NBA Jam – 8,560
7. The Simpsons: Virtual Bart – 7,984
8. Super Mario Kart – 6,314
9. Secret Of Monkey Island – 6,064
10. Logjam – 5,766
11. Snatcher – 5,670
12. The Lion King – 5,562
13. WWF Raw – 5,080
14. Tetris CD – 4,633
15. Final Fantasy III – 4,571
16. Gun Warrior – 4,483
17. Mortal Kombat – 4,372
18. ESPN National Hockey Night – 3,823
19. Fatal Strike – 3,690
20. Monster Wars – 3,447

-

### **November 7, 1994**

Tom Kalinske had seen the preliminary sales reports for the month of October, and for the first time since March, the Super Nintendo had managed to outsell the Genesis. It was only barely, but it was still a sign that Sega had to stay on top of its game if it was going to have any chance of toppling Nintendo. He wasn't surprised that Nintendo had won the month. With a slew of huge releases including the inescapably hyped *Squad Four*, the Super Nintendo CD's line up easily trumped what Genesis was offering. The next big things to hit the Mega Charger were *Doom* and *Star Wars Arcade*, and both of those games were slated for December releases. While the holiday season was up for grabs, it was clear that fall was going to belong to Nintendo.

But at the moment, he let that bit of bad news fade from his mind. He was already thinking

ahead, to the impending release of the Sega Saturn in Japan and, next year, in North America. The Saturn was what it was because Tom Kalinske saw into the future. He was the one who made the call to hook up with Silicon Graphics, and now the Saturn was loaded with the best hardware in the history of console video gaming. He had been the one to recruit the talent that would give the Sega Saturn the best third-party lineup in video game history. He'd even scouted an 18-year-old wunderkind from Iowa to score the soundtrack for one of the Saturn's biggest launch games. *Ultima: The Worldly Lord* would have its soundtrack created by Jeremy Soule, a brilliant musical genius who'd sent his musical portfolio out to any company that would have him. He'd been rejected by LucasArts and even by Squaresoft (though, not because they already had Nobuo Uematsu on payroll, but that they had no other projects that needed him at the time....their proposition for a game called *Secret of Evermore* for the Super Nintendo cartridge system was canned when Nintendo decided not to follow through with their SNES cartridge development mandate for 1995). It was Tom Kalinske at Sega who'd given Soule his chance, and when he'd heard that Nintendo had cast Deedee Magno as a voice in *Squad Four*, he'd exchanged a laugh with one of his colleagues: "They got a Mouseketeer? I went out and got the next Mozart."

And there was one more project that was very near and dear to Tom Kalinske's heart. Once again, he was paying a visit to Sonic! Software Planning headquarters, where development was well underway on a little Saturn launch RPG that would be known as *MagiQuest*. This three-player action RPG was the fulfillment of the promise Tom Kalinske had made his daughter, that Sega would have a game like *Secret of Mana*. The gameplay, however, was much faster-paced, featuring hack-and-slash like RPG combat performed by its three colorful main characters, brave young girls named after Kalinske's daughters.

"Well, how's the game look so far?" Kalinske asked, smiling as he patted the game's lead programmer on the shoulder. On the screen, one of the game's beautiful backgrounds was taking shape. The three main characters were traveling through a colorful, circus-like world with lots of large trees and beautiful low-hanging flowers and leaves. When they encountered an enemy, one of the girls blasted it with a powerful burst of fire magic, causing multiple damage numbers to appear, one for each fireball that hit. "Oh, that looks awesome! All the main attacks are spells, right?"

"That's absolutely right, your main attacks will be magic and we're programming over 100 different spells to use into the game."

Kalinske just nodded his head, watching with joy as the game inspired by his daughters played out on the screen. Development was barely halfway done, but already the game looked absolutely amazing and like it would be a blast to play. He spent more than an hour talking with various programmers and developers, all of whom showed great enthusiasm for the game and appreciation for Kalinske's praise.

*"With games like this, we'll blow Nintendo out of the water next year. They can push their Donkey Kong Country all they want, once the Saturn launches next year it's game over."*

As Kalinske finally left the development office, he was approached by a secretary who told him about a phone call that had come for him at the main desk. He picked up the phone and on the other end was his friend and colleague Shinobu Toyoda.

"Shinobu, if you're calling to tell me about the SNES-CD sales, I know, I know, we got our asses kicked last month--"

"It's not that. I just spoke to Nakayama-san about the Saturn...what we'd talked about earlier?"

"Oh....what did he say?"

"He said that Silicon Graphics and the board agree that there's no way we're going to be able to sell the Saturn for anything less than 58,000 yen. Any less than that and we'd lose too much money on each one sold."

"And that means.....at least \$349 in North America."

"Probably \$399. Maybe more."

Kalinske's shoulders slumped. He'd been giving Nintendo hell about the price of the SNES-CD for the past three months now. The latest commercial had two kids wondering what Nintendo could be doing with all of those arms and legs they were collecting from SNES-CD buyers, depicting parodies of Mario and Luigi in a humorous sword-fight with one of them holding an arm and the other holding a leg. As soon as Nintendo found out what the Saturn was going to cost, they'd turn the ad campaign right back on him.

"Well.....that's a pickle," said Kalinske, letting out a sigh. "Did you happen to hear anything about what Sony and Nintendo are up to for their next-gen system?"

"Nothing," Toyoda replied. "Though I've been hearing through the grapevine that the two companies are having some rather serious disagreements."

"Well that's been the news for the past two months, lemme know if you hear something new and we can go out and have a drink to celebrate," said Kalinske, trying to force a laugh. "I'm gonna head back to the States, we gotta try and figure out a counter-ad for this Donkey Kong game or we're gonna get our asses kicked even worse this month. Hope I can see you there soon."

"I hope we get some good news soon."

"You and me both, Shinobu..."

---

*"Between Donkey Kong Country, Squad Four, and Alien vs. Predator, it was clear that the Super Nintendo CD completely blew the Mega Charger out of the water from a technical standpoint. For the first few months after the Mega Charger's release, you could kinda make the argument that the two were equal, or close enough that there wasn't a difference between the two. But those three games trumped anything Sega could produce before the Saturn came out and they knew it."*

-Adam Sessler, from an article on GameInfinity.com, January 23, 2013

*"While Nintendo combs through the video game retirement home for the hero of its latest game, hook up your Genesis and blast your way through hot new games with radical new heroes like Sonic, Tails, Knuckles, Earthworm Jim, Akira Yuki, and more!"*

-excerpt from Sega's anti-Donkey Kong Country ad hyping the stars of its Mega Charger

games

*"This may be the best looking video game I've ever played. Everything about Donkey Kong Country is polished to a high mirror shine. The graphics are stunning, the music is so good I could sit and listen to it for hours, and the gameplay transcends even the best of the Mario games. It's a feast for your eyes, ears, and hands."*

-excerpt from Ed Semrad's 9.5/10 review of *Donkey Kong Country*

*"I don't think we could have made a game that good on our own!"*

-Ken Kutaragi, speaking about *Donkey Kong Country* in a 1999 interview

*"To be fair, I wasn't following politics all that much back then. When Newt Gingrich and the Republicans swept into Congress in 1994, some of us were upset, some of us were happy, but as far as I was concerned, as long as neither party went after video games again I didn't care who got in there. And by then, aside from an occasional politician saying that video games are too violent in order to score some quick soccer mom brownie points, nobody was really coming after us. The industry had dodged its biggest bullet in the 1993 Congressional hearings. After that it was smooth sailing, after Congress backed off it opened the way to a new age of freedom and creativity in games and all I cared about was being out in front of it and beating our competition. And competition was fierce!"*

-Tom Kalinske, in an October 2008 interview with gamepolitics.com

*"Trouble In Paradise? Nothing can be confirmed, but behind the scenes scuttlebutt says cracks could be forming in Nintendo and Sony's lucrative partnership, and with mum being the word on their next-generation answer to Sega's upcoming Saturn system, could those cracks be the first signs of a genuine rift?"*

-excerpt from *Electronic Gaming Monthly's* Quartermann column, December 1994

-

(Author's Note: This ad is largely as IOTL, with a few minor, butterfly-caused differences along with the TTL changes of course...because why change one of the best video game ads of all time?)

A quick shout-out and thanks to Starwarsfan, who cooked up a nice little video edit version of this ad for us:

**PLAY IT LOUD**

-one of the commercials for *Donkey Kong Country* which aired in the United States through most of November and December 1994

-

**November 21, 1994**

*Donkey Kong Country* is released for the Super Nintendo CD, and simultaneously as a bundled game with both the stand-alone SNES-CD peripheral and the Playstation Combo Set (along with the Super Mario All-Stars cartridge). The game doesn't quite reach the lofty

sales heights of *Sonic the Hedgehog 3*'s first day sales (mostly due to Nintendo not pushing pre-orders nearly as heavily as Sega did) but it still manages to reach nearly a million sales in its first week alone and would easily become the biggest selling game of the holiday season. The game is the biggest single driver of SNES-CD sales ever, even more than *Mortal Kombat*, and is the primary push for many families to finally purchase the peripheral or even the combo set. Because of the success of *Donkey Kong Country*, Nintendo would more than double Sega's hardware and peripheral sales in the month of October. The game is released to rave reviews, equally as good as the reviews *Sonic the Hedgehog 3* received and in many cases more so. Primary praise for the game goes to its groundbreaking graphics. While fully-rendered graphics are nothing new for the Super Nintendo CD, having been featured in games such as *Deadman Sam*, the painstakingly animated backgrounds, boss animations, and other technical features make *Donkey Kong Country* a marvel of its time, surpassing even the best graphics found on nearly all Atari Jaguar games despite the Jaguar's superior hardware. The game even makes the engineers at Silicon Graphics take notice. While the Saturn, due to release in Japan in just two weeks, is capable of far superior visuals, the fact that *Donkey Kong Country*'s graphics surpass those of some of the Saturn's launch lineup is something that surprises Sega brass and third party software developers.

-

### **Donkey Kong Country: The Basics**

*Donkey Kong Country* is, in terms of gameplay and story, virtually identical to OTL's game. It remains a tricky platformer that takes Donkey Kong and his friend Diddy Kong to a variety of jungle locations in search of Donkey Kong's hoard of bananas, stolen by the evil reptilian Kremlings. However, the game is significantly expanded from OTL's version in terms of content. Instead of the six worlds and 33 levels (40 if boss levels are counted) of the OTL game, the SNES-CD *Donkey Kong Country* features eight worlds and 52 levels (61 counting boss levels). The worlds are as follows:

World One: Kongo Jungle (as OTL), the boss is a giant gorilla twice Donkey Kong's size that swings from vine to vine.

World Two: Monkey Mines (as OTL), one extra level from OTL, the boss is a crazed witch doctor character (think someone like Mola Ram).

World Three: King K. Rool Park (an amusement park level somewhat like Krazy Kremland from DKC2 OTL), seven levels, the boss is an evil clown.

World Four: Vine Valley (as OTL), one extra level from OTL, the boss is an evil giant shark.

World Five: Gorilla Glacier (as OTL), one extra level from OTL, the boss is an evil snowman (like Bleak from DKC3).

World Six: Kremkroc Industries, Inc. (as OTL), one extra level from OTL, the boss is a giant oil drum (only boss that remains the same as OTL with the exception of the final boss King K. Rool).

World Seven: Chimp Caverns (as OTL), two extra levels from OTL, the boss is a huge rock/gem monster that shoots lots of projectiles at Donkey Kong and Diddy.

World Eight: Mt. Konguea (a giant fiery volcano world), six levels, the boss is a huge fiery dragon with probably the best animation in the whole game and probably the best animation seen to date in a console video game.

Then the final confrontation with King K. Rool is largely as IOTL.

The game's graphics feature something that Nintendo and Rare call "multi-layer rendering", using the increased storage capacity of the CD format and the processing power of the

SNES-CD to produce multiple layers of animation at once, particularly for background layers but also for Donkey, Diddy, and enemy characters. It's a subtle but very beautiful effect, producing a level of graphics seen in many OTL PS1 games. The only real drawback to this technique is that levels take a few seconds extra to load when entered from the main world screen. Because of the many deaths that the player is likely to suffer during a level, this might cause frustration. However, there IS an option in the options menu to give the player the choice of whether they want to go back to the level select map or directly back to the level when they die, if the player goes directly back to the level they can avoid these load times. The soundtrack, composed by David Wise, is a beautiful orchestral score featuring all sorts of instruments and even effects like tribal chanting. With over 30 unique music tracks in the game, it features one of the biggest soundtracks on the SNES-CD.

### **Behind The Scenes At Capcom: What's Next?**

Capcom has created some of the very best video games of all time. From *Street Fighter II* to the awesome *Mega Man* series, you've almost certainly got at least one Capcom game at the top of your all-time favorites, and now the company has graciously offered to let us go behind the scenes and check out some of their latest projects.

We're starting off with the Blue Bomber himself, Mega Man, who's got two huge games coming out right at the start of next year! First off is *Mega Man X2*, the sequel to January's excellent SNES re-imagining of the iconic character, *Mega Man X*. Unlike the first game, this game will appear on both the SNES cartridge system AND the Super Nintendo CD, with the latter game offering exclusive animated cutscenes to go along with the action! *Mega Man X2* features eight new Mavericks to fight and eight awesome new abilities for Mega Man X as the hero seeks to stop Sigma once more. Will X's friend Zero, who sacrificed himself at the end of the previous game, be making a return? Capcom refused to say for sure but they did say that Zero would have some role in the upcoming game. Whether that's as a live ally or a deceased spirit like Dr. Light has yet to be seen. Also coming up is a new Mega Man game for the Sega Genesis! Appropriately called *Mega Man: Mega World*, the game is scheduled for a February release and is said to be a remake of the first three games in the NES series, combined into one incredible adventure! The game is said to feature Mega Charger enhancements that will enable the game to receive a full graphical update and will also enable new abilities for Mega Man. It's good to know that whether you play Nintendo or Sega, you'll have a Mega Man game to look forward to when the next year begins.

We're also pleased to report that the sequel to Capcom's excellent role-playing game, *Breath of Fire*, will be released in the United States sometime in 1995. *Breath of Fire II* is

set to be released very soon for the SNES-CD in Japan. The plot features a variety of new characters and some great new dragon abilities as well, and is said to pit its main character Ryu against a corrupt god who rules the world through his all-encompassing worldwide religion. The game's heavy basis on religious themes would likely have made it very difficult to release as a cartridge-based game in North America, but being a CD format game allows for much more mature content and we're excited to experience the game's very intriguing plot when it hits our shores!

We've been hearing more and more about Capcom's upcoming action game for the SNES-CD. Titled *Victory*, we got to look at some exclusive new footage of the game that will be released sometime next spring in North America and in January in Japan. It plays somewhat similarly to the old NES Metal Gear games, though with the weapon variety and fast-paced gameplay of a game like *Zombies Ate My Neighbors*. From what we can tell, the game is heavily story based, with full voice acting and a cast of intriguing characters. It stars a man named Nash Grieves, a soldier who, while fighting in the middle of a war, begins to see very strange, otherworldly things, sightings that become stranger and more frequent as time goes on. These sightings eventually lead Nash to a discovery that will change both his life and the entire world. We were VERY impressed with what we saw and if the footage is any indication, this is going to be one of next year's most talked about games.

We finally got a quick glimpse at some technical video of a game that Capcom is developing for Sega's new Saturn console. It's said to be a horror game and the graphics are some of the best we've ever seen, far surpassing anything available for the SNES-CD or the Genesis Mega Charger device. Capcom refers to the game only as Project Biohazard, and it looks to be especially frightening and especially violent, but also looks like a lot of fun. We'll try to bring you more on Project Biohazard and all the rest of Capcom's upcoming projects as more information is made available!

-from the December 1994 issue of *GamePro* magazine

-

*"Alien vs. Predator is definitely the project that we're most proud of out of everything we've done. The decision to stop development on the Atari Jaguar version and bring all of our work to the Super Nintendo CD wasn't one that we took lightly. On the surface, the Jaguar was the more powerful platform, but the difficulty in programming for it caused us numerous headaches, while Sony's offer to assist us with development of the game was a big factor in our decision. Ultimately, with Sony's help we were able to do pretty much everything we wanted to do on the Jaguar on the Super Nintendo CD, and the game came out looking and playing fantastic."*

-Andrew Whittaker of Rebellion Games, discussing the Super Nintendo CD's *Alien vs. Predator* with *Nintendo Power* in the February 1996 issue

*"You know, considering how well the game sold, I don't think I could ask for much more. I mean, obviously coming out the week after Donkey Kong Country hurt us initially. We knew that coming in. But holiday sales were huge and we sold way more copies of the game than we ever would've on the Atari Jaguar. I think we provided a nice alternative, a more grown-up game that people could play when their kids were tired of playing Donkey Kong. It was also a time that first-person shooters were really coming into vogue on the system, so that was another huge plus. We beat Doom to market by almost nine months!"*

-Mike Beaton of Rebellion Games, discussing the Super Nintendo CD's *Alien vs. Predator* in the October 2008 issue of *GameInformer*

-

### *Super Bomberman 2*

The sequel to 1993's hit *Super Bomberman CD* hits both the SNES and the SNES-CD, but if you want the best game, the CD's the best way to go. While the levels and gameplay are pretty much the same, the SNES-CD version features enhanced graphics and gives voices to each of the Five Dastardly Bombers, which is a nice little addition that gives some real character to each one.

Graphics: 4.5

Sound: 5.0

Play Control: 4.5

FunFactor: 5.0

Challenge: Intermediate

### *Science Fighters*

One of the quirkiest fighting games we've EVER played, *Science Fighters* takes ten scientists, including a chemist, a biologist, a MARINE biologist, an astrophysicist, and others, and pits them against one another in classic 2-D fighting action. The special attacks range from merely quirky to absolutely hilarious and each character, from Quaker Bob, the earthquake-generating geologist, to Tessa, the cute quantum physicist, has their own variety of moves and strategies to use. If you're into science or just want an alternative to the bloody action of *Mortal Kombat*, then *Science Fighters* is definitely for you.

Graphics: 4.0

Sound: 4.5

Play Control: 4.0

FunFactor: 5.0

Challenge: Intermediate

-excerpted from reviews of *Super Bomberman 2* and *Science Fighters* in the December 1994 issue of *GamePro*

## **Spaceworld 1994 – New Zelda, New Mario, Next-Gen No-Show?**

It's a rare Shoshinkai where Nintendo isn't launching a new piece of hardware, but that was the case here at Spaceworld 1994. While some expected Nintendo and Sony to be announcing their next gen SNES-CD successor, especially in the wake of the impending Saturn release from Sega, we didn't even get an inkling of such news here. It wasn't a complete disappointment though, as we got lots and lots of news on upcoming games, including new installments from both of Nintendo's primary franchises. First up, lots and LOTS of info on the new Zelda game, set to launch here in Japan sometime in the spring. Titled *The Legend Of Zelda: Ocarina of Dreams*, the game is set to be a sequel to both *A Link To The Past* and *Link's Awakening*, combining elements from both games in what is said to be Link's biggest journey ever. Link returns to Hyrule, and indeed, the world we saw was pretty much identical to LttP's Light World with a few new areas added in...but we did see video footage of an entirely *new* world that becomes accessible sometime during the game. The graphics were superb, it's still the familiar top-down Zelda we all know and love, but Link and the enemy characters had a lot more detail to them and the entire world

looked completely enhanced, with more color and detail everywhere. The game is shaping up to be an incredible one and I'm sure we'll hear more about it in the coming months leading up to its release. Nintendo also announced the long-awaited *Super Mario World 3*, the latest game in the classic Mario Bros. series. This game had a whole new perspective, with a pseudo 3-D Mario exploring what appeared to be a series of isometrically-based levels. Though it looks like the same classic platforming gameplay of previous *Mario* games, this new perspective gave everything a fresh new appearance and I wish we could have seen more. It's likely that Nintendo will be showing off even more of this game at the Winter 1995 CES coming up in a couple months.

I gotta say, *Donkey Kong Country* was everywhere at this thing. As of the time of this writing the game has yet to release here in Japan and people were crowding around booths to play, the only booths more crowded than the DKC booths were the booths for *Ocarina of Dreams* and for *Final Fantasy VI*. Speaking of THAT game, which launches in Japan next month, *Final Fantasy VI* is shaping up to be fantastic as well. The game debuts a new, highly-detailed graphical style for the series. It's strictly 2-D but character sprites are very detailed and the enemies in battle even have some rudimentary animations, a first for the *Final Fantasy* series and one that gives everything a beautiful look, like something out of an animated storybook. The game centers around a girl named Tina who has mysterious magical powers and is being exploited by an evil empire when she is rescued by a bandanna-wearing rogue from the rebellion seeking to overthrow the empire's oppression. The game has the familiar Moogles and chocobos that have become a trademark for the series, and also features a wonderful fully-orchestrated and CD-audio enhanced soundtrack. But *Final Fantasy VI* wasn't the only RPG at the show. We also got a glimpse of Telenet Japan's *Tale Phantasia*, and as good as *Final Fantasy VI* looked, I have to say that *Phantasia* looked even better. Not only that, but the game features full voice acting and a wonderfully fun interactive battle system where you control character movement and attack timing. Telenet Japan's clearly been developing this game for a LONG time, and while Squaresoft is getting all the hype for the latest *Final Fantasy*, I think this is the game Nintendo really wants to push. No word yet on a United States release for *Tale Phantasia* but a Japanese release is scheduled for summer.

Nintendo made a point of emphasizing how pretty a lot of their SNES-CD games are, and I was impressed by the 3-D capabilities on display in games like *Battle Arena Toshinden*, this one a fighter published by Nintendo's hardware partner Sony. It looks tremendously good, better than any previous fighting game on the system, and the playable demo showed the game running at quite a good framerate. It launches on New Year's Day in Japan, so it may already be out here by the time you read this, and it has been scheduled for a Western release sometime in 1995. We saw plenty of other games here, such as *Lucienne's Quest*, *Super Punch-Out CD*, *Super Squadron X: Critical Dawn*, and *Double Dragon: Triple Trouble*. The one thing we didn't see too many of...cartridge-based Super Nintendo games. With the exception of a couple games like *Mega Man X2*, SNES cartridge games were almost as much of a no-show as Nintendo's SNES-CD successor. It's clear that the SNES-CD is both Nintendo's present AND its future right now, and though it pales in comparison to the Saturn from a technical standpoint, it's still got an incredibly bright future as demonstrated by the wealth of games on display here at Shoshinkai.

-Excerpted from an article in the January 1995 issue of *Electronic Gaming Monthly*, written by Peter Molyneux

-

## SNES-CD Power Charts: November 1994

1. Super Street Fighter II: Arcade Edition – 27,763
2. Mighty Morphin' Power Rangers – 20,886
3. Jewels Of The Realm – 18,294
4. Super Mario World 2 – 17,168
5. Final Fantasy Origins – 11,562
6. Cannon Fodder – 10,847
7. Superman CD – 9,607
8. Secret Of Mana – 9,508
9. Madden 95 – 8,874
10. Kid Icarus CD – 8,065
11. Sam And Max Hit The Road – 7,753
12. NBA Jam – 6,950
13. Corpse Killer – 6,375
14. Major Hazard – 6,227
15. The Simpsons: Virtual Bart – 5,768
16. Oops! - 5,608
17. Solus – 5,370
18. Super Mario Kart – 5,066
19. Secret Of Monkey Island – 4,784
20. The Lion King – 4,658

-

## December 6, 1994

The Sega Saturn is launched in Japan with five launch games: *Virtua Fighter*, *Clockwork Knight*, *Mahjong Goku Tenjiku*, *TAMA*, and *Wan Chai Connection*. Despite the small launch lineup, and despite the high 48,200 yen price tag, initial sales are decent due to the success of *Virtua Fighter*. At Sega of America headquarters, Tom Kalinske follows news of the Japanese Saturn launch. He knows that if the American launch is to be successful, he's going to need many more launch games to bolster the system's success, especially considering Nintendo's robust Space World lineup.

*"New Mario...new Zelda...Nintendo's going balls to the wall next year. They're already crushing us in sales thanks to Donkey Kong, no way we're winning the holiday. We need the Sega Saturn to be successful if we're going to beat Nintendo."*

The one solace that Tom Kalinske had was that Nintendo and Sony still hadn't hashed out a deal on the SNES-CD's successor. Nintendo almost never held Space World without a new system to show, but this year they'd done it. Were they getting desperate? Or were they just that confident in their line-up of games?

Or were they waiting for the big show?

Not the Consumer Electronics Show, which, despite its importance to the tech industry, had seemed to treat video game companies like second class citizens during most of its lifespan. Ironically, had the Super Nintendo CD not been released and raised the profile of the game industry to the point where it had managed to eke out a modicum of respect, Sega would have likely pulled out of the CES before 1994. But even with the CES treating game companies a bit better, there was still somewhat of a need for the game industry to have its

own trade show, where it could make its own headlines. With the founding of the International Digital Software Association, the game industry would have its own show. It was scheduled for May 1995 of that year, and would provide Sega with the perfect platform to hype the impending North American launch of the Sega Saturn.

*"And also," Kalinske thought, "would give Nintendo and Sony a chance to hype THEIR new machine...if they even had one."*

The prevailing rumors, growing in volume, were that Nintendo and Sony were at odds with one another...that the SNES-CD's successor would *not* be a Nintendo and Sony collaboration. Of course, it was only a rumor...but one that Tom Kalinske desperately hoped was true.

Because even with the success of the Mega Charger, there was a growing terrible feeling within Tom Kalinske that the Genesis' days were numbered.

-

At that exact moment, Ken Kutaragi was in a conference room at Sony headquarters with Norio Ohga and Sony's board of directors. They had all gotten news of the initial sales success of *Donkey Kong Country*. The game was a hit, bordering on a phenomenon. The technological achievements of the game justified everything that Ken Kutaragi had put his heart and soul into from the day he'd started working with Nintendo.

"Our collaboration with Nintendo has been...a lucrative one," said one of the directors, though his face remained stern as he looked across the table. "Troublesome, at times, but ultimately profitable. It has influenced in many ways the direction of this company."

"While we're not all in agreement on this issue, the majority of us believe that to continue the partnership with Nintendo would be a....good decision."

Kutaragi's heart began to beat faster and faster, though he dared not show the growing joy that was filling it up. He remained as stoic as the directors as they continued to speak.

"We do have....several conditions, that would need to be fulfilled in order to maintain our partnership," the first director continued. "Conditions that would not be difficult for Nintendo to meet, conditions that would greatly enhance the profitability of creating a new video game device in partnership with them. We ultimately seek more recognition and more profit potential for our products. If these conditions are met, we hope development on a new device with Nintendo would begin immediately."

"If they are...not met?" asked Ohga, looking at the director and then back at Kutaragi.

"We are prepared to create a video game device on our own, without any input from Nintendo," said another director. "Kutaragi, you are prepared to do so as well?"

"Of course," said Kutaragi with a nod. "But...I'm sure Nintendo would be happy to fulfill any conditions the board of directors sees fit to set forth."

"We are sure as well," continued the director with a slight nod of his head. "Thank you all for meeting here today. Kutaragi, I trust you'll let Nintendo know of our conditions as soon as possible?"

Kutaragi nodded in reply. He had a feeling that Sony wouldn't demand much, but any demands would be very difficult to make Nintendo's president Hiroshi Yamauchi acquiesce to. Still, if it had been possible to make the Super Nintendo CD a reality even with all the drama that had arisen around *that* little video game device, he knew that it couldn't be too much of a stretch for the next console.

"The tough part is over," said Norio Ohga as the two men left the room together, placing his hand on Kutaragi's shoulder and allowing a hint of a smile to cross his lips. "You did it."

"We'll see...." Kutaragi replied with a nervous laugh.

-

*"As big of a holiday season as 1993 was for us, 1994 was even bigger. We avoided the shortages of 1993 by shipping a lot more units, and we finished second in sales that year to, I believe, only Power Rangers. I never doubted for a moment that Donkey Kong Country would be our biggest blockbuster game ever, and the success of that game absolutely justified the decision to make it exclusively on CD."*

-Howard Lincoln

*"We came back down to Earth, I think, at the end of 1994. Did we sell a lot of Genesis systems and Mega Chargers? Sure. But just like in 1993, Nintendo creamed us. We were going to end 1994 in the same place we ended 1993. But all things considered...that kind of felt like a win."*

-Tom Kalinske

*"This holiday season, pick up Star Wars: X-Wing on Super Nintendo CD, Super Return Of The Jedi on the Super Nintendo cartridge system, or Star Wars Arcade on the Sega Mega Charger. Because whatever you're playing on, the Force will always be with you."*

-from a commercial aired during the 1994 holiday season, advertising that year's selection of Star Wars games

*"The technology available on the Super Nintendo CD really inspired a lot of us during the time that we were developing Rayman. It was conceived for the system right from the start but as we realized more and more what it could do for us from a development standpoint, we kept getting ideas and not just new ideas for Rayman."*

-Ubisoft's Michel Ancel in the June 2006 issue of *GameInformer*

*"This game is the most insidiously devilish thing I've ever seen. It's spawned from Satan in the pits of Hell!"*

-Jerry Falwell in a December 20, 1994 sermon condemning the SNES-CD game *Shin Megami Tensei*, a game that would have spawned significantly more controversy had it sold more than 20,000 copies in North America

*"Two of the biggest influences for me in terms of game design probably were the shooter games Universalizer and Soulqueen for the SNES-CD. Universalizer showed me how to properly do a challenging shooter game, and Soulqueen showed that these types of games could have a compelling story. So those games were I think the most influential games on the design of the Chorokai Project series."*

-ZUN, discussing his Chorokai Project series in a January 2008 *Famitsu* interview

-

## **December 7, 1994**

It didn't take long for Ken Kutaragi to arrange a meeting with Minoru Arakawa to discuss Sony's terms for maintaining their partnership with Nintendo.

"Basically, Sony wants three assurances from Nintendo. The first is that Sony receive more recognition from Nintendo as it pertains to their role in hardware development. They've come up with a little paragraph that they're wanting to put on all Sony products in the future, including on the box of whatever this successor device will be."

Over the past few months, Sony had been re-considering its role in the technology business. The higher-ups at Sony had come to see the company as a sort of...concierge of dreams. With Sony's technological muscle, the dreams and visions of creative visionaries in all fields, particularly the field of home entertainment, could become reality. They saw Nintendo as one of those "dreamer" companies. Sony wanted the new Nintendo console to be part of its overall strategy of attracting the attention (and cash) of entertainment companies all over the world. It would help with the tech, and its partners would supply the ideas.

"That sounds agreeable," Arakawa replied, "as long as it is not a large section of the box."

"It would be a graphic and a statement in a corner on the back of the box," said Kutaragi. "Nothing too large, it wouldn't even take up an eighth of the box I don't think."

"I'm sure Yamauchi-san would agree to that," said Arakawa, who then asked Kutaragi to continue.

"The second condition is that Sony receives either a cut of first-party game revenue or a larger cut of third-party game revenue."

"How much larger?" asked Arakawa, immediately dismissing the first option.

"Ten percent larger," said Kutaragi, "though that number is negotiable."

Ten percent added to a reasonably small cut wouldn't be too much of a stretch, though such a concession might be a blow to Yamauchi's pride. Still, it seemed as reasonable as the first condition and Arakawa assured Kutaragi that Nintendo could concede such a thing without much difficulty.

"And the third?"

"The third....Sony wants backward compatibility for the new device. They want it to play all Super Famicom CD-ROM games as well as music CDs."

Arakawa's expression hardened. Nintendo and Sony both wanted the new device to use a proprietary disc format, particularly one that would allow for more memory, perhaps up to a gigabyte of space. But backward compatibility for the new system would present somewhat of a technological problem. Nintendo had considered backward compatibility for the Super Nintendo, to allow it to play NES games, but that idea had been scrapped for being

unfeasible. For a proprietary system to allow SNES-CD compatibility would be a costly stretch...and might harm the last couple years of SNES-CD profitability as well.

"It will not be easy to convince Yamauchi-san to do this," said Arakawa.

"Backward compatibility...is the main sticking point with Ohga-san," said Kutaragi. "If the new system does not allow for backward compatibility, Sony is prepared to develop its own console."

Kutaragi shrunk back in his chair as he spoke. Clearly, it wasn't his decision to make backward compatibility such a non-negotiable. Arakawa sighed.

"If it was up to me, I'd certainly like the SNES-CD successor to have backward compatibility," said Arakawa. "But it's not. I'll try to convince Yamauchi-san to implement it in the new system but it might take time."

"I understand," said Kutaragi, standing up to shake Arakawa's hand. "We're willing to give you at least six months to decide, perhaps more...but I'm worried that too much of a delay-

"I know, the Saturn," said Arakawa, a worried look on his face. "We need to get this deal done soon."

-

## **December 12, 1994**

F-Zero CD is released for the Super Nintendo CD. Lost somewhat amidst all the Donkey Kong Country hype, it does modest sales at launch and throughout the holiday season. It receives very good reviews, scoring a 35/40 in Famitsu and 8s and 9s from most American video game media outlets, as well as a perfect score from GamePro. The game is considered even more difficult than the first, though it's also considered a far more complete game and an excellent fit for the CD-based system. F-Zero CD completes the Super Nintendo CD's trifecta of first-party hits during the 1994 holiday season, and flanked by a slew of excellently received third-party games, it helps to drive Super Nintendo CD sales to even loftier heights in one of the most lucrative holiday shopping seasons in North American history.

### **F-Zero CD: The Basics**

F-Zero CD is the sequel to the original F-Zero for the Super Nintendo. Featuring ten playable racers as opposed to the four featured in the original game, and 24 tracks that can all be raced in time trial mode, F-Zero CD is considerably more robust than the original game. It features rapidly moving graphics with dynamic, animated backgrounds and lightning-fast racing action, along with a jam-packed soundtrack with a unique song for each track. The single-player mode features four circuits: Knight, Prince, Queen, and King, each with six tracks that the player must earn first place in to advance. The player gets four lives that are lost whenever a vehicle runs out of life (from slamming into obstacles or other cars) or fails to finish in first place in a race (unlike the original F-Zero, you can finish a lap in any place as long as you finish the race first). The game is considerably more difficult than the original F-Zero, making this one of the hardest racing games on the SNES-CD. The individual racers have their own storylines for each circuit, told over a series of short non-

animated cutscenes (similar to Super Mario World 2). The game also introduces two-player multiplayer to the F-Zero series. You can race a partner in Grand Prix mode, race in Vs. mode on individual tracks, or compete in a Death Race, where the player who runs out of energy first loses (invisible rubber-banding is used to make sure the competing racers stay relatively close).

-

### **F-Zero CD:**

Ed: 9

Danyon: 9.5

Al: 8

Sushi-X: 9 (quote: "If you have enough patience to master the brutally difficult gameplay, this is one of the most satisfying racing video games ever made.")

### **Muppet World:**

Ed: 7

Danyon: 7

Al: 7.5 (quote: "While clearly geared toward kids, some of the mini-games are surprisingly appealing to older players too, and it seems that this game is a love letter toward long time Muppet fans.")

Sushi-X: 7.5

### **Rayman:**

Ed: 9.5 (quote: "The most pleasant surprise of the year is this superb platformer from Ubisoft that looks and plays almost as good as Donkey Kong Country. Yes, I said it.")

Danyon: 9

Al: 9.5

Sushi-X: 8.5

### **Shin Megami Tensei:**

Ed: 6

Danyon: 6

Al: 6.5 (quote: "While hardcore RPG fans will find the game's old-school sensibilities rewarding, the bare-bones graphics and convoluted plot will scare off those new to the genre.")

Sushi-X: 6.5

### **Space Pirates:**

Ed: 7.5 (quote: "This sci-fi adventure is one of the more fun FMV games, but I wish there was a bit more interactivity during the admittedly pretty cutscenes.")

Danyon: 5

Al: 5.5

Sushi-X: 7.5

### **Star Wars: X-Wing:**

Ed: 9.5

Danyon: 8.5 (quote: "Not a PERFECT PC port, but good enough, this really fun space-flight sim is one of the most in-depth space shooters I've ever played, and the best Star Wars game since Super Empire Strikes Back.")

Al: 7.5

Sushi-X: 7

### **Terminator II: Judgment Day:**

Ed: 7

Danyon: 8

Al: 8 (quote: "This sequel to last year's fun Terminator game, basically took the engine from that game and grafted the T2 plot onto it. Much closer to the movie than last year's game, it's a lot of fun to take control of Arnold's awesome Terminator character. The music's not quite as good though.")

Sushi-X: 8.5

### **Tin Star:**

Ed: 6

Danyon: 7.5

Al: 8.5 (quote: "You CAN use the SNES controller but I really recommend the Super Scope, it makes aiming and shooting at the bad guys in this Western-themed rail shooter a lot more fun.")

Sushi-X: 6

### **X-Men: Mutant Apocalypse**

Ed: 7

Danyon: 6.5

Al: 7

Sushi-X: 8.5 (quote: "This was an awesome adaptation of the X-Men comics and I loved the variety of characters you can use to punch your way through stages.")

### **Universalizer:**

Ed: 9.5

Danyon: 9 (quote: "An absolutely beautiful shooter with one of the best soundtracks I've ever heard in this type of game. It was tough as nails, but getting through this game's fourteen stages was a lot of fun.")

Al: 9

Sushi-X: 9

### **Unearthed:**

Ed: 5

Danyon: 6

Al: 6 (quote: "Pretty much just your standard RPG, featuring a fairly boring story and some bottom-of-the-barrel SNES quality graphics. Pales in comparison to some of the great RPGs that hit the SNES-CD this year.")

Sushi-X: 3.5

## **Race For Your Life:**

Ed: 5.5

Danyon: 7

Al: 7.5

Sushi-X: 7 (quote: "This violent racing game lets you take the wheel as one of several criminals who go on a cross-country death race to escape the police. It's kind of fun but really, really violent, and definitely deserves the M rating it got.")

## **Oceanica:**

Ed: 7

Danyon: 8 (quote: "Enix's sorta sequel to E.V.O. focuses on sea creatures in a giant ocean. I had a lot of fun getting my creature stronger and ducking giant ocean predators in the early stages, but the later stages with the human hunters could at times be an exercise in frustration.")

-*Electronic Gaming Monthly's* reviews of December 1994's SNES-CD games in the January and February 1995 issues

-

*"I'd never done a video game before, so developing Muppet World was a major challenge for me. It was, however, one that I was glad to take on, and the work we did on it laid the groundwork for future endeavors in the industry. It was nice to have Nintendo's help, the same way that we contributed our help to their Star Fox game, and it was of course another chance to work with my good friend Mr. Shigeru Miyamoto."*

-Frank Oz, discussing his work on *Muppet World* with *Muppets Monthly* magazine in February 2001

## **Muppet World**

*Muppet World* is a game nearly two years in the making, brought into existence by a deal made by Nintendo with the Jim Henson Company. In exchange for their work on *Star Fox*, the Jim Henson Company would be allowed to make a Muppet game for the Super Nintendo CD, and would be assisted by Nintendo itself in the game's development. The result is a surprisingly fun mix of mini-games and adventures, featuring a ton of Muppet-related fun and more than a half-hour of new live-action Muppet footage. The game takes place in a sort of hub world, you select an "adventure" from the main screen featuring one of twelve muppets. There's Kermit, Miss Piggy, Rowlf, Gonzo, Animal, even Statler and Waldorf get their own adventure (in this case, a wacky platformer where they make jokes about everything). Five of the "adventures" are basically mini-games, but seven of them are games in their own right, ranging from about an hour to three hours to complete. Once you beat all seven games and complete the five mini-games to a satisfactory level, the final "adventure" is opened up: a two-hour adventure featuring all the Muppets that's a great culmination to the game's storyline as well as being a love letter of sorts to those who've followed the Muppet franchise for the last 30 years. While the game is relatively easy (being targeted to kids after all), more hardcore players will still get some fun out of the game, especially if they're fans of the Muppets at all. *Muppet World* is pretty much everything you could ask for out of a Muppet game.

Graphics: 7  
Music: 7  
Control: 9  
Play Mechanics: 8

-review of *Muppet World* from the February 1995 issue of *GameFan* magazine

-

*"So, with the Mega Charger version of Doom, they told us they wanted the game out for the holiday season 1994. But the problem with that was that we needed to make some cuts to get the game to run smoothly on the Mega Charger, and we really weren't given the time to get everything working properly. Given, maybe three more months, the game would've been perfect on the Mega Charger. As it stood, the music had to be somewhat downgraded, which was a shame because the Mega Charger's audio chip was really good. The game had some slowdown, not a lot but definitely noticeable compared with say, the Jaguar version or the Super Nintendo CD version. It was a decent port, but we really got crunched and that prevented it from being as good as it could have been."*

-John Carmack, co-founder of Id Software, in an interview with *Electronic Gaming Monthly*, June 1998

*"Star Wars Arcade, while a very nice looking game that definitely rivals a lot of the stuff you might see on the Super Nintendo CD, is fundamentally flawed in several important ways. The game's fairly short and fairly repetitive, and while that might work for an arcade game, this is supposed to be a home console game and one of the Mega Charger's killer apps. The controls aren't that great, in fact, they're significantly worse than the SNES-CD's X-Wing game. So what you have is something that's very pretty, but under the surface the true colors of this game aren't so pleasant."*

-excerpted from Al Manuel's 6/10 review of *Star Wars Arcade* in the January 1995 issue of *Electronic Gaming Monthly*

*"Just like in 1993, our big holiday 'killer apps' turned out to be disappointments and that seriously hurt us when it came to countering the SNES-CD's sales push that holiday season. Earthworm Jim for the Genesis was a pleasant surprise, but that was coming to the SNES-CD the very next month and it had a nearly identical version on the SNES as well, so we really didn't have any good exclusives to push Mega Charger adaptors. We just kept advertising Sonic 3 and Virtua Fighter and tried our best to keep chugging along until the Saturn launch."*

-Tom Kalinske

-

"So with the Niners about to meet the Titans in Super Bowl XLIX, our first Super Bowl appearance in a quarter of a century, I feel like it's time to revisit the closest I feel we've been to the Super Bowl since 1990, and that was in 1995, with Steve Young and probably the best team I feel we've had since those great Joe Montana years. Everyone who was a Niners fan back then will remember all the hype going into the 1994 season. We'd just traded with the Atlanta Falcons for their star receiver Andre Rison, the guy that was going to give us a Super Bowl-winning receiver tandem like the Dallas Cowboys had with Michael Irvin and Alvin Harper. Jerry Rice and Andre Rison soon dominated the league and the

Niners were off to a 13-1 record, on track to crush the NFC playoffs with a number-one seed and one of the best offenses in league history.

But on the night of December 13, 1994, all of that became moot next to one of the most tragic incidents in NFL history. At the time of course, Andre Rison was dating Lisa "Left-Eye" Lopes, one of the members of the hit band TLC, and the two had had a very tumultuous relationship. Of course, the backdrop to all of this was the NFL's ongoing crackdown on domestic violence in the wake of the OJ Simpson murder-suicide, with a major spotlight being placed on the league and its commissioner Paul Tagliabue. We'll never know the whole truth about that night. To this day, Rison claims that Lopes was threatening to "burn the house down" and that she had started the fight. But however that night's fight started, it ended when Rison punched Lopes in the face and knocked her head into a stone coffee table. The blow caused a massive cerebral hemorrhage and Lopes died on the way to the hospital. Rison was immediately barred from the NFL, and though he managed to cop a plea to voluntary manslaughter, he served eight years in prison for the crime.

Only nine at the time, I was shocked, saddened, bewildered...horrified by the news that the man who'd become maybe my favorite player on the team could have done something so horrible. To this day, there's no way I can bring myself to side with Rison even if his story of the events of that night was true...though considering that he'd had a history of abusing Lopes even before the incident took place, I highly doubt the validity of his version of events. I kept my Rison jersey for some time after the incident, though I never actually wore it again and eventually my mom threw it away (she wouldn't have let me wear it again even if I'd wanted to). What happened afterward....the Niners, despite bravely attempting to fight through the enormous distraction and emotional toll of the event, making it to the NFC Championship only to lose 35-17 to the Dallas Cowboys, who would go on to become the first team to ever win three straight Super Bowls after beating the Pittsburgh Steelers in Super Bowl XXIX. Paul Tagliabue resigning as commissioner after the season in the wake of overwhelming public outrage. All of it just seems inconsequential next to the loss of a beautiful and talented young musical star on the rise.

Steve Young never did get his ring, and indeed never got that close again, never again making the NFC Championship. Here's hoping that Andrew Luck and this year's great Niners team can exorcise all those old demons of the last 25 years."

-from *Dispatches From Candlestick*, a San Francisco 49ers fan blog, on January 28, 2015

-

This month will see the release of three very quirky but very fun games for the Super Nintendo CD, and here are some brief rundowns so you can consider picking them up if you want something a bit outside the box!

### **Universalizer**

Universalizer is a 2-D space shooter somewhat similar to the Gradius series. You're a pilot who's pursuing an ancient evil that traverses numerous galaxies in search of ultimate conquest! Your ship possesses a great weapon: The Universalizer, which allows you to call forth the energy of the planets and stars and convert them into different types of projectiles and shields to blast enemies on your way through the cosmos! There are fourteen different levels to conquer, each one taking place in a different galaxy and each one featuring its own beautiful musical score, the SNES-CD's enhanced audio capabilities really come to life in this excellent but very difficult game!

## **Oceanica**

From Enix comes this spiritual successor to *E.V.O.: The Search For Eden*. It takes place in a vast ocean, where you're a tiny fish that must hunt down and consume other fish to grow bigger and stronger. Along the way you can explore various undersea caves and even ancient city ruins in search of new powers you can use to aid you on your quest. Your ultimate goal is to become the Great Whale of the Sea, an ancient guardian who is completely impervious to all predators. To reach this goal, you'll need to dodge thousands of other sea creatures and even smart and skillful human hunters to survive.

## **Shin Megami Tensei**

One of the absolutely strangest role-playing games we've ever played, this game is for mature audiences and hardcore RPG fans only! It's a first-person RPG, played somewhat like the old Dungeons and Dragons games, but the gameplay is very much like Final Fantasy in that you're fighting monsters and collecting loot. You're also tasked with collecting demons to aid you on your quest. These demons can be fused into a variety of creatures from myth and lore, and you'll need all the help you can get to fight some of the toughest enemies we've ever seen in a role-playing game, or any video game for that matter!

-from the "Pak Watch" segment of *Nintendo Power* in the December 1994 issue, which also contained a brief walkthrough of the first four stages of *Universalizer* and would cover *Shin Megami Tensei* in more depth in January 1995's debut of the "Epic Center" feature (which debuted IOTL in March 1995)

-

## **Ubisoft: The Hottest Game Company You've Never Heard Of**

Though Ubisoft has been around for several years now, they've burst onto the scene this month with their new Super Nintendo CD game *Rayman*. It's been getting rave reviews and is set to be one of the hottest selling titles of this holiday season. The company is headquartered in France, which is perhaps known for its fine art and delicious cuisine rather than its video games. But Ubisoft has gathered some of the freshest talent in the industry, including Michel Ancel, *Rayman*'s young but talented creator. So what's next for this exciting company?

Believe it or not, Ubisoft has a Japanese-styled RPG set to release in North America in February 1995! Called *The Darkest Ritual*, the game centers around a pair of teenage girls, Etienne and Kris, who accidentally unleash an evil curse upon their high school and must become powerful witches in order to stop it! Ancel says that the game is partially inspired by 1992's film *Buffy the Vampire Slayer*, but the game will be facing stiff competition, as *Final Fantasy VI* is set to release the very next month. Judging by how *Rayman* has directly challenged Nintendo's megahit *Donkey Kong Country*, it's clear that Ubisoft isn't afraid of a little competition. We can't wait to see what this company on the rise comes up with next!

-from the January 1995 issue of *GamePro* magazine

-

Jackbob1985 here, and today I'm continuing my in-depth look at Super Nintendo CD

releases with a countdown of my top five games from December 1994. This month was absolutely stacked, with hit franchise games and superb original titles, and it was hard to choose a winner (but fun to play most of these games!). So without any further ado, let's get this list started.

#### 5. *X-Men: Mutant Apocalypse*

The first X-Men game to hit the SNES-CD, this was a pretty straight forward action title, but it featured great graphics and music and I loved the variety it gave you when it came to choosing which mutant to go into battle with. This game let you choose nine mutants, including Beast, Cable, Cyclops, Gambit, Jubilee (ew), Psylocke, Rogue, Storm, and Wolverine. The storyline was fun and fresh too and overall this was just an awesome X-Men game.

#### 4. *Star Wars: X-Wing*

A lot of people consider the PC version of this game an all-time classic, and it was really good on the SNES-CD as well. The SNES-CD version cut out a decent chunk of the cutscenes, which was a shame, but the gameplay was left pretty much untouched and it included all the missions from the PC version, some 40 in all. It was one of the best straight-up space-flight simulators on the SNES-CD, with gameplay that I honestly found superior to Star Fox. The SNES might have had those cool (but super-hard) action games, but the SNES-CD was where you could find the best Star Wars action of all, and it started with this great port.

#### 3. *Universalizer*

From a straight-up space sim to a balls-to-the-wall bullet hell game, Universalizer might be the toughest game on the SNES-CD (and yet it actually sold a decent number of copies). You traverse the entire UNIVERSE in your quest to achieve cosmic glory, and with a great variety of weapons (and awesome music), you'd have fun even while you were getting blown up again and again and again.

#### 2. *F-Zero CD*

This sequel to 1991's F-Zero surpassed the original in pretty much every single way. It gave these compelling characters an actual story (true, it was just a backdrop to the racing, but still) and had one of the most fun (and fistfight-inducing) multiplayer modes on the system. F-Zero CD remains my favorite in the franchise and one of my favorite racing games of all time period.

#### 1. *Rayman*

The original Rayman for the SNES-CD (it got a Saturn port later on, but it'll always be a Nintendo game to me) is one of the best platformers of all time, period. With enchanting graphics and pixel-precise action, it's a tough call between this and *Donkey Kong Country* for my favorite platformer of the year (Sonic the Hedgehog can go to hell). While all the hype went to *F-Zero CD*, this game slipped in under the radar and endeared a lot of players. It's super fun to go back to again and again and again.

\*After a Christmas-themed version of the Angry Video Game Nerd theme, the Nerd heads downstairs to open up his gifts.\*

AVGN: You know, there's no better time of the year than Christmas morning. The warm feeling you get from sitting by the fire with friends and family, the delicious taste of Christmas cookies and egg nog, and of course, the gifts. Definitely the gifts. I wonder what awesome games I'm gonna get this year?

\*The Nerd looks under his tree to find...nothing.\*

AVGN: Huh? Where are all the presents? \*he looks around and spots a VHS tape under the tree with "Play Me" written on a note taped to it\* What the...? \*he pops it into the VCR\*

\*On the screen is the Grinch, laughing and sneering at the nerd.\*

AVGN: Goddamn it, I shoulda known! This fucker, the Grinch, stole all my presents!

Grinch: Angry Video Game Nerd, I've stolen your presents, and everyone else's presents...in fact, I've stolen the jolly old elf himself! \*laughs and steps aside to reveal Santa Claus tied to a chair\*

Santa Claus: \*struggling\* Help me! Help me Nerd!

AVGN: That son of a bitch! The Grinch kidnapped Santa!

Grinch: I've kidnapped Santa Claus, and I'm not giving him back unless you, the Angry Video Game Nerd, play a video game!

AVGN: Well that doesn't sound so bad.

Grinch: I want you to play THIS! \*somehow hands the Nerd the game through the screen\*

AVGN: \*he sees the game and screams\* NOOOOOOOOOOOOOOOO!!!!  
NOOOOOOOOOOOOOO!!!

\*It's "Who Kidnapped Santa Claus?", an FMV game released in December 1994 for the Super Nintendo CD\*

AVGN: This is one of the worst video games ever made! This is maybe THE worst Super Nintendo CD game ever made!

Grinch: If you don't play it, I'll make Santa play it instead! \*laughing\*

Santa: No! NO! Please, please Nerd, save me! You have to do it, for all the children!

AVGN: \*groans\* Fine...but I better get some damn good presents this year. \*he pops the game into the SNES-CD, leans back into his couch and takes a big swig of egg nog with alcohol\*

\*The review continues, interspersed with Tay Zonday singing a profanity-laced parody

version of "You're A Mean One, Mr. Grinch" (retitled to "You're An Asshole, Mr. Grinch"). The game is a horribly acted FMV disaster where the player has to help two annoying kids solve the mystery of who kidnapped Santa Claus from the North Pole. It's barely better than *Plumbers Don't Wear Ties* in terms of production values with none of that game's humor.\*

-from episode 101 of *The Angry Video Game Nerd*, "Christmas Special: Who Kidnapped Santa Claus?"

-

### **SNES-CD Power Charts: December 1994**

1. Mortal Kombat II – 29,256
2. Super Street Fighter II: Arcade Edition – 22,087
3. Contra IV: Hard Corps – 19,656
4. Jewels Of The Realm – 16,338
5. Super Mario World 2 – 16,057
6. Mighty Morphin' Power Rangers – 11,862
7. Wing Commander – 10,586
8. Final Fantasy Origins – 9,057
9. Lethal Enforcers II: Gun Fighters – 8,446
10. Secret Of Mana – 7,906
11. Cannon Fodder – 7,708
12. Kid Icarus CD – 7,554
13. Madden 95 – 6,940
14. Road Rash – 6,067
15. Superman CD – 5,864
16. NBA Jam – 5,547
17. Sam and Max Hit The Road – 5,360
18. Pitfall CD – 4,702
19. Super Mario Kart – 4,451
20. Ys IV – 4,203

-

### **December 19, 1994**

Hiroshi Yamauchi had been considering the terms that Sony had laid out to Nintendo for more than week. The terms relating to increased recognition for Sony and an increased cut of Nintendo's game profits had been tolerable, but the demand for backward compatibility for the SNES-CD successor was considerably more of a stumbling block, and as Yamauchi discussed the issue with Howard Lincoln and Minoru Arakawa, he was already having unpleasant flashbacks to those days in 1991 when Norio Ohga had raked him over the coals.

"What possible use could they have for this backward compatibility, if not to push their music CDs?" said Yamauchi, a stern look on his face. "It does us no good to make this new system compatible with the old games when we will still be trying to push the old system!"

"Sir, I think it could work out to our advantage," said Howard Lincoln, who, along with Arakawa, was favorable to the idea of backward compatibility if it would help seal the deal with a very lucrative partner. "The ability to play music CDs is something that the Saturn

has, and we need to keep a leg up on them if we're to keep our competitive advantage."

"We'll keep our competitive advantage the same way we always have, by selling great games," Yamauchi replied. "The ability to play music CDs is a side feature, nice to have but not if it costs us even more money to manufacture the system."

"Sony is more than willing to absorb most of the additional manufacturing costs," said Arakawa.

"And they'll absorb them the same way they absorbed them with the current console, by demanding even more of a cut from the games we sell."

Hiroshi Yamauchi was convinced that Sony's ultimate goal was to absorb Nintendo completely and take over the company that had been in his family for more than a century. He'd rather die than let the company be taken. If Sony wanted to compete against Nintendo, so be it. He'd rather be beaten from the outside than taken over from within.

"My answer remains the same, I will agree to the first two terms but not the backward compatibility. Keep trying to work out a deal with them that doesn't require that and if they wish to go their separate ways then that is the way it will be.

Arakawa and Lincoln left Yamauchi's office disappointed, but not surprised. Somehow, the two of them knew they'd have to convince one side or the other to cave in. They knew they'd need Ken Kutaragi's help. While they were willing to let Nintendo go its own way and compete with Sony, neither one of them wanted that. Nintendo's partnership with Sony had been highly lucrative, and not only that, but Howard Lincoln believed it had advanced the medium of video gaming itself. Neither man was about to let backward compatibility be the stumbling block for one of the greatest partnerships in the history of the industry.

"We have to keep working him," said Lincoln to Arakawa, who replied with a nod. "And before I forget, Merry Christmas."

"Merry Christmas, my friend."

And, if Hiroshi Yamauchi or Norio Ohga could be convinced to cave, a happy New Year.

-

*"This award came down to Rebecca, the eventual winner, and Mai Sharanui from The King Of Fighters '94. Though we had great fun watching the bouncy ninja Mai, we had even more fun watching the fierce Rebecca gunning down hordes of aliens and twirling those glowing twin swords of hers all over Velna. And that voice! Rebecca from Squad Four, you can sing us to sleep any day of the week!"*

-from the "Hottest Game Babe (All Systems)- Rebecca (Squad Four)" award commentary in EGM's 1995 Video Game Buyer's Guide

*"By 1995, we'd begun acknowledging that we were phasing out the cartridge-based Super Nintendo. Even in Nintendo Power, so much of the coverage had gone to the SNES-CD that we began covering the system like we had the NES back in 1993. While we still had a couple big games left in the pipeline, Yoshi's Island the biggest among them, we'd finally begun*

*formally saying that the SNES was on its way out. It had been a great, albeit somewhat short run."*

-Howard Lincoln

*"The Super Nintendo, now just \$69.99! Comes with Super Mario All-Stars and two controllers!"*

-from an ad that Nintendo began running in January 1995 after dropping the Super Nintendo cartridge system to \$69.99 (and the Playstation Combo Set to \$199.99)

*"Mark my words, 1995 will be the year of the Sega Saturn. We're bringing the arcade experience home in ways that players haven't even begun to imagine."*

-Tom Kalinske, in a January 3, 1995 press conference announcing Sega's plans for the coming year

*"So uh, we're gonna change focus and start developing games for the Super Nintendo CD and the upcoming Saturn system. I feel like the market focus at the time is on producing cheaper hardware and we just, I think the 3DO machine might have been a bit...I don't think the market was ready for it yet. And it hurts to admit that, but after talking to our manufacturing partners and our creative team, I feel like...like this refocus is going to lead to more long-term success for our company."*

-3DO co-founder Trip Hawkins, speaking at a January 16, 1995 press conference on the future of the 3DO

-

**Top Selling Super Nintendo CD Games of 1994** (pack-in sales included, only sales during the 1994 calendar year are counted):

1. Super Mario World 2
2. Donkey Kong Country
3. Super Mario Kart
4. NBA Jam
5. The Secret Of Monkey Island
6. Squad Four
7. Mortal Kombat II
8. Star Fox
9. Secret Of Mana
10. Super Street Fighter II: Arcade Edition

-

**1994 Nintendo Power Editors' Choice Top Ten SNES-CD Games**

1. Donkey Kong Country

*Donkey Kong Country amazed us all with its incredible graphics, awesome soundtrack, and great gameplay. No monkey business here, Donkey Kong Country was our number one pick!*

2. Squad Four

*This action-packed space adventure introduced us to four brave heroes and broke new ground in storytelling and cinema-like effects.*

### 3. F-Zero CD

*F-Zero is back and it's better than ever! We loved this sequel to 1991's smash hit and we can't get enough of taking all ten racers out on the track.*

### 4. Snatcher

*Hideo Kojima's cyberpunk thrillride was one of the most innovative titles we've ever played on a Nintendo system. We can't wait to see what he comes up with next!*

### 5. The Secret Of Monkey Island

*From Lucasarts came this fun pirate adventure starring Guybrush Threepwood, an intrepid adventure seeking to take down the evil LeChuck. Yo ho ho and a bottle of fun!*

### 6. Mortal Kombat II

*Mortal Kombat returned, as brutal and bloody as ever. Though the controversy was lighter this time around, the gameplay certainly wasn't, and we had even more fun playing this than we did last year!*

### 7. NBA Jam

*We loved hitting the hardwood with all 27 NBA teams in this excellent arcade port. Shattering the backboard and catching on fire has never been so much fun!*

### 8. Contra IV: Hard Corps

*Konami does it again with this action-packed run and gun adventure that featured multiple paths and loads and loads of tough enemies to gun down.*

### 9. Jewels Of The Realm

*We loved this colorful adventure game that gave us tons of ways to get through its beautiful levels. We also felt that it featured some of the year's best voice acting and storytelling.*

### 10. Rayman

*This platformer featuring graphics right out of a storybook was one of the most original and fun action games we've ever played. It even gives Donkey Kong Country a run for its money!*

*-featured in the January 1995 issue of Nintendo Power as part of their Super Power Club bonus insert*

**1994 Nintendo Power Awards ("The Nesters")**- compiled from fan voting, not a complete list of awards

Best Graphics and Sound (SNES-CD)

1. Donkey Kong Country
2. Squad Four
3. NBA Jam

#### Best Challenge (SNES-CD)

1. Donkey Kong Country
2. Snatcher
3. Phaedra's Heart

#### Best Play Control (SNES-CD)

1. NBA Jam
2. Donkey Kong Country
3. Squad Four

#### Best Theme And Fun (SNES-CD)

1. Donkey Kong Country
2. Squad Four
3. The Secret Of Monkey Island

#### Best Hero

1. Donkey Kong
2. Samus
3. Shad

#### Best Villain

1. King K. Rool
2. Ridley
3. LeChuck

#### Most Innovative

1. Snatcher
2. The Secret Of Monkey Island
3. Squad Four

#### Best Overall (Super Nintendo)

1. Super Metroid
2. Dragon Warrior V
3. Super Street Fighter II

#### Best Overall (SNES-CD)

1. Donkey Kong Country
2. Snatcher
3. Squad Four

We're now going to take a look at how video game technology is making the leap in 1995. It's been more than two years now since the release of the major CD-ROM video game peripherals, and though Sega's CD add-on has largely been a failure, Nintendo and Sony's CD-ROM has thrived, with more games promised this year than ever before. Sega has chosen to move on to the next generation of gaming technology, and though their new Saturn device won't be released here in North America until the fall, we've managed to get our hands on the Japanese version of the device in order to take a look under the hood and see just how advanced it really is.

The device is packing a graphics processor from Silicon Graphics, a company known for making high-tech computer internals. The Saturn can replicate some of the most advanced computer graphics we've yet seen on a home device, and though the price tag of nearly 50,000 yen is steep, it's significantly less than the 3DO device released in 1993, and vastly more powerful. As seen in the hit game *Virtua Fighter*, the Saturn can perfectly replicate the performance of its arcade counterpart, in fact showing even more detail and quickness of movement involving the game's cart of characters. Sega remains quiet about the system's exact graphical specifications, but similar graphics chips have been clocked at over 80 megahertz, rivaling some of the speedier home PCs available on the market. Though Sega is hinging most of its long-term plans on the Saturn, its cartridge-based Mega Charger attachment for the Sega Genesis continues to sell at a robust pace. Capable of 22 megahertz of processing speed, it too is capable of displaying accelerated 3-D graphics, though its version of *Virtua Fighter* isn't quite as clean or speedy as the arcade version.

Sega's arch-rival Nintendo has yet to announce the successor to its Super Nintendo, though it will almost certainly use optical disc technology similar to the SNES-CD. Whether or not Nintendo will partner with Sony on its new system is unknown, though an inside source says negotiations are "ongoing". Nintendo impressed many with the rendered graphics of its hit *Donkey Kong Country* game, and ports of popular PC titles such as *Doom* are planned for release in the upcoming year. All in all, Nintendo was much more secretive about their upcoming plans than Sega was, but it's likely that if Nintendo and Sony do collaborate on a new console, its performance and processing power will almost certainly rival that of the Sega Saturn.

Nintendo and Sega are clearly the top dogs in the gaming industry, putting companies such as Atari and the upstart 3DO Company in the red by easily beating their own next-generation hardware devices on the market. The 3DO Company is expected to refocus its efforts on designing software titles for Nintendo and Sega's systems, while Atari continues to push on, recently dropping the price of its Jaguar system in an effort to keep pace with Nintendo's recent price cuts. There's also a new contender in town, as Japanese toymaking giant Bandai is said to be announcing its own next generation console at the Winter CES, coming up later this month. Whether or not Bandai can break up what's turned into a duopoly has yet to be seen, but Nintendo and Sega seem to be far more worried about each other than any potential third party in this industry race.

## **SEGA MEGA CHARGER**

## **Sega Enterprises, Ltd./Silicon Graphics**

The Sega Mega Charger is a powerful graphics accelerator in the form of a Genesis cartridge that can be easily plugged into the Genesis video game console and linked up with certain games to provide enhanced 3-D graphics and sound capabilities.

-Popular Mechanics, "Design and Engineering Awards 1995", January 1995

-

### **Electronic Gaming Monthly 1994 Editors' Choice Awards** (selected)

Game of The Year: Donkey Kong Country (SNES-CD)

Runner-up: Sonic the Hedgehog 3 (Sega Genesis)

*Game of the Year was a damn tough decision, probably the toughest we've ever had to make. Sega brought its A-game with Sonic 3, but in the end, the graphics and music in Donkey Kong Country, along with its fantastic platforming gameplay, put it over the top. We couldn't get enough of guiding Donkey Kong and his sidekick Diddy through the eight beautifully designed worlds, fighting giant bosses (that dragon!) and pushing through some of the toughest platforming challenges we've ever faced. Even with the Mega Charger backing it up, Sonic 3 just couldn't quite take this one.*

Super Nintendo Game Of The Year: Super Metroid

Runner-up: Fire Emblem

*This one was pretty easy. Super Metroid took the Planet Zebes and super-sized it, providing some challenging but rewarding exploration segments as we made our way through fire, rain, and jungle environments on our way to take out the deadly Mother Brain.*

Sega Genesis Game Of The Year: Sonic the Hedgehog 3

Runner-up: Virtua Fighter

*Sonic 3 was the first game to ever get a perfect score from EGM, and for good reason. It was Sonic's best adventure yet, taking us through colorful environments faster than the speed of sound. Virtua Fighter was superb and a great showcase for the Mega Charger's capabilities, but in the end we couldn't say no to the hedgehog.*

Super Nintendo CD Game Of The Year: Donkey Kong Country

Runner-up: Snatcher

*While we loved the innovative and unique Snatcher, and its storytelling absolutely blew us away, there was no doubt that Donkey Kong Country was taking this one home. The chest-pounding, monkey-rolling, Kremling-stomping adventure was just too good!*

Best RPG: Fire Emblem (Super Nintendo)

Runner-up: Dragon Warrior V (Super Nintendo)

*Two challenging RPGs that showed that the Super Nintendo cartridge system can still bring it when it comes to epic adventures. In the end, it was Fire Emblem and its high-stakes, high strategy gameplay that took the crown over Enix's old school epic.*

Best Fighting Game: Virtua Fighter (Sega Genesis)  
Runner-up: Super Street Fighter II: Arcade Edition (SNES-CD)

*We'll always have a soft spot for Street Fighter, but Virtua Fighter is the next generation and boy did it kick butt with its 3-D gameplay and glimpse into the future of fighting games!*

Best Action Game: Donkey Kong Country (SNES-CD)  
Runner-up: Sonic the Hedgehog 3 (Sega Genesis)

*Just like in our Game of the Year debate, the monkey won out over the hedgehog, with just a bit more platforming satisfaction.*

Best Music: Donkey Kong Country (SNES-CD)  
Runner-up: Snatcher (SNES-CD)

*Snatcher's jazzy tunes and cyberpunk sounds definitely struck a chord, but the fully orchestrated Donkey Kong Country soundtrack made every jump, barrel throw, and enemy knockout as epic as it could be.*

### **System Reviews:**

Super Nintendo CD:

Ed: 10 (quote: "The Super Nintendo CD continues to impress with every game released for it. Hands down, the most robust and varied lineup of any of the major game consoles.")

Danyon: 9 (quote: "While the RPG selection this year was a bit lacking, every other genre was well represented, especially the fighting games, which I'm sure Sushi-X will appreciate.")

Al: 10 (quote: "What wasn't there to like about the SNES-CD this year? From Donkey Kong Country, to Squad Four, to Snatcher, there was enough on this system to make my job as a game reviewer as fun as ever.")

Sushi-X: 9 (quote: "This thing is an arcade lover's dream machine, though it's yet to be seen how well it can handle the next generation of 3-D arcade hits.")

Super Nintendo:

Ed: 7 (quote: "It's clear that this system is on the way out, but it's been a good ride and we've still got some great games to come.")

Danyon: 7 (quote: "I know that people who are sticking with the SNES over its CD add-on might have been a bit disappointed, but games like Fire Emblem and Super Metroid still keep me playing this awesome console.")

Al: 7 (quote: "Three years in and already showing its age? Technology is really something, isn't it? That being said, I can't get enough of Fire Emblem and I'll be sad to see the end of cartridges.")

Sushi-X: 6 (quote: "The existence of the SNES-CD really highlights this thing's flaws, especially as it pertains to fighting games.")

Sega Genesis:

Ed: 8 (quote: "We all loved playing Sonic 3, but outside of that, the Genesis' lineup left a bit to be desired. Here's hoping the Mega Charger peripheral will stimulate some creativity.")

Danyon: 9 (quote: "The Mega Charger really saved this thing's bacon just when I was

starting to get bored with it! I can't stop playing *Doom* on this thing."

Al: 8 (quote: "Sonic 3 was my game of the year and I'm hoping for good things from *Knuckles: Renegade* when it hits in the spring.")

Sushi-X: 9 (quote: "The Mega Charger is a huge boon to fighting games, giving us the best home console version of *Super Street Fighter II* and making *Virtua Fighter* possible. Will we see some SNK ports? I hope so!")

-from *Electronic Gaming Monthly's* 1995 Video Game Buyer's Guide

-

### **Gamepro 1994 Editors' Choice Awards** (selected)

Super Nintendo Game Of The Year: Super Metroid

Runners-up: Ken Griffey Jr. Presents Major League Baseball, Dragon Warrior V

Sega Genesis Game Of The Year: Sonic the Hedgehog 3

Runners-up: Virtua Fighter, Madden '95

Super Nintendo CD Game Of The Year: Donkey Kong Country

Runners-up: Squad Four, The Secret Of Monkey Island

Fighting Game Of The Year: Super Street Fighter II: Arcade Edition

Runners-up: Virtua Fighter, Mortal Kombat II

Action/Adventure Game Of The Year: Sonic the Hedgehog 3

Runners-up: Donkey Kong Country, Jewels Of The Realm

Role-Playing Game of the Year: Dragon Warrior V

Runners-up: Phaedra's Heart, Final Fantasy Origins

Game Of The Year (Overall): Sonic The Hedgehog 3

Runners-up: Donkey Kong Country, Super Metroid

-

**Game Watch** (starting with the January 1995 issue, *Nintendo Power* magazine officially changes their "Pak Watch" list of selected upcoming games to "Game Watch", in accordance with the increasing irrelevance of cartridge-based games with the decline of the Super Nintendo)

*“1994 was arguably the high-water mark of the console wars, at least as far as the SNES vs. Genesis portion of it was concerned. Sega went into the year in near panic mode. Their CD-ROM experiment had been a disaster in the face of the Super Nintendo CD's superior line-up of games. But Sega responded with a bold strategy: focus on value and re-double its efforts on the Genesis, the system it had been pushing for the last four years. With the massive release of Sonic 3, those efforts paid off, and Sega spent a good part of the year ahead of Nintendo in sales. The release of the Mega Charger that August was perhaps the second most successful peripheral launch ever...second, of course, only to the Super Nintendo CD. It gave Sega the processing power it needed to compete with Nintendo's high-capacity CD-ROM games and successfully bridged the gap between the Genesis and Sega's fifth-generation console, the Saturn. Nintendo followed up a fairly weak summer with a massive holiday season of hit games, including franchise-starter Squad Four and the massively acclaimed Donkey Kong Country. It swept most of the major game publication awards and dominated sales that holiday season, pushing Nintendo's SNES and its CD-ROM peripheral, which had become overwhelmingly the focus of its development efforts, back in front to stay. Though Sega ended the year in pretty much the same place it had started, they'd at the very least bought valuable time, keeping their company a clear close second in the console wars rather than falling into irrelevancy. 1995 would see the beginning of the next generation with the North American launch of the Sega Saturn... but Sega would have to navigate a minefield of challenges along the way.”*

-“The History Of Console Gaming: Year-By-Year (Part 5)”, Wired.com, June 12, 2012

-

And here's a list of all the SNES-CD games of 1994 whose franchises were completely original to this timeline, along with brief descriptions to help you get an idea of what kind of game it would have been:

Squad Four: An adventure game by Argonaut featuring a squad of four interstellar explorers who crash-land on a planet in the midst of a massive war. A majorly-hyped first party game for Nintendo.

Daywalkers: A platform horror game about a cop who fights vampires that are attempting to take over a city. A fairly violent game that gets decent reviews and sales.

Cheer High Detective Team: A visual novel/detective game about a group of cheerleaders who end up solving mysteries. While intended as a game for tween girls, the numerous unintentional fanservice moments in the game make it a surprise cult hit among males, though overall sales are pretty low and reviews are below average to middling at best.

Thrillseeker: A board/party game for 2-4 players. One of the first party games to come to the SNES-CD, it's actually a fairly decent game and because it's one of the first of its kind, sales are fairly good.

After The Lights Go Out: A noirish detective game full of FMV cutscenes. The protagonist, Sam Steele, investigates a variety of mysteries in a city full of crime. The game isn't bad but there are a ton of cliches and the acting is cheesy. This game is around the time that there are a glut of detective games on the system and sales are poor.

Monster Wars: A tactical RPG by Koei featuring all kinds of horrific monsters. Vampires, werewolves, skeletons, mummies, and other creepy crawlies clash on numerous battlefields, fighting for control of the Dark World. One of the best SRPGs on the system, sales are about average for the genre.

Knightstar: A JRPG about a young boy destined to become a knight and save his kingdom. A middle-of-the-road RPG, though there are a decent amount of voice acted lines in the game, giving it a boost in the production values department.

Snakey Snakington: A generic platformer starring a snake named Snakey Snakington. Repetitive music and unoriginal stages doom this game to below average reviews.

Phaedra's Heart: A JRPG by Enix, starring a goddess named Phaedra who loses her powers and must journey through the world of the mortals to reclaim them. Features some voice acting. One of the best-received original RPGs on the system, but sales are atrocious. The game is now a collector's item.

Solus: The spiritual successor to the Super Scope games Battle Clash and Metal Combat, this is a lightgun game by Nintendo's R+D 1, which has the player battling for his life in a futuristic arena. About halfway through the game the scene shifts to where the player is battling those who put him in the arena with the help of some of his surviving opponents.

Bumblebee: Zooble's Hive: A platforming/action game where you control an anthropomorphic bumblebee named Zooble who has to fight to protect his hive from a gang of evil spiders known as the Webkins. Featuring some catchy music and tight platforming gameplay, this Konami game is a success for the most part.

Slumlord: An action game where you play a rather shady character who runs a crime racket and dishes out punishment to those who cross him. A somewhat below average game that

would be controversial for its violent content if many people had bought it.

**The Next Champion:** A sidescrolling fighting game where you customize a character and then take them on a journey to become the next world martial arts champion. Receives some praise for its early use of RPG elements and its character building tools.

**Who Kidnapped Santa Claus?:** An FMV-based detective game where you have to find out who kidnapped Santa Claus. Atrocious, cheesy acting and boring gameplay make this one of the worst games to be released for the console. The Angry Video Game Nerd does a Christmas special on this.

**Hurricane Season '94:** A piece of educational simulation software where the player can simulate or track hurricanes, the simulator allows the player to plot weather conditions to steer or strength hurricanes. A fairly well-made, if quirky piece of software with very few sales.

**Gun Warrior:** An action game where the player battles the evil army of the dark wizard Zekto, with only his many, many guns to aid him. Features some pretty fun action and slick animation, along with good music, the game is a hit for Tecmo and becomes a franchise.

**Astra:** A fairly generic RPG featuring a band of warriors who battle an ancient, evil dragon and his demon hordes. Sales are pretty lousy and the game is mediocre.

**School Daze:** An FMV game where you're a student in high school and you have to deal with high school romance, bullying, classes, and other things. Another one of those FMV games that is "so bad it's good", the acting is atrocious and the game itself isn't very good.

**Meteora:** An FMV space shooter where your character has to fight off a variety of armadas. The acting is actually halfway decent (a couple of the actors in this become more famous later on) and the game itself is well received.

**Universalizer:** An arcade-style space shooter in the vein of the "bullet hell" genre, similar to games like Gradius and Axelay. Excellent animation, a variety of levels and weapons, and outstanding music makes this one of the best received shooters on the whole system.

**Koolblocks:** A puzzle game that has the player matching groups of similar blocks, while also shooting blocks with other blocks to clear increasingly large arenas. Despite the generic name, the game is decently received and has a fun multiplayer mode.

**At Land's End:** A Zelda-esque adventure game featuring a brave knight who has to explore several kingdoms in search of a captive princess. The game has none of the charm of similar adventure games and the repetitive and clunky gameplay earns it middling reviews

at best.

**Jewels Of The Realm:** An action/adventure game by Activision, featuring two characters, a boy and a girl who are forced onto a journey together when their village is destroyed by an evil tyrant, they have to power up mystical jewels to increase their power to get strong enough to save the realm. The game features voice acting and cutscenes, the girl is voiced by Alyson Court in her first major video game role (before she plays Claire in Resident Evil). The game is very well received for its gameplay and production values and sells quite well.

**Soulqueen:** A space shooter starring a badass female bounty hunter named Cleopatra who calls her fighter ship the Soulqueen. Very fast-paced and difficult, the game is considered one of the founding games of the modern bullet-hell genre. An instant cult classic.

**Furious Heart:** A fighting game featuring a variety of brawlers. Really generic in terms of its gameplay but does receive some praise for its graphics.

**Science Fighters:** A quirky fighting game which features scientists of various disciplines brawling. Almost completely tongue-in-cheek, this game is actually praised somewhat for some unique characters and moves, and has a fun, albeit completely wacky storyline.

**My Name Is Silence:** An FMV game about a mysterious assassin caught up in a tale of political intrigue. One of the better-acted FMV games on the console despite featuring a cast of complete amateurs, it's known as one of the better FMV games on the console and receives a cult following.

**Hunter:** A first-person shooter/army game where you have to hunt down a tyrannical warlord. The graphics are rather simplistic and the clunky gameplay and confusing level design make it an ignored and panned game.

**Day Of Malcarius:** An RPG created by a group of former Game Arts workers who spun off from the company to form their own. Somewhat like Lunar but a bit more experimental, about a group of warriors who rise up to battle a warlock named Malcarius. With solid gameplay and graphics and a good musical score, the game is one of 1994's better SNES-CD RPGs.

**Fireball:** A multi-dimensional shooter game without much of a plot, it's somewhat like a much faster paced Asteroids, where your single ship flies around the screen shooting down balls of flame that light up with bright colors. Decently fun but nothing special.

**Tut's Tomb:** An Egyptian-based platformer game where you play as King Tut. Lousy graphics and clunky play controls make this a below average title.

Unearthed: A generic-as-they-come RPG with bad graphics and very dull gameplay, with an unoriginal story to boot. Poorly reviewed, disappears among the herd of other RPGs this year.

Dunk Star: A basketball game featuring a variety of fictional players where the object of the game is to come up with the most spectacular dunk possible. A fairly generic sports game with a hilariously bad announcer.

Heavily Armed Princess: A platformer about a princess who takes up a sword and many other weapons after her prince boyfriend is kidnapped. Excessively violent and filled with hilarious cutscenes and one-liners, the game receives a very mixed reception but becomes a cult classic.

Oops!: A trap-em-up FMV game featuring a group of girls at a slumber party. Developed by Sony after their proposal to get Night Trap on the console was shut down, this game is a much more kid-friendly Night Trap Lite in both content and difficulty. The acting is even worse than Night Trap, with the exception of a young Jennifer Morrison who plays one of the girls. Nintendo actually tries to hype this game but the atrocious reviews kill sales pretty quickly.

Real GT Racing: A racing game featuring 20 real cars from across the racing world on a variety of licensed tracks. One of the better looking games graphically of 1994, the racing itself is fairly dull and the game receives middling reviews.

Race For Your Life: A racing game featuring cars driven by escaped criminals looking to avoid the cops and wreck each other as they race across the country. The first racing game to get an M rating on the SNES-CD, this game is notorious for letting you run over bystanders and the language is fairly extreme for an SNES-CD game.

Oceanica: A spiritual successor of sorts to E.V.O.: The Search For Eden, developed by Enix, the game has you as a small sea creature who must grow bigger by devouring other larger creatures, eventually you end up having to evade human hunters. A decently received adventure/RPG game.

City Planner: A sort of rival game of sorts to SimCity, City Planner is a much more in-depth city simulation, which involves running the day-to-day business of a city more than it does building one. It even lets the player make illicit deals, though there is the risk of being caught by police or investigative reporters. Very low sales but another cult classic game for the console.

Logjam: A platforming game about a lumberjack in a forest who must dodge bears, environmental hazards, and other things on his way back home. The game actually has a pretty good soundtrack and decent level design and does fairly well.

**Major Hazard:** A third-person action/shooter where the title character, Major Hazard, battles a variety of enemies in his quest to help his army win a war. A somewhat silly game, Major Hazard is an overly manly hero in the vein of Duke Nukem and the game is fairly fun, with fully voiced gameplay.

**Fatal Strike:** An action game/brawler where you control the samurai Notukaga as he quests through a variety of levels for revenge against the shogun who wronged him. Made by Koei, the game features excellent graphics and level design and is a minor hit for the company.

**Invasion 2022:** A real-time strategy game where the player must repel an alien invasion. Compared to X-COM in a number of ways, but the gameplay isn't nearly as good and the graphics are mediocre, leading to poor reviews and sales.

**Icebiter:** A run-and-gun action game where you play a soldier who must save his icebound village from a huge ice monster and its monster minions. Somewhat comparable to Gunstar Heroes in gameplay, it features decent level design and music and is fairly well received.

**Eskrima Warriors:** A fighting game featuring the martial art of eskrima, involving sticks, blades, and blunt weapons. Considered a sort of pre-cursor to Soul Edge, though the two games have nothing to do with one another and aren't by the same company (this game is Tecmo, Soul Edge is Namco), the game is one of the better fighting games of the year.

**Infiltrator:** A sort of stealth action/adventure game where you play a professional spy that breaks into a variety of locations. Decently received, though not a great or even really good game.

**Dazzler:** A puzzle game where you combine sparks of light in certain combinations. Instead of racking up your score (though you do get a score), the object of the game is to make more and more impressive combos for brighter visual displays. Though the gameplay is mediocre, the graphics and art design get a lot of praise and it shows off the SNES-CD's 2-D capabilities in a big way.

**Tomato Tommy:** A puzzle/platformer starring an anthropomorphic tomato. The gameplay is extremely bad and the graphics, while colorful, are very repetitive. Add in a complete lack of decent music and it's one of the SNES CD's worst platformers.

**Kings And Knights:** A medieval FMV game where a mystical king sends you on a quest to retrieve the ancient sword Excalibur. The actor playing the king is terrible, hilariously so and the game itself is miserable.

**P.O.L.I.C.E.: Hostage Rescue:** An action game where you're a police officer who has to rescue hostages. It's as generic as it gets and the poor voice acting doesn't help matters,

the game is repetitive and the play controls lousy.

American Dance-Off!: A dance game that attempted to bring back a version of the NES' floor mat accessory to the SNES-CD. Made by a third party, the accessory barely worked and when it did, the game was horrible anyway. The one saving grace is that this game's atrocious sales and critical reception don't have any butterfly effects on the later Dance Dance Revolution, indeed, nobody remembers this game by the time that one comes out (except for EGM's Seanbaby and later, the Angry Video Game Nerd).

Fearleaders: An action game where you can switch between five cheerleaders as they attempt to battle a variety of scary monsters in an attempt to save their school from the living dead. A generic, ho-hum platformer that features cookie-cutter dialogue and below average graphics and sound.

-

*"I remember how well Pulseman did when it first launched in January 1995. There was a lot of competition, including from the new Mega Man X game, but sales were still great and Nintendo's promotional push was a big rush for that. The success of Pulseman was a big reason why I was hoping we'd stay on board with Nintendo."*

-Ólafur Jóhann Ólafsson, in an interview with the Gaming Intelligence Agency, January 11, 2001

*"Pulseman was considered as a solid platformer. It had interesting level design, a strong futuristic look and feel, a character which was original, with intriguing powers, and of course, a legendary soundtrack, considered one of the best of the SNES-CD. It proved a moderate success. However, it's biggest impact would be solidifying the relationship between Sony and Game Freak. Sony had accepted the game for distribution, and heavily promoted the game. Game Freak and Sony discussed a sequel, which never came into fruition. However, it was this friendship that would prove very substantial in the near future..."*

-excerpt from the Kotaku.com article "Game Freak: The Pre-Pokemon Years," August 8th, 2014.

*"Valis: Rebirth was big in terms of convincing me that Telenet Japan was for real. They'd done a lot of great work already, but this game in particular was a lot like Popful Mail, a game I'd wanted us to bring over for the Sega CD before my fallout with them. We were already mulling over approaching Nintendo but that Valis remake was the clincher."*

-Victor Ireland, from "AMA: Victor Ireland" on Rootalk (TTL's Reddit equivalent), February 23, 2013

*"Sega brings the arcade hits home!"*

-a line from a new Sega advertisement campaign pushing the company's arcade ports that started in early 1995

*"On the subject of plan B, I believe we could go forward if absolutely necessary. The technical specifications of a new console could easily exceed those of the Saturn. From a technological standpoint, we would be safe with this strategy."*

-Ken Kutaragi, from a Sony internal memo in January 1995 discussing the possibility of creating a new console without Nintendo's help

-

### **Carrier Aces:**

Ed: 6

Danyon: 7

Al: 6.5 (quote: "A fun little World War II aerial combat game, but the difficulty could use some re-balancing.")

Sushi-X: 6

### **Earthworm Jim: Special Edition**

Ed: 9 (quote: "In a lot of ways this is the best version of Earthworm Jim, though the Genesis version still has a couple extras that this CD-ROM port inexplicably lacks. Still, the animation is top notch.")

Danyon: 9.5

Al: 8.5

Sushi-X: 8.5

### **Flintstones: The Movie:**

Ed: 4

Danyon: 2.5 (quote: "What a miserable game. Yabba-dabba-don't buy this.")

Al: 4

Sushi-X: 2

### **Lords Of Thunder:**

Ed: 7.5

Danyon: 8

Al: 7 (quote: "While the game itself isn't terrific, the graphics and music got a really nice boost from when this game was on the TurboGrafx CD, and as far as shoot-em-ups go, it's one of the best looking on the system.")

Sushi-X: 7.5

### **MechWarrior 3050:**

Ed: 7 (quote: "Not quite as revolutionary as the original, but it still brings the classic mech gameplay we all know and love. It's tough as nails but the original was too.")

Danyon: 7

Al: 8

Sushi-X: 8

### **Mega Man X2:**

Ed: 8.5

Danyon: 8

Al: 8 (quote: "While it could've been upgraded a bit more for the SNES-CD, it's still Mega Man and it's still fantastic, with even more creative bosses and power-ups than the

original.")  
Sushi-X: 8

### **Mighty Max:**

Ed: 5.5  
Danyon: 6  
AI: 6  
Sushi-X: 6 (quote: "This was a fairly generic action game, so if you're not a big fan of the show or the toy, you might want to skip this one.")

### **Pulseman:**

Ed: 9.5 (quote: "This gorgeous action game is a revelation and even better than Mega Man X2, to which it'll undoubtedly be compared. The ability to jump from wall to wall opens up new dimensions of gameplay and the real-time animated cutscenes littering the game bring Pulseman's incredible world to life.")  
Danyon: 8  
AI: 8.5

-

### **Mega Man vs. Pulseman: The Showdown (Which should you buy?)**

*This month, we reviewed two excellent SNES-CD action platformers in Mega Man X2 and Pulseman. Both games are great, and both games are quite similar, but also have some key differences. So which one should you buy? Let's break it down.*

Graphics:

Graphically, Mega Man X2 is excellent. While the upgrade to CD didn't change things up too much from the SNES version, it still features some great 3-D effects, very smooth animation, and a variety of bright and colorful stages. On the other hand, Pulseman seems to be designed for the SNES-CD from the ground up and it shows. The animations are fantastic and each level even features short cutscenes that pop up during gameplay. In contrast, Mega Man X2 features no cutscenes, even on the CD version. We've got to give the edge to Pulseman here for its slightly better in-game graphics and its animated cutscenes. **WINNER: Pulseman**

Sound/Music:

Both games feature superb soundtracks. Gamefreak's Pulseman soundtrack features some nice variety in music, though some of the motifs get a bit repetitive and not all of the sound effects impressed us. On the other hand, Mega Man X2 featured an amazing variety of rock and roll songs, some very good atmospheric music (the Crystal Snail stage for example), and a much better theme for bosses. While both games were good, Mega Man X2 was just a bit better. **WINNER: Mega Man X2**

Play Control:

We've got the familiar Mega Man control scheme vs. the innovative but at times tricky Pulseman controls. Pulseman has the ability to leap between walls very rapidly and on the whole, this is a fun skill to pull off, though at times can be a bit difficult. Mega Man is equipped with a variety of dashes, leaps, and the wall cling ability unique to the X series. While Pulseman has to be given credit for originality, it was Mega Man X2 that was ultimately a bit easier to master and more fun to control. **WINNER: Mega Man X2**

## Storyline:

While storyline isn't always important in games, here we agreed that both games did have compelling stories that drove the action of the games. In Mega Man X2, the robot is once again tasked with defeating Sigma and his Mavericks, with the added twist that his friend Zero, thought destroyed for good, has actually had his body parts scattered and needs to be recovered before Sigma can claim them and rebuild him. Pulseman, however, had what we feel was a bit more original and engrossing story, of a half-robot, half-human boy named Pulseman who struggles to find his place in the world and must save it and his friends from the evil Doc Waruyama, who happens to be Pulseman's father. The cutscenes added an additional layer of excitement to Pulseman's characters and story, and we just felt that Pulseman told its story better than Mega Man X2 did. **WINNER: Pulseman**

## Gameplay:

Finally, we come to the clinching category, and the most important category of all which is gameplay. Again, Mega Man X2 is a game we've all played before now many times, while Pulseman brings something new and unique to the table. That said, the Mega Man game formula is tried and true and this is one of the most fun Mega Man games ever, with excellent level design and just the right amount of difficulty. Pulseman crams its nine stages with fun enemies and bosses, though the game can be somewhat frustrating at times, it's ultimately rewarding to finish off the final boss and see the excellent ending. While this category was extremely close, probably the closest of all five, we had to give the slightest of edges to Mega Man X2. When it works, it REALLY works, and it was the game we kept going back to. While Pulseman is a great game, if you can only get one, choose the Blue Bomber. **WINNER: Mega Man X2**

-a comparative article of *Mega Man X2* and *Pulseman* featured in the February 1995 issue of *GameFan*, which awarded both games an identical score of 41/50

-

*"Moonlight was created to be sort of a companion series of sorts to Breath of Fire. We intended to keep our Breath of Fire RPG series on the cartridge Super Famicom and came up with Moonlight for CD players, but once the CD became pre-eminent, we transitioned Breath of Fire to the CD format starting with the sequel. Due to Moonlight's commercial success we were able to support two RPG franchises on CD!"*

-Capcom's Tokuro Fujiwara, speaking with *Famitsu* magazine in the December 1997 issue

*"So the first half of Moonlight is a pretty straight-forward game where you're crushing this evil crime syndicate and their sadistic leader. But about halfway through there's a serious twist and you soon find yourself not only trying to save the city, but the entire world! The game opens up completely and goes from a gritty noir RPG to a full-on cyberpunk fantasy adventure. I think the first Moonlight is still the best, and it's definitely one of my favorite RPGs on the SNES-CD."*

-a user on Kotaku.com, discussing the game *Moonlight* in a comment on a "Talk Amongst Yourselves" article

## Epic Center

*Welcome to the very first installment of Epic Center, a new feature in Nintendo Power*

magazine! Here, you'll find tips, tricks, strategies, and previews for a variety of RPG and adventure games coming to Nintendo systems!

## **DANCING IN THE MOONLIGHT**

*Moonlight* is a new role-playing game from Capcom taking place in a dark, crime-infested city called Banboru. Over the course of the game, twelve characters from all walks of life will join your party as you work together to battle the evil Jade Syndicate and restore peace to this troubled metropolis. Be warned, defeating this crime syndicate won't be the end of your adventure! Indeed, it'll be only the beginning.

Characters in *Moonlight* include...

**Shuko:** The main character, a rookie police officer who is new to the city. He starts out naive and inexperienced but as he gets deeper and deeper into the seedy underworld, he'll discover that things definitely aren't what they seem.

**Craig:** Shuko's partner and best friend, a cop who's been on the force several years and tries to teach Shuko the ropes. Don't rely completely on his experience, he can't carry you the whole way!

**Wei Lin:** A mysterious informant who soon joins Shuko's cause to get revenge on the syndicate's leader. She might be beautiful but don't underestimate her.

**Jack:** A bouncer who has a score to settle with the syndicate. He knows a few criminals and you'll need their help to get further in your quest.

**Julia:** Another officer at Shuko and Craig's precinct, she's a crack shot and you'll bump into her a few times before she joins your party later on.

**Taifung:** A martial-arts master who runs an illegal underground dojo, he clashes with Craig plenty but the two of them will need to work together to help Shuko succeed.

You'll meet plenty of other characters on your long journey. This truly is an RPG like no other!

(...)

## **A FANTASY FOR THE AGES**

*Final Fantasy VI* hits the Super Nintendo CD in just two short months. The game already released in Japan to record sales and stellar reviews, and we got a chance to sit down with Ted Woolsey, head translator for the North American version of the game, for a quick preview of what we'll be looking forward to.

**NP:** Thanks for giving us this interview, we can't wait to play *Final Fantasy VI*! What's been your favorite thing about translating this game?

**Ted Woolsey:** The sheer variety of characters, playable and otherwise. I feel like this *Final Fantasy* has the best cast of characters yet, both heroes and villains. The cast of heroes alone is huge, there are 14 in all and that's not counting the temporary characters who join your group for a brief time.

NP: We know you can't spoil any of the game's HUGE twists, but can you give us a quick tease on what to expect?

Ted Woolsey: The game on its surface is about the conflict between magic and technology, but from a character standpoint, the main character Terra is conflicted about who she is and what she's going to become. She's torn between two sides of herself, and you'll see in the story that the conflict forms the heart of a big part of this game.

NP: So this will be a more mature, epic Final Fantasy than those in the past?

Ted Woolsey: I feel that the story of this game rivals that of any Hollywood movie. The production values are astonishing and the dialogue is really well written, I'm working really hard to make sure none of the great work from the Japanese writers gets lost in translation. It's been a challenge but a really gratifying one.

NP: Thanks again for agreeing to talk with us, we're excited for this game!

Ted Woolsey: No doubt, you're gonna love it!

(...)

*That's it for this month's edition of Epic Center. For those of you with this month's issue of Nintendo Power CD, your disks contain preview videos that take you behind the scenes of the upcoming RPGs The Darkest Ritual and Final Fantasy VI! In addition, Moonlight, The Darkest Ritual, and Final Fantasy VI, along with seven other great games, have playable demos for you to try them before anyone else!*

-excerpted from the "Epic Center" feature in the January 1995 issue of *Nintendo Power*

-

*Valis: Rebirth* was the first major release from Telenet Japan for the Super Nintendo CD in North America. While FMV games such as *Time Gal* had been featured on the system before, *Valis: Rebirth* was the beginning of a larger strategy for the company to gain a foothold with international gamers, and they would start with one of their flagship action franchises. *Valis: Rebirth* was a remake of their 1986 MSX game *Valis: The Fantasm Soldier*, and it could actually be considered a complete reboot rather than a remake, taking elements from the first four games of the series in retelling the first. It tells the story of the heroine Yuko, whose friend Reiko is abducted and brainwashed by the evil soldier Rogles into helping him defeat the only person who can stop his reign of terror. The game features fourteen side-scrolling levels and is a hybrid of an action game, a platformer, a hack and slash, and a puzzle game with some RPG elements as well. Yuko can upgrade her equipment by finding treasures or defeating enemies, and each level features a ferocious boss (with many levels featuring one or more sub-bosses as well). The game features animated cutscenes and in level voiced scenes specifically made for this version, indeed, it was a complete revamp from the ground up, with only the basic storyline and a few elements taken from the 1986 original. Also, unlike in the original game, Yuko's friend Reiko survives at the end and indeed would become playable in the sequel. With this game, Telenet Japan intended to create a flagship franchise, and it largely worked. The game sold massively in Japan and decently in the States, which justified both the creation of sequels and their localization, indeed, there would be three SNES-CD *Valis* games in all, and the series would continue on

the Ultra Nintendo with 1999's *Ultra Valis: Knight Of Light* that would take the series into three dimensions. Though subsequent games such as *Tale Phantasia* would be far more successful for Telenet Japan, *Valis: Rebirth* laid the important groundwork for the company becoming one of Nintendo's best second parties.

### **Sega At The Arcade: A New King?**

While 1995 is poised to be the Year of the Saturn for Nintendo's everpresent rival, Sega also seems to be trying to make 1995 the Year of the Arcade! Sega has begun porting a number of their arcade hits to the Mega Charger, and the Saturn has already been promised a number of major ports including *Virtua Fighter*, *Virtua Racing*, *Desert Tank*, and *Daytona USA*. But Sega is hard at work on the next generation of arcade games, and Yu Suzuki has been quoted as saying that he's already working on a new lineup of games that will hit arcades in 1995, including a space shooter that is said to be the spiritual successor to the Space Harrier series called *Galactic Savior*. Suzuki promises that this game will utilize new hardware from Sega to bring to life dozens of lifelike spaceships on screen at once, with an addicting storyline that will keep players putting quarters in machines until their pockets run dry.

Suzuki is also said to be in talks with Namco for a deal that would put new Sega arcade boards in Namco machines to create upgraded versions of games such as *Ridge Racer*, and that such tech would also be utilized in a brand new 3-D fighting game that would involve a variety of characters wielding powerful bladed weapons in battle. Namco has already stated its intent to develop exclusively for the Saturn in the future, and as the two companies draw closer, it seems that their alliance is hellbent on challenging Nintendo for market supremacy. With many of these Namco arcade games sure to be ported to the Saturn over the next two years, it could draw plenty of arcade junkies into Sega's fold, something that's sure to be music to the blue hedgehog's ears.

-from an article in *GamePro* magazine, February 1995

-

### **Winter CES Update!**

The Winter 1995 Consumer Electronics show was a bit dialed back in terms of video game floor space. The big game companies seemed to be holding back, most likely for May's upcoming Electronic Entertainment Expo, but Nintendo and Sega were still showing off some exciting upcoming games, and we're sure you'll be seeing a lot more of them in the coming months.

First off was Nintendo, and the big game at their booth this year was their newest Zelda game, *The Legend Of Zelda: Ocarina Of Dreams*. The game was playable at Nintendo's booth, and despite the crowds, I managed to get some time with the controller in my hand. What I saw was nothing short of incredible. The character animation has received a huge upgrade, Link looks so alive and colorful on the screen even from a top-down perspective, and the enemies moved in fun and unique ways. Though the game won't have any voice

acting to speak of, we could still hear some loud grunts when Link swung his sword or went for his famous spin-attack, and enemy growls could be heard as well. The added sound effects give Link some much needed personality, though the gameplay spoke for itself. You can now wield two items instead of one, with one mapped to the Y button and the other to the X button, making it a bit more intuitive so you're not constantly switching. There will be new items featured in this game, and some returning items from Link's Awakening never before seen in a console Zelda. This includes Roc's Feather, which allows Link to jump across pits and to new areas, bringing more of an action element to the classic adventure franchise. I wish I'd gotten more time to play but from what I saw, *Ocarina of Dreams* is going to be a huge hit like the Zelda games before it.

Sega's booth was also quite crowded, with the biggest crowds around the new game *Knuckles: Renegade*. This game stars Sonic's new pal Knuckles in a quest of his own. Gameplay seemed somewhat similar to Sonic, though Knuckles has a few combat moves at his disposal, giving you a lot more ways to take out enemies. Knuckles is going to be teaming up with some new friends in this game that has the titular echidna leading a rebellion against Dr. Robotnik. One of those friends is a beautiful butterfly woman named Corona who seems to be Knuckles' love interest. She's actually playable for certain parts of the game and has a cool attack where she fires sonic lasers out of her hands. This game will be out in April and I got to play through the first couple of levels, I was quite impressed and I can't wait to take Knuckles and his band of rebels out for a spin.

There was another player at this year's CES, and that was Bandai, showing off their next generation system. They call it the Solaris, and from what I saw, the graphics are quite good, this thing is capable of some powerful 3-D effects comparable to what the Saturn can do, but time will tell if Bandai can compete with Nintendo and Sega. Bandai only had tech demos to show off and a concept design of the system. It looks really sleek but it's important to remember that this is a project that Apple backed out of, and they must've had a reason for doing that. So far, it's too early to tell if they'll repeat the mistakes of their predecessors, but I'm sure some of those failed predecessors would tell you that their biggest mistake was just trying to take on the two juggernauts.

-excerpted from an article in the March 1995 issue of *GameFan*

-

**SNES-CD Power Charts – January 1995** (starting with the January 1995 issue, *Nintendo Power* stopped printing point totals for their Power Charts feature, which remained a combined ranking of player votes, editors' choices, and sales figures for the month three months prior)

1. Squad Four
2. Mortal Kombat II
3. Super Street Fighter II: Arcade Edition
4. TMNT V: Wrath Of The Foot
5. Super Mario World 2
6. Contra IV: Hard Corps
7. Jewels Of The Realm
8. SimCity 2000
9. Secret Of Mana
10. Donkey Kong Country
11. Mighty Morphin' Power Rangers

12. Wing Commander
13. Illusion Of Gaia
14. Final Fantasy Origins
15. NBA Live 95
16. Nightmare Busters
17. Kid Icarus CD
18. Lethal Enforcers II: Gun Fighters
19. Cannon Fodder
20. Super Mario Kart

-

### **January 23, 1995**

Ken Kutaragi and Norio Ohga met once again in Ohga's office to discuss the latest developments in Sony's video game division. Despite the terrible earthquake in Kobe six days before that had killed over six thousand people, it was business as usual at Sony, and a busy time it was indeed.

"We've confirmed that Namco will be exclusive to Sega for the foreseeable future," said Kutaragi, adding to the news that Capcom would likely be primarily supporting Nintendo and Sega regardless of what Sony did in the future, and that Squaresoft would almost certainly remain loyal to Nintendo as well. "The two are working together on a series of arcade games that will receive exclusive ports to the Sega Saturn."

Ohga furrowed his brow and took on the familiar stern expression that Kutaragi had grown to know so well. The news that Sony would have difficulty gathering third-party support if it struck out on its own with a game console did not please Ohga, and once Nintendo caught wind of it, it would likely reduce the company's leverage in any negotiations.

"Keep reaching out to Capcom and Konami, their support will be extremely important going forward. We need to begin development on the console immediately...I'm wanting to release it in Japan next summer, and have a release before Christmas of 1996 in the West. We'd be only a year behind the Saturn there, and would likely be far ahead of Nintendo's next console."

"Work on the chips and initial development kit has already begun," said Kutaragi. "We'd likely be able to have the kits sent out to software developers sometime in April."

Ohga nodded, pleased with this information. He knew Kutaragi didn't want to go behind Nintendo's back, but he'd had a history of going behind people's backs before. Still, there was plenty of time for Nintendo to change its mind, even after the development kits had been sent out. He and Kutaragi both would prefer it if Nintendo accepted Sony's terms to develop their next generation console...together.

But as the old adage goes, hope for the best and prepare for the worst. Such thinking had saved lives when the earthquake had hit, and it would give Sony an advantage that it would need if it indeed began competing with Nintendo.

"Our big holiday game for the Super Nintendo CD, *Ballistic Limit*, I believe it's called. Can you get a hold of Mr. Olafsson?" asked Ohga, looking across the table at Kutaragi.

"Yes, I can."

"If Nintendo doesn't agree to our terms within the next three months, we'll need to pull that game and redesign it as a launch title for the new Sony console."

-

*"People didn't realize it at the time, but Nightsquad was actually quite an incredible programming feat. Controlling up to five onscreen characters at once and being able to assign them independant actions, even very basic ones, actually did tax the SNES-CD significantly and it's a minor miracle that WayForward was able to pull it off. For a first effort, it's a fantastic game and it helped put publisher THQ on the map."*

-*"Retro Games That Pushed The Limits: SNES-CD"*, Racketboy.com, March 1, 2006

*"I'm not surprised these two characters struck a chord with people, especially Etienne. The protagonists of The Darkest Ritual were two of the first really popular female video game characters and it's gratifying to me that this series became one of Ubisoft's biggest franchises. I never had more than an advisory role in the series' production so I can't take too much of the credit, but just to have gotten the chance to work on the series has been one of the biggest joys of my career."*

-Michel Ancel, discussing *The Darkest Ritual* in a Kotaku.com interview about the series' fourth game *The Darkest*, on October 21, 2013

*"Kris, I know we're dealing with things far beyond our control, but I'm not afraid! Having these powers is awesome and I want to use them to protect people! Please...please stay with me. I can't do this alone."*

-Etienne, *The Darkest Ritual*

*"The new Scooby-Doo and Justice League video games for the Super Nintendo CD present a major marketing opportunity for Cartoon Network. Tying in these games with a preview of Cartoon Network's programming will help get the network into more households as families who play these games will hopefully call their cable providers to ask for it."*

-from an internal memo distibuted to the Cartoon Network marketing department on January 29, 1995

-

### **Bass Masters Classic:**

Ed: 6

Danyon: 6 (quote: "While a passable fishing game, it features fairly primitive graphics and doesn't do anything to make itself attractive to typical players.")

Al: 6

Sushi-X: 6

### **Justice League: The Battle For Earth:**

Ed: 7.5 (quote: "This exciting action game at first plays like somewhat of an X-Men: Mutant Apocalypse rehash, but the second half really distinguishes itself and it features a superior storyline and cutscene sequences.")

Danyon: 6.5  
Al: 6  
Sushi-X: 7

### **Metal Warriors:**

Ed: 8  
Danyon: 8  
Al: 8  
Sushi-X: 8.5 (quote: "LucasArts does it again! This badass game is definitely the closest you'll ever get to piloting a giant mech suit and the controls are surprisingly intuitive.")

### **Revolution X:**

Ed: 3  
Danyon: 3.5  
Al: 2.5 (quote: "This Aerosmith game was barely fun in the arcades and it translates quite poorly to the SNES-CD. The graphics and music got ported over well, but the gameplay just isn't suited for a home console and it clearly shows.")  
Sushi-X: 1.5

### **Scooby-Doo: The Mansion Mysteries:**

Ed: 5.5  
Danyon: 8  
Al: 7.5 (quote: "If you're a fan of Scooby-Doo this is definitely the best Scooby-Doo game ever. It feels like several episodes of the TV show connected together and it mixes the point-and-click mystery genre and platforming fun quite well.")  
Sushi-X: 5.5

### **Timecop:**

Ed: 5 (quote: "A mediocre game for a mediocre movie. There are far better action games out there.")  
Danyon: 4.5  
Al: 4.5  
Sushi-X: 5.5

### **The Darkest Ritual:**

Ed: 7.5  
Danyon: 7 (quote: "While not the best RPG on the SNES-CD, indeed, the gameplay is fairly generic as far as RPGs go, the appeal of this game lies in its characters and fun dialogue. I wish the game had featured some voice acting, but it's not a deal-breaker.")  
Al: 8.5  
Sushi-X: 8.5

### **Escape From The Lab:**

Ed: 5.5  
Danyon: 4  
Al: 6 (quote: "Matt Frewer's hilarious performance is the only good thing about this FMV

game about escaping from a science lab disaster area, but even he can only carry this game so far, and even then, it's no Max Headroom.")

Sushi-X: 4

### **The Hunt For Sasquatch:**

Ed: 6

Danyon: 6 (quote: "This lightgun powered action game isn't really anything to write home about. Thankfully, it's not too frustratingly difficult, so you should at least have SOME fun on the way to find the sasquatch.")

Al: 5

Sushi-X: 5

### **Jim And Kim:**

Ed: 6.5

Danyon: 7.5

Al: 6

Sushi-X: 5 (quote: "While this platformer's graphics are pretty, that's the only thing saving this mediocre game featuring level after level of these two kids adventuring through seemingly endless factories. Stick to Donkey Kong Country.")

### **Real Ultimate Football:**

Ed: 0.5 (quote: "An utterly disgraceful FMV football game. Technical glitches plague what's already some of the least fun gameplay I've ever had the dishonor to slog through. The worst game on the SNES-CD, even worse than Who Kidnapped Santa Claus.")

Danyon: 1

Al: 1

Sushi-X: 0.5

### **Nightsquad:**

Ed: 8

Danyon: 9 (quote: "This awesome run-and-gun features innovative gameplay and a variety of weapons and enemy types. Switching between members of your squad is surprisingly easy thanks to the excellent control scheme.")

Al: 8.5

Sushi-X: 9

-reviews of the SNES-CD's February 1995 games from the March and April 1995 issues of *Electronic Gaming Monthly*

-

*"When describing Etienne and Kris, some people like to use the 'Tomboy and Girly Girl' trope, but the two of them really don't conform to that. In a lot of ways, they're two halves of the same soul. I like to think of them as....well, if you're a fan of the Beetlejuice movie, the way I describe Etienne and Kris is that Kris is more like the original Lydia from the movie. Dark, morose, quiet, that sort of thing, where as Etienne is more like the Lydia from the Beetlejuice cartoon. She's dark as well but she's more upbeat, outgoing, adventurous. They're both closer to being girly girls than tomboys, but not in a typical "girly" fashion.*

*They're not into the latest trends, maybe the latest GOTH trends perhaps, but even then...they're both so unique and I think that's why the two of them have had such appeal to players over the last twenty years."*

-Ubisoft's Elliot Birke, lead character designer for *The Darkest* series, discussing Etienne and Kris in a 20th anniversary interview with Topless Robot, February 13, 2015

## **The Darkest Ritual – Ubisoft's RPG Gamble**

*The Darkest Ritual is one of the most intriguing games of the year. A Japanese-style role-playing game by a Western publisher, it's actually been getting a good deal of buzz over the past few months as critics line up to praise the game for its charming characters and unique storyline. Let's dive in to our Game of the Month and give you all the details on this fascinating adventure.*

*The Darkest Ritual* is a game that takes place in a modern day high school, in contrast with the high fantasy settings of most RPGs. It stars two 17-year-old best friends, Etienne and Kris, who have been dabbling in magic spells, witchcraft, and the occult for most of their young lives. When Kris accidentally uses a spell that opens up a gateway to the underworld, it triggers a demonic invasion at the girls' school! Now the two of them must master their powers, recruit fellow adepts, and conquer the demon hordes in one of the strangest RPG quests ever brought to a home console.

*Etienne-*

Etienne is a tall, platinum blonde, upbeat girl with a gift for light magic. Though she's cheerful and perky, she has a very dark sense of humor at times that can make her somewhat creepy to those who don't know her. Her very pale skin and black lipstick give her a soft of "dark widow" look but if you get to know her, she's actually very nice! Etienne's affinity for light magic makes her somewhat of an unlikely witch, but when pushed too far she can combine her light magic with bursts of dark energy for a spectacular chain reaction! A bit of trivia about Etienne: though Etienne is a girl, the name is actually almost always used for males, and in the French version of *The Darkest Ritual*, Etienne goes by the name Stephenie.

*Kris-*

A bit shorter than Etienne, not quite as pale with short black hair, Kris is a perfect counterpart to Etienne's upbeat charm. She's somewhat depressed but still courageous and determined to use her powerful dark magic to help those in need. She's a bit more passive than Etienne but when push comes to shove she can be even fiercer than her friend! She's the one who enacted the dark ritual that brought the demons to her hometown, and she feels a deep guilt about unleashing such forces on her friends and loved ones. This guilt drives her to accomplish incredible things, making her a witch who will fight to the bitter end!

-excerpted from *The Darkest Ritual* cover story in the March 1995 issue of *GameFan*, which gave the game a 47/50, the best review the game received from a major video game publication. It was also the runner-up for *GameFan*'s 1995 RPG of the Year award behind *Final Fantasy VI*.

*"The Darkest Ritual ended up being a major success story for us. It became the first non-Squaresoft, non-Enix JRPG to sell over 100,000 units in North America. We actually limped*

*to 100,000 in 1996, a week before Tale Phantasia blew past that mark. Our game sold 110,000 in North America overall. Combine that with the 250,000 units we sold in Europe and the 150,000 we sold in Japan and we moved over half a million copies of the game, so by the time the Ultra Nintendo came out we were already in the planning stages for The Darkest Night. It, along with Rayman, helped to put Ubisoft on the map, and we've been putting out great games ever since."*

-Michel Ancel

-

*"Before 1995, we were mostly doing educational or licensed games. Nightsquad represented our first really big original project, and we wanted to make the most of the technology of the SNES-CD. We knew a game like Nightsquad wouldn't have been possible on the Sega CD and it took some serious doing to get the game to work on Nintendo's system. The months of long nights and little sleep paid off in the end, but it was a hell of a ride."*

-Matt Bozon, creative director at WayForward

### **How THQ Found Its WayForward With *Nightsquad***

In 1993, THQ was a struggling toy company looking for a foothold in a new business. Noticing the great success that video games were having, in large part due to the exciting new technology represented by the Super Nintendo and the Sega Genesis, THQ began looking for companies to develop games that it could then publish to one of the new game systems. Enter WayForward with their concept for a video game about a group of special-ops police officers battling crime in a city riddled with drug lords and bank robbers. The unique aspect of the game was that instead of controlling one character, you would control five, making your way through the city with each character having their own individual weapon or skill while you battled hordes of enemies. It didn't seem like it could be done, the SNES-CD, for all its processing power, still featured a fairly limited amount of RAM and at first the game would stutter relentlessly. Nevertheless, WayForward pressed on, finally stumbling on a programming trick that would allow the five characters to be displayed on screen while still acting independently, simplifying their AI enough to eliminate the slowdowns and stuttering while at the same time actually making an easier control scheme for players to use. Now, with practice, the player could easily rotate through five characters at once, switching weapons and issuing commands on the fly even with the limited capabilities of the SNES controller. Nightsquad became one of the most addictive run-and-gun games on a system flush with great fast-paced action titles, and was seen as one of the best video games of the first half of 1995. The success of the game, which sold over a quarter of a million copies in North America, put THQ on the map and established WayForward as a studio that put out quality games that pushed the limits of fourth-generation hardware. Though the two companies only collaborated a few more times in the future, both companies emerged from 1995 as bigger names in the video game industry, especially THQ which would go on to become one of the fifth-generation's biggest publishers of games.

-Excerpted from "Early Gems Of The Super Nintendo CD", an article posted on Gamesovermatter.com, December 17, 2013

"You're going to run into a horde of Armor Platers right at the start of Stage 3. If you've got the Railgun, give it to Jones and put him in the lead and watch him take out the entire group of enemies while the rest of the squad should be able to keep Jones from taking damage with suppressing fire.

Stage 5's boss is a massive tank, and the guy inside will chuck deadly Molotov Cocktails which can deplete your entire squad's health in a hurry. Order everyone but your leader to back off. Elliot or Marie can use an upgraded Pistol to shoot the guy in the tank, but if you're taking too much damage, try to damage the front of the tank with Shotgun blasts from Jones. Make sure not to let the five members of the squad get too close together.

When the helicopter comes down the second time in Stage 6, there'll be a hostage dangling from it and it only takes a tiny bit of damage to kill the hostage and fail the stage. Make sure you use a weapon that can aim up at the front of the helicopter, once the helicopter is just hovering, use a Pistol to shoot at the rope and cut the hostage down."

-Excerpted tips from Nintendo Power's coverage of the first eight stages of *Nightsquad* in the February 1995 issue of *Nintendo Power*

-

"Oh, going back to do the voice of Daphne was great fun! I'd never done a voice for a video game before but it was largely just the same as the cartoon. It wasn't like the video games I'd seen, it was more like a story or a movie, from what I saw it was a lot like the cartoon itself. When I talk to Mary Kay (Bergman) about voice acting, sometimes she mentions video games to me and she says that they're hard work with a lot of yelling and grunting but there wasn't really any of that with this game, it was just a really fun time with all of my old friends."

-Heather North, in a 2009 interview with the Scooby-Doo Wiki about the making of *Scooby-Doo: The Mansion Mysteries*

"Well, our *Justice League* game came out right around the same time as that *X-Men* game came out, and so of course there were comparisons, but we really weren't trying to copy them, we just wanted to tell a story with the *Justice League* characters and fortunately I think the people who played it realized that. We made our game at the same time they did, there's no way we could have ripped them off!"

-Jared Reely, localization/project manager for Konami of America

"And now, a special preview of the all new Cartoon Network!"

-from the introduction to a special *Cartoon Network* preview video included with both *Scooby-Doo: The Mansion Mysteries* and *Justice League: The Battle For Earth* on SNES-CD

"It's all about brand synergy, getting your properties out there for people to take a look at and say, 'Well that looks good, I want that!'. These games are getting better and better every day, they're just like movies, just like cartoons, and that's why this *Cartoon Network* promotion is such a good idea for us, because on *Cartoon Network*, you're gonna see *Scooby-Doo*, you're gonna see *Superman*, and *Batman*, and all these characters, and so why not start with the games? And I'm also trying to get a *WCW* game on there too, been talking to some real smart guys over there in *Japan* about a *WCW* game."

-Ted Turner, from a February 28, 1995 interview with *Forbes* magazine where the conversation briefly turned to Warner Brothers' SNES-CD projects

### **From Cartoons To CD-ROM: Warner Brothers' All New Video Games**

Warner Brothers has always been a player in the video game market, and with vast holdings all over the spectrum of media, it's no surprise to see their latest efforts for SNES-CD. What is surprising is that both games are actually quite good, and should be two of the biggest

selling video games of the quarter.

*Scooby-Doo: The Mansion Mysteries* reunites the old gang of Freddy, Velma, Shaggy, Daphne, and of course that lovable dog Scooby-Doo, as the group investigates a series of mysteries that take place in and around a seriously haunted mansion. The game is structured as a series of "episodes", six in all, each with its own self-contained mystery to solve, but all six tying in to their own mystery that the player will solve at the end of the game. The game features a number of cutscenes that, while not animated quite as well as the old cartoons, are still entertaining and tell the game's story in a fashion that fans of the old show would surely appreciate. Players alternate between searching for clues and moving between rooms, occasionally dodging traps and the odd monster. The mysteries aren't too tough to solve, the joy is in discovering snippets of dialogue or uncovering a hidden artifact that's not really necessary to solve the mystery.

*Justice League: The Battle For Earth* is an arcade-style action game that lets you choose between Superman, Wonder Woman, Batman, Green Lantern, The Flash, or Aquaman as you work to stop the evil Darkseid and his minions from taking over the Earth. It's quite a fun game with each character possessing their own weapons and moves to use on the enemies. The game also has in-level and between-level cutscenes in the form of still images accompanied by character voices. It's a lot more storyline heavy than the similar game *X-Men: Mutant Apocalypse* released last December, and should appeal to DC Comics fans who have been somewhat starved for games on the CD-ROM systems.

-from an article in *Wired* magazine's March 1995 issue, previewing some of the top video games of the first part of 1995

-

*Thinking of names for the new Sony console. Why not an acronym? **New and Outstanding Visuals and Audio. Nova.***

-Ken Kutaragi in an internal memo to Norio Ohga, March 7, 1995

*The acronym itself needs work but I like the idea of Nova. The directors want to announce it at the 1995 Electronic Entertainment Expo if Nintendo hasn't accepted our conditions by May. I'll discuss the name with the board and we'll start getting promotional materials created immediately.*

-Norio Ohga in an internal memo to Ken Kutaragi, March 7, 1995

-

1995 would be a seminal year for DC Comics, particularly because it was the tenth anniversary of the multiverse shattering *Crisis on Infinite Earths*. Though DC's intent for the maxi-series was to streamline the Pre-Crisis multiverse into a single universe to make more accessible for new readers, it had the opposite effect. According to writer Marv Wolfman, none of the characters in the new DC universe (save for a few survivors from the multiverse like Harbinger, Lady Quark, and Pariah) were supposed to remember the Crisis or the existence of the multiverse, which caused the first of many continuity snarls. Janette Khan's edict that Superman be the sole survivor of Krypton caused the first major snarl. Kara Zor-El's sacrifice to save Superman in *Crisis on Infinite Earths* played a critical role in the story as did Barry Allen's. However, if DC's heroes remembered Barry's sacrifice, then who saved Superman in *Crisis on Infinite Earths* #7?

Similarly, John Byrne's *Man of Steel* established that Superman began his career as an adult and never was Superboy in the new universe. That created a snarl for the Legion of Super-Heroes because Superboy and Supergirl were charter members of the team. Additionally, Superboy sent Mon-El to the Phantom Zone in the previous continuity and created another paradox. Legion writer Paul Levitz attempted to rectify it by creating a Pre-Crisis Superboy from a pocket universe. Then in 19898 Superman editor Mark Carlin ordered the new Legion creative team to sever any ties to the Man of Steel, which necessitated the a soft reboot where Mo-El took Superboy's place as Valor that created more snarls.

Wonder Woman and Hawkman's revised origins also created paradoxes that required multiple retcons to correct. In the case of the former, the retcons did not affect Wonder Woman herself as it did Donna Troy AKA Wonder Girl. The character herself was the product of a misunderstanding; "Wonder Girl" was originally Wonder Woman as an adolescent but Bob Haney, the creator of the Teen Titans, thought she was a separate character and thus included her in *Teen Titans* #1. She became an orphan rescued by Wonder Woman— however, George Perez's reboot of Wonder Woman placed her debut in the contemporary DC universe, well after the debut of Wonder Girl and the Justice League (though DC substituted her with Black Canary as a JLA founding member.)

As for Hawkman, Tim Truman planned for *Hawkworld* to be a retelling of Katar Hol incarnation of the character, which would lead into 1961's *Brave and the Bold* #34. However, John Ostrander's follow up *Hawkworld* established that Katar Hol, like Wonder Woman, debuted in the contemporary DC universe. However, Katar Hol was a longtime member of the Justice League of America and appeared in *Action Comics* and *Justice League International* Post-Crisis, which created even more complications. Despite attempts at

substitution (the Golden Age Hawkman, Carter Hall taking his place on the JLA and a Thanagarian spy assuming the role in *Invasion*), it was clear that DC's continuity became too complicated for new readers hence the need to iron out the kinks.

DC intended to release *Crisis in Time: Zero Hour* in July 1994 but according to *Zero Hour* writer, Dan Jurgens, Janette Khan believed that February 1995 would be more appropriate for it to coincide with the original Crisis. What DC originally slated to be a five issue series expanded into eight parts released over two months. The delay also gave DC's other talent more room to accommodate the event as well as provide creative input. The rehabilitation of former Green Lantern, Hal Jordan; *Emerald Twilight* was an extremely polarizing story arc because it reduced a longtime member of the Justice League into a murderer. Eventually, Mark Waid came up with the solution that Hal Jordan's breakdown was part of the manipulations of longtime Legion foe, the Time Trapper who became the primary villain of *Zero Hour*.

The best way I can condense the plot is this: after Hal Jordan (now Parallax) absorbed the power of the Central Power Battery on Oa, the Time Trapper fed him visions of the original Crisis where the five remaining Earth merging into one. Convinced that if he restarted time, he would restore the multiverse and Coast City along with it. Time began to unravel, erasing the 30th century entirely, and temporal anomalies brought back previously deceased or incapacitated, like the second Doctor Mid-Nite (Beth Chapel) and Batgirl, and caused the various timelines to converge. Once the heroes discovered the source of the anomalies they confronted Parallax in the void that existed before the Big Bang. The Time Trapper revealed himself and then struck Jordan down to take control of time itself. Jordan, having come to his senses and repentant for his actions used the last of his power to destroy the Time Trapper and create a new Big Bang and a new timeline.

The event in itself was almost as controversial as *Emerald Twilight*. Like *Armageddon 2001* before it, a leaked memo revealed that DC originally planned to kill off the Justice Society because Mike Carlin believed that, "no one wanted to read a book about old superheroes." Fan outcry prompted a last-minute revision; instead of killing the Justice Society, they lost the plot contrivance that kept them young. Those deemed redundant, like the Golden Age Atom, Dr. Mid-Nite, and Hourman as well as Starman and Wildcat, went into permanent retirement while their successors took their mantles. There were still casualties other than Hal Jordan. The Golden Age Hawkman and Hawkgirl died in a particularly gruesome fashion, impaled from behind by Parallax when he revealed himself. Power Girl, a throwback to the pre-Crisis Earth-2, also died in a scene that mirrored the original Supergirl's in the previous Crisis.

DC launched a special "zero" issue for each of their ongoing titles that "revised" the continuity discrepancies via modified origins. For example, Donna Troy's post-Crisis origin remained intact, however, Wonder Woman debuted before her and was again a Justice League founder and thus took Donna on as an "apprentice" as well as Hippolyta declaring her an honorary Amazon. Similarly, Katar Hol's *Hawkworld* origin was still in continuity but he arrived on Earth at the same time as his Silver Age compatriots. DC Comics also released *DC Comics Presents #0*, which contained the definitive timeline of the new DC Universe.

*Crisis on Infinite Earths* earned the largely undeserved reputation of helping usher in the "dark age" because the maxi-series was contemporaneous with *Watchmen* and *The Dark Knight Returns*, which deconstructed the medium. Most comic book historians credit *Zero Hour* with the reconstruction of the genre. In the wake of the crossover, DC wanted the "iconic" versions of the Justice League and Teen Titans to return. As such Mark Waid, having

proven himself on *Flash*, took on writing duties of *Justice League* (formerly *Justice League America*), which restored the "Big Seven" plus longtime members like Green Arrow and Black Canary as well as a new Doctor Fate. *Justice League* also reinvigorated the career of George Perez, who stayed on the title for an unbroken four-year run. *New Titans* simply became *the Titans* written by Karl Kesel and drawn by Howard Porter, which involved Robin (Tim Drake), Superboy, Impulse, and a new Wonder Girl under the tutelage of Troia, Nightwing, and Arsenal.

However, DC completely rebooted *the Legion of Super-Heroes* overseen by *Animal Man* and *Doom Patrol* writer Grant Morrison and a young Bryan Hitch. In many ways, Morrison's *Legion* was a loving pastiche of old pulp science fiction like *Buck Rogers*, *Flash Gordon*, or even the UK's own *Dan Dare*. Fans responded positively to the new direction and for a time it even outsold *Justice League*. In some ways, the success of *Legion* and *Justice League* paved the way for Morrison and Waid's acclaimed reimagining on *Action Comics* and *Superman* at the end of the decade.

So did *Zero Hour* fix all of DC's continuity problems? No, but they were far less pronounced post-ZH and DC's policy was to ignore past mistakes and focus on the present and future. It also helped bring an end to gun-toting antihero trend that defined Image and, to a lesser extent, Marvel. For the first time in decades, DC outsold Marvel on a consistent basis where *Justice League* and *Legion* regular surpassed *X-Men* (albeit by a narrow margin.) With its non-*Spider-Man* and *X-Men* titles in disarray, DC's revamp would force Marvel to reexamine its strategy. However, the battles in the boardroom and Marvel's bankruptcy would complicate matters.

But that is another story for another day.

-from the blog "The Musing Platypus" by B. Ronning, January 9, 2014

-

*"Final Fantasy VI was immediately popular in Japan, and with the increasing prevalence of RPGs in the West, we had high hopes for its Western release. The amount of enthusiasm among players there for this game surprised a lot of us! We shouldn't have been surprised but we kept our expectations somewhat muted."*

-Hiranobu Sakaguchi, executive producer of the *Final Fantasy* series in a December 1995 Famitsu interview

*"We'd originally intended to have Sarah Brightman as the singer for Celes' part in the opera, but we were unable to secure her, she wanted too much money and so we had to look elsewhere. We found another singer, a young singer who was quite brilliant, and certainly of course now she's quite popular but back then she was largely unknown."*

-Nobuo Uematsu, discussing the making of "Aria di Mezzo Carattere" in *Final Fantasy VI* with Kotaku.com on December 22, 2009

*"Well, in 1995 Sega was struggling quite a bit, Nintendo was doing very well and Sega was having trouble keeping up, so we got a lot more creativity with the Mega Charger than we would've normally been given. I remember many people wanting to develop for the Saturn,*

*but the limitations of the Mega Charger and the Genesis were something I viewed as a challenge."*

-Makoto Uchida, Sega Enterprises game developer

*"Cat Jackson was really Sony's first attempt to establish a sort of 'character mascot', certainly I think Sony was looking to really establish a distinct identity back then, as part of Nintendo or otherwise. It sorta flopped, I guess you could say. I mean the game did decently but it was no Mario or Sonic, not even close."*

-Blake Harris, discussing Sony's history on the SNES-CD in an article in *Electronic Gaming Monthly*, July 2014

*"Oh, Frederico, you must help us! Generalissimo Garcia is at it again! He's bullying our village and taking all the children off to work in the mines! Do something, Frederico!"*

-A random villager in *Frederico* as the titular character enters Soleado Village in Level 2

*"Yamauchi-san was never happy to be given an ultimatum. Leading up to that fateful meeting in the spring of 1995, when he made his decision on partnering with Sony, I don't think I ever saw him in a good mood. None of the options he had were entirely good, but then again, none of them were entirely bad either. One day, finally, he just....made his decision and called Howard Lincoln and I to his office. A huge decision and he made it just like that. I'll never know what he was thinking before he made the final call, and neither of us ever got up the courage to ask him."*

-Minoru Arakawa, in an interview with *Forbes* magazine after Hiroshi Yamauchi's death in 2014

*"One of my husband's friends works on video games. I don't know too much about them. I think if I started playing them I wouldn't have any time left to make music!"*

-Selena Quintanilla-Pérez, from a December 1994 interview in *People* magazine

-

## **March 13, 1995**

*Final Fantasy VI* is released in North America for the Super Nintendo CD, following a very successful release in Japan the previous December. The game is highly lauded by critics upon its release, scoring a 39/40 in *Famitsu* magazine and perfect scores from many American video game publications. It receives the biggest marketing campaign to date for a Squaresoft game, with commercials appearing on both children's TV (despite the game's Teen rating for some violence and mild language) and prime-time TV. This marketing campaign contributes to the game becoming the SNES-CD's biggest seller in North America for the month of March, even beating out *NBA Jam: Tournament Edition*. The game even receives some prime-time news coverage for its critically lauded opera scene, in which the character Celes performs as Maria in the Jidoor Opera House. The scene features the first ever lyrical music in a Squaresoft video game, with Celes' part performed by then-unknown actress Kristin Chenoweth. *Final Fantasy VI* is instantly hailed as the game of the year thus far upon its release, though the year wasn't even a fourth of the way over, and indeed, competition would be arriving fairly quickly for that title the very next week.

## **Final Fantasy VI: The Basics**

*Final Fantasy VI* (which was known IOTL as *Final Fantasy III* upon its initial release) is largely as OTL in terms of gameplay and plot. The game features fourteen playable

characters (two of them optional) and the classic turn-based ATB battle system of the previous two games in the series. It allows party members to learn spells by equipping Espers, this game's equivalent of the summoned monsters known in previous Final Fantasy games. The game's graphics are significantly more detailed than in OTL. Though still in 2-D, Squaresoft used very detailed sprites for the overworld, town, and dungeon graphics, an example of which can be seen here:

[http://images2.wikia.nocookie.net/...ly\\_Concept.jpg](http://images2.wikia.nocookie.net/...ly_Concept.jpg) (This image was taken from the Final Fantasy Wiki, IOTL it's an early concept mock-up for Final Fantasy VII and provides an example of what Nivek and I envisioned for TTL's level of graphical detail in Final Fantasy VI)

The game is also the first to feature animation for characters and enemies in battle. Though enemies appear as detailed sprites, they also have animated parts and complex attacks, the first Final Fantasy game thus far to feature this. The musical score, conducted by Nobuo Uematsu, is largely the same as IOTL, though many of the songs in the game are fully orchestrated given the capacity of the CD storage medium. The graphics and sound in *Final Fantasy VI* are highly praised, while not as advanced as games like *Donkey Kong Country* and *Squad Four* in terms of technological achievement, the game is considered a 2-D masterpiece and a new standard for sprite animation.

The plot largely follows the same storyline as OTL's *Final Fantasy VI*. The world is threatened by the growing power of the Geshtalian Empire, which seeks to use Magitek Energy to conquer the world. Having already occupied the southern continent, the Empire now sets its sights on the north, waging war with only the Returners to resist them. In the mining town of Narshe, an Esper is found, and the Empire uses an enthralled young woman named Terra to help them capture it. When Terra has a strange interaction with the Esper, it sets off a journey as the girl joins the Returners in order to discover who she really is. This eventually leads to a climactic battle between the Empire and the heroes atop a giant floating continent, where the Empire's mad lieutenant Kefka undoes the careful balance between the magical statues that keep the world in balance, leading to its destruction and the party's separation.

This is where the game takes a different turn from IOTL. IOTL, the World of Ruin was largely a non-linear portion of the game, where after retrieving Setzer's airship, you could go pretty much anywhere you wanted and recruit party members and complete tasks in any order you chose. Here, however, Hiranobu Sakaguchi decides that in order to demonstrate the increased story-telling abilities of the new CD medium, that the second half of the game would follow a more linear route, with Celes required to recruit more party members and complete more quests for the game to open up for exploration. The World of Ruin largely follows the same route as OTL until you reach the end of the quest to recruit Edgar. After Edgar is recruited, instead of going to Kohlingen to get Setzer and his airship, the party instead goes to Maranda to recruit Cyan from Mt. Zozo, and undertakes the Doma dream quest as a mandatory part of getting him back. After Cyan is recruited, the next step of the game takes the party to the Veldt, where a new quest is available for Gau (you are required to recruit him here). Gau discovers that his father is alive and must rescue him from a vicious monster on the Veldt, which kicks off a quest to fight the monster by accomplishing various tasks, you'll then be able to fight the monster in a random encounter. Once the monster is defeated, Gau sort of reconciles with his father and he also admits that he saw Relm enter a mysterious cave in the Veldt (you also find out that Gau kind of likes Relm). If you saved Shadow on the Floating Continent, this is where you get him back, if not, Relm is found injured instead. Either way, the next part of the quest is to proceed to Jidoor where

Reim must be rescued from the possessed painting. The party then returns to Mobliz, where they finally get Terra back after she defends the orphans from Hunbaba. Terra agrees to re-join the party and asks them to go to Narshe with her, she wants to confront the Esper and find out the secrets of her past. The party reaches Narshe, which has been converted into a fortress town by a crazed Banon and the last remnants of the Returners, who now blame Terra for causing the doom that has befallen the world. The only resistance to Banon is Mog, but his band of moogles has been decimated, leaving him the last survivor. Narshe is a two-part dungeon, the first part involves the party making their way to Banon and confronting him, he uses a giant suit of modified Magitek Armor to battle the party. Defeating him seems to drive him out of his madness, but it's too late and Banon passes away after apologizing to Terra and encouraging her to find her true destiny. The next part of Narshe involves finding and confronting the esper Valigarmanda, who is much more antagonistic toward Terra than in OTL's Final Fantasy VI and has a major boss battle with the party. After Valigarmanda is defeated, he accepts Terra as the true heir to the Esper race and grants the party his power. After Valigarmanda's defeat, Terra mentions that Setzer once told her about a lost love of his and an airship that the party might be able to use. The party then goes to Kohlingen and we get IOTL's Darill's Tomb quest, though the boss at the end is significantly tougher. After the party gets the airship back, however, you don't get to explore right away, as you're instead forced to go right to the Phoenix Cave and split into two parties for a major dungeon, including a mandatory boss fight (the Red Dragon is there too but this time you also fight another major boss), a scene where Celes saves Locke's life, a reprise of Aria di Mezzo Caratterre (this time much softer and also sung lyrically by Kristin Chenoweth) and the climactic reunion between Celes and Locke, after which the game finally opens up to side-quests and the like. Cult of Kefka Tower is a required quest before attempting to enter Kefka's Tower proper, though the rest of the game including the final boss and the ending play out almost exactly as OTL.

-

*"A lot of the controversy I think this game is having is from people who don't realize how proud I am of my Mexican heritage and how this game is a celebration of that culture, not a stereotype or a way to make fun of Mexicans. There IS a lot of humor in the game but it's not racial humor, it's character-based humor from how zany all the characters are. Thankfully I think the vast majority of players realize that and I'm so grateful for all the praise Frederico's gotten, it absolutely blows me away."*

-Silver Sail's Carlos Delgado, creator and lead designer of *Frederico*, in an interview with the New York Times, April 8, 1995

*"And to be completely honest, I probably had more fun with Frederico than I did with Final Fantasy VI. Every Super Nintendo CD owner should check this game out."*

-*Electronic Gaming Monthly's* editor in chief Ed Semrad in the April 1995 EGM Review Crew article. *Final Fantasy VI* and *Frederico* were awarded co-Game of the Month in that issue.

## **Enter The Wacky World Of Frederico!**

*Frederico* is the latest hit action game from Acclaim. You're Frederico, a sombrero-wearing, butt-kicking hero whose girlfriend Madelina has been kidnapped by the evil Generalissimo Garcia. Not only do you have to venture through 17 huge levels to save her, but you've got to help all the other denizens of Fiestopia whose lives have been disrupted by Garcia's dastardly deeds. You can pretty much just plow through this game's highly colorful levels, taking out enemies with the more than two dozen weapons and items and skills at your disposal, but you'll lose out on accessing secret areas and winning lots of pesos that you use

to buy new skills for Frederico's arsenal, and if you decide to stick to the beaten path, you'll find the game getting frustratingly difficult later on. This is one of the most exploration-heavy platformers we've yet seen, levels are VERY non-linear, though there are plenty of signposts directing you to the exit goals.

The game is beautiful, there are lots of different characters and the game doesn't use the same character design too often, the backgrounds are colorful and full of life and the animation is some of the best yet seen on the SNES-CD. The game features an outstanding soundtrack with catchy, energetic tunes, and while there's not much in the way of voice acting, the characters still make quite a few humorous exclamations, adding even more liveliness to the game.

Sushi-X: 8.5 (quote: "SNK does it again with the latest installment of Fatal Fury! They've even added a couple new characters exclusive to the SNES-CD version, which is a great bonus.")

### **Final Fantasy VI:**

Ed: 9.5 (quote: "The best Final Fantasy yet and quite possibly the SNES-CD's best RPG. A brilliant storyline featuring more than a dozen unique characters, role-playing adventure doesn't get much better than this.")

Danyon: 9.5

AI: 9

Sushi-X: 9

### **International Superstar Soccer CD:**

Ed: 7

Danyon: 9

Al: 7.5 (quote: "It's not a perfect soccer game but it features outstanding graphics and you won't get bored quickly if you're a soccer fan.")

Sushi-X: 6.5

### **Jungle Strike:**

Ed: 8

Danyon: 8.5

Al: 7.5 (quote: "I loved the graphics in this helicopter-based game but it was a bit short and the missions could've used more variety.")

Sushi-X: 7.5

### **Lost Eden:**

Ed: 8

Danyon: 5 (quote: "Beautiful graphics, but I thought this game got old pretty quickly and it was one of the shorter games I've played on the system, so that probably says something.")

Al: 4.5

Sushi-X: 7

### **NBA Jam: Tournament Edition:**

Ed: 8.5 (quote: "Not much more than an incremental roster update and some slightly more polished graphics, but it's definitely the definitive version of NBA Jam and if you don't have the original, this is the one to get.")

Danyon: 8

Al: 8.5

Sushi-X: 8

### **Ninja Gaiden Trilogy:**

Ed: 7.5

Danyon: 8

Al: 8

Sushi-X: 9 (quote: "Being a ninja myself, I have to love this game. The updated graphics and all new musical score make this challenging trilogy worth playing through all over again.")

### **Populous CD:**

Ed: 6.5

Danyon: 7.5

Al: 6 (quote: "It's not a bad game but gameplay is somewhat slow and it's not too much better than the SNES version of the game. Despite an all new interface, the graphics really didn't get that much of an upgrade.")

Sushi-X: 7.5

### **Rise Of The Robots:**

Ed: 5.5 (quote: "Yet another game featuring pretty graphics but rather pedestrian gameplay, there are much better fighting game options on the SNES-CD.")

Danyon: 5.5

Al: 6

Sushi-X: 1

### **Romance Of The Three Kingdoms IV:**

Ed: 9

Danyon: 9 (quote: "Koei does it again! This is the definitive Romance of the Three Kingdoms game, full of gorgeous graphics and there are so many missions to play. The customization options are a welcome addition to this already amazing series.")

Al: 8.5

Sushi-X: 9

### **Spawn:**

Ed: 6.5

Danyon: 6.5

Al: 5.5 (quote: "Just a generic platformer at best, the animations are decent but otherwise this is not really a worthy use of the franchise.")

Sushi-X: 4.5

### **The Ignition Factor:**

Ed: 8.5

Danyon: 8.5

Al: 9

Sushi-X: 7.5 (quote: "Firefighting's never been so fun than in this excellent action puzzler that lets you put out fires in dozens of stages.")

### **Top Gear 3000:**

Ed: 6.5

Danyon: 7 (quote: "A decent racer featuring some nice graphics, I loved the detail put into the stages and how quickly the cars seem to zip around.")

Al: 5

Sushi-X: 5

### **Virtuoso:**

Ed: 3 (quote: "Soooo repetitive and boring, you'd think the life of a rock star would be fun and exciting but this game hardly gives you anything to do.")

Danyon: 3

Al: 2.5

Sushi-X: 2.5

### **Wild Guns:**

Ed: 8

Danyon: 8

Al: 8 (quote: "This game is oh so tough but oh so fun, it gives you so many things to shoot

and I love having the option of using the controller or a light gun. A light gun makes things a BIT easier but not much.”)

Sushi-X: 8

### **Frederico:**

Ed: 9.5 (quote: “This was one of my favorite action games in a long time. Colorful and with a really fun protagonist, there's always something to do and there's a HUGE variety of weapons that give you plenty of incentive to take out baddies.”)

Danyon: 9

Al: 9

Sushi-X: 9.5

### **Dark City: Heart Of Darkness:**

Ed: 8

Danyon: 7

Al: 7

Sushi-X: 9.5 (quote: “The greatest detective game ever made, hands down. The game improves on the first in so many ways and the story is like something out of a movie. I had to keep playing right to the end.”)

### **Return To Pickton Lake:**

Ed: 7.5

Danyon: 7.5 (quote: “Cody and Cassie's new quest is fun even if it's somewhat of a retread of the first game.”)

Al: 7

Sushi-X: 7

### **Friendly Fire:**

Ed: 5.5

Danyon: 5.5 (quote: “This arena shooter game is heavy on jokes but light on gameplay. The split-screen multiplayer can be fun but it lacks the charm of the cheesy dialogue. This game isn't horrible but it's not all that good either.”)

Al: 6

Sushi-X: 6

### **Chemistry Master:**

Ed: 6.5 (quote: “This action game where your protagonist mixes chemicals to use on enemies showed some promise, but I wish the stages had been somewhat better designed.”)

Danyon: 4.5

Al: 6

Sushi-X: 7

### **Chumoking:**

Ed: 4

Danyon: 3.5

AI: 6.5

Sushi-X: 5 (quote: "This cookie-cutter fighting game has some of the worst graphics I've ever seen. It's hard to enjoy any game when it looks like a glitchy mess.")

### **Extreme Deerhunting:**

Ed: 6

Danyon: 7

AI: 5.5 (quote: "It's you and some deer and a gun. That's pretty much it. I do like that it pretty much replicated the arcade deer hunting experience but if this isn't your bag it's going to bore you.")

Sushi-X: 4

### **Cat Jackson:**

Ed: 7

Danyon: 7.5 (quote: "Beautiful animation really does make this otherwise generic platformer worth a look. Cat Jackson isn't as fun as Mario, but it was quite whimsical nonetheless.")

AI: 7.5

Sushi-X: 7

### **Melia's Kingdom:**

Ed: 6

Danyon: 6.5 (quote: "This wasn't a terrible RPG, though the graphics are positively last-gen. Despite that, I liked the interaction between the main characters. This RPG lacks the heart or polish of Final Fantasy VI, but for hardcore genre fanatics it's worth a play.")

AI: 6.5

Sushi-X: 5.5

### **Eyes Of The Vampire:**

Ed: 7

Danyon: 8.5 (quote: "A sort of mash-up of vampire lore, this is the best FMV game on the SNES-CD. Scary and actually well-acted, with really smart puzzles, it makes me clamor for another game like it. It's an oasis in the middle of a huge desert.")

AI: 6.5

Sushi-X: 8.5

-

### **Sega Spring Preview!**

The Sega Genesis and Mega Charger are getting a slew of exciting new games over the next few months, enough to keep any Sega fan busy until the big Saturn release this fall. This month will see a pair of major games for the Sega Genesis, including *Star Trek: The Borg Collective* and *Ristar*. *Star Trek*, out for the Genesis with some Mega Charger enhancements, is an action-RPG hybrid that allows you to create your own Starfleet captain and command your crew as the Borg close in. It's somewhat tied in with *The Next Generation* TV series, as the cast of that show are characters in the game that you can meet and interact with, and even have them join the battle at certain points in the game.

*Ristar* is an exciting new action platformer featuring a fun new character and beautiful graphics, with some very fast-paced gameplay that's become a hallmark of the Genesis lineup. The Mega Charger gets some love as well, with an enhanced, Mega Charger-exclusive remake of the classic shooter game *Space Harrier*. Zip around from level to level shooting dozens of enemies from the sky in this highly-anticipated release. It's one of several big games planned for the Mega Charger this year, including the Mega Charger-enhanced games *Earthworm Jim 2* and *Vectorman* and the Mega Charger exclusive title *Lords of Skylein*, coming to the Mega Charger this June. Featuring voiced cutscenes and gorgeous animation, it's coming out the same month as Nintendo's highly anticipated SNES-CD *Legend of Zelda* title. Sega is betting big on this RPG and hoping it won't replicate the failure of *Lunar: The Silver Star*, which has sold poorly since being ported to the Mega Charger last year. Speaking of RPGs, a localization of *Phantasy Star IV* has been announced. It's getting some new upgrades for the Mega Charger and Sega is hoping to have it released sometime before the end of the year.

-excerpted from *Game Players* magazine, April 1995

-

Stuart Scott: Michael Jordan. You know him. Everybody knows him. He's going for a record breaking 70 wins this year with the Chicago Bulls alongside teammates Scottie Pippen and Chris Webber, but he's also making the virtual leap back to the world of video games. After being absent from basketball-related video games for the last couple years, Jordan is making his big comeback in the new *NBA Jam: Tournament Edition* video game for the Sega Genesis. Jordan recently signed a multi-million dollar deal to appear exclusively in Sega video games for the next three years, in addition to Sega's *NBA Jam* games, he'll also be appearing in *NBA Live 96*, coming to the Genesis later this year. And hey, if you've got a Nintendo system like some of my homeboys, don't worry. You won't be seeing Michael Jordan, but you WILL be seeing NBA Rookie of the Year front-runner Grant Hill, who's currently trying to get the Boston Celtics back into the NBA playoffs. Next year, he'll be starring in an all new video game for the Nintendo CD. Nintendo has yet to release any details about the deal, only that it'll be an all new NBA video game to rival the *NBA Live* series. So it looks like Grant Hill and Michael Jordan will not only be rivals on the hardwood, but on the virtual hardwood as well. And hey. Bulls overwhelmingly in first place, Celtics right now sitting in eighth...an NBA playoff showdown looming in the immediate future?

-from the morning edition of *ESPN SportsCenter*, March 17, 1995

-

*"That time, spring 1995, was so hectic for all of us at Sony. We were preparing to launch out on our own if we had to, I was frantically getting everything ready for the reveal of the Nova at E3, and of course, this whole time I was also helping Olafsson-san with the games division. We were going to need very strong first and second party games to take on Nintendo...in the unfortunate event that we'd have to take them on, of course."*

-Ken Kutaragi

*"While we were really heavily working on the development of Ballistic Limit, which at that time was our huge release for the holiday season and potentially would have to be the big launch game for the Nova, we were also working with Naughty Dog on their pirate game which was looking outstanding....and then there was Cat Jackson. I was never all that enthusiastic about that one, but many people at Sony, particularly higher-ups including Mr. Ohga himself, said that we'd need good characters, mascot characters to help forge Sony's*

*identity. And so, Cat Jackson was born."*

-Olafur Johann Olafsson

Cat Jackson was Sony's first attempt at a "mascot" character. A playful, fun-loving anthropomorphic cat, not a lot unlike the classic character Felix the Cat, only with "attitude", *Cat Jackson* the game was a pretty basic, generic platformer, featuring the titular cat traversing a variety of fairly straight-forward levels to rescue his girlfriend from The Fatcat, the main villain of the series. The game itself wasn't all that inspired, and it paled in comparison to games like *Frederico* in terms of level design and even in terms of plot. The one thing it did nail down was the animation. The game had some outstanding graphics, Sony showed off its skills pretty well and it had some of the best graphics of any SNES-CD game at the time. That, along with the decent amount of promotion the game got, added up to it becoming one of the month's best sellers alongside games like *Final Fantasy VI*, *NBA Jam: Tournament Edition*, the aforementioned *Frederico*, and *Double Dragon: Triple Trouble*. In a really crowded month, Cat Jackson carved out a decent niche, and sort of validated Sony's efforts, though of course at the time, the company had much bigger things on its mind.

-excerpted from a Kotaku.com article, "Sony The Software Company", posted on June 27, 2013

*"By the end of the month, it was clear that Ohga-san wasn't going to budge on any of his three conditions for the new Nintendo system, particularly the backward compatibility condition. Yamauchi-san hadn't budged either. But at that point, it would be entirely Nintendo's call."*

-Ken Kutaragi

-

*We've got your first exciting news about three of Nintendo's upcoming hits! In this Nintendo Power exclusive preview, you'll get a first look at The Legend Of Zelda: Ocarina Of Dreams, Super Squadron X: Critical Dawn, and Super Mario World 3, all making their way to the Super Nintendo CD this summer!*

*The Legend of Zelda: Ocarina Of Dreams* is the fifth and latest game in Link's adventures. You'll be retreading some old ground in Hyrule before a major twist sends you plummeting into an all new world of magic and mystery! Right now, we'll take a look at Hyrule's three new dungeons that you'll be exploring in the game. First up is the Lost Labyrinth, a hidden dungeon found deep in an uncharted area of the Lost Woods. It's the first dungeon Link will be exploring, and where he'll once again find his trusty bow. You'll have to deal with hordes of dangerous insects as you make your way through the confusing tunnels, so be wary of bites from above! The next dungeon is the City of the Dead, found beneath the sanctuary graveyard in the Light World. The dungeon is full of scary skeletons and ghoulish ghosts, with a fierce boss at the end designed to bring Link's worst nightmares to life! Finally, we'll show you a glimpse of the game's third dungeon, located in an all new area to the south of Hyrule that you'll have to explore thoroughly if you want to find it. The dungeon is full of all new monsters never before seen in a Zelda game, and will put all of Link's skills to the test!

*Super Squadron X: Critical Dawn* continues the story of the Super Nintendo cartridge game *Super Squadron X*, which saw Captain Xenda, accompanied by an elite squad of fighter ships, pilot his powerful tank, the VIXIV, and lead the charge against a deadly alien invasion of the new planet that humans now call home. *Critical Dawn* sees Xenda returning to Earth in order to save stranded refugees from being devoured by a mysterious evil force. Once

again, Xenda leads a team of troops into battle, but this time the VIXIV tank will play an even larger role, transforming into a battle-mech for certain fights as the evil force, known as the Blight, takes control of some of Earth's abandoned weaponry. Fighting amidst the ruins of a mostly-abandoned Earth, Xenda will need all his skills and bravery to survive!

Finally, *Super Mario World 3* looks to be the most fun Mario game yet, taking Mario into the third dimension for the very first time as you explore new worlds and levels from an isometric point of view. Mario's familiar foe Bowser has returned once more, this time with a mechanical army of deadly Mechakoopas armed and ready to take Mario out! Princess Toadstool hasn't been kidnapped this time around, and she's there to lend a hand with a variety of new power-ups for Mario and Luigi, including the Cannon Hat which lets Mario blast his foes with explosive projectiles! You'll need all the help you can get, as these levels are tougher than ever and Bowser has a seemingly endless army of Mechakoopas at his disposal!

-excerpted from the "Summer Unveiled" preview article in the March 1995 issue of *Nintendo Power*

-

### **Fists Of Fury: A Trio Of Brawlers Leap Into Battle!**

This month, Nintendo's got a slew of games coming to the Super Nintendo CD, and right now we're going to cover three hard-hitting brawlers that should definitely quench your thirst for fighting might.

First up is *Double Dragon: Triple Trouble*, the first Double Dragon game to hit the SNES-CD. The Lee brothers, Jimmy and Billy, must once again fight their way through countless enemies, this time in order to take down three deadly crime lords: Fong Chow, a ruthless drug-pushing gangster, Soulfei, a mysterious but brutal sword master, and the mysterious Karina Su, a femme fatale who charms both brothers and might not be as evil as she seems. Depending on your actions during the game, you'll go after either Fong Chow or Soulfei first, though you must take out the two of them in order to reach the final confrontation. Is Karina Su friend or foe? You'll have to reach the end of the game to find out for yourself!

Next up, it's an outstanding port of SNK's hit fighting game, *Fatal Fury Special*. It's an upgraded version of *Fatal Fury 2*, but the SNES-CD version adds two characters from the brand new arcade game *Fatal Fury 3*, Hon-Fu and Blue Mary, to make 18 characters in all, giving this game one of the biggest rosters of any fighting game around! It also retains the all new combo system of the arcade version, adding an extra incentive for skilled players to master the game.

Finally, Tecmo brings its *Ninja Gaiden* series together for the very first time with *Ninja Gaiden Trilogy* for the SNES-CD. This game has a slew of enhancements over the NES originals, from revamped graphics, remastered sound (including voiced cutscenes), and removal of all the censorship from the original versions of the games. The result is one epic collection that anyone who hasn't played the originals has to own. It's one of the best compilation treatments on the system, rivaling even last year's *Final Fantasy Origins*, and even long time Ninja Gaiden veterans should pick this up, as it's almost an entirely new game.

While there's plenty to choose from this month in terms of video games on the SNES-CD, we think that fighting game fans are getting the best deal, and those of you itching to pound some faces in won't be disappointed!

-excerpted from the April 1995 issue of *GameFan* magazine

-

*"The first game to really shock me, in terms of content, had to be Dark City: Heart Of Darkness on the Super Nintendo CD. I was NOT expecting that game to go to the places it went and even though it covered the subject matter with the utmost respect and gravity it deserved, I was amazed to see such a game on a Nintendo system, even after they'd weathered the storm with Mortal Kombat and had allowed Shin Megami Tensei. Dark City: Heart Of Darkness, of course, featured human trafficking, a very realistic depiction of human trafficking, and was one of the darkest games ever featured on a console, even still to this day. It was a great game, MUCH better than the frustratingly difficult original, and far and away the best detective game to come to the system. But holy hell, was it a rough game to get through."*

-Adam Sessler, from an article on Gameinfinity.com, April 14, 2014

*"Oh yeah, me and Alex played both of the Pickton Lake games. I loved the second one where you got to team up with some of your friends instead of just saving them, there was a lot of really funny dialogue and despite all the scary monsters running around it was such a light-hearted game! I wish it had sold better because we never got a third Pickton Lake game, at least not until this gen when they revived the series finally. Of course it did come out at pretty much the exact same time as Final Fantasy VI...and we're both kinda guilty of letting that game take our attention away from Pickton Lake."*

-Ariel Hirsch, speaking about *Return To Pickton Lake* in a November 2014 GameInformer article

Lost amidst the overwhelming slew of games that released in North America for the Super Nintendo CD in the spring of 1995 (26 in March alone!) were two of the system's biggest cult classics: *Dark City: Heart of Darkness* and *Return To Pickton Lake*. The latter of course was the vastly under-anticipated sequel to 1993's beloved cult classic *Pickton Lake*, while *Heart of Darkness* was the sequel to one of the SNES-CD's most notoriously difficult detective games. *Return To Pickton Lake* was an utter commercial failure. Selling only 34,000 copies, it was as well reviewed as the original game, despite some criticism for being somewhat derivative of the first. Like the first game, it starred Cody and Cassie attempting to save their beloved camp from an invasion by supernatural monsters. Unlike the first game, which saw the twins rescuing their friends, this game saw Cody and Cassie's friends returning the favor by helping them fight the bad guys, providing distractions, combat assistance, obstacle or puzzle help, or just moral support. The game was still in large part similar to the first, but the presence of the twins' school buddies added an additional layer of humor and charm to the game. *Dark City: Heart of Darkness* was about as far from funny or charming as a video game could be. While the first game saw its detective protagonist solving ordinary crimes such as robbery or murder, *Heart of Darkness* saw its lead character descend into the world of human slavery, as he had to bust a ring of very wicked criminals who were kidnapping ordinary people (many of them young people) in order to sell into slavery in foreign countries. It was a deeply serious, depressing plot and though the hero did succeed in the end (if you could traverse the game's difficult mysteries, which were admittedly not quite as frustrating as those in the first game), he was left a somewhat broken man due to all those he wasn't able to save in time. The game, despite low sales,

actually DID receive a third installment for the SNES-CD (unlike Pickton Lake which has only recently been revived in a next-gen retro digital title), which treaded on somewhat lighter ground. While *Final Fantasy VI* is considered the month's best game and one of the greatest of all time (and rightly so), there are a few critics who believe *Dark City: Heart Of Darkness* to be the superior game due to its groundbreaking storyline.

### **SNES-CD Power Charts- March 1995**

1. Donkey Kong Country
2. Alien vs. Predator
3. F-Zero CD
4. Super Mario World 2
5. Squad Four
6. Star Wars: X-Wing
7. Mortal Kombat II
8. Rayman
9. Super Street Fighter II: Arcade Edition
10. Muppet World
11. Terminator II: Judgement Day
12. TMNT V: Wrath Of The Foot
13. Universalizer
14. Super Bomberman 2
15. Race For Your Life
16. Contra IV: Hard Corps
17. Jewels Of The Realm
18. X-Men: Mutant Apocalypse
19. Secret Of Mana
20. Shin Megami Tensei

-

### **March 30, 1995**

Norio Ohga, Ken Kutaragi, and a host of Sony executives had gathered in the Sony board room, awaiting the arrival of Minoru Arakawa and Howard Lincoln from Nintendo. The two men arrived, Arakawa holding an envelope in his hands as he took a seat at the table. The meeting had been called after Arakawa had told Ohga that Hiroshi Yamauchi had finally decided on whether or not Nintendo could meet Sony's conditions for the new console. The tension in the room was clearly visible on the faces of the gathered men, particularly on the face of Norio Ohga, who did not want to wait long for Yamauchi's response.

"I have in my hand a letter from Mr. Yamauchi, regarding his decision as to whether or not we will be accepting Sony's three conditions for the new Nintendo console. These are words directly from Mr. Yamauchi himself, words which Mr. Lincoln and I have discussed with him but the ultimate decision was Mr. Yamauchi's alone to make. I will be reading the letter now."

Arakawa opened up the envelope, already knowing what it was going to say. Though he and Howard Lincoln had faces of stone, the looks on the faces of Ohga and Kutaragi were far

less stoic. The men gathered in the room knew exactly what future lay ahead if Nintendo refused Sony's conditions. Ohga had been very clear with the men from Nintendo that Sony would not budge, and that they were prepared to abandon development of Nintendo's next generation console if all three conditions were not met.

The future of two companies hinged on the balance of the words contained in the letter, Hiroshi Yamauchi's final decision on the matter of Nintendo and Sony's relationship in the console business.

"We accept Sony's three conditions."

As soon as the words left Minoru Arakawa's mouth, Kutaragi couldn't contain the smile on his face. He quickly restrained himself, though Lincoln saw Kutaragi's smile and allowed a smile of his own, along with a small nod.

*"I know. I'm relieved too,"* thought Lincoln, sensing immediately that the tension had begun to come out of the room. Ohga stood up and reached across the table to shake both men's hands, and Kutaragi quickly followed suit.

"We're looking forward to doing continued business with Nintendo," said Ohga, giving both men a hearty handshake.

"And we're looking forward to forging the future of video games, together," said Arakawa in reply. "Mr. Yamauchi understands that compromise is sometimes important in running a successful business."

Hiroshi Yamauchi had agonized over the decision to agree to Sony's conditions, but in the end, he knew that the key to Nintendo's success had been its innovation and creativity. With Sony handling much of the heavy lifting on the technological side, it would free Nintendo's creative minds up to generate innovative new ideas. He knew that Sony needed Nintendo's creative energy more than Nintendo needed Sony's technology, which he ultimately viewed as a luxury that could be eschewed should the need ever arise. He'd seen so many other companies try and fail to stand up to the Nintendo juggernaut. For every Sega, there were a dozen Ataris, or 3DOs, or Phillips that had tried and failed to forge forward with their own console. Sony had to realize this, which is why, Yamauchi realized, they'd only given three conditions for continuing their work with Nintendo. Had it been the other way around, Yamauchi would've made a lot more demands.

And Cat Jackson, which 20 years later would be a largely forgotten element of Sony lore, had perhaps been the final catalyst for Yamauchi's decision. Sony had attempted to come up with their own Mario...and they'd pretty much ripped off Felix the Cat. While Sony's pedestrian first attempt at a mascot character hadn't been the only thing that convinced Yamauchi to make the deal, it had quite possibly been the final ray of sunshine to thaw the ice around the Nintendo boss' heart.

Within days, Nintendo and Sony had already begun work on the initial specifications for the new console, which, as outlined by the deal, would be backward compatible with all SNES-CD games. Sony's work on the Nova was quietly rolled into what would become the new console, with Gunpei Yokoi leading up the technical work on Nintendo's end in collaboration with Ken Kutaragi from Sony. It was Howard Lincoln who came up with the proposed project name for the next-generation system, which both companies expected would be ready for release sometime in 1997.

The name he proposed was "Project Eunice", which not only was a play on the expected UNES (Ultra Nintendo Entertainment System) name of the console, but also meant "good victory" in Greek, as in the expected victory that Nintendo was to experience over Sega's Saturn in the next generation. The groundwork had finally been laid for Nintendo and Sony's continued partnership, though for the time being, there was still a long road ahead...

*Apparently Sony had come up with a proposed fifth-generation system called the Nova to compete with Nintendo and Sega if that deal to create the Ultra had fallen through. The specs on it looked pretty impressive and they would've had a nice launch lineup from what I can tell, headlined by a next-gen Ballistic Limit (which of course was on SNES-CD IOTL). So what do you guys think would've happened if Yamauchi had said no to Sony's demand for backward compatibility in the new console?*

-

### **March 31, 1995**

Chris Perez's phone rang at 8:51 AM, stirring him from sleep. He picked up the phone and could hear a familiar voice on the other end.

"Hey Chris, it's Carlos and you owe me ten bucks."

"Unnnh...." Chris groaned and rubbed the sleep out of his eyes, not expecting to get a call from his friend Carlos so early in the morning. The two of them had grown up together in San Antonio and had become friends, with Carlos helping Chris out with his math homework and showing him how to program a computer. The two had stayed in touch, bonding over their shared love of guitar music, though while Carlos' love of computers had drawn him to the video game industry, Chris had become a musician and was now married to one of the hottest rising stars in the Latin American music world, Selena Quintanilla. "What the hell man, you woke me up...."

"Sorry, sorry....I just got the sales figures back from *Frederico*, you know the game you bet me ten bucks wasn't gonna do well? Well guess what, it was the number one best selling new game of the week! We sold like 50,000 copies! And you bet me ten bucks it was gonna fail."

"Ah, shit man, that's great..." mumbled Chris, still bleary-eyed as he held the phone up to his ear. "Look, you come down here to Texas and we'll go for a steak dinner or something, I'll pay, how about it?"

"You need to come up here to Seattle and we can have a big fucking party, man! This is like a dream come true, you gotta-"

Chris could hear the shower running in the other room. He then noticed that his wife had gotten up early and seemed to be getting ready to go somewhere...and he had a pretty good idea as to where.

"Hold on, I gotta call you back," said Chris, hanging up the phone and climbing out of bed. As soon as he'd gotten dressed he could see Selena already making her way out the door. "Hey, you're not going back to that motel are you?"

Selena had a look of distress on her face as her husband confronted her.

"You know that bitch is crazy," said Chris, trying to block the door only for Selena to push past him. "Why would she want to meet you alone unless she had something up her sleeve?"

"She's just scared," replied Selena, placing her hand on the doorknob. She was going to meet with Yolanda Saldivar, the former president of her fan club, whom Selena had suspected of embezzling money from the club over the past few months and who had some important tax documents that Selena would need to conduct her financial affairs, which due to her meteoric rise to fame had become increasingly complex. "She told me last night that she'd been raped."

"That's a bunch of bullshit and you know it! She's trying to lure you there, she's gotta be up to something--"

"I still see her as a friend....I just think she's made a terrible mistake and that she wants to make amends for it. Let me try and talk some reason into her."

"You're not going to see her without me there."

Selena started to open the door. Chris held it shut for a moment but when she tried to force it open he backed off, his anger turning to concern.

"Please," Chris said, looking into Selena's eyes. "Let me go with you. I'll stay back but if she tries anything--"

"....."

Selena knew that her friend....if Yolanda still was her friend at that point, was almost certainly fabricating her story. But she also didn't want to suspect that she had any suspicious motives, that she was just desperate for sympathy, that she knew she was in trouble and just wanted Selena to try and understand why she was doing what she was doing. Ultimately, Selena desperately wanted to salvage the friendship the two of them had formed...but something in her gut told her that Yolanda Saldivar wanted more than just friendship.

"All right," said Selena, looking back at her husband. "You can come along....if she is my friend she'll know why I brought you."

-

*"It...it happened in like a split-second... she had the gun pointed right at me, but Chris, he grabbed the gun so fast... he grabbed it and he grabbed her hand and he wouldn't let her fire it....and when she realized she couldn't get to me she started shouting 'rape, rape!' at the top of her lungs, like....like she wanted people to think Chris was trying to hurt her....but....but there were so many people there, thank God for that and they called for help and....and I just thank God every day that Chris wasn't hurt. If he'd been hurt I never would have forgiven myself for letting something like that happen to him. ....no, no, no, I don't....I don't think about what....what could've happened if he hadn't been there. I don't....I don't even like talking about that day but.... but the only thing that....that I draw*

*on as a positive is how much he loves me, that...that he would come there like that to protect me. I love him so much. Half of the songs on the album are about Chris. He is my star."*

-Selena Quintanilla-Pérez, discussing her new English-language crossover album in an interview with MTV News on November 30, 1995

Hola cuates, Aquí Gus Rodriguez de Club Nintendo aquí en Nintendomania con una Entrevista Exclusiva con el compadre Carlos Delgado sobre el nuevo juego de Super Nintendo CD, Frederico, el Juego Protagonizado por el epónimo heroe en su misión en un mundo que sería el México de fantasía(no muy diferente al que vemos en las telenovelas de televisa) y uno de los pocos juegos en estar completamente en español.

*Hello Buddies, Here's Gus Rodriguez from Club Nintendo in Nintendomania now with an exclusive interview with the fella Carlos Delgado, about the newest SNES-CD Game, Frederico, the game started by the eponymous hero in his mission in a world that would be the Fantasy Mexico (not so different what we watch in Televisa Soap Opera) and a very rare type of game, one that's in Spanish!*

Gus: Un Placer Tener su Tiempo para esta entrevista, Señor Delgado, Dígame en pocas palabras en qué consiste Frederico para el público.

*G: A pleasure having your time for this interview, Mr. Delgado, tell me in few words, "what is Frederico?" for our audience.*

Carlos: Ya un placer mío compadre Rodríguez, como ya dijo el juego protagonizado por frederico podría describirse como Mario con Metroid en Mexico, exploras el mundo, peleas contra enemigos y explorar el mundo del juego.

*C: The pleasure is mine fella rodriguez, as you say the game would be described as Mario meets Metroid in Mexico, you explore the game world.*

Gus: Como Nacio la Idea de frederico, es algo bien raro ver un juego como este

*G: How was this Frederico idea born? It's pretty unusual seeing a game like this.*

CarloLa idea de Frederico nacio cuando un poco después que me Uní a Silver Tail después de terminar la Universidad, ya con experiencia en programación y tenia buen nivel como artista, fue reclutado como programador para dar ideas para posible juegos, una vez, uno de nuestros cliente, Acclaim, estaba interesado en un juego completamente nuevo para el Super Nintendo CD y querían algo nunca antes visto, así que hable con mis compañero y jefes y le dije, porque no usamos la idea de un Mario Latino y ellos me dijeron: Podría elaborarla.

*C: The Idea about Frederico was born a little later on, I joined Silver Sail After finishing college. I've got experience as programmer and artist and was recruited into company to give my ideas for possible games, one time, when one of our customers, Acclaim, was interested in a game that was completely new for the SNES-CD and wanted something not done before, and I propose the idea of Latin Mario and they say, can you elaborate on it?.*

Gus: Asi propuso la idea de repente, aprovechando la oportunidad que tenia.

*G: So suddenly you shouted the idea, taking the heat of the time.*

Carlos: Claro, sentí era ahora o nunca, si me quedaba callado tal vez no tendría la oportunidad de hacer nada.

*C: Yeah, I felt it was now or never, if i was quiet maybe I'd miss a big opportunity.*

Gus: Que Dijo cuando propuso la idea, ya tenía la temática del juego.

*G: What did you say when you proposed the idea for the game?*

Carlos: En si no tenía mucho, solo la idea de hacer el juego con personaje Latino, propuse la idea de exploración citando Metroid y Castlevania y proponiendo como una versión mexicana de Mario.

*C: As I said, I mentioned the concept, of the character being a latino/Hispanic, I proposed the exploration elements quoting metroid and castlevania and proposed him as a Mexican version of Mario.*

Gus: Si con Mario y Sonic, los juegos de plataformas estaban vibrando y pegando duro, así logro convencer a Acclaim le diera luz verde.

*G: Yes, with mario and sonic, platformers were alive and kicking in the market, so that was how I managed to convince Acclaim.*

Carlos: Claro, Nos dieron la fecha de desarrollo y ya esta listo para ahora lanzarlo a finales del mes.

*C: Of Course, they gave us the deadlines and now the game is ready for completion at the end of the month.*

Gus: Algo que he oído de mis compañero reporteros anglo, es que para algunos Federico era inusual por sus temas, casi algo dijeron estereotípico de la cultura hispana, porque cree que se deba eso, personalmente no encontraba nada malo, he mas he visto representaciones peor en en otros medios, en especial la televisión

*G: Something I've heard for our reporter partners in English, some for them consider Fredereico weird for their theme, almost feeling like an stereotype of the Hispanic culture, why was that controversial, I've watched far worse stuff in television sometimes.*

Carlos: Eso es algo que pasa, especialmente cuando se toca temas de culturas extranjeras, haya en los Estado Unidos ellos son muy prudente para evitar herir sensibilidades de otros países, pero en si Federico no es ridiculizar o caricaturizar, es celebrar como somos los mexicanos y latinos, somos bastantes alegres y festivos comparando con nuestro primos anglos, pero también hay nuestro lado oscuro, lo cual refleja los crímenes del villano, Generalísimo Garcia, que sabemos fueron episodios oscuros paso la historia, pero la aventura de frederico es algo así, sacar lo mejor de lo peor de lo peor mientras se divierte en el camino

*C: That is something tend to happen, especially when touch topic about foreign cultures, back them in United States they're really careful to avoid hurting the sensibilities of other*

*cultures, but again, Frederico was not intended to ridicule or stereotype, it was to celebrate, specially how Mexican and latin we are. We're pretty upbeat and jovial comparing our anglo cousins yet we've got our dark side and history, something you notice about the crimes of the villain, Generalissimo Garcia, those were dark moments that happened in history but the adventure of Frederico was that, take the best from the worst when you've got fun in the way.*

Gus: Algo que Amamos de Frederico, la opción de Idioma en Español (con todo y bandera Mexicana) al iniciar el juego, como salió la idea de idioma español, fue algo que se quisieron poner pensando en mercado hispano.

*G: Something we loved from Frederico was the Spanish Language option (with mexican flag and all) at the start of the game, how was the idea for the Spanish language, was it something you had in mind for the Hispanic market?*

Carlos: De hecho el Idioma español fue una chance de milagro, habíamos terminado el juego para diciembre y comenzábamos el debugging, entonces estaba discutiendo con un compañero de grupo como a veces explicabas referencia en español y como tenía más sentido en su idioma y me dijo, si no podía yo con el traducirlo e insertar el idioma antes de enviar el Master a Acclaim. Yo le dije si contaba su apoyo para una maratón para la inserción de texto y dijo: "sure not problem, would be fun". y así lo hicimos los dos.

*C: In fact Spanish language was a lucky break, we finished the game in December and started the debugging, so there was discussing with of one team members about how sometimes I tell stories about some Spanish reference and say if it makes more sense in Spanish and how would be if was in Spanish, so say tell me if me knowing Spanish would not be translated in the text before sending the Master to Acclaim. So I say, sure if we can get his help for a long programming marathon for the text insertion and he said: "sure, no problem, would be fun" and that was how were able to do it.*

Gus: Entonces el esfuerzo suyo y de aquel programador pudieron poner todo el juego en español, que dijo Acclaim y el resto al ver eso.

*G: So was a two man personal effort, the programmer and you, and you were able to put all the text in spanish, what did Acclaim say when they saw it?*

Carlos: La compañía estaba sorprendida, no esperaban eso de nuestra parte, aunque dijeron que le gusto, así si había gente entre hispano o gente que sabía español el juego tendrían eso ya sin pagar extra y le gusto.

*C: The company was suprised, nobody expected that from our part, but they loved it, so they would be able to market the game to people who knew spanish or here in Mexico without extra cost because it was already translated.*

Gus: Eso fue algo cuando me sorprendió, Nos enviaron nuestra copia de evaluación y el equipo quedo sorprendido al ver todo en español, junto al ingles, todos jugamos en español, aunque algunos escogimos ingles para comparar y esta genial.

*G: Yeah we got suprised too, we sent our review copy and was nice seeing the Spanish option, all game text and menus with alongside enGLISH, we all played in Spanish but some chose English and it was nice seeing the comparison.*

Carlos: Eso me encanta, espero en México le encanten tener el juego en su idioma, y si las ventas son buenas, nos ayuden para la secuela.

*C: I love it too, hope the game here in Mexico is a hit, so that can help for the sequel.*

Gus: Con gusto aquí en México se espera también que sea un éxito

*G: The same here, Hope here in Mexico it's a hit.*

Aquí Termina la Entrevista, para mas información y trucos del juego, la revista club nintendo de april tendrá frederico de portada y tema principal no se la pierda

*This concludes our interview, for more info and tricks about the game, Club Nintendo in April will have Federico on the cover. Don't miss it!*

Tercer Programa de Nintendomania, Marzo 18 1995.

-Interview from March 18, 1995, translated for the Federico Fanpage, Fiestopia.com

-

*"You don't look like one of Robotnik's goons. I guess I can trust you but you better not do anything to make me change my mind. I'm Corona and you're talking to the leader of the Renegades!"*

-Corona the Butterfly, from *Knuckles: Renegade*

*"I knew I'd burned my bridges with Sega, Nintendo was pretty much the only other game in town. I liked what they were doing with RPGs, I liked what Telenet Japan was up to, so I figured I'd take a shot at asking them straight up for the Phantasia job."*

-Victor Ireland, president of Working Designs

*"The guy's name....is fuckin' BADBAD? This is supposed to be a serious killer warlord here, and you're telling me that with all the brilliant translations for games like Final Fantasy and Secret of Mana, the best that Tecmo can come up with for this guy's name is BADBAD? You put out Deadman Sam, for fuck's sake! What were they thinking?"*

-from the Angry Video Game Nerd episode #62, "Tecmo's Secret Of The Stars"

*"Sony and Nintendo coming to an agreement really did make my job a lot easier. It eliminated all the uncertainty about where we were headed in the coming months and it kept my relationships with a lot of the third-party companies intact. Once I knew that Project Eunice was a go, I could focus on building up a really good game library for the years ahead. Ballistic Limit was especially crucial and I knew it'd make a much better SNES-CD game than a fifth-gen one."*

-Olafur Johann Olafsson

*"I'm always gonna have fond memories of working on GameTV. We really were the first TV show about video games to become a big hit and I honestly wish I was still working on there today. We got to cover what I think was the best time for video games and I haven't done anything more fun since."*

-Ted Crosley, co-host of MTV's *GameTV*, in a September 2012 interview with *GameInformer* magazine

-

### **Bust-A-Move:**

Ed: 9

Danyon: 8.5 (quote: "This fun, exciting and ridiculously addictive puzzle game looks beautiful on the SNES-CD and the soundtrack makes getting combos all the more enjoyable.")

Al: 7.5

Sushi-X: 8.5

### **Cosmic Fantasy:**

Ed: 7

Danyon: 7.5

Al: 6 (quote: "Telenet's remake of this classic sci-fi RPG isn't terrible, but they could've updated a few more things to make it comparable to the great RPGs available on the market instead of just making it basically mediocre.")

Sushi-X: 5

### **Frank Thomas' Big Hurt Baseball:**

Ed: 8

Danyon: 8

Al: 8.5 (quote: "The awesome graphics make this game the best on the SNES. The presentation is just superb and the gameplay is pitch perfect, no pun intended.")

Sushi-X: 8.5

### **Kirby's Avalanche:**

Ed: 7.5

Danyon: 7.5

Al: 7

Sushi-X: 7 (quote: "I'm still clamoring for a real SNES-CD Kirby game, but this fun puzzler should tide over fans of the pink puffball for now.")

### **NCAA Final Four Basketball:**

Ed: 6 (quote: "Fairly basic basketball gameplay and pedestrian graphics make this NCAA basketball game just an average sports title. If you're clamoring for your favorite college teams on CD, you'll just have to settle for it.")

Danyon: 5

Al: 5

Sushi-X: 6

### **P.T.O. II:**

Ed: 6.5

Danyon: 5.5 (quote: "Koei's sequel to its classic naval strategy game doesn't quite measure up to the first. We wish the graphics had been updated somewhat and the campaign is surprisingly short.")

Al: 7  
Sushi-X: 7

### **PGA Tour 96:**

Ed: 5  
Danyon: 6.5  
Al: 6.5 (quote: "You could do a lot worse for golf games but the graphics definitely could've used a bumping up.")  
Sushi-X: 7

### **RBI Baseball 96:**

Ed: 7 (quote: "This is a pretty fun baseball game even if the gameplay's not quite as tight as some of the others on the system. The presentation could've used a bit of work.")  
Danyon: 6.5  
Al: 7.5  
Sushi-X: 6

### **Stargate:**

Ed: 8.5  
Danyon: 6.5  
Al: 7 (quote: "An actually decent movie tie-in, who woulda thunk it? We like that the SNES-CD version integrated some of the scenes from the movie into the gameplay. It's generic in parts but if you're a fan of the film this is a worthy title to play.")  
Sushi-X: 7

### **Tecmo Secret Of The Stars:**

Ed: 4  
Danyon: 6.5  
Al: 3  
Sushi-X: 3.5 (quote: "A generic as they come RPG further marred by a crap translation, this is one of the worst RPGs on the system.")

### **Swords Of Samnaria:**

Ed: 7.5 (quote: "Taito's Axes of Avenglia sequel plays somewhat better than the original, I liked the graphics a lot and the plot was engrossing and easy to follow.")  
Danyon: 8  
Al: 6  
Sushi-X: 6

### **Salvation:**

Ed: 7  
Danyon: 7  
Al: 6.5 (quote: "This was a somewhat generic arcade-style space shooter but the ability to rack up truly ludicrous combos makes it at least worth a try.")  
Sushi-X: 7

### **Nights Of Excitement:**

Ed: 6

Danyon: 6.5

Al: 8 (quote: "This game might not be for everyone but I enjoyed the cute characters and some of the minigames were really fun. It seems to be designed for younger players but there were some frustratingly hard minigames later in the quest.")

Sushi-X: 5.5

### **Parallel World:**

Ed: 8.5

Danyon: 9 (quote: "Another classic RPG so soon after Final Fantasy VI? Yes, please! It may not have a lot of hype behind it but if you're an RPG fan you HAVE to check out Parallel World for its great gameplay and deeply emotional storyline.")

Al: 9

Sushi-X: 9

### **Warriors And Conquerors:**

Ed: 5 (quote: "A generic Civilization clone that tries to mix things up by focusing on battles and combat. It would have helped if the combat were actually all that interesting.")

Danyon: 5.5

Al: 5.5

Sushi-X: 5

-*Electronic Gaming Monthly's* reviews of SNES-CD games in the May and June 1995 issues

-

*"Knuckles: Renegade is the next big step forward in the Sonic the Hedgehog series. Knuckles is one of the most popular new characters we've ever introduced, and we're confident that fans are going to love seeing him star in his own game with a new cast of characters that will become a crucial part of the ongoing Sonic franchise."*

-Tom Kalinske, in a statement to Sega shareholders on March 30, 1995

### **Knuckles: Renegade Brings Mega Attitude!**

*Knuckles: Renegade* is the newest game in the *Sonic the Hedgehog* franchise and the first *Sonic* game exclusive to the Mega Charger. The enhanced graphics and sound capabilities of the Mega Charger make this the best looking *Sonic* game ever, with fluid animations and a fantastic soundtrack featuring some gritty new tunes. Though this game plays a lot like the original *Sonic* trilogy, it's not your typical *Sonic* game. It stars his pal Knuckles, who's a bit more rough and tumble than the rest of his crew, and he's on a pretty serious mission as he's helping a band of rebels stop a somewhat more vicious Dr. Robotnik. You'll be teaming up with several new friends and all of them are playable at some point, meaning you'll have to master some brand new skills to survive the six worlds and sixteen levels of this quest. First up, there's Corona the Butterfly. Though she might be a beautiful butterfly with brightly colored wings, don't underestimate her for a second. She's even more dangerous than Knuckles himself, and she can fire sonic energy waves from her hands! Then there's Espio the Chameleon, a no-nonsense ninja who can blend in almost anywhere. Vector the Crocodile is a fierce detective with a heart of gold, and Charmy Bee is the comic relief of the

cast but he's still got a lot of heart and a pretty strong stinger.

While the graphics and sound were superb, we did have a few problems with the gameplay, which wasn't quite as fluid as *Sonic the Hedgehog 3*. Some of the levels seem a bit rehashed from earlier *Sonic* games, and levels on the whole are a bit shorter too, making this game not quite as epic as *Sonic 3* or even *Sonic 2*. We DID enjoy the gritty storyline which really reminded us of the great Saturday morning *Sonic* cartoon, and we hope that's a sign that the series will be a bit darker when it makes the jump to the Saturn. Either way, this game seemed like more of a side-story than an evolution in the series, but nonetheless, it's a very fun diversion. *Knuckles: Renegade* releases on April 10th.

Graphics: 5.0

Sound: 5.0

Play Control: 4.5

Challenge: Intermediate

-excerpted from the May 1995 *GamePro* review of *Knuckles: Renegade*

-

*"All told, April 1995 was actually a pretty good month for us. Knuckles Renegade and Space Harrier drove Mega Charger sales while the year's annual crop of sports games helped us out with regular Genesis owners. Combine that with a bit of a lull in the SNES-CD release slate and we just about pulled even. Not to mention our big win at the Kids' Choice Awards. I even got to make an appearance at the awards and get slimed, which was a lot of fun and my daughters really loved it. It wasn't a really serious award but I still have the blimp at home and any win over Donkey Kong Country was great in my book."*

-Tom Kalinske

\*Ben Savage and Rider Strong are on stage at the Kids' Choice Awards to present the Favorite Video Game award for 1994.\*

Ben Savage: And the nominees are... *Donkey Kong Country*, for the Super Nintendo CD....

Rider Strong: *Sonic the Hedgehog 3*, for the Sega Genesis...

Ben Savage: And *NBA Jam*, for multiple systems. And the Kids' Choice Award goes to...  
\*opens envelope\*

Ben and Rider: *Sonic the Hedgehog 3!*

Announcer: Here to accept the award for Favorite Video Game is *Sonic the Hedgehog* himself, along with Tom Kalinske, president of Sega of America!

\*Tom Kalinske and a costumed *Sonic the Hedgehog* come up to the podium and accept the blimp.\*

Tom Kalinske: Ah, *Sonic* is so happy to win this award that he can't speak, so I'm gonna speak for him. \*the guy in the *Sonic* costume whispers something to Kalinske\* *Sonic* says that he wants to thank everyone who voted on him, and he also says that....this guy next to me really wants to get slimed! ...huh? \*looks at *Sonic* who backs away\* I didn't say that!

\*gets a massive amount of slime dumped on him\* Aaaaaaaaahhhhh!!! \*all the kids laugh\* You know, that Sonic is a real prankster, but I guess that's why all you kids love him, thanks again for this award and be on the lookout for Sonic's next adventure! \*he walks off the stage with Sonic\*

Announcer: Coming up next, the award for Favorite Male Athlete of the year! And remember to stick around after the Kids Choice Awards for a special preview episode of our newest Nicktoon, *Phineas and Ferb*!

-excerpt from the 1995 Kids' Choice Awards, April 29, 1995

-

*It's a big month in Nintendo's Epic Center. We've got four big RPGs releasing this month for the SNES-CD, and we're going to cover them all. Also, be sure to check out this month's Nintendo Power CD if you're a subscriber, we've got playable demos of Parallel World and Cosmic Fantasy.*

### **Two Worlds, One Quest:**

*Parallel World is an exciting new RPG from Enix that takes place in a world divided between a vast underground kingdom and a bustling society on the surface. The two worlds have never come into contact but have heard terrible things about the other. When four young heroes from each world start out on a journey, they never suspect that they'll meet, and that their meeting will change everything...*

(...)

Narcel and Kate might be bumbling thieves, but they're surprisingly capable in battle and you'll need to use all your skills to defeat them. Have Sally keep healing every turn while Roger and Xander attack with their best sword techniques. If Xander is level 13, you can use your Forward Charge to hit Narcel and Kate at the same time which will be a major help in this fight.

(...)

### **The Secret Is In The Stars:**

*Tecmo's Secret Of The Stars follows Ray and his band of warriors on a mission to defeat Homncruse and restore peace and justice to the land. While on their mission, the warriors can also team up with a group of warriors known as the Kustera, giving this game one of the largest casts we've yet seen in an RPG.*

(...)

Be sure to search Badbad-House thoroughly for treasures, you'll need them in the fights ahead and that 100 gold will come especially in handy.

(...)

### **A New Kind Of Fantasy:**

*Telenet's Cosmic Fantasy isn't related to Square's Final Fantasy series, but with its animated cutscenes and voice acting, it's arguably more thematic. It's an updated remake of a pair of games that appeared on TurboGrafx systems, with improved enemy AI and a retooled*

storyline.

(...)

Taking an old series and combining it into a single game seems to be a trend for Telenet, which did the same for *Valis: Rebirth* earlier this year. While *Cosmic Fantasy* follows much more closely to the original, it also has a somewhat condensed version of the second game's plot contained within.

(...)

### **Sword Fighters:**

*Taito's Swords of Samnaria is the sequel to 1993's SNES-CD game Axes of Avenglia. Featuring an all new cast of characters and a new storyline, it features one of the best soundtracks we've heard in an RPG. Join Castion and his fellow sword fighters as they journey out on a quest to defeat the evil sorceress Aritelle!*

(...)

Though all of your characters use swords for weapons in this game, each character has their own different type of sword that they specialize in. Thugarr uses the hefty Bastard Swords, while Sileen specializes in light rapiers.

(...)

-excerpted from the Epic Center column in the April 1995 issue of *Nintendo Power*

-

*We got sports, lots of sports in this month's issue of GamePro magazine! On the SNES-CD, RBI Baseball '96 goes head to head with Frank Thomas in a big time clash of bats! We've got golf action with PGA Tour '96, and just in time for March Madness, it's NCAA Final Four Basketball, the first NCAA basketball game to contain all the big teams and let you pair them up in the NCAA Tournament!*

So which baseball game is best? While RBI Baseball '96 stepped up to the plate with its typical tight gameplay and new simulation options, we had to give the edge to Big Hurt Baseball. The SNES-CD version looks and feels like a next-gen baseball game, with outstanding player animations and even better presentation than last year's ESPN Baseball Tonight. While we're still aching to see Ken Griffey Jr. show up on CD, this Frank Thomas game is outstanding and it really does combine the best features from all the previous SNES-CD baseball classics.

### **Frank Thomas' Big Hurt Baseball (SNES-CD)**

-excerpted from the April 1995 issue of *GamePro*

-

Bernard Shaw: And we now have an update on the attempted bombing of the Alfred P. Murrah building in Oklahoma City. The two men that were arrested attempting to drive an explosive-laden truck in the vicinity of the building are believed to be connected to this morning's assassination of Attorney General Janet Reno by Timothy McVeigh in Washington, DC. This now appears to have been a coordinated attack against the United States by these three men, the two men arrested in Oklahoma City, Terry Nichols and Michael Fortier, and Timothy McVeigh, who is still in a Washington DC hospital in intensive care after being wounded by police following his assassination of the Attorney General. Right now we cannot speculate on the motives of these three men, only that the attack on the federal building in Oklahoma City appeared to be a coordinated attack with this assassination.

-from a report on CNN at 3:00 PM on April 19, 1995

*"And so right after I got that alert, over the radio that there had been an assassination in Washington and that all the federal buildings were to be put on enhanced security, there was this truck. And I had noticed that the man driving the truck was looking very strange, very nervous, and seemed to be in a hurry. And I stopped him and, you know, I began to question him and I wanted him to open up the truck and that's when he started firing at me.*

(...)

*You know, they call me a hero, but....but I can't....I can't claim to be a hero. I just was doin' my job. They said I probably saved 500 lives that day, I dunno how many people were in that building or what would have happened... all I know is that if I hadn't stopped that guy in the truck from detonating that bomb, I never woulda seen my wife again. I wouldn't have seen my daughter Abby grow up and graduate from college and get married. But I ain't the only guy that was there. I was pinned down and two of my buddies came and saved me and we all stopped those guys that day. It uh....you know....it was... \*he has some trouble reaching up to wipe his eyes with his right arm which was crippled from two gunshots sustained after being fired upon by Terry Nichols and Michael Fortier\* ...I was just doing my job. That's all I was doing."*

-from an interview with heroic security guard Brad Cullman on CNN's documentary special "20 Years Later: The Day That Shocked A Nation", on April 19, 2015

-

(Authors' Note: This entire *Tale Phantasia* segment was created by Nivek, this is only the first part of what he wrote up and there will be more as the months go on!)

### **The Tale Of A Phantasia:**

Yoshiharu Gotanda: I've always wondered how all this would have unfolded if it wasn't for that fateful meeting with the head honcho of Nintendo back in 1993. I was just a fresh programmer from high school, 18 years old and already I was making games, and I got the idea for a game, it was a novel I was writing in high school, but when Telenet and the team I was working with signed a development deal for Nintendo, they wanted something big to impress them. They told me if I could come up with a prototype in a month to show Nintendo and Sony, they'd help get them to sign off on the idea.

Famitsu: Only a month for a prototype?

Y.G.: Yeah, but that was Nintendo's way of doing things. You show a prototype of what you want your game to be, they look at it, and a simple yes or no can mean the difference between starting a project and having your idea thrown in the trash.

Famitsu: Yeah, we've heard that from other Nintendo developers, but you seem different, so young and with your very first game impressing all those other Nintendo developers from all over the world, and of course impressing Nintendo's top management as well. That's not an easy feat!

Y.G.: You make it sound harder than it was and it was already brutal! \*laughs\*

Famitsu: \*laughs\*

Y.G.: Yeah, it was hard but after that I had all the time in the world, and I wanted to focus on all the different aspects of the game. Like the battle system. All the other RPGs I've ever played, and they were some nice RPGs, but always turn-based, you never really got to show off your skills, or see the magician casting his spell, such talented fighters and I wanted to show that off. Again, going back to the prototype, my savior in that regard was Joe Asamuna. He saw the promise in it and he was the old who really sold it to Nintendo and Sony.

(...)

Joe Asamuna: I still remember when (Kazuyuki) Fukushima-sama called me from the production of *Soulqueen* to form a new team for a new game based on the idea from my employee Gotanda-san. They said they had the whole concept in pre-production since he joined the company just a few months before we wrapped up a couple games for the Super Famicom and Nintendo was looking for new ideas for Super Famicom CD games. He said he needed me to coordinate a prototype with Gotanda-kun and Ueki-san, and that we'd only have a month to do it.

Famitsu: Yeah, Telenet's been really pushing this game hard and I have to imagine there was a special reason.

Joe: I think I can say it now but at the time, Telenet was having some serious financial problems. We'd been developing some Genesis game but they were having rough sales, especially in North America and Europe. If it wasn't for Nintendo and Sony's support, we might not have made it through that time.

Famitsu: Right, they were going to merge all the development teams together, weren't they?

Joe: That's right, and undoubtedly we'd have lost some of those really creative minds we've been utilizing these past few months. I myself was helping to get *Soulqueen* and *Cosmic Fantasy* and *Valis: Rebirth* ready for release on the SNES-CD.

Famitsu: Wasn't Telenet taking a big risk on the Phantasia Project?

Joe: Correct, a really big risk, and if Nintendo hadn't thrown such support behind us, Telenet was ready to shop the project off to other companies. They were throwing out names like Enix and Namco, both of those companies were taking a look at our team around

this time.

Famitsu: It looks like Telenet had enough faith in the Phantasia Project to keep you guys around! What might've happened if Nintendo hadn't pushed this project hard for the Super Famicom CD?

Joe: Honestly, that's not an easy question, but Nintendo and Sony have been the best partners we've ever had, they gave us everything we needed to complete the development on this game and I couldn't be happier with how it went.

-excerpted from *Famitsu's* interviews with Yoshiharu Gotanda and Joe Asamuna in the April 1995 issue of *Famitsu* magazine which covered *Tale Phantasia's* Japanese launch

### **SNES-CD Power Charts- April 1995**

1. Donkey Kong Country
2. Super Mario World 2
3. F-Zero CD
4. Mega Man X2
5. Alien vs. Predator
6. Squad Four
7. Pulseman
8. Mortal Kombat II
9. Super Street Fighter II: Arcade Edition
10. Star Wars: X-Wing
11. TMNT V: Wrath Of The Foot
12. Rayman
13. Moonlight
14. Muppet World
15. Secret Of Mana
16. Contra IV: Hard Corps
17. Universalizer
18. Earthworm Jim: Special Edition
19. MechWarrior 3050
20. Dragon's Destiny II

-

*"This is GameTV, MTV's first ever TV show focused entirely on video games! For the next 60 minutes, we'll be giving you the hottest news about everything going on in the world of gaming. We'll be talking Sega, Nintendo, the PC, the arcades, and everything in between, so let's get started! I'm Ted, this is Alex, and right now we've got an awesome segment for you, it's an exclusive world-premiere preview of Sega's brand-new arcade game, Virtua Cop 2!"*

-from the beginning of the very first episode of MTV's *GameTV*, May 2, 1995

MTV's *GameTV* was the first really successful and popular TV show about video games. It aired from May 1995 to September 2000, every Tuesday night from 9:00 PM to 10:00 PM. It featured previews, reviews, interviews (and they landed some pretty major stars for these), and even tips and tricks for some of the biggest games. It was the first real sign

that video games weren't just kids' stuff anymore, the show was aimed at teens and adults and really brought "attitude" to game journalism without being overly patronizing. The show featured a 0-5 review scale where two of the hosts (usually Ted and Alex, but the other hosts got involved in the reviews sometimes as well) gave a brief talk about the game and then a numerical score (they also used half-points). 0 was totally awful, 5 was an instant classic. If a game got at least a 4 from both reviewers it was a "GameTV's Choice", if a game got 5s from both reviewers it was inducted into the "GameTV Hall of Fame" with a little ceremony and everything.

What really stood out about this show was the hosts. They were young, mid 20s-early 30s, and ALL of them enjoyed video games. They actually picked hosts who knew what they were doing and legitimately liked games, which was a big part of the show's appeal. The show had nine hosts over the years, sometimes hosts came and went, but the original five were:

**Ted Crosley:** A kind of preppy looking dude, he came off as a sort of "cool jock" type of guy but make no mistake, this guy absolutely loved video games. He was 27 when the show started and he and Alex, along with Brittany, were the three original hosts to stay through the show's entire run. He was an unabashed Sega fan, loved Sonic games, sports games, and fighting games.

**Alex Stansfield:** A bit more of a joker than Ted, Alex was a huge Nintendo fan and so he and Ted went at it quite a bit, they had a Siskel-and-Ebert sorta thing going on and when they were arguing about a game it was great TV. A huge RPG fan as well and he also loved to play puzzle games. I believe he recently competed in a Tetris Grand Master tournament in Japan and did quite well. Very very smart.

**Brittany Saldita:** The only female in the original cast (was joined by Lyssa in early 1997), she was another huge RPG fan and like Alex, preferred Nintendo to Sega, though she had a soft spot for the Sonic series. I had a HUGE crush on her as a kid (and, I'm suspecting a lot of Gen X and Millennial gamers grew up with crushes on her). She could be really fierce when advocating her opinions on the show and could also play circles around the guys in multiplayer games. She's the only one out of the nine hosts of this show that we've lost, she sadly died of ovarian cancer last September at the age of 43.

**John Walden:** The only African-American to host the show, he left in 1998 but when he was around he was one of my favorite hosts. He loved fighting games and sports games and was also great at doing interviews, his interview with Shigeru Miyamoto in 1997 was an absolute classic. I also remember that excellent skit he did with Alex around the time the Ultra Nintendo came out, the two of them were trying to decide between Castlevania and Final Fantasy and John was this hilarious vampire character. He's probably had the best career out of any of the original hosts besides Lyssa, he's hosting The Price Is Right and I think he's doing a fantastic job of it.

**Kazzi DeCarlo:** "Kaz" was the wild man of the original hosts and also the first host to leave the show (in 1996). This guy was in most of the skits playing the wacky characters, but his reviews were hilarious too, he'd give these totally off the wall reviews interlaced with his serious opinions out of the game. I remember him being tough as nails too, he only ever gave one 5 to a game, of course we didn't see him do too many of the reviews but when he did he was pretty tough.

-excerpted from "GameTV: A Retrospective" on IGN.com, January 31, 2015

**April 24, 1995**

"*Tale Phantasia* is doing really well in Japan and I think we should bring it here," said Howard Lincoln as he and Minoru Arakawa were walking down the hallway of Nintendo of America headquarters. "In fact, I think I'd like for 1996 to focus on Nintendo's lineup of role-playing games. We had several of them release this month and sales figures were decent, *Parallel World* sold a good amount of copies and *Final Fantasy VI* has been our best selling third party game this year."

"I agree that it should be brought over, but localizing it will be difficult," said Arakawa. "With the amount of voice acting in the game, it may be difficult to find a translator and a studio that can get all of the game's dialogue conveyed in a way that will engross the player into the storyline."

"I thought about using a lot of our *Squad Four* cast, but that may get expensive considering how much dialogue is in this game," said Lincoln. "I did have an offer over the phone a few days ago, a company that specializes in translating Japanese games and is building a working relationship with Telenet Japan. Telenet recommends them but they wanted to get our approval considering the...interesting personality of the person in charge."

"And who might this person be?" asked Arakawa. The two men stepped into Howard Lincoln's office, and Lincoln played back a message that Nintendo had received four days ago.

"This is Victor Ireland with Working Designs. I just want to say, *Tale Phantasia* is an amazing game and it would be my honor if Working Designs got the contract to localize this game. We've been working with Sega for a while, it didn't work out with them but I admire what Nintendo's been doing with game localizations and I think we could do really well together. If you want a sample of the work we can do just let me know. I really want to help you bring this awesome game to the States."

Howard Lincoln already knew about Ireland's volatile personality and the way his company's relationship with Sega had ended. He had to wonder if this offer to Nintendo was less about wanting to help bring *Tale Phantasia* over and more about spiting Sega. But the work they'd done on the original *Lunar* was excellent, and Telenet and Working Designs seemed like they could have really good synergy together.

"It's entirely your call," said Arakawa, who knew less about Victor Ireland than his American colleague. "This will be a major game for us, if you want us to foot the bill for the Squad Four team to work on this game, we would be willing to do that."

"This man has never had a hit project, even *Lunar* was a niche title," said Lincoln. "But...if Telenet wants to work with him and they think he can help make this game a success in North America, I'm willing to trust their judgment and put Working Designs in charge of the localization."

The two men sat down in Lincoln's office. They had more to discuss.

"Two weeks," said Lincoln. "Two weeks until E3."

"I am confident that whatever Sega is planning for their new Saturn, it will not be enough to counter all of the games we are going to put on display. We have a new Zelda game, a new Mario game, Doom is coming to the Super Nintendo CD..."

"And the Year of the RPG," said Lincoln. "We might not 'bring the arcade hits home', but...I think the arcade is going out of style anyway, isn't it?"

The two men shared a laugh. E3 was coming...and the console wars would soon be elevated to their biggest stage yet.

-

Okay, I wrote this piece a few weeks ago, in response to questions about the Archie continuity. This is a brief synopsis of how Archie's Sonic series is coming along. It will bleed into 1997, as major events in the comics occurred then.

"Archie's Sonic the Hedgehog series, which began in 1993, was a whole different animal from the games or the two animated series. It was a fusion of all three forms, incorporating elements from all three elements. However, from issue 10 onwards, it began to create its own continuity, separate from either series. Despite this, many of the cues were taken from both Saturday Morning Cartoons, particularly "SatAM" as it was later referred to as.

[..]

Knuckles the Echidna was introduced in issue 13 in an adaptation of Sonic 3. (You could tell by all of the ads for the Mega Charger, including a reference to Eggman's machine being charged by one!) At first, he wasn't used often. However, when Knuckles: Renegade came out in 1995, and as he was introduced on SatAM as a character, he was given more prominence. This was especially true under the authorship of Ken Penders, who was hired under head writer Michael Gallenger in 1993. Penders soon became more and more active. Knuckles became a particular favorite of Penders, and he set about trying to focus on his mythology and that of the Echidnas. Renegade was made into a special 48 page special [1], which adapted the game's prologue, essentially an ad for the game. (Penders also was an advisor on the game's story, in order for it to resemble the comics more). Here, Robotnik manages to build a large city near the edge of the Floating Island, and begins to bring some prisoners there. Luckily, Knuckles comes to their rescue, and together, they try to stop Robotnik. The Renegades were retooled to become Knuckles' version of the Freedom Fighters, after he rescues them from robotization, and settle them onto Angel Island. Each issue from Issue 35 had at least one Knuckles' story. Also, like in SatAM, Knuckles, Sonic, and Sally are involved in a love triangle. However, unlike the show, where it was shoe-horned in, the comic expanded on this feature, often making it unclear whether Sally loved Sonic or Knuckles. (Corona was downplayed as love interest for Knuckles until much later on). It also lasted much longer than on the show.

[...]

Issues 40-44 involved several botched battles involving Robotnik (or another minor villain from the comic, such as Anti-Sonic), the Knothole Freedom Fighters and the Renegades. This, along with the tension between Sonic and Knuckles, leads to the arc "Endgame" (Issue 45-50, January to June, 1997.) Here, Robotnik engineers the stealing of the Floating Island's Master Emerald[2] and pins this on the Freedom Fighters. He also has Princess Sally killed off, and framing Sonic for it. This would lead to Sonic going on the run, and the Freedom Fighters and Renegades fighting. This leaves Robotnik free time to work on his Doomsday Device, which will completely erase Knothole and the Floating Island. The

Doomsday Device is fueled by the Master Emerald .Eventually, Sonic clears his name, the truth comes out that a fellow Freedom Fighter had killed Sally on accident, and also, a traitor stole the chaos emerald. Sonic, Knuckles, and their joint forces storm Robotropolis. Robotnik and Sonic engage in one final battle, before the Doomsday device is turned on Robotnik, erasing him from reality. This action also shatters the Master Emerald. However, this news of Robotnik's death is dampened by the death of Princess Sally.[3] Issue 51 (Funeral for a Freedom Fighter) shows Sonic and Knuckles engaging in a tough battle out of frustration for her tragic death. However, they sort out their differences, and look forward to the future. And the issues to come proved that it would be a interesting future indeed.

[..]

Penders also had an intended pet project of a Knuckles the Echidna comic series. However, this was shelved due to new character restraints from Sega, and the plan was reduced to a single four issue miniseries. Most of what he had planned for that was introduced into the main series Knuckles stories. The Miniseries largely adapted the rest of Knuckles Renegade, followed Knuckles and the Renegades as they find the pieces of the Master Emerald, and also noted the return of the Echidnas in the last issue of the miniseries. This would become a major plot point for Knuckles' storyline" [4]

- From blog "Sonic Boom: a blog about a Hedgehog", entry entitled "Archie's Sonic the Hedgehog: Issues 1-50 (and 51)," March 5th, 2009

[1]Chaotix, and several other games, were given this treatment OTL.

[2]The Master Emerald as it is in the games doesn't exist in the Comics OTL at this point. It created a little bit later, when a villain called Mammoth Mogul... you know what, you probably don't want to hear about that. Anyway, due to the higher promotion of Sonic 3, the generic chaos emerald used is replaced with the Master Emerald itself

[3] Sally was to be killed off in Issue 50 OTL. She was woken up by Sonic at the end of Issue 50. However, Issue 51 revealed that she was an android. Sega forced Archie to have her live. Hence, the sequence in issue 51 was changed to a dream sequence. Here, they just outright say that she's dead at the end of issue 50.

[4] The series was the OTL Knuckles the Echidna spin-off comics series that ran for 40 issues. It was quite popular, and there was even a film in the works, from what I've heard.

-

*"E3 1995 was obviously a pivotal moment in Sega's history. We needed to 'go big or go home' with the Saturn, and it was quite a relief to see the positive reaction that a lot of people had to it. There was brief discussion among the higher brass in Japan to actually release the Saturn in North America at the time of E3, but thankfully, Mr. Nakamura convinced them that it would be an enormous mistake. At the time, only two of the launch games would've been ready to ship, and what was the rush? Nintendo still had at least two years before it was going to launch its next console. I'm glad cooler heads prevailed, because releasing the Saturn in May would've been the dumbest decision in the history of business."*

-Tom Kalinske

*"I've been asked, 'why didn't you talk more about the Ultra Nintendo at E3 1995?', and the fact of the matter is, we wanted this show to be about all the great SNES-CD games coming out. The SNES-CD still had at least three years of life left and we didn't want to do anything*

*that would overshadow it at that time, plain and simple."*

-Howard Lincoln

*"E3 1995 was a lot of fun! I wasn't picked to be the keynote speaker but I did get to give a lot of interviews and show off some of the new Sony games. I also got to do a neat little presentation comparing the SNES-CD soundchip, the evolution of my SPC ship for the SNES, with the Mega Charger's sound chip. It was a very busy time for me but I remember it fondly."*

-Ken Kutaragi

*"We're here at E3 and it's a huge spectacle! Some of the biggest celebrities are here to join in the festivities, including Seal and yes, at Acclaim's booth, Selena is going to be performing! It's a big party and GameTV's been invited!"*

-Ted Crosley, introducing GameTV's E3 special on May 16, 1995

*"I remember the first time I got to play Tale Phantasia at E3 1995. It was one of the most crowded booths and it was completely in Japanese, but there really wasn't an RPG like it. Fully voiced and the battle system was a LOT of fun. I remember thinking the first time I saw it, this game is going to be very big."*

-Ed Semrad, editor in chief of *Electronic Gaming Monthly*, discussing E3 memories in the July 2002 issue of *EGM*

*"Oh no, no, I'm just here to play this new video game, it's a lot of fun, Sony and Nintendo invited me here to play some video games and I'm having a wonderful time."*

-Michael Jackson, talking to the press at the *Tales Of The Seven Seas* kiosk at Sony's E3 1995 booth

-

## **May 10, 1995**

*"Good morning, everybody. I'm Tom Kalinske, president of Sega of America, and today we are formally unveiling the Sega Saturn in North America. It's been tearing up the sales charts in Japan for nearly six months now, and indeed, we're less than four short months away from its official North American launch. The Sega Saturn is the culmination of a nearly two-year effort by Sega in Japan, North America, and Europe to create the greatest video game console ever devised. Our efforts have been joined by the company Silicon Graphics, which provided us with the technology to make the Sega Saturn possible. Ladies and gentlemen, I give you...the Sega Saturn."*

\*A video begins to play on the projected screen, showing scenes from the games Virtua Racing, Virtua Fighter, and Virtua Cop.\*

### **THE ARCADE COMES HOME**

\*More scenes are shown, this time a huge magic spell being launched against a giant boss monster in MagiQuest, followed by scenes of a man entering a village in Ultima: The Worldly Lord.\*

### **THE GREATEST ADVENTURES**

\*Scenes are then shown of Madden '96, NHL '96, and Bases Loaded '96\*

## **LIFELIKE SPORTS**

\*There's a scene shown from Panzer Dragoon, the huge dragon flying in the air amidst a beautiful landscape.\*

## **NEW WORLDS**

\*Scenes are shown from Resident Evil and Tomb Raider, the very first builds but still looking very impressive, showing Lara Croft shooting at a tiger and Jill and Chris running from zombies.\*

## **NEW CHARACTERS**

\*A group of friends are shown playing Daytona USA with four of the new six-button Saturn controllers.\*

## **A NEW WAY TO PLAY**

\*Various scenes are then shown from Saturn games, each punctuated by three words: **YOU WILL BELIEVE** as the graphics get more and more impressive, looking better than anything previously seen on a video game console. The final scene is shown from an early build of Nights, probably the best looking game yet, of the main character flying through the air, followed by one more **YOU WILL BELIEVE**.\*

## **Sega Saturn**

### **Launching Saturday, September 2, 1995**

#### **PLAYING IS BELIEVING.**

\*The crowd erupts into raucous applause as Kalinske takes the mic once more.\*

*"As you just saw, the Sega Saturn will be launching in North America on 'Saturday', that's Saturday, September 2nd. Labor Day weekend, so you'll have three days off to enjoy more than a dozen launch games that will be available at launch. The Sega Saturn will retail for \$399, and for that you get the Sega Saturn, two controllers, and Virtua Fighter as a pack-in game. We'll also have a special Virtua Arcade Bundle that will cost \$499, and for that you get the Saturn, Virtua Fighter, Virtua Racing, Virtua Cop, two controllers, a steering wheel accessory, and our new Saturn lightgun accessory. We understand that the Saturn's price point is significantly higher than that of the Sega Genesis. But imagine how much you would pay for a high-end gaming PC, over \$2000. Imagine how much you'd pay for one of our Sega arcade machines, over \$6000. The Sega Saturn produces graphics equivalent or in some cases better than either a PC or an arcade machine and you're paying just a tiny fraction of the cost. And we are partnering with Namco and we plan to bring every single Sega and Namco arcade game released in the next five years to the Sega Saturn as a home console game. That's right, every single Sega or Namco game that you enjoy in the arcade, you'll be able to purchase and bring home for your Sega Saturn to play in the comfort of your home with your friends whenever you want, and it'll look just as good or in some cases better than what you get when you go to the arcade and spend your quarters.*

*In addition to bringing the arcade hits home, the Sega Saturn will be the best sports gaming*

device your money can buy. We'll be featuring games from all four major sports leagues in the very first three months of release. In addition, we'll be bringing sports like tennis, golf, auto racing, boxing, and many others to the Sega Saturn, and as you've already seen, they'll feature lifelike graphics so that when your friends walk into the room, they won't know whether they're watching a TV broadcast or seeing you play your Sega Saturn. We've also got some of the best epic role-playing games coming to the Saturn. I am proud to announce for the very first time that an all new original video game, *MagiQuest*, is going to be at launch for the Sega Saturn. This is a game very near and dear to my heart because it's inspired by my own daughters and their love of adventure. In *MagiQuest*, you'll take on the role of three very brave young girls as they discover their hidden magical powers and journey on an epic quest. But this game isn't just for girls, this is one of the most challenging and deep role-playing games that's ever been developed, with monstrous bosses, deep, dark dungeons, and dozens of powerful spells to use on your foes. And you'll be able to play with two of your friends as you take these three girls on an amazing adventure. We've also got a Saturn-exclusive installment of the classic *Ultima* role-playing game series. It's called *Ultima: The Worldly Lord*, and it's going to take this great series into the third dimension for the first time. With polygonal graphics and plenty of beautiful effects, it's the most atmospheric *Ultima* game ever, and with a soundtrack composed by the brilliant young musical maestro Jeremy Soule, who will be appearing at our Sega booth tomorrow, you'll be sucked right in to this enormous world. In *Ultima: The Worldly Lord*, you play as the lord of a small kingdom and you must help it to grow while protecting it from evil threats in the world beyond. You'll explore the world to recruit warriors, craftsmen, and merchants alike, combining the world-building elements of a game like *SimCity* or *Populous* with the classic *Ultima* adventuring gameplay role-playing fans have loved for more than a decade.

I'm also proud to reveal that Sega's plans for the Saturn extend well into 1996 and beyond with several games already in development for the console's second year. Among them is a new franchise we like to call *Nights*. Developed by Sonic Team, it is the next evolution of action gameplay. You'll take to the skies and soar through a beautiful dream world, collecting items, battling enemies, and exploring the most beautiful video game landscape ever conceived. We're proud to show off a tech demo of *Nights* at our booth at E3 and we'll be offering much more on this game in the months to follow. We've also been hard at work with our third-party partners to develop games that take advantage of the new technology present in the Sega Saturn. One of these games is called *Tomb Raider*, where you'll take control of explorer Lara Croft as she plunges into ancient temples and battles deadly creatures, including creatures from beyond the grave. This game is very early in development but we've got plenty of early footage to show off and more information about this game will be available at Sega's booth. There's also a horror game from Capcom, originally known as *Biohazard* but now known as *Resident Evil*. This game takes place in a mansion that's become ground zero for an outbreak of a deadly virus that turns human beings into shambling zombies, and you'll need to use your wits and courage to escape. This game has been in development now for nearly two years and it's been designed specifically to take advantage of the technology afforded by the Sega Saturn. We do have a playable demo of this game that will be available at Sega's booth and we encourage everyone to try it out to get a serious glimpse at the Sega Saturn's potential. I am proud to be here in Los Angeles for this week's E3 and I look forward to seeing all of you out on the convention floor. The future of gaming is here, it's the Sega Saturn, and playing is believing!"

-keynote speech from Tom Kalinske at the 1995 Electronic Entertainment Expo

"Hello, I'm Olaf Olafsson and I'm the president of Sony Interactive Entertainment, Sony's videogames division. We've been in partnership with Nintendo for four years now, and

recently I'm sure a lot of you have heard rumors that the Nintendo-Sony relationship is not on sound footing. I'm here to tell you right now that those rumors are not true. In fact, Sony is doubling down on its relationship with Nintendo and we are in the middle of developing several new games for the Super Nintendo CD over the next few months. The first game I'd like to tell you about is *Tales Of The Seven Seas*, a brand new action-adventure game from our development partner Naughty Dog. This game stars a band of seven characters who have their own pirate ship and they use it to explore islands amidst a vast sea in search of adventure. This brilliant and creative game has some very fun characters and a variety of gameplay types, from puzzle solving to hack and slash action platforming, to RPG-like exploration, and is fully voiced by a cast of some of the best voice actors in all of animation. We at Sony feel that *Tales Of The Seven Seas* will be a new paradigm of storytelling and fun in video games and we encourage everyone here to try it out in our booth, both to get a taste of the various types of gameplay and to see the seven stars of the game for yourself. Next up, we have *Twisted Metal*, a car combat game that features some of the best graphics possible on the Super Nintendo CD as you hop into a car loaded up with weapons to hunt down and destroy other drivers. It too features some very colorful characters, including a psycho clown named Sweet Tooth who drives a fully-loaded ice cream truck. Finally, there's a game that we at Sony are very proud of, that Sony has developed in its own in-house game studio and is going to launch in October of this year. It's an action shooter game called *Ballistic Limit*, where you play as a futuristic soldier named Ash Beckland. Ash is the lieutenant captain of a squad of highly-trained recruits who hunt down alien threats to protect a colony that orbits a dying Earth. When Ash's captain is mysteriously killed and he is separated from the rest of his squad, he must resume his mission alone while trying to find any allies he can. The gameplay is that of a run-and-gun shooter where you have a variety of weapons at your disposal, but at any time during the game, you can switch to a first-person mode called *Ballistic Mode*, where you'll become much deadlier as you gun down enemies until your *Ballistic Meter* reaches its limit. You're also able to use this first-person mode to find hidden treasures that you can't find normally. You're not by yourself on this quest, it's a story-driven action game with twists and turns rivaling those in the most popular movies or television shows, and like *Tales Of The Seven Seas*, it involves fully voiced cutscenes. Sony will continue to publish and create games for the Super Nintendo CD and whatever lies beyond. Thank you all and enjoy E3!"

-keynote speech from Olafur Johann Olafsson at the 1995 Electronic Entertainment Expo

"Good morning, I'm Nintendo of America president Howard Lincoln. As you heard just a few minutes ago from Mr. Olafsson, Nintendo and Sony's partnership is stronger than ever. In fact, we're already hard at work on the next great gaming console of the future. But this year, Nintendo is all about the games, and the Super Nintendo, Super Nintendo CD, and Game Boy will feature the best games on the market. We'd like to start off by talking about a little game called *The Legend Of Zelda: Ocarina Of Dreams*. For the past two years, Shigeru Miyamoto and the game makers at Nintendo have been working tirelessly on a Zelda game worthy of the Super Nintendo CD. This game will conclude the epic trilogy begun in *The Legend Of Zelda: A Link To The Past* and continued in the Gameboy game *The Legend Of Zelda: Link's Awakening*. It will bring the real world of Hyrule and the dream world of Koholint together through the magic of an ocarina, and send Link on his biggest adventure ever. Link will need all the weapons and abilities he can get, and this game brings back many of your favorites from both *A Link To The Past* and *Link's Awakening*, while introducing brand new items to use in this game's collection of deep dungeons, some of the most difficult and mind-bending dungeons ever featured in a Zelda game. The technology of the Super Nintendo CD and its advanced graphics processor will enable some of the most amazing visuals ever seen in a Zelda game, including atmospheric dungeons, massive bosses, and new animations for all of your favorite classic characters, including Link

himself. *Ocarina Of Dreams* has been released in Japan to rave reviews and record-shattering sales and we hope you'll enjoy playing the full North American version of the game over at our booth. Of course, none of us would be here if it wasn't for Mario, the plumber whose games have delighted millions across the world. This August, *Super Mario World 3* will be released for the Super Nintendo CD. For the first time, Mario will be able to run, walk, and jump in all directions with this game's new 3-D isometric gameplay. You'll be able to explore more than 40 levels in the new style as you battle Bowser and his army of Mechakoopas who are once again seeking to conquer the Mushroom Kingdom. The new dimension will offer a new degree of freedom for Mario, though he'll be without his green dinosaur pal Yoshi for the first time since *Super Mario Bros. 3* on the NES. Yoshi fans, don't despair, we've got an all new game on the Super Nintendo starring Mario's green friend in a prequel to the original *Super Mario Bros.* game. *Yoshi's Island* is an all new cartridge that utilizes our new Super FX 2 Chip to create worlds that look right out of a storybook. The game takes place back when Mario and Luigi were just little babies. When Bowser's court wizard Kamek snatches Baby Luigi up, it's up to Yoshi and Baby Mario to rescue him. You'll utilize the new Ground Pound technique to stomp enemies into the ground in this latest Super Nintendo classic!

We've also got SNES-CD sequels to a pair of 1993 SNES hits. First up, there's *Super Squadron X: Critical Dawn*, which continues the story of *Super Squadron X* by having Captain Xenda and his battle tank the VIXIV return to Earth in search of those left behind after humanity fled the planet. He'll encounter hordes of deadly alien creatures along the way, and only the VIXIV can blast them out of the skies and save the refugees. We also have an RPG, *Earthbound 2*, the sequel to the SNES hit *Earthbound*. In this game, aliens invade the peaceful town of Onett, and Ness and his new friends have to rally forth to save humanity. Of course, a lot of you are here for news about a home console version of Nintendo and Rare's hit fighting game *Killer Instinct*. Rest assured, you won't leave here disappointed. The game has been in development for the Super Nintendo CD for much of the past year, and it will finally be coming home this fall. *Killer Instinct* for the Super Nintendo CD features the combo-based gameplay of the arcade hit, with all of the exciting characters and pulse-pounding moves you've been using on your friends in the arcades. We've got a big *Killer Instinct* display set up at our booth so you can see just how smoothly this game runs on the SNES-CD. For fans of the pink puffball, Kirby's back in a pair of exciting new adventures for the Super Nintendo and the Gameboy. First up, *Kirby's Adventure 2* for the Super Nintendo. It features seven brand new worlds for Kirby to explore and more than a dozen new forms to transform into as he battles a new threat to the galaxy in the form of the tyrannical alien wizard Thraxor. For the Gameboy, *Kirby's Dream Land 2* is a sequel to the very first Kirby game, *Kirby's Dream Land* released all the way back in 1992. This time, he's teaming up with an adorable hamster named Rick as he adventures through several worlds, swallowing up enemies all along the way. *Kirby's Dream Land 2* will be available later this month, while *Kirby's Adventure 2* is set to release in August. We're also proud to announce that Rare is hard at work on *Donkey Kong Country 2*, the sequel to the hit *Donkey Kong Country* game which is still burning up the sales charts even as we speak. We'll have more information on this game available at our booth, but rest assured, this game will be bigger and badder than ever.

Nintendo is also proud to present dozens of games from our third-party development partners. We've already heard from Sony, who will have a trio of excellent games available later this year. Another of the Super Nintendo CD's biggest games this year is the SNES-CD port of the hit PC game *Doom*, in development by Williams right at this moment. It's going to be the definitive home console version of *Doom*, with development assistance directly from the original programmers of *Doom*, John Carmack and John Romero. Both men will be

at Nintendo's booth to show off the game and to explain why this is going to be the only home console version of Doom worth buying. We're looking forward to releasing the game in August, alongside the release of Super Mario World 3. We're also proud to announce that a game based on the upcoming movie Batman Forever, developed by Acclaim, will be available for the Super Nintendo CD, and that Acclaim is showing off the Batmobile at its booth, alongside a demo of the SNES-CD version of the game. We're proud to be hosting the performing artist Seal, who will be performing the theme song for the new Batman Forever movie and will be giving a live performance immediately after this presentation. Two more of the year's most anticipated games will be exclusive to the Super Nintendo CD from our partners at Tecmo. Tecmo Super Bowl CD is an updated version of the classic Tecmo Super Bowl game, featuring the latest NFL rosters and all new cutscenes to help bring the exciting action on the football field to life. Next up, Tecmo is bringing a sequel to 1993's surprise hit action game Deadman Sam. In Deadman Sam 2, Sam teams up with his ghostly wife Nellie to battle even more evil denizens of the underworld. Nintendo is also proud to announce a pair of games from Konami. Later this year comes Zombies Ate My Neighbors: Ghoulish Patrol, a sequel to the highly praised and highly strange horror game about two kids trying to save their neighborhood from an invasion of the dead. In Ghoulish Patrol, developed in partnership with LucasArts of Secret Of Monkey Island fame, Zeke and Julie recruit a team of neighborhood kids to help them battle against a circus of horrifying creatures. Speaking of horror games and Konami, we're pleased to announce Eternal Night, a terrifying new game from the makers of the Castlevania series. You play as a count who must restore the light to his castle after an otherworldly intrusion of demons threatens to swallow up his realm. With gameplay that harkens back to Konami's classic Castlevania series, the game features a variety of weapons and hordes of massive bosses to bar your path.

But as good as Nintendo's 1995 is looking to be, we're already looking ahead to 1996. And for 1996, we have a theme in mind. When we set out to create the Super Nintendo CD in partnership with Sony, we intended to create games featuring the latest in electronic technology. We did that, but we also accomplished something more. Through some of the most talented minds in the gaming industry, the Super Nintendo CD has advanced the medium of storytelling in gaming, particularly through the role-playing game genre. RPGs have been some of the most popular games on the Super Nintendo CD, and Squaresoft's hit Final Fantasy VI has been one of the top selling games of the year. For that reason, we've decided to declare 1996 the Year of the RPG. More than a dozen role-playing games are in development for the Super Nintendo CD for 1996, and in this presentation we're going to highlight four of them. Joining us from Squaresoft is the president of Square USA, the creator of Final Fantasy, Mr. Hiranobu Sakaguchi!"

\*Hiranobu Sakaguchi takes the stage along with a translator to great applause from the crowd. He begins to speak in Japanese, the translator then speaks in English.\*

"Here at Squaresoft, we are proud to be partners with Nintendo in the creation of video games for the Super Nintendo CD. We feel that the technology afforded by the Super Nintendo CD has made it possible to do our very best work, and we will continue that work both in this year and the years beyond. Our next great RPG title is something we have called the Dream Project because it brings together many great minds from all over Japan to work on a game that I feel is the greatest we have ever produced. I am proud to announce Chrono Trigger which will be released in Japan for the Super Nintendo CD in the fall and in North America next spring. In this game, you must journey through time to prevent an apocalyptic crisis. Brave heroes will join together in an adventure spanning many eras of time, utilizing powerful magical techniques and combining those techniques

*into powerful attacks to use on the enemy. With the help of the anime legend Akira Toriyama, we intend to include over 45 minutes of anime full motion video in the game, which will be fully voiced both during these videos and during battles and other scenes. It will be Squaresoft's first fully voiced video game and it will also be the first Super Nintendo CD game to span two discs. One disc alone will not be enough to contain all the content in this magnificent adventure. The next game I would like to announce, is one of the most anticipated, perhaps the most anticipated game in the history of Squaresoft. It is the sequel to a game that won great acclaim in 1993, both here in North America and back in Japan. In fact, I understand it is the best selling role playing game in the history of North America! So I imagine that the anticipation for this sequel, the sequel to Secret Of Mana, is very high indeed. We do not have a name for it here in North America as of yet but in Japan it will be called Legend Of The Holy Sword 3. In this game you will be able to choose from among six heroes to form a party of three. Just as in the original Secret Of Mana, you will be able to battle with three players at a time, exploring a world even bigger and more beautiful than the first. This game is still early in development but we have a video to show at our booth out on the floor and I'm hoping you enjoy what you see. Finally, I would like to announce a game that has been a grand partnership between Squaresoft and Nintendo, a game that has been in discussion for quite some time and a game that I'm very happy to announce with the help of Mr. Howard Lincoln."*

*\*Sakaguchi cedes the floor to Howard Lincoln, who begins to speak again.\**

*"Thank you, Mr. Sakaguchi. As I said before, none of us would be here without Mario, and what better way to celebrate the Year of the RPG than by giving Mario a role-playing game of his own? Coming in 1996, Nintendo and Squaresoft will present Super Mario RPG, which will star Mario and his friends in an adventure spanning the Mushroom Kingdom and beyond. The game will feature isometric graphics and gameplay similar to that in Super Mario World 3, while battles will test your reflexes like never before. All your Mario favorites will team up with brand new characters to face a terrible new evil in Super Mario RPG, coming to North America sometime next summer. Finally, I'd like to announce a project that Nintendo's been helping to create along with its partner Telenet Japan, who recently released the excellent Valis: Rebirth for the Super Nintendo CD. Telenet Japan's talented Wolf Team has created a quest unlike any other, a game that released in Japan two months ago to great reviews and stellar sales. It's a game called Tale Phantasia, and it's coming to North America next summer. We've got the Japanese version of the game fully playable at our booth, and we've already begun the process of localizing the game, which will include more spoken dialogue than any other video game on the Super Nintendo CD to date. It's absolutely beautiful and we were proud to help Telenet Japan and its brilliant Wolf Team make it a reality. We hope you'll enjoy playing Tale Phantasia and all the other excellent upcoming Nintendo games at our booth this year. Thank you, enjoy E3, and here's Seal!"*  
*-keynote speech from Howard Lincoln at the 1995 Electronic Entertainment Expo*

-

Ted Crosley: We're here in Las Vegas for E3, the Electronic Entertainment Expo! It's an exclusive event, which means that if you're not in the media or part of the video game industry, you can't get in! But guess what? Since you're here watching GameTV, you're about to get an all-access pass to the hottest show in gaming, and you don't even have to get up off the couch! For the next hour, we'll be taking an in-depth look at the future of video games, so get ready, get set, and let's do this thing!

(...)

Ted Crosley: I am here at the Sega Saturn booth and this massive line is for *Virtua Cop*, the home console version of Sega's hottest arcade game. Two weeks ago we looked at *Virtua Cop 2*, it's coming to the arcade later this year, but this is the home console version of the original, so let's see how it stacks up.

\*Ted goes up to the booth where a man from Sega of America is waiting.\*

Ben: Hey there Ted, I'm Ben Glass with Sega of America and this is the Saturn version of *Virtua Cop* which will be available on launch day in September.

Ted: Well, I'm looking at the game and the first thing I noticed is that it looks JUST like the one in the arcade, I mean everything just looks amazing in this game.

Ben: *Virtua Cop* for the Saturn has been designed to replicate the original in almost every aspect, in fact, wherever possible it's been made to look even better than the original arcade game.

Ted: This is absolutely incredible. Being a big Sega fan, I've got to say I was a bit worried about this one because arcade games have a history of looking a lot better than they do at home, but I'm really impressed with how good it looks. I'm gonna play, can I play?

Ben: Absolutely.

\*Ted starts playing with the lightgun attachment, blasting bad guys on the screen. The game looks very realistic and moves at a quick pace, there's absolutely no slowdown or loss in translation from the arcade version.\*

Ted: It's as tough as I remember at the arcade too. \*he laughs\* Thank God I don't gotta put another quarter in.

(...)

\*Now Ted is in front of a screen showing off the *Nights Into Dreams* tech demo. Standing with him is Tom Kalinske.\*

Ted: I'm here with Sega of America president Tom Kalinske. We're looking at *Nights*, the game everyone's been talking about, and I can see why. Everything's so beautiful. The sky's full of stars, you got your water there in the moonlight, this game is like watching a dream come to life.

Tom: Well, that's exactly the effect we were going for, Ted, this game takes place in a magical dream world and you'll be exploring as this character *Nights*, who is a Nightmaren who is created for evil but ends up turning good and helping two young children realize their dreams.

Ted: That sounds a lot like a fairytale, so this game, it's the next generation of action platformers?

Tom: It's not exactly a platformer, it's a fully free-roaming flying game, you'll be spending much of this game gliding through the air and exploring the worlds. We're hoping to utilize the Saturn's technology to create an entirely new gameplay experience.

Ted: It looks, absolutely....amazing. I mean, this is all gameplay, correct?

Tom: That's right, and this is early alpha gameplay at best, so it's going to look even better in the final product.

Ted: So the Sega Saturn, it's clearly more advanced than anything before it. It trumps the 3DO, it blows the Jaguar away and it looks a lot better than the Super Nintendo CD. The asking price of 400 dollars is a bit high but I haven't seen games look quite this good on anything else.

Tom: Exactly, we've worked with Silicon Graphics who makes high-end computer chips and the Sega Saturn is designed to replicate the technology found in those PC games. It uses CD-ROM like the Sega CD but with vastly improved technology. It can do 3-D, it can do 2-D, we learned from the Mega Charger that it's a bit more difficult to do 3-D and 2-D with two different processor chips, we've had some difficulties with that so we've decided to do a single chip for both, we can do the latest in 3-D graphics but we can also do very detailed and beautiful 2-D graphics for games where those would work best.

Ted: And this system is...how many bits is it?

Tom: It's a 64-bit system but we've actually tried to avoid using the "b" word. We feel like there are other ways to describe the abilities of a game console besides the number of bits it has, it's more about how you use those bits. Jaguar was a 64-bit system and it looked nothing like this, not even close. We're using an advanced processor chip and that's what powers the graphics on the system.

Ted: So you're declaring the "bit wars" over then, pretty much?

Tom: \*laughing\* If that's how you want to put it, yeah. I mean, we're gonna use another "b" word and that's "believe", this Saturn is going to do things that you won't believe until you've played it.

Ted: Well, I've played the Saturn and right now I'm a believer.

Tom: Yeah!

Ted: Come on now, this is MTV, you gotta show a little attitude.

Tom: Hell yeah! \*laughing\* This isn't my first time on MTV, I've done the VMAs before so I'm glad to be appearing on MTV again. Tell Beavis and Butthead I said hi.

Ted: I will absolutely do that. I gotta ask one more thing, we haven't seen any sign of a new *Sonic* game for the Saturn, and as probably the world's biggest Sonic fan I'm a bit disappointed.

Tom: Rest assured, Sonic the Hedgehog will be showing up on the Sega Saturn. Sonic 3 was a tough act to follow and we want to make sure that the next Sonic game is his biggest and best game ever. I don't have anything more I can say at the moment but just watch this space because I imagine E3 1996 will be the hedgehog's big show. We will not keep you waiting!

Ted: I will hold you to that! Thanks again for speaking with us, the Saturn really is an impressive device.

Tom: Thank you!

(...)

Alex Stansfield: Right now I'm about to play the new Legend Of Zelda, the line for this game is massive but I'm here with Gail Tilden from Nintendo and she's going to help walk me through this dungeon here.

Gail Tilden: Well, right now you're in the City of the Dead, it's the second dungeon in the game and you're underground in a haunted complex of rooms and caves.

Alex: This is pretty scary, there's ghosts everywhere... \*he's fighting off Poes with his sword as he makes his way through the rooms, he's at a late stage of the dungeon\* Now I've got the jumping feather, which is pretty fun.

Gail: That's Roc's Feather, it's from Link's Awakening and it's making it's first appearance in a console Zelda game as the item you find in this dungeon.

Alex: Yeah, I can already see how these rooms kinda utilize the feather and...and...get back, get back! \*having some trouble keeping Poes away in a room full of gaps and holes\* They are coming outta the woodwork!

Gail: As you can see you're gonna need all your skills to get through these new dungeons.

Alex: Oh I can absolutely see that but I think I'm through this part here. So this new Zelda game, who's the new bad guy, or can you not tell me?

Gail: In this game the bad guy is a thief named Gaddis who steals the pieces of the Ocarina of Dreams and you have to track him down. He's a lot younger than Agahnim, just a little older than Link actually and almost kind of an evil counterpart to Link.

Alex: So he's like an evil whiny teenager pretty much?

Gail: Not so much whiny or teenager but yeah definitely evil.

\*So now Alex is in the boss room, up against a giant ghostly foe, a huge Poe surrounded by other Poes\*

Alex: Whoa, whoa, whoa! \*he gets hit by a wave of Poes surrounding the monster\*

Gail: There's a trick to this but I'll let you figure it out.

Alex: Right, that's the neat thing about Zelda, a trick to every boss in this game. \*he leaps up onto a balcony, this lets him avoid the spinning Poe attack\* Oh, that worked! \*he keeps playing and uses a stabbing downward slash to hit the beast's weak point and stun it\* That worked too! All right! \*begins slashing the beast repeatedly now\* I love the animation in this game, Link looks so much more alive and the boss does too, a lot of detail in pretty much everything. \*a couple more downward stabs and slashes finish off the boss\* And he's dead!

Gail: Congratulations, enjoy playing that?

Alex: I absolutely did, thanks again, that was really fun. Definitely looking forward to playing this game.

(...)

Alex: And now for another epic game, we're over at the Sega Saturn booth and this is *Ultima: The Worldly Lord*. Right now we're out exploring in a field just to the west of our main town, as you can see on the screen we've got bandits and raiders coming after us.

Tim Stellmach: You've got to decide whether these guys are friends or foes. Sometimes you can actually recruit some of the enemies who accost you in the field, it might be more helpful than fighting them for their loot.

Alex: I'm going to go ahead and fight them for their loot. ....and I'm dead.

Tim: In the early stages of the game it's absolutely crucial that you avoid combat if it looks like you're outmatched, you've gotta be careful because sometimes your enemies can be really powerful.

Alex: So it helps if I use diplomacy to settle some of these disputes?

Tim: Absolutely, most of the time the human enemies won't fight you if you don't attack them first. Sometimes they will and you'll learn to identify which of them are hostile and which of them are open to talking it out.

Alex: This series has always been a lot more intuitive, I think, than some of the other role playing games where you just kill everything.

Tim: Right, this game offers you a lot more choice about how you're going to progress in the world and build up your kingdom.

Alex: It's one of my personally most anticipated Saturn games, really looking forward to playing it when we review it later on.

(...)

Brittany Saldita: Brittany here, I'm over at Nintendo's booth and right now I'm playing *Tale Phantasia*! This is an absolutely beautiful RPG and I can't get enough of it, right now I'm just walking around getting into fights and tearing into enemies. I'm here with Yoshiharu Gotanda who designed the game, he's been really helpful in getting me acclimated to the game's combat systems and translating for me since I'm not very fluent in Japanese.

Yoshiharu Gotanda: Right now you've just gone back to the past and you're making your way to a town where you'll be able to figure out just how you got here.

Brittany: Between this and *Chrono Trigger* I'm doing a lot of time traveling in games! I have to say, I love the rich detail in the character sprites and the background animation, these graphics are gorgeous. The combat system is a lot like a fighting game, you have moves and even combo moves to perform, you can set up to four special moves to the B button

and then use B and press a direction on the controller to do your special move. You run out of magic points REALLY fast if you do too many special moves so you'll want to stick to your regular attack most of the time.

Yoshiharu: You have it mastered already! \*he laughs\*

Brittany: This is not my first RPG, lemme tell you, but I've never played a game like this. Maybe Secret Of Mana but that game didn't have the sheer variety of moves that this game has.

Yoshiharu: You can set even more special moves to the L and R buttons!

Brittany: I am gonna be playing this game forever. I can see the people standing in line to play, they're jealous of me, looks like one of them wants to kill me so I'd better stop talking and keep playing. \*laughs\* Oh my god you guys, I need to import this from Japan. It's just that damn good. \*she keeps playing\*

(...)

Ted: We're here at Sony's booth and this is one of the busiest booths in the show because it's the line for *Ballistic Limit*, the highly anticipated shooting game from Sony for the Super Nintendo CD this fall. I've started playing through level one and it's pretty fun so far, I've already got three weapons that I can switch back and forth between but what's REALLY interesting about this game is that once you go into Ballistic Mode, your weapon switches functions, check this out. I've got a pistol, but when I switch into Ballistic Mode it takes on this cool tri-laser function and I can kill multiple enemies at once. You can also go into the menu and change up the weapon function, so for example if you want it to do the same thing in regular mode and Ballistic Mode you can do that. You can find new weapons or you can even buy them in shops. This game is a lot like Metroid but much less about exploration and more about killing stuff, you also interact with a LOT more people than you do in Metroid where you're kinda just by yourself on an alien world.

(...)

John Walden: I'm hanging out here at the Saturn booth and I'm about to play \*sings\* DAYTOOOOONNAAAAAAAAAAAAAA USA with three other E3 attendees. Now, you CAN use the steering wheel for this game, same thing in Virtua Racing and also in Ridge Racer which isn't coming out at launch, but I'm using the controller, it feels real good in my hands and I'm kinda used to it from Virtua Racing on the Mega Charger. Let's get this thing started!

\*There's a countdown and then the race begins, John is in second out of four at the start.\*

John: I'm lovin' the graphics, they look just about as good as what you see in the arcade, no trees popping up all of a sudden like in Virtua Racing for Mega Charger, the crowd looks real good and of course there's the awesome theme song. Right now, I'm in second, I'm gonna try to pull ahead of this guy but he's pretty good.

\*The race continues, John and another attendee battling it out for first.\*

John: I think out of all the Sega racing games here at E3, this one's probably the best. I might have a soft spot for Daytona but I really think this is the best racing game out there, it's gonna be hard for anything on Nintendo to beat it.

\*Finally the race ends, John pulls out a thrilling last-second victory.\*

John: Yeah! All right! \*shaking hands with and kind of hugging the guy next to him who got second place\* I'm having a lot of fun here at E3, I'm gonna kick it to Kaz, he's checking out one of the weirdest games at this year's show.

(...)

Kazzi DeCarlo: This is Panorama Cotton, it's coming to the Genesis in North America this June and it's a hella weird game. I'm not really an anime fan, but this game's pretty fun. It's out there but it's pretty fun. It's made by Sunsoft, who's also making Andrekah which is another kinda weird game for the SNES-CD but this one definitely takes the cake. You play as this witch who's shooting stuff while on a broom, it's a lot like Space Harrier but....you know what I'm having fun with this game. I'm here with Jenny from Sega of America and she seems like she enjoys this game too, is this your favorite Genesis game?

Jenny: It's one of the best games I've played, I love the graphics and all the animations.

Kazzi: Yeah that's another thing. This....you see this? It's not hooked up to a Mega Charger, this is an honest to God Sega Genesis game and it looks pretty damn awesome. Not a Saturn game, not a Mega Charger game, a Genesis game. And check this stuff out! \*he heads over to another booth where Vectorman is being shown off\* This is ANOTHER Sega Genesis game! Just the Genesis, no Mega Charger in sight! I'm tellin' ya, the Genesis is still kicking.

Jenny: Absolutely, we'll be releasing games for the Genesis and the Mega Charger through 1997 at least, we have over 100 new Genesis and Mega Charger games planned for the rest of this year alone.

(...)

Ted: Guess who me and Alex found? It's Joel Schumacher, he's gonna be directing the new Batman movie but right now he's here at E3.

Alex: Mr. Schumacher, what brings you here to E3?

Joel Schumacher: Right now I'm here at Acclaim's booth to help promote *Batman Forever*, both the movie and the game. I'm also here because I've become a bit of a video game fan, I don't play a lot of them but I enjoyed some of the games on the Super Nintendo CD and so I'm here to kind of get a taste of all of that.

Ted: What's your favorite video game?

Joel: I enjoyed *Snatcher* tremendously. The level of storytelling really approaches what's being done in films and I got a real kick out of seeing all the twists and turns, it was very inspiring.

Alex: So is there a little bit of a *Snatcher* feel to *Batman Forever*?

Joel: Not really, but I did take inspiration from the darker themes in the game, I felt that if a video game could bring that level of emotion to its world and its characters, that the

*Batman* series could use some of that as well. I actually got inspired to kind of exert some more creative control over the movie, convince Warner Brothers that the film could be better served by going in a more mature direction and they finally broke down and listened to some of my advice. It won't be quite as dark as *Batman Returns* but hopefully it's the kind of film that all audiences young and old can really enjoy.

Ted: Well, we're really eagerly looking forward to the new film. Have you visited with Selena? She's here at the booth too and I thought you two might have met each other.

Joel: Oh, she's beautiful and wonderfully talented. She'll be singing a song on the *Batman Forever* soundtrack and I'd love to perhaps have her appear in one of my movies someday.

Ted: She'd make a good Catwoman. Nothing against Michelle Pfeiffer but she really would.

Alex: I think he just wants to see Selena in that Catwoman outfit.

Joel: \*laughing\* Well they do kind of have the same name, don't they?

(...)

Ted: We'll be back with more coverage from the floor of E3.

Alex: And don't miss the end of our show where we'll be bringing you a performance from pop superstar Selena who's going to be performing one of her new hit songs at the Acclaim booth!

-from the May 16, 1995 episode of MTV's *GameTV*

-

### **EGM From The Floor Of E3!**

*E3 1995 was definitely the biggest video game trade show of all time and we've got tons of news live from the showroom floor!*

*The biggest news at E3 was the announcement of the launch plans for the Sega Saturn, which is set to release on Saturday, September 2, a date that Sega is calling "Saturday". With over a dozen launch titles planned for release, the Saturn will have one of the most robust launch line-ups ever. While Sonic the Hedgehog was a disappointing absentee, the Saturn had plenty of other great games to ease the pain of waiting. We were probably most impressed with the Saturn's exclusive Ultima title, Ultima: The Worldly Lord. We felt like this game takes the series in a completely different direction from previous titles and we love the freedom of exploration it gave us. We also loved Virtua Cop, the booth was one of the most crowded at the show but when we got to play we were blown away by the graphical detail which was pretty much identical to the arcade version. As always, sports fans will have plenty to do on launch day weekend, with a pair of racing games and games for all four of the major American sports, in addition to an outstanding fighting game in Virtua Fighter. All in all, the Saturn is a somewhat pricey (\$399) but very impressive looking piece of tech and we were quite blown away by it.*

*On the Super Nintendo CD front, we were impressed with the sheer quantity and variety of games available for the CD console. Whether you're a fan of RPGs, platformers, shooting games, strategy games, sports titles, fighting games, or anything else, the SNES-CD had*

something for you with more than 60 games on display. *Ballistic Limit* was like nothing we'd ever seen before with rapid-fire strategic switching between 2-D gameplay and 3-D first-person shooter gameplay, with more weapons than we could count. *Tales Of The Seven Seas* looks especially fun, it combines the swashbuckling humor of the *Monkey Island* series with *Deadman Sam*-like action gameplay with a little of *Zelda*-esque exploration thrown in. Speaking of *Zelda*, *Ocarina of Dreams* looks like *Link To The Past* on steroids. We got to see the first three dungeons and bosses in all their glory and they looked spectacular. Nintendo seems to be keeping the game's second half under wraps but if what we saw with the *Dark World* in *LTP* is any indication, it's going to be amazing. Nintendo announced a slew of role-playing games for next year but don't count out the rest of this year's crop, *Earthbound 2* looks weird but wonderful and *Squaresoft* showed off an upgraded version of *Final Fantasy IV* with enhanced graphics and CD based audio that makes us want to journey with Cecil and his companions all over again. We also liked what we saw from *Capcom's Breath of Fire* sequel, which seems to incorporate a more mature storyline featuring religion.

For those of you who still haven't upgraded your SNES (what's taking you so long?), there were plenty of games shown off, not as many as there were for the CD but enough to keep stubborn cartridge players well entertained. *Kirby's Adventure 2* was a welcome sight, *Kirby's world* looks as fun and colorful as ever, and we also got a bit of a shock when *F-Zero: G-Force* was announced. Not a racing game, it's actually an action-platformer that takes players behind the scenes, so to speak, starring *Captain Falcon* and his fellow racers as they try to stop an evil conspiracy. The graphics compare favorably to games like *Super Metroid* and the gameplay, as appropriate to the series, is really fast paced. The big SNES game of the show was *Yoshi's Island* and word on the street is that it's Nintendo's swan song to the original SNES. If what we saw is any indication, it's a hell of a swan song, with the most beautiful graphics we've ever seen on a cartridge game.

The *Genesis* and *Mega Charger* also got plenty of love with the announcement of *Vectorman*, a new platformer game utilizing rendered graphics that looked really impressive even without the *Mega Charger* attachment. Using the *Mega Charger* to play, though, opens up new worlds and new 3-D environments similar to the enhancements for *Sonic 3*. We also saw *Phantasy Star IV*, due to be released in December, and it was one of the best RPGs shown off at E3, even compared with Nintendo's murderer's row of role-playing games. RPG fans who stuck with *Sega* are going to get plenty of love over these next few months, in addition to *Phantasy Star IV*, upgrading to the *Saturn* will get you *MagiQuest*, a *Secret Of Mana*-looking game with much faster gameplay that stars three adorable girls who fill the screen with colorful spells.

Aside from *Nintendo* and *Sega*, we didn't see much from *Nintendo's* competitor *Atari*, who's pretty much thrown in the towel as far as the *Jaguar* is concerned. Meanwhile, *The 3DO Company* seemed to be advertising its software just as much if not more than its hardware. The platformer *Gex*, previously thought to be the 3DO's "killer app", was being promoted as an SNES-CD port set to be released later in May. There was also a booth set up by *Bandai* showing off their technically impressive but lacking in games *Solaris* system. We saw two games displayed at the show, a *Power Rangers* game and a strange looking platformer which paled in comparison to *Sega's* tech demo for *Nights*. If what we saw from *Nintendo* and *Sega* is any indication, it'll be an uphill climb for *Bandai*...

-excerpted from a report in *Electronic Gaming Monthly's* July 1995 issue

-

**E3 1995**

The E3 expo was to be the "successor" event of sorts to the Consumer Electronics Show in Chicago. It was to be an event where video games held the center stage rather than being relegated to the basement as they were at the CES. The show took place at the Los Angeles Convention Center from May 11 to May 13, 1995. The day before the show, executives from Sega, Sony, and Nintendo held press conferences outlining their future plans. Sega's show, headlined by Tom Kalinske, was all about the upcoming Saturn. The Saturn's high price point of \$399 drew some groans from the crowd despite Kalinske's efforts to justify the price by comparing it to much higher priced gaming options on the PC or arcade platforms. To his credit, the promotional video shown demonstrating the Saturn's technological capabilities was quite impressive and the Saturn did compare favorably to middle-end PC gaming rigs of the time. Olaf Olafsson from Sony then spent some time re-iterating the relationship between Sony and Nintendo (which became somewhat strained in the days before the companies agreed to work on the Ultra Nintendo together) before announcing three games for the SNES-CD's fall lineup. Then it was Howard Lincoln's turn for Nintendo, and he spent his time promoting the Super Nintendo CD's great lineup of upcoming games, barely even mentioning the Ultra Nintendo (or even "Project Eunice", its codename at the time). He even had Hiranobu Sakaguchi up on stage briefly to promote the "Year of the RPG", Nintendo's term for what would indeed be a banner year for role-playing games on the system.

Nintendo spared no expense to promote their games at E3 that year, even hosting the performer Seal who would do the theme song for the upcoming *Batman Forever* movie. Similarly, at Acclaim's big booth (in which games based on *Batman Forever* and *Judge Dredd* were promoted, among others), Selena did a performance (almost certainly due to her friendship with the creator of Acclaim's big hit game *Frederico*, which an urban legend credits with saving the singer's life from a crazed fan). There were plenty of "booth babes" at the show, though Sega's booth was rather tasteful, instead of booth babes there were featured three models dressed in the relatively conservative outfits worn by the main characters of the action-RPG *MagiQuest*. Believe it or not, the infamous celebrity John Wayne Bobbitt also appeared at the first E3, in a closed-off area of the show promoting his new pornographic computer video game *Uncut*. Speaking of Selena and urban legends, there's another one that's actually probably true of Bobbitt attempting to call up Selena's hotel room in the middle of the night and getting instead her irate husband on the phone, who threatened to kill him amidst a tirade full of Spanish profanities.

The most crowded booths at the show were probably those of *Ballistic Limit*, *Virtua Cop*, *The Legend Of Zelda: Ocarina Of Dreams*, and *Tale Phantasia* in that order, with *Ballistic Limit* considered to be the consensus Game of Show amongst the gaming media. Curiously, especially on the last two days of E3, the *Super Mario World 3* booth wasn't very crowded on the last two days. It had been extremely crowded, probably the most difficult booth to get into, on the first day, but the last two days it was relatively easy for any journalist or celebrity who wanted to play the game to be able to do so. It was perhaps the first indication that the game was somewhat of a disappointment compared to *Super Mario World 2*, as word of mouth spread throughout the convention the crowds had thinned out around the game. However, except for the most popular of games at the show, most booths were fairly easy to get to with only a small amount of waiting time. Nintendo, Sega, and the myriad of third parties that had set up booths at the show made sure to include enough gaming kiosks to cut down on the waiting times that had plagued earlier conventions like CES. The fact that the gaming companies had the vast space all to themselves probably made this a lot easier of a feat to pull off, and E3 1995 received mostly rave reviews from both game companies and gaming journalists alike. It was clear that once 1996 rolled

around, everyone would be ready to do it all over again...

-excerpted from IGN's E3 1995 article (based on this real-life article on IGN.com about the original E3: [http://www.ign.com/wikis/e3/E3\\_1995](http://www.ign.com/wikis/e3/E3_1995) )

-

*"It was a great time to be working at Capcom. Sega was pushing the cutting edge of what was possible in a video game console and Nintendo and Sony gave us a lot of freedom to create many different types of games, so we were more than happy to just make games and back then we were making a lot of great ones."*

-Shinji Mikami, in an interview with BradyGames for the Collector's Edition of the Victory: 20th Anniversary HD Remake strategy guide

*"People forget that Snatcher was just the beginning, that it wasn't all that great of a game. The storyline itself was fantastic for sure, but its real influence came from all the great games it inspired. Policenauts was one, of course, but there were others, much lesser known, that were even better."*

-Gaming historian Cassidy Relintz, quoted in the January 21, 2014 IGN.com article "Top 25 Most Influential Games (That Weren't All That Great), #3: Snatcher"

*"Aw dude, you totally spun him out! Way to go!"*

-Meat Brick, *Bikerz*

*"These murderers are after me, all of my friends...except for you...are dead....! What the hell am I supposed to do now? Where the hell am I supposed to go? Why can't I go back to yesterday morning when I just had a normal life?"*

-Corrine Pearl, *Daughter of Pearl*

*"I think, if I'd known that the Super Nintendo CD in particular was going to be so big, the 3DO wouldn't have been made at all. I had no idea that Sony was going to be so competent at making video game hardware. I thought Nintendo and Sony's collaboration was going to be a comedy of errors when we surged forward with the conception of our standard. It was a dumb call to make. That thing ended up running most of our games as well as the 3DO did for a third of the price or less. I was in denial about it for a while, but... I'm enough of a man to admit that I got my ass kicked on that one. Hats off to Sony for kicking my ass."*

-Trip Hawkins, discussing the 3DO's failure in *Wired* magazine, January 2004

Sushi-X: 6.5

### **Super Punch-Out CD:**

Ed: 8

Danyon: 8

Al: 8

Sushi-X: 8 (quote: "A nice little update to last year's SNES game, though if you've already played it the biggest thing you'll miss if you skip this one is a really fun two-player mode.")

### **Super Turrican 2:**

Ed: 9 (quote: "A beautiful, exciting, and really challenging shooter with some of the most fast-paced action I've ever seen.")

Danyon: 7

Al: 8

Sushi-X: 7.5

### **Daughter Of Pearl:**

Ed: 9

Danyon: 9

Al: 9 (quote: "One of the greatest visual novels I've ever played. Heart-rending and truly mind-bending, it's indeed better than Snatcher and you'll need to play more than once to see every little detail of its story.")

Sushi-X: 8.5

### **Clownin' Around:**

Ed: 6

Danyon: 6

Al: 6.5 (quote: "I liked the colorful graphics in this platformer where you're a clown who basically fights other clowns but if you're not into clowns you'll have to look elsewhere for a great action title.")

Sushi-X: 6.5

### **Backwoods Racing:**

Ed: 6.5

Danyon: 6.5 (quote: "It's good enough for what it is, some of the courses are genuinely challenging and running moonshine to soup up your vehicle is an intriguing gameplay mechanic that could be expanded on if this game gets a sequel.")

Al: 8

Sushi-X: 7

### **Chicken Fighter:**

Ed: 6

Danyon: 5

Al: 6

Sushi-X: 4.5 (quote: "I thought I'd never see the day when they'd make a fighting game about a bunch of anthropomorphic chickens but here it is and it's a bad day.")

### **Bikerz:**

Ed: 8 (quote: "Kids will definitely like this game more than adults, but the colorful cast of characters should appear to cartoon fans and those who are young at heart.")

Danyon: 7.5

Al: 7.5

Sushi-X: 6.5

### **3-D Pool:**

Ed: 5.5

Danyon: 6 (quote: "I can't recommend this to anyone who hates pool, but if you're a fan of pool, this is probably the best billiards game you'll find on a console.")

Al: 6

Sushi-X: 5.5

### **The Legend Of Annie Oakley:**

Ed: 7.5 (quote: "This is a really fun platforming/shooter game that offers up a silly but still engrossing portrait of the legendary gunslinger's early days. We could use more games that turn famous American heroes into exaggerated cartoon legends. Teddy Roosevelt, anyone?")

Danyon: 7

Al: 7

Sushi-X: 7

### **Puzzle Pals:**

Ed: 3

Danyon: 4.5 (quote: "I'll take a pass on this rather kiddy game where you're a detective

who solves a series of boring and unintuitive puzzles to close cases. The voice acting is horrid and the story's not even all that good either.")

Al: 5.5

Sushi-X: 4

### **Icebiter 2:**

Ed: 8 (quote: "While it doesn't do much different from the previous Icebiter game, I still loved the gameplay and it's a bit faster-paced this time around, with more weapons, more obstacles, and bigger bosses. It's a really worthy sequel to the original hit.")

Danyon: 8

Al: 7.5

Sushi-X: 7.5

### **Last Resort:**

Ed: 8

Danyon: 8.5 (quote: "While FMV horror games are usually pretty terrible, this thriller taking place at an abandoned resort island is extremely well made and relies on spooky camera tricks rather than hokey acting to put you in the middle of the action. This and Eyes of the Vampire are both must-plays for any horror fan.")

Al: 8

Sushi-X: 9

### **Victory:**

Ed: 9.5 (quote: "Capcom has perfected the top-down run-and-gun action game with this incredible effort featuring some of the best voice acting I've ever heard in a game and some of the best combat I've ever had the fortune to experience. Believe the hype, this game absolutely lives up to it.")

-

*When the war is over...*

\*A group of soldiers are seen returning from a great war, smiles on their faces...one of them is getting the Medal of Honor from the president, another is seen walking to the store, while another is coming home to his family\*

*The peace is not always guaranteed...*

\*The soldier getting the Medal of Honor doesn't notice the evil glow in the president's eye...the soldier at the store doesn't see the clerk contacting someone with a weird-looking communicator device... the soldier coming home is horrified to see his family transforming into hideous creatures...\*

*And sometimes surrender is only the beginning....*

\*More soldiers are seen walking down the street together when they are suddenly confronted by an army of space aliens... the soldiers drawn their weapons as the aliens rush at them, the scene dissolving into scenes from the game, featuring a well-animated soldier on a large battlefield charging into an alien base, swapping weapons, firing large rocket bursts, using a laser gun, setting up trap mines, then two soldiers fighting together on the same screen, then another scene where the main character is battling an enormous boss creature...\*

Narrator: When one war ends, another war begins. Fight the war to save humanity from the alien hordes. Collect dozens of weapons, explore through levels on Earth and in space, and team up with a friend for two-player co-op action. It's *Victory* and it's coming May 8th for your Super Nintendo CD, from the makers of Mega Man and Street Fighter.

### **PLAY IT LOUD.**

-from the commercial for the Super Nintendo CD game *Victory*, which aired in late April and May 1995

### **Victory: The Basics-**

Victory was released for the Super Nintendo CD by Capcom on May 8th, 1995. Hyped for a number of months, it became one of the fastest selling SNES-CD titles to date, and good word of mouth led to the game continuing to sell well for the remainder of the year, becoming one of the biggest hits of 1995 for the SNES-CD. It was a top-down run-and-gun action game, similar to games such as *Zombies Ate My Neighbors*, but also drawing comparisons to *Metal Gear*. The main character was a man named Nash Grieves, and the first two levels are both an introduction to the game mechanics as well as a background of the game's action. It depicts Grieves fighting for the United Forces Army in the late 21st century. The army is said to be conquering the territory of a united force of enemy nations who are hoarding a resource needed for humanity's continued survival. The war ends with a United Forces victory and Grieves is named a war hero. But even during the war, he notices strange occurrences. His buddies dismiss them as war delusions but even after the war ends, Grieves is haunted by his visions and decides to report them to government officials. This leads to Grieves becoming a prisoner and discovering something terrible: all major Earth nations, both among the United Forces and among the enemy, are ran by disguised aliens who are using the humans as both resource gatherers and proxy soldiers in their civil war. Grieves must unite with other soldiers, including his friends from the war and others, to stop the alien threat. However, it's not that simple, as human leaders have become interwoven with the aliens and humanity, rather than being an oppressed race of oblivious prisoners, may become the biggest threat of all as Grieves fights his way through more than 20 levels seeking to untangle the deadly web of schemes and crimes that threaten the freedom of the people of Earth and beyond. The game combines open combat sections where Grieves faces hundreds of enemies and even huge bosses to smaller, more stealthy sections inside buildings and other enemy-controlled places. While stealth is never required, it sometimes makes things a lot easier if he is not detected during certain missions. The game also has a multi-player mode where two players can cooperate, Grieves teams up with his war buddy Jett Sharklund in co-op mode, while in single-player mode, Sharklund is an important and trusted ally. The game is littered with in-game cutscenes and a generous amount of voice acting during important plot segments, with Grieves voiced by Scott McCulloch.

-

Ted Crosley: As you can see, *Victory* is an exciting action game filled with twists and turns and bumps and bruises.

Alex Stansfield: We both enjoyed it for its thrilling gameplay and great storyline, but Ted, what's your final verdict?

Ted: *Victory* was a lot of fun up and down and all the way around, with lots of cool weapons and some great characters. The main guy Nash was kinda boring but I liked his friend Jett and I liked Stephanie, the French spy who seems like she's gonna be teamed up with the aliens but she turns out to help you a lot over the course of the game. The voice acting was surprisingly good and like I said, the gameplay was a ton of fun. While it's not quite as groundbreaking as some of the other games I've played, there really wasn't a dull moment to be had. I'm giving *Victory* a 4.5 out of 5. Not quite a 5 but really really really good.

Alex: I'm giving it a 4. I really loved the weapon variety, but later on a lot of the weapons were pretty useless and it seemed to shoehorn you into one style of play. I also liked the indoor sections a LOT more than the battlefield segments, which I felt got repetitive except for the boss fights. I DID love the boss fights, all of them. The fight against the mutant ice creature in level 9 kicked ass.

Ted: That fight did kick a lot of ass, the Siberia level in general was probably my favorite in the game.

Alex: That and level 15 on the ship. I wish more of the levels could've been like the alien ship, it gave you a lot of stuff to do and blowing up those aliens was a lot of fun.

Ted: I don't think there's any disagreement here that *Victory* is a GameTV's Choice game. Highly recommended.

Alex: Absolutely.

-from the May 9, 1995 episode of *GameTV*

-

And looking back at May 1995 for the Super Nintendo CD, there was a surprising slew of quality games that were released. The best and by far most significant of these games was Capcom's hit *Victory*, though it was a bit surprising at the time that it was such a major hit, releasing around the same time as a number of somewhat anticipated sequels. It was thought that the majorly-hyped original IP and the squad of sequels would cannibalize each other, but *Victory* stomped them all. The sequels were for the most part disappointments, which probably contributed to *Victory's*, well, victory. Let's take a brief look at each of them and analyze what went wrong.

*Shadowrun: Worlds Without End*- This was far and away the biggest disappointment, especially to me. The original *Shadowrun* had been a cult classic when it was released in May of 1993 and it was thought that the sequel would take the series into the mainstream and be a much bigger hit. Instead, it got above-average reviews at best and sold about as poorly as the first. While it brought back many of the well received game mechanics from the original, the plot, adapted loosely from the new (at the time) *Immortals* trilogy, left a

LOT to be desired, and the game seemed to focus on bumping up the graphics rather than bumping up the gameplay. It was a decent enough game but not the *Final Fantasy VI*-killer some expected.

*Pocky and Rocky CD*- This probably turned out to be the best of the lot! Natsume's cute franchise about a girl and her raccoon buddy seemed like it was made for the SNES-CD, the add-on eliminated a lot of the slowdown that plagued the SNES games when things on screen got too hectic and enabled the designers to make the game a whopping 14 levels! It was huge, the bosses were challenging, numerous, and very well animated and there were tons of different power-ups. It was the perfect *Pocky and Rocky* game and very well received critically, but it was somewhat of a bomb commercially and the series never got another installment.

*Super Turrican 2*- This was another game that was actually really good, it just sold horribly. Yes, it was hard, VERY hard but if you were playing a shooter in those days you knew what you were getting into. *Super Turrican 2* was exclusive to the SNES-CD after the previous one appeared in both cartridge and CD form, and the transition to full CD really showed with vastly improved animation and music. It was a quality game but this was always a niche series.

*Super Punch-Out CD*- This was essentially an enhanced port of 1994's *Super Punch-Out* for the Super Nintendo. What did it add? Another circuit of four fighters that you could face after beating the Bruiser Brothers (to be fair, the last fighter was Donkey Kong, so that was pretty awesome), a bit more voice acting, and a pretty fun two-player split-screen mode that let you box your friends. If you had the SNES version you weren't missing too much by skipping this on CD. Nintendo actually had a deal where you could send in proof of purchase for *Super Punch-Out* on the SNES to get a \$30 off coupon for *Super Punch-Out CD*. It wasn't a bad deal for people who REALLY wanted to upgrade.

*Icebiter 2*- Finally, we have *Icebiter 2*, the sequel to 1994's hit run-and-gun game about a soldier sent to protect his village from a giant ice monster. This game ups the ante by sending the same soldier out to battle some evil warlords who want to conquer his village. The levels were a lot bigger and more complex but the gameplay was pretty much exactly the same as the first. It wasn't a bad game and commercially this probably performed the best of the month's five sequels. Compared to *Victory*, though, it didn't do all that well.

-from "May 1995: The Month The Sequels Flopped", an article on Gamesovermatter.com, January 22, 2013

-

\*A group of animated punk-looking kids walk down a long street, laughing and joking amongst themselves. They suddenly hear the sound of revving motorcycles and look to see another group of punk-looking kids across the street. The leader of the group across the street is chewing on a toothpick.\*

Leader: Ya think ya got what it takes to beat us?

\*The leader of the first group of kids, a boy with spiky green hair, raises his fist.\*

Leader: Bring it on!

\*The kids all get on little motorcycles and begin racing around the street, spinning each other out with hilarious weapons like a bouncy ball bomb and a chain made out of red plastic monkeys.\*

Narrator: Join the gang for some extreme motorcycle action! It's *Bikerz*, the craziest racing experience to ever hit your video game console! Join Stank, Crash, Abbey, Lars, Darcy, and all the rest as you take on Meat Brick and his crew of motorcycle meanies!

\*A huge crash is seen as motorcycles slam into each other, sending kids from both sides flying hilariously into the air.\*

Meat Brick: You'll pay for this ya punks!

Narrator: *Bikerz*, now on sale for the Super Nintendo CD and the Sega Genesis featuring enhanced Mega Charger gameplay!

-the commercial for *Bikerz*, which aired on Nickelodeon and other kids' channels in May 1995

### ***Bikerz*: Gaming's Hottest New Phenomenon?**

The video game *Bikerz*, featuring a somewhat light-hearted take on the old motorcycle gang cliché with a bunch of silly kids on colorful motorbikes, is selling well in response to favorable reviews from game journalists and polls of kids are calling it one of the most popular video games of the summer alongside *Knuckles: Renegade*, *Frederico*, and *The Legend Of Zelda: Ocarina of Dreams*. The game's exciting racing gameplay is getting praise from all around and there's even talk of an animated series potentially in the works. Though the Genesis version is outselling the Super Nintendo CD version by about 2 to 1, the SNES-CD version of the game was still one of that system's best selling games of May, finishing third behind *Victory* and *Gex*. While the rudeness of some of the characters and the opinion of some that the game may be promoting the motorcycle gang lifestyle make it controversial among some parents, most are singing the game's praises as a fun and exciting new title that promotes friendship and fun.

-from an article in *Newsweek*, July 10, 1995

-

*"Snatcher, I think, has inspired a lot of people who never would have thought of video games as a medium for storytelling otherwise. I set out to make a game a lot like Snatcher but as the idea kind of gestated in my head it took on a bit of a life of its own. I'm proud of this game. It's not selling like Snatcher but I never expected that it would. I just hope the people who play it appreciate it and that I get to do another game like it, I have a lot of ideas."*

-Stan Bartollini, lead designer of *Daughter of Pearl*

The success of *Snatcher* saw a lot of imitators in the next couple of years that followed. Most of the imitators were bad games that sold poorly. *Daughter of Pearl* was...an outstanding game that sold poorly. The game was developed by Neversoft and was one of the first titles released for the company, which started with three men, Joel Jewett, Mick West, and Chris Ward. Seeing the increased popularity of story-based games on the Super Nintendo CD, the three hired two writers to help develop ideas for their SNES-CD games, while also focusing more on gameplay-based games for the Sega Saturn. One of the writers

was let go shortly afterward. The other, Stan Bartollini, designed and wrote *Daughter of Pearl*, a hybrid action/point-and-click that featured a young office worker, Corrine Pearl, whose life is thrown into chaos after she stumbles upon a conspiracy, is pursued by lethal killers and who witnesses the brutal death of the detective she hires to protect her. It was a very unusual subversion of a common trope, where the beautiful, helpless young woman hires a detective who then becomes her protector and the solver of the mystery. Here, Corrine is forced to fend for herself and must decide who she can trust as she unravels the mystery, getting stronger and braver as she goes along. Corrine's story arc was praised as one of the greatest in all of gaming up to that point and the game was instantly praised for its storyline and gameplay (the latter of which was almost universally considered to exceed *Snatcher's* in quality, with significantly more action scenes). Unlike *Snatcher*, the game didn't feature voice acting (Neversoft couldn't afford to hire voice actors at the time). The game sold very poorly at first release, but critical praise and word of mouth led to a slow trickle of sales throughout the SNES-CD's life and eventually *Daughter of Pearl* managed to turn a (very small) profit and get a sequel. As for Bartollini, the game had established him as one of the best writers in video games and his creative mind would be behind several more hits for Neversoft on future systems.

17. Contra IV: Hard Corps
18. Jewels Of The Realm
19. Earthworm Jim: Special Edition
20. Universalizer

-

*"Sega's plans for a Game Gear successor may be dead in the water but the company is rumored to be working on a new portable: a handheld version of the Sega Genesis, with the Mega Charger's enhancement chips along for the ride. The portable won't come cheap: it's expected to launch at \$249.99 when it's released this holiday season, but with that much power under the hood, you're definitely getting what you pay for."*

-excerpted from the Quartermann rumor column in the June 1995 issue of *Electronic*

## Gaming Monthly

*"Nomad's a stupid name. Just call it the Venus. We'll talk to Shocking Blue about getting the rights to their song for the commercials."*

-overhead from Tom Kalinske at Sega of America HQ

-

*"Just remember, the world of Hyrule is full of all kinds of secrets, tricks, and traps that are a lot more fun to figure out on your own. So my recommendation is that before you turn to me for help, you try to solve the puzzle yourself. And hey, don't worry, if you're stumped, I'm here for ya. Just think of me as that cool friend who just happens to be really good at video games. Don't worry, we'll get through this together. Ocarina of Dreams is the toughest Zelda game yet, but with your pal Brady here to help you out, you'll never walk alone in Hyrule!"*

-excerpted from the introduction to the BradyGames *Totally Unauthorized Legend of Zelda: Ocarina Of Dreams Player's Guide*

*"Mega Charger sales were really starting to slow by the middle of 1995. Part of it was the imminent release of the Saturn, part of it was the fact that Nintendo was churning out a lot of good games, and part of it was that things were slowing down on the Genesis. We'd tried to keep a steady stream of games going, but it was clear that developers were gravitating to the Saturn and we were also losing one or two to Nintendo. By the summer of 1995, it was apparent that the Genesis had peaked in sales."*

-Tom Kalinske, "The Chase: Sega's 20 Year Struggle To Take Down A Giant"

*"Uh, yeah, Earth is in the same galaxy as the Lylat System. We hadn't planned it that way at first but Mr. Miyamoto thought it would be kind of neat to tie the three games together."*

-Dylan Cuthbert, Argonaut Games, in a June 1995 interview about *Super Squadron X: Critical Dawn*

*"Nintendo continues to top themselves with every big game they release. Super Mario World 2, Secret Of Mana, Donkey Kong Country, and now Ocarina Of Dreams. I've never seen a company on such an incredible roll. For the fourth time in two years, I'm proclaiming a Super Nintendo CD game the greatest video game of all time."*

-excerpted from the July 1995 issue of *Game Informer* magazine

*"Link, you must gather the three pieces of the Ocarina of Dreams. If you fail, I fear all of Hyrule is doomed."*

-Princess Zelda, *The Legend Of Zelda: Ocarina Of Dreams*

*"What will become of us this time? After you wake up from the dream? I don't want to disappear again..."*

-Marin, *The Legend Of Zelda: Ocarina Of Dreams*

-

*"And so once again I return to Earth, the planet humanity once called home. I know that this will be the last time I return here."*

-Captain Xenda, from the introduction to *Super Squadron X: Critical Dawn*

## **Super Squadron X: Critical Dawn – The Basics**

Super Squadron X: Critical Dawn was released on June 5, 1995, for the Super Nintendo CD. It is the third game in the X series of tank-based shooters by Argonaut games, and the direct sequel to the SNES game *Super Squadron X*. In *Super Squadron X*, humanity has been forced to leave the Earth due to an environmental crisis, but on their new planet there is an infestation of deadly aliens that Captain Xenda is tasked with wiping out, using his battle tank known as the VIXIV and receiving air support from a squadron of soldiers. In *Critical Dawn*, Xenda returns to Earth to rescue stranded refugees, but Earth has become home to dangerous mutated creatures and Xenda must once again use the VIXIV to save them. Over the course of the game, the nature of the crisis that caused the Earth to become uninhabitable is revealed: it is the machination of a group of deadly aliens known as the Grutals, who tainted the Earth's environment and are now growing a mutant army on the planet. Though Xenda defeats both the mutants and the Grutals and saves the refugees, the damage the Grutals have done to Earth is irreversible and Xenda returns with the refugees to humanity's new home world. The game is a shooter where Xenda pilots a tank (somewhat like the Landmaster in OTL's Starfox 64). The gameplay in *Critical Dawn*, unlike the rail shooter gameplay in the SNES *Super Squadron X*, is free-range, you are required to rescue a certain number of refugees in each stage before making your way to the exit. There is usually a boss guarding the exit and mini-bosses guard some of the refugees on occasion. It's to your advantage to rescue all of them, not just the required number, as rescuing more refugees will give you health or weapons bonuses and you need to rescue every single refugee in every single level to get the true ending. The game also is the first game to tie into Star Fox and Squad Four, establishing all three series as taking place in the same galaxy, though in *Critical Dawn* it's only in the form of minor allusions (the three series do eventually cross over properly but that isn't until well into the 2000s). There's a bit of voice acting (between levels, mostly), again, nothing near what was present in Star Fox or Squad Four.

*Critical Dawn* is received decently by critics, scoring mostly 7s and 8s, it's not as well recieved as Squad Four or Star Fox, though it does well in sales and is considered to be a good game. The graphics and sound aren't quite as good as Squad Four's, though the free-roaming gameplay is praised for being a departure from the original *Super Squadron X* which was largely considered "Star Fox in a tank".

-

## **ClayFighter 2: Judgment Clay:**

Ed: 6

Danyon: 6.5

Al: 6.5 (quote: "A decent enough follow-up to the original ClayFighter, though there really isn't anything too innovative to be had here. The graphics got a touch-up but the gameplay's pretty much identical to the first.")

Sushi-X: 5

## **Mighty Morphin' Power Rangers: The Movie:**

Ed: 4

Danyon: 2.5 (quote: "A serious disappointment, just like the movie it's based on. I wish they could've just kept the beat-em-up gameplay of the first intact, and compared to the

soundtrack of the first game, the music in this is a crime.")

Al: 1.5

Sushi-X: 4.5

### **Primal Rage:**

Ed: 8

Danyon: 8

Al: 7

Sushi-X: 7 (quote: "It doesn't look quite as good as it does in the arcade but this is still probably the best home adaptation of Primal Rage we're going to get until the Saturn comes out.")

### **Super Squadron X: Critical Dawn:**

Ed: 7 (quote: "A pretty good shooter, though it can be hard to find some of the refugees you need. I also wish the graphics and presentation could've kept to the same high standard Argonaut set with *Squad Four*.")

Danyon: 8

Al: 7

Sushi-X: 8.5

### **Tecmo Super Bowl CD:**

Ed: 9

Danyon: 8

Al: 9 (quote: "An outstanding update to a classic sports title, Tecmo kept the wonderful and simple gameplay intact while seriously beefing up the presentation. Maybe my sports game of the year!")

Sushi-X: 9

### **The Legend Of Zelda: Ocarina Of Dreams:**

Ed: 9.5

Danyon: 9.5

Al: 9.5

Sushi-X: 9.5 (quote: "This game's an absolute masterpiece, there's really nothing more to say.")

### **Weaponlord:**

Ed: 7

Danyon: 7.5

Al: 7.5 (quote: "A really fun fighting game, kind of reminiscent of Eskrima Warriors but with a much deeper combo system.")

Sushi-X: 9

### **WWF Wrestlemania:**

Ed: 8.5

Danyon: 6.5

Al: 7.5

Sushi-X: 7 (quote: "Based on the pretty good arcade game by Midway, this port is pretty good and it even adds some quick videos for the wrestlers, which was a nice touch. It's kind of simplistic but if you're a wrestling fan, check this one out.")

### **P.O.L.I.C.E: City Under Siege:**

Ed: 4 (quote: "One of the most unnecessary sequels ever, this lightgun game is just as bad and as frustrating as the first.")

Danyon: 4

Al: 2.5

Sushi-X: 3

### **Sock Monkeys:**

Ed: 6.5

Danyon: 7.5 (quote: "This kind of silly platforming game definitely takes some cues from Donkey Kong Country, though the gameplay's not nearly as refined. Still, I loved the graphics and the humor had me in stitches.")

Al: 7

Sushi-X: 7

### **Gryphon:**

Ed: 5.5

Danyon: 8

Al: 8.5 (quote: "I imagine this game will be hit or miss with some folks. It's one of the most blisteringly difficult adventure games I've played but it's also really rewarding if you stick with it.")

Sushi-X: 5

### **Hotel Havoc:**

Ed: 7.5

Danyon: 7

Al: 7

Sushi-X: 6 (quote: "This game combines platforming and puzzle elements as you ascend the floors of hotels in search of a kidnapped lady. It's definitely not the best puzzle game out there but you could do worse.")

### **Polar Bear Adventure**

Ed: 5

Danyon: 5

Al: 4.5 (quote: "I never thought I'd get to play a platformer where I'm an actual polar bear but here it is. If they'd have just gone the whole hog and had me mauling people I might've given this game a higher score.")

Sushi-X: 5

### **Martial Masters:**

Ed: 7.5

Danyon: 7

AI: 6.5

Sushi-X: 9.5 (quote: "This is a fighting game for true masters! It has a steep learning curve but once you've got it down you'll be pulling off amazing combos and impressing all your friends. It's definitely not for casual button mashers.")

-reviews of June 1995's SNES-CD games in the July and August 1995 issues of *Electronic Gaming Monthly*

-

John Walden: So, Tecmo Super Bowl CD is a damn good game.

Alex Stansfield: I think it's the best football game on the Super Nintendo CD. It's definitely the most fun, it's got the updated 1995 rosters, and I loved all the little animated cutscenes you get between quarters.

John: The commentary can be a bit silly at times but I had a good laugh at it.

Alex: Well, it's no John Madden, but I enjoyed it.

John: Speaking of Madden, I think the king's dethroned. I think this is better than the Madden games on here.

Alex: Oh yeah, a hell of a lot better than Madden. I'm giving it a 4.5.

John: I'm not going quite that high with it, I'm gonna give it a 4 but that still makes it a GameTV recommended game and for anyone who's a fan of the NFL, Tecmo Super Bowl CD is as good as it gets. The only thing it's missing is Bo Jackson.

Alex: Yeah, no Tecmo Bo! But, but, Emmitt Smith is really good on here.

John: He is, but he's no Bo.

(...)

Brittany Saldita: So how did you like Gryphon?

Ted Crosley: Well, I'll tell you, it was all right.

Brittany: It was all right?

Ted: It was okay. The difficulty was way frustrating, but the puzzles at least made sense.

Brittany: I loved the puzzles but the graphics could've been better. It's definitely flawed but it's not bad. It's like...kind of like an all-dungeon Zelda but without any of the charm, it's just puzzle after puzzle.

Ted: I needed help to get through.

Brittany: \*laughing\* Yeah you called me at midnight begging for help.

Ted: Shh, shhh!

Brittany: Like a little bitch.

Ted: Shhhh! \*covers her mouth with his hand\*

Brittany: \*starts laughing as she gently pushes his hand down\* But anyway, I give Gryphon a 3.5. It's got its flaws but it's a solid adventure game.

Ted: I give it a 2.5. It's unimaginative and frustrating, it has a few good parts but I'd wait for Zelda

Brittany: \*looks excited\* Only two weeks away...

-excerpted from the June 13, 1995 episode of *GameTV*

(...)

Ted: So, WWF Wrestlemania, does it satisfy your urges to slam people?

Alex: As a fan of the arcade game, I found it fun but the arcade game itself was really only ho-hum.

Ted: I liked the arcade game and this was a pitch-perfect port. In fact, it was better than perfect, we get little ten second snippets of the wrestlers on the selection screen which is a nice touch.

Alex: It's an average fighting game that just happens to have WWF wrestlers in it.

Ted: Which makes it good!

Alex: I give it a 3. If you like wrestling and you spend a lot of time and quarters on the arcade game then sure, it's a must buy, but if you don't like the WWF it's not worth it.

Ted: I give it a 3.5 for being a really great port of a fun arcade game and spicing it up with real WWF videos.

\*Video of Razor Ramon saying "I'm the bad guy" appears on the screen\*

(...)

Kazzi DeCarlo: Philips definitely makes better games than they do game systems. I'm surprised this one came out for Nintendo considering the whole bait-and-switch thing Nintendo pulled with them back in 1991.

Brittany: Hotel Havoc is a decently fun puzzler but it could have been a lot better, it had the most boring main character in the history of Western civilization and I would've liked seeing what this game could've been if the developers had gone with their original plan to make this a Mario game.

Kazzi: What would they have called it? Mario's Hotel? Hotel Mario?

Brittany: I like the ring of Hotel Mario. But, they would've had to get rid of the animated

cutscenes, I just...Mario would've looked really weird in those.

Kazzi: You don't like Don the Doorman?

Brittany: He's boring as hell!

Kazzi: I thought this game was pretty boring actually. There's only so much you can stand of opening doors and climbing elevators.

Brittany: It played really well. It was a really polished game. I'm giving it a 3. It's a solid game. It's pretty fun, but the main character was a complete bore and I would have rather seen Hotel Mario.

Kazzi: I give it a 3 too. I know I said it was boring but it has its charm and the cutscenes were decently amusing.

-excerpted from the June 20, 1995 episode of *GameTV*

-

## **June 21, 1995**

Sega releases its big-budget turn-based RPG *Lords of Skylein* for the Sega Mega Charger, one of the Mega Charger-required games on the Genesis. Taking place high above the world on a floating continent called Skylein, it tells the tale of the young hero Aerio, whose grandfather is one of the legendary heroes/rulers of the continent known as the Lords of Skylein. Aerio's world is shook to its core when his grandfather is murdered by another of the Lords, a man named Shaddock, and in the wake of all of this, Aerio is cast down to the dark world below with his childhood friend (and love interest) Tulia. The world below is a world of famine and those who come from Skylein are hated. Aerio and Tulia must find what few allies they can as they attempt to make their way back up to Skylein to stop Shaddock's dark machinations. The game is epic in scale, with 50+ hours of gameplay, and in a lot of ways it's Lunar: The Silver Star for the Mega Charger done right, with plenty of cutscenes and some voice acting but not an overwhelming amount, the game pushes the limits of the Mega Charger but also conforms to them. It's a big seller, the biggest RPG seller on the Genesis (including any of the Phantasy Star games), and it's one of the best reviewed Genesis games of the year. While *Lords of Skylein* is ultimately considered a success critically and commercially, it utterly fails at its true aim, which was to push the sales of Genesis consoles and Mega Charger peripherals. Sales of Genesis consoles don't even show a blip after the release of *Skylein*, indeed they continued their slow decline that had begun in late 1994. *Lords of Skylein* would be one of the last majorly hyped Sega Genesis games and the last one before the release of the Sega Saturn. While a great game, it could not stop the runaway train that had begun with the release of *Donkey Kong Country*, and in less than a week, the train would get much faster...

-

*"Ocarina Of Dreams was a game that I had envisioned since before we released the Super Famicom CD. I had so many ideas for another Zelda game, and with the introduction of CD-ROM, the technology was there. I am humbled by the reception this game has recieved. I just tried to make it the most fun Zelda game possible. I'm glad that people are having so much fun!"*

-Shigeru Miyamoto, speaking at Nintendo Spaceworld in 1996

\*The scene shows the middle of the Lost Woods, where Link's Master Sword lays dormant.\*

*The Master Sword sleeps...*

\*A dark cloud is sweeping over Hyrule\*

*And so does the Hero of Hyrule...*

\*Link is tossing and turning in his bed, still dreaming of the Wind Fish and Koholint and Marin, but also of Zelda, who is in her palace looking dreadfully worried as the storm clouds gather\*

*But when darkness descends...*

\*A shadowy thief is shown cutting down guards before stealing away with a treasure as the dark clouds cast down lightning from the skies\*

*A hero must awaken...*

\*Link takes up the Master Sword just in time to see darkness and lightning swallow up all of Hyrule. He has a vision of Zelda screaming and Marin swallowed up by the shadows as the thief lifts an ocarina to his lips...\*

*But he awakens to a world of nightmares...*

\*Scenes from the game are now shown as Link roams dungeons, battles enemies, picks up new items and even faces off against a couple of the bosses, the familiar Zelda theme plays but with an ominous tone.\*

*Find the Ocarina and restore light to the darkness.*

\*More scenes from the game are shown as Link sees Zelda and Marin standing in shadows, he reaches out to them only to see them both swallowed up, a single hand reaches out of the shadows and takes his and then all goes black.\*

*End the nightmares and restore the dreams.*

\*One more in-game scene is shown of Link surrounded by eight brilliant lights and lifting his sword.\*

## **THE LEGEND OF ZELDA: OCARINA OF DREAMS**

### **JUNE 26**

-a commercial for *The Legend Of Zelda: Ocarina Of Dreams* that began playing in June of 1995, it was the first major Nintendo game since late 1994 not to be featured as part of Nintendo's "Play It Loud" campaign (which has already lasted several months longer than IOTL)

### **June 26, 1995**

*The Legend Of Zelda: Ocarina Of Dreams* is released for the Super Nintendo CD in North America, just under three months after its Japanese release. The game shattered records in Japan and in North America it became the third fastest selling Super Nintendo CD game to date. It received an enormous number of overwhelming positive reviews from practically every publication, beating *Sonic the Hedgehog 3*'s record for average review score. *Electronic Gaming Monthly*, which gave it four 9.5s out of 10, was its worst review score on initial release and that was merely because of the current editorial policy not to give a perfect 10 to a game unless it was truly without flaw (Ed Semrad would later say in 1998 that he considers this policy one of his biggest mistakes and that without it, *Ocarina of Dreams* absolutely would've received a perfect 10 from all four reviewers and would have gotten the magazine's first Platinum Award). Due to these positive reviews and extraordinary word of mouth, *Ocarina of Dreams* would remain in the top ten sales list for the Super Nintendo CD until the end of its lifespan. In addition to the excellent software sales, the game also produced more sales of the Super Nintendo CD peripheral than any other game except perhaps for *Mortal Kombat*. It was cited as the last major push for SNES owners to purchase the CD peripheral and would become a pack-in game for the peripheral and the Playstation Combo Set later in the year. The game receives a 32-page cover article in the June 1995 issue of *Nintendo Power*, unprecedented coverage at the time, with the issue swelling to 130 pages to accommodate all the *Zelda* coverage. It would also have five strategy guides published for it in North America alone: the official guide by Nintendo and unofficial strategy guides by Prima, BradyGames, GamePro, and Infotainment World Books. Despite the glut of strategy guides available, the game's release would produce the largest spike in the history of Nintendo's phone-in hint lines (and last major such spike before the advent of the internet).

### **The Legend Of Zelda: Ocarina Of Dreams – The Basics**

*The Legend Of Zelda: Ocarina Of Dreams* is the sequel to *The Legend Of Zelda: A Link To The Past* and *The Legend Of Zelda: Link's Awakening*, the conclusion of what comes to be known as the "Link To The Past trilogy". It features essentially the same classic top-down *Zelda* gameplay as the other games in the series, with mostly graphical enhancements and a new enhanced soundtrack designed to take advantage of the Super Nintendo CD's capabilities. Character sprites are significantly more detailed, though they retain a somewhat similar look as *A Link To The Past*, not going a more realistic route but instead adding more detailed animation to the sprites, enemy sprites receive an equal amount of detail and bosses become much more complex, boss fights do as well, taking place in rooms that span more than one screen in several cases. The game takes place soon after *Link's Awakening*, with peace restored to Hyrule and Link spending his time resting. The game begins with Link getting an urgent telepathic message from Princess Zelda, summoning him to Hyrule Castle where there has been a theft of a valuable treasure: The Ocarina of Dreams, a musical instrument with the ability to bring dreams into reality. Zelda says that the thief has been trapped in the castle catacombs but that Link is needed to track him down and retrieve the ocarina. The catacombs are the introductory dungeon to the game, similar to Hyrule Castle in *A Link To The Past*. Link makes his way through the catacombs and confronts the thief, a young man named Gaddis who says that he'll use the ocarina's power to make his dream of ruling all of Hyrule come true. Before he can use it, Link attacks him and the ocarina is broken into three pieces, which Zelda uses her magic to scatter to all parts of Hyrule. Angered, Gaddis attacks Link but is repelled and he escapes, vowing to hunt down the ocarina pieces. This triggers the beginning of the quest and the first three dungeons. For this part of the game, the world is like a slightly enlarged version of the Light World from the original *Link To The Past*, a few new areas are opened up but

the terrain is mostly familiar. The first three dungeons are as follows:

*Lost Labyrinth*- The game's first real dungeon located deep in the Lost Woods, it's full of creepy insect monsters and you get the Bow in here, the boss of the dungeon is Gohma, a huge scorpion monster.

*City Of The Dead*- Located under the Sanctuary Graveyard, this dungeon is full of creepy Poes and other undead creatures. You get the Roc's Feather in this dungeon and the boss is an enormous Poe called Ghoulord.

*Uncharted Marsh*- This is a swamp-like area that connects several small dungeons together, you'll find a brand new item, the Soul Stone that allows you to make a copy of Link that you can leave on switches. The boss of this dungeon is Tongura, a huge toad monster with a dangerous tongue.

After collecting the pieces of the ocarina from the first three dungeons, Gaddis invades Hyrule Castle and takes Zelda hostage, demanding the ocarina in exchange for her safe return. Link doesn't give it to him and Zelda manages to get away from him on her own, Gaddis attacks Link and injures him, and Zelda tells him to play the ocarina. He does so, but Gaddis gets a hand on it as he plays it and the dream that forms is a corrupted version of Link's dream...

When Link awakens he finds himself in a new world, a twisted combination of Hyrule and Koholint. Unlike in *A Link To The Past*, you can't travel between the two worlds. However, any treasures missed in the original Hyrule will be able to be acquired in the new world, in different locations. This new Hyrule is ruled over by eight Nightmare Lords, one of whom is Gaddis. In order to restore peace and freedom to this strange new world, Link must defeat the eight Nightmare Lords and liberate the area under their control. The Nightmare Lords inhabit eight dungeons, and the first one is Gaddis, the thief who set this whole thing in motion. Gaddis rules his realm from the former Kahariko Village, now an enormous but corrupt city steeped in vice and featuring a huge coliseum in the center. Link must make his way to the coliseum but before he can get in, he is required to retrieve his Master Sword. As he goes to retrieve it he meets up with Marin (this is where he discovers that Koholint is part of this world as well). Marin begs Link not to try and liberate the world, because she fears that once the magic of the ocarina has faded, everyone who lived in Koholint before will once again fade away. For now, Link continues on his mission, determined to find the Master Sword and also to reunite with Zelda. After a quick trial, Link retrieves the sword and can access the first dungeon of the new world, which happens to be the labyrinthine halls below the coliseum. Once Link gets the dungeon's treasure (the first Power Bracelet), and the Boss Key, he makes his way up to the arena itself and battles Gaddis in a fierce boss fight (Gaddis is the only of the eight Nightmare Lords who doesn't transform into a huge monster upon fighting Link). Once Gaddis is defeated he gives Link a cryptic clue as to the Nightmare Lords' true intentions before dying. Gaddis is beaten, but seven Nightmare Lords remain and a huge new world stands open...

Once Link gets the Master Sword, he can reforge it by hunting down six pieces of Silver Ore. The sixth piece can't be found until Link has beaten the fourth Nightmare Lord, once that's found the blacksmith can forge the Silver Sword for Link. That sets Link forth on a new quest to find six pieces of Golden Ore that can be used to forge the Golden Sword once Link beats the seventh Nightmare Lord. There are 11 Heart Containers in this game (from beating the three bosses) and 24 Pieces of Heart to be found.

The remaining dungeons are as follows...

*Hanging Cliff*- A dungeon in a huge cliffside overhang, you get the Hookshot as your treasure here and battle Kristia, the first of two female Nightmare Lords, who transforms into a huge rockbeast upon Link entering the boss room.

*The Menagerie*- A dungeon in the middle of a huge jungle that was made from the twisted corruption of Animal Village, Link must free his animal friends from both Link To The Past and Link's Awakening by retrieving the Gust Bellows treasure and fighting the Nightmare Lord Zaphic, who transforms into an enormous evil flower monster to battle Link.

*Zero Core*- A strange futuristic ice dungeon, the first appearance of a futuristic environment in a Zelda game, this dungeon is the creation of the Nightmare Lord Baska, who transforms into a huge robotic creature to battle Link, who must use his new Electro Rod to fight Baska off.

*Shadow Hollow*- A dungeon that combines the environments of Misery Mire and the Face Dungeon, this horrifying dungeon was created by the dark wizard and Nightmare Lord Aravec, who turns into a shape-shifting shadow creature. You'll use the Mirror Shield gained in this dungeon to shine some light on Aravec and drive him away.

*Oceanic Tower*- An enormous tower in the middle of a vast ocean, this is the game's obligatory water dungeon, though it's surprisingly one of the most beloved in the series with complex but intuitive puzzles and beautiful imagery, starting a trend of good water dungeons in later Zelda games. You get the Living Bomb here. The boss is Zanithera, the second female Nightmare Lord, who turns into a huge dragon beast to attack Link.

*Hadean Crater*- A fire dungeon on the sight of the former Death Mountain, which exploded in an enormous volcanic eruption. Here, you get the Ice Rod, and you'll need it to face Vanaxu, who transforms into a lava-dwelling demon-like beast during his boss fight.

After seven dungeons are defeated, there's still no sign of Zelda. All the while, Link has been finding more mysterious clues as to the Nightmare Lords' true purpose, while he's also been encountering Marin and other Koholint residents more and more, and is still unsure about whether or not to finish his quest, not wanting to destroy the dream that the Koholint denizens are a part of. He puts those doubts aside long enough to venture into the eighth dungeon, a twisted combination of Mt. Tamaranch and Hyrule Castle, where the eighth Nightmare Lord Calavir resides. Calavir has made appearances throughout the second half of the game and is clearly the ringleader of the Nightmare Lords, having recruited a naive and grief-stricken Gaddis into his circle after the deaths of Gaddis' parents at the hand of a band of thieves consumed him with a lust for power so that he'd never be helpless to help those he loves again. Halfway through the eighth dungeon, Link comes across Zelda's room and finds it sealed by a mysterious force. Approaching the door he finds that he is able to enter, and there, having been in her room the entire time, is Princess Zelda... nursing a wounded but still-alive Gaddis back to health. She explains that Calavir's true purpose is to awaken the fallen Ganon using the dream of the Wind Fish, trapped in the castle in a corrupted form. The Nightmare Lords have been siphoning the life energy of the people of Hyrule and Koholint into the castle, where, combined with the Wind Fish's energy, it can resurrect Ganon from the dead. Gaddis apologizes to Link and says that he was a fool to listen to Calavir's lies. After this scene, Zelda gives Link the final dungeon treasure, the Silver Arrows, and implores him to stop Calavir once and for all. Link goes to the final part of the dungeon and there he finds Calavir who has absorbed the power of the Wind Fish.

The Calavir battle is similar in a lot of ways to the final Nightmare battle from Link's Awakening but with entirely different and more complex forms that it will take almost all of Link's accumulated items to defeat. Finally, Calavir falls and the game seems to be over, only for Ganon's evil theme to be heard as the dark villain returns to full strength and appears behind Calavir. Calavir bows down to Ganon and begs to be given enough power to defeat Link, but Ganon merely absorbs him, laughing and calling him a fool. He then attacks Link only to be hit with a wave of light energy from Zelda, who rushes into the room with Gaddis. Ganon goes to kidnap Zelda, only for Gaddis to put himself in the way. He is struck down by Ganon, this time for good, and Ganon escapes with the princess and the ocarina, using it to construct a huge castle in the center of Hyrule. A distraught Link is met outside by Marin, along with a lot of other people from Koholint and Hyrule. Marin says that she finally understands that as the Hero of Hyrule, Link has a duty to protect as many people as he can and that no matter what happens to her or her people, Link must do what's right and fight evil.

The final dungeon is Ganon's Castle and it's truly enormous, the most complex and difficult dungeon in the game, even making Hyrule Castle seem like a cake walk. The challenges of the castle will test everything Link's gained throughout his journey and you'll even rebattle versions of several of the game's previous bosses. Finally, Link battles Ganon and instead of being an oversized pig-like monster, he's a huge, multi-screen spanning beast, the battle is in multiple phases and features a fully orchestrated final boss theme complete with chorus. During the final boss battle, Link frees Zelda, and both she and Marin help with various phases of the fight. Finally, Ganon is defeated, and light is restored to Hyrule. The ocarina's power is drained, but due to the goodness of Link's heart, it uses the light within him to recreate Hyrule... no longer twisted and evil, but pure and light, and fully integrated with the dream world of Koholint, brought into reality by Link's goodness and courage. The people of Hyrule and Koholint celebrate an era of eternal peace in their new world, and Link lays the Master Sword to rest once more.

-

Alex: Legend Of Zelda: Ocarina of Dreams is a masterpiece in every sense of the word. It's just a brilliant, challenging, supremely fun game and the best Zelda game I've ever played.

Ted: I agree on all points, I can't find anything bad to say about it. It's everything I dreamed it would be and more.

Alex: From the beautiful graphics to the incredible music score, the ridiculous bosses, the enormous dungeons, the lovable characters, this game from top to bottom is just pure awesome. I give it a 5.

Ted: And I also give it a 5. And you know what that means.

\*A trumpet fanfare plays as Brittany, Kazzi, and John walk out with party hats on\*

Ted: We have our first EVER inductee in the *GameTV Hall Of Fame!*

Alex: And hopefully the first of many. To the wall!

\*The five hosts walk to the wall, Alex humming the Legend Of Zelda theme as he holds up a framed case with a copy of the game inside, there's a big wall with a *Game TV Hall Of Fame* plaque on it, the wall stands empty as the hosts mount the framed game up on the wall.\*

Ted: And there it is, *The Legend Of Zelda: Ocarina of Dreams* becomes the first member of the GameTV Hall of Fame. Very, VERY well-deserved.

Brittany: Everybody go out and buy it right now!

-excerpted from the June 27, 1995 episode of *GameTV*

### **July 6, 1995**

Tom Kalinske returned from his Fourth of July holiday with a renewed focus on making Sega the most successful video game company it could possibly be. He'd seen the glowing reviews and the huge sales figures for the new *Zelda* game and he'd expected that. Right now, he was busy planning just how the Saturn would take over the video game world, as the Genesis had seemed poised to do just a year earlier. To that end, he was meeting with executives from Namco, the company to whom Sega had tied so much of its fortunes for the next generation.

"So *WeaponLord*, that's the final game you guys had to publish for the SNES-CD?"

"That's correct," replied the Namco executive, acknowledging the last of the games Namco had on its previous deals with Nintendo. "We are now publishing games exclusively for the Sega Saturn."

"Good," said Kalinske, as he and the men from Namco walked down one of the hallways of

Sega of America headquarters. "We're looking on bringing a lot of Japanese games here to North America for the Sega Saturn...for one thing, it'll keep the guys at Sega of Japan satisfied and it'll give me more leeway to do what I want to do with the Saturn. For another thing...honestly...Japanese games have done a lot better than American games for a long time and the Saturn's success depends on plenty of Japanese hits coming to Western shores."

Kalinske had seen the Super Nintendo CD thrive on Japanese RPGs and games such as Mario and Zelda. While Western-developed games such as *Donkey Kong Country* and *Mortal Kombat* had been major hits, the epicenter of game development was still in Japan, and if the Saturn was going to succeed, it would need to have as many localizations as possible.

"We look forward to having *Ridge Racer* and *Tekken* positioned as major games within the Saturn's launch window," said one of the executives. Namco's *Ridge Racer* would be coming out in November, positioned to give it some breathing room away from *Virtua Racing* and *Daytona USA*. *Tekken* was positioned for an early 1996 release. "And the other game...the sword-fighting game, *Soul Edge*...."

"That looks like an awesome game, way better than that *Eskrima Warriors* the Super Nintendo CD has..." Kalinske didn't mention he was already negotiating to bring that game to the Saturn as a port, though he knew *Soul Edge* would be far more successful. "The name of the game's gonna be a problem, seems some small company has a trademark on the *Edge* title but I'm gonna have some money thrown their way to let us use it."

Kalinske was going all in with the Saturn, he'd spare no expense to make sure it was a success. With Genesis sales fading fast, he knew the company's future rested with the Sega Saturn...and that the Sega Saturn was Sega's future.

Two months away... Saturday was two months away, and Tom Kalinske'd be damned if he was going to let *The Legend Of Zelda* be the gaming story of 1995.

-

## **Batman: 20 Years After *Forever***

Twenty years after the third theatrical Batman film was released in theaters in 1995, it's still remembered as an excellent part one of the best superhero film franchises, largely due to the tireless work of producer Tim Burton and director Joel Schumacher to make the film a worthy third installment to Batman's theatrical story. A little bit of background information is needed: the film was the direct sequel to *Batman Returns*, a dark, brooding film that proved to be very controversial and not nearly as successful as the original *Batman* movie. Because of this, Warner Brothers wanted *Batman Forever* to be much lighter and more family-friendly. This of course was occurring in the midst of a renaissance in entertainment, spearheaded by the re-introduction of video games to more mature players after the 1983 crash nearly destroyed the industry and relegated the hobby to a mere "children's toy". Beginning with the introduction of the Super Nintendo CD in 1992, video games took a decidedly more mature turn, which culminated in 1994 with the release of the cyberpunk point-and-click classic *Snatcher*, a game that was the first true penetration of the medium into the mainstream consciousness since *Pac-Man* in the early 80s. One of the entertainment figures who took great notice of *Snatcher* was Joel Schumacher, who'd just

been tapped to direct the third Batman film and was inspired by the game's mature, uncompromising storyline. After getting support from Tim Burton, Schumacher asked, practically begged Warner Brothers to dial back some of the family-friendliness of the film, and eventually he wore them down, allowing *Batman Forever* to be much closer to Schumacher's original vision.

The film was two-and-a-half hours in length, briefly touching on Batman's past and how it related to the duality of Batman and Bruce Wayne as he embarked on his most dangerous adventure yet, clashing with two dangerous villains instead of one. The primary villain of the film was the Riddler, played by Jim Carrey, a tormented genius whose mind had been cracked by repeated failures, especially once Bruce Wayne rejected his latest invention for fear it could be used to brainwash people. Originally, Carrey was to play the Riddler as a straight-up comic character, similar to his previous roles in films like *Ace Ventura* and *The Mask*, but Schumacher decided that that wouldn't mesh with the darker mood of the film, and so Carrey played the Riddler as a sort of brooding, on-edge villain (with occasional hints of dark manic humor, allowing Carrey to get in a few slapstick scenes that would be precisely times to maximise audience amusement). Billy Dee Williams reprised his role as Two-Face from the previous two films. An intriguing "what if" scenario was in play here as Two-Face was to be originally portrayed by Tommy Lee Jones, who turned down the role. This actually may have been a good thing, as it prompted Schumacher to expand Two-Face's backstory to have more continuity with the previous two films, we see him get splashed with acid by a deranged criminal in one of the film's opening scenes and this starts him down the path to insanity. Batman's sidekick Robin is introduced in this film, played by Leonardo DiCaprio (in a very good performance), Robin seeks revenge for the deaths of his family at the hands of one of Two-Face's criminal capers and gets a character building arc that stands in parallel to the duality of Batman. Nicole Kidman plays Batman's love interest Dr. Chase Meridian.

Over the course of the film we occasionally get flashbacks to Batman's past as Bruce Wayne, exploring the choice he has to make between living a normal life and avenging the deaths of his parents by fighting crime in Gotham. There's a particularly powerful scene toward the end of the film, after Wayne Manor is attacked, Dr. Meridian is kidnapped, and Bruce Wayne receives a brutal blow to the head that temporarily erases his memory. Alfred helps to restore it by taking Bruce to a secret cave below the Batcave, where Bruce sees the giant bat that inspired him to become Batman in the first place as Alfred reads him a passage from his father Thomas Wayne's diary. We also get a lot of callbacks to the first two films and it does a fantastic job confronting the fact that Batman, known for NOT killing his foes, did kill criminals in the first two films, it's in *Batman Forever* that he confronts this aspect of his past and decides not to kill criminals anymore (a lesson he must then impart to Robin, who is furious as he looks to avenge his family's deaths). Toward the end of the film, Robin and Dr. Meridian are both held captive by the Riddler, who wants Batman to choose between his new sidekick and the love of his life. In the original script of the film, Batman saves them both. The scene, however, is changed somewhat, to reflect the character arcs of both Robin and Two-Face. Throughout the film, we see that Two-Face is truly of two minds, not a psychotic villain like the Riddler but of someone struggling between hatred and justice, like Batman and Robin are. Through most of the film, Two-Face is Riddler's willing partner and commits evil criminal acts. But, at the end of the film, during the climactic scene, Robin is able to free himself enough to sacrifice himself which would enable Batman to save Dr. Meridian without having to worry about him. But as Robin is falling, he is rescued by Two-Face, (but at the cost of Two-Face's own life seconds later). As Two-Face is about to plummet to his own doom, he tells Robin that he can't ask him to forgive him, but Robin makes the choice to forgive Two-Face and even tries to save him,

unsuccessfully. The Riddler is defeated by having his own mind-wipe device turned on him, and ends the film in Arkham Asylum, screaming as nightmarish visions of a giant bat torment his broken mind.

*Batman Forever* was well-received by critics, it holds a 78% Fresh rating on Rotten Tomatoes and is frequently cited as one of the top ten superhero films of all time. It grossed \$56 million over its opening weekend in North America, which was a record at the time, and ended up making \$230 million total at the North American box office, making it a financial success that vindicated Joel Schumacher's vision.

## **The 1995 NBA Playoffs**

The 1995 NBA Playoffs were perhaps the most exciting of the 1990s. The Chicago Bulls, who had set an NBA record that season with 71 wins behind the terrific trio of Michael Jordan, Scottie Pippen, and Chris Webber, were looking for revenge against the defending champion Houston Rockets. The Rockets had had a bit of a scare early in the season after Hakeem Olajuwon tweaked his back during a game, but he turned out to only miss a week of action and the Rockets were able to fight their way to a #3 seed in a rough and tumble Western Conference. Here are some of the most intriguing playoff series in this awesome playoffs.

*(1) Chicago over (8) Boston, 3 games to 1-*

This first-round matchup was billed as the battle between the reigning king Michael Jordan and the up-and-coming superstar Grant Hill, who had led the Celtics to the eighth-seed and won Rookie of the Year. The first two games were easily won by Chicago but in game three in Boston, Grant Hill had a legendary and spectacular performance, with 52 points, 12 rebounds, and 11 assists en route to a 100-97 Celtics win. The performance called back memories of Michael Jordan's amazing 63 point game against the Celtics back in 1986. The Bulls responded by winning a somewhat close Game 4, but the series showed that not only was Grant Hill the next big thing, but that the Bulls were vulnerable...

*(4) Golden State over (5) Utah, 3 games to 2-*

Over in the Western Conference, the Golden State Warriors were proving to be one of the most dynamic and exciting teams. The Warriors' road began back in 1991, when the team decided not to trade its star Mitch Richmond for exciting and big rookie Billy Owens. Keeping its exciting "Run TMC" line-up together seemed smart at first, but in the 1992-93 season it seemed to be a mistake when Mitch Richmond suffered a career threatening injury and missed the entire season. The Warriors crashed and burned, but lucked into a good draft pick that netted them Penny Hardaway, who they then traded to the Magic along with a package of draft picks, bringing them the big man they thought would take them to the top, Chris Webber. It seemed to work. With Mitch Richmond back and better than ever, the Warriors dominated the 1993-94 season and achieved the best record in the regular season with 62 wins and the one seed...but were then shocked by the Denver Nuggets, who beat them in five games. The Warriors then traded Chris Webber to the Bulls, not only getting their three first round draft picks back, but also getting young stars BJ Armstrong, Horace Grant, and Toni Kukoc. With their young nucleus complete, the Warriors managed to scrap their way to a 4 seed, and in the first round they knocked off John Stockton and Karl Malone to make it to round two.

*(1) Chicago over (4) Indiana, 4 games to 3-*

This was perhaps the best series of the entire playoffs, particularly its legendary game 5 moment. The series was tied at 2 games each, with Indiana's home court proving VERY tough even for the historically good Bulls to win on. Now back in Chicago, with 4.2 seconds left the Bulls had seemingly survived a tough challenge from the Pacers. The score sat at 91-86... but then came Reggie Miller. Miller scored a catch and shoot three pointer to make the score 91-89 with two seconds to go. On the inbound, Miller stole the pass, dribbled back to the three point line, tossed up a desperation shot at the buzzer...and it went in. "6 Points in Four Seconds" became a classic Pacers battle cry and one of the greatest NBA moments of all time. It was for naught, however, as the Bulls rallied to win the last two games and the series. Despite all of this, the Pacers proved that they were one of the most resilient and talented teams in the NBA, and that this could prove to be a long-lasting rivalry...

*(3) New York over (2) Orlando, 4 games to 2-*

As good as Shaq and Penny were becoming, the veteran Knicks managed to knock them off in this exciting series that saw Patrick Ewing absolutely playing his ass off, particularly in game 5 in Orlando, where his 37 points and 18 rebounds, along with four big blocks, led the Knicks to a close win that enabled them to close it out in New York.

*(4) Golden State over (1) Phoenix, 4 games to 1-*

The Phoenix Suns looked damn good throughout the season, taking the #1 seed with 59 wins behind their star Charles Barkley. But in this series it was all Golden State. Horace Grant's excellent defense kept Barkley contained while Mitch Richmond provided the scoring and Toni Kukoc provided excellent play off the bench. The Warriors dominated the clinching game in Phoenix, 112-89, behind Richmond's 40 points in one of the best NBA playoff performances of the year.

*(3) Houston over (2) San Antonio, 4 games to 3-*

Big time big men clashed in this series, Olajuwon and Robinson both played well but Olajuwon wouldn't be denied and the Rockets held onto their title in another of the most entertaining series of the playoffs.

*(1) Chicago over (2) New York, 4 games to 2-*

The Knicks provided a tough challenge for the Bulls in a physical slugfest that saw Jordan and Ewing nearly come to blows in Game 4 as obscenities rained down from the raucous New York crowd. It was a fierce series that saw Chris Webber prove to be the difference, he overpowered the Knicks at the rim and averaged 14.7 rebounds over the course of the six games. The Bulls moved onto the finals where once again they would challenge...

*(3) Houston over (4) Golden State, 4 games to 3-*

The Western Conference Finals saw Houston's team of big vets against Golden State's team of small young talents, and in the end, experience won out, though it wasn't without a fight. The Rockets won Game 7 94-90 despite an outstanding defensive performance from Horace Grant. Olajuwon, like he'd done in Game 7 of last year's Finals, took the game into his hands and kept pounding the rim, proving too athletic for the Warriors to stop. The finals

would be a rematch between the Rockets and the Bulls, and Michael Jordan was eager to get revenge.

*Chicago over Houston, 4 games to 0-*

Yes, the NBA Finals were completely anticlimactic after what was an otherwise excellent playoffs, Jordan played with a fury and he was easily the Finals MVP. It sucked to see the Rockets go down like that, after the 1994 Finals was a classic we were all expecting a repeat performance for the sequel, but some teams just wouldn't be denied. The Rockets were worn out after running with the Warriors for seven games and it showed, while the Bulls carried their battle scars from the Knicks series extremely well. For the fourth time, Michael Jordan would win a ring.

-

*Just 15 months ago, Nirvana frontman Kurt Cobain was checking himself into rehab, deeply addicted to drugs and having suicidal thoughts. Now, the band is poised to release its fourth live album, and despite being typically withdrawn from the glow of public attention, Cobain says he's never felt better.*

"It's about being trapped, being in dark places and just kind of dwelling there in them to find comfort, not trying to find the light but kind of embracing the dark."

Kurt Cobain doesn't open up with the media very often, and coming out of rehab hasn't changed that, though he's definitely looking a lot better than where we saw him early last year. He's launched headlong into working on the band's fourth album, *Stains*, and along with his bandmates, he's been totally focused on his work, with only the occasional helpful distractions. Krist Novoselic is a bit more talkative.

"Meditation, certainly, I think that's helped. Kurt plays video games some, more now that he's away from Courtney. He likes to hang out with people, just random people who look like they're having a rough time. He's trying to open up, but it's hard to know what he's feeling."

Band member Dave Grohl is probably the most open with Nirvana's mood, which seems to be positive and dare we say it, excited to have a new album out there.

"I've been having fun, it helps when the three of us can just close ourselves up somewhere and think of new songs. We banged out like five songs in a week, the album came along faster than all of us kinda thought it would."

"Been getting a lot of ideas from all over the place," Cobain adds while strumming a few notes on his guitar. "One night we just all sat around and each of us came up with something. The album's got a real spontaneous feel to it, it's just kind of a reflection on what everybody puts up with from time to time, maybe it'll help people deal with what they've got going on."

Cobain credits his bandmates with helping him deal with everything he's had going on over the past couple of years.

"I just thought, during that week when everything was going to (expletive), if I took that gun and put it to my head and pulled the trigger, what the (expletive) would Dave and Krist think of that? Who the (expletive) am I to put more stuff in their lives? All the pain I was dealing with, I just woulda been putting it on them and that's not the kind of person I wanted to be. And then, you know, Frances. I couldn't do it. I don't know where the hell my mind was but it's not a place I ever wanna be again."

Nirvana's album *Stains* is scheduled to be released in late August.

-

*Phineas and Ferb* was Nickelodeon's sixth Nicktoon and one of their most successful. Conceived by Dan Povenmire and Jeff "Swampy" Marsh, the two had been pitching the idea for the show to various children's networks even since before *Rocko's Modern Life* began airing on Nickelodeon in 1993. Soon after the first season of that show ended, Nickelodeon decided to pick up *Phineas and Ferb*, noting both the success of *Rocko* and the fact that they hadn't had a Nicktoon with a non-infant human protagonist since *Doug* back in 1991. The show featured two young brothers who created a variety of inventions, while in a parallel story to each episode, their pet platypus named Perry tried to foil the plans of the somewhat evil Dr. Doofenshmirtz. The plotline of each episode, except for the occasional special, was usually the same, and the show like *Rocko* even featured an occasional musical number sung by some of the characters. The show's voice cast included Courtland Mead as the voice of Phineas, *Pete and Pete* star Danny Tamberelli as the voice of Ferb (Author's note: He's not British as IOTL), Jennifer Morrison as the voice of their meddling sister Candace, Jeff Bennett and Kath Soucie as the voices of Phineas and Ferb's parents, Anndi McAfee as the local Fireside Girl troop leader (who also happened to have a huge crush on Phineas) Isabella, and Dan Povenmire himself as the voice of Dr. Doofenshmirtz. The show, which debuted as a pilot preview after the 1995 Kids' Choice Awards and had its proper premiere on September 3, 1995, was a major ratings hit for Nickelodeon, placing second only to *Rugrats* which also happened to blow up around 1995. The show continued on until 2001, when it got a half-hour finale special that saw the end of summer and a flash-forward episode concerning the characters' fates ten years on. It remains one of the most popular Nicktoons and is frequently mentioned on retro Nickelodeon sites. The debut of the show is said to have launched the "second era of Nicktoons" which included other hit shows like *Sam and Kira* and *Spongebob Squarepants*, and continued until 2000 with the debut of *Constant Payne* kicking off the "third era".

-

The story of how *Sailor Moon* made it to North America was an intriguing one, and an integral part of the children's entertainment revolution of the mid-1990s. Initially, a company called Toon Makers wanted to bring *Sailor Moon* over as a live-action/animation hybrid, but *Sailor Moon*'s parent company Toei shut this down. They also shut down another, much higher profile bid from DiC Entertainment, which would have adapted the original anime series but with heavy censorship and Americanization that Toei found unpalatable, especially considering how video games of the time were becoming increasingly less lax in localization censorship. Instead, Toei accepted the bid from Saban and the Vancouver-based Ocean Group to bring *Sailor Moon* to American shores, after promises from both companies that censorship would be kept to a minimum. This resulted

in the series debuting on Fox Kids' weekday lineup in the fall of 1995, alongside shows such as Mighty Morphin' Power Rangers. The first season of 46 episodes aired throughout the fall of 1995, keeping such moments intact as the deaths of the Sailor Senshi (renamed the Sailor Guardians for North American audiences), though the violence of the deaths was censored somewhat to obtain a Y7 rating. The show was highly acclaimed by critics on its American release, praised that it finally brought a super hero girls could identify with in contrast with the more boy-centered Power Rangers series. Upon the success of the first season, Sailor Moon R was dubbed and released in the fall of 1996, to similar ratings success.

Sailor Moon S seemed to be on a similar track for the fall of 1997, but controversy erupted over the presence of two homosexual characters, Sailor Uranus and Sailor Neptune. Initially, Saban had decided to dub the series as intended, believing that the show's popularity would be enough to overcome the controversy. But after Ellen DeGeneres came out on her show *Ellen* in early 1997, the controversy that erupted proved too much for Saban to handle, and instead of dubbing Sailor Moon S, Fox Kids simply continued to air reruns of the first two seasons until their contract ran out in 1998. It seemed that Sailor Moon in North America would be incomplete, at least for the time being...

-

With *Jumanji* having just wrapped filming and on schedule for release this December, some of the stars of the film have some interesting stories to relate.

"Toward the end of filming, Robin Williams wouldn't stop talking about the newest *Zelda* game," said Kirsten Dunst, who co-starred with Williams in the film. "He even brought in all the *Nintendo Power* magazines that had coverage of the game to read between takes. He was so excited for that game that he kind of got me and Bradley (Pierce) excited about it too."

Nobody was more thrilled than Dunst to receive a gift of a brand new Super Nintendo CD with a copy of *The Legend of Zelda: Ocarina of Dreams* from Williams once filming wrapped.

"And, I've been playing it a lot obviously. I'm at the big water tower dungeon now, the one with like 13 floors that you have to climb up. He was right, it's really really fun. We actually played through the first couple of dungeons together so I could get the hang of the game. He's so good at it though, he kind of made me feel like a dummy during some of the parts."

Dunst also says that if there's ever a *Legend Of Zelda* movie, she'd like to play the princess herself!

"Oh, I could definitely play Zelda, as long as I'm not some damsel in distress waiting on top of a tower. I want a sword too!"

-excerpted from an article in *Nickelodeon Magazine*, October 1995

-

Montel Williams: Well, I just can't get over how brave you are. You saved your friends and

you helped alert police about a very, very dangerous man.

Polly Klaas: Thank you. If he hadn't tripped over that game...

Williams: Don't think about it like that. It was your bravery and courage that helped to stop that dangerous criminal.

Klaas: Thank you.

Williams: Although...speaking of games, you are still playing the Nintendo, correct?

Klaas: I am, sometimes, yes.

Marc Klaas: \*smiles\* When she's got her homework done. \*the audience laughs\*

Williams: Well, I've asked a very special guest to come and I think he might have something for you.

\*Howard Lincoln walks out onto the stage\*

Williams: I'd like to introduce Mr. Howard Lincoln, the president of Nintendo of America.

(...)

Lincoln: And, to commemorate your real-life bravery in stopping a dangerous criminal, Nintendo is going to award you \$5,000 toward a college scholarship.

Klaas: \*smiling like she's almost going to cry\* Oh, thank you!

Williams: And, because you know, all work and no play is just no fun at all, Mr. Lincoln has another surprise...

Lincoln: Nintendo is going to be sending you one game a month for the next ten years, any of our Nintendo games that you want. And we'll also be giving you our new game system when it's released.

Klaas: Wow, that's really great...thank you very much! \*she hugs Howard Lincoln\*

(...)

Williams: So what's next for you and your daughter...?

Marc Klaas: Well, we're actually moving away from Petaluma, my wife and Polly and I decided that it might be best for us to go somewhere else, so we're actually going to be moving to Littleton, Colorado, Polly will be starting high school there in the fall.

Williams: And I'm sure you're excited about that.

Polly Klaas: Very excited, yes!

*This year's upcoming fall TV season is drawing some serious buzz, with a number of highly anticipated shows stepping onto the television landscape! Among the new shows is another Star Trek series, Star Trek: Voyager, which will feature the first female captain and is getting a lot of buzz for casting Terminator star Linda Hamilton in the lead role.*

*Star Trek: Voyager* is generating a lot of buzz among so-called "Trekkies", though the choice to put a woman in the captain's chair is proving controversial among some fans. The role of Captain Nicole Janeway was originally set to go to actress Genevieve Bujold, but after she pulled out during the filming of the pilot, the showrunners turned to Linda Hamilton, whose veteran sci-fi chops and proven acting ability were key factors in her casting. Though some fans are balking at the idea of a female captain, most long-time *Star Trek* fans are eager to see Captain Janeway's adventures begin later this year, and it's likely that the casting of Hamilton will pull in plenty of *Terminator* fans to see how Sarah Connor

fits in as a starship captain.

One of the year's most anticipated comedies is the CBS show *Extracurricular*, starring Christopher Reeve as a high school teacher whose ex-wife (played by Jane Kaczmarek) happens to be the superintendent of schools and also the high school rival of his current wife (played by Heather Locklear). Reeve took on the role after turning down a role in the made-for-TV movie *Kidnapped*, about a war between highland and lowland Scotsmen. The role is a return to form for the talented and affable Reeve, who seems to have launched full-steam ahead into rejuvenating his acting career, even giving up his horse riding hobby to devote more time to taking on roles. Reeve's hard work seems to have paid off, early reviews of *Extracurricular* are highly positive and it seems to be one of the big shows of the coming fall season.

-excerpted from an article in the August 4, 1995 issue of *Entertainment Weekly*

-

*Zero Hour* came at a time when DC and Warner Bros. looked to expand its brand awareness. As Ted Turner himself said, "It's all about brand synergy, getting your properties out there for people to take a look at and say, 'Well that looks good, I want that!'" *Justice League: Battle for Earth* gave heroes like Flash and Green Lantern a higher profile, *Batman: The Animated Series* was one of the most popular shows on the Fox Kids block, and Joel Schumacher's *Batman Forever* convinced DC/Warner Bros. to fast track other properties.

*Superman: Last Son of Krypton* was in development since 1993 when Warner Bros. bought back the film rights to Superman and handed the project to producer Joel Silver. Silver brought on Sam Raimi to direct and in turn Raimi brought Bruce Campbell to play the Man of Steel. Kevin Spacey and Lawrence Fishburne played Lex Luthor and Brainiac, respectively, and Dana Delany as Lois Lane (who would reprise the role in voice form for *Superman: The Animated Series*.) *Last Son of Krypton* was not as reverential to the Superman mythos as Richard Donner's vision, but had enough action to make it the third highest grossing film of 1996 after *Independence Day* and *Twister*. Some of the more over-the-top scenes featuring Spacey's Lex Luthor even became Internet memes a decade after the film's release.

However, it was Fishburne's portrayal as the cold, calculating, and alien Brainiac that made the film memorable. Despite the lighthearted banter between Superman and Luthor, his Fishburne's Brainiac balanced it out with a sense of menace that forced the mortal enemies to put their differences aside to save Metropolis from becoming a part of Brainiac's collection of bottled cities. Fans who stayed to the end of the credits found themselves rewarded with a short clip that revealed Brainiac survived the destruction of his spaceship as a computer virus that spoke of a "darker force."

Raimi revealed that it was originally a throwaway line meant to keep the fans buzzing during an interview to promote the 1999 sequel, *Man of Tomorrow*, but it planted the seeds for what would become the "DC Movie-verse." As such, DC initially treated later movies like 1998's *Green Lantern* starring Billy Zane as Kyle Rayner and 1999's *Wonder Woman* with Catherine Zeta-Jones as the titular heroine as standalone films. Interestingly, CBS produced a pilot for *Justice League of America* in 1997 that only survives to this day in bootleg form.

It is obvious to see why CBS chose not to pick up; the production values were low and the acting was atrocious. When questioned on the failed pilot, DC president, Jeanette Khan cryptically told *Wizard* magazine that the company had bigger plans for the Justice League.

The Green Lantern franchise owed more to Schumacher's *Batman Forever* than it did *Last Son of Krypton* in the respect that it drew inspiration from video games. Schumacher admitted in numerous interviews that Hideo Kojima's *Snatcher* for the SNES-CD was a source of inspiration and the reason why he resisted pressure from Warner Bros. to make the film appeal more to children. Similarly, Warner Bros. wanted Green Lantern to appeal to "the MTV generation" and sought to tap into the growing video game and anime culture of the time, hence the choice to use the younger Kyle Rayner over the more-established Hal Jordan.

After seeing the successes of *Stargate* and *Independence Day*, Warner Bros. lured the team of Roland Emmerich and Dean Devlin away from the American-produced *Godzilla* to work on the project. Billed as the "Star Wars of the new century," *Green Lantern* followed a similar "hero quest" narrative where struggling artist receives a Green Lantern ring from Ganthet, the last Guardian of the Universe. Joe Morton played former army ranger and Green Lantern, John Stewart, who served as combination Obi-Wan Kenobi/Han Solo and foil to the more idealistic Rayner. While the film bore superficial similarities to 1994's "Emerald Twilight," Hal Jordan was conspicuously absent and Parallax treated as a nebulous entity that destroyed the Green Lantern Corps. Geoff Johns would later use the concept of Parallax as a separate entity that the Time Trapper manipulated Hal Jordan into freeing from the Central Power Battery in 2002's *Green Lantern: Recharged*.

Meanwhile, Wonder Woman's first foray into cinema was almost a given her iconic status in comics and the dual successes of *Batman Forever* and *Last Son of Krypton*. A then-largely unknown Joss Whedon, whose only major credits at that time were *Buffy the Vampire Slayer* and *Toy Story* aggressively petitioned Warner Bros. to write the screenplay. *Wonder Woman* was largely an adaptation of George Perez's 1987 "Gods and Mortals" combined with the subversive elements of William Moulton Marston's Golden Age tales. For example, *Wonder Woman* overturned the "damsel in distress" trope by making Col. Steve Trevor a hostage of Ares for Diana to rescue, but in a way that was not demeaning or condescending to the largely male comic book-reading audience. The playful nature of the film as well as the mythological elements also drew a wider audience that helped restore the comic book industry after the speculation bubble burst in 1996.

It is needless to say that both films performed extraordinarily well at the box office. While neither film was the top grossing film of its respective year, many science fiction enthusiasts compare the *Green Lantern* trilogy more favorably to the *Star Wars* prequel trilogy and *Wonder Woman* exposed a generation of young girls to comics outside of Betty and Veronica. Both films inspired the Cartoon Network's *The Brave and the Bold* ensemble series that teamed either Green Lantern, Wonder Woman, or the Flash with lesser-known heroes like Hawkman/Hawkgirl, Zatanna, and Firestorm (the latter of whom would headline a movie in the 2000s.)

Marvel's entry into film would be delayed by the film rights of its properties held by various studios and its bankruptcy and subsequent acquisition by NewsCorp. However, 20th Century Fox released *X-Men* directed by Bryan Singer on July 3, 1998. Singer had initially turned down the offer Fox gave him after *The Usual Suspects* in 1995 as he was not a fan of the comics and unfamiliar with the characters. However, his friend, Tom DeSanto, convinced him to reconsider. With the successes of *Batman Forever* and *Last Son* as well as *Green*

*Lantern* in the pipeline Fox and Marvel hurried X-Men into production. The film's success led to the release of Chris Columbus' *Fantastic Four* in 1999 opposite *Wonder Woman*.

By the close of the 20th century, as Master Yoda would say, "*Begun the Superhero Wars has.*"

-Tales From The Superhero Wars, sequentialhistory.net, July 1, 2010

*"For a lot of girls, the big anime craze started with Sailor Moon coming to North America in the fall of 1995. But for me, it started with a video game and a sweet little witch girl named Andrekah."*

-Rebecca Sugar, from a post on Tumblr on February 3, 2014

*"By the time Ogre Battle came out, the die was pretty much cast for us leaning more toward Sega than toward Nintendo. Enix in Japan just didn't think that Nintendo gave Enix and its games their proper due in comparison with Squaresoft's games. Sega was welcoming third parties with open arms and right when the Saturn came out was when they were courting Enix."*

-Robert Jerauld, former producer at Enix USA

*"The Super Nintendo cartridge system continues to sputter along, with a small but potent lineup of games that include what might be some of the best games of the year."*

-from the August 1995 issue of *Electronic Gaming Monthly*, discussing the upcoming SNES lineup for the second half of 1995

*"Sha-sha-sha-boooooom! Oh....that was too much, wasn't it?"*

-Andrekah, from *Andrekah*

*"He is too far gone... there is only one thing that can reach him but I have been praying for an eternity for him to hear my voice and he cannot."*

-Maria, from *Earthbound 2*

*Andrekah* was a lot of things. It was the best-selling new SNES-CD game of July 1995 in North America. It was the game that saved Sunsoft from restructuring in the face of imminent bankruptcy. And it was one of the most spectacularly fun and visually beautiful games on the Super Nintendo CD. *Andrekah* released on July 10, 1995 in North America after a January 1995 release in Japan. The game had sold excellently there and its North American release was accompanied by a large amount of pre-release hype. Sunsoft threw a LOT into promoting this game. It had commercials on Nickelodeon and Fox Kids, it had magazine ads...for a game about a little anime witch it was really out there in a big way.

The game revolved around a young witch girl named Andrekah who found herself lost in a strange new land. Having found herself without anything to do with her mysterious magical powers, she decides she'll use them to help solve the problems of the people in the new land she finds. With that, the game begins, immediately giving you the choice of three missions to take on (you have to take all three but you can choose the order). The game has short little cutscenes (fully voiced and animated) where Andrekah sees someone having

some kind of problem, asks them what's wrong, and then ventures into the unknown lands beyond the towns and villages to solve their problems in a platforming/action stage. During the stages Andrekah encounters various beings, friends, foes, humans, animals, ghosts, monsters...she meets dozens of whimsical characters on her journey. The game is lovely, Andrekah is instantly cute and charming while never quite crossing the line into outright annoying. As you progress on your journey you open up more stages, while there's also an ongoing myth arc where Andrekah slowly discovers her true purpose, setting the stage for the game's incredible climax. The gameplay is somewhat similar to *Mega Man* but it also compares to a game like *Jewels Of The Realm*, with light platforming segments mixed with various forms of combat. The graphics were a beautiful mix of 2.5-D styled, colorful stages and environments, almost like a somewhat enhanced version of what we'd later see the *Yoshi's Island* cartridge pull off on the cartridge-based SNES, giving the game a serious anime aesthetic. The soundtrack was mostly lighthearted but with some menacing tracks (especially toward the end). The voice cast, as in most games of the time, consisted of largely unknown actors and actresses. Jillian St. James, known mostly for minor anime roles in the mid-90s, was the first actress for Andrekah and played her very well, though later actress Rachel Lillis (who voiced Andrekah on the Ultra Nintendo/Saturn game and a couple of sequels for later consoles) and current actress Shelby Rabara (who voiced Andrekah in the most recent, current generation game) have both done excellent work as the young witch.

The marketing campaign for *Andrekah* was a big success, the game went on to be one of the surprise hits of 1995, and is also partially credited for kicking off the American anime craze (with *Sailor Moon* helping to do so on the TV side of things). It was known as one of the earliest successful games geared toward girls and Andrekah was a popular Halloween costume in 1995 and 1996. It also helped to boost sales of *Panorama Cotton* on the Genesis (especially once Andrekah was ported to the Saturn), and Cotton and Andrekah have crossed over on each other's games ever since. Worldwide, Andrekah pushed well over a million copies and gave Sunsoft an enormous boost that it needed during one of the toughest times in its history. While 1995 is known largely as the year of the Saturn launch and *Ocarina of Dreams*, it's important to remember the tale of the little witch that could...and did!

-from a post on Kotaku.com, "Why *Andrekah* Was The Most Important Video Game Of 1995", on August 14, 2014

-

## **Earthbound 2: The Basics**

*Earthbound 2* (known as *Mother 2* in Japan), was the sequel to *Earthbound/Mother*, which originally released for the NES in Japan and got a remake for the SNES that made it to North America in December 1993. Launching in North America on July 17, 1995 (delayed by Nintendo a month to keep it out of *Zelda's* way), the game picks up where the original *Mother* left off, taking place in a land called Eagleland and revolving around the strange events that occur after a meteor crashes in the home town of a young boy named Ness. The meteor turns out to be sent by the evil cosmic horror Giygas, and its evil energy causes creatures and humans around the world to go completely berserk, while Giygas' alien legions begin their invasion of Earth. The game is largely as *Earthbound* was OTL, though with a few minor differences, most of them related to graphics (significantly better than OTL, some of the battle backgrounds utilize real video for example) and sound (the soundtrack is for the most part the same with some minor changes to tracks, a few original tracks to TTL and utilizing the enhanced audio of the CD medium). The biggest change is

toward the end, after the Ness' Nightmare sequence. Before returning to the past to battle Giygas, the party seeks out Giygas' homeworld and discovers the Tree of Enlightenment. They also psychically channel the spirit of Maria, who gives them a prayer to use on Giygas. This mini-quest adds 2-3 more hours to the game and is complete with a town and a new dungeon where the party battles a boss, the Omega Starman, before finally going to the past to defeat Giygas.

Nintendo tries a different marketing strategy with *Earthbound 2* than in OTL. With gamers already familiar with the series and more receptive to RPGs, Nintendo utilizes a more traditional ad campaign, playing up the sci-fi adventure aspect of the game rather than utilizing a quirky scratch-and-sniff or "this game stinks" campaign. The game is also released without the official strategy guide included (Nintendo still publishes a separate guide for the game though). *Earthbound 2* sells slightly better than in OTL, though *Andreakah* outsells it by a significant margin. Most importantly, however, is that the game is not seen as a complete failure by Nintendo, though it is no less loved by players and loyal fans...

-

### **Ogre Battle, Enix, And A Tag-Team With Sega**

By the time *Ogre Battle* was released in North America in late July 1995, Sega and Enix had already entered into an agreement that would help to shape the fifth-generation console landscape. While Enix would continue to make games for the Super Nintendo CD until 1997, their new agreement with Sega would keep Enix games off the Ultra Nintendo entirely, and would put every late-generation SNES-CD game on the Saturn in some shape or form, drawing a clear battle-line between Enix and its RPG rival Squaresoft. The first big Enix agreement with Sega was over the game *Ogre Battle*, which would receive a Sega Saturn port sometime in 1996. Sega decided on a straight-up port over an enhanced 3-D remake of the game, instead reserving the series' 3-D transition for the game's 1998 sequel, *Ogre Battle 2: Princes Of The Universe*.

Enix had joined Namco as a major Japanese game company that would be developing games exclusively for the Saturn. The nature of the Sega/Enix deal wouldn't become open knowledge until late 1996, when the last of the Nintendo-based Enix games were about to release on the SNES-CD. The two major releases, *Terranigma* and *Dragon Warrior VI*, weren't games that Nintendo could easily downplay, and *Terranigma* even made the cover of Nintendo Power in January 1997. But the die was cast, and gamers would have to take sides: Sega or Nintendo, Enix or Squaresoft?

-excerpted from an article in the February 2010 issue of *Game Informer*

-

"At first, you know, I didn't want to take sequels. I'd done *Ace Ventura*, but....you know, after that I figured, no more sequels. So I do *Batman Forever*, and that's such a tough role, a lot more serious, a lot darker, and I kind of needed a break and then I get offered *The Mask II*. So I basically just said 'what the hell, it's gonna be fun, why not?'"

-Jim Carrey, on *The Late Show With David Letterman*, August 6, 1996

IGN.com: Okay, we know you've probably told this story before, but...you've been married to James Rolfe, also known as the "Angry Video Game Nerd", for seven years now. The two of you seem to be really happy together, but it is a shock for some people to learn that you

two are married. How did you guys meet?

Jennifer Morrison: \*she laughs\* It's okay, I like telling this story. So, back in 1995 there was this contest in *Nintendo Power* magazine, when *The Mask* video game came out they had a contest where if you won, you got to be in *The Mask II* (note: Jennifer Morrison starred in the film as Lily, the niece of Stanley Ipkiss' fiance Tina Carlyle) as a walk-on. And he won the contest. So he's there on set, and they don't need him for like a couple hours, and so I see him just sitting there looking kind of bored, and they don't need me for a couple hours either, so I offer to let him come in my trailer and play some video games.

IGN.com: Do you remember what games you played?

Morrison: We played *Twisted Metal* for like two hours and had a blast and it was a lot of fun and so we kind of became friends right there on the set. It wasn't love at first sight or anything like that but we talked a lot while we were playing and he talked about how much he loved movies and wanted to make movies, and I ended up giving him my e-mail address so we could stay in touch. I didn't give him my phone number or anything like that, but the internet was, you know, kind of becoming a thing, so I gave him my e-mail and said, you know, you're pretty cool, e-mail me or something. And we did e-mail off and on for a couple years and eventually I told him that if he ever does like a student film or something, I'd like to be in it. So right after I got done wrapping *Urban Legends* in 2000, he e-mails me and asks if I can come be in this little student production he's doing. I go out to his college and we have a blast, again, you know, just friends at the time, but over the next few years we stayed in touch and eventually he asked me out, and that led to us getting married in 2007.

IGN.com: All of that from just a little Nintendo contest!

Morrison: It's crazy how things work out, isn't it? And so now I'm acting and he's directing, he's still doing the Nerd as kind of a hobby, but he's also directing some indie films.

IGN.com: And he directed the *Tron* episode of *Once Upon A Time* last season!

Morrison: I know and that episode was great, wasn't it?

IGN.com: It was one of our favorites.

-excerpted from an interview on IGN.com promoting season 4 of *Once Upon A Time*, September 16, 2014

-

*1995 was for all intents and purposes the Super Nintendo's swan song. Though the cartridge-based system would see some games released as late as fall 1996, the last major releases were in the second half of 1995: F-Zero: G-Force, Storm Guardians, Kirby's Adventure 2, and of course, Yoshi's Island.*

*F-Zero: G-Force* was an action/adventure game that put you in the shoes of Captain Falcon and a band of brave heroes who raced super-fast vehicles by day and protected the streets of Mute City by night. The game was a sort of hybrid platformer/beat-em-'up that let you control one of four main characters: Captain Falcon, Dr. Stewart, Jody Summer, and Super Arrow. The four heroes team up to battle the forces of the evil villainous mastermind Black Shadow and his hired henchman Samurai Goroh (who later becomes a reluctant ally of

Captain Falcon's team). The game took some cues from Super Metroid in terms of combat style, though it's much faster paced. The graphics were excellent, on par even with a lot of the SNES-CD games of the time, with really detailed backgrounds and animation, utilizing the Super FX2 chip for some really stunning effects. All in all, it was a fun and well recieved action game that gave players a look "behind the scenes" of the F-Zero universe, so to speak, and though it wouldn't recieve a proper sequel until the Ultra Nintendo, it was still a really fun game that established Captain Falcon as one of Nintendo's most awesome heroes.

*Storm Guardians* was the last really big third-party game for the Super Nintendo. Developed by Midway, the game was a sort of superhero shooter game that featured five brave warriors who could transform into forces of nature to battle huge enemies and bosses. It definitely lifted from the popular *Power Rangers* franchise somewhat, but was much better than any of the *Power Rangers* games, with great graphics, great combat, and some of the most visually stunning boss battles on the Super Nintendo. You could rapidly switch between the five Storm Guardians, who shared a health bar but each had different weapons and abilities depending on your chosen style of play. The game was sort of light on plot but the gameplay and action sequences made up for it. It was one of the most successful SNES games of 1995, and it too would recieve a sequel on the Ultra Nintendo.

Alex Stansfield: What did you think of *Andrekah*?

Ted Crosley: I'm gonna be honest. Going in, I thought it was going to be some silly little girls' game, but I had trouble putting it down toward the end. It was really, really good.

Alex: Yeah, I absolutely agree with you there. This game is great. It's one of the best games of the year. The graphics are gorgeous, the gameplay is stellar...

Ted: Honestly, it reminded me of Mega Man with the hub world and choosing what level you're gonna play.

Alex: Right, right, but you don't pick up weapons, you already have everything you need and you use your skills to win. And you need a lot of skills, this was a hard game at times.

Ted: It was hard, but it was a lot of fun and I didn't have too many problems getting through it, the only problem was I didn't WANT to get through it because I was having so much fun! I give *Andrekah* a 4.5 out of 5.

Alex: I do too, 4.5 out of 5, really good game, highly recommended.

-excerpted from the July 11, 1995 episode of *GameTV*

(...)

Brittany Saldita: *Ogre Battle* is an amazing game.

Alex: I wasn't quite as enamored with it as you were, I really didn't like not being able to control my team in battle.

Brittany: That is the point of a strategy game, you have to equip your guys and prepare BEFORE the battle and then properly position them during the battle, just like a real war!

Alex: I didn't like how you could be defending a town and you're fighting guys that you can barely damage and they get one guy that scores a good hit on you and you lose the fight and lose the town.

Brittany: If you know how to outfit your army you won't have trouble! Don't put a weak squad in an important town! This is one of the deepest, most rewarding RPGs I've played in a long time.

Alex: You know, it wasn't a bad game, I just got frustrated. I loved the soundtrack, I loved that there were lots of secrets, but this game isn't for the faint of heart.

Brittany: It's one of the best RPGs of the year.

Alex: And while we're discussing *Ogre Battle: The March of The Black Queen*...been seeing a lot of Queen stuff lately since Wayne's World.

Brittany: Well, if *Ogre Battle 2: Fat Bottomed Girls* is anything like this game I will be first in line to buy it.

Alex: \*snickering\*

Brittany: They're gonna keep with the Queen theme!

Alex: I give *Ogre Battle* a 3.5. It's a good game, but it could've been better.

Brittany: An amazing soundtrack, challenging battles, really deep strategy make *Ogre Battle* one of the year's best games. I give it a 5, it made my rockin' world go 'round!

Alex: \*snickering again\*

Brittany: \*getting the giggles, the two of them are having trouble holding in their laughter\* Whew....

Alex: \*still laughing\* Ted and Kazzi are gonna talk about *Trapmine* right after the break... \*laughing\* Fat Bottomed Girls...you think we'll see *Ogre Battle: Radio Ga Ga*?

(...)

Kazzi DeCarlo: *Trapmine* was the bomb, and I'm not just saying that because you actually can lay bombs in this game.

Ted: With 82 single player levels, this excellent action puzzler will keep you playing for hours on end but it's in the multi-player mode that you'll really have a blast.

Kazzi: Yeah, but you're likely to lose some friendships over this game. Ted, I hate your guts right now.

Ted: Hey, it's not my fault you can't see a spike trap if it walked up and bit you on the ass.

Kazzi: It did! About fifteen times!

Ted: And it was hilarious.

Kazzi: I give *Trapmine* a 4, but I give Ted a big fat zero for being a cheater and a jerk.

Ted: I give *Trapmine* a 4, it's super addictive and the opportunities to lay hidden traps make it a much more complex and challenging game than the similar *Bomberman* games, and also much more rage inducing, clearly.

Kazzi: I'm gonna kill you! \*pretends to attack Ted\*

Ted: We're gonna review *Comix Zone* next if somebody can pry Kaz off of me before he strangles me to death!

(...)

Ted: It's the master of *Doom* himself, John Romero. Welcome to *GameTV*.

John Romero: Good to be here.

Ted: Nearly two years on and we're still playing *Doom*, still talking about *Doom*, such an awesome game, how's it feel to have been a part of such a huge phenomenon?

John: It's really special. It's something that really makes me proud and to hear people talking about the game just makes it all the more rewarding. It still blows my mind how many people have played *Doom*.

Ted: Well, even more people are about to play it, it's hitting the Super Nintendo CD next week, so tell us about that.

John: Working with Nintendo on this game has been a lot of fun. A lot of work, of course.

Ted: Obviously, porting anything from the PC to a home console is going to involve some challenges.

John: Well, yeah. But Nintendo gave us plenty of time. When we ported to the Mega Charger it was a lot more rushed, and there wasn't as much memory with the cartridge as there is with the CD. This is the most faithful *Doom* port you're going to get.

Ted: I've been playing through some of it already, our review's next week but this game runs exactly like it does on PC, at least so far.

John: It was painstaking getting it to run as well as it does. I wasn't going to stop until I was pleased with the results. I think players are going to be pleased too. The only thing that we weren't able to get that I really wanted was multiplayer deathmatch, there was just too much going on for us to be able to do split-screen deathmatches even with all the time we had, the SNES-CD just wasn't quite powerful enough. Maybe for the next one.

Ted: You're already looking toward the future?

John: We've got a version of *Doom* coming to the Sega Saturn and we're looking to port *Doom II* either to the SNES-CD or Project Eunice, and of course the Saturn too. But I've got other projects in the works and I think they're going to be even better.

Ted: Better than *Doom*?

John: \*nodding\* You heard me.

Ted: For right now, let's just keep talking about *Doom*.

-excerpted from the August 1, 1995 episode of *GameTV*

-

*"It was a challenge, to be sure. We had to squeeze out every drop of power we could out of the SNES-CD. We made what I like to call 'hidden compromises', places where we had to cut little corners to make everything work. It's a testament to what we did that some of these weren't found until more than a decade later."*

-John Carmack, talking about the porting of *Doom* to the SNES-CD in an interview with PhobosLegions.com

*"Doom! Hell yeah, man! Doom!"*

-overheard by local news reporters in a line of shoppers waiting to purchase *Doom* for the SNES-CD on August 7, 1995

*"You know, I honestly don't get the problem people were having with this game. Super Mario World 3 was my favorite of the three Super Mario World games and I'm not*

*apologizing for that. It looked amazing, the gameplay was awesome, and the bosses were outta this world. I get that it was different from most Mario games, but I felt like it was the perfect transition between the old-school Mario platformers and the awesome game we got on the Ultra Nintendo."*

-the Angry Video Game Nerd, discussing the three *Super Mario World* games in a 2009 special episode

*"That's right Mario, I don't need the princess anymore! Not when I have a whole army of Mechakoopas to stomp anybody who gets in my way!"*

-Bowser, during the intro to *Super Mario World 3*

*"You've never seen water look this good in a video game."*

-excerpted from an advertisement for *Ecco 3: The Omega Stone*

*"You guys do know the water in Ultima for the Saturn looks like ten times better than this, right?"*

-Tom Kalinske, overheard in the Sega of America marketing department, chastising his ad team for focusing on graphics over gameplay in the ad campaign for *Ecco 3*

-

*"Approved by the creators of Doom themselves, Doom for the Super Nintendo CD is the only way to get the true, authentic Doom experience on your home console. All the original levels, all the original enemies, and the game's hardcore original soundtrack are all there, just like on the classic PC game."*

-excerpted from the commercial for the SNES-CD version of *Doom*

## **August 7, 1995**

The Super Nintendo CD port of *Doom* is released amidst a slew of pre-release hype and excellent reviews. The release is heavily promoted in magazine ads and even ads on primetime television proclaiming the game to be the definitive home console version of the game. The hype reaches a mainstream fever pitch not seen since the release of *Mortal Kombat* in 1993, and the game's opening day sales trail only that game, *Super Mario World 2*, *Donkey Kong Country*, and *The Legend Of Zelda: Ocarina Of Dreams* in opening day sales for the Super Nintendo CD. The release is accompanied by a bit of controversy over the game's violent content, but not nearly as much as *Mortal Kombat* had, and the fact that the game is advertised largely toward older players does a bit to mitigate the controversy somewhat.

*Doom* doesn't sell too many SNES-CD add-ons to gamers who don't already have them, but it's another nail in the coffin of the Genesis, whose decent but ultimately inferior Mega Charger port of *Doom* looked even worse in comparison with the SNES-CD's near perfect port. The game is universally praised as one of the best of the year, and becomes one of the year's top sellers as well, becoming the first game to unseat *The Legend Of Zelda: Ocarina Of Dreams* from the top of the sales charts. The success of the SNES-CD *Doom* port not only gives other PC game makers confidence in putting out their own ports to the SNES-CD and future Nintendo systems, it also endears John Romero and John Carmack to Nintendo as a company for allowing them to take the time and care they needed to port their game so faithfully. The relationships Nintendo forged via the release of *Doom* would serve them greatly in the years to come, perhaps even moreso than the release of *Doom* itself served the SNES-CD's pedigree as a game console.

## **Doom: The Basics**

The SNES-CD port of Doom is a nearly flawless home console port of the original game, with all the levels, environmental textures, and enemies intact. The only changes are the absence of a deathmatch multiplayer mode (which is essentially the only knock that most mainstream reviewers have with the port) and what John Carmack dubs "invisible compromises", nearly imperceptible differences from the PC original such as well-hidden slowdowns and a few microscopically less detailed textures in certain areas. The original gritty rock soundtrack from the original PC game is still there, and in fact, most fans proclaim the SNES-CD's slightly more detailed versions superior to the original. The game runs exceptionally well on the SNES-CD's 21 Mhz processor and the memory capacity of the CD-ROM format enables the game to retain all the texture details of the PC original, with all the levels of the original PC game. Id Software briefly considered including the Doom II levels as a package with the game but decided against it when it proved too time-consuming to get them into the game, initially Doom II was planned for 1997 for the SNES-CD but those plans would be scrapped later on in favor of a game for the Ultra Nintendo.

### **A Pair Of Spooky Sequels Grace The Super Nintendo CD!**

It might still be a couple months until Halloween, but the Super Nintendo CD is overrun with skeletons and zombies this month as a pair of monstrous sequels are poised to make their debut later this month!

First, it's *Deadman Sam 2*, sequel to 1993's surprise hit SNES-CD game! Sam and Nellie might be dead but their adventures are alive and kicking as they traverse the underworld, working together to stop King Polter and his horde of ghostly monsters! Use Nellie's ghost powers to enhance Sam's weaponry and strike down dozens of different foes as you cross 15 spooky levels in order to liberate the underworld from King Polter's control! Even take control of Nellie herself and possess enemies to make them fight each other!

In *Zombies Ate My Neighbors: Ghoul Patrol*, Zeke and Julie are back and trying to stop another undead invasion from a circus of killer clowns! But this time, you've got your friends by your side. Team up with six kids from Zeke and Julie's school, each with their own special abilities. Trust us, you'll need all of them to send this circus of horrors packing! -excerpted from the September 1995 issue of *GamePro* magazine

"It's kind of a shame that these two games released when they did. Both of them were great, especially *Deadman Sam 2*, which wasn't quite as well reviewed as the first game but got even better reviews than *Super Mario World 3* in some publications. *Ghoul Patrol* was

*great fun and some of Zeke and Julie's friends were really hilarious, but the game completely bombed in sales, it was one of the worst selling games of the month and pretty much killed any chance of us getting a third game. Deadman Sam 2 did all right, it paled in comparison to the twin juggernauts of Doom and Super Mario World 3, but it did well enough to keep the franchise rolling. It was pretty simple really, Deadman Sam 2 found its niche and Ghoul Patrol didn't. There just wasn't enough room for three great action platformers on the SNES-CD in the same month."*

-excerpted from "Spooky, Scary Skeletons On The Super Nintendo CD: A Retrospective Of The SNES-CD's Horror Platformers" on Kotaku.com, April 14, 2012

-

## **An Adventure Like No Other**

*Kirby's Adventure 2* on the SNES is probably the best cartridge-based game we've played all year. This 32-megabit cartridge features stunning graphics and a beautiful soundtrack, while giving Kirby some amazing new moves. It's the sequel to 1993's NES hit *Kirby's Adventure*, picking right up where that game left off as the evil wizard Thraxor launches an invasion of Dreamland. You traverse six worlds and more than 40 stages on your way to battling Thraxor, eating and spitting lots of different enemies along the way. Kirby can transform into 22 forms in this game, not counting the one-off forms that Kirby can acquire such as a giant microphone and a huge exploding Kirby bomb. Kirby can even summon forth a friend by pressing X after transforming, Kirby will lose his transformation but gain a special helper, somewhat similar to the function of the animal helpers in *Kirby's Dreamland 2*.

This game is actually a fairly decent challenge, certainly moreso than in *Kirby's Dreamland* or *Kirby's Adventure*. In addition to the end of world bosses, there are numerous mid-bosses that challenge Kirby along the way, each with their own attack patterns and skills. You'll have to master them all, especially if you want to challenge the Boss Rush mode that's unlocked after beating the main game. While *Super Mario World 3* is the majorly hyped game this month for the SNES-CD, those who are still playing with cartridges shouldn't feel too bad, some of us here at GamePro actually preferred this game to Mario's newest adventure! It's fun, it's colorful, it's got its own kind of charm and *Kirby's Adventure 2* is definitely the best Kirby game yet.

Graphics: 5.0

Sound: 5.0

Play Control: 5.0

Fun Factor: 5.0

Challenge: Intermediate

-excerpted from the September 1995 *GamePro* review of *Kirby's Adventure 2*

-

*As development was getting started on Diablo for the PC, Condor had another project in the pipeline for Blizzard: a Super Nintendo CD game simply called Treasure Hunters. The game, inspired by the RPG arcade classic Gauntlet, featured a new spin on the top-down questing of that game: enemies and treasure chests would drop randomized loot for players to collect, a system that would appear in full-force in Diablo later on.*

David Brevik: So this game that Blizzard had us working on was kind of a game that they'd be releasing in-between the first and second Lost Vikings games, sort of a questing adventure/RPG kind of like *Zelda* or *Gauntlet*.

Game Informer: And it ended up being a sort of dress-rehearsal for *Diablo* in a way.

Brevik: A much lighter take on *Diablo*, but yeah, pretty much that. It would have four-player multiplayer, lots of questing, optional dungeons and the like but the main focus was on gathering more and more powerful loot to make the most powerful characters you could be.

Game Informer: The game also featured customizable characters.

Brevik: Right, not like what you see today but we had a bunch of silly costumes you could wear, different faces and heads, that sort of thing, kind of letting the player feel like they were a part of the game. You could progress through the main game or re-tackle any dungeon you've already beaten, so if you wanted to go through it with friends you could and we also gave the option of level scaling if you wanted it to be harder on your second go-around. The SNES-CD gave us a lot of leeway with that kind of thing, the graphics were pretty simple but we had lots of data in the game.

Game Informer: And again, you were prepping for what would eventually show up in *Diablo* later on.

Brevik: Yeah, absolutely. We were kind of surprised that *Treasure Hunters* was so successful, it ended up doing pretty well even though we came out right after *Doom*, we were all pretty happy with it. Later on, when the Ultra Nintendo came out, Blizzard wanted to make a *Diablo* port a top priority.

Game Informer: Do you think the SNES-CD helped to kind of propel your company and Blizzard to success in those early days?

Brevik: Absolutely, there really were a lot of similarities between developing for it and developing for the PC, that's why so many of the old Amiga classics did so well on there too.

-excerpted from a February 2011 interview with David Brevik of Condor (later Blizzard North), discussing the company's early history and eventual acquisition by Blizzard in 1996

-

## **August 24, 1995**

The Windows 95 operating system by Microsoft is launched following an enormous and expensive marketing campaign. It immediately becomes one of the most successful product launches of all time, and would soon become the most popular operating system for desktop computers.

-

\*An animated scene of Mario, Luigi, Princess Toadstool, and Toad all eating together at Peach's Castle is interrupted by powerful shaking of the ground. The four heroes run to a window and look outside only to see Bowser's Mechakoopas marching on the kingdom.\*

Narrator (Don LaFontaine): Bowser's back, and this time, he's brought an army...

\*Mario and Luigi look at each other and nod, they're about to leave when Princess Toadstool places a hand on Mario's shoulder and stops him.\*

Narrator: Mario's going to need all the help he can get...

\*Scenes from the game begin to play, showing off colorful 3-D worlds in the new isometric perspective as Mario dodges attacks from Mechakoopas and uses his new Ice Mario powers to freeze them in their tracks.\*

Narrator: Join Mario and Luigi on an all new adventure. Traverse over 40 new levels containing stunning new 3-D graphics. Battle gigantic Mechakoopas with help from Princess Toadstool...

\*Toadstool is seen throwing a power-up to Mario and in another scene she drops a POW block that takes out a bunch of Goombas.\*

Narrator: For the first time ever, Mario can move like never before in three dimensions.

\*More scenes show off the isometric perspective as Mario moves through a haunted house environment, dodging Boos.\*

Narrator: Mario's quest has never been tougher, and Bowser has never been crueller.

\*Briefly shows Mario fighting a huge mechanical Bowser robot\*

Narrator: *Super Mario World 3*, only for the Super Nintendo CD, coming August 28th. The bigger they are...

\*Shows off another huge boss, a giant Magikoopa that fills the screen with magical energy blasts\*

Narrator: The harder they fall.

\*Shows Mario about to land on the Magikoopa's head\*

-

*"But when Peach got captured, AGAIN, at the end of the game, imagine my disappointment. My disappointment then turned to cheers and jubilation when Peach burst her bonds and socked Bowser right in the face. No, it wasn't the finishing blow, it's Mario (or Luigi) who lands that, unfortunately. But it was a step forward and it was the first time since Mario Brothers 2 that Peach has actually been able to strike back against the bad guys. I don't think that the makers of this game had any idea how much it meant to girls like me to actually see Peach rescuing herself for once."*

-Anita Sarkeesian, from "Tropes vs. Women In Video Games Part 4", October 30, 2014

## **August 28, 1995**

*Super Mario World 3* is released for the Super Nintendo CD in North America, following a

successful Japanese release in mid-July that saw the game break many of the sales records that *Ocarina of Dreams* had set there in April. In North America, the game didn't fare quite as well, though it was still one of the year's biggest selling games. The reason for this was the reviews: the game's new isometric viewpoint was technically gorgeous but somewhat hard to get used to for longtime Mario fans. The SNES-CD controller only had four directions and though you could move in eight (by pushing down two of the directional arrows at once), the game still somewhat lacked the precision platforming element that had been so key to success of earlier Mario games, making for a few frustrating moments. The game was less well-received by reviewers, getting largely 8s and 9s as opposed to the near perfect 10 scores that *Super Mario World 2* had gotten. The game was widely considered a disappointment, and sales figures reflected that: ultimately, the game was outsold by *Doom* in North America over its lifespan, and *Doom's* first week sales nearly doubled that of *Super Mario World 3's*. The game was extremely heavily promoted, though not quite to the degree that *Super Mario World 2* had been, and though it was a good or perhaps even great game, it just hadn't lived up to the high standards that had been set by *Super Mario World 2*.

### **Super Mario World 3: The Basics**

*Super Mario World 3* is definitely a different game from the first two *Super Mario World* titles, featuring a 3-D isometric viewpoint (similar to OTL and TTL's *Super Mario RPG*) in which Mario can move in multiple directions. This allows for much more detailed graphics than in *Super Mario World 2*, utilizing 3-D-like figures instead of the largely 2-D ones in that game. The game features a soundtrack by Koji Kondo that features more than 20 different themes, more than in the previous game, and the soundtrack itself is highly praised. The gameplay itself is largely similar to that of previous Mario platformers. Mario can grow when he collects power-ups (including the new Snowball power-up that lets Mario become Ice Mario, the game removes the Jet Mario power-up from SMW2 and also removes the Cape from the first two Mario World games, Mario is unable to fly in this title) and he shrinks when he gets hit. The game features six worlds and 40+ levels, including a few secret levels and a seventh secret world, though with 80 goals in all, the game features less than *Super Mario World 2* (with 120) or even *Super Mario World* (which had 96), making for a more streamlined game that is also a point of controversy amongst fans of the previous two titles. Yoshi is gone from the game, though he's replaced by Princess Toadstool, if you find her hiding spot in certain levels, she can help you with power-ups, she can attack enemies, or even find secret worlds for you.

The plot of the game is fairly simple: Mario, Luigi, Princess Toadstool, and their friends are enjoying a leisurely lunch in the Mushroom Kingdom when suddenly Bowser attacks with an enormous army of Mechakoopas and tanks. The heroes are forced to flee the castle before it is destroyed by Bowser's massive army. Bowser orders his troops to spread out and hunt down Mario, Luigi, and Toadstool as they continue to overrun the Mushroom Kingdom, forcing Mario to once again spring into action to liberate it from Bowser's no-good legions.

#### *World 1: Mushroom Grasslands*

A set of grassland stages, fairly plain, as is the tradition for Mario games, these levels are mostly ordinary with only a few tricks and traps. At the end of the stage you fight a boss, the boss is a giant version of the standard Mechakoopa enemy.

#### *World 2: Kalamari Desert*

A set of desert stages. The Ice Flower is especially effective here. The boss of this stage is a giant mechanical Angry Sun that attacks you with fire breath.

### *World 3: Monty's Caverns*

A set of underground stages somewhat like Vanilla Dome in *Super Mario World*. This time around, Monty Mole and his friends help Mario out on their quest. The boss of this realm is a huge tunneling robot that chases Mario through an abandoned mineshaft.

### *World 4: Ancient Ruins*

A set of stages taking place amidst long-lost temples that Mario must protect from being desecrated by Bowser's troops. The boss of this world is a giant mechanical Magikoopa.

### *World 5: Harsh Marsh*

A series of levels taking place in the middle of brackish jungle swamps. The boss of this stage is actually five bosses, a set of mechanical jungle warriors considered to be one of the toughest boss battles in the Mario series.

### *World 6: Bowser's Battlefield*

A set of battles taking place amidst Bowser's battle fortifications. The final battle of the game is a multi-staged battle against Bowser and his enormous Bowser-shaped mech. During this battle, Bowser has captured Princess Toadstool but during a part where Bowser is about to scorch Mario with a lethal fire blast, Toadstool breaks free and socks his mech with her fiercest punch, causing it to malfunction and scorch itself, opening it up to the final blow from Mario.

### *World 7: Tower Of Power*

By finding ALL of Toadstool's hiding spots throughout the game, you can access a hidden seventh world with some of the game's toughest challenges as you ascend a giant tower to a secret final boss: Mecha Mario.

-

Ted Crosley: The SNES-CD port of *Doom*, I gotta say, it kicked ass.

John Walden: Yeah, it's pretty much just like playing it on the computer. All the levels are there and the game ran super smooth with plenty of graphical detail in the stages.

Ted: Honestly, the one thing I didn't like was that it lacked a deathmatch mode.

John: That was a shame. A deathmatch mode would've put this game over the top for me but honestly, as excellent as *Doom* is, this is a perfect port. I have to give it a perfect 5.

Ted: I have to dock half a point for lacking a deathmatch mode. They could have gotten it in there. 4.5 for me.

John: Even the original *Doom*, it's tough to get a deathmatch going, you gotta have internet and how many people have internet?

Ted: But I was looking forward to being able to play this game with three of my friends, or even one of my friends, and as good as this game is, for me to give it a five it's gotta be better than the original, I can't just give a 5 to a straight up port unless it's got a little something extra.

John: Well regardless of that, *Doom* is still highly recommended by GameTV.

Ted: Oh yeah, absolutely, if you haven't played Doom, what are you thinking? Go get this game, go get it right now!

-excerpted from the August 8, 1995 episode of *GameTV*

(...)

John: *Five For Fighting Hockey*, I mean, for me, I had a lot of fun with it.

Alex Stansfield: No NHL license, obviously, but the game is full of fun teams with silly names that really add to the humor of this tongue-in-cheek hockey game. I just wish the hockey itself could actually have been a bit better.

John: Well, that's what hockey is, when you go to a hockey game you're really going to a fight and maybe some hockey will break out.

Alex: I wish the hockey had broken out a bit better.

John: I really liked this game. The hockey itself is fine but the real point of this game is the fighting, pretty much everything you do leads to a fight and the fighting itself is really well done. The announcers are hilarious and I was laughing my ass off at the fighting scenes, when I played against Alex I'd be constantly trying to start fights with his team.

Alex: And even that....after a while, the fighting got kind of boring, you know? I have to give this game a 3. I got some good laughs but for a hockey game I'd stick with the NHL series.

John: I'm giving it a 4.5. It's got everything that a hockey game should have, which is lots, and lots, and lots of fighting.

-excerpted from the August 15, 1995 episode of *GameTV*

(...)

John: So now that you've seen our mini-reviews of *Madden '96* and *NFL Quarterback Club '96* across the two major systems, which one should you get? For *Madden*, the customization options really only show up in the Mega Charger version of the game, we were hoping to get the Create-a-Play feature on the Super Nintendo CD this year, but that didn't materialize. The game itself looks somewhat better on the Super Nintendo CD, but the Genesis and Mega Charger versions played a lot better and it just seemed like EA put a lot more effort into Sega's versions of these games. On the flipside, *Quarterback Club '96* largely played the same on both Nintendo and Sega's systems, but the Super Nintendo CD version lets you customize your own teams and really seemed a lot like the PC games in terms of customization options. If you've got a Super Nintendo CD, *Quarterback Club* is probably your best bet, but if you've got the Genesis and especially if you've got a Mega Charger, *Madden* is the best football franchise out there. We're hoping to see an even better version of *Madden '96* once the Sega Saturn launches next month, the technical capabilities of that system show a lot of promise, so if you're planning to get the Saturn you might want to hold off on picking up a football game until that version of *Madden '96* comes out.

(...)

Brittany Saldita: So that's *Ecco 3: The Omega Stone*. It's exclusive to the Mega Charger and I can see why, it's an absolutely gorgeous looking game.

Alex: I agree, it's really lovely all around, beautiful water, beautiful environments, Ecco's never looked better.

Brittany: This game was a bit of a surprise, I remember that Sega didn't show it off very much at E3. It was there but it was kind of off to the side and I'm not sure why it wasn't featured more because it's a great game. I thought it was even better than *Tides Of Time*.

Alex: It's a close call but I really enjoyed it. The bosses are huge and difficult, the temples you explore are just lovely.

Brittany: I know, the environments were amazing, this game REALLY shows off what the Mega Charger can do.

Alex: I can't wait until we get Ecco on the Saturn.

Brittany: I give Ecco 3 a 4.5 out of 5. A really fun game that every Mega Charger owner needs to check out.

Alex: I give it a 4. It's a great game.

-excerpted from the August 22, 1995 episode of *GameTV*

(...)

Ted: Well, I know what YOU thought of this game.

Alex: I thought it was fantastic. The controls took a bit of getting used to but once I'd gotten the hang of it I was having a great time and it's a more than worthy successor to *Super Mario World 2*. Make no mistake, *Super Mario World 3* is one of the best looking video games of all time. With huge bosses, beautiful levels, and outstanding music, it's the complete package.

Ted: I thought it was good but it could have been better and I'm still frustrated with the controls. You just can't get the perfect jumping in that viewpoint like you can in the original games. I'm glad they made the jumps a bit easier to compensate but isn't that kind of the point of a Mario game, to jump?

Alex: Well, this game had a lot more emphasis on combat, it gave you a ton of enemies to fight and a great new power-up for doing it.

Ted: I'd have rather kept the Cape. The Ice power is kinda lame.

Alex: Lame? Are you kidding me? Freezing Bowser's Mechakoopas was awesome, I couldn't get enough of it!

Ted: It wasn't a bad game but for a Mario game you gotta admit that the last one was a lot better. I had more fun playing *Wario Land* than this.

Alex: Wario Land was great too! This game is amazing.

Ted: I think you're just blinded by the good graphics. Which, by the way, are gonna look like puke after the Saturn comes out this week.

Alex: That has yet to be seen.

Ted: You've seen it! You've seen the Saturn! It blew you away! You were like a kid at Christmas playing Panzer Dragoon! I saw you!

Alex: Super Mario World 3 looks better.

Ted: You liar! You're lying! There's no way in hell!

Alex: I give Super Mario World 3 a 5 out of 5. It's a fantastic game. It's not QUITE the best Mario game ever but it's damn close.

Ted: I almost want to give Super Mario World 3 a 3.5 just to spite you. But...but I can't. I can't because it's a good game. I give it a 4, but as far as Mario games go, it's still a disappointment. And there's gonna be about five or six Saturn games released this week that are gonna blow it out of the water.

Alex: Bullcrap.

-excerpted from the August 29, 1995 episode of *GameTV*

## September 1, 1995

On the eve of the North American Sega Saturn launch, Tom Kalinske and his associates at Sega of America were perusing sales reports and discussing the latest news amongst themselves, knowing that tomorrow would be the big day. Initial sales for *Ecco 3* had been promising, it had been the second biggest Mega Charger launch of the year behind *Knuckles: Renegade*, despite the game receiving somewhat limited pre-release coverage. And initial reports that *Super Mario World 3* was, despite still being a major hit, somewhat of a disappointment, were also a welcome sign, as Kalinske still had memories of the massive *Super Mario World 2* launch that thrust the SNES-CD into the public consciousness. *Super Mario World 3* hadn't even gotten a sixth of the launch day sales that *Sonic the Hedgehog 3* had gotten, proving that the hedgehog still dominated the plumber when it came to sales and reviews.

"Looks like their attempt to pre-empt the Saturn launch with their newest Mario game is gonna backfire on them," said Shinobu Toyoda, unable to wipe the smile from his face.

"Just wish we were launching with *Sonic 4*," said Kalinske, shaking his head softly. "Imagine the headlines if we'd have dominated Mario on launch week. Imagine if we had moved ten times the units in our first day."

"That would have been.... 1.8 million units," said Toyoda, quickly doing some math in his head.

"You think *Sonic the Hedgehog 4* could sell that many copies in a single day?" asked Al Nilsen, looking around at the rest of the table with some trepidation.

"Gentlemen," said Kalinske, looking around at his fellow Sega execs with a glimmer in his eyes. "When we launch *Sonic 4* next year, we're gonna sell TWO million copies on launch day."

The others at the table weren't even sure they'd be able to sell two million Saturns on launch day. Not at that price. But Kalinske already anticipated that there'd be a price drop before *Sonic 4* would even be formally announced. He knew initial sales at \$399 would be low, even the \$499 unit with three pack-in games probably wouldn't be a hit right away. But this was a marathon, not a sprint...and the Sega Saturn, at minimum, was going to have a year and a half head start. In all likelihood, probably two years.

And unlike when Sega launched the Genesis in obscurity, this time, the eyes of the world were upon them. Everyone already knew Sega's name. And on Saturday, everyone would know the Sega Saturn.

-

\*There is a completely dark room. Two people, a young man and a young woman, walk out to the middle of that room as a faint light shines on them. They take each other's hand and look at each other for a moment before looking down at a small black pedestal before them. Each of them reaches forward to take a controller.\*

\*The room is illuminated by light, the light from a video game on a huge screen, *Virtua Fighter*. The two of them play for a few seconds as the vivid, fluid graphics of the game are shown on screen. Then the two of them begin to play *Panzer Dragoon*, and the floor

beneath them falls away. The two of them are seen riding on a pair of dragons, matching the action in the game of a dragon flying through the air. The two of them land in the middle of a crowd of scary-looking soldiers in full face masks and nightsticks that approach them. The young woman steps forward and extends her hand.

Woman: Join us.

\*The young man hands the soldier a controller and he begins to play. The game is *Ultima: The Worldly Lord*. The soldier plays for a moment and passes off the controller to another soldier. The soldiers drop their nightsticks and remove their face masks and bask in the sunlight. One of them changes into a police uniform and is seen running toward a criminal who is holding several people hostage. The game being shown changes to *Virtua Cop*. The soldier takes out the criminal and extends his hand to the rescued hostages.\*

Soldier: Join us.

\*The hostages run in different directions, one of them climbs into a car and begins racing down a long track in a beautiful field. The game now being shown is *Virtua Racing*. The track continues until the car rides into Daytona Speedway where the car joins a race in progress, the game switches to *Daytona USA* and the Daytona USA game theme is even briefly heard as the cars cross the finish line. The man takes his place on the victory podium and when he is interviewed by a reporter, he holds his hand out to the crowd.\*

Man: Join us.

\*The crowd disperses and we see them taking on various roles now, as games including *Madden '96*, *NHL '96*, *Golden Axe: The Duel*, *Bug!*, *Solar Eclipse*, and *Primal Rage* are shown. Finally, a girl is shown walking through a field and confronting an enormous monster. The girl (played by one of Tom Kalinske's daughters) shows a bit of fear at first but the man and the woman from the start of the commercial stand with her and give her encouraging looks. She steps forward and her hands are illuminated with magical energy as she steps forward to confront the monster. She lifts her hand up and stares into its eyes. A scene from *MagiQuest* of the protagonists fighting together against a huge monster is shown. Then we see the girl, striking down the monster with a burst of magic and causing the entire field to sparkle with white light, while a huge crowd of people is shown gathering in the field behind the girl, the man, and the woman. The girl is shown now looking into the camera and extending her hand to the viewer.\*

Girl: Join us.

\*The scene finally fades to black with the words **Playing Is Believing** shown in white.\*

**Sega Saturn**

**Available Everywhere**

**Saturday, September 2**

-excerpted from the Sega Saturn launch commercial widely shown in both its full and abbreviated forms across American television throughout August 1995

-

*Going into the Saturn launch, were Sega of Japan and Sega of America still at each other's throats?*

Tom Kalinske: I wouldn't put it like that, but there were definitely some differences left between our companies. We hadn't wanted them to launch the Saturn in Japan until the spring of 1995, for example. While Nakayama-san was able to keep some of Japan's more draconian edicts from affecting SoA, there were still some things that the two branches of the company had to work out. I think the rift kind of started to close back in April of 1995. Diane (Fornasier) proposed that maybe some of us from SoA and some of the folks from Sega of Japan should have a little....I guess you could call it a retreat, maybe? We'd have a little week-long retreat at Lake Tahoe just to relax and decompress and air out all the old grievance that the two branches of the company had with each other.

*Did that help?*

Kalinske: It helped. I mean, it didn't fix all the problems we were having with SoJ, we'd still clash throughout the Saturn's lifespan on certain things, but it did a lot to kind of allieviate some of the bad blood between us. We went out speedboating on the lake, we drank...a lot, we listened to a ton of loud music and watched movies, that kinda thing. It was a lot like summer camp but with a lot more drinking. And basically, I told the SoJ guys, "look, we can't help what the top brass are saying about us and about you, but we're both in this together and if we don't work this stuff out, Nintendo's going to whip us both". I mean, I said it differently, it was kind of a half hour of rambling I did but they got the message and after the retreat there seemed to be a lot more cooperation between the two sides.

*What do you think Sega of America's role was going forward during the Saturn era?*

Kalinske: I feel like Sega of Japan trusted us a lot more with the marketing. There were some stumbles. You know that great commercial we did, the "Join Us" thing and the whole "Playing is Believing" campaign? That wasn't me. My original idea... \*laughs\* it was kinda stupid. It'd be this kind of crpytic, esoteric kind of commercial directed by the guy who did the Mario Bros. movie, huge mistake right there, but it'd be where we'd have some dude's eyeballs getting sucked out while he was playing the Sega Saturn. I kept seeing it in my head and thinking it'd be great but Al (Nilsen) sort of talked me out of it and the campaign we went with, I liked a lot better. I even got to put my daughter Ashley in the commercial, so it ended up working out fantastic.

*But ultimately, you were able to keep Sega of Japan from scuttling the whole thing and I imagine you consider that a success.*

Kalinske: \*laughs\* Well they did have some good ideas but I'm glad we got to keep our autonomy at the very least!

-excerpted from a July 2008 interview with Tom Kalinske for GamePro magazine

-

*"We are excited to be launching the Sega Saturn here in Seattle, Washington! The Sega Saturn brings arcade-quality gameplay to the home and is the most advanced gaming*

*console ever made! Now who wants to be the first to purchase one here today?"*

-Tom Kalinske, announcing the Sega Saturn launch at a special launch day event at the Walmart store in Seattle, Washington where he and several others from Sega were on hand to help sell some of the first Sega Saturns

## **September 2, 1995**

The Sega Saturn officially launches in North America, with a price tag of \$399. The original Saturn includes the console, two controllers, and the Saturn port of *Virtua Fighter*. There is also a *Virtua Arcade Pack* for \$499, which includes the Saturn, two controllers, a lightgun controller, a steering wheel controller, *Virtua Fighter*, *Virtua Racing*, and *Virtua Cop*. The Saturn launch is accompanied by fanfare not seen since the launch of *Sonic the Hedgehog 3*, with simultaneous events at stores all across the United States giving fans a chance to try the Saturn out for themselves before purchase. The launch is given mainstream news coverage on CNN, which features live video from the special Mall of America launch event outside Minneapolis. The Saturn launches with twenty games, about half of Japan's current available game list, though more of these Japanese games would be making their way to North America over the next few months. The biggest seller on that first day, apart from the pack-in *Virtua* games, is *Daytona USA*, which even sold well amongst people who bought the *Virtua Arcade Pack* with *Virtua Racing* included. Other popular games at launch include *MagiQuest*, *Ultima: The Worldly Lord*, *Madden '96*, *NHL '96*, and *Primal Rage*.

Though the Saturn launch is well received by the gaming press, criticism immediately erupts over the high selling price. At \$399, the system is twice the price of Nintendo's Playstation Combo Set, and this prevents the system from being a major success on its first day, selling an underwhelming amount of units. There are very few sell-outs reported, only the \$499 *Virtua Arcade Set* reports sell-outs and even those are rare. The Saturn launch is far from a flop, but it's far from the breakout success that Sega had come to expect from its major product launches, and Tom Kalinske immediately begins lobbying Sega of Japan for a price cut, to no avail. For now, Nintendo still leads the market, because without a killer app to speak of, there's not much of a reason for the mainstream consumer to spend that kind of money on a game console.

-

Anchor: The Sega Saturn launched today at the Mall of America, to great fanfare from a large crowd who had gathered to purchase the device. It's the newest game system from Sega, rivals to popular game company Nintendo, and it's said to be the most advanced game system ever made, with 3-D graphics and cinema-quality sound. We'll talk live to Sega fans who were there at the mall to have a chance to buy the hottest thing in video gaming.

\*Scenes show a jubilant crowd around a large stage stacked with television screens showing off the newest Sega Saturn games.\*

Sega Employee: Welcome to the world of Sega Saturn!

\*The crowd cheers\*

Anchor: Today at the Mall of America, it was a holiday for Sega fans, who waited for hours to gain admittance to the big Saturday launch fest. The hottest games were shown off and lines stretched deep into the mall, but some say that this new game system is all hype and

no substance.

Woman: \*with her two kids\* You know, I took a look at it and it was impressive but it was 400 dollars and that's with just one game.

Anchor: Though the Sega Saturn is undoubtedly cutting edge, the hefty price tag scared away many we talked to at the mall.

Woman: It's just too much to ask, you know?

Anchor: But ask others who were at the event, and they'll proudly proclaim their allegiance to Saturn mania.

Teenage Boy: \*holding up his Virtua Arcade Pack\* I'm ready to get home and play the Sega Saturn, yeah!!!

Reporter: Was the 400 dollar price tag a bit discouraging?

Teenage Boy: Well actually, this was 500, but I've been saving up my allowance for a long time for this, ever since Sonic 3 came out I've been saving up for the Saturn.

Anchor: And some parents at the event were willing to fork over the cash as well.

Dad: Well, it was a lot of money, but the technology is so good that I imagine the kids'll be playing it for a while. It's cheaper than getting them a new computer to play games on and the graphics look just as good. I was really impressed with the uh, the dragon game, I got them that one and then I got Ultima for myself, I've been playing Ultima since back in the day and this one looks awesome.

Anchor: He's referring to *Ultima: The Worldly Lord*, said to be one of the Saturn's biggest games. Boasting a movie-like soundtrack and a huge world to explore, it's just one of 20 games that Sega planned to make available for people purchasing the system. Other games launching with the Saturn include new versions of the popular *John Madden Football* series, and a home version of the arcade hit *Virtua Cop* where you're a police officer who guns down bad guys.

Boy: \*with his mom, he's wearing a Sonic the Hedgehog baseball cap and t-shirt\* Well, my mom said she'd get it for me but they said there weren't any Sonic games so I decided maybe to wait for Christmas instead.

Reporter: You look disappointed, are you disappointed that there aren't any Sonic games to buy?

Mom: He was heartbroken. I asked the Sega employee about Sonic games and he said they were working on them but that he didn't know when one would be available. It's kind of a shame, that they wouldn't have them because that's the whole reason we bought the Genesis in the first place.

Anchor: *Sonic the Hedgehog* was completely absent from the presentation today, and when we talked to Sega representatives, they told us the same thing, that any games starring the beloved blue mascot wouldn't be ready until at least next year. As of right now there are plenty of Sega Saturns remaining for purchase at the mall and throughout the Minneapolis

area, though Sega expects them to be in short supply as the holiday season approaches.

-from the September 2, 1995 evening KMSP-TV newscast

*The Sega Saturn launched yesterday morning in North America, and fans lined up in droves to buy it, but initial sales reports are said to be disappointing. Most of the criticism circles around the Saturn's \$399 price point, which is said to be above what most middle-class Americans are willing to pay for a video game console. When you look under the hood, however, there's reason for the Saturn's high price, and most technology analysts have concluded that the price is likely a bargain, considering the Saturn's technical specifications.*

*The Sega Saturn utilizes a 64-bit VR4200 processor capable of running at 86.75 MHz, with a Silicon Graphics "Reality" GPU coprocessor running at 62 MHz. The system contains 4 megabytes of random access memory, which is by far the most RAM ever featured in a home console device, comparable to mid-range family computers and almost certainly a large reason for the Saturn's high price. It utilizes CD-ROM discs as its medium, similar to the discs for the Sega CD peripheral, though the Saturn's CD-ROM discs are a bit higher in terms of memory capacity. The system utilizes a six-button controller with additional shoulder button inputs, allowing for a variety of arcade-like control layouts. Initially, the Saturn was to utilize quadrilateral shapes for its graphics, but when Silicon Graphics told Sega that it would be easier to use triangular shapes, Sega relented and games now feature triangular shapes. The Saturn is capable of rendering both 2-D and 3-D graphics with ease due to its unique Dual Transfer Engine, hardwired into the system's graphics chips. Originally the Saturn was conceived as a 2-D device, but once Silicon Graphics came on board, developers in Japan worked with SGI to create a way for the Saturn to easily display both 2-D and 3-D graphics and switch back and forth between them on the fly, enabling the creation of games that utilize both at the same time, or enabling developers to choose between a more retro graphical style, as seen in popular Japanese anime games, or to emulate the cutting-edge 3-D graphics in the latest PC and arcade games.*

*All of these graphical tricks and tools make the Sega Saturn the most advanced gaming device on the market, and its strategy seems somewhat similar to that of the 3DO, which debuted in 1993 to critical acclaim but also a steep price tag of over \$700. The Saturn is significantly more capable than that device, and at 300 dollars less, it appears to be a much bigger bargain, but with Sega having to compete with Nintendo's popular Super Nintendo and its CD peripheral, it will be an uphill battle for the company to convince gamers to make the leap forward. Perhaps once more "killer apps", particularly a new Sonic the Hedgehog game, are released, Sega fans will hop on board with the Saturn and ride the wave to a new generation of video game consoles.*

-from the September 3, 1995 episode of *Computer Chronicles*

-

*"For all the bluster about the high launch price, the truth is that the Saturn is an amazing game console. The graphics blow away anything I've ever seen and there's a launch game for just about everyone, there's RPGs, there's platformers, there's shooter games, racing games, sports games, fighting games, it's the best launch line-up I've ever seen even if it lacks a true 'killer app' in the traditional sense. The truth is that the Sega Saturn is only going to get better as time goes on and I imagine if the high price hurts sales, there's going to be a price cut at some point (the Genesis got a HUGE one early on if you all remember). Whether or not you wait to buy it, you'll want to get a Sega Saturn if you're a Sega fan. This*

*is probably the best we've ever felt about a console launch."*

-Ed Semrad, from an editorial in the October 1995 issue of *Electronic Gaming Monthly*

### **Ace Combat**

Ed: 7

Danyon: 8

Al: 7.5

Sushi-X: 5 (quote: "The graphics might be good, but this is pretty much just another boring air combat game. I wasn't a huge fan of this in the arcades and it's not any better on the Saturn.")

### **Astal**

Ed: 6

Danyon: 7 (quote: "This game looks really pretty and plays a bit like *Jewels Of The Realm*, but the combat's pretty simplistic compared to that game and the levels get pretty boring after a while. I wish there were more variety in levels and enemies.")

Al: 8.5

Sushi-X: 6

### **Bases Loaded '96: Double Header**

Ed: 3 (quote: "They promised us an MLB game! What happened? Instead we get another entry in the Bases Loaded series and it's definitely the worst of the bunch. It looks like an SNES-CD game and a crappy one at that.")

Danyon: 4.5

Al: 4

Sushi-X: 5

### **Bug!**

Ed: 7.5

Danyon: 5

Al: 7 (quote: "This is a decently fun platformer, though it's not the killer-app mascot title we were hoping for. Instead it's just a solid action game with some nice graphics and decent music.")

Sushi-X: 7

### **Clockwork Knight**

Ed: 8.5

Danyon: 8.5 (quote: "This fun and creative platformer features beautiful graphics and wonderfully animated boss fights. It might be the best platformer we played at launch.")

Al: 8

Sushi-X: 7

### **Corpse Killer**

Ed: 3

Danyon: 1.5

Al: 1 (quote: "No. Just no.")

Sushi-X: 3

### **Daytona USA**

Ed: 7

Danyon: 8

Al: 7

Sushi-X: 6.5 (quote: "It's a fun and pretty game but it's way too short. We wish Sega had taken advantage of the console medium to add a few more cars and levels.")

### **Golden Axe: The Duel**

Ed: 7

Danyon: 7

Al: 7.5

Sushi-X: 7.5 (quote: "It's not a bad fighting game by any means but is it wrong to ask for a traditional beat-em-up side-scroller? I do love what this game did with the classic Golden Axe characters and the animation trumps anything on the competition's systems.")

### **Madden '96**

Ed: 5.5

Danyon: 8

Al: 7 (quote: "It seems like EA didn't spend that much time bumping up the graphics for the Saturn, it's a good looking game but it could look a lot better. Maybe next year?")

Sushi-X: 5.5

### **MagiQuest**

Ed: 7

Danyon: 7 (quote: "Maybe the prettiest of the Saturn launch games, with a lot of fun combat, we just wish the storyline was anywhere near as good as Secret of Mana. The dungeons got really repetitive after a while and there's only so much hack and slash magic action I can take.")

Al: 8

Sushi-X: 6

### **NBA Jam: Tournament Edition**

Ed: 9 (quote: "Looks even better than it does in the arcade and they added tons of new announcer quotes too. The best arcade NBA game available.")

Danyon: 9

Al: 7.5

Sushi-X: 8.5

### **NHL '96**

Ed: 9.5

Danyon: 9.5 (quote: "This might just be the best hockey game ever made, with superb graphics and tons of customization options. For NHL junkies, this game is the Saturn's killer app.")

Al: 9

Sushi-X: 9

### **Panzer Dragoon**

Ed: 9

Danyon: 9

Al: 9 (quote: "Utterly gorgeous, the best looking video game ever released on a home console. Star Fox, move over, there's a new king of rail shooters and it's Panzer Dragoon.")

Sushi-X: 9

### **Primal Rage**

Ed: 7

Danyon: 7.5

Al: 6

Sushi-X: 5 (quote: "This really could've used more of an upgrade, it barely looks better than it did on the Mega Charger.")

### **Solar Eclipse**

Ed: 6.5

Danyon: 7.5

Al: 7

Sushi-X: 7.5 (quote: "I had a lot of fun with this game, the FMV sequences are a bit hokey but don't take away from the great rail shooter action.")

### **Ultima: The Worldly Lord**

Ed: 8.5

Danyon: 9.5 (quote: "Could this game top Final Fantasy VI as the RPG of the year? It's damn close. The graphical compromises made were worth it when you consider just how huge this world really is, and the soundtrack is absolutely astonishing.")

Al: 9.5

Sushi-X: 8

### **Virtua Cop**

Ed: 9 (quote: "I had way too much fun with this pitch-perfect port. It's even fun to play with a controller but you'll have a blast with the light gun.")

Danyon: 9

Al: 9

Sushi-X: 8

### **Virtua Fighter**

Ed: 8

Danyon: 8.5

Al: 9.5

Sushi-X: 9.5 (quote: "Still the reigning king of 3-D fighters, this port is the smoothest and best looking yet.")

### **Virtua Racing**

Ed: 7.5 (quote: "It's a bit primitive in terms of options compared to other racing games out there but only Daytona USA comes close in terms of graphical clarity.")

Danyon: 9

Al: 9

Sushi-X: 8

## **Worldwide Soccer**

Ed: 8

Danyon: 7

Al: 8.5 (quote: "I'm not a huge soccer fan but Worldwide Soccer is an awesome way to get me excited about the sport, I had trouble putting it down!")

Sushi-X: 8.5

-excerpted from reviews of the Sega Saturn's launch games in the October and November 1995 issues of *Electronic Gaming Monthly*

-

"*Saturday has come and gone, but if you're still on the fence about buying a Sega Saturn, it's time to come down on one side or the other. We played the hell out of the Saturn over the last few weeks and now it's time for the verdict. It's an all-Sega Saturn episode of GameTV and it's starting right now!*"

-Ted Crosley, from the introduction to the September 5, 1995 episode of *GameTV*

(...)

Brittany Saldita: When it comes right down to it, *MagiQuest* is no *Secret of Mana*, but I still thought it was a really good game.

Kazzi DeCarlo: Yeah, I had a fun time with it. I wish you could use the big spells more often but I guess that would've wrecked the difficulty of the game.

Brittany: It's not that hard of a game. It really is a game designed for younger players. That's not a bad thing but when you're pushing it as one of your big launch titles, you need to make it a more well-rounded game and I thought *MagiQuest* kind of failed at that.

Kaz: It's a little girls' game, you can say it!

Brittany: It's not a little girls' game and that's not a bad thing!

Kaz: Tom Kalinske made it for his daughters to play and I have some advice: just let your kids play *Secret of Mana*.

Brittany: But wouldn't that be like the president of Coke chugging a Pepsi, or Ronald McDonald eating a Whopper?

Kaz: Now I'm hungry.

Brittany: I give *MagiQuest* a 3.5. The graphics are gorgeous and the combat is really fun, but not fun enough to not be repetitive after slogging through the same damn dungeon

three or four times.

Kaz: And I give it a 3.5 for having awesome spells and cool bosses, but, yeah, what Brittany said, the dungeons and quests are repetitive and it's a little girls' game.

(...)

Alex Stansfield: *Ultima: The Worldly Lord* was awesome, I thought it was the best Ultima game ever, even better than *Ultima VII* which was an RPG classic. I loved exploring the world, I loved recruiting people to come to your town, I loved being able to build my town into this huge city, or seeing what else I could build it into.

Ted Crosley: Yeah Alex, I'm with you on the game being awesome. I've never been keen on *Ultima* games, I thought a lot of them were boring but this game seems custom made for the console experience. It plays a LOT differently from *Ultima Underworld* on the Sega-CD and I really appreciated that.

Alex: The music, I want to talk about the music because-

Ted: The music was amazing. And the guy who composed it, I heard he was only 19 when he did it!

Alex: Yeah, Jeremy Soule has a promising career ahead of him. He's going to be doing movies. He's as good as John Williams.

Ted: I wouldn't go that far but he's amazing, I love how the music switches between areas with no need to load it or anything, it switches with characters, it switches with the mood, it's so dynamic and a real testament to what the Sega Saturn can do.

Alex: I give *Ultima: The Worldly Lord* a perfect 5. It's the best RPG I've played since *Secret of Mana*, it's just that damn good.

Ted: I give it a 4.5. I almost gave it a five but it can be a bit slowly paced and some of the dungeons were repetitive. That said, it's a really fun game in a huge world and you all should be playing it if you have a Sega Saturn.

(...)

John Walden: *Daytona USA* is a bit of a short game but it was really really fun.

Ted: Yeah, it's as good as I remember it being in the arcade.

John: It was a tough choice for me between this and Virtua Racing, I gotta say I prefer Daytona but it's a tough call.

Ted: Honestly I liked Virtua Racing a lot more. Daytona is a decent game but I thought Virtua Racing was a more solid racing game, Daytona needed some more tracks, maybe some better music-

John: You don't like Daaaaaaaaaaaaayyyyytooooooooooooooooonnnnaaaaaaa?

Ted: I liked that one but the rest of the soundtrack was kind of blah for me. I give Daytona

USA a 3.5 for being true to the arcade and a lot of fun but way too short to be a truly great game.

John: I give it a 4.0, it's a blast to play especially with friends.

(...)

Brittany: Being a hockey fan, NHL '96 is the real deal. I always liked hockey but there haven't been many games to capture the experience of playing an NHL game in video game form, but this, this one is fantastic.

John: Yeah, a LOT of good sports games on the Saturn but this one was the best I thought.

Brittany: Well, the graphics are great and the commentary is all there, probably the best commentary in any video game. It looks like a TV broadcast in some ways.

John: The NHL series has always been huge for Sega and I'm glad EA decided to have this game available at launch.

Brittany: It's a definite 4.5 for me. It's everything you could ask for in an NHL game.

John: I give it a 4.5 too. Only thing better than this is going to the actual game.

(...)

Kaz: *Virtua Cop*, for my money, the best damn Saturn launch game! It's even better looking than the arcade and you gotta have a lightgun too.

Ted: That's the thing, I thought, you know, maybe this should have come with a lightgun. But honestly, I still enjoyed it. It's still a great game and another reason why Sega kicks Nintendo's ass.

Kaz: Yeah, their best lightgun game is what, that Yoshi game they have?

Ted: \*laughing\* This is no Yoshi game, this game, you shoot criminals, you have a hell of a time doing it, I had a lot of fun.

Kaz: I'm giving *Virtua Cop* a perfect 5!

Ted: I'm giving it a 4, it's a lot of fun but it's still kind of short and pretty simplistic in terms of gameplay. The Saturn port is great though, definitely worth a purchase if you loved it in the arcade.

(...)

Ted: *Panzer Dragoon*, what did you think of it?

Alex: I was really impressed but not blown away. I thought it looked amazing, the water looks awesome, but it's still somewhat lacking compared to other rail-shooter games like *Starfox*.

Ted: Oh no, no! No, there's no way *Starfox* is better than this, it had the stupid Muppets!

Alex: The Muppets are not stupid!

Ted: *Panzer Dragoon* has a great story but it cuts out all the BS that *Starfox* had and is just a really, really good game with lots of challenge and lots of fun.

Alex: I don't see why you have to trash *Starfox* to praise this game. It IS really good but it's not the best Saturn game.

Ted: To be honest it's a close one between this and *Ultima* for me. I'm giving it a 4.5, it could stand to be a bit longer but it's an amazing looking game and really fun to play.

Alex: I give it a 4, it's definitely gorgeous and fun but it's not quite up there with the best of the best.

(...)

\*Ted, Alex, Brittany, John, and Kaz are all sitting around a table in front of a big TV, holding Saturn controllers in their hands at the end of the episode.\*

Ted: Overall, it's pretty clear to me that the Sega Saturn is the future of gaming. There's already tons of great games out for it and the technology is super advanced, it's only going to get better from here.

Alex: I was really impressed with everything the Saturn could do but I'd hold off until the Ultra Nintendo comes out before making a judgment call one way or the other.

Ted: Yeah, I'm sure our viewers would be happy waiting until the 5th of Never to get your opinion on the Sega Saturn.

Brittany: Simmer down you two. For me, it comes down to how fun the games are, and the Saturn has a lot of really fun games. *Ultima* was awesome but I was really disappointed in *MagiQuest* and I'm hoping we see some good RPGs coming in the future. I'd love to see *Phantasy Star V* blow all of us away when it comes out in a couple years or so.

John: The Saturn had some really good sports games, though let's not talk about *Bases Loaded* as I was really disappointed in it. *Madden*, *NBA Jam*, and *NHL '96* were all really good, so if you're a sports gamer you'll definitely want to pick up the Saturn.

Kaz: Can we PLEASE talk about *Bug*? I had a great time playing *Bug*, who needs *Sonic* when you've got *Bug* to bug out with?

Ted: That's one thing I wanted to talk about.

Kaz: *Bug*?

Ted: *Sonic*. We NEED a *Sonic* game for this thing Sega, hurry up and make one!

Alex: Well I know that I'm plenty happy with *Super Mario World 3*, now available on the Super Nintendo CD to play right now.

Ted: \*rolls his eyes\*

Brittany: And that's the thing that gamers are going to have to look at, is the Saturn a better bargain than the Super Nintendo CD?

Ted: Yes.

Alex: Ermmmm...

Ted: Shush!

Kaz: Remember when Sega did that commercial about the kid who had to pay an arm and a leg for his Super Nintendo CD?

Alex: \*laughing\* Oh, the irony!

Ted: But this is different, the Saturn IS worth the money. I mean, so is the SNES-CD but the Saturn is NOT overpriced. Look at how much the 3DO was!

Alex: Okay, I will concede that the Saturn, for what it can do, is probably a bargain and if you get the 500 dollar combo set it's an even bigger bargain.

Ted: Thank you!

John: Can I just say, I think Ultima is probably a contender for Game of the Year. If you want a "killer app" for the Sega Saturn, there's a really good place to start.

Brittany: Agreed.

Alex: Ultima was amazing.

Ted: That's all the time we've got for today, I think it's safe to say that everyone here at *GameTV* liked the Sega Saturn, but with that 400 dollar price tag it's up to you, the gamer, to decide if it's worth buying. I say it is, but it's entirely up to you. Next week, we're gonna be talking *Mortal Kombat 3*, launching for Super Nintendo CD and Sega Genesis next week, it's gonna be a bloodbath! See you next time and as always, never stop playing.

-excerpted from the September 5, 1995 episode of *GameTV*

-

*You're gonna be seeing a lot of reviews of the Sega Saturn launch games, but which ones should you buy and which ones should you pass up? Here at Next Generation Magazine, we're gonna cut through all the BS and count 'em all down, Casey Kasem style, so you know which ones live up to the hype and which ones aren't worth the plastic they're printed on.*

#20: Bases Loaded '96: Double Header

*This miserable baseball stinker is plagued with graphical glitches and some really lousy gameplay. Our advice, wait until Frank Thomas' Big Hurt Baseball hits the Saturn later this year.*

#19: Corpse Killer

*This FMV-based game was fun when it first showed up on the Sega CD, but it looks positively dated on the Saturn and the horror and special effects are as lame as they come.*

**#18: Ace Combat**

*We weren't fans of the original arcade game and though the graphics are quite nice, the gameplay is pretty boring compared to other aerial combat games.*

**#17: Solar Eclipse**

*This game's a poor man's Starfox at best and the graphics really don't show off everything the Saturn can do. Combine that with some truly hokey FMV scenes and you've got a pretty mediocre game.*

**#16: Astal**

*We loved the colorful, almost anime-style graphics, but the gameplay itself is pretty derivative of the genre.*

**#15: Worldwide Soccer**

*Not a bad soccer game, but we're still gonna wait for FIFA.*

**#14: Primal Rage**

*The graphics could've been a lot better but pounding the crap out of other prehistoric creatures never gets old.*

**#13: Bug!**

*We really liked the tight platforming action of this game and though it was a bit unoriginal, it still looks and plays quite well. For those Saturn fans sad about missing out on Super Mario World 3, this is a decent substitute.*

**#12: NBA Jam: Tournament Edition**

*Not much got upgraded here from last gen but it's still the best version of NBA Jam you're going to find on a home console.*

**#11: Madden '96**

*This game looks really nice and plays better than any Madden so far. One gripe: where's Create-A-Play mode?*

**#10: Virtua Racing**

*Honestly, the Mega Charger version is almost as good. The draw distance improvement is a big plus but it's largely the same as what we got last gen.*

**#9: MagiQuest**

*You'll never play a faster-paced action RPG than this really fun game starring three young witches on a magical journey. It could've used a better story but with combat this addictive, who can complain?*

**#8: Clockwork Knight**

*This game does things that a lot of platformers don't do. We loved the fantastical style and fun characters and we couldn't help but play through it more than once.*

**#7: Virtua Fighter**

*The best looking Virtua Fighter yet. 'Nuff said.*

#6: Virtua Cop

*It's easy to see why this excellent shooter game is a hit in the arcade. We were addicted pretty quickly, trying to best each other's high scores, and the graphics transitioned perfectly in this very well made port.*

#5: Daytona USA

*The best arcade racer...maybe ever finally gets a console worthy of displaying it in all of its awesomeness. Out of all the Saturn games, this one was the most fun to play in four-player mode, the racing is really tight and it runs perfectly on the Saturn's lightning-fast processor.*

#4: Golden Axe: The Duel

*Does a classic side-scrolling franchise really translate well to the fighting game genre? We say...absolutely yes! It features some of the best 2-D graphics we've ever seen and blistering combos that rival even that of Nintendo's Killer Instinct.*

#3: Ultima: The Worldly Lord

*We imagine that a world this huge could only have been possible on the Sega Saturn. You'll get lost, but in the most wonderful of ways, as you explore this enormous world searching out quests and finding new residents for your growing town.*

#2: NHL '96

*EA outdoes themselves with this superb Saturn hockey game, providing the closest thing we've yet seen to making a video sports game look like it does on TV.*

#1: Panzer Dragoon

*The perfect showcase for the Saturn's amazing graphics, this stunningly beautiful and fun rail-shooter shows us all what "next generation" is all about.*

-excerpted from the November 1995 issue of *Next Generation* magazine

-

*"Looking back, do I wish there was more we could've done with the Sega Saturn launch in North America? Rush a Sonic game to market? Get that price down? Sure. But even if the sales weren't there, the gaming press loved us. And as I kept telling the staff as that year went on, it's a marathon, not a sprint."*

-from a July 2008 interview with Tom Kalinske for *GamePro* magazine

*"I appreciated the gesture, obviously. It's one of the greatest gifts if not the greatest gift my dad's ever gotten for me. I played MagiQuest a LOT after my dad gave me my copy, I loved it and I loved being a part of it and everything about the game was a lot of fun. But...I still prefer Secret of Mana. I didn't have the heart to tell him for a long time but I think a few years later I finally told him and he understood. It's the thought that counts though, right?"*

-Ashley Kalinske in an article in the USC student newspaper, November 13, 2003

*"Sega pretty much got me my start in the game industry and I'm always going to be grateful to them. Being such a huge part of the Sega Saturn's launch and everything surrounding it was so gratifying, and it gave me a lot of mainstream exposure. I imagine it's a big reason why I got this job!"*

-Jeremy Soule, speaking about his work in video games in an interview with *Entertainment Weekly* about his work scoring the upcoming *Lord of the Rings* film trilogy, August 25, 2000

*"If the Sega Saturn had had a true 'killer app' to go along with that 400 dollar price tag, it might have been an immediate success the same way the economically-priced Mega Charger had been. Ultimately, the Saturn had plenty of 'good games' and a few 'very good' games, but the closest thing it had to truly 'great' games were Panzer Dragoon and Ultima: The Worldly Lord, both somewhat niche titles that people weren't exactly stampeding into stores in order to buy. Nevertheless, the Saturn had largely stuck the landing on its launch, releasing the console at the perfect time with an already impressive library of games. It would be up to Sega of America and Sega of Japan to work together and convince skeptical Genesis owners that they needed a Sega Saturn in their lives. The one thing that Sega had on its side was time, but even that would eventually run out."*

-from an article on IGN.com, "The Sega Saturn's First 18 Months"

## **September 18, 1995**

Tom Kalinske had reviewed the sales figures for the Saturn's launch, and while they weren't disastrous, they weren't all that great either. The Saturn had sold 55,000 units on launch day in North America, with 25,000 of those being the Virtua Arcade Set. While far far far short of Kalinske's wildest dreams pie-in-the-sky 2 million figure, it was still far from being a complete failure. Saturn had actually had a better launch day than the SNES-CD did upon its release, though Sega had spent far more on advertising and events related to the launch. He knew a price cut had to come at some point, it was only a matter of when Sega of Japan saw fit to do it.

Things were looking up. The Genesis had a big holiday season on the way with games like *Vectorman* and *Phantasy Star IV* leading the charge, and the Saturn's first holiday season looked to be even better, featuring games like *Ridge Racer*, *Myst*, and *Rayman*. And 1996, when the Saturn's first true killer apps were set to be released, looked to be the year that might just turn the tide.

Kalinske's phone rang.

*"I imagine that's Al or Diane wanting to talk about one of the upcoming Saturn releases,"* said Kalinske, though he hoped it wasn't someone from Sega of Japan offering 'suggestions' to boost sales. He picked up the phone. "Hello?"

"Dad!" came the voice on the other end of the line. It was Tom Kalinske's daughter Ashley and she had been playing *MagiQuest*. "I just beat the game!"

"Huh? Oh...you mean *MagiQuest*?"

"Uh huh, just beat the final boss and it was a lot of fun!"

"You already beat it?" Kalinske said with some laughter. "You've only had it a couple of weeks, I'll have to talk to your mom about letting you play video games too much..."

"Well...she let me play it more because it's the game you made for me," said Ashley. "And I read what you put in the credits!"

Tom Kalinske immediately remembered the message he'd put in the 'Special Thanks' part of *MagiQuest*'s credits, crediting his three daughters for being the inspiration for the game and thanking them for being the light of his life. It almost brought a tear to his eye to hear how

much Ashley appreciated the message.

"Well...the game wouldn't have even happened if it wasn't for the three of you..."

"Thank you daddy!" Ashley replied, beaming over the phone. "It was really special seeing our names in the credits...."

"You guys are the most important things in my life, you know that?"

Ashley giggled and nodded.

"I know and we miss you daddy, now that the Sega Saturn is out will you have to work so much?"

"I think my vacation's coming up in a couple weeks, I'll let you guys know as soon as I do, okay?"

"Okay...thanks again for making this game for us!"

"Sure thing sweetie, I love you, tell your mom and sisters too okay?"

"Okay, I love you too daddy!"

Tom Kalinske slowly put the phone back on the receiver and let out a sigh, a big smile on his face, a smile like he'd just moved five million Sega Saturns in a single day. Whatever happened with Sega and Nintendo, there wasn't anything in the world that could make him happier than hearing the joy in his daughter's voice. He didn't care how good *Secret of Mana* was. In his mind, the greatest game of all time would always be *MagiQuest*.

Or....maybe *Sonic the Hedgehog 4*.

-

*"Toshinden was meant to really show off the 3-D capabilities of the Super Nintendo CD and it came out at the perfect time considering that the Saturn came out that very same month. It looks very dated now but back when it was released I was very proud of it, we got quite a lot out of that wonderful little machine!"*

-Ken Kutaragi

*"Tales of the Seven Seas really kind of began its life as a side project we worked on while trying to figure out how to get the SNES-CD to do the kind of 3-D that we wanted it to do. We'd spend hours tossing out ideas for it and it really took on a life of its own. The moment I knew it was gonna be big was when me and one of the other writers got into our first serious screaming match over a plot point. If it meant that much to us, it would mean that much to our fans too."*

-Mark Cerny, co-creator of *Tales Of The Seven Seas* and current creative director at the Nintendo Treehouse, in a December 2012 interview with [TheNintendoProject.com](http://TheNintendoProject.com)

*"September 1995 was, for my money, the best month for fighting games in history. You had Virtua Fighter and Golden Axe on the Saturn launch, you had Killer Instinct, Battle Arena*

*Toshinden, and Mortal Kombat 3 on the Super Nintendo CD, you had several excellent arcade games coming out... what shocked me was how well all of them sold despite the competition. There's nothing deeper than the wallet of a fighting game junkie but that's a hell of a lot of quarters."*

-Ken Williams, AKA "Sushi-X", posting on Rootalk

*"I am NOT going back to that gilded cage! I may miss my clothes and my money and my nice, soft bed, but I do NOT miss everyone telling me what I cannot be!"*

-Victoria, *Tales Of The Seven Seas*

*"You spoony bard!"*

-Tellah, *Final Fantasy IV*, speaking one of the popular lines that remained in the SNES-CD remake

-

*"Nintendo's Killer Instinct was an enormous shock when it hit the arcades in 1994. They didn't even have their next-gen deal with Sony finalized at the time, but the game itself was outstanding and showed what Nintendo was capable of in terms of next-gen graphical content. It really made us stand up and take notice, in terms of what kind of games we were going to be able to make with Nintendo going forward. We did end up making games for both the Ultra and the Saturn, but the release of Killer Instinct definitely pulled us a lot closer into Nintendo's orbit. If their next generation games were going to look THAT good, imagine the possibilities for our games."*

-Hideo Kojima

*"Was Killer Instinct a prototype of Ultra? Well, nope, at least not in hardware, but more software and philosophy, Killer Instinct was something more like an indirect jab to Sega when they were pushing their '3D' with their blocky Virtua Fighter, we showed something better and more dynamic and we succeeded. How the future would take shape was different, but it seems Killer Instinct made its impact in the business."*

-Ken Lobb

## **September 11, 1995**

*Killer Instinct* is released in North America for the Super Nintendo CD. The game is a significant graphical downgrade from the original arcade version but still features decent 3-D graphics and a quick framerate (with a bit of slowdown during graphically heavy scenes). The game also preserves the arcade edition's soundtrack via use of the CD medium to store songs and sound effects, making the game at the very least a reasonable facsimile of the arcade experience. The home console port is extremely well received by the gaming media, praised for being just about as good a translation from the arcade version as possible and pushing the Super Nintendo CD close to its limits in terms of technological ability. The game is one of Nintendo's most hyped of the year and sells extremely well in its initial release week, less than *Doom* and *Super Mario World 3* by a considerable amount but still one of the hottest video game launches of the year.

## **Battle Arena Toshinden:**

Ed: 7

Danyon: 8

Al: 8

Sushi-X: 8 (quote: "This fighter features fantastic graphics but the gameplay is a bit generic. Still, it's nice to see that a good 3-D fighter is possible on the SNES-CD's tech.")

### **Brandish:**

Ed: 7

Danyon: 9

Al: 7.5 (quote: "This dungeon crawler features some serious challenge and a very good soundtrack. The controls are a bit confusing but it's still worth delving into this dungeon.")

Sushi-X: 6.5

### **Final Fantasy IV:**

Ed: 9 (quote: "This is an excellent remake that adds so much clarity to the story and provides hardcore gamers with a real challenge.")

Danyon: 9

Al: 8.5

Sushi-X: 8

### **Killer Instinct:**

Ed: 8.5

Danyon: 9 (quote: "It's as fast and furious as the original arcade hit! Rare's outdone itself!")

Al: 9

Sushi-X: 9.5

### **Mortal Kombat 3:**

Ed: 7.5

Danyon: 6.5 (quote: "Is the Mortal Kombat formula wearing a bit thin? Perhaps, but I did love the character variety.")

Al: 6

Sushi-X: 8

### **NBA Give 'n Go:**

Ed: 7 (quote: "This fun game brings great arcade-style NBA action to the SNES-CD.")

Danyon: 7

Al: 6.5

Sushi-X: 6.5

### **NBA Live '96:**

Ed: 8

Danyon: 8.5

Al: 7.5 (quote: "This year's NBA Live features the best graphics yet and the customization options are highly welcome.")

Sushi-X: 7.5

### **Spider-Man: Showdown With Venom:**

Ed: 7  
Danyon: 7  
Al: 7  
Sushi-X: 7.5 (quote: "Spider-Man fans should find plenty to love about this game.")

### **Starblade Alpha:**

Ed: 7  
Danyon: 7  
Al: 6 (quote: "It sure looks pretty but it's a lot easier than other space shooters.")  
Sushi-X: 6

### **Theme Park:**

Ed: 4.5 (quote: "It seemed like fun to be able to make your own amusement park but there's a lot of clutter in the menus and the crowd AI is pretty bad.")  
Danyon: 5.5  
Al: 5.5  
Sushi-X: 4

### **Schemes And Dreams:**

Ed: 3 (quote: "This FMV title seems to take inspiration from 3DO's Plumbers Don't Wear Ties. It's a lot less raunchy and it actually has real video cutscenes, but the plotline is boring and the acting is hideous.")  
Danyon: 2.5  
Al: 5  
Sushi-X: 2.5

### **The World Wars:**

Ed: 6  
Danyon: 7.5  
Al: 7.5 (quote: "Another Koei strategy game, this is a pretty fun way to play out the two World Wars, with plenty of tactical options.")  
Sushi-X: 7

### **Tales Of The Seven Seas:**

Ed: 9.5 (quote: "I couldn't stop playing this game until I discovered all the secrets it held, some very very close to its chest.")  
Danyon: 9  
Al: 9.5  
Sushi-X: 9.5

### **Mysteria:**

Ed: 8  
Danyon: 8 (quote: "Even though the plot is somewhat generic, I still loved this anime-inspired RPG.")  
Al: 8

Sushi-X: 8

### **Naval Guns:**

Ed: 8.5

Danyon: 9

Al: 7.5

Sushi-X: 7.5 (quote: "I didn't expect to have so much fun with this game but I really did thanks to the huge variety of playable boats.")

### **Sailing The Seven Seas – How A Side Project Became A Video Game Classic**

In 1994, Jason Rubin and Andy Gavin were at a creative crossroads. Their company, Naughty Dog, was attempting to create a brand new video game that would take advantage of the 3-D graphical technology that was becoming available to the industry. They began to work on a 3-D platforming game that would utilize perspective to create a vivid three-dimensional world while keeping required processing power to a minimum. They began to jokingly nickname their project the "Sonic's Ass Game", since the camera perspective would be focused behind the character as he walked, forcing the player to look at his backside the entire game. Initially, Naughty Dog considered producing games for the upcoming Sega Saturn system, knowing it would have the most graphical power to produce the most impressive games. But Rubin and Gavin also knew that putting their games on Nintendo's Super Nintendo CD would bring in more potential sales, despite the technological limitations. While Naughty Dog began to work on its 3-D platforming game (with their work on the "Sonic's Ass Game" concept somewhat explored in the 1996 sidescrolling platformer *Dog Dash*, and then fully realized with *Crash Bandicoot* on the Ultra Nintendo Entertainment System in 1997), its developers also tossed around other potential game ideas. One idea they kept coming back to, an idea initially conceived by Andy Gavin and Mark Cerny, was the idea of a pirate adventure game. The success of *The Secret Of Monkey Island* in 1994 intrigued them, though Cerny wanted a game with much more playability, preserving the charming characters and funny storyline of *Monkey Island* while turning the concept into a full-on action game. Gavin and Cerny, along with Rubin and others at Naughty Dog, tossed around ideas for several months before a game began to take shape. By 1995, Sony had taken notice of Naughty Dog's work and *Tales Of The Seven Seas* had found a publisher. One of the greatest video games to grace the SNES-CD had been born.

-excerpted from "Naughty Dog: 25 Years Of Games", an IGN.com article published on July 29, 2014

### **Tales Of The Seven Seas – The Basics**

*Tales of The Seven Seas* is at its heart and soul an action-platformer game, though the game mixes a variety of genres, including puzzling, open-world exploration, shooting, visual novel, and RPG elements. The OTL games it most resembles are the Genesis/Saturn games *Beyond Oasis* and *Legend of Oasis*. The game is a level-based game, but after the initial two levels, the game opens up completely, allowing players to select from a variety of missions, called "chapters", at all times. There are seven playable characters in all, and the character you play as depends on the chapter. Some chapters allow you to play as any character,

some allow you to choose between certain characters, and some force you to use a specific character. On the chapter select screen, which takes the form of an overworld map that your ship can sail around to access playable chapters (marked by Xs on the map), most available chapters won't advance the story. The game tells you which ones do before you select them, it also tells you what chapters will no longer be available if you select a chapter to play, or what ones will become unavailable but available again later on. If you play the game straight through, you'll play through 24 chapters, though there are 110 playable chapters in all, there's no way to play all the chapters in a single playthrough but if you use a guide and follow it exactly, you can play through all of them in two (most players will take about four or five playthroughs to play through everything, though some chapters are hard to access). Gameplay usually takes the form of action platforming segments where you either explore a level and battle enemies, each of the seven characters has their own weapon and plays a bit differently. Though characters don't actually level up or obtain different equipment (you can get stronger within chapters by collecting power-ups or through the right dialogue choices), when you attack an enemy, damage numbers will appear and the character you're playing has a life bar. There are no "lives" in the game, when you die you return to the checkpoint which is usually close by. The game isn't very difficult, though some puzzles and bosses can be quite tricky. The game instead plays a lot like a "choose your own adventure" book (which Naughty Dog says they were inspired by) that allows you to take the path through the game that you see fit, using the characters and advancing the storylines that you want to see. It relies more on character and story-based gameplay rather than challenging action, and for this it's widely considered a game ahead of its time. The game features a large soundtrack, and a lot of fully voiced dialogue (the game would become one of the first to utilize professional voice actors on a console, Sony had confidence in the game and shelled out the money to hire them). The graphics are considered average to above average for the SNES-CD, not much 3-D is utilized but the 2-D backgrounds and detailed character designs are highly praised. Nintendo publishes an official strategy guide for the game, at 236 pages it's Nintendo's largest strategy guide until significantly into the Ultra Nintendo's lifespan several years later, and it's largely considered better than Prima's strategy guide which doesn't include maps for most of the chapters and doesn't cover them all in the detail Nintendo's guide does.

The storyline itself concerns seven young people who are introduced at the start of the game. They are...

Erick: The "main" character (if the game truly has one, Erick is the character who's ending you get if you take the straight-forward path through the game with no side missions), Erick is your typical courageous hero who wants to explore the seas for purposes of adventure and fun. However, when it comes to actual battles and danger, Erick is a bit of a coward, so he'll need encouragement and strength from his friends if he is to fulfill his dreams. Voiced by Jason Marsden, who had also recently finished starring in *A Goofy Movie*.

Dona: Dona is a beautiful rogue of Spanish heritage, she is a wannabe pirate and raider who is quite capable in battle and very headstrong, though she doesn't suffer fools easily and Erick's cowardice is a bit of a bother to her. She becomes somewhat conflicted when she realizes that her pirating and theiving have real consequences. Voiced by Maria Canals, the game becomes her first voice acting performance of many.

Victoria: A beautiful blonde debutante who runs away from home for a life of adventure on the high seas, Victoria seems to have bitten off more than she can chew but she's extremely well educated (in addition to being a prim and proper rich girl, she's also the team's closest thing to a "tech nerd"), despite having a bit of a spoiled attitude she has a

truly warm heart. Voiced by Olivia D'Abo, known largely at the time for playing Karen on *The Wonder Years*, though by 1995 she'd started branching out into voice acting.

Creel: Creel is a boisterous young man who enjoys partying, rum, and punching people, not necessarily in that order. He quickly bonds with Erick and the two become close friends, he helps Erick to find his true courage, though he also sometimes gets his friends into a lot of trouble. Voiced by Will Friedle, at the time mostly known for playing Cory's older brother on *Boy Meets World*.

Albert: Albert is an escaped slave from a Caribbean plantation, despite his rough life he has a very sensitive and gentle demeanor and greatly appreciates his new friends. He and Dona are probably the team's most experienced navigators, Albert spent lots of time studying sailing in secret while planning to make his escape, and he takes to the seas quite quickly. He and Victoria greatly distrust one another but not for reasons you might think. Voiced by Giancarlo Esposito, whose other recent work included the 1993 video game *Meteora*.

McKenna: A young girl, the youngest of the seven playable characters, McKenna is a bold sneak-thief who spends her time stowing away on ships and stealing food and treasure, though she's currently racked with guilt over an event in her recent past. She and Dona form a sisterly bond over the course of the story (though she can also form a bond with Victoria if you take the right missions). Voiced by Tara Charendoff, who was at the time largely known for doing voices in Canada as a child actress during the 1980s and was only just recently performing in American productions.

Jack: A young boy, one year older than McKenna, whose entire family died in a shipwreck, he's distraught over all of this when he gets stuck with his six companions, he's the only one who didn't choose the life of a pirate but he and McKenna bond over the course of the game and he also learns a lot from Erick and Albert as well. Voiced by Toran Caudell, who would later go on to voice the main character in 1996's *Dog Dash*.

These seven characters are brought together at the start of the game, when a massive hurricane destroys the various ships that the seven are on, all but Jack having boarded or stowed away on the ships in search of new lives of freedom on the seas. The seven wash up together on an island, (seemingly) the only survivors of the various shipwrecks. The first two chapters involve them meeting up and getting to know each other (in a sort of tutorial) before they find an enormous wrecked pirate ship on the island. They work together to fix it up and become a pirate crew, exploring the high seas. After Chapter 2, the game fully opens up and you're free to embark on whatever chapters you see fit. Though you'll eventually have to choose the mandatory story-advancing chapters (which may or may not change depending on circumstances), the side chapters you embark on change the characters' relationships. At any time, you can enter the pirate ship and visit the various rooms, talking to characters as any of the playable characters you have available (for example, you can talk to Victoria as Erick, or Albert as McKenna, any combination you desire, and certain dialogue scenes open up chapters or provide power-ups for the next chapter you play). Sometimes certain characters aren't available on the ship (Creel passes out after a mission, Albert temporarily leaves, Victoria gets kidnapped, etc.), limiting dialogue choices at certain times. At other times, there are additional NPC characters on the ship that you can talk to. The dialogue scenes on the ship almost always aren't voiced (though very important ones occasionally are), it's usually in-chapter dialogue that's voiced (again, saved for more important scenes). The path you take through the game largely depends on the relationships the various characters have forged. It's sometimes difficult to know what choices do what, though the game is designed in such a way that if you like a

certain character, the game will largely trend toward focusing on that character more (you get more side missions that involve them, they become available to play in storyline missions that they usually wouldn't be, etc.). It's extremely intuitive for its time (Naughty Dog conducted extensive playtesting to make sure) and one of the game's most highly praised systems. Ultimately, the game's storyline eventually leads up to a final confrontation with the main villain, Admiral Schark, a vicious warlord who seeks to bring all of the Moonlight Islands (the archipelago where the game takes place) under his control. Depending on the path you took through the game, Schark's main subordinate and sometimes the location of the final battle will change, along with the gameplay of the final battle itself, but all paths lead up to a battle with Admiral Schark. The game has seven endings, all of them are happy endings but the ending you get will focus on whichever of the seven characters you had more affinity for during the game. The ending that is considered "canon" is Erick's ending, though all seven endings have largely the same events, it's just focused on a different character.

## September 25, 1995

*Tales Of The Seven Seas* is released for the Super Nintendo CD, amidst a slew of excellent reviews (of that year's games, only *The Legend Of Zelda: The Ocarina of Dreams* had received better reviews up to that time) and a good amount of pre-release hype fueled by Nintendo's enthusiasm for the game. The game exceeds its own lofty sales expectations. Though its launch-day sales don't exceed *Killer Instinct's*, its launch week sales do and its launch month sales exceed *Killer Instinct's* significantly, making it one of the biggest surprise successes of 1995 in the world of gaming. Word of mouth is excellent, the game is covered in the mainstream media and it even kicks off a mini-pirate fad that triggers a spike in the sale of pirate costumes for that year's Halloween. Along with the spike in ninja costume sales (due to the Power Rangers beginning their "ninja" arc earlier that year to coincide with June's feature film), it becomes known as the Halloween of "pirates vs. ninjas". The game is largely credited with undoing the damage that *Cutthroat Island* had done to the pirate genre in mainstream entertainment, and would help to kick off a slew of pirate-themed media in the months and years ahead. For Naughty Dog, the game's success is quite encouraging, and the sequel is immediately placed on the company's "to-do" list behind their upcoming sidescroller *Dog Dash*. The company was at the time wavering on what would later be known as *Crash Bandicoot*, trying to decide whether to attempt to make the game for the SNES-CD or to target it as a launch game for the Ultra Nintendo. The success of *Tales Of The Seven Seas* made that decision for them. *Crash Bandicoot* was Ultra-bound. *Tales of The Seven Seas 2* would take its place as the company's last SNES-CD game, targeted for release in 1997.

-

"I remember being told, 'you're crazy to release this game against *Killer Instinct*, Nintendo's gonna kick your ass', but I was confident. *Mortal Kombat* had always dominated the month it had come out in. We dominated in 1993, we dominated in 1994. So what happened in 1995? *Killer Instinct* kicked our ass. Did we still make a ton of sales? Of course. Did we make as many as the first two games did? No. So in retrospect, should we have held off on the game and released it in October against *Ballistic Limit*? Maybe. Should we have rushed it and tried to put it in July against that prissy little anime game? Maybe. Or maybe *Mortal Kombat* just wasn't as big as it used to be. Hell if I know."

-Ed Boon, discussing the home console release of *Mortal Kombat 3* in a podcast for 'Finish Him!' Internet Radio, November 17, 2013

*Mortal Kombat 3* offers up torrents of blood when it debuts on the SNES-CD on September 18th. Featuring even more characters than the first two games, it's definitely the most violent of Nintendo's big trio of fighters coming out this month, but is it the best? Hardcore *Mortal Kombat* loyalists will swear by this game for sure, but graphically it's probably inferior to the other two games and the removal of longtime fan favorites like Scorpion and Kitana will probably piss off a few fans, though Midway has promised their return in future games.

Sony's *Battle Arena Toshinden* is far more intriguing. With 3-D graphics that at times even exceed those of *Killer Instinct*, it's a visual feast for the eyes, but in terms of character variety and gameplay it's a bit lacking and it does suffer from occasional slowdown. Still, for those looking for a refreshing new game, it's a change of pace from *Mortal Kombat* and definitely worth a look. The top SNES-CD fighter of the month is the long awaited *Killer Instinct*, but there are a pair of very viable alternatives for those who haven't bought into the hype.

-from the official Fox Kids premiere promo for *Sailor Moon*, which began airing throughout the month of August

-

"Obviously a lot of us wanted to play *Final Fantasy IV* again. It looked great with those new graphics and I loved the endgame twist of being able to use characters like Yang and Porom again in the final dungeon. But it would've been a crime to overlook *Mysteria*. Though it wasn't as jam-packed with anime cutscenes as the RPG classic *Chrono Trigger* that came out the next year, it was still the first SNES-CD game to really feature Lunar-like cutscenes in an RPG, and was arguably as good as either of those great Sega CD classics. Seeing as how we never got *Lunar 2* in North America, at least not until much later on, *Mysteria* was a lot more than a consolation prize and it actually sold reasonably well despite the competition! It was clear that RPG fans were buying anything they could get their hands on on the SNES-CD."

-SetzerWrath, in a July 2008 blog post on RPGGamer

*Nintendo's Epic Center is huge this month! Final Fantasy II is back, this time as its original title, Final Fantasy IV, with all new updates for the Super Nintendo CD! Also, we'll be covering the incredible new RPG Mysteria and the hardcore dungeon crawler Brandish.*

(...)

*Final Fantasy IV* might be better known to North American players as *Final Fantasy II*, the title with which it originally appeared when it made its debut on the Super Nintendo in 1991. Now that the true *Final Fantasy II* and *III* have been released in the *Final Fantasy Origins* collection, this SNES-CD remake can bear its true name while it shows off all the new bells and whistles that Squaresoft has given it for its big CD makeover, coming to the SNES-CD later this month. It's got all new graphics similar to those in *Final Fantasy VI*, showing off an incredible level of detail to show off the game's cast of colorful characters and its huge two worlds in a whole new light. Its soundtrack has been re-orchestrated for the Super Nintendo CD's high quality audio capabilities, and Ted Woolsey, the man behind the translations of *Final Fantasy V*, *Secret Of Mana*, and *Final Fantasy VI*, has overhauled the game's translation completely. Its brand new and improved script reveals details about the game's characters and story previously known only to Japanese players. Don't worry though, fan-favorite lines such as Tellah's classic "you spoony bard!" are still very much included!

(...)

### **Three Ways To Play**

The new *Final Fantasy IV* asks you to pick a difficulty when you start a New Game. You won't be able to change the difficulty once you select it, so choose wisely! Here are some brief descriptions of the three modes.

**Easytype:** This difficulty mode is the original difficulty given to North American players when they played *Final Fantasy II* on the SNES.

**Hardtype:** This is the original difficulty featured in the game's Japanese release. It gives characters new abilities, but enemies are much tougher and move much faster.

**Mastertype:** This difficulty level is for seasoned *Final Fantasy IV* veterans who want a whole new challenge. It gives enemies much more striking power, a lot more HP, and it mixes up

commonly-used strategies, meaning that the old tried-and-true tactics that worked on bosses in the original game usually won't work here, and many times will send you quickly to the Game Over screen. Only *Final Fantasy IV* masters need apply!

(...)

*Mysteria* is an epic RPG featuring nearly 30 minutes of fully animated, fully voiced cutscenes that bring the action of this beautiful traditional role-playing game to life. The game takes place in a land called Mysteria, and focuses on six young heroes who set out on a journey to defeat the witch queen Lethisis. It's one of the few RPGs that lets you control six characters in battle, and with all these characters in your party there are lots of battle strategies to use on the hordes of enemies and massive bosses that stand in your way. *Mysteria's* combat system makes use of location, before your turn you can move your party members around on a sort of tactical grid to put them in prime position to strike, but be careful not to set yourself up for a vicious counterattack! This epic 50 hour game is one of the biggest and best RPGs of the year and it's only on Super Nintendo CD! We'll walk you through the first few hours of your journey, but remember that the rest of Mysteria is best explored on your own.

-excerpted from the Epic Center section in the September 1995 issue of *Nintendo Power*

-

Ted Crosley: *Showdown With Venom* is a decent Spider-Man beat-em-up that gets a bit repetitive at times but has a really good storyline and a good fast paced combat style that definitely fits the character.

John Walden: I kind of disagree with you on the combat, I thought it was a bit too loose for my tastes, with somewhat dubious hits and glitchy moves. I don't know if I got a bad copy of the game but I had a hard time getting a handle on it.

Ted: Honestly, you probably have a point there, for those not used to this series of games, it's really rough getting the hang of the combat system even with practice. Your game's not glitched, I noticed it too but as a Spidey veteran I'm kind of used to it, *Maximum Carnage* on the SNES and the Genesis was the same way. I still had a lot of fun and it's the last time we'll be seeing Peter Parker in a game, next year's Spider-Man game is gonna be introducing Ben Reilly so that'll be a fun one.

John: I'm looking forward to seeing the new Spider-Man finally show up, I just hope the combat's been improved for it. I have to give this game a 2.5. The storyline was good but everything else just didn't click for me.

Ted: I'm giving it a 3.5 but I'll definitely acknowledge that the play control needed to be tightened up just a bit and that if you're new to Spider-Man games you might want to start with *Maximum Carnage*.

(...)

Brittany Saldita: *Tales Of The Seven Seas* was one of my favorite games of the year. I loved the well-balanced cast, I loved the mission progression system, it was just like playing a storybook.

Alex Stansfield: This game is a full-on contender for my Game of the Year. It might even be better than *Ocarina of Dreams* and *Final Fantasy VI*.

Brittany: Let's not go THAT far, I thought the action levels got just a bit repetitive at times, just a tiny bit.

Alex: The game does a really good job of mixing things up, you'll have an action stage and then maybe a puzzle and exploration stage, then there's a stage of pure platforming and then you might even have a foot race, did you get to the foot race?

Brittany: Damn, I didn't play it all!

Alex: There's a level where you're McKenna and you have to beat Baron Couley to the treasure, you have to set traps to bar his path, it's actually really hilarious because McKenna says really funny stuff when he falls into the traps.

Brittany: See, that's another thing, there's almost TOO much to do! I feel like you almost need the guide to see everything, I played about 90 missions and I know there are like 20 more but I just didn't have the time to find them all.

Alex: You played more than I did, I played like 75.

Brittany: We need to go back and talk about this game again after we've 100 percented it. I want to play it again anyway, I loved it.

Alex: I have to give it a 5. It's a fantastic all around game, some of the best characters you'll ever see.

Brittany: I LOVE that they included three girls and not just one. I'm glad they didn't pull a Smurfette and just have guy guy guy girl. They have three girls and ALL of them are fantastic. I thought the rich girl would be a total bitch but then she turns out to be this bookworm and a REALLY kind-hearted person. They explored the subject of race in this game with the character of Albert. This is such a deep and complex game and I'm worried kids who play might not understand all of the little character nuances.

Alex: This is a game for kids and for adults, it's a game for everyone, boys and girls and I think it's gonna be huge.

Brittany: I give it a 4.5. I wanted to give it a 5 and make it our second Hall of Fame game-

Alex: Why didn't you?

Brittany: I just wish the levels had been a bit more different, there were times when I felt they could have been more creative and they weren't. I know it's hard doing 110 of them, but maybe they could have made less chapters, I dunno. It was so close to being a 5 for me though.

Alex: *Tales of the Seven Seas*, definitely highly recommended by GameTV.

Brittany: Absolutely, yes, a wonderful game.

(...)

Ted: *Naval Guns*! It is not a game about guns fired from your belly button.

Alex: No it is not. It's actually a pretty good game, going in I didn't think I'd like it but the more I played, wow.

Ted: Yeah, they give you so many different boats to use on the missions. And you're not just shooting down planes either, they give you a swift boat to go on runs into the jungle, you've got a speed boat, you can do submarine missions, those were my favorite part.

Alex: Graphics were good too. The music was really repetitive, I gotta say that's a knock on it.

Ted: Well, it's a realistic naval combat game, music's not an important thing. I turned the music off. The sound effects were fantastic, get a surround sound system and you can hear those booming battleship guns, they shake the room!

Alex: That was pretty cool.

Ted: I'm giving *Naval Guns* a 4. Probably the best video game about boats ever made.

Alex: I give it a 3.5, again, it could've used better music and I would've liked to see some kind of multiplayer mode! But, you know, for the most part a really solid game.

-excerpted from the September 26, 1995 episode of *GameTV*

### **SNES-CD Power Charts: September 1995**

1. The Legend Of Zelda: Ocarina Of Dreams
2. Donkey Kong Country
3. Victory
4. Super Mario World 2
5. Final Fantasy VI
6. Primal Rage
7. Super Squadron X: Critical Dawn
8. NBA Jam: Tournament Edition
9. WWF Wrestlemania
10. Gex
11. Super Punch-Out CD
12. Super Mario World 3
13. Tecmo Super Bowl CD
14. Mega Man X2
15. Frederico
16. Squad Four
17. F-Zero CD
18. Bikerz
19. Mighty Morphin' Power Rangers: The Movie
20. Super Street Fighter II: Arcade Edition

-

## September 30, 1995

Howard Lincoln was extremely pleased with the first sales reports for *Tales Of The Seven Seas*, with sell-outs reported in stores across the country. It was clear that Sony was becoming not only a valuable hardware partner with Nintendo, but an outstanding software publisher as well, and he was extremely glad that the company was going to be on Nintendo's side for the foreseeable future. Not only was *Tales Of The Seven Seas* a huge hit, but Sony's upcoming game *Ballistic Limit* was set to be one of Nintendo's two huge holiday titles for the Super Nintendo CD, along with the sequel to 1994's megahit *Donkey Kong Country*. Rare had just completed work on *Diddy's Kong Quest*, and the game looked amazing, with even better graphics than the first, along with more levels, nine worlds, and many, many more secrets to find. And in a perfect coincidence, the game's pirate motif was set to capitalize perfectly on the success of *Tales Of The Seven Seas*. Along with the disappointing Saturn launch and the success of *Killer Instinct*, September of 1995 had been one of Nintendo's best months ever, and October looked to be just as good if not better.

Also in October was the upcoming swan song for the Super Nintendo cartridge system. Nintendo's last big first party game, *Yoshi's Island*, was nearing release. With beautiful storybook-like graphics, the game looked gorgeous thanks to the Super FX2 chip, and it squeezed every drop of graphical power out of the Super Nintendo cartridge format. Perhaps in another world and another time, even more power could have been squeezed out of the cartridge, but technology marches on and the SNES-CD came on faster and better than anyone, even Howard Lincoln or his bosses, could have anticipated. It had become such a success that Nintendo was finally getting ready to cut the SNES-CD loose from its base with a stand-alone version of the peripheral, one that fans had been clamoring for in droves for more than a year. The Super Nintendo CD stand-alone would release in November for \$129.99, and would be accompanied by price cuts for the Playstation Combo Set, along with price cuts for the SNES-CD attachment and the cartridge-based SNES itself. The price cuts would be small but would hopefully be another blow to the Saturn, which was still languishing with low sales at its \$400 price point. With luck, this would be Nintendo's biggest holiday season ever, and maybe, just maybe, Nintendo would win the console wars at last. Naughty Dog's band of swashbucklers had fired the first shot. Now would come the fusillade.

-

## Sailor Moon (Fox Kids, 1995)

The Beautiful Transformation (September 4, 1995) (Note: ITTL, the Masked Rider series is never brought over, so there's no crossover with Power Rangers and the "Ninja Quest" arc of Power Rangers begins airing a week earlier. Sailor Moon and season 3 of MMPR debut on the same day along with new episodes of X-Men and Batman and Robin.)

The House Of Fortune (September 5, 1995)

Radio Love (September 6, 1995)

Usagi's Fitness Club (September 7, 1995)

Scent Of A Monster (September 8, 1995)

Usagi Plays Cupid (September 11, 1995)

Becoming A Star Is Hard Work (September 12, 1995)

Girl Genius, Or Monster? (September 13, 1995)

Beware The Confusing Clock (September 14, 1995)  
The Guardian Of Fire (September 15, 1995)  
Nightmare In Dreamland (September 18, 1995)  
Danger Cruise (September 19, 1995)  
Guardians Unite (September 20, 1995)  
A New Enemy Appears (September 21, 1995)  
Rei's First Date (September 22, 1995)  
Usagi Becomes A Bride (September 25, 1995)  
The Flash Of The Monster Camera (September 26, 1995)  
Shingo's First Love (September 27, 1995)  
A Love Letter From Tuxedo Mask? (September 28, 1995)  
Summer Beach Love Story (September 29, 1995)  
Sailor V: The Movie (October 2, 1995)  
Romance Under The Moon (October 3, 1995)  
Wish Upon A Star (October 4, 1995)  
Catch A Falling Star (October 5, 1995)  
The Guardian Of Power (October 6, 1995)  
Usagi's Friendship (October 9, 1995)  
The Boy Who Saw The Future (October 10, 1995)  
The Painting Of Love (October 11, 1995)  
Of Love And Chaos (October 12, 1995)  
Grandpa In Danger (October 13, 1995) (Note: Aired as part of a special "Friday the 13th" event on Fox Kids along with both parts of the MMPR episodes "A Ranger Catastrophe", which introduced Kat to the show.)  
Luna's Worst Day Ever! (October 16, 1995)  
Umino The Hero (October 17, 1995)  
Enter Sailor Venus (October 18, 1995)  
The Princess Appears (October 19, 1995)  
The Princess Remembers (October 20, 1995)  
Tuxedo Mask: Evil? (October 23, 1995)  
Usagi's Bizarre Training (October 24, 1995)  
Snow Blindness (October 25, 1995)  
Makoto, The Ice Princess (October 26, 1995)  
The Legendary Lake Yokai (October 27, 1995)  
Ami's Courage (October 30, 1995)  
Minako's Old Friend (October 31, 1995)  
Undercover Usagi (November 1, 1995)  
A Message From The Past (November 2, 1995)  
The Eternal Wish (Part 1) (November 3, 1995)  
The Eternal Wish (Part 2) (November 3, 1995) (Note: These two episodes aired as a one-hour special on Fox Kids. The deaths of the Sailor Guardians are left intact with only the most violent parts cut out, their deaths are acknowledged in the show itself and these episodes are later known as a watershed moment in children's television.)

### **Sailor Moon R (Fox Kids, 1996-97)**

The Return Of Sailor Moon (Part 1) (June 14, 1996)  
The Return Of Sailor Moon (Part 2) (June 14, 1996) (Note: These two episodes aired on Fox in primetime as a one-hour special.)  
The White Rose (July 15, 1996)  
Usagi's Crisis (July 16, 1996)  
A New Transformation (July 17, 1996)

Venus To The Rescue (July 18, 1996)  
Mamoru And Usagi: Babysitters (July 19, 1996)  
The Song Of Queen Rei (July 22, 1996)  
Jupiter On Fire (July 23, 1996)  
Snow White Steals A Kiss (July 24, 1996)  
Usagi In Detention (July 25, 1996)  
Secret Of The Makai Tree (Part 1) (July 26, 1996)  
Secret Of The Makai Tree (Part 2) (July 26, 1996) (Note: These two episodes aired as a one-hour special.)  
Mysterious Girl From The Sky (September 16, 1996)  
The Break Up (September 17, 1996)  
Goodbye, Ami? (September 18, 1996)  
Rei Unbound (September 19, 1996)  
The Search For The Silver Crystal (September 20, 1996)  
Makoto vs. Minako (September 23, 1996)  
Usagi, The Mom (September 24, 1996)  
Vacation (September 25, 1996)  
Protect Chibi-Usa! (September 26, 1996)  
Sleeping Beauty (September 27, 1996)  
Clash In Flame (September 30, 1996)  
The Bonds Of Friendship (October 1, 1996)  
The Four Sisters (October 2, 1996)  
Abduction Of The Sailor Guardians (October 3, 1996)  
Save The Sailor Guardians! (October 4, 1996) (Note: The scenes depicting the Sailor Guardians on crosses are cut as IOTL, though they ARE dubbed and they are shown when this episode is aired in Canada in mid-1997.)  
Sailor Pluto Appears (January 6, 1997)  
Esmeralde And The Power Of Darkness (January 7, 1997)  
Usagi And Mamoru: Together Again? (January 8, 1997)  
Minako's Nurse Mayhem (January 9, 1997)  
Artemis' Adventure (January 10, 1997)  
Ami's Terrifying Illusion (January 13, 1997)  
The Dark Gate (January 14, 1997)  
Battle In Space And Time (January 15, 1997)  
Dimande's Dark Ambition (January 16, 1997)  
The Evil Wiseman (January 17, 1997)  
The Queen Of Darkness (January 20, 1997)  
The Message (January 21, 1997)  
Usagi's Determination (January 22, 1997)  
The Final Battle (January 23, 1997)  
Visions Of The Future (January 24, 1997)

-

*"To save humanity, Ash Beckland will push beyond every limit imaginable..."*  
-the tagline featured in magazine advertisements for *Ballistic Limit*

*"So toward the end of 1995, Sony's interactive division was kicking around ideas for advertisements that we could use for our own games or perhaps to help Nintendo along. Someone, I forget who, came up with this sort of metallic noise, which would be followed by a kind of computerized voice. It was very striking when we came up with it and we had the*

*voice saying 'Nin-ten-do', three syllables in a kind of Japanese accented voice and we proposed it to Nintendo that they would start playing it in ads for the SNES-CD's exclusive games. And Shigeru Miyamoto, he loved it and then even Yamauchi-san liked the idea and so that's how the whole 'Nin-ten-do' ads came to be."*

-Ken Kutaragi

*"The end of development on Yoshi's Island was kind of bittersweet because it was our last Super Famicom cartridge game, or at least the last one I personally worked on. The Super Famicom was a wonderful device and of course the CD-ROM changed everything, technology improves but it was improving so quickly!"*

-Shigeru Miyamoto in an August 1997 Famitsu interview

*"If you ask me which of the two consoles I would prefer to develop games for it would absolutely be the Super Nintendo CD. And I know that the Saturn is the more technologically advanced of the two, but Nintendo's philosophy is so developer-oriented that I do prefer working with them when I'm porting a PC game. It was very easy to port Civilization over, it was nearly identical to the original game, no problems really there at all. I'm pondering a Pirates! port but it's such an old game I think I might wait and do an updated version perhaps for the new game console they have coming out."*

-Sid Meier, in a January 1996 interview with PC Gamer

*"I've been separated from my squad for nearly eighteen hours now. No sign of them or of any human life anywhere. There surely must be survivors. I gotta keep looking. If my suspicions about the attack are true, I'm not gonna survive alone for long."*

-Ash Beckland, *Ballistic Limit*, level two

-

## **Cannon Fodder 2:**

Ed: 8

Danyon: 8.5 (quote: "Though not much has changed, war is still a lot of fun in this excellent strategy sequel. The tougher levels will give Cannon Fodder vets a serious challenge.")

Al: 7.5

Sushi-X: 8.5

## **FIFA Soccer 96:**

Ed: 7.5

Danyon: 7.5

Al: 8 (quote: "At its heart and soul it's still the same old FIFA but that still makes it one of the best soccer games around.")

Sushi-X: 7

## **Kawasaki Superbike Challenge:**

Ed: 5

Danyon: 5

Al: 7

Sushi-X: 4.5 (quote: "The graphics are decent enough but there isn't enough stage variety and the bikes don't handle very well.")

**King's Field:**

Ed: 6 (quote: "It's definitely one of the toughest RPGs you'll ever play. I wish the graphics were as good as they are in some of the other SNES-CD games but those looking for a challenge won't mind as much.")

Danyon: 6

Al: 7

Sushi-X: 6.5

**NHL '96:**

Ed: 8

Danyon: 8

Al: 9

Sushi-X: 9 (quote: "The SNES-CD version's graphics don't quite match up with the excellent visuals on the Saturn but the gameplay is top notch and most of the quality commentary remains intact.")

**Sid Meier's Civilization:**

Ed: 8.5 (quote: "One of the best PC games ever comes to the SNES-CD and it's a spot-on port.")

Danyon: 8.5

Al: 8

Sushi-X: 8

**Super Star Wars Trilogy:**

Ed: 9 (quote: "While the only added bonus is the addition of a few clips from the original movie trilogy, getting all three of these excellent SNES games in one package is bonus enough.")

Danyon: 9.5

Al: 9

Sushi-X: 9.5

**X-COM: UFO Defense:**

Ed: 9

Danyon: 9

Al: 8.5

Sushi-X: 8.5 (quote: "Between this and Civilization, this was definitely a great month for PC ports to the SNES-CD! The gameplay is pretty much completely intact, this game is chock-full of content and it's definitely one of the best strategy games ever made.")

**Ballistic Limit:**

Ed: 9.5

Danyon: 9.5 (quote: "With masterful gameplay punctuated by some of the best graphics yet on the SNES-CD, this is clearly one of the best video games of the year.")

Al: 9.5

Sushi-X: 9.5

### **Eskrima Warriors: The Tournament:**

Ed: 7

Danyon: 7

Al: 6

Sushi-X: 6.5 (quote: "So while I liked the new characters, this game was a bit of a disappointment compared to the first, it seems more like a minor upgrade than a true sequel.")

### **Gun Warrior: Big Guns:**

Ed: 9

Danyon: 9.5

Al: 9 (quote: "The addition of two new heroes adds much-needed variety to the gameplay and makes this sequel one of the freshest games I've played all year.")

Sushi-X: 8.5

### **Cyber City:**

Ed: 6

Danyon: 4

Al: 4.5 (quote: "This wannabe-Snatcher game does nothing new and a lot of things wrong, it's probably one of the worst point-and-click games I've played in a while.")

Sushi-X: 4

### **The Sea Adventure:**

Ed: 2 (quote: "Make it stop! This is a horrid underwater FMV game that tries to be exciting but is just incredibly boring and the acting is seriously terrible. I'm glad these kinds of games are being phased out on the SNES-CD, it's so hard to do them right.")

Danyon: 3

Al: 3.5

Sushi-X: 1

### **Nintendo Music Maker:**

Ed: 6

Danyon: 7 (quote: "It's not bad and those who loved the music tool on Mario Paint will have a ball with this, which adds a ton of real instruments to the mix of silly sounds featured in the original. I wish there was more to do with it but it's really good at what it does.")

Al: 7

Sushi-X: 7

- excerpted from *Electronic Gaming Monthly's* reviews of October 1995's SNES-CD games in the November and December 1995 issues

-

This brilliant, beautiful platformer from Nintendo represents in a lot of ways the end of an era. When the Super Nintendo was first released back in 1991, it was expected to be the future of the video game industry. The CD-ROM drive from Sony was intended to be a peripheral, a mere supplement to what was supposed to be the premiere cartridge-based

gaming device. No one predicted that the Super Nintendo CD would take on a life of its own, that within three years of its release we'd be talking about the last first party Super Nintendo cartridge game. But barring some unexpected surprise, *Yoshi's Island* is it, and what a way to go out. The Super FX 2 chip, though paling in comparison to games like *Donkey Kong Country* or *Ballistic Limit*, paints a gorgeous picture not unlike the colorful straight-out-of-an-anime graphical stylings of *Andreakah*. Clearly, the Super Nintendo was capable of quite a lot, but it was clear from the get-go that software companies preferred the storage capacity of the CD-ROM format and the processor speed of the CD peripheral.

And so it's come to this. *Yoshi's Island*, featuring 48 levels (not to mention the six secret levels you can attain by getting perfect scores in every stage), is one of the year's best games and also the best possible way for first-party games on the Super Nintendo to go out. Yes, there will be more Super Nintendo games, games such as Acclaim's *Heliscap* are set to release early next year. But Nintendo itself is moving on, and it's likely that 1996 will see the last cartridge games ever made for home game consoles. Nintendo's even doing something they probably should have done sometime last year by releasing a stand-alone SNES-CD, which significantly lowers the cost of entry for those who haven't yet hopped aboard the next-gen train, while not forcing them to purchase what's now a dying system. Even so, there's plenty of reasons to buy a Super Nintendo cartridge system if you haven't done so. Games like *A Link to the Past*, *Super Metroid*, and now *Yoshi's Island* are still exclusive to it and the \$69.99 price tag is somewhat of a steal. While the best games are on the Super Nintendo CD, if you skip the original SNES, you're missing out.

*5 stars (out of 5)*

-excerpted from the *Yoshi's Island* review in the November 1995 issue of *Next Generation* magazine

-

I remember *King's Field* for the Super Nintendo CD. It came out about the same time that *Virtual Hydlide* did on the Saturn and the two were compared quite a bit. Make no mistake, *King's Field* was the superior game. The story was dark and fascinating, and the gameplay was unrelentingly tough. *Virtual Hydlide* had better graphics what with its faux-realistic characters and environments, but I loved that dark, dank aesthetic that *King's Field* had, a great example of From Software using the limitations of the available technology and turning it into an asset. *Virtual Hydlide's* gameplay was extremely generic, but *King's Field* had its own unique charm. It wasn't an RPG like *Final Fantasy*, it was a single-person dungeon crawl that dropped you right in the middle of a mysterious labyrinth and said "now find your way out". The game was a niche title and sold pretty poorly in North America but did great sales in Japan and we ended up getting the next two games in the series, both of them on the SNES-CD as well. It definitely inspired some developers and we ended up with a few of this game's ideas fully realized with later games on the Ultra Nintendo and on the Saturn.

-from a comment on Kotaku.com's "TAY: Favorite Game No One Else Talks About?" article on February 23, 2013

Though both games were overshadowed by *Ballistic Limit* and both sold only decently well (with *Civilization* the more successful of the two), *Sid Meier's Civilization* and *XCOM: UFO Defense* continued the tradition of excellent PC ports to the Super Nintendo CD. *UFO Defense*, a difficult but extremely engrossing strategy game about repelling an alien

invasion, might just be the best SNES-CD game that nobody played. The game was a hit on the PC and got a near-perfect port on the SNES-CD but just got swallowed up amidst all the other big games debuting that month. It did manage to sell enough games later on to turn a profit, but with earlier PC games like *Secret Of Monkey Island* becoming massive hits on the system, it was a definite disappointment that this game didn't click with gamers, who seemed to prefer shooting aliens in the face (in *Ballistic Limit*) to carefully plotting a military campaign against them. *Civilization* sold somewhat better, it didn't sell QUITE as well as 1994's port of *SimCity 2000*, but it did all right and was a very well received port, even getting a commercial that I remember seeing on Nickelodeon during that time (though it wasn't nearly as good as *Ballistic Limit*'s commercial. I'm surprised we never got *Sid Meier's Pirates!* on the SNES-CD, what with how well *Tales of The Seven Seas* did, but a lot of gaming decisions made around that time are still mysteries to me (like, "how did Sega expect the Venus to be a success when you could only play Mega Charger games on it for like an hour on six AA batteries?!").

-excerpted from "SNES-PC: A History Of PC Ports On The Super Nintendo CD", an article on IGN.com, October 22, 2009

-

### **Virtual Hydlide**

Saturn's latest RPG is a bit of a mess, but at least it's a pretty mess. *Virtual Hydlide*, set to release October 9th, is a 3-D remake of the original RPG classic *Hydlide*, and while it looks absolutely gorgeous with a realistic-looking hero and it runs at a smooth framerate, its gameplay is pretty mediocre and extremely repetitive. The game does have an innovative procedurally-generated dungeon mechanism to ensure that every playthrough takes you through a different set of dungeons, but cutting down the same enemies hour after hour gets pretty repetitive after a while and competing with your friends for high scores isn't quite as fun when it's only one of you questing at a time.

When compared with the other two RPGs out so far on the Saturn, *MagiQuest* and *Ultima: The Worldly Lord*, the game's flaws soon become apparent. Its combat is much slower and less exciting than *MagiQuest*, and its gameplay is much less engrossing than *Ultima*. When it comes to rebooting age-old RPG classics, we'd have much rather seen a remake of *Phantasy Star* than this game.

Graphics: 4.5

Sound: 3.5

Play Control: 2.5

Fun Factor: 2.0

Challenge: Intermediate

-

Kazzi DeCarlo: *Gun Warrior: Big Guns* is just the kind of nutty, wacky game that I love to play. Three big dudes taking huge ridiculous guns into an underground dungeon and blowing away tons of monsters and bad guys and racking up the points. It ramps up the ultraviolence and fun of the original *Gun Warrior* to the extreme and makes no apologies for what kind of game it is.

Ted Crosley: I liked the option to select between three characters, they were a lot more than just Mario and Luigi palette swaps, each guy brings his own guns to the table and you can kind of pick which one best suits your strategy. I felt like after a while this game got kind of repetitive but overall it was pretty good.

Kaz: Repetitive? It's fun as hell, who cares if the levels are pretty much the same, the gameplay is ridiculously addictive and fun.

Ted: Also some of the levels were kinda long. I mean, don't get me wrong, I had lots of fun with it but maybe it could've been shorter.

Kaz: Awww man, shorter?

Ted: Level 6 went on for what had to be half an hour and if you messed up, back to the start you went. I don't mind a challenge but there's got to be enough of an incentive to plow through.

Kaz: What more incentive do you need than three dudes with lots of big guns? I give *Gun Warrior: Big Guns* a 5 out of 5, easily.

Ted: And I give it a 4. It's definitely fun and an improvement on the first, but it could have used some variety in the gameplay and a better checkpoint system to keep you from having to repeat the game's sometimes dull levels too often.

(...)

Brittany Saldita: You know, I dug the original *Eskrima Warriors*, but this sequel really feels like a rehash and not in a good way.

John Walden: Is there ever a good rehash? I agree though, just adding a few new characters and making the graphics a bit prettier doesn't make a good sequel.

Brittany: Uuuuuuuuuunless you're *Street Fighter*.

John: \*laughs\* Yeah, when's *Street Fighter III* coming out?

Brittany: The year after *Ultra Mega Super Duper Street Fighter II*, Capcom promises. Anyway, this is a game that's not worth full price. If you really like the new characters, maybe you could wait until it hits the bargain bin.

John: I think you're being a little bit harsh, five new characters is quite a bit for a fighting game sequel and it kept all the old ones, but it also kept a bit too much of the old gameplay to really be a true sequel. As far as fighting games go, three vastly superior options just came out last month for the Super Nintendo CD. MAYBE if you're gonna wait for this game to come out on the Saturn next year you could see if they make a few more changes then.

Brittany: I would definitely wait on the Saturn version if you have the Sega Saturn, at the very least the graphics should look a LOT better. I give *Eskrima Warriors: The Tournament* a 2.

John: And I give it a 2.5.

(...)

Ted: *Mallrats* is a fantastic movie, I've seen it and it cracked me up and I hope everyone watching this goes to see it when it hits theaters this Friday.

Kevin Smith: Thank you, thanks very much.

Ted: Now before we let you go, this IS a video game show-

Smith: Well finally, I was wondering when the hell we were gonna talk about games!  
\*laughs\*

Ted: See-

Smith: If I'd have known you wanted to talk about games, we could've talked about them the whole time!

Ted: \*laughing\* Why didn't you tell me, man? So what games have you been playing?

Smith: Aw man, right now, definitely *Zelda*, plowing my way through that and waiting for *Ballistic Limit*.

Ted: So you're a Nintendo guy?

Smith: You know, for right now yeah but the Saturn looks pretty sweet too, I'll probably try to pick it up when I can, maybe I'll get it for Christmas or something, I'll bug Ben Affleck about it and maybe he'll get me one.

Ted: I recommend *Ultima* and *Panzer Dragoon*.

Smith: You know, *Panzer Dragoon* looks really cool. I uh, I really want to play another *Earthworm Jim* game, is that coming out for the Saturn, do you guys know?

Ted: I WISH they would make an *Earthworm Jim* game for the Saturn, I'd buy that in a second. Oh, and speaking of games, I spotted *Frederico* in *Mallrats*, that was nice. The scene where Jay kicks the kid off the Super Nintendo in the mall and plays *Frederico*, that's a hilarious scene.

Smith: I wanted to put a game in there, I was thinking "what game would Jay want to play if he got high?" and boom, *Frederico*. Now I wish we could've put *Yoshi's Island* in there for that trippy level with the Fuzzies.

Ted: \*laughing\* That would've been perfect.

-

Al Michaels: ABC's coverage of Game 7 of the 1995 World Series is brought to you by... McDonalds. Have you had your break today? Ace Ventura: When Nature Calls, starring Jim Carrey, premiering November 10th. And *Ballistic Limit*, only for the Super Nintendo CD. Go

Ballistic, tomorrow. And I think this Atlanta crowd's about to go ballistic tonight if Tom Glavine can get this final out to win the World Series for the Atlanta Braves. One on, two outs, bottom of the ninth with Atlanta clinging to a 4-3 lead.

Tim McCarver: Well, we saw manager Bobby Cox call a timeout and go up to the mound to talk to pitcher Tom Glavine. Glavine, maybe feeling some soreness in that arm after pitching this entire game.

Michaels: Well, with the Indians' slugger Albert Belle coming up to the plate, this is definitely a moment when Cox might want to think about bringing in a closer.

McCarver: But it looks like Glavine's going to stay out there. He's performed well today, he did give up that three-run shot in the third inning but he's held the Indians to only two hits since then.

Michaels: He's been great this whole playoff run for the Braves, he had that excellent performance in Game 2, pitched a no-hitter and gave the Braves what everyone thought would be a commanding 2-0 lead but the Indians have roared back, they forced a Game 7 and now it's down to one last inning and perhaps, one last out. Glavine winds up and there's the pitch, Belle swings and it's a miss and that's strike one.

McCarver: Albert Belle's been playing great, had that three-run homer and he's batted .380 for these playoffs. He wants to win a World Series real bad.

Michaels: The sometimes volatile Albert Belle, always speaks his mind but is one of the best pure sluggers in Major League Baseball. And he watches this ball go to the outside for ball one. Albert Belle, 51 homers this year and if not for the shortened season, maybe he could've had a shot at Roger Maris' record of 61. Absolutely magnificent the whole year and he's been a big reason why the Indians have been so good this season and why they're here in the World Series.

McCarver: He puts such power into his swing, doesn't hold anything back. He swings the bat a lot like he talks!

Michaels: \*laughing\* That he does. And there's a fastball right down the plate, maybe a bit outside but it's called strike two.

\*Belle comes off the plate for a moment and glares at the umpire, he talks to him a bit and looks quite furious at the strike call, the crowd roars in glee behind him\*

Michaels: And now the crowd can sense it, the Braves one strike away from winning the World Series, and Albert Belle needs to be very careful here, he does not want to get tossed out of Game 7 of the World Series.

McCarver: This crowd can definitely sense it, they're on their feet here in Atlanta, I don't think there's a single fan right now sitting.

Michaels: 52,000 fans on their feet in Atlanta, one strike away from a world championship, Tom Glavine is one pitch away from immortality, the Braves leading by one and if he strikes Albert Belle out here that is going to be all she wrote! He winds up. Here's the pitch and Belle swings and it's a big hit! That ball is heading toward the stands! It's back in the outfield, it's fair and at the warning track...it could be...yes! Yes, that is a home run and the

Cleveland Indians have won the World Series!

\*The Atlanta crowd lets out a tremendous groan of dismay as Albert Belle rounds the bases, as he does so he seems to make a "suck it" gesture at the groaning and booing crowd but the TV camera don't catch it entirely, he rounds third and jumps on home plate and into the arms of his jubilant Indians teammates as Tom Glavine collapses to his knees on the mound, tears streaming down his face as Bobby Cox comes over to comfort him.\*

Michaels: In one of the most improbable, incredible finishes in World Series history, the Cleveland Indians come back from a 2 to nothing deficit to win the World Series!

McCarver: And that is why Albert Belle might be the best player in baseball, one of the greatest moments in World Series history, right up there with Kirk Gibson back in 1988.

Michaels: And the Cleveland Indians are celebrating in Atlanta, they are the world champions of baseball!

\*A man, Ash Beckland, is seen running through a darkened hallway where only a few lights are flickering, showing the outlines of scary alien creatures pursuing him. He continues to flee through decrepit corridors, past shuttered storefronts and closed doors. He hears a cry off in the distance. He dashes around a corner and sees a group of helpless colonists being menaced by a terrifying creature shown only in shadow. The man distracts it with a burst of gunfire, causing the creature to turn and join his pursuers while the family escapes.\*

\*The man continues running, while the increasing sounds of the aliens continue to swell behind him. He makes one more turn and his eyes go wide. It's a dead end. He continues to run toward the wall, then stops, hearing the sounds building up behind him even more. His eyes narrow. He turns, and pulls out two large guns as the aliens come upon him. The camera zooms on his eyes and zooms out to reveal footage from the game's first-person mode, of the player using their weapons on a variety of alien enemies. The footage then switches to the game's normal platforming mode, showing Beckland using a variety of guns and grenades on enemies, fighting a large boss and then switching to first-person mode to show the transition between the two modes as the player continues to fight seamlessly, the weapon is much more powerful in this mode and it shows the monster roaring and falling back as it's defeated.\*

\*The view then switches back from the game footage to the live-action scene, as Beckland walks over the corpses of the aliens he's killed. He hears another roar off in the distance and the camera zooms in on one of his eyes.\*

### ***Go Ballistic.***

## **BALLISTIC LIMIT**

### **October 30**

\*At the end of the advertisement is the first instance of TTL's new Nintendo "slogan", the combination of metallic sounds and a voice saying "Nin-ten-do" in a slight accent, identical to OTL's classic "Play-sta-tion" advertisements. The slogan will be used for nearly all SNES-CD commercials throughout the remainder of the console's lifespan, and for all Sony-published Nintendo games through at least the Ultra Nintendo's lifespan.\*

-from the *Ballistic Limit* commercial that aired on US television throughout October 1995

### **Ballistic Limit: The Basics**

*Ballistic Limit* is a game published and developed by Sony Computer Entertainment, and greatly hyped by both Nintendo and Sony before its release. The game is a hybrid 2-D platformer and 3-D first-person shooter (somewhat similar to OTL's *Metroid: Other M*, though largely without the exploration aspects). The gameplay revolves around controlling a soldier named Ash Beckland and is largely based on combat against a variety of alien, mutant, and sometimes human foes with a large assortment of weapons, explosives, and sometimes melee. The game is level-based with 19 levels in all, nearly all levels contain a boss at the end and a few have mid-bosses at important checkpoints. The player has a certain number of lives in each level, dying sends you back to the last checkpoint but running out of lives sends you to the beginning of the level (without any items or weapons obtained). Over the course of the game, Ash obtains a variety of weapons, which are permanently added to his collection. You can select up to three gun weapons, one explosive/special weapon, and one melee weapon before entering a level, finding a new weapon during a level enables you to swap it with one of your equipped weapons immediately. The game's 2-D segments are largely similar to *Metroid* in terms of combat (though at somewhat of a quicker pace), it's run and gun with the ability to aim on the fly, different weapons have different effects, there's pistols, laser pistols, shotguns, rifles, specialty alien weapons that fire different types of projectiles, etc, with 34 total gun-type weapons, 7 total explosive/specialty weapons, and 6 total melee weapons available in all.

The unique aspect of the game's combat system is Ballistic Mode. Ash has three bars: a life bar, an armor bar, and then a Ballistic bar that basically controls how much time you have in the game's special Ballistic mode. When entering Ballistic Mode, the game takes on a first-person perspective. Ash becomes fixed in place but can turn in any direction to aim at enemies. When in Ballistic Mode, weapons usually become somewhat more powerful, sometimes FAR more powerful, you're able to aim more easily at enemies' heads, guns take on special properties, can fire multiple projectiles, etc., depending on the weapon. You can only stay in Ballistic Mode for a short time before having to wait for the meter to gradually recharge, certain items increase the size of the Ballistic bar (and also you can find upgrades for health and armor bars as well) or you can collect items to recover it more quickly. Learning to properly time and strategize your Ballistic Mode gameplay is the key to winning the tougher battles in the game. You can replay old levels to collect missed items and you can also save at any time between levels. The game features in-level voiced dialogue and in-level and between-level cutscenes that take the form of motion-comic like animations.

The game takes place sometime in the late 21st century, Earth has been rendered uninhabitable by natural disasters and ecological destruction and mankind now lives in huge space colonies orbiting the planet. As humanity slowly makes its way out to the stars, the solar system is under relentless assault by alien monsters. The colonies have formed special squads of soldiers to venture out and face the alien threat. Ash Beckland (voiced by Michael Masseo, known in OTL as a somewhat prolific character actor and also for accidentally firing the fatal shot that killed Brandon Lee during the filming of *The Crow*, ITTL that accident never took place and Brandon Lee continues to appear in films, more on him later) is lieutenant captain of one of these squads, and on a mission to take out an alien warship, Beckland is separated from his squad and he finds his captain has been killed. After fighting off an alien onslaught, Beckland manages to reunite with several of his squadmates, including Beckland's training partner and romantic interest Sara (voiced by Peta Wilson, known as Nikita in OTL's *La Femme Nikita*, which isn't made ITTL) and Danny, Beckland's rival at the academy. After a major boss fight in level 8, Beckland and his friends manage to pilot the alien warship back to the main Earth colony, only to find it under attack, the alien warship was only a distraction for the main invasion and many humans have already been killed. The next few levels involve Beckland, Sara, and Danny liberating numerous areas of the colony only to discover to their horror that many of their friends on the colony have been subjected to hideous alien experimentation, transforming them into terrifying creatures. One of these subjects is Beckland's seemingly deceased commanding officer, who has been turned into a somewhat-sentient commander for the alien forces, under alien control. At the end of level 15, Beckland reluctantly fights and kills his mutant CO, only to see that during his dying moments, the man has managed to free his mind from the aliens. He reveals the aliens' plans to mutate humans due to their natural stubbornness and creativity and to re-colonize Earth as a hybrid human-alien race before re-launching a new conquest of every sentient race in the galaxy. Beckland also begins to fight against human collaborators with the aliens, and for a time it's teased that Danny is one of them, though it's later revealed that Danny's just been going undercover to sabotage their operations (this is revealed during an exciting moment in the level 17 boss fight where Danny saves Beckland's life). In the aftermath of level 17, Sara is captured and mutated by the aliens, and she becomes the level 18 boss in a very poignant fight. At the end, however, Sara manages to force her mind out of the brainwashing just before she would have killed Beckland, she then uses her mutant upgrades to wreak havoc on the alien forces, clearing the way for Beckland in level 19 where he fights the alien warlord leader in a fierce multi-stage battle. The game ends with a cure found for the mutations (including Sara's), as well as the humans capturing some alien technology that might help them restore Earth to habitability again. Beckland has saved humanity and the alien conquerors have been wiped

out, but the galaxy remains a dangerous place...

## October 30, 1995

*Ballistic Limit* is released for the Super Nintendo CD in North America, with Japanese and European releases the following month. The game is immediately successful, the massive advertising campaign for the game raised awareness to a limit unseen since *Donkey Kong Country*, and it's the second fastest-selling video game of the year in North America behind only *The Legend Of Zelda: Ocarina Of Dreams*. It performs quite well in Japan and Europe also, easily surpassing two million sales worldwide before the end of 1995. Reviews for the game are stellar, its advanced graphics (some of the best yet seen in an SNES-CD game, its 2-D graphics exceed those seen in most early Saturn games and every Mega Charger game), highly praised soundtrack and quality voice acting (the performances of Michael Masee and Peta Wilson are particularly praised and Ross Hull, who is most well known for playing Gary in *Are You Afraid Of The Dark?* is also praised for playing the young scientist Dr. Reeve Grantley, who comes up with the cure for the alien mutations and is also the man behind the Ballistic System utilized in Beckland's weapons) make it one of the year's best reviewed games. With the recent film success of *Mortal Kombat*, the film rights to *Ballistic Limit* become a hot property, and several directors, including Joss Whedon and Joel Schumacher, express interest in producing the film adaptation. Along with *Snatcher*, the game becomes an early example of the importance of story telling in video games, and the game is the start of one of Sony's most enduring video game franchises.

(...)

Ted (dressed up as the cop from *Virtua Cop* for *GameTV's* Halloween special): *Ballistic Limit* is everything I thought it would be and then some. The graphics are amazing, the gameplay is incredibly fun with a huge variety of weapons, and even the voice acting was fantastic!

Alex Stansfield (dressed up as *SimCity's* Dr. Wright): I think companies are starting to get the hang of voice acting in games, especially with budgets growing to allow professionals to be brought in. *Tales Of The Seven Seas* is another example of that.

Ted: And how awesome are the bosses? They're tough as hell, definitely.

Alex: That four-headed bastard in level 13 was not easy even with my best weapons.

Ted: Right, this game's not easy but it at least gives out enough extra lives to where you're not repeating whole levels all that often.

Alex: And levels aren't THAT big unless you're going off the beaten path a lot. Honestly I thought this game was kinda short, it took me maybe six hours to get through and I was looking for upgrade items too.

Ted: It was a fun six hours though, wasn't it?

Alex: A REALLY fun six hours.

Ted: I really have no problem giving *Ballistic Limit* a 5 out of 5. It deserves it, it more than deserves it, I had so much fun and there were moments that just blew me away.

Alex: I think I have to agree, everything was done just so well, I thought maybe the first-

person parts would be clunky but the controls worked so well. I mean in *Squad Four* the shooting was kind of awkward but in *Ballistic Limit* it was really well done. 5 out of 5.

Ted: And you know what that means!

Alex: Absolutely, it's time to finally put game #2 on the Hall of Fame wall!

\*Ted and Alex, along with Brittany (dressed as *The Darkest Ritual's* Etienne), John (dressed as Bo Jackson from *Super Tecmo Bowl*), and Kaz (dressed as Tuxedo Kamen from *Sailor Moon*), walk up to the Hall of Fame wall with a framed copy of *Ballistic Limit*, hanging it up there next to *Ocarina of Dreams*.\*

Brittany: *Ocarina of Dreams*, you've finally got a friend!

Ted: *Ballistic Limit*, you're now in the GameTV Hall of Fame. Congratulations!

Alex: Coming up after this commercial break, is *Kawasaki Superbike Challenge* going to be game #3 on the Hall of Fame wall?

John: I'll give you a hint: no.

-excerpted from the October 31, 1995 episode of *GameTV*

-

Nintendo Power Covers Of 1995:

January 1995: Pulseman (was *Adventures Of Batman and Robin* IOTL)  
February 1995: Justice League: The Battle For Earth (was *Mega Man X2* IOTL)  
March 1995: Final Fantasy VI (was *NBA Jam: Tournament Edition* IOTL)

December 1995: Donkey Kong Country 2 (same as IOTL)

"My Sega Venus story ended in tears. I got it for Christmas in 1995 along with *Lords of Skylein*. So one day soon afterward, I'm playing *Lords of Skylein* and having a blast, I'm really getting sucked into the game and not really paying attention to much else. Any time the Venus runs out of juice (which is quite often), I replace the batteries, six at a time, not really paying attention to how many I'm using. Well, that evening, I'm playing through the fourth dungeon when suddenly I hear my mom downstairs yelling 'who used all the batteries?'. So you know, I just go down there and tell her I did, and she says 'you used 40

*batteries in one day?', and when I tell her I did she says 'do you have any idea how much those batteries cost?' Turns out, 40 batteries cost about 40 bucks. I had gone through forty dollars worth of batteries in about six hours of playing. When I tell her how I went through so many batteries, she goes ballistic, she takes the Venus away and I never ever see it again. Five or six months later I asked her what she did with it and she told me she sold it to a pawn shop to replace that forty dollars. I never had a Sega Venus again until I bought one on Ebay a few months back for eighty bucks. I should've just used the damn AC adapter."*

-A post on Rootalk.com's /segamemories subforum on December 18, 2014

*"Was that good luck or what? We didn't even imagine pirates would be a big thing when we came up with the theme for Donkey Kong Country 2. We all just thought pirates would be a cool, adventurous thing to use for our game. Then Tales Of The Seven Seas came out and I'm sure we got a big boost from it!"*

-Tim Stamper, producer of *Donkey Kong Country 2*

*"It has been a really busy time for me! But I am always thinking of new ideas for games. I'm already thinking of games for the next Nintendo system as well!"*

-Toshiro Tsuchida, creator of *Front Mission* and *Arc the Lad* in the January 1996 issue of *Famitsu* magazine

*"By the time the Saturn had been released worldwide, Sega was essentially the number one arcade game company. We knew that would be our best asset going forward, something Nintendo didn't have and would be trying to replicate. As long as we kept our advantage in the arcades, we would always be competitive in the console market."*

-Yu Suzuki

-

## **Donkey Kong Country 2: The Basics**

*Donkey Kong Country 2: Diddy's Kong Quest* is the sequel to 1994's *Donkey Kong Country*. The graphics are largely similar to its predecessor, using the same multi-layer rendering techniques as the first game to provide very detailed background and character animations, with a slight bump-up in animation detail from the first game and improved presentation quality. The soundtrack is expanded from the first game with 48 different music tracks spanning a variety of genres but largely consisting of adventurous orchestral music to fit in with the game's pirate motif. Gameplay remains largely the same, though the player now controls Diddy Kong and his girlfriend Dixie Kong after the abduction of Donkey Kong by Kaptain K. Rool and his pirate Kremlings. The two Kongs must traverse eight worlds and 61 levels to save Donkey Kong, and there's also a hidden ninth world with seven levels that becomes available if enough bonus Krem Coins are collected. Here are the eight worlds.

*Gangplank Galleon*: A world taking place on a giant pirate ship, largely the same as IOTL with a couple extra levels. The boss is Krow, the same boss as OTL.

*Crocodile Cauldron*: A volcano-themed world similar to OTL's, the boss is Kleever, a giant spinning sword, again identical to OTL.

*Krem Quay*: A swamp-themed muck world similar to OTL, with a huge muscular Kremling boss named Kudgel, again the same as IOTL.

*Zinger's Domain:* The first world that's majorly changed from IOTL, instead of Krazy Kremland, an amusement park level (TTL's Donkey Kong Country already featured an amusement park level), this world is entirely beehive-based, and a couple of the worlds even show Kremlings fighting Zingers. The huge bee boss King Zing remains from IOTL.

*Port Kremtuga:* The first truly original world from TTL, Port Kremtuga is based on a bustling Caribbean port city. Levels featured include a stage depicting a huge Kremling bar fight and a stage featuring a large earthquake. The boss is Krench, a busty female pirate Kremling who wields two swords.

*Gloomy Gulch:* A spooky ghost forest world, the same as IOTL. The boss is Kreepy Krow, a resurrected ghost version of World 1's Krow, again the same as IOTL.

*K. Rool's Keep:* A climb up a huge tower castle with dungeon-themed levels, similar to OTL's version of this world. ITTL, Kerozene (from OTL's Game Boy Advance remake) again appears at Stronghold Showdown, though his attack pattern is much more complex and difficult and he's animated with a lot more detail.

*The Flying Krock:* ITTL, this world has six sky-themed stages instead of just one stage before the final boss. Screech's Sprint is still the final level before reaching the showdown with Kaptain K. Rool.

*Lost World:* The ninth secret level, accessed by acquiring all the Krem Coins from the bonus stages. It features seven levels that must be completed before reaching the bonus showdown with Kaptain K. Rool at Krocodile Kore. This showdown is different from OTL's, after hitting him once, he doesn't die as IOTL, but instead hops on board a giant K. Rool robot that must be hit several times to defeat, this robot is by far the toughest challenge in the game.

## **November 20, 1995**

*Donkey Kong Country 2: Diddy's Kong Quest* is released for the Super Nintendo CD. Reviews are as stellar as the first game's, in some cases even better, and it's named an immediate contender for Game of the Year. Its release isn't accompanied by quite as much anticipation and hype as the first *Donkey Kong Country*, but it sells nearly as well upon its debut and continues to be a strong seller throughout the holiday season, helped along by its great reviews, good will from the previous game, and a wave of popularity of pirate-themed media. It becomes Nintendo's biggest hit of the holiday season, even moreso than *Ballistic Limit*, and contributes massively to Nintendo's enormous sales victory over Sega that Christmas.

-

## **Donkey Kong Country 2: Diddy's Kong Quest:**

Ed: 9.5 (quote: "Even better than the original? Absolutely. From the variety of levels to the graphics to the amazing music, Donkey Kong Country 2 builds upon everything from the first and raises the bar yet again.")

-reviews of November 1995's Super Nintendo CD games in the December 1995 and January 1996 issues of *Electronic Gaming Monthly*

-

*Though the Sega Saturn had been the biggest hardware launch of 1995, the holiday season saw a pair of launches from Nintendo and Sega that gave gamers more options concerning their current-gen game systems.*

### **Free At Last: The Stand-Alone SNES-CD**

Even since the middle of 1993, Nintendo fans had been clamoring for a Super Nintendo CD that wasn't dependent upon the purchase of a cartridge-based Super Nintendo. Eager to keep their beloved fourth-generation system going, Nintendo stood firm and refused to release a stand-alone SNES-CD to market, instead continuing to sell its CD peripherals and Playstation Combo Sets, which meant that if you wanted to play Nintendo's rapidly growing library of CD-ROM games, you had to purchase the "vanilla" SNES. Once *Donkey Kong Country* was released at the end of 1994 to major commercial success, Nintendo and Sony began working on a stand-alone version of their popular CD peripheral, and it launched on November 27, 1995, one week after the release of *Donkey Kong Country 2*.

<https://www.dropbox.com/s/rcrywzt1yu...azine.png?dl=0> (Author's Note: This is an SNES-CD mock-up taken from OTL's *Super Play Magazine*.)

The new Super Nintendo CD was a sleek, compact device with the ability to play the entire library of SNES-CD games, and it included four controller ports right out of the box. It was one of Nintendo's better-designed devices, much smaller than the original peripheral had been, and at \$129.99, it slashed the price of entry for Nintendo's CD-ROM games by more than a third, the price was also just under a shade of one-third the price of Sega's \$399 Saturn. Combined with across-the-board price cuts for Nintendo's cartridge-based SNES (to \$59.99 from \$69.99), Nintendo's SNES-CD peripheral (to \$129.99 from \$149.99), and the Playstation Combo Set (to \$169.99 from \$199.99), Nintendo had positioned itself to be the

budget alternative to Sega's high-priced marvel, the Sega Saturn.

### **I'm Your Venus, I'm Your Fire...**

For the past five years, the Sega Game Gear had flagged behind Nintendo's lower-tech but significantly more economical Game Boy. On November 14, 1995, Sega released the Venus, a handheld Sega Genesis with the Mega Charger internals built right in. The Venus was by far the most powerful handheld game system that had ever been released up to that date, and it launched at \$249.99, more than twice the price of Sega's Genesis (Sega would begin selling the Mega Genesis, a Genesis with a Mega Charger built in, for \$99.99 around that time as well). The Venus launched with quite a bit of fanfare, including a slickly produced commercial featuring Bananarama's classic "Venus" song interspersed with scenes of people looking like they were having a ball playing Genesis and Mega Charger games on a handheld. The Venus had a pair of pretty nasty Achilles heels. The price was one (it was slashed to \$199.99 within a couple of months and then slashed further to \$149.99 a couple months after that), and the other was the battery life. When playing Genesis games, battery life was just under three hours on six AA batteries. That was bad enough, but when playing certain Mega Charger games (*Star Wars Arcade* and *Lords of Skylein* were the biggest culprits), battery life could be as short as 45 minutes. The thing consumed batteries at a prodigious rate, someone once calculated that playing the 50-hour *Lords of Skylein* could cost nearly \$400 in batteries. You could buy a Saturn for that much! Though the Venus wasn't a complete flop (the slickly produced commercial and price cuts drove the Venus to 3.5 million in sales by the end of 1996), it failed to achieve the lofty success of Nintendo's Game Boy.

-

\*A husband and wife are out walking on the boardwalk on a date.\*

Wife: Are you sure it's okay to leave our son home alone?

Husband: Oh, he's a responsible boy, I think we can trust him.

\*The two of them see a group of teenagers walking by, talking about something.\*

Teenage Boy: Hey, did you hear about that sweet new video arcade?

Teenage Girl: Yeah, I heard it just opened up, I can't wait to go over there and play.

Husband: \*to his wife\* A new arcade? I bet our son would love it. \*walks over to the teens\* Hey guys, you mind telling us about that new arcade? We've got a kid your age, he loves video games, where's it at?

Teenage Boy: Sure thing dude, it's at 1724 Spruce Street!

Wife: Huh? Say that again?

Teenage Girl: 1724 Spruce Street. It's the hottest arcade in town, all the kids hang out there.

Husband: Wait a minute, that's our house!

Teenage Girl: It's a house all right and it's an awesome arcade, there's dozens of games!

Wife: Our son put an arcade in our HOUSE?

Husband: \*looking panicked\* We gotta get home....

\*The husband and wife rush home to see lights flickering inside their house and tons of kids hanging out around it\*

Wife: \*pushes through the crowd and opens the door\* You put an arcade in here? You're in big trouble!

Husband: \*looking around\* Wait, where are all the arcade machines?

Son: \*sitting by the TV with a Saturn controller in his hand with his friends around him\* There aren't any machines, it's just the Sega Saturn!

\*The son and his friends are shown to be having a blast playing *Virtua Fighter* while his parents sigh in relief. The screen switches to show Sega's arcade lineup including *Virtua Fighter*, *Daytona USA*, *Virtua Cop*, and *Ridge Racer*.\*

Announcer: With dozens of the hottest arcade games, including the newest hit from Namco, *Ridge Racer*, who needs the arcade? Stay home, save your quarters and bring the arcade home. Only the Sega Saturn brings you the biggest arcade hits, and with dozens more on the way, you'll never need to leave your living room again.

Husband: \*sitting down by the TV with his wife\* So, can we have next game?

Son: No way!

Wife: You're grounded.

Son: .... \*nervously hands a racing wheel to his mom\*

Wife: \*has a smirk on her face as she begins playing *Ridge Racer*\*

### **Playing Is Believing**

\*cue the SEGA! scream\*

-excerpted from a Sega Saturn commercial that aired in late 1995 and early 1996

*Without question, the Sega Saturn's biggest early successes were their arcade ports. The Virtua Trio of Virtua Fighter, Virtua Cop, and Virtua Racing drove Saturn sales more than anything else during that rough 1995 holiday season, but it was their November 1995 release of Ridge Racer that proved to lay the foundation for the relationship that Sega and Namco would form throughout the latter half of the 90s. Namco's deal to produce arcade games with Sega was regarded as the biggest coup in the history of the arcade industry. Indeed, it was around this deal that the entire arcade game industry would orbit starting with the release of the Saturn. The Saturn's technology became the benchmark for arcade*

*cabinets throughout its lifetime. Using their combined negotiating power, Sega and Namco were able to reduce costs and enable arcade chip technology to progress far more rapidly. Their lucrative contract with military contractor Lockheed Martin to produce these high-tech arcade chips gave the two companies the inside track on becoming the leaders in arcade cabinets. This greatly increased the longevity of Sega's Model 2 arcade platform and enabled Sega and Namco to take their time with Model 3, which wouldn't see release until 1997.*

*Though Ridge Racer's release provided only a minor bump to Saturn sales, it was still a critically acclaimed and highly desired game throughout the 1995 holiday season. Sega had initially feared that the game might fall by the wayside in the wake of their big racing game releases at the Saturn's launch, but Namco had distinguished Ridge Racer from other games on the market and the port became the Saturn's best selling non pack-in game of 1995, outselling even Daytona USA. Namco's next arcade port to the Saturn would be the 3-D fighting game Tekken, which was set to release in February 1996 in North America. Tekken would be followed up by Soul Edge in June 1996, and the two games were only part of a very promising Saturn lineup for the year. While Nintendo continued to prosper with its strong lineup of SNES-CD games, Sega's near monopoly on major arcade hits would prove to be a huge selling point for the Saturn going forward.*

-

*"Front Mission Preview: An exclusive promotional video for Squaresoft's new strategy-RPG Front Mission, only available to Nintendo Power CD subscribers!"*

-excerpted from the October 1995 issue of *Nintendo Power CD*, describing a special 5-minute promotional video for *Front Mission* that only aired in Japan IOTL (Author's Note: This video <https://www.youtube.com/watch?v=kidzS-EkVY8> only with English narration and text replacing the Japanese)

*In this month's big Epic Center feature, we're taking a look at Squaresoft's newest hit game, Front Mission! When it released back in April in Japan, it became one of the fastest-selling video games ever! Now it's here in the West and Nintendo Power's got tips and strategies to help you through the first few missions of the game.*

-excerpted from Nintendo Power's Epic Center section in the November 1995 issue

*Were Front Mission's North American sales a disappointment to you?*

Toshiro Tsuchida: I knew we weren't going to sell half a million copies in the first week like we did in Japan! I believe the first week in North America, we ended up selling about 40,000 copies which really was not bad considering just how many excellent games were released that month. Our total North American sales were...somewhere just under 200,000 I think? Not as big as *Final Fantasy* but certainly all right for any other game.

*Did you begin work on Front Mission 2 immediately after the first?*

Tsuchida: Not immediately after but after sales were so high in Japan, we did. We quickly realized that the game would not be possible on the Super Famicom CD and that is why it

did not release until later on the Ultra.

*I remember there being considerable controversy after the release of Front Mission 2 for the Ultra Nintendo in North America, there was a lot of really controversial content and some of those concerns also came up with the first game.*

Tsuchida: Well, it was not my decision to localize it! Certainly it helped that the Super Famicom CD had opened a lot of doors in North America. Square was a big factor behind pushing those envelopes. I was glad to see all the Front Mission games localized and to see the reception to them from around the world.

-excerpted from an interview with Toshiro Tsuchida with RPGamer.net, June 10, 2010

*Front Mission* for the Super Nintendo CD releases on November 13, 1995, and it's somewhat similar to Enix's earlier strategy game *Ogre Battle*, though unlike *Ogre Battle* you have much more control over your soldiers as you march them across the battlefield. Gameplay is somewhat linear, the cut-scenes (despite not being voiced) are beautifully depicted with animation for certain very important scenes and the battles themselves are full of very detailed animation and realistic graphics. Customizing your battle mech (known as a "wanzer") is a very complex affair but once you get the hang of it you'll have trouble stopping.

The plot is quite complex but very engrossing and we loved the option to play a special second scenario after the completion of the main plot, we won't spoil any more than that but it was essentially like getting two games in one and it added lots of extra play time to this already epic game. Squaresoft has outdone itself in a big way with *Front Mission* and this just makes us more excited to see what they have in store for what looks like a very jam-packed 1996.

Graphics: 5.0  
Sound: 5.0  
Play Control: 5.0  
Fun Factor: 5.0  
Difficulty: Advanced

-excerpted from *GamePro's* December 1995 review of *Front Mission*

-

Sort of lost in all the holiday hype of 1995 was the two big detective game sequels released that November. Nintendo was localizing the long-awaited sequel to 1993's *Super Detective Club*, while we also got *Where In Time Is Carmen Sandiego?*, which at the time was actually one of the more hyped games considering the reception the first one got.

*Super Detective Club 2* was designed for the Super Nintendo CD from the ground up, it contained four all new cases along with cut scenes and voice acting to dramatize the cases. The fourth case was linked to each of the first three cases which could be solved in order. The game was a bit more dramatic and mature than the Famicom games, it got a Teen rating in North America and even featured a bit of mild language which was almost unheard of in a Nintendo game up to that time! The first case of the first three was a murder, a miserly businessman is found dead and his five grandchildren, who also attend the school that the protagonist and his friend Ayumi Tachibana attends, are the prime suspects, you

have to figure out which of the grandchildren is the murderer. Ayumi's friend Michuri is one of the suspects and the evidence actually points to Michuri but a smart player will see the hidden clues that actually implicate the businessman's youngest grandson Banko in the crime. The second case is a kidnapping, Ayumi Tachibana is kidnapped and it's a race against time to save her (though she eventually escapes on her own and helps the protagonist implicate the criminal). The third case is another murder, this time of a female racehorse jockey, it's a very complex case to solve, probably the toughest of the three. The prime suspect at first is her jealous rival but it turns out that she and her rival were actually lovers and about to elope, it was the rival's manager that ends up being the murderer. The fourth and final case ties in to the other three. Ayumi's friend Michuri is kidnapped by the culprit from the second case (who escaped from jail), Michuri happens to be the owner of the murder victim's racehorse from the third case and not only do you have to stop the kidnapper but you have to find out who hired them, which turns out to be a dangerous crime syndicate. The game does have a happy ending (assuming you solve the mystery in time) and despite the serious material, it does have plenty of lighthearted moments. The game was largely well received and sold even better than the first, even in North America. That brings us to that month's second game...

*Where in Time Is Carmen Sandiego?* was the sequel to one of the best selling video games of 1993. *Where In The World Is Carmen Sandiego?* was the first real post-release hit for the Super Nintendo CD and the sequel was expected to perform just as well...so why didn't it? For one thing, the critical reception to the game just wasn't quite as good as the first. It replaced the rather charming live-action cutscenes from the first game with animated cutscenes somewhat similar to the animation found in the Fox Kids series *Where on Earth Is Carmen Sandiego?*, with Rita Moreno even reprising her voice acting role from that show. In fact, the game borrowed considerably from that show, including Carmen's history with ACME and her sympathetic background. The game would also include elements that would be featured in the later PBS game show series *Where In Time Is Carmen Sandiego?* including the theme song (which was decent but nowhere NEAR Rockapella's legendary theme song for *Where In The World*) and the Chronoskimmer. The result was a somewhat disjointed amalgam of elements that made the game somewhat...confused compared to the first game's significantly more focused effort. That's not to say the game wasn't good, which it largely was, but it was ultimately forgettable. The second reason it didn't succeed to the degree the first one had...the competition. It came out just one week after *Donkey Kong Country 2*, and was largely ignored in favor of that game. Ultimately it was outsold even by *Super Detective Club 2*, and other games such as *Rage*, *Front Mission*, and *The Endless War* also outperformed it both critically and commercially. The disappointment that was *Where In Time Is Carmen Sandiego* proved that the franchise was largely past its peak in the public eye, and that the detective game genre itself was past its prime as well, despite Nintendo's success with *Super Detective Club 2*.

-excerpted from "Dueling Detectives", an article on Nintendo Digital Digest, November 19, 2012

-

## **The Many Faces Of Rage**

*Rage*, coming November 6th to the Super Nintendo CD and coming in early 1996 to the Sega Saturn, is the latest beat-em-up from Capcom. It features nine fierce brawlers who are geared up to pummel their way through endless waves of enemies. Depending on your chosen path through the story, you can obtain one of four different endings. Here's a quick

*look at all the brawlers you can chose from.*

Jason Gurds: A captain in the United States Marines, Jason is seeking revenge for the ambush and deaths of his comrades in a war. Upon hearing that the warlord Blackstone is responsible for the deaths of Jason's comrades, Jason resolved to punch, kick, throw, and bodyslam his way through everybody that gets in his way.

Adam Crasher: With superhuman strength gained from a nuclear accident, Adam is equipped to beat down legions of criminal thugs. There's no way he's going to let Blackstone or anyone else steal the loose nuclear material that's already caused him so much pain. Adam moves somewhat slowly but his punches pack more power than anyone else in the game.

Kitsuko Atsuri: Kitsuko may look like a harmless geisha girl but don't be fooled, her swift kicks and fierce leaps can devastate much larger foes. She seeks to protect her friends from Blackstone's criminal empire.

Icarus Lowell: The youngest of the brawlers in Rage, Icarus is a 14-year-old boy who's had wings grafted onto his back by Blackstone's evil scientists and doesn't need much motivation to pick a fight with the evil mastermind. He can float above enemies for a short time to land fierce blows from above!

Artemis Night: Artemis is a private detective who failed to stop Blackstone from murdering his beautiful lover. Now he seeks only revenge and he's brought his trusty pearl-handled pistol along for the ride.

Savage Paul: Though he's got a scary name and an even scarier appearance, Savage Paul is mostly a gentle giant, he runs an orphanage but he's not going to let Blackstone threaten his beloved orphans without bearhugging him and his minions into submission first.

Kim McIntosh: A fiery redhead with a positive attitude, Kim doesn't have anything personal against Blackstone, she just likes beating the crap out of people. With a reckless style that emphasizes charging in rapidly and bashing enemies, Kim's the definition of a glass cannon but if you like to live dangerously, she's your girl.

Lord Masters: Lord Masters is an old man who has been kicked out of his hard-earned mansion by Blackstone. Now he uses his remaining fortune to train himself into a fierce martial artist, while sometimes getting his butler Jenkins to do some of his dirty work.

XCR-333: XCR-333 is a rogue combat robot who got a mind of his own after being given an order to slaughter a bus full of children by Blackstone. Instead, he fought off ten other robots and moved the children to safety. Now he uses his programming to fight back against his evil creator.

-excerpted from the December 1995 issue of *EGM2*

-

John Walden: *Ridge Racer* is just a great game, I say it's better than *Virtua Racing* and *Daytona USA*, the graphics are awesome and the racing action is a ton of fun.

Alex Stansfield: It's close for me between the three of them. I think *Ridge Racer* is definitely

the closest to an authentic arcade experience but the other two games have their good qualities too. Not a knock against *Ridge Racer* by any means, it's a ton of fun, such a beautiful game and the racing is top notch.

John: If you can get a friend over to play this, you'll definitely want to go head to head. Hook up a couple racing wheels and you're absolutely golden.

Alex: Plays so good with the wheel, I mean the controller's fun too but if you use the Sega racing wheel it's just like it is in the arcade. And I can't stop talking about the graphics, it looks really pretty with great draw distance.

John: The graphics are what most impressed me about *Ridge Racer*, can't get over how good this game looks. I'm giving it a 4.5.

Alex: And I'm giving it a solid 4, this is definitely a GameTV recommended title.

(...)

Brittany Saldita: Squaresoft's *Front Mission* is a decent game but it did get somewhat repetitive toward the end, the later missions I felt were kind of a grind.

Ted Crosley: I agree, I'm not quite sure if maybe they ran out of ideas or what?

Brittany: But the plot was terrific and I liked the added USN scenario, that added some replay value to the game at least.

Ted: For me, *Front Mission* definitely pales in comparison to say, the *Final Fantasy* games.

Brittany: Agreed.

Ted: But for what it's worth it's still a good game.

Brittany: I feel like it laid the foundation for a great game and that it had a lot of good ideas but the execution could've been better. If they find a way to make longer missions not such a drag, this could be a real masterpiece. I give *Front Mission* a 3.5 out of five.

Ted: I give it a 3.5 too, it's definitely got a lot going for it but it's not a classic like *Final Fantasy VI*.

-excerpted from the November 14, 1995 episode of *GameTV*

(...)

Ted: So let's wrap this up, what did you think of *The Endless War*?

Kazzi DeCarlo: Well it's not endless, the game DOES have an ending! So that's ONE strike against it. But to be honest, I feel like this game was trying too hard. I'm all for having options but it seemed like it turned into a LOT of micro-management. Even *Civilization* managed to make a really complex strategy game easy to get into.

Ted: I LOVED all the customization options, I just wish there were more nations to pick from. There were only eight and even though they gave all of them a lot of story details and

gameplay quirks, I felt like they could have included a lot more or even let you make your own.

Kaz: Why'd all the countries have to be fictional? I wanted to kick France's ass.

Ted: \*laughing\* But yeah, the customization for individual soldiers and units added a ton of strategy. This game is the deepest war game I've ever played, it's deeper than Koei's great games, deeper than *Civilization*, it's a game all about planning battles and strategy and it works on a ton of levels. And the music was awesome.

Kaz: The music was the ONLY redeeming factor I thought, when I was muddling through menus at least I had good music to listen to.

Ted: This game did come with a huge instruction book.

Kaz: You mean I have to read INSTRUCTIONS?!

Ted: It helps to read instructions, yeah.

Kaz: \*groans\*

Ted: I give *The Endless War* a 4.5 but you really do need to read the instructions.

Kaz: I give it a 3. I just didn't have much of a clue when it came to planning out my attacks.

Ted: The instruction book helps!!!

(...)

Ted: *Donkey Kong Country 2* is pretty much everything we expected a DKC sequel to be. Beautiful, challenging, and lots of platforming fun.

Alex: Yeah, make no mistake about it, this is one of the best games of the year and even better than the original.

Ted: I'll definitely give it that even though I thought the original *Donkey Kong Country* was a bit overrated. I loved the adventurous feel of this one, it felt like you were going on a real pirate quest and the enemies were really creative compared to the first.

Alex: Any flaws the first *Donkey Kong Country* game had, this one fixes.

Ted: A word of warning, it's blisteringly hard. I enjoyed the challenge but you will be frustrated at times.

Alex: Oh yeah, this one definitely beats out the first. The bosses are a LOT tougher.

Ted: The music was beautiful especially in the thorn stages, though most of the time I couldn't hear the music over my loud swearing.

Alex: Screech can go right to hell!

Ted: Oh, (expletive) that bird. I got a bird to give him.

Alex: Birds aside, *Donkey Kong Country 2* gets a 5 out of 5 from me.

Ted: I'm gonna give it a 4.5, it's definitely one of the best platformers around and sets a new bar for the series.

### **December 2, 1995**

At Sony's headquarters in Japan, chairman Norio Ohga was monitoring an event in North America with great interest. Not the success of *Donkey Kong Country 2*, or the continuing strong sales of *Ballistic Limit*, or anything having to do with video games at all. Instead, Ohga and his fellow Sony executives were tracking the performance of Pixar's computer-animated film *Toy Story*, which had been highly lucrative at the North American box office for the past two weeks and had generated critical praise like few animated films before it. The technology used in *Toy Story* was exceptionally advanced, and Ohga knew that no video game console would be able to produce visuals like it for at least a decade and probably much longer.

"This new computer-generated animation is the future of the industry," said Ohga, who could see nods of agreement from those seated at the table. "And, as we've done in the video game industry, we should be involved in this."

Ken Kutaragi looked over at new Sony president Noboyuki Idei, seated to the left of Ohga. Ohga's fellow executives had been skeptical of the choice to pick Idei as Sony's new number-two man, but Idei represented a new wave of thinking within Sony, a tendency to take risks, to look for opinions outside the company, ideas that could drive Sony forward into a new era of business. That kind of thinking had gotten Sony into perhaps its most successful business endeavor to date, its partnership with Nintendo on video games, and now it seemed that Ohga wanted Sony to forge another partnership.

"It's not likely that we'd be able to make a deal with Pixar," said Idei, "though I am certainly open to working with them if it's possible."

"Not Pixar," said Ohga, knowing that Pixar already had a strong relationship with Disney, yet another entertainment titan. "But there are many other movie studios who may wish to utilize this new animation technology, and will be looking for a company like Sony to provide the hardware."

Ohga had big plans for Sony going forward. It would already be making itself more visible as a partner to Nintendo once the Ultra was released, and Ohga hoped to use this visibility to form a unified front across the entertainment industry. Wherever big ideas were formed, Sony would be there to bring them into reality. The company already had an advertising campaign that would begin launching in Japan in 1996 and across North America hopefully later that year. The Ultra Nintendo was just one part of Sony's business strategy...and with luck, its partnership with an animation company would be another. Ohga already had a few potential partners in mind...

"Do you already have someone in mind?" asked Idei, his mind already searching for potential partners for Sony in this new endeavor. "Because...there's a former Disney executive who's just built a new animation studio and he has some very powerful partners."

Ohga's lips curved into a smile. The two men had the same idea.

"I've been looking into that possibility," said Ohga. "They've been looking into partnering with a company called Pacific Data Images, but the deal's not done yet."

"Is there any way for us to arrange a meeting with them?" asked Idei. "Or should we go looking elsewhere?"

"We should have many potential options," Ohga replied, "but if you'd like to arrange a meeting I'd be in full support of it."

Within the week, Idei was placing the call... he'd just started at Sony and already he'd be discussing a partnership with one of the most powerful men in show business...perhaps one of the most powerful men in the world.

"This is Mr. Noboyuki Idei from Sony... I'd like to speak with Mr. Spielberg, please."

-

*"Twisted Metal is yet another game that pushes the Super Nintendo CD to its limits. With its wide open spaces, colorful cars, and blistering fast action, it's a game that proves that*

*Nintendo's CD device can still hang in there with consoles like the Saturn."*

-Next Generation magazine, December 1995

*"We went into December ready to launch two games. Of course Twisted Metal was our biggest and the one we put most of our energy into, but a lot of the people inside Sony were quite pleased with our other game that month as well. Arc the Lad was a great game for us, we had really modest expectations for it but we exceeded those and sold more copies than we expected to, about 80,000 or so which is really good for a game considered to be a niche title. I kind of regretted that we rushed the localization for the holidays, it wasn't that good and the voice acting could have been a lot better but that might be part of the game's charm."*

-Olaf Johann Olafsson, "The Chase: Sega's 20 Year Struggle To Take Down A Giant"

*"I remember when Arc the Lad came out in Japan, it was a game that I would've been interested in localizing, but with all of our efforts devoted to Tale Phantasia and Bahamut Lagoon, we couldn't offer our services and Sony went ahead and localized it, it surprised me that they did it at all and especially that they got it done so fast!"*

-Victor Ireland

*"Legend Of The Sorcerers was a game that always intrigued me. It was definitely more experimental and innovative even than Tale Phantasia, but the final product was somewhat of a disappointment. I always felt that the idea of an FMV-based role playing game could have been explored later on with more powerful consoles with more software capacity, but by then the industry had moved on from FMV games entirely."*

-Yoshiharu Gotanda

*"I was really impressed with the Sega Saturn from the moment I first got one. The technology was top-notch and the games looked absolutely beautiful. I knew we could do great things with such a marvel, but...I was still curious to see how Nintendo and Sony would respond."*

-Hideo Kojima

*"I begged the suits in Japan to let me lower the Saturn price for the holidays. Even a drop to \$349 would have been better than nothing. If Black Friday had been a huge thing in 1995 like it was just a few years later on, I imagine I could've at least gotten some \$299 sales for that. The best I could get was for Sega to let us give away some free game vouchers. That pushed some Saturns but it was still a rough holiday that year."*

-Tom Kalinske

Al: 7 (quote: "It definitely brings plenty of difficulty and high-flying action to the table, though the mid-stage and between stage cutscenes are a bit hokey.")

Sushi-X: 8

#### **Forever With You:**

Ed: 7 (quote: "We don't get too many games like this in the West, but it's one of the best dating sims period, with very deep characters and a complex relationship system. It's the kind of game that'll be hit or miss with a lot of people.")

Danyon: 7

Al: 9

Sushi-X: 4.5

#### **Toy Story:**

Ed: 9 (quote: "The graphics in this game are excellent and the use of real cutscenes from the movie really brings the action of Toy Story to life.")

Danyon: 9

Al: 8

Sushi-X: 8

#### **Twisted Metal:**

Ed: 9

Danyon: 9.5 (quote: "It's hard to believe this game can look so good on a current-gen system but it really does. Sweet Tooth's missiles aren't the only thing that blew me away.")

Al: 9

Sushi-X: 8.5

#### **Legend Of The Sorcerers:**

Ed: 6

Danyon: 5.5

Al: 5.5 (quote: "While this game is undoubtedly a technological marvel, it looks a lot better than it plays, the RPG battles are bare-bones at best.")

Sushi-X: 6

#### **Lilywhite:**

Ed: 8

Danyon: 8

Al: 8.5

Sushi-X: 9 (quote: "Dammit, this adorable platformer has even melted my cold ninja heart.")

It makes Andrekah look like Rambo but the levels are incredibly well designed.”)

### **Battlesun:**

Ed: 5

Danyon: 5 (quote: “The graphics are the only good thing about this unimaginative space shooter.”)

Al: 6

Sushi-X: 5.5

### **Door To Demonia:**

Ed: 9

Danyon: 7.5

Al: 7.5 (quote: “This game will surely draw immediate comparisons to King's Field, though in some aspects it's better. It's a much scarier game with an incredibly spooky atmosphere.”)

Sushi-X: 7.5

### **Sweet Ninjas:**

Ed: 6.5

Danyon: 5.5

Al: 6.5

Sushi-X: 6 (quote: “Believe it or not, this game shares an engine with the Japanese Sailor Moon fighting games. With the show currently dominating the daytime TV ratings, one wonders why they didn't just bring that game over instead of this generic girlfighter, that would've made it more interesting at least.”)

-excerpted from the *Electronic Gaming Monthly* reviews of the SNES-CD games of December 1995 in the January and February 1996 issues

-

*With Christmas just two weeks away, the holiday shopping season is predicted to be slightly down from last year, even with the improving economy. With that said, there's still billions of dollars at stake, and one of the largest holiday shopping sectors, as always, is toys. This year, the hottest toys are those from the hit CGI animated film Toy Story, a film that's been performing exceptionally well at the box office. Buzz Lightyear seems to be this year's hottest toy, with voice samples and retractable wings just like in the movie. His best friend Woody is another hot seller in both pull string and non-talking varieties. Of course, Power Rangers is still one of the hottest toy franchises out there, and though it's somewhat down from last year's record breaking holiday, plenty of shoppers are still snapping up the latest items from the hit show. This summer's movie has propelled sales of the new generation of Power Rangers toys, with the Ninja Megazord being quite hard to find. Another toy franchise that's done quite well? The Japanese import Sailor Moon, which is taking in big bucks among those buying for young girls. While Sailor Moon hasn't quite matched the sales of fellow Japanese sensation Power Rangers or perennial girls' favorite Barbie, the toys are still some of the best selling of the season, with sales increasing nearly every week. Of course, all of these franchises are tied in with this year's biggest toy craze: Pogs. The little cardboard caps featuring designs from hit shows like the aforementioned Power Rangers, hit video games like Super Mario, and logos of famous sports teams, among many, many others, are*

*selling like hotcakes this year despite controversy from parents and school officials concerned that the collectible caps promote gambling, with kids betting them during high-stakes games on the playground.*

*Speaking of high-stakes games, video games are, as always, a big seller, with Nintendo once again leading the pack. The company is promoting a new version of its hit Super Nintendo CD device, this time no longer tied to the previous cartridge-based model. With a new price of \$129.99, they're flying off the shelves, with best-selling games such as Donkey Kong Country 2, Ballistic Limit, Super Mario World 3, Doom, and The Legend Of Zelda. Nintendo's rival Sega also released new devices this year, the state-of-the-art Saturn and a portable version of its Genesis console called the Venus. With these new spacey names comes stratospheric prices that are scaring many parents away. Instead, shoppers are continuing to flock to Sega's Genesis console, which just launched the new action game Vectorman. According to leading retail trackers, the Genesis is outselling the Saturn this holiday season 3 to 1, which might be good news for bargain hunters but bad news for Sega, which is pinning its future strategy on the success of the Saturn. When we asked Sega's president Tom Kalinske if the Saturn's price would come down in the future, he said he had no comment. Toy retailers aren't worried about the slight downturn in sales this holiday season, and those we talked to said that there isn't really a new must have toy out there on the market. Despite the downturn, this Christmas holiday is expected to bring in major cheer for retailers across the country.*

-from the "CBS Evening News with Dan Rather", December 11, 1995

-

### **Twisted Metal: The Basics:**

Published by Sony, developed by SingleTrac, and released on December 11, 1995, *Twisted Metal* is a 3-D vehicular combat game largely similar to the version of the game that released IOTL for Sony's Playstation system. Instead of OTL's 12 vehicles, the game features 10, though popular characters such as Sweet Tooth are still available. The game's graphics are in 3-D, but with a slightly lower framerate, much more 2-D in the backgrounds, and with a somewhat shorter draw distance than OTL's game. Despite these technical differences, the game is considered one of the very best graphically on the Super Nintendo CD and its fun gameplay and edgy content make it an immediate hit, especially among teens and young adults. The game features a one-player mode where players compete in a series of increasingly more difficult arenas against other cars, using the game's large variety of weapons to blow away enemies and clear the stage so they can move on to the next one. A heavily promoted aspect of the game is the multiplayer mode, which supports up to four players in split-screen. One reviewer describes the mode as "Mario Kart's Battle Mode on steroids", and though there's a bit more slowdown on four-player mode than there is on single player, it's still the most popular aspect of the game and *Twisted Metal* is considered by players and the gaming media alike to be right alongside the *Super Bomberman* games as one of the best multiplayer games on the system. Reviews for the game are glowing, though unlike in OTL where it was considered a Game of the Year candidate (based on the fact that it was the best launch window game for the highly regarded new Playstation), here it's just considered a really good game while not in the same tier as games such as *Ocarina of Dreams* or *Ballistic Limit*. It becomes one of the top selling SNES-CD games of the holiday season, and though technical limitations would prevent the vehicular combat genre from taking off properly on the SNES-CD, it would inspire a number of similar games on the Sega Saturn.

-

*So, you're looking at the three, count 'em, three RPGs coming to the Super Nintendo CD this month and wondering which one to get? Have no fear, the RPG experts at GameFan are here to give you an answer!*

First off, there's *Arc the Lad*. It's a classic Japanese-styled RPG, with some interesting battle mechanics. Instead of turn-based battles like in traditional RPGs, battles take place on a combat grid and you fight by moving your character a certain number of spaces toward the enemy. You can jump and employ various strategies but the basic gameplay is a lot like Squaresoft's *Front Mission* in that you must carefully decide on the best move to draw the enemy out. This game features some fun characters and a good storyline, though these factors are hampered somewhat by a pretty lousy translation and really terrible voice acting. It seems that Sony rushed this game out for the holiday season and it really shows, if the localization had been better we might have enjoyed it a bit more. The battle system is interesting, but the game is somewhat flawed.

*Legend Of The Sorcerers* is a Telnet-developed game, and it basically plays out like your traditional fantasy RPG but with a major difference. The battles themselves play out as full-motion anime FMVs, similar to games like *Time Gal* or *Road Prosecutor*. You select your move and then you see it actually play out on the screen! It's quite creative and really neat at first, but the problem is that it severely limits the amount of actions your characters can take. You essentially get a basic attack, a special and/or one or two spells, an item option and that's it. You can power up these attacks but they play out the same every single time and battles tend to get very repetitive very quickly. The boss fights are cool but there aren't even that many of them and ultimately, once you strip away the pretty FMVs it's a generic-as-they-come RPG. This seems like more of a tech demo than an actual game, it's something that could be really amazing given the right medium (maybe this would've worked better on the *LaserActive*?) but with the limitations of the SNES-CD it's just a neat experiment and nothing more.

Which brings us to *Breath Of Fire II*. Despite being the most traditional RPG of these three it's also the best, with an enthralling, emotional, and sometimes quite dark storyline, strategy-heavy battles and a great soundtrack, it's a more than worthy sequel to the original. Capcom's definitely outdone itself with this game, which even features a few minutes of animated cutscenes and some limited voice acting. The game isn't afraid to cover heavy subjects such as sex and religion, though these topics are covered quite tastefully and not with the intent to shock or titillate, but to instead present a very well-told story about the dangers of blindly following authority. It's the most well-developed and emotionally mature game of these three and ultimately the most fun to play, that's why *Breath of Fire II* is our choice for the SNES-CD RPG of the month!

Now, whether or not *Breath of Fire II* is better than *Phantasy Star IV* is a question to be settled in our official review column...

-excerpted from the January 1996 issue of *GameFan*

-

*"The Sega Mega Genesis with built-in Mega Charger, now just \$99.99. And included for a limited time, get your choice of Vectorman or Phantasy Star IV as a free bonus game."*

-excerpted from a Genesis commercial that aired during the 1995 Christmas season

*People forget that while the Saturn launched in 1995, Sega was continuing to push the Genesis very hard during Christmas that year. Their two big holiday releases were Vectorman and Phantasy Star IV, and they were among the very best Genesis games. Vectorman used faux-3D graphics to try and simulate what Nintendo was doing with the Donkey Kong Country games. It looked amazing and didn't even require the Mega Charger, though if you had one you could access three bonus levels, some voice acting was unlocked, and the backgrounds had some animation to them. It was actually quite a good game, I remember it being better than Super Mario World 3 and right up there with Ballistic Limit in terms of how good it was. It actually pushed a lot of Genesis systems that Christmas and according to the official sales figures the Genesis was way out ahead of the Saturn, at least at that time.*

*The other big holiday game was Phantasy Star IV. The game had actually been released two years before in Japan, Sega was going to localize it earlier on but after the success of the Mega Charger the game was re-tooled with voice acting and some graphical upgrades. Those without the Mega Charger could still play the original version of the game, which was quite good, but the Mega Charger version was outstanding, it had a lot more combo attacks, the graphics looked great and it even unlocked a bonus second ending that hinted toward the next Phantasy Star game (which would turn out to be Phantasy Star V on the Saturn in 1997). This version was also released in Japan as a special edition version of the game. All in all, Phantasy Star IV ended up being the best selling of the three Genesis Phantasy Star games in North America. It wasn't as big a hit as Vectorman but it gave Sega a nice little boost during a time it was sorely lacking in the RPG department.*

-excerpted from "From Genesis To Saturn: The Great (And Sometimes Painful) Transition", an article on SegaRetro.com, January 11, 2014

-

Ted Crosley: All told, Vectorman was a really fun game. I loved the fact that you could use a projectile attack and the platforming was really challenging as well.

Alex Stansfield: Yeah, this game was superb. It's a nice change of pace from the Sonic games to see a bit more..exacting platformer on the Genesis.

Ted: Well, they gave us time to stop and enjoy the beautiful graphics. I'll admit, it's no *Donkey Kong Country*, but with the Mega Charger it still looks amazing.

Alex: The animation quality, the creativity of the enemies, it's all there. Vectorman is truly one of the year's best games.

Ted: It's absolutely the best Sega Genesis game of the year in my opinion.

Alex: For me it's between this one and Lords of Skylein, but for quality to time ratio I think I do have to agree that it's Vectorman.

Ted: I give Vectorman a 4.5 out of 5, definitely a platformer you need to play.

Alex: And I give it a 4.5 too which makes it a GameTV recommendation. Very highly recommended.

-excerpted from the December 5, 1995 episode of *GameTV*

(...)

Ted: The single player campaign was really short but the multiplayer blew me away.

Alex: I'm in full agreement, *Twisted Metal* is the best multiplayer game of the year, no doubt about it. The game's definitely pushing the Super Nintendo CD when the weapons really get flying but other than some graphical stutter it runs really well.

Ted: I just wish that maybe there could've been more than eight levels. Even *Super Bomberman* had a more robust single-player mode than this.

Alex: And that's true, though the single player mode did get a bit repetitive for me.

Ted: Well yeah, multiplayer's definitely where it's at with this one. Even if I suck at it.

Alex: Brittany was kicking our asses earlier today, I'm surprised she's not over here bragging about it.

Ted: I think she's still raging about *Legend of the Sorcerers*, she HATED that game.

Alex: Well, that game sucked but this game does not. A 4.5 from me.

Ted: I'm giving it a solid 4, definitely one to check out.

(...)

Kazzi DeCarlo: *Lilywhite* is one of the most unique action games I've ever played! It's super adorable, but also super tough.

Brittany Saldita: Well, right, tough is a good word to describe this game. It's no *Andreka* for sure but it does have its charm.

Kaz: It is just such a sweet little game.

Brittany: The storyline was where I think this game fell short for me. You had *Andreka*, which really charmed me quite a lot with her interactions with all the characters but this game's just a straight-up platformer. You go from stage to stage, fire your little twinkle stick at enemies....

Kaz: \*snickering\*

Brittany: I mean, ultimately can you really say it's better than most every other platformer out there? The only thing this game has going for it is character design and a decent soundtrack but other than that I wasn't impressed.

Kaz: I'm not gonna be quite so harsh on it. It was really fun, it was really cute, I enjoyed it.

Brittany: *Lilywhite* gets a 3 from me.

Kaz: And I give it a 4.

(...)

Alex: *Blackthorne* was a really, REALLY good SNES game but the definitive version is definitely this one for the Sega Saturn.

John: The added cutscenes, voices, and excellent graphics make it a far cry better than it was on the SNES and I can see why they canceled the Mega Charger version for this one. It's a great mix of 2-D and 3-D and probably the best Saturn game to come out after launch day.

Alex: It's a tremendously fun, very creepy, challenging, but all-around good game and I wish I'd played this one first because it makes the SNES version a waste of time.

John: \*laughing\* It's not often that you prefer the Sega version of a game to the Nintendo one!

Alex: Well, this game really shows the possibility of the Sega Saturn and I'm excited to see what comes out for it next year. Maybe this game will get a Saturn sequel?

John: Maybe, maybe not, all I know is that I like what I played and I'm giving it a 4.

Alex: I'm giving it a 4 too. It's GameTV recommended so if you've got a Saturn, definitely pick up *Blackthorne*.

-excerpted from the December 12, 1995 episode of *GameTV*

(...)

\*It's the end of the episode and Ted, Alex, Brittany, John, and Kaz are around a tree in pajamas and slippers exchanging gifts, they're each holding a gift-wrapped present in hand.\*

Ted: Being Christmas time here on *GameTV*, it's a special time of the year and so we've got one last present for everybody. We got our number one most wanted gift from next year. So let's start opening the gifts. I'll go first.

Brittany: Why the hell do you get to go first?

Ted: Because I'm the oldest.

John: I'm older than all y'all!

Alex: Look, let's just let Ted go first so he shuts up.

Ted: Thank you. \*he tears open his gift\* Let's see what we got here...oh....oh look...look! \*holds up a generic Saturn game case that says "SONIC 4" on it in big letters\* This is exactly what I wanted! I want Sega to get busy and make Sonic 4! And I think everyone who just dropped 400 bucks on a Saturn...

Alex: Or 500 if you got the Virtua Arcade package....

Ted: Right, right, everyone who spent all that money on a Saturn wants Sonic 4. What are you waiting for, Sega?!

Kaz: Okay, time for me to go next. \*he just rips open his gift before anyone can say anything, it's a Bandai Solaris box\*

Alex: \*groaning audibly\*

Brittany: Oh, I'm sorry.

Ted: You've been a naughty boy this year, Kaz.

Brittany: Seriously, how many people did you like, kill for Santa to bring you that piece of crap?

Kaz: Hey! Hey! No! No, I want some RECOGNITION for this thing! This is a quality gaming device!

John: No, it's really not.

Ted: Denial, that's stage one.

Kaz: No, this is a good game system and there's a really good game coming out next year called *Gon: Prehistoric Panic*. And it's cheaper than the Saturn, it's a hundred bucks cheaper!

Alex: And there's literally six games out for it that aren't educational games. It's junk, it really is junk.

Brittany: Okay, that's it, it's my turn to go. \*opens her box and there's a copy of *Sailor Moon: Another Story* for the Japanese SNES-CD\* Dear Nintendo... \*holds up the game\* Localize this. It is your "Year of RPGs" next year, this is a GREAT RPG that just came out in Japan, this needs to be in America.

Ted: Oh, is that the one where the girls are going around in skirts fighting monsters?

Alex: Hey, I like *Sailor Moon*, *Sailor Moon* is really cool.

Kaz: ...I'll trade gifts with you.

Brittany: No, no way! Nintendo, *Sailor Moon* is a HUGE hit right now. There are lots of little girls who want to play an RPG and for those of them whose parents won't let them play *The Darkest Ritual* because of some bullcrap about the occult, this is a game they can play.

Ted: Or they can play *Final Fantasy VI* which has two much much better female protagonists.

Brittany: Okay, you've got a point but-

John: Is it even that good of a game?

Brittany: It is a very good game. I think it would be a big hit and it's the "Year of RPGs"!

Ted: It's gonna be the year of the Sega Saturn next year.

Brittany: \*groans\*

John: I'll open my gift now. \*opens his present, it's a baseball bat\* Aww yeah, what I want is a real baseball game on the Sega Saturn. And next year it's coming, *Frank Thomas' Big Hurt Baseball* is coming to the Sega Saturn.

Alex: You know what's also coming? Ken Griffey 2 for the Super Nintendo CD.

John: Next year is looking to be BIG for sports games, you've got Grant Hill Basketball coming to the SNES-CD, NBA Hangtime is coming to the arcades, but I'm looking forward to seeing *Frank Thomas* make his way to the Sega Saturn.

Brittany: And I heard it's gonna have the real teams, too, the last one on the SNES and the Genesis didn't.

John: The early video of the game looks real great, I'm looking forward to it.

Alex: All right, finally it's time for my gift. \*opens it up, it's a Game Boy\*

Brittany: That's a good gift.

Ted: I don't get it.

Alex: \*takes out the Game Boy and it's been drawn all over with crayons\*

Ted: Why would you do that to a perfectly good Game Boy?!

Kaz: It's pretty.

Alex: Nintendo, it's been six years since the Game Boy came out and it's great, but it needs COLOR! Game Gear has it, Lynx had it back in 1989, the Game Boy needs to get with the times! It needs colors!

Ted: It needs games.

John: Well, in Japan, they're coming out with some kinda...bug-catching game?

Brittany: I heard about that, I forget what it's called but it looks pretty fun, it's made by the same guys who did *Pulseman*.

Ted: You just need to get a Venus, I think.

Alex: I'm gonna need to ask Santa for a truckload of batteries.

Ted: I can play *Vectorman* on the toilet!

Alex: I can play *Tetris* on the toilet...

Brittany: You two are disgusting, remind me never to touch either of your handhelds.

John: Well, it's been a fun time here at *GameTV*, but now we're signing off, we'll be back with a special New Year's Eve year-end special in 12 days. I'm John, that's Kaz, that's Brittany, and \*points to Ted and Alex\* those two are disgusting, and from everyone here at *GameTV* we wish you all a very Merry Christmas!

Brittany: Hope you get all the games you want, bye! \*waving with the other hosts\*

-excerpted from the December 19, 1995 episode of *GameTV*

17. Battle Arena Toshinden
18. Madden 96
19. Naval Guns
20. Mysteria

-

### **December 25, 1995**

Though Christmas wasn't typically celebrated in Japan the way it is in the West, and certainly not with the religious significance it holds for many Christians, it was still celebrated as a jovial time of gift giving and to celebrate the coming new year, and Hideo Kojima was in a Christmasy mood as he sat at home reading the fax he'd just recieved from his friend Masahiro Sakurai at HAL Labs. The reception that *Tokimeki Memorial* had gotten in the West as *Forever With You* was pleasing to him. Though the game would only sell 29,000 copies in North America, its very positive response from Western game critics still made him quite happy and the game sold more than well enough in Japan to cover any shortfalls that low sales in other territories would cause.

1996 was a big year for him and for his company Konami. In two short months, *Eternal Night* would be coming to the West. The action-adventure game, styled like the company's

series *Castlevania* but with a Kojima flair, had sold nearly a million copies in Japan already and had been a smash hit with critics, earning a 39/40 in Famitsu. It was already being heavily hyped by Western game publications and would no doubt be one of the biggest games of the quarter for the Super Nintendo CD. An enhanced remake compilation of the first two Metal Gear games titled *Metal Gear 1+2* was also set for release the very same month, and was sure to be at least a decent success. Then there was *Policenauts*, the follow-up to Kojima's international hit *Snatcher*. *Snatcher* had been possibly the most influential Super Nintendo CD game ever released, and he had high hopes that *Policenauts* would be equally well received.

Of course, there was the question of Kojima's next project, a game he'd been conceiving in his mind since 1994. A game he'd thought at one point to release for the 3DO, and then perhaps for the Super Nintendo CD...but he had too many ideas in his head, the ideas had grown far too ambitious for either of those systems. Now he had his eye on the Saturn, a system he'd been enjoying for the past year. He KNEW the Saturn was more than capable of handling his vision for Metal Gear 3... it was top-notch technology, which is why it was commanding such a high retail price. But Kojima also knew that another console was coming, he'd been asking Sakurai about it for more than two years, but still had only news articles, snippets of press conferences, and test time with early development kits to glean information off of. He'd definitely have to give Nintendo's new console a chance to prove itself before making any kind of decision on Metal Gear 3. He was extremely impressed with the Saturn, but if this game was going to be the best it could possibly be, he'd have to weigh all his options extremely.

Another fax was coming in as Kojima was lost in thought. He turned to the fax machine and walked over to it, tearing the fax off of the roll. It was from Konami HQ. He blinked.

"New Eunice dev kits are here. Merry Christmas."

Kojima smiled. Merry Christmas, indeed.

-

Here's a list of SNES-CD games that I imagine would get official soundtracks for purchase in North America up to the end of 1995:

- Super Mario World 2
- Final Fantasy III/V
- Secret Of Mana
- The Secret Of Monkey Island
- Final Fantasy Origins
- Super Street Fighter II: Arcade Edition
- Mortal Kombat II
- Donkey Kong Country
- F-Zero CD
- Phaedra's Heart
- Soulqueen
- Jewels Of The Realm
- Squad Four
- Mega Man X2

Pulseman  
Valis: Rebirth  
Final Fantasy VI  
Cosmic Fantasy  
Pocky and Rocky CD  
The Legend Of Zelda: Ocarina Of Dreams  
Ogre Battle  
Doom  
Super Mario World 3  
Final Fantasy IV  
Mortal Kombat 3  
Donkey Kong Country 2: Diddy's Kong Quest  
Front Mission  
Forever With You  
The Darkest Ritual  
Frederico  
Parallel World  
Victory  
Andrekah  
Tales Of The Seven Seas  
Mysteria  
Ballistic Limit  
Rage

-

*"While we were extremely impressed by the level of graphical fidelity and high-quality sound found in the Sega Saturn launch line-up, we couldn't stop playing The Legend Of Zelda: Ocarina Of Dreams. Battling fierce bosses, plunging deep into huge dungeons, and discovering secret after secret, this game had a hold on us and we're still playing it today. That's the reason why we're awarding our 1995 Game of the Year award to this outstanding title."*

-excerpted from the February 1996 issue of *Next Generation* magazine

*"Larry, 1995 was the year we saw video games embraced by older players more than any other year before. Poll after poll is showing that the demographics of our fans are getting older and older, and so going forward I think those people are going to be buying a lot more games."*

-Howard Lincoln, excerpted from the January 25, 1996 episode of *Larry King Live*

*"At this stage it seems a Saturn price cut is inevitable, the only question is when and how much."*

-Quartermann from his rumors column in the February 1996 issue of *Electronic Gaming Monthly*

*"This is a song about loss and about how we all hope that we'll be able to see our loved ones again. Working with our dear friends Mariah Carey and Boyz II Men on this song has been really bittersweet and it's so gratifying to hear how it's been helping so many people cope with the losses in their own lives."*

-Rozonda "Chilli" Thomas, speaking with MTV news about the song "One Sweet Day" on

January 5, 1996

-

**Top Selling Super Nintendo CD Games of 1995** (pack-in sales included, only sales during the 1995 calendar year are counted):

1. Donkey Kong Country
2. The Legend Of Zelda: Ocarina Of Dreams
3. Super Mario World 2
4. Super Mario World 3
5. Doom
6. Donkey Kong Country 2: Diddy's Kong Quest
7. Ballistic Limit
8. Tales Of The Seven Seas
9. Killer Instinct
10. Super Mario Kart

-

### **1995 Nintendo Power Editors' Choice Top Ten SNES-CD Games**

1. The Legend Of Zelda: Ocarina Of Dreams

*Ocarina Of Dreams towered above a great year of fantastic games. Link's latest quest was his biggest and most epic to date, and players and editors are in agreement: it's the most inspired title in one of Nintendo's most storied series.*

2. Donkey Kong Country 2: Diddy's Kong Quest

*Diddy Kong returns in this sequel that's somehow even better than the first! Along with his pal Dixie Kong, the two monkey heroes explored eight huge worlds in their epic quest to save Donkey Kong from the evil Captain K. Rool.*

3. Super Mario World 3

*Mario's newest adventure was a bit different from what players were used to but for our money it was his best quest ever! Bowser's Mechakoopa army couldn't keep the plucky plumber down, and the new 3-D graphics brought Mario's adventure to life in a way we've never seen before!*

4. Doom

*The long-anticipated SNES-CD version of this instant PC classic was worth the wait! With more than a dozen levels, this awesome shooter left us all clamoring for more.*

5. Final Fantasy VI

*Squaresoft's latest RPG is a true classic, featuring a beautiful soundtrack (including that amazing opera scene!) and one of our favorite villains in any video game.*

6. Ballistic Limit

*From the depths of an alien-infested space station to huge motherships, Ballistic Limit was a sci-fi odyssey and gave players dozens of ways to blast the alien hordes.*

#### 7. Killer Instinct

*Rare's arcade fighter impressed us all with beautiful 3-D visuals and high-impact combo moves!*

#### 8. Tales Of The Seven Seas

*This seafaring pirate adventure swashbuckled its way into our hearts with a cast of fun characters and over 100 levels to explore!*

#### 9. Tecmo Super Bowl CD

*Tecmo gave a new spin to the classic football series with updated graphics, all-new rosters, and the introduction of commentary for the first time ever!*

#### 10. Earthbound 2

*This quirky modern-day RPG was one of the most epic role-playing quests we've ever experienced. Ness' journey to take down Giygas featured thrills, friendship, and laughter.*

-

**1995 Nintendo Power Awards ("The Nesters")**- compiled from fan voting, not a complete list of awards

#### Best Graphics and Sound (SNES-CD)

1. Ballistic Limit
2. The Legend Of Zelda: Ocarina Of Dreams
3. Twisted Metal

#### Best Challenge (SNES-CD)

1. Donkey Kong Country 2: Diddy's Kong Quest
2. Doom
3. The Legend Of Zelda: Ocarina Of Dreams

#### Best Play Control (SNES-CD)

1. The Legend Of Zelda: Ocarina Of Dreams
2. Doom
3. Ballistic Limit

#### Best Theme And Fun (SNES-CD)

1. The Legend Of Zelda: Ocarina Of Dreams
2. Donkey Kong Country 2: Diddy's Kong Quest
3. Super Mario World 3

### Best Hero

1. Link
2. Mario
3. Doomguy

### Best Villain

1. Kefka
2. Gaddis
3. Bowser

### Most Innovative

1. Ballistic Limit
2. Tales Of The Seven Seas
3. Earthbound 2

### Best Overall (Super Nintendo)

1. Yoshi's Island
2. Kirby's Adventure 2
3. Storm Guardians

### Best Overall (SNES-CD)

1. The Legend Of Zelda: Ocarina Of Dreams
2. Doom
3. Final Fantasy VI

(Author's Notes: "Sure Ain't Me" is a song made up for TTL, written by Lisa Lopes and referring to her relationship with Andre Rison, recorded three weeks before her death in December 1994, in the song she references how the relationship problems aren't caused by her and that anything wrong that she does in the relationship is because of her boyfriend, after Lopes' death the song becomes an anthem for women in abusive relationships. As for "Waterfalls", which Lisa Lopes penned while in prison for burning down Andre Rison's mansion IOTL, the house-burning never happens ITTL and so the song is never written, which is a rather large butterfly considering how many weeks the song topped the charts IOTL. "Dreaming Of You" peaked at #22 IOTL, it would seem paradoxical that the song would do BETTER with Selena alive, but with her alive to finish and promote the album it does significantly better critically and sales-wise and the song "Dreaming Of You" becomes a #1 hit, at least for a week. The album itself tops the sales charts for four weeks. "One Sweet Day" is an even MORE massive hit than it was IOTL with the involvement of the two surviving members of TLC. It ends up topping the charts for an astonishing nineteen consecutive weeks across 1995 and 1996.)

-

**Electronic Gaming Monthly Editors' Choice Awards 1995 (selected):**

Game of The Year: The Legend Of Zelda: Ocarina Of Dreams (Super Nintendo CD)  
Runner-up: Doom (Super Nintendo CD)

*With The Legend Of Zelda: Ocarina Of Dreams our pretty much unanimous choice for Game of the Year, the much more difficult decision was which game to put as our runner-up. There were a number of strong contenders, including Ballistic Limit, Yoshi's Island, and NHL '96 on the Sega Saturn, but ultimately we felt that the SNES-CD port of Doom, a near perfect port of the PC version, deserved our pick.*

Super Nintendo Game Of The Year: Yoshi's Island  
Runner-up: Kirby's Adventure 2

*Yoshi's Island was our winner here and it wasn't close. The beautiful, storybook-like graphics and brilliant level design made this an easy decision. As for our runner up, we loved the cutesy Kirby's Adventure 2 and its great bosses and power-ups which made it a worthy successor to the NES classic.*

Sega Genesis Game Of The Year: Lords Of Skylein  
Runner-up: Vectorman

*Vectorman blew our minds with its graphics and fun gameplay, but the epic Lords of Skylein just narrowly beat it out. This 50-hour journey was one of the longest RPGs we've ever played, and its enthralling storyline made us care deeply about its cast of amazing characters.*

Super Nintendo CD Game Of The Year: The Legend Of Zelda: Ocarina Of Dreams  
Runner-up: Doom

*This was also what our overall Game of the Year came down too and ultimately Zelda won in a landslide with its beautiful visuals and brilliantly designed dungeons, along with probably the best storyline yet in a Zelda game.*

Sega Saturn Game Of The Year: NHL '96  
Runner-up: Virtua Fighter

*NHL '96 just might be the best sports game of all time, making us feel like we're really at the arena. Virtua Fighter was a pitch-perfect home port of a game that we all got super-addicted to at the arcades.*

Best RPG: Final Fantasy VI (Super Nintendo CD)  
Runner-up: Lords Of Skylein (Sega Genesis)

*It was a close decision but in the end, Final Fantasy VI was our top RPG of the year. It had a huge cast of characters and all of them brought their own good qualities to the table. Though Lords of Skylein was longer, it wasn't quite as epic as Square's classic.*

Best Fighting Game: Killer Instinct (Super Nintendo CD)  
Runner-up: Virtua Fighter (Sega Saturn)

*Hoo boy, this category almost had us fighting for real! Both games had their pros, but in the end, Killer Instinct and its fun combo system won out over the graphically-superior but not quite as addicting Virtua Fighter.*

Best Action Game: Yoshi's Island (Super Nintendo)

Runner-up: Donkey Kong Country 2: Diddy's Kong Quest (Super Nintendo CD)

*Donkey Kong Country 2 was certainly amazing, and it's a testament to how good this year was that a game superior in every way to last year's Game of the Year winner couldn't even win its own genre this time around. Yoshi's Island was beautiful, challenging, and fun to come back to over and over again.*

Best Music: Final Fantasy VI (Super Nintendo)

Runner-up: Ultima: The Worldly Lord (Sega Saturn)

*Final Fantasy VI's epic score just barely won out over Ultima's movie-like soundtrack. In the end, it was the opera scene that won it for Squaresoft's masterpiece.*

### **System Reviews:**

Super Nintendo CD:

Ed: 10 (quote: "The Super Nintendo CD continued to be the best video game console around by a wide margin. Even with the Saturn having just released, this thing continues to impress with games like *Ballistic Limit* and *Ocarina of Dreams*.")

Andrew: 9 (quote: "*Ocarina of Dreams* alone makes the Super Nintendo CD worth the money, especially since you can finally buy it as its own console.")

Mike: 10 (quote: "The SNES-CD had more hits than all the other game consoles combined. There's literally something for everyone on this amazing game system.")

Sushi-X: 9 (quote: "The visuals are showing their age just a bit compared to the Saturn, but *Twisted Metal* proves that developers can still push this bad boy.")

Sega Saturn:

Ed: 9 (quote: "People might balk at the price but there's no balking at the amazing graphics and great initial lineup.")

Andrew: 9 (quote: "With games like *Panzer Dragoon* already here and *Sonic 4* on the way, Genesis owners should start saving up.")

Mike: 8 (quote: "Though none of the games really blew me away, there's still enough here to like that it's worth it for someone with \$400 to spend.")

Sushi-X: 8 (quote: "I can't wait until the awesome Namco arcade hits like *Soul Edge* come to this thing.")

Super Nintendo:

Ed: 6 (quote: "It's finally looking like the end of the line for the venerable SNES, but it's been a great run.")

Andrew: 6 (quote: "Without the need to buy it in order to play SNES-CD games, there's not too much need to purchase an SNES console now.")

Mike: 7 (quote: "*Yoshi's Island* proves that there's still life in those old SNES cartridges.")

Sushi-X: 6 (quote: "It's been fun but compared to the Saturn, the SNES is downright

primitive.”)

Genesis:

Ed: 6 (quote: “If I had to choose between a cheap Genesis and an expensive Saturn, I'd probably go for the Saturn.”)

Andrew: 7 (quote: “It's arguable that the Sega Genesis had some of the year's best RPGs between *Lords of Skylein*, *Phantasy Star IV*, and *Star Trek*.”)

Mike: 6 (quote: “You pretty much needed the Mega Charger to get much fun out of the Genesis this year.”)

Sushi-X: 8 (quote: “I'm not giving up on my Sega Genesis yet, it's still the best value console around even with the SNES-CD plummeting in price.”)

-from *Electronic Gaming Monthly's* 1996 Video Game Buyer's Guide

-

### **Gamepro 1995 Readers' Choice Awards** (selected)

*Back in our March 1996 issue, we asked our readers to name their favorite games of the year, and boy, did you guys come through! Over 3,000 letters came in naming over 100 different games in more than 20 categories, and here are the results!*

Best Role-Playing Game:

*You guys clearly had a favorite and that was Final Fantasy VI! Squaresoft's epic SNES-CD game took nearly half of the vote, while a likely Sega Genesis split between its two great RPGs allowed Earthbound 2 to slide into second place.*

Final Fantasy VI: 48%

Earthbound 2: 14%

Phantasy Star IV: 12%

Lords Of Skylein: 9%

The Darkest Ritual: 8%

Breath of Fire II: 6%

Best Sports Game:

*While we voted the Saturn's NHL '96 as our personal favorite, a lot of our readers balked at the Saturn's then-high price of \$399, and the more popular Genesis sports titles got a lot more votes. Tecmo Super Bowl CD scored a surprisingly close second as Nintendo gamers showed their love for the excellent NFL title.*

NBA Live '96 (Genesis): 29%

Tecmo Super Bowl CD (SNES-CD) : 26%

Madden '96 (Genesis): 20%

NHL '96 (Saturn): 8%

Best Fighting Game:

*This was largely a three-way race between Killer Instinct, Mortal Kombat 3, and Virtua Fighter. In the end, readers showed their love for the combo-heavy KI.*

Killer Instinct (SNES-CD): 41%  
Mortal Kombat 3 (SNES-CD): 26%  
Virtua Fighter: (Saturn) 19%

Best Action Game:

*Wow! This one was neck-and-neck all the way! We thought the SNES-CD's top two titles might split and allow Vectorman the win, but Nintendo fans had enough votes for both DKC2 and Ballistic Limit. Only 19 votes separated them!*

Donkey Kong Country 2: 26%  
Ballistic Limit: 25%  
Vectorman: 22%  
Yoshi's Island: 11%  
Knuckles: Renegade: 10%

Best SNES Game:

*Yoshi's Island was expected to win, and it did, but look at how many of you voted for Storm Guardians! This fantastic game got a lot of praise in GamePro and it looks like our readers listened to us.*

Yoshi's Island: 41%  
Storm Guardians: 23%  
Kirby's Adventure 2: 18%  
F-Zero: G-Force: 8%

Best Genesis Game:

*Vectorman is a clear hit! Vectorman got a ton of votes from readers and it beat out even Knuckles: Renegade by a big margin. RPG gamers had their say as well, putting Phantasy Star IV and Lords of Skylein in a virtual tie for third (in truth, PSIV won by two votes).*

Vectorman: 39%  
Knuckles: Renegade: 25%  
Phantasy Star IV: 12%  
Lords Of Skylein: 12%  
Madden '96: 7%

Best SNES-CD Game:

*While there were lots of great SNES-CD titles this year, it was all about Zelda. Ocarina of Dreams nearly tripled the runner-up, Final Fantasy VI, to run away with this year's award.*

The Legend Of Zelda: Ocarina Of Dreams: 47%  
Final Fantasy VI: 16%  
Ballistic Limit: 15%  
Doom: 9%  
Killer Instinct: 9%

Best Saturn Game:

*We apparently have a lot of hockey fans reading this magazine. NHL '96 was the big winner, beating out runner-up Virtua Fighter and hoisting this year's GamePro Cup. Ultima: The Worldly Lord finished in a very respectable third.*

NHL '96: 32%  
Virtua Fighter: 29%  
Ultima: The Worldly Lord: 14%  
Virtua Cop: 9%  
Madden '96: 7%

#### Best System Overall:

*As we expected, Sega fans split their vote somewhat, though Super Nintendo CD still had eight more votes than both the Genesis and Saturn combined, even with the cartridge-based Super Nintendo siphoning off votes. The Super Nintendo CD had its best year yet, with dozens of quality games and some of the greatest games of all time! We imagine the Saturn will surge after this year's recent price drop!*

Super Nintendo CD: 43%  
Sega Genesis: 29%  
Sega Saturn: 14%  
Super Nintendo: 9%

#### Best Game Overall:

*We figured Zelda would win, though we didn't imagine it would be this much of a blowout! Ocarina of Dreams took home more than a third of the votes, that's over a thousand of you who loved Zelda enough to make it your favorite game of the year. We don't blame you, Link's amazing quest was definitely the best thus far in the series and one of our favorite games of all time. Sega fans rallied behind Vectorman, who finished in second by quite a wide margin. And look at that support for Virtua Fighter! Though it didn't beat out NHL '96 to win the best Saturn game honors, loyal fans did give it enough of a push to put it ahead of the hockey title for this award, finishing in a very close fourth behind Final Fantasy VI. The strangest games to get votes this year? SNES-CD's Chicken Fighter, The Smurfs on Sega Game Gear, and Spot Goes To Hollywood on the Sega Genesis were among the 37 games that received a single vote in this category.*

The Legend Of Zelda: Ocarina Of Dreams (SNES-CD): 35%  
Vectorman (Genesis): 14%  
Final Fantasy VI (SNES-CD): 8%  
Virtua Fighter (Saturn): 8%  
Ballistic Limit (SNES-CD): 6%  
NHL '96 (Saturn): 5%  
Doom (SNES-CD): 5%  
Phantasy Star IV (Genesis): 4%  
Yoshi's Island (SNES): 3%  
Donkey Kong Country 2 (SNES-CD): 3%  
Killer Instinct (SNES-CD): 2%  
Knuckles: Renegade (Genesis): 2%

-

Ted Crosley: We've just finished counting down the 5 Worst Games of 1995, along with our Top 5 Computer Games and our Top 5 Arcade Games. Now here's the moment you've all been waiting for, it's our Top 10 Console Video Games Of The Year.

Alex Stansfield: Remember, these games were selected by all five of us together, so games that receive a better review from just the two of us may not have been liked as well by the other three. So don't write any letters to us asking why a Hall of Fame game might be ranked below a game that didn't make the Hall of Fame.

Kazzi DeCarlo: But DO write letters sharing with us your recipes for delicious desserts, because those are yummy.

Ted: Yes, keep the dessert recipes coming!

Alex: Here are our top ten games of 1995!

Brittany Saldita: Number 10... **Knuckles: Renegade**. Of all the great action games to come out for the Genesis this year, *Vectorman*, *Ecco 3*, this latest game in the Sonic franchise stood the tallest. Introducing edgy new storylines, tight gameplay, and Knuckles' kick-ass new pals in the Renegades, this game made the wait for *Sonic the Hedgehog 4* just a bit easier.

Ted: But not too much easier.

Alex: Knuckles: Renegade brought in a lot of the dark aesthetic from the Saturday morning *Sonic* series, letting gamers take Knuckles for a spin in a thrilling new world with ruthless new enemies.

John Walden: Of all of Knuckles' new friends, Corona the butterfly and her lethal sonic waves made her an instant favorite. She fluttered her way into our hearts even while she was bringing Robotnik's robot legions to their knees.

Ted: Our number 9 game of the year was **Super Mario World 3**. Though it wasn't nearly as good as the previous *Super Mario World* title, and though we gave it a LOT of flack, it's undeniable that the graphics are gorgeous and some of the enemy designs were out of this world.

Brittany: Bowser's legions have never looked better, the Mechakoopas were fearsome foes and even though Mario's jumping was a bit cumbersome in the new isometric viewpoint, we all sucked it up and got the hang of it anyway, making for a really fun experience.

Alex: Mario World 3 featured a jovial soundtrack from Nintendo's master musician Koji Kondo. The mix of jovial jaunts and fearsome mechanical melodies made this game emotionally stirring from start to finish.

Kaz: The number eight game on our list was **Ultima: The Worldly Lord** for the Sega Saturn, which brought RPG exploration into a new dimension with a huge world to traverse and lots of people to recruit. Also, I loved exploring the pie factory.

Alex: Being able to chuck pies at NPCs was a hilarious diversion, but this huge world had lots of them to undertake and we spent more time with this game than most of this year's other games combined.

Ted: *The Worldly Lord* was probably the best game in this venerable RPG series, and that's saying something. It's a different experience every time you play.

Brittany: From start to finish, *Ultima: The Worldly Lord* is a game full of mystery and wonder, and it was the one Saturn game we absolutely couldn't put down.

Alex: Our number seven game of the year was **Tales Of The Seven Seas**.

Ted: Exploring the seas has never been so fun than with this motley crew of outcasts and misfits. Brilliantly voice acted and featuring some really inspired level design, few games have surprised us so pleasantly as this one.

Brittany: With deep characters, tons of secrets, and seven different endings, *Tales Of The Seven Seas* is the most fun I've had with a video game in a long time. We sang its praises during our review earlier this year, nearly putting it into our Hall of Fame.

Alex: It's a real step-up in terms of interactive storytelling and we're already clamoring for a sequel. *Tales Of The Seven Seas* is more than worthy of being called one of the year's best games.

John: At number six, **Yoshi's Island** is the best looking Super Nintendo game ever made, with 2.5-D graphics that could've been right at home even on CD.

Ted: It features dozens of challenging and creative levels, and lots of fun secrets to find.

Kaz: It's also one of the year's funniest games, featuring the bumbling yet menacing villain Kamek and a fight inside the stomach of a giant evil frog.

Brittany: These plucky dinosaurs travel through jungles, volcanos, and even above the clouds on their journey to reunite the baby brothers Mario and Luigi.

Ted: Yoshi's Island was an amazingly fun game and a great way to say goodbye to the cartridge Super Nintendo as we usher in a new generation of games.

Alex: Our number five game of the year was **Doom** for the Super Nintendo CD. We didn't think they could make *Doom* as good as it was on the PC, but they did.

Ted: While we lamented the lack of multiplayer, the single-player campaign was as good as any and all the levels from the original PC version were here in all their glory.

John: The awesome rock-inspired soundtrack was there too, and killing demons has never been so fun as it was when done to driving guitar riffs.

Kaz: Simply put, Doom kicked ass.

Ted: Our number four game was **Ballistic Limit**. This brilliant sci-fi adventure became our second Hall of Fame game back in October, and for damn good reason.

Brittany: With nineteen levels jam-packed with action and alien monsters, along with a unique and intuitive perspective switching mode, *Ballistic Limit* is one of the most unique shooters we've ever played.

Alex: Taking its cues from games like *Super Metroid*, *Ballistic Limit* plunged us into the depths of desperation and kept us on the edges of our seats.

Brittany: In third place, the RPG masterpiece **Final Fantasy VI**. With a storyline both uplifting and heartrending, this role-playing classic was clearly the best game in the series, featuring both the best visuals and the best score to date.

Ted: While I've never been a fan of the opera, *Final Fantasy VI*'s stunning opera scene, featuring actual real-life singing, brought a tear even to my cynical eye.

Kaz: And the villainous Kefka with his terrifying laugh made him a villain we all loved to hate.

John: The game even featured one of the biggest twists we've even seen in a video game, but we won't spoil it for you, you'll have to play it for yourself.

Alex: *Final Fantasy VI* is utterly worthy of the title "masterpiece" and its a game every Super Nintendo CD owner needs to play, RPG fan or not.

Ted: That brings us to our #2 game of the year, and it's the sequel to what a lot of people considered last year's #1. We're talking about **Donkey Kong Country 2: Diddy's Kong Quest**. Not too many people believed that last year's amazing *Donkey Kong Country* could ever be improved upon, but this one proved all the doubters wrong.

Alex: The sheer number of secrets contained in this game boggled all our minds, and the challenging platforming made us all yell at our screens.

Kaz: The Lost World alone probably contributed to the invention of hundreds of new swear words.

Brittany: But all of that challenge made for an incredibly rewarding experience, and when you finally saw that 102%, your heart was filled with a sense of supreme accomplishment.

Ted: *Donkey Kong Country 2* is itself a supreme accomplishment, and it's got us super excited for *Donkey Kong Country 3*.

Alex: And now we reach the #1 game of the year.

Ted: I'm sure those of you who have been following GameTV since we've been on the air can probably guess what it is.

Kaz: And those of you who haven't been following us...why the hell not?

Ted: Our pick for Best Game of 1995, and it is absolutely unanimous, even Kaz agreed with us on this one is... **The Legend Of Zelda: Ocarina Of Dreams**.

Alex: What else is there to say that hasn't already been said? Nintendo's epic quest blew all of our minds. From deep, dark, deadly dungeons to a twisty turny storyline that brought the events of *A Link To The Past* and *Link's Awakening* full circle, *Ocarina of Dreams* completed an epic trilogy and was simply one of the best video games ever made.

John: No bull here, *Ocarina Of Dreams* is a big step forward in video gaming and a sign that Nintendo is still the number one company around when it comes to creating video game classics.

Ted: Even I've got to admit, if I only owned a Sega Genesis I'd be pretty damn jealous of Nintendo owners for being the only ones who get to play this brilliant classic of a game.

Brittany: Yeah, and honestly, this really was Nintendo's year. Don't get me wrong, I loved a ton of games Sega put out and the Saturn's future is looking so bright that Sonic should probably start wearing some sunglasses, but 1995 was the Year of Nintendo and really was the Year of Zelda.

Alex: The Super Nintendo CD had seven of our top ten games. We thought about balancing out the list but we had to be honest, most of our faves were of the spinning disc variety.

Kaz: And there were lots of great Nintendo CD games that we DIDN'T include on this list. Twisted Metal, Earthbound 2, Andrekah, Victory, Rage, so many really great games that easily could've made it with the others.

Ted: I'm feelin' it though, next year is the Saturn's year.

-excerpted from the December 31, 1995 episode of *GameTV*

-

*With the introduction of the Sega Saturn and tons of great games, 1995 was one of gaming's biggest years in recent memory. Here's a brief countdown of the top 10 news stories from the past year in video games.*

#### *#10: Michael Jordan Signs With Sega*

Michael Jordan is the world's most famous athlete and the king of the NBA. With his exclusivity deal with Sega, you'll only be able to play with Michael Jordan on basketball games for the Genesis and Saturn. He might even be a bigger MJ than the last one Sega signed...

#### *#9: Sail The Seven Seas*

*Tales Of The Seven Seas* was perhaps the year's biggest sleeper hit, selling hundreds of thousands of copies and scoring rave reviews from lots of game magazines (including this one). The Super Nintendo CD's pirate-themed hit even kicked off a bit of a mini-pirate craze!

#### *#8: We're Heading To Venus*

Now you can play Sega Genesis games anywhere you go with the release of the Sega Venus, which even includes Mega Charger support. Though you'll need lots of batteries, being able to play Genesis games anywhere is pretty amazing.

#### *#7: Nintendo Decouples The SNES-CD*

Before November 1995, those who wanted to play the slew of hits on the SNES-CD needed

to own a Super Nintendo or buy an expensive combo set. With the introduction of the stand-alone version, the SNES-CD became available to a whole new group of players.

#### *#6: Mortal Kombat A Blockbuster*

With a big \$25 million opening weekend, *Mortal Kombat* became the first video game movie to achieve major Hollywood success (and even got mediocre reviews from critics, which for a video game movie is a big accomplishment). Will this lead to more video game-to-film adaptations in the near future?

#### *#5: Sega And Namco Create An Arcade Powerhouse*

Early last year, Namco and Sega signed a deal to create a new generation of arcade chips, which we've already begun seeing in games such as *Tekken* and *Soul Edge*. Namco is poised to play a big role in Sega's future success.

#### *#4: Nintendo And Sony Make A Deal*

It was looking a bit iffy for a while, but in March of last year Nintendo and Sony signed the paperwork to begin developing a new console known as Project Eunice. While it likely won't see release in 1996, we can't wait to see all the latest news on what this console is going to be.

#### *#3: A Show Of Our Own*

The first ever expo dedicated solely to video games took place in Los Angeles last May. E3 was a rousing success and the next one is already scheduled for this spring, where we'll likely see a brand new crop of future hit games.

#### *#2: Ocarina Of Dreams*

The overwhelming critical favorite last year was Nintendo's *The Legend Of Zelda: Ocarina of Dreams*. Link's latest adventure was his best received yet and one of the year's best-selling games.

#### *#1: Enter The Saturn*

The launch of the Sega Saturn was easily the biggest video game story of 1995. Though sales weren't exactly overwhelming, the system's strong launch lineup and great critical reception have set it up nicely to have an excellent 1996.

(...)

*1995's been great but we're already looking forward to 1996. Here are the ten games we expect to be next year's biggest hits.*

#### *#10: Resident Evil*

The Saturn's survival-horror thriller is looking amazing as it gets set to release in Japan. From what we've seen, it's going to be one of the scariest games ever made and with movie-like visuals, it's set to be a technical marvel as well.

*#9: Super Mario RPG*

We can't wait to see Mario and friends take their turn at becoming RPG heroes. While we don't know too much about the game, it looks amazing graphically and the thought of playable Bowser makes us giddy with anticipation.

*#8: Panzer Dragoon II Zwei*

Last year's *Panzer Dragoon* was our favorite Saturn launch game and the sequel looks to build on everything the first game set up.

*#7: Chrono Trigger*

Squaresoft's "Dream Project" just released in Japan to amazing reviews and record-breaking sales and we expect more of the same in the States. It's set to be the Super Nintendo CD's first ever two-disc game, and if one disc isn't enough to contain all the awesomeness it'll be hard for this game to be topped!

*#6: Tomb Raider*

We're highly enamored with this adventure game's beautiful heroine and stunning environments and can't wait to explore the ancient ruins with Lara Croft next year.

*#5: Elements of Mana*

The sequel to *Secret Of Mana* is shaping up to be even more fun than the first from what we've seen. Choosing our own party should give the game some excellent replay value.

*#4: Squad Four 2*

Other than the fact that it IS coming next year, Nintendo's keeping surprisingly tight-lipped about the details of the sequel to one of 1994's top original games, but the few screenshots we've seen look incredible.

*#3: Tale Phantasia*

The game's been out in Japan nearly a year and we loved what we've played. Battles are a blast and the localization, done by the same team who did the classic *Lunar* on Sega CD, is sounding highly promising. This game's hyped to the moon, we think it'll live up to that hype.

*#2: NiGHTS: Into Dreams*

From the very first Saturn tech demo we knew this game would be a winner and we're not backing down from that prediction. This game is the best looking Saturn game we've ever seen and now it's only a few months away.

*#1: Sonic The Hedgehog 4*

Perhaps the most anticipated game of all time, the latest title in the Sonic series is building hype to an enormous fever pitch. If it's not Game of the Year 1996, it'll probably be viewed as a massive disappointment.

-

*"1995 saw the grand encroachment of video games into the cultural mainstream in a big way. Games like Doom on the SNES-CD and Virtua Cop on the Sega Saturn saw mainstream headlines, and with Mortal Kombat a marginally big hit at the box office, scoring \$70 million in North American box-office receipts, video games were definitely on the forefront of the cultural zeitgeist. It was a bit of a cruel irony that the year saw Sega, which had become a force in the industry by attempting to push video games further into the mainstream, saw their worst sales year since 1991. The Sega Saturn had launched at seemingly the perfect time and with an excellent launch line-up, and the technically advanced system had scored rave reviews from game critics, but the steep price of entry was far too much to ask players to bear, especially when Sega had prided itself on being the budget alternative to higher-priced Nintendo consoles. Nintendo struck while the iron was hot, not only enjoying the best lineup thus far in their history, with new installments in their flagship Mario and Zelda series along with excellent third-party efforts from Squaresoft, Capcom, Konami, and Sony, but launching a new stand-alone SNES-CD that was perfectly priced at just \$129. Nintendo crushed Sega over the holidays and as 1996 began, the company stood poised to deal their rival a finishing blow, even before announcing a single game for their long-awaited Ultra Nintendo. Once again, as it had been in 1991, it would be up to the blue hedgehog to strike back against the dominant Nintendo. Could Sega take advantage of their technological superiority before their window of opportunity slammed shut for good?"*

-*"The History Of Console Gaming: Year-By-Year (Part 6)", Wired.com, June 19, 2012*

-

And here's a list of 1995's original franchise games along with some brief descriptions of them, this is mostly for games that didn't get covered much in the original updates so you can get an idea of what they were like. A few of these didn't get covered in the updates at all.

-

Dragon's Destiny II: A sequel to the 1993 aerial combat game featuring slightly better graphics and the option for four-player battles. The game is a bit more well received than its predecessor.

Dark City: Heart Of Darkness: A sequel to the 1993 detective game, the main character returns to Dark City to bust a human slavery ring. One of the best detective games on the system, the very dark subject matter draws some controversy but the game is very well received even though sales are poor.

Deadman Sam 2: This sequel to the 1993 hit features Sam and Nellie fighting a horde of ghosts who want to conquer the human world. Not quite as well reviewed as its predecessor but still a solid game that sells well.

Swords of Samnaria: Taito's sequel to Axes of Avenglia featuring a new cast of characters. The game's graphics and soundtrack are good but the RPG gameplay is about as generic as it comes.

Icebiter 2: Sony's sequel to 1994's action platformer, somewhat faster paced and with much larger worlds and better graphics. About as good as the last game, it's criticized for being somewhat derivative but it's solid nonetheless.

Eskrima Warriors: The Tournament: A sequel to 1994's Eskrima Warriors, this updated fighting game bumps up the graphics a bit and adds a few new characters. It's fun but considered to be worse than the original.

P.O.L.I.C.E.: City Under Siege: A sequel to 1994's game, this game features more levels and baddies to kill but ultimately it's considered just as mediocre as the original.

Gun Warrior: Big Guns: Another Tecmo sequel to an earlier SNES-CD hit, this game features the titular Gun Warrior teaming up with two fellow heroes (with guns of their own) to battle their way through a monster-infested labyrinth. Combining the ludicrous run and gun gameplay of Metal Slug with the dungeon crawling atmosphere of games like Ultima, it's considered one of the silliest, most violent action games for the SNES-CD and is very well received, becoming one of the year's bigger original franchise hits.

Return To Pickton Lake: Cody and Cassie return to the haunted lake, this time with some of their school friends. Instead of rescuing them, their friends help them out in their fight against more horror-styled baddies. It sells quite poorly even though it's reviewed as well as the first one.

Frederico: An action/exploration game about a Mexican hero named Frederico who has to save his girlfriend from the evil Generalissimo Garcia. Very colorful and bright, the game is very well-received in terms of gameplay but draws some initial controversy due to being accused of stereotypical portrayal of Mexicans. The creator, however, is Mexican himself and intended the game to celebrate Latino culture, not stereotype it. The controversy blows over quickly and the game becomes a franchise.

Moonlight: An RPG by Capcom that takes place in a modern city, featuring 12 playable characters who are battling a crime syndicate, eventually though it turns into something

much greater.

**Legend Of The Sorcerers:** Telenet Japan's experimental RPG combining the elements of an FMV game like Time Gal with the mechanics of a JRPG. It's VERY basic in terms of combat and plot and gets mixed reviews, it's considered more of a unique experiment than a classic RPG.

**Sock Monkeys:** An action platformer starring three sock monkeys who have to explore various levels. It's pretty generic as far as platformers are concerned but the creative enemies and very good graphics get the game some good reviews. It also gets some criticism for being a "Donkey Kong Country ripoff", though it plays somewhat differently and wasn't intended to piggyback off of DKC's success.

**The Darkest Ritual:** This is a JRPG-styled game by Ubisoft about two teenage girls, Etienne and Kris, who are messing around with witchcraft for fun when they accidentally unleash a horde of monsters on their school and have to stop it, eventually going into the underworld with a couple of their friends to take out the monsters' leader. It's a very well received game and actually a minor hit.

**Friendly Fire:** This is kind of a tongue-in-cheek third person arena shooter game. There are lots of jokes but the gameplay is pretty middling and sales are mediocre.

**Chemistry Master:** This action platformer involves a quirky scientist hero who mixes up different chemicals to toss at enemies. The combat is pretty fun but the graphics and sound are kind of primitive for the SNES-CD and the game isn't very well regarded.

**Chumoking:** A fighting game with pretty clunky graphics and slow gameplay. Not very well received at all.

**Escape From The Lab:** A fully-FMV game where you play a student who has to escape from a science lab gone crazy. Starring Matt Frewer as a crazy mad scientist, the game is pretty hokey (as most FMV games were) but not as bad as other FMV games on the system.

**Salvation:** A fast-paced space shooter game featuring hundreds of ships on screen at once, a bit like Gradius crossed with Space Invaders. The plot is pretty generic but the gameplay, which allows the player to rack up huge combos, can be addictive and the game receives middling to above average reviews.

**Last Resort:** A hybrid FMV/point-and-click horror game that takes place in an abandoned luxury resort island. Exceptionally well made, the game isn't a huge seller initially but good reviews and word of mouth make this game a profitable seller over its lifetime.

**Lilywhite:** A very quirky, obscure platforming action game starring a cute magical sprite named Lilywhite. The game barely makes it out of Japan and sales in the West are pretty lousy but the game is critically hailed.

**Schemes and Dreams:** An FMV game featuring several young entrepreneurs trying to make it in the world of business. After Plumbers Don't Wear Ties was rejected for the SNES-CD due to sexual content, this tamer game was made instead. It's actually not a horrible game but it's still pretty bad and sales are low.

**Extreme Deerhunting:** A hunting simulator utilizing either the Super Scope or the Justifier,

or other proprietary light guns. Reviews are mediocre but it does decently well due to it being the only game of its type on the system.

**The World Wars:** A war-RTS game featuring battles from the two World Wars. While it's praised for the number of units allowed on screen, other than that gameplay is pretty mediocre.

**That's Gotta Hurt!:** A somewhat silly but still quite violent FPS game that involves various hilarious and yet violent ways to kill people. It's got a four-player multiplayer mode but it runs really slowly and aside from internet Let's Plays in the present day, it's a mostly forgotten game.

**Cat Jackson:** A Sony published attempt to start a platformer franchise, this game stars a wise-cracking anthropomorphic cat named Cat Jackson, who has to hunt down his kidnapped girlfriend while exploring more than a dozen different levels. It's as generic as it comes in terms of gameplay but the colorful graphics and great music, along with the voice acting, receive praise.

**Tales Of The Seven Seas:** This is an adventure game, published by Sony, featuring a crew of misfits on a pirate ship who explore various islands in search of treasure and adventure. The game combines a number of genres, from platforming, to hack and slash, to RPG-like exploration, and is known as one of the best games on the Super Nintendo CD.

**Andrekah:** A colorful platformer starring a lovely little witch girl named Andrekah who goes around just helping random people. Featuring voice acting, a whimsical musical score, and great graphics, it's a big hit for Sunsoft.

**Puzzle Blast:** A puzzle game that combines elements of shooters with puzzle games like Tetris, it's a fun little title with modest sales.

**Battlesun:** A fairly generic space shooter that involves a war around a dying sun. The graphics receive some praise but the music is fairly lousy and the gameplay is standard generic fare.

**Dr. CD:** An educational medical game where you're a doctor who diagnoses patients with various illnesses. While the information presented is accurate and the game is legitimately educational, it's also exceptionally boring.

**The Hunt For Sasquatch:** An action game where you play a park ranger who has to hunt down the legendary monster Sasquatch before it slaughters campers on a big weekend at the park. You use the lightgun to kill feral beasts in various levels before finally reaching the sasquatch. The game receives mediocre reviews and sales are poor.

**Melia's Kingdom:** An RPG about a young man who teams up with a mysterious girl named Melia to reclaim her lost kingdom from evil forces. It's nothing too terribly special and doesn't feature any voice acting, the graphics are rather primitive and it's clear that the game is just a game originally made for Super Nintendo but moved to the CD once SNES sales declined.

**Nights Of Excitement:** A rather unique game, or collection of mini-games, with a quest behind them. Your characters are a group of girls seeking to have some fun after midnight in a big city. While the game itself is a bit disjointed and reviews and sales are somewhat

mediocre, it would later be compared to games like the Warioware series as the years go on.

**Door To Demonica:** A first-person horror/RPG game somewhat similar to Sony's King's Field, it receives comparisons to that game, though this game made some graphical compromises in order to run smoothly. While this makes for a really blocky and primitive looking game, it contributes to the horror atmosphere in a certain way and the game becomes somewhat of a cult classic.

**Eyes Of The Vampire:** An FMV game about a young man in Victorian times who gets involved with palace intrigue involving vampires, both good and bad. Combining elements of various sources of vampire lore, the game is one of the best received FMV games on the system, though sales are poor.

**Shopping Mall:** A sim game where you're in charge of a shopping mall. Bring in new stores, build attractions, and do everything you can to make your mall as lucrative as possible. It's actually quite a detailed simulation game and one of the most unique of its kind. Sales are average for the genre.

**Hyperspeed:** A very fast racing game in the vein of F-Zero, but with more simplistic levels and music. In the wake of F-Zero CD, it gets compared unfavorably and sales and reviews are bad.

**Cyber City:** A sort of noirish point and click sci-fi game where you're a detective investigating mysterious thefts by a gang of evil replicants. One of the numerous Snatcher imitators that began to crop up after the 1994 hit's success. This is one of the more generic of the imitators and one of the least well regarded.

**Daughter Of Pearl:** Another of the Snatcher imitators but much more well regarded, this game features a young female office worker who gets caught up in a conspiracy and has to take over an investigation when the detective helping her is brutally murdered. The main character's story arc is known as one of the best in the SNES-CD's history and the gameplay is said to be better than Snatcher's. Sales are poor but the game becomes a cult classic and gets at least one sequel.

**Gryphon:** A fantasy adventure game featuring a young hero who explores a series of mazes. The graphics are pretty simple and the sound is nothing great, but the game's difficulty and the intuitive nature of the dungeons make it a hit among certain players.

**Clownin' Around:** A platformer starring a friendly clown character who has to battle an evil clown character. It's a fairly generic platformer but the graphics win some acclaim.

**Victory:** A top down run and gun shooter, somewhat similar to Zombies Ate My Neighbors but also drawing comparisons to Metal Gear, it features a soldier who encounters otherworldly phenomena while fighting in a war. The phenomena turn out to be related to a secret cabal of world leaders who turn out to be extraterrestrials. The game's sophisticated storyline, excellent graphics, decent voice acting and fun combat mechanics make it one of the best reviewed games of the year, a major commercial hit for Capcom and the start of a franchise.

**Backwoods Racing:** A racing game where you're a moonshiner, you start out evading the cops and then after a few levels of that you're entered into races with other moonshiners. It

allows for car and driver customization and is sort of inspired by the early days of NASCAR (though it's not a NASCAR game in and of itself). The more moonshine you run, the better you can soup up your car. Gets decent reviews but sales are merely mediocre.

The Endless War: A strategy war game featuring a number of fictional nations, it's probably the SNES-CD's most successful strategy game both critically and commercially due to its great music and deep combat system.

Mysteria: An anime-styled JRPG with full anime cutscenes, it's a first attempt to bring a Lunar-styled anime RPG to the SNES and it's actually one of the system's more popular original RPGs.

Chicken Fighter: A silly 2-D fighting game where you battle with anthropomorphic chickens. Filled with silly chicken puns, it really wasn't that bad of a game but it's still pretty obscure.

Naval Guns: A game where you're a gunner on a battleship, trying to shoot planes down out of the sky as well as other ships. You can also be on a swift boat, a speedboat, or other types of boats. Despite being fairly simplistic in its gameplay, it's actually pretty fun and the graphics are excellent, leading to decent reviews and sales.

Hotel Havoc: Created by Fantasy Factory, this game is essentially Hotel Mario but since Hotel Mario doesn't exist ITTL, the game features completely original characters and different animated cutscenes as a framing device. Without the stigma of being a bad Mario game it's actually regarded as a fun and decent puzzler especially since a lot of the problems of ITTL Hotel Mario are fixed because the game makers can't lean on the Mario name as a crutch.

Toxic Waste: A platformer about an anthropomorphic sludge pile crawling his way through various levels full of toxic garbage. Known as a gross-out game, it's actually fairly popular, featuring voice acting and decent level design despite being full of weird sights and grossness.

Five For Fighting Hockey: A violent street hockey game named after the penalty, though you don't get any penalties for fighting in this game. Featuring original teams and hilarious characters, it features more fighting than actual hockey but the animation, humor, and gameplay are widely praised.

Jim And Kim: A platform game featuring a brother and sister named Jim and Kim who go through various levels, many of them factory related. The animation in this game is actually pretty good but the levels are repetitive and the gameplay mediocre.

Real Ultimate Football: A fully-FMV football game featuring you as a quarterback and games played using entirely FMV. There's barely any variety in teams and gameplay is hideous, this game is seen in a lot of ways as Scottie Pippen's Slam City but with football.

The Sea Adventure: An FMV game where you're in an underwater city under the ocean and you have to repel an invasion by mysterious marine creatures while keeping your team alive. Full of hokey acting and standard FMV gameplay, this is one of the last fully-FMV games released for the system, as both Nintendo and Sony are increasingly becoming averse to these games and barely any of them sell even remotely well, this game is no exception.

Trapmine: A strategy/puzzle game where you have to lay down various traps to take out your opponents. The single-player game is a 60 level puzzle game but there's also a multiplayer mode supporting up to four players.

Parallel World: An RPG featuring four young heroes who live in a vast underground nation, while at the same time, above ground there are four other young heroes living in the surface world. You alternate between the parties, who believe that they're out to destroy the other, only for the real threat to emerge, a threat that seeks to destroy both worlds. Lauded for a great soundtrack and storyline, it's actually a decent seller for its genre.

Bikerz: An action/racing game featuring a variety of silly bike gang characters, it's a kind of sanitized, family-friendly take on the biker gang cliché. The gameplay isn't bad and it sells pretty well, starting a franchise.

3-D Pool: It's a pool game. That's basically it. The graphics are all right for what it is but it's as basic a billiards video game as you can imagine.

The Legend Of Annie Oakley: A western-themed action game, combination platformer/shooter that utilizes the Justifier for certain segments, it's a sort of stylized fantastical interpretation of the legendary gunslinger Annie Oakley's life. While sales aren't quite up to snuff, it's generally regarded as the system's best Western themed game.

Rage: A side scrolling beat-em-up game, reviewed quite well to its large variety of characters compared to most other beat-em-ups and its branching storyline depending on what characters you use. The characters have somewhat different motivations and there are four different possible final bosses depending on your main character, it's a pretty big commercial hit.

Treasure Hunters: A dungeon-crawling adventure game similar to Gauntlet in a lot of ways, you play up to four characters as you traverse through a top-down dungeon, collecting loot and battling enemies. Created by Blizzard, ITTL it's considered somewhat of a proto-Diablo (though much more light-hearted, similar to The Lost Vikings in humor). Because of the success of this game, Diablo will be ported to the SNES-CD's successor console.

Polar Bear Adventure: A platformer where you play as a polar bear. Not an anthropomorphic polar bear but an actual polar bear, out to battle other beasts but also to battle humans trying to take your land. You can literally bite humans, shake them around and toss them aside like rag dolls (no blood though). Because of the bloodless violence it's actually not really considered controversial and it's pretty much just an average platformer game.

Nightsquad: A run-and-gun action game where you're an elite squad of special ops officers battling crime in a really, really crime-infested city. Somewhat unique in that you actually have five characters on screen with you at once, you're one character and the others sort of mimic your actions though you can also assign them independent controls. It's a fairly fun game and sales are pretty decent.

Sweet Ninjas: This is a 2-D fighting game actually made by the company that did the Sailor Moon fighting games in Japan, though instead of localizing Sailor Moon, we get this game that plays fairly similarly, it's a fighting game packed with female characters and is very anime in its design. Reviews and sales are both average.

The Jade Cat Museum Heist: An FMV game where you actually play a burglar who steals a

variety of things from museums and tries to avoid being caught. It's pretty simplistic and pretty short and pretty easy and another fairly humdrum FMV game in the waning days of the genre.

**Ferrari Worldwide Rally:** A racing game where you race Ferraris in tracks around the world. The graphics are quite good and the racing itself is considered fairly realistic considering the SNES-CD's limitations.

**Ballistic Limit:** This run-and-gun shooter is probably Sony's biggest hit of 1995 on the system. You're a futuristic soldier charged with protecting the world from aliens and all manner of threats and you have to travel through a variety of levels to do so. What's innovative about this game is that you switch to first-person for a number of segments. The graphics are excellent, it has one of the SNES-CD's best soundtracks, and the gameplay is considered superb.

**Pig Wars:** A combination strategy/shooter game where you're the leader of an army of anthropomorphic pigs. The game is divided into RTS-like segments where you place your armies and do battle, and action segments where you have to control individual pigs as they try to kill other groups of pigs. The game is full of silly humor and has a variety of weapons, sales are disappointing but the game does just well enough that it's profitable.

**Fairytale Storybook:** A game consisting of twelve classic fairy tales. It's more like a game collection, you can read through the original fairy tale and then play a short video game based on it. With fairy tales like Snow White, Sleeping Beauty, Cinderella, The Three Little Pigs, Jack and the Beanstalk, and others, it's considered a cute little game for kids but not really challenging or fun enough for serious gamers.

**Warriors And Conquerors:** A strategy-sim game sort of like Civilization (which releases for SNES-CD the same year) but focusing on war and battles. It's also rather generic and not nearly as fun or interesting.

**Martial Masters:** A fairly complex 2-D fighting game that's praised for a fairly in-depth fighting system as opposed to games like Mortal Kombat and Street Fighter. It's designed to be a fighting game for experts and though it doesn't sell very well it does become a cult classic among hardcore fighting game fans.

**Puzzle Pals:** A detective/puzzle game sort of similar to Professor Layton in gameplay, you're a detective who investigates a series of mysteries and uses puzzles to solve the clues. It's sort of framed as an educational game for kids and it really doesn't have much of Layton's charm, making it do poorly critically and commercially.

**Don't Go To Bed!:** This is a really trippy platformer game taking place in the dreams of a young boy who is trying to save himself from a variety of nightmarish creatures. Aside from the psychedelic graphics it's as generic as platformers come.

**Nintendo Music Maker:** A sort of expansion of the music creator on Mario Paint, this is an in-depth music creator for the SNES-CD, made by Nintendo and allowing you to use hundreds of instruments and sound effects to compose your own tunes. It sells very well and it's regarded as quite innovative for the time though it's obviously not as good as later tools like the KORG synthesizers for the DS IOTL.

-

*"With such a huge variety of games available for the SNES-CD, it was both liberating and restricting. Certainly developing for the SNES-CD gave us an environment where we felt like we could do anything, but at the same time, there were so many hit games already out there that we had to find a niche to slip into where we wouldn't be rehashing something that had already been done."*

-Jonathan Ellis, co-founder of Psygnosis

*"Mega Man X3 was a bit of an ordeal, the step-up to a fully next-generation game was a hard transition and I had to fight for control over my own project, it was a bit of a mess for a while. I will say that the finished product does look quite good. I am glad I was able to get Zero fully playable at the very least."*

-Keiji Inafune, in the January 1996 issue of *Famitsu*

*"Nintendo says this is the year of the RPG. So when you buy a Super Nintendo CD, you'll spend most of your time waiting, and waiting, and waiting....meanwhile, Sega Saturn players are punching. And kicking. And shooting. And racing! And jumping! And flying!"*

-excerpted from an early 1996 Sega Saturn commercial

*"How's that wait for Sonic 4 going, Saturn owners?"*

-excerpted from a letter to *Nintendo Power* in the April 1996 issue

*"We realized around 1996 that we were going through a time of transition for the entire children's entertainment industry. Video games were getting more grown-up and kids' shows were too. We had to make sure that even as we were appealing to a new generation of kids, we had to produce shows that were as smart and 'cool' as what they were getting everywhere else."*

-Former Nickelodeon president Herb Scannell, quoted in *Slimed: An Oral History Of Nickelodeon's Golden Age*

-

### **Chessmaster 3D**

Andrew: 6.0

Mark: 7.0 (quote: "The computer is pretty slick and smart, but the bare-bones feature list could use a boost.")

Mike: 6.0

Sushi-X: 5.5

### **Mega Man X3**

Andrew: 8.5

Mark: 8.5

Mike: 8.5 (quote: "Mega Man FINALLY steps into the next generation with fantastic sprite animation and action packed cutscenes.")

Sushi-X: 9.0

### **Mickey Mania: The Timeless Adventures of Mickey Mouse**

Andrew: 7.0 (quote: "It's not quite up there with Capcom's 1993 Mickey Mouse effort, but Sony Imagesoft produces a fun and challenging Disney romp.")

Mark: 7.5

Mike: 7.5

Sushi-X: 7.0

### **Mohawk And Headphone Jack**

Andrew: 6.0

Mark: 4.5

Mike: 8.0

Sushi-X: 5.0 (quote: "This game doesn't know what it wants to be. The slick graphics make it look pretty but deep down it's a pretty lousy platformer.")

### **Samurai Shodown II**

Andrew: 8.0

Mark: 8.5

Mike: 8.0

Sushi-X: 9.5 (quote: "SNK does it again! This game is as good as the last and the SNES-CD port is just amazing.")

-excerpted from *Electronic Gaming Monthly's* reviews of January 1996's SNES-CD games in the February and March 1996 issues

-

*While Sega Saturn sales continue to flag here in the States, in Japan, the Saturn is doing quite well. It's outsold the Genesis nearly every month since its 1994 release there, and with a lineup that now includes over 50 games, the Saturn has nearly caught up to the Super Nintendo CD in monthly sales despite its still high price of 45,000 yen. Virtua Fighter-mania has fully swept the Land of the Rising Sun, and with Virtua Fighter 2 pulling in record arcade profits on its way to a March release in the island nation, it looks to push sales of Sega's next-gen console even more. While Virtua Fighter is a popular game here in the U.S., it hasn't been nearly enough to overcome consumer distaste of the Saturn's \$399 asking price. This month's lineup of games, which includes an enhanced port of the SNES-CD hit Andrekiah, a fast paced four-player block puzzle game called Sokusha, and an anime-styled platformer called The Light Fantastic, aren't expected to do much to move the sales meter despite all three games scoring good reviews. Sokusha is especially highly regarded, with its four-player combo action said to be comparable to a cross between Bust-A-Move and Panel de Pon. The game was a big hit in Japan, but doesn't seem to be selling very well stateside. Next month's Western lineup, which includes a port of Namco's hit fighting game Tekken, could tip the scales somewhat in Sega's favor, but the company has a lot of ground to make up to catch up with Nintendo. The company is releasing a hit arcade port of its own: Twinblade, an arcade game said to be a response to Namco's popular Soul Edge game, which comes stateside to the Saturn in April, is hotly anticipated after being one of last fall's most popular arcade titles.*

*While industry analysts continue to call for Sega to slash the Saturn's price, the company refuses to budge. The rumor mill is ripe with the expectation that Sega may make the Virtua Arcade Set, the one bright spot in the Saturn's American sales, the standard package for American Saturn buyers. Were it to become the standard package at \$399, it may help to get more people to take the plunge on Sega's next generation console, but most analysts recommend that Sega make a version of the Saturn available for \$299 or less. The Saturn's lineup of games for 1996 continues to look promising, with a number of exclusive titles along with versions of some of the SNES-CD's biggest hits, such as Andrekiah, Rage, and the upcoming Konami adventure game Eternal Night. Sega has also been engaging in a sustained marketing blitz similar to the one that accompanied the early days of the Genesis. Advertising experts have been praising Sega's "Playing is Believing" campaign, but even the most compelling commercial won't get economically-minded families to open their wallets. Sega insiders say that the company might be banking on the upcoming tax refund season to drive consumer sales, along with a wave of upcoming games that includes both the aforementioned Tekken and Soul Edge, along with the massively hyped horror game Resident Evil which also is set for release in April in both America and Japan.*

-

Sony's history with the company Psygnosis began with its acquisition of the company in 1993. At the time, Sony was beginning to buy up and partner with game developers, both in order to bolster its own software library and in preparation for a potential split with its

hardware partner Nintendo. By 1995, Sony and Nintendo had inked a deal for the next generation of console hardware, and Psygnosis was tasked with producing a game that would be a hit for Sony in the latter part of 1995. The company initially wished to make a futuristic racing game in the vein of *F-Zero*, but Sony advised against it, citing both technological limitations and the desire not to make a game too similar to Nintendo's series. In addition, the slightly disappointing sales performance of *F-Zero CD* (which sold less than a million copies in North America, around 700,000 by the end of its lifespan) had made Sony wary of oversaturating the genre. They asked Psygnosis to propose another concept, and that was the basis for the game *Klepto: The Invisible Thief*. A top-down stealth/puzzle/action game, *Klepto* tasked players with guiding the titular character through a series of increasingly difficult levels in order to steal a certain item (in some cases, more than one item). Encountering an enemy or tripping a trap would cause increasingly difficult waves of enemies to come at Klepto, who could fight them or flee, though it would eventually become impossible to stand against the waves of increasingly aggressive enemies. The game was fairly simple, but quite fun, scoring decent reviews and sales for Sony during the early part of 1996 and giving them confidence that Psygnosis would be a valuable partner for them. Perhaps, someday, that racing game could re-surface when the time was right...

-excerpted from "The Many Software Partners of Sony", an article on Goldcontroller.com, June 18, 2012

*Mickey Mania: The Timeless Adventures Of Mickey Mouse* was a game originally conceived for the Super Nintendo, but was canceled and delayed so that it could be rebuilt from the ground up for the Super Nintendo CD. It finally came out in January 1996, three years after Capcom's hit *The Magical Quest starring Mickey Mouse*. The game consisted of a series of levels based on classic Mickey Mouse cartoons, and Sony delayed the game in order to polish up the animation and add voice acting, in this case Wayne Allwine as Mickey Mouse and Jim Cummings as Mickey's rival Pete. Did the game work? Well, yes and no. Visually the game was quite impressive, with animation easily surpassing the graphics in the Sega CD version of *Aladdin*, still the benchmark for graphics in a Disney video game. But the gameplay was what Sony and their partner Traveller's Tales REALLY should have been working on. Instead of the intuitive and fun gameplay of *The Magical Quest*, we got a frustrating and badly-paced game that, when you strip out the frustrating difficulty, was all too short with only seven levels to speak of. The game might have been better had Sony not pulled David Jaffe off the project to work on *Twisted Metal*, but that game was one of Sony's "big three" for the holiday season 1995 and it's obvious what their priorities were at the time. *Mickey Mania* wasn't a BAD game, honestly, and those willing to slog through the stages definitely found value there, but it's still a case where graphics trumping gameplay isn't always the best strategy. The best Super Nintendo CD games, of course, had both. -"Disney Games: A History (part 3)", excerpted from IGN.com, February 29, 2012

*Mega Man X3* was the first *Mega Man X* game to be designed exclusively for the SNES-CD, and the first game in the series to include animated cutscenes, voice acting (though the voice acting in *X3* was quite poor) and the ability to play as X's best buddy Zero. We talked briefly with series co-creator Keiji Inafune about *Mega Man X3*, its development, and its critical and commercial reception.

UGO.com: *Mega Man X3* was the first game in the series to be designed with the CD

medium in mind.

Inafune: Yes it was.

UGO.com: Tell me how much input you had during the game's development.

Inafune: I absolutely wanted to make this game for the CD. The cutscenes, the graphical enhancements, those were my idea, though I did not have complete input on what exactly those would contain. Capcom went with another company, Minakuchi, for things like the music and some of the level design.

UGO.com: Was the final product at least close to what you envisioned?

Inafune: Yes, I can honestly say that it was. The game was very good, the best of the original three certainly. It was a beautiful game, very fun and people seemed to really enjoy it.

UGO.com: Were you surprised that sales didn't match up to the first two games?

Inafune: A little bit, at first. I think the first game did so well because it was an entirely new thing. People wanted a next-generation Mega Man and *Mega Man X* was it. The next game was the follow-up to that and of course it was available on both Nintendo platforms at the time so it did quite well also. The third, I think people might have been a bit burned out. The annual releases, maybe not such a good idea.

UGO.com: Well, it did work for Rare and *Donkey Kong Country*.

Inafune: Ah, but those were utterly huge games! \*laughs\* Mega Man, not quite so much. Not by the time *Mega Man X3* came out. We sold enough. We did very well in Japan.

*This month's Nintendo Power is all about The Year Of The RPG! Our Epic Center section is super-sized, with over 40 pages of preview articles dedicated to this year's upcoming role-playing hits! And if you're a Nintendo Power CD subscriber, you're really in luck! Not only do you get all of the great regular content you've come to know and love from your quarterly CD, but if you're an RPG fan, you'll love this month's bonus Counselor's Corner videos showing you through the toughest parts of some of last year's biggest RPGs. You'll also love our exclusive behind the scenes looks at Chrono Trigger and Tale Phantasia, where you'll meet some of the talented actors who will be bringing those games' amazing characters to life! And finally, you'll not only get to play a demo of Chrono Trigger, but you'll be treated to a world premiere demo of the localized version of Tale Phantasia, months before its June release! Only Nintendo Power CD is giving you this all-access pass to be the first gamers on American soil to experience one of the most incredible RPGs ever made!*

(...)

*If you can identify all 18 heroes on our "Year Of The RPG" cover, you could be eligible to win some amazing prizes in this month's bonus contest! Just read through our Epic Center section for the scoop on all the great RPGs coming out this year. The information contained*

*within will give you everything you'll need to identify the 18 heroes from 9 different games featured on our cover. Then, put the names of the heroes (order doesn't matter as long as you have them all!) on an index card and send it in to Nintendo Power!*

*One (1) Grand Prize Winner will receive the new Super Nintendo CD, along with every single RPG we're releasing on it this year! Including, but not limited to: Chrono Trigger, Tale Phantasia, Super Mario RPG, Elements of Mana, Fire Emblem: The Holy War, Suikoden, Romancing SaGa, Soul Matrix, Lufia II, Tactics Ogre, Day Of Malcarius II, Natalia: Teardrop of Fate, and many more!*

*Five (5) First Prize Winners will receive copies of Chrono Trigger, Tale Phantasia, Super Mario RPG, and Elements of Mana, four of this year's biggest RPGs for their Super Nintendo CD!*

*Ten (10) Second Prize Winners will receive one game of their choice between Chrono Trigger, Tale Phantasia, Super Mario RPG, and Elements of Mana.*

*Fifty (50) Third Prize Winners will receive an exclusive Tale Phantasia t-shirt!*

*-excerpted from the January 1996 issue of Nintendo Power*

Victor Ireland: So right now we're recording the main theme song for *Tale Phantasia*. And we're not going to spoil the whole thing but here's a little preview, we have a really talented young woman named Jenny Stigile and she's here to record right now so let's listen in.

Jenny Stigile: *\*standing at the mic to record\* Standing beneath the pale blue moonlight... between the worlds fate has chosen... there is still a place for love.*

*While our swords clash in the darkness, I feel the weight of fate pressing on me... and my longing for adventure starts to fade...*

(...)

Victor Ireland: *Tale Phantasia* has been an incredible project to work on. I think this really is the best RPG ever made and I know fans in North America have been waiting to play it for a long, long time. The wait is just about over. I promise you, we are going to make this game even more fun than it looks if you've seen footage of the Japanese game, I promise, it's absolutely going to be worth the wait.

*\*A quick snippet is shown of Cress leaping into battle and yelling as he strikes down at a foe\**

(...)

Moira Quirk: I'm here, actually about to record, um, my last lines for *Chrono Trigger*. And it's been a really fun experience, definitely, for sure. Ummm....can I tell you who I'm playing? *\*looks offscreen\** Can I? Yes, I'm being told that I can. I perform the voices of two characters, actually. One of them is named Schala and the other is this queen named Zeal. And Schala is actually Queen Zeal's daughter, but they couldn't be any more different. I don't think I should say any more than that! *\*laughs\** For Schala, I kind of have to...kind of have to raise my voice up just a bit, because she's a bit younger than me. And I have to kind of dial down the accent a bit, I have, you know, a Midlands accent and so I have to

remember to keep that kind of under control and speak with a more general, still sort of fancy but not so Midlands-ish for her voice. And then...Queen Zeal, she is a lot of fun. I get to act a LOT for her. I'm being told not to say too much about her but out of the two characters she is definitely more fun to play.

\*there's a brief snippet of Quirk in the recording booth performing some of her lines for Schala, such as "and who might you be?", in another clip she seems to be yelling out the name of a magical attack\*

Moira Quirk: I do know that a lot of people watching this will recognize me from *Guts* on Nickelodeon. \*she laughs a bit\* So I like that this is a chance to get them to see, well, um, hear, another side of me. \*laughs again\* I had so much fun doing this game. I hope I'll get to voice more games in the future!

-excerpted from preview videos on the January 1996 issue of *Nintendo Power CD*

-

*Super Bowl XXX was one of the greatest Super Bowls of all time. The road to the Super Bowl wasn't quite so great, but the game itself was amazing. First, of course, you had the underdog upstart Indianapolis Colts, led by Jim Harbaugh, who steamrolled the San Diego Chargers with a huge performance from Marshall Faulk. Then they went into Arrowhead Stadium and kicked the 14-2 Kansas City Chiefs right in the mouth, 23 to 9, once again thanks to Marshall Faulk. Then finally you had the AFC Championship game against the defending conference champion Pittsburgh Steelers. Everything, and I mean everything seemed to go right for the Colts in that game and everything that could go wrong for the Steelers did. You had Kordell Stewart getting a touchdown only to have it be ruled incomplete because he stepped out of bounds. You had Quentin Coryatt of the Colts intercepting the ball twice, including one for a pick-six. You had Marshall Faulk making huge running play after huge running play, with two touchdowns. The Colts ended up winning 31-3, it wasn't even close. And remember, this team had a 9-7 record. Of course, on the other side of the coin you had the 12-4 Dallas Cowboys. They got the bye and then whipped the 49ers in the divisional round. The 49ers, of course, still reeling from that whole Andre Rison thing which they never seemed to recover from. Then they beat the Packers handily in the NFC Championship, setting up the Super Bowl.*

*Well, right from the start, the three-time defending champs dominated the game, starting off on a 17-0 run. It seemed like they were going to make it four in a row for sure. But they didn't call Jim Harbaugh "Captain Comeback" for nothing. He led the Colts all the way back, but the Cowboys defense continued to play tough. Their offense started making some dumb plays but with just under a minute left, the Colts had the ball on their own 9 yard line, no timeouts, down 24 to 20. That was when Jim Harbaugh made the most amazing drive in Super Bowl history. He took the Colts down to the 44 yard line of the Cowboys with just a second to go. Then he launched an incredible Hail Mary toward the end zone. Aaron Bailey came down with it but was surrounded by guys, the ball fell out of his hands and right onto his chest. It seemed like it would roll to the turf but somehow he managed to close his hands around the ball and pin it down tight, securing the touchdown and the Super Bowl victory for the Colts, who not only became the first 9-7 team to win a Super Bowl, but the first team to come back from more than 10 points down to win one. It was a tough loss for the Cowboys, but with their rival 49ers having pretty much collapsed, it seemed that they'd rule the NFC for years to come. Of course, they didn't count on the rise of the Packers and Brett Favre, but that's another story.*

-

Brittany Saldita: So, in conclusion, *The Light Fantastic* is a delightful game. It's not quite as good as *Andrekah*, but it's still super fun and one of the better platformers I've played in the last few months.

Kazzi DeCarlo: I have to disagree, the game is pretty derivative and the hero is nowhere near as endearing as *Andrekah*.

Brittany: Lumex is very endearing, he's super cute and really funny!

Kaz: He's kind of a dork.

Brittany: Well, anyway, I give *The Light Fantastic* a 4 out of 5 for its trippy graphics, really tight gameplay, and charming hero and musical score.

Kaz: And I give it a 3. It's not very original, not very difficult, and while visually pleasing, just isn't as compelling of a game as some of the others in its genre.

(...)

Alex Stansfield: \*looking disappointed\* So, yeah...yeah, I thought *Natalia: Teardrop of Fate* was pretty bad.

Brittany: It wasn't a bad game, but it definitely wasn't a GOOD game. Nintendo's "year of the RPG" starts off with a bit of a dud.

Alex: Let's hope this is just the calm before the storm.

Brittany: To be fair, I liked the dark aesthetic, and the battle system was somewhat original, sort of reminding me of *Lufia*'s but with a good deal more customization. The character of Natalia was also quite well written, it was just a chore to slog through overly long and grindy dungeons to get to the next bit of storytelling.

Alex: And you WILL grind if you are playing this game. You will grind like Sir Mix-A-Lot at a booty convention.

Brittany: \*snickering, about to lose it with laughter\*

Alex: Just wait for *Chrono Trigger*, do not waste your time on this game. 1.5 out of 5.

Brittany: I give it a 2.5. \*turns to Alex\* Sir Mix-A-Lot at a...\*laughing\* really?

Alex: I thought it was funny and clearly you did too.

Brittany: \*she keeps laughing\* You're a dork, I swear...

(...)

Ted Crosley: While the voice acting was....tremendously bad.

Alex: Oh yeah.

Ted: I still loved *Mega Man X3*. The music was fantastic, the Mavericks were some of the best yet, especially Neon Tiger, Whirl Gecko, and Scatter Albatross. I will never know how they made an albatross badass.

Alex: The creativity of Capcom knows no bounds, Ted.

Ted: You got that right, my brother.

Alex: I will say I do wish the gameplay would have evolved just a little bit. Zero is a great addition but let's hope they change things up a bit for *X4*. Regardless, I'm giving this game a 4.5.

Ted: And I'm giving it a 4, which makes it a GameTV Recommended game.

Alex: And highly recommended at that.

-excerpted from the January 23, 1996 episode of *GameTV*

(...)

Brittany: And we're here on *GameTV* with the singer Monica, whose hit single "Don't Take It Personal" was a number-one hit last year. What's it like, being just 15 years old and already with a number one single?

Monica: It's pretty great, I have a lot of people to thank of course.

Brittany: Obviously, no one gets to the top without help but you should give yourself some credit, your voice is amazing!

Monica: Thank you.

Brittany: Now before we get to talking about your next songs and that new gig you have lined up on Nickelodeon, I do want to ask, since this is a video game show if you've been playing any games lately.

Monica: You know, I haven't really had time to play any games unfortunately.

Brittany: That's understandable, I play a lot of role-playing games and some of them take FOREVER to play. I mean we're talking 80 hours on one game.

Monica: \*laughing\* Well there's songs I've put hundreds of hours into so...

Brittany: Well yeah, obviously when you're working on a song you can get into the flow and you look up at the clock and whoops, it's five in the morning!

Monica: I've had nights like those for sure! \*she laughs again\* But I guess if I do kick back and play some games, I mean, I've played *Sonic the Hedgehog* before. And I've played *NBA*

*Jam* and *Mortal Kombat*, you know, just a little bit with friends but yeah.

Brittany: Do you have a favorite *Mortal Kombat* character?

Monica: I like the one with the purple, uh, the mask and she's purple.

Brittany: Oh, Mileena, she's my favorite too! She's a badass.

Monica: She seems like one, that's why she's my fave!

17. NHL '96
18. Sid Meier's Civilization
19. Ogre Battle
20. King's Field

-

### **Nickelodeon Making Changes For 1996?**

The cable network Nickelodeon is still #1 in kids' TV, with hit shows like *Rugrats*, *Phineas and Ferb*, and *The Adventures of Pete and Pete*. Nevertheless, the company is looking to add some fresh new shows to its lineup this year in order to remain at the front of the pack in the hunt for youthful eyeballs. Of biggest note are a pair of live-action shows that will be debuting later this year. First up is *Swashbucklers*, a pirate-themed show that follows the adventures of six kids who are stranded on an abandoned pirate ship and set out on the high seas in search of adventure and a way home. The show is said to be Nickelodeon's biggest budgeted show to date, which could make it an enormous hit or a tremendous flop. The other show set to debut this year is *Space Cases*, a sci-fi show that's somewhat like *Star Trek* for kids. The show, which features a familiar face for *Power Rangers* fans: that of Walter Jones, who played the Black Ranger Zack before leaving the show in 1995 after

Saban refused to give him and two of his co-stars bigger contracts. Jones plays the devil-may-care young space cadet Harlan Band, one of a cast of five young cadets who find themselves stranded after a ship they stumbled onto accidentally launches them into a wormhole. The show is taking another cue from *Star Trek*, in this case *Star Trek Voyager*, by featuring a female captain. That would be Alyssa Goddard, played by Vancouver-based actress Teryl Rothery. Though unknown to most American viewers, kids may have heard her voice on *Sailor Moon* as the wicked Queen Beryl.

In other Nickelodeon related news, the hit sketch comedy series *All That* will be getting a new cast member, and she's a big one. Hit recording artist Monica is set to join the show when it starts its new season in the spring. Though the 15-year-old is much more well known for her singing skills than for her acting chops, showrunner Dan Schneider says that he was "very impressed" by Monica's audition and that she'll be a welcome new face on the show. Though Schneider has to be happy to have Monica, he's probably disappointed that his idea for a sitcom spinoff featuring *All That* cast members Kenan Thompson and Kel Mitchell fell through, after Thompson had to decline the offer to star on the new show due to a commitment involving a comedy film he's shooting with Matthew Broderick. Nickelodeon may offer Schneider the opportunity to have another show in the near future, but for now, he'll be concentrating his creative energies on *All That*. With a name as big as Monica on board, he'll have plenty of talent to work with for the foreseeable future.

-excerpted from *Variety* magazine, January 29, 1996

-

Commander Keen is a name familiar to any kid who played games on the family computer back in the early nineties. With the advent of the Internet we learned that the original staff of id Software developed the first trilogy on company computers they "borrowed" from their employers at Softdisk during their weekends, which appears to be a reoccurring theme of the series. Most people today remember id Software for *Wolfenstein 3D* and *Doom*. After the runaway success of the latter, it appeared that the 8-year-old boy genius had hung up his battered and scorched helmet after his sixth adventure, *Aliens Ate my Babysitter*, but Tom Hall was not finished with him just yet.

id Software had originally committed *The Universe is Toast* trilogy to a Christmas 1992 release. However, the success of *Wolfenstein 3D* postponed it until E3 1995 when Tom Hall saw an early build of Sega's *Nights* and decided that he wanted to model the next Keen games on it.

"Something clicked in my mind when I saw the demo with the freedom of movement present in the game," recalled Hall in interview for *Electronic Gaming Monthly* in 2008. "That was how I wanted to make Keens 7 through 9. I had a vision in my head and it remained stuck in my mind for months afterward."

Though he left id Software after a dispute with John Carmack over the violence and gore in *Doom* two years prior, Hall and Carmack reportedly came to an understanding and id released the rights to Commander Keen back to Hall. With help from John Romero, Adrian Carmack, and a few staffers from Apogee Software, Hall spent most of his off hours developing fine-tuning the three-dimensional platforming engine from scratch.

"Admittedly, *Universe* wasn't technically a 3D game. Keen was still a hand-drawn sprite that moved on two planes while the backgrounds and platforms were polygons that 'moved' along with him." Romero admitted, "It was kind of a cheat and looked like Keen was running up a spiral staircase at times, but it was a labor of love and I believe the fans appreciated it."

Fans of the series did respond well to the initial installment *The Universe is Toast, Into the Inferno*, upon its release Christmas 1995. While the game had more than its fair share of glitches, it was not broken and its quirky sense of humor made it stand out. While it was ostensibly a "run and gun" platformer *UiT* also possessed puzzle elements and involved more stealth than similar titles like *Mega Man*. Ammunition for Keen's neural stunner was scarce and many enemies were immune to it. There were no bosses to speak of, aside from Mortimer McMire, but many "security checkpoint" levels where Keen would need to outmaneuver a pursuing (and invincible) Robo Red Hunter and use the stage hazards to slow it down or destroy it outright via a series of buttons and switches. *UiT* was a difficult game and infuriatingly so at times, but it forced the player to think of ways out of tight spots.

The game itself controlled similarly to *Goodbye Galaxy* and *Aliens Ate my Babysitter*, with each action delegated to a single key on the keyboard: jump, fire, and another to activate Keen's trademarked pogo stick. A control scheme that was easily transferable to console. Teleporters took you to four different worlds where Keen's objective was to destroy the Universal Toaster Cannon's secondary nodes.

The volcanic mining world, Savarrg, was the typical "Lethal Lava Land" (of which Keen is the trope namer), which took place on a molten planetoid. In addition to avoiding falling into lava pools, Keen needs to use the convection to raise platforms and avoid raining meteors. The lower gravity is another wrinkle where you must carefully execute your jumps because serrated stalagmites and stalactites are everywhere.

Meanwhile, the fauna of the jungle world, Ogonoc, is out to kill you. Many of the enemies from Keen 4, *Secret of the Oracle*, like Poison Slugs, Skypests, and Mad Mushrooms return; however, the Dopefish's comeback is the most glorious. One of my favorite pleasures of this world is the underwater level where you use the stage enemies as fodder the lovable dumb guppy's appetite.

The ice world Juttoon is the standard ice level with poor traction though it is memorable for the encounter with "Eddie the Yeti" who tries to roast Keen over a spit. Rounding out the worlds is the storm-ravaged Sakans where Keen must navigate the air currents and avoid tornadoes. *Keen 7* was the biggest game in the series at the time with twenty-one levels.

While it did not light the sales charts on fire like *Doom* and its sequel, *Into the Inferno* it did warrant a jump from PC to the Sega Saturn where the game gained a champion in the form of Sega of America President and CEO Tom Kalinske.

"I remember showing the game to him in January 1996. Though it clearly was no *Nights*, Keen already had an installed fan base and he saw the potential of the series. He was supportive of the port and even helped us improve the game and enhance it." Hall said of his meeting with Kalinske. "Unlike Nintendo, who said 'no thanks' when we showed them our smooth-scrolling graphics engine in 1990, Sega wanted to be a partner in this."

Indeed, Sega invested considerably by assisting in rectifying the technical issues that

riddled the PC version and the Saturn version of *The Universe is Toast* ran much smoother. Sega Technical Institute also helped in finishing the eight and ninth installments *Danger in the Desert* and *Clash of the Intellects* for the planned October 1996 release as one package.

Keen 8, *Danger in the Desert*, was the shortest and likely the hardest installment of *UiT* with only eleven levels and lacks the variety of environments present in *Into the Inferno*. After completing destroying the control nodes on the four worlds, Keen heads to the Universal Toaster Cannon to destroy the final one when a Shikadi warship intercepts the Bacon-with-Beans Megarocket and shoots it down over the desert world Apollus IV. Ammo is even more limited and enemies are more abundant. As with *Keen 5*, the Shidaki take four shots to stun and it is better to avoid them than confront them directly.

McMire also dispatched a Keendroid to commit crimes and terrorize the populace in your name, turning most of Apollus' inhabitants against you. Thankfully, the planets' periodic sandstorms and dark caves offer you plenty of covers to avoid your Shidaki and Apollian pursuers. Thankfully, you also enlist the help of a young Apollian, Pallo, you rescued in the first level to help you gather the parts needed to rebuild your ship, destroy the Keendroid, and restore your reputation. Pallo would later play a crucial role in later games as the first recruit of the "Commander Keen Corps" in the *Multiverse Madness* trilogy.

Once Keen finds the parts needed to repair his ship, he heads to the UTC for the final showdown in *Clash of the Intellects*. Personally, some of my favorite levels are in this part of the trilogy. As it takes place on a space station orbiting a blue supergiant, this is where Mortimer McMire keeps his most heinous experiments. Enemies from as far back as *Invasion of the Vorticons* return, except cybernetically enhanced and even more aggressive. There are Gargs, Vorticons, and Bloogs—oh my! Unlike the previous two installments *Clash of the Intellects* is more generous with the ammo. You will need it when a herd of roid-raged Gargs rush you (and another trope namer.)

The low-gravity mechanics from *Into the Inferno* return and some switches even flip the station's gravity so that you can run along the walls and ceiling. This is a crucial mechanic for the battle with Mortimer McMire where you need to flip the gravity to temporarily disorient him and trick him into disabling the force fields protecting the final control node by leading his shots. McMire seemingly dies when the Universal Toaster Cannon self-destructs.

With the profits from the PC version and some money from Sega, Apogee added animated cut scenes to the Saturn version where Kath Soucie (late of the SatAM Sonic the Hedgehog) voiced Billy Blaze/Commander Keen and television's Bart Simpson, Nancy Cartwright, lent her voice to Mortimer McMire. If you meet certain criteria, the game rewards you with a cut scene of a shadowed figure rescuing McMire at the last second. As most gamers know by now, said figure was Keen's mirrorverse counterpart, Captain Khaos, who would be the primary antagonist of *Multiverse Madness* saga for the Sega Saturn.

Most fans of the series agree that the Saturn version of *The Universe is Toast* is the superior version. While Apogee developed and Sega published the Saturn version in September 1996, Apogee published a slightly truncated version for the SNES-CD the following year before the release of the Ultra Nintendo. This version was much slower and buggier than even the PC version, which Hall admits was not his finest effort.

"To be honest, I wanted to move onto the next part of the series by then. John and I were working on the engine for *Keen 10* and so much of my attention went to that and thus I could not give *UiT* for the SNES-CD the care I gave the PC and Saturn versions. However,

by that time Keen was already entering the Saturn's orbit after everything Sega had done for us."

Romero laughed at the mention. "Didn't Angry Video Game Nerd guy pan that port? I wasn't involved in it and Tom barely had any input at all. They gave that port to an inexperienced team and it showed. Poor Tom took it rather personally, but Apogee told us we needed an SNES-CD port. That was one of the main reasons why he decided to take Keen and found Ion Storm. I couldn't join him as *Commander Keen* was only a side project done more for fun than profit.

"Tom and I parted on friendly terms and I am proud of my (admittedly small) contribution to the Keen 10 engine."

Indeed, many reviewers panned the SNES-CD port of *UiT* for its unresponsive controls, slowdown, and horrendous graphics compared to the Saturn. It would be the only *Commander Keen* game to grace a Nintendo console. Sega directly invested in Ion Storm, which effectively made them a second-party developer similar to Rare and HAL Laboratories' relationship to Nintendo. The studio would also bring in additional talent like Warren Spector who created *Deus Ex*, which many Sega fans consider a rival to *GoldenEye* when it comes to multi-player though the single-player experience is much different.

As for Keen, *The Universe is Toast* pulled in solid sales though far less than *Sonic the Hedgehog 4*, which Sega released the following month. Between those two games, Sega gained a considerable lead on Nintendo in the fifth generation—at least when it came to flagship series. *Commander Keen* is the only other Sega-affiliated franchise that spun off into an animated series and comic book by Archie Comics. Sadly, *Commander Keen: The Animated Series* lasted for one twenty-six episode season in fall 1999. As with the games, many critics and players praised its irreverent humor and cultural reference and compared it to the late *Calvin and Hobbes*. The comic book still continues onto this day under the pen of Dan Slott.

"I consider *UiT* and *Multiverse Madness* the height of my career," reflects Hall, who still oversees the series to this day. "We're not churning out Keen games like we did in the Saturn days and some complain that the gameplay has not changed that much. To them I say this: look at Mario and Sonic. Their core gameplay has not changed a great deal over the years. Sega and Nintendo didn't waste money and time on reinventing the wheel with each new game. Sometimes you need to look under the hood and tweak the engine a little bit to see what works when you add something new. That's my philosophy when it comes to Keen and part of the reason why he has stood the test of time."

The world of *Commander Keen* is one fans keep returning to because of its charm and refined gameplay. Hall's metaphor is a perfectly apt one. While technology progresses, consoles grow more powerful, and audience tastes change, there will always be an appreciation for the classics. *Commander Keen* is one the "Cadillacs" in every retro gamer's collection and with the advent of downloadable content, the series finds a new audience every year. Not bad for a series that started out as a prank, isn't it?

-from the blog "The Musing Platypus" by B. Ronning, March 12, 2013

-

"If you mention the Bandai Solaris today in the West, you're likely to get a bunch of blank stares. Sometimes when I talk to my friends, if they're really nerdy, at least one might describe it as 'that one console that deep-sixed Bandai.' I'm not joking when I say that the bad ass sun logo on the hardware itself is one of the best things about it. Remember when Power Rangers was huge here in the States? Yeah, most of that cash went into keeping this piece of crap afloat in the market toilet bowl long after it should've been flushed.

To those of you who don't know why this thing even exists, I'll give you the skinny. Back in the '90s, everyone and their grandmother was trying to take down Sega and Nintendo/Sony. Philips, Trip Hawkins, SNK, NEC - all of them went into the ring and they all came back with a bloody nose for their troubles. Even Namco at one point wanted to (the TurboGrafx-16 was rushed to market because Hudson Soft didn't want NEC to be courting them). In the midst of all of this, Bandai wanted in on the action; taking a piece of the market share created by both gaming giants after Atari's collapse was just too good to pass up. In '94, Apple got approached by Bandai to produce a stripped down Macintosh that would have the capacity to play CD games. Apple, intrigued by the recent success of the video game market, agreed at the time but on the condition that it would be marketed more as a multimedia device that just happened to play games. Y'know, like the water cooler at an office where people stand around and shoot the shit? You're probably thinking to yourself, 'It's a stripped down computer - who the hell would want to buy a multimedia device that can't even do half the things a desktop can do?'

...and you'd be absolutely right. Good thing '90s-era Apple decided to stop hemorrhaging money long enough to check themselves into the psych ward so they could realize that this was an absolutely stupid idea and backed down from it. Unfortunately, that left Bandai stuck footing the bill and if you know anything about Japanese corporate culture, this sort of thing is absolutely humiliating. But they had to stand by what they'd done and scrambled to find someone to help them put it to market (not that you'd know that from their E3 1995 presence where everyone was all smiles about the next big thing in gaming, mind you). They found another weird partner to help them, Mitsubishi. Of course, it wasn't going to come cheap. Though Mitsubishi said they'd manufacture the hardware, they wanted a steep 45% of the profits from each console sold. Reluctantly, Bandai agreed.

This isn't to say that the Solaris doesn't have its place in history. Aside from being the primary reason that one of Japan's great post-WWII success stories was taken out back, put up against the wall, given a cigarette, and executed by a firing squad with Sega uniforms, it actually holds a more dubious claim to fame. A lot of people in NTSC and PAL regions think that *NiGHTS into Dreams...* is the first 3D platformer, but this isn't actually true. Bandai Games was responsible for releasing theirs six months shortly beforehand in early 1996. What do you know: it's a licensed title to boot.

*Gon: Prehistoric Panic* is based on a manga series by Masashi Tanaka, following the adventures of a Not T-rex. It's alright, I guess. I'm not personally big on silent media, but there's got to be an audience for it. It lasted a long time, too (it just ended not too long ago; '02, I think) so what do I know? Prior to its Solaris title, Bandai had actually done a previous Gon game on the Super Famicom.

The comic itself has absolutely no dialog in it and all of the humor is strictly visual; as such, it's pretty accessible to anyone who picks it up and in this regard GPP is pretty true to its source material. Most of the time, it's just Gon picking fights with animals or whatever. Some gaming purists out there might actually be interested in this. It cuts the crap and

doesn't pretend to have a deep or meaningful story. I mean, no one plays Mario (hah) or (hah!) Sonic for their stories, right? You take the role of the big-headed, wide-eyed Gon and roam around a 3D world based on a vaguely prehistoric setting. You can attack enemies in three ways (each corresponding to the controller's three main buttons; the fourth is used for jumping): breathe fire (?!), tail whip, or, um, a toxic fart. The last is just as juvenile as it sounds but the enemies admittedly make some funny over-the-top facial expressions if you can use it against them.

The worlds found in game are pretty much what you'd expect. Swamp-themed, volcano-themed, tundra-themed and the like; nothing spectacular or noteworthy. Based on that, you might be thinking that *Gon: Prehistoric Panic* is just really middle of the road. To be fair, that's pretty much true so far as presentation is concerned. Music is serviceable and there are times when the art direction sort of works, seeing obscure animals like a giant ground sloth as a boss is pretty fun. Gon's model looks okay. That's the most charitable thing you can say about it from a creative standpoint: it's so middle of the road that it doesn't even need to exist.

You might be confused as to why this would be made a flagship title for a Mind Blowing Next Gen Console™ and the answer is... well, I have no clue, to be quite honest. Most sources I can find about it say that Bandai threw money at it after panicking when Apple backed out and figured that it would ultimately save costs by doing it in house once the hardware (hopefully) panned out. This begs the question why it wasn't a Power Rangers game or something similar; the old beat 'em up on the Super Nintendo could've been a solid basis for something, maybe a *Streets of Rage* sort of game. Again, nothing mind blowing, but you needed the thing to move so why wouldn't you take advantage of an insanely successful property? A property which, need I remind everyone, they had relative easy access to?

Regardless, what's the real downfall of *Gon: Prehistoric Panic*? **Everything else.**

It feels like they were trying to make a 3D version of Data East's old Joe & Mac games. Well, imagine that without any of the fun those had. Half the time in a level you're just wandering around a blank void - or at least it looks like it because the draw distances in it are so awful that you might as well be. You don't even really care about any of the good stuff I mentioned before because half the time you're so bored looking for something to do that it just kind of blends together in a drone of monotony. When you finally do encounter bad guys to fight, the enemy types can more or less be summed up as follows: sabre tooth cats, woolly mammoths, bears, rhinos, and some big prehistoric bird things. That's it. While it might be funny to see woolly mammoths bumbling around an active volcano at first, it quickly makes you realize that what you're playing must have been ridiculously rushed. It's true: the game had less than a year to be completed as the Solaris was tanking so hard after its launch that Bandai was throwing just about everything they could at it to keep its corpse propped up.

Even if it's not that great in design, it might make up for things if it at least played well, right? Oh, hopeless optimist, there's still more disappointment to come!

The controls are mutilated beyond belief. Keep in mind that for some God forsaken reason Bandai still kept the track ball from their deal with Apple; you can see it present in the prototypes for what they called the 'Pippin' then. This, rather than the controller's d-pad, is the primary way in which you move. Rather than being able to go in a straight forward line, you slide all over the place like someone spilled oil over the floor.

On.

Every.

Single.

Stage.

This wouldn't be as frustrating if you could actually get a handle for things. But you can't, at least not in any meaningful way. Soon as you think you've mastered **walking** in one world, it's off to the next and you have to relearn how things work all over again. Not only is this bad for trying to go around and collect the assorted precious stones you need per level, but it makes fighting against bosses nigh impossible. You'll probably throw the controller on the ground in frustration when you get to the last one, a cave man whose name I don't remember, because he's got projectile weapons that he constantly fires at you like spears and arrows.

In the end, *Gon: Prehistoric Panic* would've maybe been acceptable in the late '80s or early '90s. But gamers expected something more. Despite eventually being put as a pack-in for the Solaris it didn't help matters and by 1997 Bandai was filing for bankruptcy. Despite Sega now owning a big chunk of the rights to produce anime-based games and more, to this day they've never done an official re-release and it remains shelved - except to people like me, I guess, who have nothing better to do than masochistically torture themselves.

Ugh.

2/10"

-*Electronic Gaming Monthly's* reviews of February 1996's SNES-CD games in the March and April 1996 issues

-

"*Terrifying is the Night...*"

-the tagline for *Eternal Night*, used in its numerous magazine advertisements

## **Eternal Night: The Basics**

Konami's SNES-CD (and later Saturn) title *Eternal Night* was released in North America on February 5, 1996. The game is an action-adventure title somewhat similar to the Castlevania games, though the protagonist has a much larger variety of weaponry and attacks come at a much faster pace, it almost plays like a Metroidvania fighting game. The game is directed by Hideo Kojima, who worked on it largely at the same time that he was working on *Metal Gear 1+2* and getting *Policenauts* ready for an SNES-CD release later that year. The game's protagonist is a baron named Alec von Sturmer, a man who was forced to kill his beautiful bride on her wedding day after she was possessed by the demon witch Lespell. As it turns out, Lespell was also betrothed to Belial, the demon king of hell, and his punishment toward the human race is turning the sun black and unleashing a horde of hideous demons upon the world. Alec must journey through a series of castles where Belial's demons have invaded and taken over. The gameplay is more combat-focused than exploration focused, and every level (14 in all) ends with a boss, usually a very large and fierce one, culminating with the final levels in which Alec must enter Hell itself to slay Belial. The game uses copious amounts of demonic and arcane imagery and very little of it is censored for the North American release, it gains an M rating for violence and disturbing imagery but the game is still a massive hit, with a huge wave of pre-release hype before its release. It becomes one of the top selling SNES-CD games of the first half of 1996, with praise directed toward its graphics, its gameplay, and ESPECIALLY its haunting soundtrack composed by Takanari Ishiyama and Michiru Yamane.

*1996 was the busiest year yet in Kojima's career. Not only was he bringing his first two Metal Gear games and his Snatcher follow-up Policenauts to the SNES-CD's eager audiences, but his intense horror adventure game Eternal Night had just been completed. The fruits of Kojima's efforts, however, were soon evident. Eternal Night was one of the most successful games, critically and commercially, of 1996, and while Metal Gear 1+2 wasn't nearly as successful as his later mega-hit Metal Gear Solid would be, the compilation was highly critically regarded and became one of February's top sellers. If Policenauts could repeat the mainstream success of Snatcher, it would be the cherry on the sundae. But of course, Kojima was just getting started...*

-excerpted from "Konami: Empire Of Fun", a book published in 2013

Phil Donahue: I couldn't tell these games from a cartoon to tell you the truth. \*looking at a screen\* So this one's *Eternal Night*. It's uh, supposedly it's connected with the occult, it's violent...I want to make sure I know what I'm talking about before I go out there.

Producer: It looks fun. \*laughing\* No really, it looks fun.

Donahue: Well, I'm, I gotta be impartial here, let our guests debate it out. How many of the best-selling games are violent like this? Are all of them?

Producer: Um...\*flipping through some sheets\* Well, last year's top two sellers were Donkey Kong Country and um, *Zelda*. They're not really violent, but *Doom*, that one-

Donahue: Yeah, we'll be talking about *Doom*. What about...how did that one game, with the girls doing magic, how'd that do?

Producer: Uh.... *Darkest Ritual*?

Donahue: Yeah.

Producer: It sold...85,000 copies last year? Not a big seller I don't think?

Donahue: But *Eternal Night* and *Doom*, they both sold really well.

Producer: *Eternal Night* is the top selling game right now. Last week it sold the most.

Donahue: Okay. \*he flips through the notes, reading them while he walks over to where his wife is\*

Marlo Thomas: \*sitting, watching someone playing through *The Darkest Ritual* while another producer takes notes, she's watching a scene of dialogue between Etienne and Kris\* Those two girls are lesbians. They're totally lesbians. \*she smiles\*

Donahue: Huh?

Thomas: Did they catch that? The way they talk to each other. They're totally into each other. I don't know if any of the people complaining about the "occult stuff" in this game even caught that. It's so neat. \*she laughs a bit\* Wow, I can't believe it.

Donahue: Are you sure?

Thomas: Yeah. It's really, REALLY subtle though. But um, don't bring it up and give your guests anything else to flip out about. \*laughs again\* I didn't even know they did that in these games. That is amazing. That's beautiful. Such strong girls in this game.

Donahue: Maybe that IS why they're really upset about this game.

Thomas: It wouldn't surprise me. \*smiles\* Have a good show. \*leans in and kisses his cheek\*

-overheard backstage on *Donahue* before the filming of the episode "Are Video Games Harming Our Children?", February 27, 1996

## A Tale Of Two Fighters

February 1996 was the month of the two fighting fighters, and by that I mean *Tekken* on the Sega Saturn, and *Twinblade* on the Super Nintendo CD. Both games were ports of hit fighting games in the arcade. *Tekken* involved fighting with punches and kicks, while *Twinblade* involved dual-wielding duelists duking it out. Both were fairly well hyped at the time of their release, *Tekken* was to be the game that would help the Saturn finally get a leg up, while *Twinblade* was Nintendo's answer to *Soul Edge*, a game that wouldn't even launch in North America for the Saturn until April of that year. So, how good were the two games, and how well did they do?

*Tekken* was pretty much your standard 3-D fighting game. It featured 17 characters, basically by adding the sub-bosses and final boss Heihachi from the original arcade version. The Saturn version, believe it or not, looked somewhat better than the arcade game and was probably the best looking 3-D fighter on the system up until that time. That said, the gameplay was pretty basic. It was a decently fun game, but nothing terribly special, and *Virtua Fighter* was somewhat better received critically. *Twinblade* featured ten playable characters, each with their own dual-wielded weapons. The graphics obviously were somewhat of a downgrade from the arcade as the developers had to deal with the SNES-CD's limitations. That said, the gameplay was quite excellent and arguably better than *Killer Instinct*. The different weapons, ranging from a pair of dual samurai swords to lethal twirling ribbons for the character Jenny, made strategy and fighter selection an important part of the metagame, and while the graphics were pretty primitive compared to *Tekken*, they're regarded as some of the best on the SNES-CD. Commercially, while *Tekken* became a hit for the Saturn, it, like other games before it, didn't push Saturns like Sega had wanted it to do. It actually outsold *Twinblade*, though not initially. *Twinblade* did quite well also, it was the #2 selling new SNES-CD game of the month behind *Eternal Night*, and was a front-runner for Fighting Game of the Year in many publications. It was also better received than the later *Soul Edge*, though it can be somewhat argued that Namco would "lift" some of *Twinblade*'s better-liked mechanics for its *Soul Edge* follow up down the road. Nothing can be proven, of course, but some of *Soul Calibur*'s new characters looked eerily similar to a few of the ones in *Twinblade* and its 1997 sequel. It's just something to think about.

-excerpted from "1996: A Look Back" on ComboBreakers.com, June 23, 2013

*The Dark Queen would later get a game of her very own, when Battletoads: The Dark Queen was released for the Super Nintendo CD in February 1996. The game, though significantly easier than previous Battletoads titles, was an intriguing look at the past and present of this beloved villainess. The game was somewhat unique in that it switched back and forth between the Dark Queen's past and her present, with levels alternating between them. In the past, we see the Dark Queen's origins as a young apprentice sorceress named Vixariel. In these stages, the young Dark Queen completes a series of tasks but we soon discover that she plans on betraying her master and stealing his immortality. In the present stages, the Dark Queen is once again plotting to conquer the universe, and you must gather components to build a massive machine that will drain the universe of its life energy. As the Dark Queen ventures forth to gather the components, she slaughters all who oppose her in a series of levels that make you truly feel the Queen's evil power. Finally, the past stages culminate in a boss battle against the Queen's master, where she defeats him and takes his immortality to become the Dark Queen. In the final level of the present stages and of the*

game itself, there is a unique final boss... YOU are the final boss, controlling the Dark Queen as she faces off against the Battletoads. It is...extremely neat to play as a final boss and whether you win the fight or not, the game ends, giving you one of two endings. If you lose to the Battletoads, the Dark Queen once again retreats to the ends of the universe, where she actually considers relinquishing her immortality and the ending is left very ambiguous as to whether or not she'll attempt her evil schemes again. If you defeat the Battletoads, the Dark Queen conquers all and there's a very entertaining and triumphant ending of her subjugating the entire universe. The game actually makes it quite fun to play as the villain and though there are a couple scenes in the "past" levels that give her sort-of a sympathetic line or two, ultimately she's an unrepentant villain and the character is all the better for it. -excerpted from "The History of The Dark Queen", an article on IGN.com, January 24, 2012

It's a busy time to be an employee at Rare, and Chris and Tim Stamper know that all too well. Their Battletoads spin-off game *Battletoads: The Dark Queen* just launched, but there's no rest for the weary, as the company has been hard at work on *Donkey Kong Country 3* over the past few months, with more planned titles on the way. Among them, a sequel to *Killer Instinct* which is set to hit arcades later this year, and a game based on the hit new James Bond movie *Goldeneye*.

"We can't really tell you anything about *Goldeneye*, not even what system it's gonna be on," Chris Stamper told us as he walked us around company HQ. "I will say that our Ultra dev kit just arrived and we've been really excited about it but we have no clue what game will be the first we're gonna develop, right now we're just taking everything as it comes."

Today, the Stampers were showing us the nearly-completed sequel to 1994's hit SNES baseball game, *Ken Griffey Jr. Presents Major League Baseball*. For the sequel, which comes out in May, Rare has added voiced commentary and has improved the graphics dramatically. We loved what we played, but when we asked if we could have a go at the newest *Donkey Kong Country* game, we were sadly turned down.

"The first playable *Donkey Kong Country 3* demo will be available at Spaceworld in Japan," said Tim Stamper, referring to this year's Nintendo blowout in Japan (which should be taking place right about the time this magazine reaches your eyeballs), where it's rumored that the first Ultra Nintendo games will be shown off. "Even if we wanted to show you the game, it's not quite ready for playable demonstration just yet."

Rareware employees, however, were eager to demo their new *Killer Instinct* game for us, which looked even better and played a lot faster than the previous hit title. Like *Goldeneye*, it's not yet clear which system this game will be available on, though the Super Nintendo CD has already shown it can handle a limited degree of 3-D visuals. *Ken Griffey Jr.'s Winning Run* looks outstanding on the system, and is expected to be a big seller when it releases in May. It's clear that Rare has no shortage of great games on the way, something Nintendo is very grateful for.

"All these games we're showing off will only be available for Nintendo systems, not on the Sega Saturn, no matter what," said Chris Stamper as I continued to play *Killer Instinct 2*. "A lot of companies are doing upgraded versions of Super Nintendo CD games on the Saturn, but if we think a game needs to be on the Ultra, we can wait for it to be released. I can't say anything about what was on the dev kits but everybody here is really excited to get our hands on them for the first time."

-excerpted from "A Rare Breed: Our Trip To Rareware HQ" in the April 1996 issue of

*Electronic Gaming Monthly*

-

Ted Crosley: This game is insane. *Eternal Night* is one of the scariest action games I've ever played but also one of the most fun.

Alex Stansfield: It's definitely a huge step up from *Castlevania: Rondo of Blood* in terms of gameplay, particularly in how many ways it gives you to kill those huge-ass bosses in every level.

Ted: Even the plot which is usually an afterthought in these kinds of games is pretty good.

Alex: Right, that was a pretty big step-up from *Castlevania* too. This game really shows off the sprite capabilities of the Super Nintendo CD with all those huge bosses on screen.

Ted: You can't stop talking about the huge bosses, can you?

Alex: The huge goat lion from level 10 was amazing.

Ted: Oh, Baphomet. Yeah he gave me some serious nightmares. This game, all in all was absolutely outstanding, I'm awarding it a 4.5.

Alex: I'm also giving it a 4.5. The only knock I have against it was that the levels could've been just a bit bigger, but it does a good job keeping the action moving and the bosses were so creative and fun that the game absolutely zipped by, maybe it just SEEMED shorter.

-excerpted from the February 6, 1996 episode of *GameTV*

(...)

Brittany Saldita: *Slaughterbox* is an absolutely brutal game. It can be fun at times but I felt like there was too much focus on the gore and not on the gameplay.

John Walden: I agree, the game was trying way too hard to be shocking and not hard enough to be fun. *Mortal Kombat* did a great job at both but this game fails at that and what's worse is the really frustrating AI, like when you're put into a room with five guys and they all come at you at once and there's really no way to win.

Brittany: Which is a shame because it feels like there's the idea of a good game there. I don't MIND a really gory and bloody game, I mean I love the *Mortal Kombat* series but this is not that.

John: It's not that at all and it really could've been better. I give *Slaughterbox* a 2.5.

Brittany: And I give it a 3. It's got some moments of fun but you have to look really hard for them.

(...)

Ted: *Tekken* was just...kind of boring compared to *Virtua Fighter*. To me, I felt like every

fight ended up being kind of the same. Half the characters are pretty much clones which is almost an unforgivable sin.

John: I was able to forgive most of *Tekken's* sins. It looks gorgeous and it plays really smoothly. I felt it was easier to do quick combo moves than it was to do in *Virtua Fighter* which for me was more of a slower game.

Ted: I have to give it credit for that, it is an intuitive game but after a while...

John: I didn't even mind the clones.

Ted: How could you NOT mind the clones?! The whole point of a fighting game-

John: Would you rather have just had nine characters?

Ted: Yes! God, yes, give me nine characters that are different instead of 17 characters where half of them are the same as the other half!

John: I just think there are situations where clones are okay.

Ted: Wouldn't a costume swap have sufficed? Instead of, instead of giving them a whole character slot, let me press a button when I pick them and then you get the alternate character! That is a WAY better idea.

John: You have a point, maybe that way would've been better.

Ted: I give *Tekken* a 3.5. It's definitely not the best fighter out there but it plays decently and can be fun for the first few hours.

John: I'm giving it a solid 4, it's a really nice game and a lot of fun to play.

Ted: And you have to unlock the clones too. What a joke.

## February 28, 1996

Selena Quintanilla-Perez: And the nominees for Best Rock Album are... *Wildflowers*, by Tom Petty... \*an excerpt of the album is played\* ...*Stains*, by Nirvana... \*an excerpt of the album is played\*... *Jagged Little Pill*, by Alanis Morissette... \*an excerpt of the album is played\*... *Vitalogy*, by Pearl Jam... \*an excerpt of the album is played\*... and *Mirror Ball*, by Neil Young... \*an excerpt of the album is played\* And the Grammy goes to... *Jagged Little Pill*, Alanis Morissette!

\*Alanis Morissette comes up to accept her Grammy, giving Selena a big hug as she is handed the trophy\*

(...)

MTV News Interviewer: And now we're here live with Nirvana. You guys got shut out tonight, unfortunately.

Kurt Cobain: \*looking like he really couldn't care less, he shrugs\* It is what it is.

Dave Grohl: We weren't really expecting to come away with anything tonight, so...

Kurt Cobain: Alanis is brilliant. I just want to say that, she's (expletive) brilliant and she absolutely deserved to win every award she won tonight.

Krist Novoselic: She sounded so pissed off on that whole album, I mean, I shudder to think if she didn't win tonight...

Dave Grohl: \*laughing\*

MTV News Interviewer: Any plans, maybe another album coming up?

Kurt Cobain: Right now, we're just gonna relax and get ready for our tour coming up this summer. I have no idea what or when or if our next album is gonna be.

Krist Novoselic: Pretty much what he said.

Dave Grohl: When it comes, it comes.

MTV News Interviewer: Thank you guys, good luck with the tour. \*Nirvana leaves, Kurt flashes a peace sign at the camera as the three quickly make their way in another direction\* Coming up next, we're gonna TRY to talk to the big winner of the night if we can get to her, right now there's a massive crowd around Alanis but if I can get a microphone

into that mess, maybe we'll hear what she has to say and if she's still pissed off after winning so many Grammys.

-

### **March 1, 1996**

Tom Kalinske sat across a desk from his boss, Hayao Nakayama, as the two discussed Kalinske's proposals for the Sega Saturn's next direction.

"So the brass in Japan finally have a decision? What's it gonna be.... the \$299 price drop? The \$399 Virtua Arcade set? Neither?" Kalinske was expecting to hear 'neither' from Nakayama. Japan had resisted chopping the price of the Saturn even as sales continued to fall from their peak on Saturday. If anything, Kalinske expected to hear that he could package the Virtua Arcade Set as the Saturn's standard pack-in equipment. At the very least, \$399 for all of those bonus games and accessories would move a few Saturns.

"Both," said Nakayama. "They've decided to allow both. Effective Saturday, March 23, the price of the Saturn will drop to \$299 in North America and the Virtua Arcade Set will be re-launched as a \$399 premium package."

Kalinske could barely contain the excitement on his face. Finally, Sega was making the decision they needed to make to move Saturns! It was coming six months later than it should have, but late was always better than never!

"That is....awesome!" shouted Kalinske, pumping his fist. Nakayama also allowed himself a jovial laugh, he'd been advocating the price drop himself for several months. "Thanks for bugging them so much about it for me, I know they wouldn't have done it if you hadn't been behind me 100 percent."

"Well, we have to do something, the SNES-CD is outselling the Saturn in North America 5 to 1..." said Nakayama, shaking his head. "Saturn's doing a lot better in Japan, which...I think that put them in a good mood, having the Japanese branch do better for a change."

"Well, we need to make sure we keep bringing plenty of Japanese games over," said Kalinske. "Looking forward to a big push for *Guardian Heroes* this month, and of course *Resident Evil* and *Soul Edge* are coming..."

Nakayama nodded, expecting all three games to sell well, especially *Resident Evil* which was being heavily promoted in gaming magazines, while a general TV advertisement push would begin later that month.

"We already have an ad lined up for this new price drop," said Nakayama. "We'll call it, 'Spring Into Saturn'."

Kalinske briefly reviewed the advertisement material. The spots were catchy, they showed Sonic the Hedgehog mischievously changing price tags in stores to reflect the new lower price of the Saturn.

"That rascal," said Kalinske with a chuckle. The ads were fun, they'd work to push Saturns in the short-term, but he knew Sega needed a bigger strategy and he'd already been mining his brain for ideas. "I think though...that we'll need another campaign to push more Saturns

later this year. I have an idea for a campaign that we could announce at this year's E3."

"Of course," Nakayama replied with a nod. Sega already had big plans for E3...along with the inevitable *Sonic 4* announcement, they'd be showing off hotly-anticipated games like *Nights*, *Tomb Raider*, and *Virtua Fighter 2*... the announcement of a new ad campaign would be the perfect way to top off all the big news. "What did you have in mind?"

Tom Kalinske remembered all the comparison reviews the previous month, showing the beautiful *Tekken* up against the impressive but dated *Twinblade*. It didn't matter that *Twinblade's* reviews were better, it had already given him an idea...

"We dust off an old classic, we kick Nintendo right in the fucking teeth the same way we did back in 1990. We show off all the things the Saturn can do that their last-gen machine could never dream of. We show people that Saturn does...what Nintendon't."

-

1995 saw the dawn of what I call the "reconstruction" phase of DC Comics in the wake of *Zero Hour* and *Batman Forever*, the latter of which inaugurated the DC Cinematic Universe. Many fans regard Mark Waid and George Perez's seminal run *Justice League* as the most definitive run since Gardner Fox's in the sixties. For one, it brought the "Big Seven" of the original league: Superman, Batman, Wonder Woman, Flash, Green Lantern, Aquaman, and Martian Manhunter back to the fore. Though it is purely a matter of personal opinion, the *Justice League* was supposed to be about DC's heavy hitters banding together against universe-shattering threats and unlike the Marvel's *Avengers*, its roster remained stable until then-writer, Gerry Conway, removed most of the line up that kept B-listers like Zatanna and Elongated Man and replaced the others with no names like Gypsy and Vibe in the often maligned "Justice League Detroit." Most fans hold its successor "Justice League International" in higher regard because of its emphasis on humor. However, the two leading creative voices behind the *International* era, Keith Giffen and J.M. DeMatteis, had departed and the line stagnated shortly thereafter. Interestingly it began with the SNES-CD game, *Justice League: Battle For Earth*.

"Brian (Augustyn) called me up with an offer to take over what was then *Justice League America* after my work on *the Flash*. However, he told me that editorial wanted the opening arc to be an adaptation of the video game." Waid recalled in an interview, "I never played the video game. I wasn't really interested in playing it so the most I knew about the game was that it was the original seven against Darkseid. It sounded generic to me and I struggled with the proposal until Grant (Morrison) suggested that I kill the New Gods."

Jack Kirby originally intended to end the New Gods since their debut in 1970, but low sales led to the cancellation of the Fourth World titles before Kirby could conclude the epic. Since then the New Gods occasionally reappeared, most famously in 1982's *Great Darkness Saga* and the *Superfriends: The Legendary Superpowers Show* animated series from 1984 in addition to Kenner's *Superpowers* toy line. One could understand why DC editorial was initially reluctant to part with Darkseid.

"Janette [Khan] and Paul [Levitz] initially vetoed the idea because Darkseid was the quintessential villain. However, Paul eventually relented and Janette not too long afterward." Waid continued, "I believed that the best way to honor Jack Kirby's legacy what

to finish the saga he started. Paul, being a creator himself, agreed.”

*Justice League America* became *Justice League* with issue #100 in June 1995, which began with the prelude to “the Fall of the New Gods” arc. Darkseid had finally found the missing piece to the coveted Anti-Life Equation on Earth and uses it to begin his enslavement on the planet and his assault on New Genesis. Hence it fell to DC’s Big Seven to fight not only the horde of Apokolips, but also other heroes that Darkseid enslaved with the Anti-Life equation. “Fall of the New Gods” also crossed over into the *Superman* titles because of their historical connection to the Fourth World and *Wonder Woman* to involve the gods of Olympus. Neither the *Superman* nor the *Wonder Woman* titles had an effect on the main story; it is notable for the introduction of Wonder Woman supporting character, Vanessa Kapatelis becoming the new Wonder Girl who would later join the (Teen) Titans.[1]

As for the main arc itself, it involved two main threads: Superman, Aquaman, Batman, and Wonder Woman’s last stand against Darkseid and Flash and Green Lantern exchanging barbs as they join Martian Manhunter and Mister Miracle in their frantic gambit to assemble the Life Equation. Perez’s rendition of Superman captured the power of the Man of Steel when he fought Darkseid in one-on-one combat. However, even Superman falls and through the intervention of Orion does he survive.

Meanwhile, Mister Miracle’s group set charred and broken New Genesis on a collision course with Apokolips to end the threat of Darkseid’s armies. Orion engages Darkseid in final combat for a mortally wounded Orion to deliver the killing blow. Earth survives, but the New Gods aside from Mister Miracle, Barda, and Metron are dead. As Metron tells the assembled and battered Justice League before his departure to parts unknown, “The Fourth World of the New Gods has ended. The Fifth World of Man begins today.”

Metron’s words reveal the overall theme of “The Fall of the New Gods”: legacy. It is particularly evident with the inclusion of Wally West and Kyle Rayner in the lineup, both being the successors of Barry Allen and Hal Jordan, respectively. While Barry and Hal were the best of friends in the halcyon days of the Silver Age, the relationship was initially tense and the differences between them stark. Wally was the kid sidekick who “did good” but growing into the mantle while Kyle received the last Green Lantern by pure happenstance (though latter stories would change this), thus both characters initially despised each other. Wally saw Kyle as undeserving of the mantle, ironic considering his inferiority complex towards his predecessor, and Kyle saw him as an elitist snob. It changed the dynamics of team through their respective relationships to the veteran members considering Wally’s ties to Batman and Aquaman and Kyle’s relationships with Superman and Martian Manhunter. While influenced by the Silver Age League, Waid made it clear that this was not the same league.

The theme of legacy was also evident by how the Justice League absorbed the remnants of the Justice Society with the inductions of both a new Sandman [2] and Doctor Fate to the League in the issues following “Fall of the New Gods.” With Jay Garrick, Alan Scott, and their compatriots permanently off the board, it made sense for their successors to join the League and “streamline” its heroes into one organization. Granted, James Robinson, David Goyer, and a young Geoff Johns attempted a revival of *Infinity Inc.* with the children of the Justice Society in 1999, it barely lasted two years before cancellation. Similarly, Waid’s *Justice League* did not forget its predecessor, as Ted Kord AKA Blue Beetle became a prominent member of the Justice League whose company, along with Wayne Enterprises, provided the tech and the capital for this incarnation of the League. [3]

However, "Fall of the New Gods" was not without its critics. Many critics today believe that the Waid/Perez run started out too strong and ended on a comparative whimper. There is a kernel of truth to this, however, with the title flagging—DC needed to go big or go home. The comic book industry had been in decline with the rise of other media, notably television in the fifties and then video games in the eighties/nineties, *Justice League: Battle for Earth* for the SNES-CD introduced a generation of children who largely did not read comic books. If those that played *Battle for Earth* were to pick up a copy of *Justice League America* circa 1993, the likes of Rocket Red, General Glory, and Maxima instead of Superman, Batman, Wonder Woman would have confused them.

"Fall of the New Gods" was a risky gambit but it paid off as far as DC was concerned. *Justice League #100* may not have sold millions of copies, but it was the best-selling title of 1995 at nearly 300K copies. Granted, sales fell and stabilized, but *Justice League* would go on to contest *X-Men* for top-selling title each month. Its main legacy was that it successfully brought past and present together. One of my main criticisms of *Crisis on Infinite Earths* is that it wanted to give its universe a clean break but was reluctant to completely let go of the past and thus tried to have its cake and eat it at the same time. This resulted in a nearly incomprehensible continuity nightmare with rampant retcons to force a square peg through a circular hole. If *Zero Hour* and "Fall of the New Gods" accomplished one thing, it rounded the edges to make that peg fit. After nearly a decade of anti-heroes and deconstruction; the industry was ready for a reconstructive approach. Waid/Perez's *Justice League* was not just the cornerstone for the new DC Universe (at least, until Grant Morrison's *Hypercrisis*) but also its animated and cinematic universes.

*-from the blog "The Musing Platypus" by B. Ronning, May 5, 2015*

--

[1] Butterflies fluttered John Byrne's run on *Wonder Woman* away, thus Cassie Sandsmark never existed ITTL and an oft-overlooked supporting character from the Perez era took the mantle instead.

[2] Sandy Hawkins takes the mantle from the retired Wesley Dodds earlier and an alt-Jared Stevens becomes the new Doctor Fate complete with signature helmet instead of the dagger.

[3] In my mind, the League at the end of the Waid/Perez run consists of the Big Seven, Green Arrow/Black Canary/Hawkman/Red Tornado (representing the "Satellite League"), Sandman/Doctor Fate (the Justice Society), and Blue Beetle/Plastic Man/Captain Marvel (characters from companies DC acquired)

-

*"At \$399, the Saturn was already a bargain. At \$299, it's a must-have gaming console, especially if you're a Genesis owner. There are too many great games coming out for it this year to miss."*

*-Dan "Shoe" Hsu in an opinion article in the May 1996 issue of *Electronic Gaming Monthly**

*"And now we have the greatest Super Nintendo CD role-playing game ever made. It's *Chrono Trigger*, for a number of reasons. The graphics are pretty much the pinnacle of*

*sprite art. The soundtrack is by far the greatest video game soundtrack ever. The animated cutscenes are done masterfully and there are so many of them, and the voice acting is superb, especially by SNES-CD standards. The SNES-CD was an RPG lover's dream device, and the cream of the crop, the jewel in the crown, the top of the mountain is and will always be Chrono Trigger."*

-GameTV's Alex Stansfield, in an article on his website on January 11, 2012

*"This was the first time I'd ever done a project of this scope. It was the first time ANYONE had ever done a project of this scope. Nearly an hour of animation for a video game. This game had more animation than even the laserdisc games for arcade systems had! It was very intimidating but I knew we were making history. It was truly a Dream Project in every sense of the word!"*

-Akira Toriyama

*"Nintendo had not allowed any game for the SNES-CD to be more than one disc. They cited costs, consumer inconvenience, any number of reasons and at the time it was not a major problem, we'd had to reduce the sound quality for Final Fantasy VI but that was the only time we'd bumped up against the limit. From the beginning, Chrono Trigger was going to need two discs. We asked Nintendo at the very start of the project if we could do two discs and to our surprise they agreed immediately! I think they realized that this technology was advancing so fast that two discs would be necessary. Also, I imagine the Sega Saturn had a lot to do with it as well."*

-Yoshinori Kitase

*"For Schala, we had nearly forgotten about her fate but when it came time to decide what to do with her, we were greatly torn. I initially wanted a tragic end for her, as such a delicate and kindhearted character I was planning to just have her disappear, another victim of Lavos' wrath. But among the writing staff, there was the opinion that perhaps her tragic fate would be overshadowed by the very violent death of Crono and that it wouldn't have the impact I'd intended. And then (Akihiro) Matsui-san showed how adding another playable character could add another layer of strategy to the game. So I relented and we then made Schala able to be found and added to the party. In hindsight, this is a decision that I think ended up being the right one to make."*

-Masato Kato

*"MARLE!!"*

-Crono, after Marle disappears in Guardia Castle in 600AD, it's his first words spoken in an animated cutscene. In TTL's *Chrono Trigger*, Crono has spoken dialogue and playable character names cannot be changed.

*"Please go...I could not save Crono and I could not stop my mother. I deserve neither your time or your pity."*

-Schala, after the party comes to retrieve her after the Ocean Palace disaster in the optional sidequest to recruit her into your party

*"Mother, for the first time in my life I will defy you....! I will NOT allow you to bring Lavos into this world!"*

-Schala when the party faces down Queen Zeal at the Ocean Palace

*"Wow, March 1996, hell of a month there. Chrono Trigger sorta overwhelmed everything but you also had Guardian Heroes and Frank Thomas for the Saturn, plus Major Hazard and Monster Wars sequels, Milon's Adventure, Belle Weather, that sweet WCW Nitro*

*game...even had a fairly playable Donald Duck game. I can't imagine being a kid at that time with only five bucks a week allowance, must've been torture."*

-a comment on Kotaku.com's "TAY: Best Month For Video Games Of All Time?" post on June 24, 2013

-

\*The main theme from *Chrono Trigger* begins to play as animated cutscenes from the game are displayed on the screen, including the launch of the Epoch, Crono, Marle, and Lucca fighting Zombor, Magus and Ozzie facing down Frog and Cyrus, and Marle disappearing in 600AD. Text flashes on the screen as the scenes play, the commercial features no narration.\*

**From the creators of *Final Fantasy* comes an adventure spanning millions of years.**

\*More cutscenes are displayed, showing off more footage from the game including Frog pulling up the Masamune, Lavos bursting up from the ground on the Day of Lavos, and Queen Zeal cackling wickedly.\*

**Featuring nearly one hour of film-quality professionally acted animated cutscenes**

**Over 50 musical tracks in full CD audio**

**Stunning high-definition characters and backgrounds**

\*The screen goes black\*

**March 18**

**ONLY on Super Nintendo CD**

\*mechanical sound effect\* *Nin-ten-do*

-the North American television advertisement for *Chrono Trigger*, which began airing in early March 1996

## Chrono Trigger: The Basics

Squaresoft's *Chrono Trigger* is the first 2-disc game for the Super Nintendo. A large part of this space is taken up by the 47 minutes of animated cutscenes, the more than three hours of voice acted spoken lines, and the entirely CD-audio based musical soundtrack by Yasunori Mitsuda and Nobuo Uematsu. The game is so large, in fact, that it took up nearly all the space on two CDs and was nearly a 3-disc game. The game is mostly similar to OTL's *Chrono Trigger* in terms of plot, with most of the changes consisting of storyline details and the addition of a new playable character and three more endings. The game is fully voice acted, including the main character Crono who was mute IOTL. Because of this, none of the characters can be named, as they are named in voice acted lines and cutscenes and thus have to remain consistent. Character dialogue is featured in battle, characters do not call out their attacks but do speak as an attack is launched, this is context-based and sometimes a spoken line can vary depending upon how close an enemy is to dying or whether a character is targeting one enemy or multiple enemies. For example, when you launch an attack targeting three enemies, and one of them moves out of range of the attack, a character may express disappointment. This is seen as ground-breaking for the time, even surpassing the level of voice acting quality in *Tale Phantasia*, a game that would be compared to *Chrono Trigger* many, many times after that game's launch. The voice acting itself is considered to be quite good, though the cast is nearly entirely unknowns. The only two voice actors that go on to have highly successful careers after performing in *Chrono Trigger* are Moira Quirk, who voices Schala and Queen Zeal in the game, and Crispin Freeman, who voices Magus. Graphically, the game looks quite a bit better than IOTL, with sprite graphics comparable to those featured in games like OTL's *SaGa Frontier* and *Legend of Mana*. The highly detailed character sprites are considered among the very best 2-D graphics on the SNES-CD, only surpassed by certain titles on the Sega Saturn. In terms of gameplay, though the basic attack/tech/combo structure is unchanged from OTL, because of the addition of Schala as a playable character, the elemental scheme of the game is changed somewhat. Instead of a character having only a single element they're associated with, they're associated with both an element and an attack discipline, physical (known as Force in the game) and magical (known as Aura). Crono is Force-Light, Marle is Aura-Water, Lucca is Aura-Fire, Robo is Force-Shadow, Ayla is Force-Fire, Frog is Force-Water, Magus is Aura-Shadow, and Schala is Aura-Light. This also changes up some techs. Crono no longer has OTL's Luminaire, that instead becomes Schala's eighth and final tech. Instead, he has Tornado, a full-screen attack that does physical damage. Ayla's ultimate attack becomes Meteor Strike, where she leaps into space and returns to earth with the force of a meteor impact to damage foes with fire and physical damage (her Triple Kick becomes her seventh tech and she loses Dino Tail). Schala's magic consists of mostly healing techs with light-based magic attacks interspersed (Crono's basic lightning tech becomes Lightning Strike, where he uses his sword to deal lightning/physical damage). Also, the tech list is SIGNIFICANTLY expanded, with every single possible two-person team getting three dual techs between them, this makes for 84 dual techs in all. Triple Techs continue to require Crono, but Magus and Schala get Triple Techs with him as well. Along with nine bonus Triple Techs that don't require Crono (acquired with special colored rocks as IOTL), this makes for a total of 30 Triple Techs, for a grand total of 114 combination techs and 64 single techs (with a few repetitions among these) available in the game.

The plot remains identical for the most part to OTL's *Chrono Trigger*. It starts with Crono waking up and meeting a beautiful girl named Marle at the Millennium Fair, only to see her getting transported through time by an invention created by his friend Lucca. Crono pursues Marle through time, leading to a series of misadventures that leads to the three youths learning of a terrible apocalypse that ruins the future. The creature responsible for this

apocalypse is Lavos, and the three of them, along with a robot they meet later on named Robo, decide to stop the apocalypse by any means necessary. They come to learn that a wizard named Magus in the Middle Ages may have created Lavos and team up with Frog to stop him. Once they defeat Magus, however, they learn that Lavos was merely summoned by Magus, and another time portal sends them back to prehistoric times to reunite with Ayla and witness Lavos' arrival on Earth in the form of the meteor that killed the dinosaurs. This creates a portal that sends the group to a mysterious ancient land called Zeal, where the true story finally comes into focus as the group confronts the evil Queen Zeal in an attempt to stop Lavos forever. This fails, and results in Crono's death (and ITTL the end of disc one). After the group then escapes Dalton's Blackbird, the game opens up as a possibility for reviving Crono is revealed. This second portion of the game, the sidequest portion, contains the biggest changes from IOTL's *Chrono Trigger*. Each of the game's eight playable characters has a quest. The Death Peak quest revives Crono, the Fiona's Forest quest allows Lucca to confront her past, the Ozzie's Fort quest gives Magus a chance to put his former henchmen down once and for all, the Geno Dome quest allows Robo to settle accounts with Mother Brain, and the Rainbow Shell quest allows Marle to reconcile with her father. The three quests that have the biggest changes from IOTL: The Cyrus' Tomb quest, in which Frog acquires his ultimate weapon the Masamune, also requires Frog to battle the ghostly Cyrus in a one-on-one showdown before receiving his prize. The Sun Stone quest requires a climb up Singing Mountain in 65,000,000 BC to place the Sun Stone before it can be charged, and this quest also sees Ayla confronting the last remaining Reptites and also marrying Kino. Finally, there is a remaining quest added from OTL, the quest to rescue Schala in 12,000 BC (which requires you to both revive Crono and spare Magus' life). After the fall of the Ocean Palace, Schala is sent to a place called Time's Wasteland, in which Lavos casts those who no longer fit into any time period. After Crono is revived, bringing Magus to the Last Village in 12,000 BC will prompt the cat Alfador to follow him. One of the villagers will comment on how Alfador was digging around for something in the village. Alfador will then run to a spot where Magus will dig up Schala's pendant. You must then take this pendant to all three Gurus, beginning with Gaspar, and then to Melchior who will mount it into a crest. Presenting this crest to the sleeping Balthasar Nu will stir him from his seemingly eternal slumber just long enough to use the crest to create a portal to Time's Wasteland, begging you to find and save Schala. Time's Wasteland is a curious dungeon, a mixture of environments with versions of monsters from all time periods (in terms of difficulty level it's a bit less than the Geno Dome and Giant's Claw). You MUST bring Magus into this dungeon in order to defeat its boss, Dalton, who is siphoning Schala's power in order to make himself an incredibly powerful sorcerer. If Magus is not with you, he won't be able to convince Schala to break free of Dalton's control and strike back against him, you'll be forced out of the battle and will have to put Magus in your party before trying again. If Magus is in your party, then after hitting Dalton to the tune of 15,000 HP, Magus will reveal himself as Janus to Schala and beg her forgiveness. Seeing Magus finally causes Schala to snap out of Dalton's energy sapping spell and fight back, allowing Magus to finish him off for good. After this, Schala joins the party, at Level 37 like her brother, with a full-party Heal spell, a Life spell, and a single-target Light magic attack spell. She later learns Haste 2, Cure 2, Lucent Array (a Light Magic attack that hits all enemies with the same power as Magus' Dark Mist), Life 2, and Luminaire. Her basic weapon is a staff. Following the eight side quests is the optional Black Omen dungeon, where Queen Zeal can be confronted (as IOTL, if you face Queen Zeal with Magus in your party, the normal "Boss Battle 2" theme will change to Magus' theme, or if you face her with Schala in your party, Schala's Theme will play during the battle, if you use both of them, Magus' theme takes priority), or you can go directly to 1999 AD using the time machine or the bucket, either way the final battle with Lavos plays out almost exactly as IOTL. The game then ends with the characters returning to their original timelines, the ending is a bit different if you've acquired Schala, who

resolves to rebuild 12000 BC as the new Queen of Zeal, where Earthbound and Enlightened Ones will be treated the same, in this ending, Magus decides to return to 600 AD to atone for his crimes there. The game then ends with a beautiful panorama of the Epoch traversing the world (or a balloon if you've destroyed the Epoch by crashing it into Lavos). As IOTL, you're given the option of starting a New Game+ to fight Lavos earlier in order to acquire one of 16 possible endings.

### **March 18, 1996**

*Chrono Trigger* is released in North America to the most positive critical reception for a video game since *The Legend Of Zelda: Ocarina of Dreams*. The game is universally proclaimed as being Squaresoft's masterpiece, exceeding *Final Fantasy VI* and comparable to *Secret of Mana* in quality. The game breaks many of *Secret of Mana*'s North American RPG sales records, with over 50,000 sales on the first day, 150,000 in the first week, and 250,000 by the end of April. With Sega's price cut on the horizon, the resounding success of *Chrono Trigger* further highlighted the significant "games gap" that remained between Nintendo and Sega, especially amongst the older demographic that Sega was attempting to court. It kicked off Nintendo's "Year of the RPG" in earnest and struck a major blow for Nintendo at a time that it was going to need to go on the offensive as the Saturn's price dropped and its library of games increased.

For Squaresoft, the release of *Chrono Trigger* further solidified the close relationship between the company and Nintendo. *Final Fantasy VII* had been formally announced for the Ultra Nintendo just a few weeks before, and while that game would not have a demo ready for Spaceworld, E3 was only two months away...

\*Scene shows a boy at the toy store, looking at a Sega Saturn\*

Boy: Oh man, the Sega Saturn is awesome!

\*Footage of Sega Saturn games begins to play\*

Boy: No other game system brings you realistic 3-D graphics, intense sports action, and the best home arcade ports like the Sega Saturn does! \*looks at his mom\* Mom, can we get it?

\*The boy's mother looks at the price tag and shakes her head\*

Mom: Sorry but it's just a little too much for us right now, maybe next year?

Boy: \*looks disappointed\* Okay...

\*As the mom and her son are walking away, the boy catches a blue blur out of the corner of his eye\*

Boy: Huh? \*turns and looks but sees nothing\*

\*The blue blur streaks by again, followed by a bunch of store security guys\*

Boy: Is that...Sonic? \*watches as Sonic taunts the security guys who can't catch him\*

Sonic: You're too slow! \*flees out of the store\*

Boy: ....\*he goes back over to the Saturn display\* ...MOM! MOM, COME QUICK!

\*The mom rushes over to the Saturn display and sees the price tag has been changed from \$399 to \$299\*

Boy: Can we get it now?

Mom: Well... okay. But don't tell your dad!

\*It then shows Sonic rushing down the highway to another toy store with a big red marker in hand and a smirk on his face\*

Narrator: Sonic is at it again! Now the Sega Saturn is just \$299! With the latest graphics and the hottest arcade ports, now's the perfect time to Spring into Saturn!

\*Footage of various Saturn games is shown on screen\*

Narrator: Get the Saturn with *Virtua Fighter* and two controllers for just \$299, or get the *Virtua Arcade Set* with everything shown here \*shows the three *Virtua* games plus the light gun and steering wheel accessories\* for a new low price of \$399. And for a limited time with the purchase of any Saturn is a \$20 off coupon toward the purchase of your next Sega Saturn game. With games like *MagiQuest*, *Daytona USA*, and *Ridge Racer*, plus all new games like *Guardian Heroes* and *Frank Thomas' Big Hurt Baseball*, the Saturn is the home

for all of today's biggest hits!

\*Sonic is shown running into the next store, the security guards try to follow him but end up tumbling into a big pile in the parking lot.\*

Security Guard at the bottom of the pile: SEGA!

-excerpted from a Sega Saturn commercial that began airing on March 23, 1996

### **March 23, 1996**

The price of the Sega Saturn is dropped from \$399 to \$299 in North America, while the price of the Virtua Arcade Set, containing *Virtua Fighter*, *Virtua Racing*, *Virtua Cop*, and a number of accessories, is cut to \$399 from \$499. The price drop is accompanied by a new marketing campaign for the Sega Saturn, highlighting the price drop and showing off games such as *Guardian Heroes*, *Soul Edge*, and *Resident Evil*. The price drop causes the first major price spike for the Sega Saturn, and though it still remains significantly behind the SNES-CD in sales, the Saturn passes the Genesis in North American sales for the first time during the month of April 1996. \$299, though still expensive compared to the Super Nintendo CD and the Sega Genesis, is considered by the gaming media to be a more than acceptable price for the Saturn, and sales of hardware and software begin a steady rise that would continue throughout the remainder of the year.

*Of the games that benefited from the Sega Saturn's price cut in the immediate short term, perhaps none did more than Guardian Heroes, a hybrid RPG/beat-em-up from Treasure that probably would've faded into obscurity had Sega and Tom Kalinske not chosen it to be the game that would be pushed heavily in promotional material accompanying the Saturn price drop. Having been released just twelve days before, Guardian Heroes was a fun game, and a gorgeous one too, with beautiful anime-style 2-D that looked amazing on the Saturn's high-powered processor (though Chrono Trigger's graphics were getting a lot of praise at the time, it couldn't compare to what the Saturn's 4x powerful processor could do with 2-D). The game starred four brave warriors who set out on a quest to fight an evil wizard Kanon. The game was highly praised for its four-player gameplay, it probably offered up the best multiplayer experience on the Saturn thus far, with chaotic fights that could take up the whole screen as enemies rushed in. It was beloved by critics, and though it didn't score as highly as Chrono Trigger, it's probably the second best regarded game to come out of that month (and competition was FIERCE!). Among people who used their \$20 Saturn coupons, Guardian Heroes was one of the most purchased Saturn games and it ended up selling over 500,000 copies in North America. Tom Kalinske proudly cited the game as an example of how well Japanese games could do in the West if properly marketed, and the success of Guardian Heroes was a big reason why Treasure's 1997 action title Troublemakers (starring enemy-tossing cutie Marina Liteyears), received such a big promotional push. The other big Saturn game of the month, Frank Thomas' Big Hurt Baseball, was another big success, though it was outdone later on by Ken Griffey Jr.'s Winning Run on the SNES-CD and was ultimately outsold by Guardian Heroes, the little Treasure game that could.*

Jyushin Thunder Liger  
The Great Muta  
Scott Norton*

-excerpted from an article in the April 1996 issue of *EGM2*

"Oh man, WCW Fire Pro Wrestling. That game was the shit back in the day and it's the game that actually got me into watching WCW. Pretty much EVERYBODY in the company was in that game. I was used to wrestling game rosters having 12, maybe 16 guys tops. To see so many guys AND to be able to add the new ones as they came, or even to put myself in the game? Yeah, it didn't have the story modes or anything like today's games do. It was just straight-up pro wrestling. Hell, you could make up your own stories if you wanted to, just act out the promos between matches like me and my friends did. ...yeah, we were dorks."

### **The Major's Back To Kick Some Ass**

*Major Hazard: FUBAR* is one of the most anticipated sequels of the year, and for the most part, it lives up to the hype. Major Hazard and his band of misfit grunts, along with a couple of new characters, get stuck behind enemy lines and have to fight their way out. And fight they do, while getting into a whole lot of trouble along the way. Those of you who remember the last *Major Hazard* game know that it's a laugh riot along with being really fast paced and fun. This game takes the humor up to 11. There are tons of ridiculous weapons and lots of potty humor, which some fans might not appreciate, but it's not gratuitous like in certain children's TV shows, for the most part it's spaced out well and when it does occur it hits the mark and makes you laugh.

The graphics have been amped up from the previous title. Explosions are a lot more detailed as are the enemies, and there's a lot more going on on the screen at once. There's a lot more voice acting in this game (and the last one had plenty to spare), and everything just seems like a marked improvement over the previous title. The challenge is ramped up too, there are some really frustrating levels (and the Major himself expresses his frustration at times with some great one-liners). There's even two-player co-op and competitive modes for when you want to enjoy the game with a buddy. We wish you could play with four players at once, but the game already suffers from a tad of slowdown during particularly crowded segments, so a four-player mode might be too much for the SNES-CD to handle. Regardless, *Major Hazard: FUBAR* is one of the most fun AND funny games of the year so far.

Graphics: 4.5

Sound: 4.5

Play Control: 5.0

Fun Factor: 5.0

Challenge: Intermediate

-excerpted from the April 1996 *GamePro* review of *Major Hazard: FUBAR*

-

Brittany Saldita: *Guardian Heroes* is a really fun, really challenging beat-em-up that's best played with three friends but still quite fun when you're all by your lonesome.

John Walden: It's one of the most addictive Saturn games to date, taking cues from the awesome *Golden Axe* series and throwing in an RPG twist.

Brittany Saldita: While the plotline was a bit thin, it still had some good moments and for the genre, it's a pretty good story. *Guardian Heroes* keeps the action going in every stage, there's never a dull moment and it takes some serious strategy to beat some of the tougher bosses.

John Walden: And those graphics....damn. I mean, don't get me wrong, the Saturn is great at 3-D, but these amazing visuals look like something out of a storybook come to life.

Brittany Saldita: I love that they didn't try to force much 3-D in here. It looks beautiful the way it is. Colorful, vivid, fluid in motion, *Guardian Heroes* is not only one of the most fun video games I've ever played, it's also one of the most beautiful. I'm giving it a 4.5 out of five.

John Walden: And I give it a 4.5 also.

(...)

Kazzi DeCarlo: *Monster Wars 2* is the only game where you can see Jack the Ripper get eaten by a horde of mutant pumpkins.

Ted Crosley: This game was a bit too weird for me. I wasn't a fan of the original and I really wasn't much of a fan of this, though I've never been a huge fan of Koei strategy games to begin with.

Kaz: Well, the fact that you can pick from some really obscure monsters is pretty neat. They got Cthulhu in this thing!

Ted: Uggggggggghhhhh, Cthulhu.

Kaz: You don't like Cthulhu? You don't like Lovecraft?

Ted: I despise Lovecraft!

Kaz: Oh man, I thought you were cool.

Ted: What's cool about a bunch of weird stories with a bunch of weird giant space demons and a bunch of scared people running around and going crazy?

Kaz: Everything you just described is cool. C'mon, man, when the Great Old Ones rise out of the Earth, the end times will be upon us!

Ted: The only Great Old Ones I care about are my grandparents and they're pretty boring too.

Kaz: Well, *Monster Wars 2* was a lot of fun. It wasn't perfect by any means, with quite a few repetitive missions, but the sheer variety of monster types had me entertained and I'm giving this game a 3.5.

Ted: I'm giving it a 3. Fans of Koei games will love it but it's nothing special.

-excerpted from the March 12, 1996 episode of *GameTV*

(...)

Alex Stansfield: *Milon's Adventure* wasn't what I expected at all. I was super frustrated with the NES game, but this game actually was a lot of fun.

Ted: Well, I never played the NES game.

Alex: And I'm glad you didn't, it was a mess.

Ted: But this game was pretty fun. It's a bit derivative of games like *Castlevania* and *Andreakah* but it works on most levels, the graphics are kinda cutesy and simple but I really liked the soundtrack.

Alex: I had tons of fun, the game fixed literally EVERYTHING wrong with the original NES game and it's one of the biggest sequel improvements I've ever seen.

Ted: HudsonSoft is known for their weird titles and this is no exception but I did have fun.

Alex: I'm giving *Milon's Adventure* a 4.5 out of 5.

Ted: I'm giving it a 3.5.

(...)

Ted: Wow. That's all I can really say about *Chrono Trigger*.

Alex: This game lived up to the hype and then some. And the replay value is just through the roof!

Ted: Yeah, going back and kicking ass with fully-leveled characters is something that should be in EVERY RPG from now on.

Alex: The soundtrack is the best I've ever heard in a game, hands down, bar none.

Ted: I'm gonna disagree with that, I thought the *Sonic 3* soundtrack was bigger.

Alex: Yeah we are DEFINITELY disagreeing there.

Ted: The voice acting surprised me, I thought it was fantastic. Usually voice acting in games kinda sucks, even *Lunar* for Sega CD was really campy but this was pretty good. I can't say too much about the voice acting without spoiling a lot of the plot but it was really good.

Alex: Let us just say this, if you are a fan of *Guts* on Nickelodeon this game will blow your mind.

Ted: Yeah, they should've called the Mountain of Woe the Aggro Crag.

Alex: \*laughing\* That would have been appropriate.

Ted: I'm giving this game a 5 out of 5. I can't give it anything else.

Alex: Yep, 5 out of 5 for me. \*sirens go off\* Uh oh...uh oh, guess what time it is?

Ted: Time to change Kaz's dish?

Alex: It's time to add another game to the GameTV Hall Of Fame!

\*A framed copy of *Chrono Trigger* is brought over to the wall where *Ocarina of Dreams* and *Ballistic Limit* are mounted.\*

Ted: And let's put it up here, right next to *Ballistic Limit*, there you go.

Brittany: It looks pretty good up there.

Alex: And there is *Chrono Trigger* and when we come back we are going to be giving you all an EXCLUSIVE world premiere sneak peek at Sega's upcoming game *NiGHTS Into Dreams*.

-excerpted from the March 19, 1996 episode of *GameTV*

"And it is with great excitement that we award our first perfect 40/40 score to a game that is not on the Super Famicom CD! **Biohazard** for the Sega Saturn simply blew us away with its cinematic graphics and terrifying atmosphere. It's absolutely worth checking out for anyone who owns a Sega Saturn and the perfect incentive to purchase one for those who don't own one already!"

-excerpted from an editorial in the April 1996 issue of *Famitsu* magazine

-  
"It's a great feeling, having the #1 video game in the world. The entire world, is that right? Ha, it feels really great."

-Shinji Mikami, in an interview on a Japanese talk show on April 30, 1996

"Resident Evil is a superb game that takes the Sega Saturn to another level. Combined with the recent price cut, the Sega Saturn is now the must-own game device of the year."

-from the review of *Resident Evil* in the May 1996 issue of *GamePro*

"Sega's got its balls back."

-overheard in the halls of Nintendo of America sometime shortly after the North American release of *Resident Evil*

"Entering into optical media was something I was so eager to do, so much space and power would allow us to go nuts creatively and *Fire Emblem: The Holy War* is the result of that. Nintendo was supporting us better than ever, *Shield of Seals* was a hit Super Famicom cartridge and Nintendo wanted the next one to be bigger and better. The Super Famicom CD was the best thing to ever happen to *Fire Emblem*."

-excerpted from a translated December 1996 *Famitsu* interview with Shozuo Kaga

"Localizing *The Holy War* was a big task, not only because of the time crunch, but because how controversial some of the content of the game would be. I had long conversations with Treehouse and Mr. (Howard) Lincoln about how to deal with some of the content, especially...well, if you've played the original Japanese version you know what I'm talking about. Obviously we had to avoid creating a glaring plothole. I think we chose the most sensible approach, I know some fans disagreed with how we handled it but we got as close to the original story as we could get."

-Marcus Lindblom

"God dammit, it's full of incest!"

-Howard Lincoln, overheard during a 1995 brainstorming session at the Nintendo Treehouse about how best to translate *Fire Emblem: The Holy War*

"Video games are getting more violent and graphic, absolutely. I think the culture in general is getting increasingly permissive about sex and violence and it's something that the American people are going to have their say about in the election."

-United States Senator and 1996 Republican nominee Bob Dole, in an April 19, 1996 news interview

-

## **Resident Evil: The Basics**

*Resident Evil* for the Sega Saturn is for the most part identical to the OTL Playstation version, though due to the added processing power of the Saturn compared to OTL's Playstation, the in-game graphics are somewhat better, comparable to OTL's Nintendo 64 version of *Resident Evil 2*, while the cutscenes are also somewhat better looking, making the game perhaps the best looking console video game ever made up to that point. The game retains the familiar cast of Chris Redfield, Jill Valentine, Barry, Wesker, Vickers, and

Abby (Abigail) Chambers (renamed from Rebecca due to there already being a very popular video game character named Rebecca in Nintendo's *Squad Four*). The game retains the familiar plotline of a haunted mansion where mysterious scientific experiments are being performed, and the character of Wesker being a traitor. There is an additional boss fight from OTL, a monstrous two-headed reptilian beast fought toward the middle of the game, in order to show off the Saturn's graphical capabilities. Despite the progress that video game voice acting has made OTL, *Resident Evil*'s voice acting is still largely known as being bad even by 1996 standards, and is unfavorably compared to the voice acting in March's release of *Chrono Trigger*. The infamous "Jill sandwich" line from OTL is one of many pieces of bad dialogue that makes it into the game. The voice acting and dicey script are considered virtually the only flaws in an otherwise fantastic game.

## **April 15, 1996**

*Resident Evil* is released in North America for the Sega Saturn, three weeks after its Japanese release as *Biohazard* and five days after its European release. It receives some of the year's best reviews (only *Chrono Trigger* has received better in 1996 so far, and even then only barely) and is a major hit in all three territories, rapidly becoming the biggest selling non pack-in Saturn game. Despite controversy over the graphic violence present in the game (which is not censored as was the case IOTL), the game is an enormous success, and combined with the Saturn's price cut a month before, is the first game to seriously push Sega Saturns off the shelves. The Saturn surpasses the Genesis in sales in North America for the first time, and it's a position the Saturn would never relinquish for the remainder of its lifespan. It also begins a long but steady march toward surpassing the Super Nintendo CD in sales. The game receives mainstream press coverage, and even when portrayed in a bad light, the footage of the game shows off the Saturn's graphical capabilities. The game easily surpasses anything the Super Nintendo CD is capable of and for the first time truly shows off Sega's technical superiority. It's also the game that establishes "survival horror" as a viable genre of video games. Previously, *Alone in the Dark* had been a popular PC title (and had bombed on the Super Nintendo CD), and the SNES-CD had its share of horror games like *Last Resort*, but it was *Resident Evil* that truly brought the genre into the mainstream and, as *Super Mario World 2* had done for the SNES-CD back in 1993, established the Sega Saturn as a viable console in the North American market.

*"Once the first post-Resident Evil hardware and software sales figures had come in, I knew it. The Saturn finally had its killer app and it justified everything I'd been telling the suits in Japan about the need for a price cut. Finally, things were looking up for the Saturn."*

-Tom Kalinske, "The Chase: Sega's 20 Year Struggle To Take Down A Giant"

-

## Fire Emblem: The Holy War – The Basics

*Fire Emblem: The Holy War* is the TTL version of OTL's *Fire Emblem: Seisen no Keifu*. Released on the SNES-CD, the game is expanded significantly from what it was IOTL, owing to the CD format which allowed significantly more space for what the game designers intended. The sprite-based graphics of OTL's game are retained, but with more detail, including full portraits for each character as they are speaking or as they appear in battle, adding much more detail to the appearance of the characters. The game's soundtrack is a mixture of in-game music and fully orchestrated CD audio (with this as an example of the quality of certain musical tracks: [https://www.youtube.com/watch?v=8Dng...Zc\\_Ap-k9u6UqwQ](https://www.youtube.com/watch?v=8Dng...Zc_Ap-k9u6UqwQ) ). The game also includes a detailed character pairing system similar to OTL's *Fire Emblem: Awakening*, with characters able to have conversations both in and out of battle, male and female characters can even hook up and have children with enough relationship points, adding a deep dynamic of strategy to which characters you choose to take onto the battlefield. The relationship system also appeared in OTL's version of the game, though ITTL it's even more advanced, with much more involved conversation and character parameters, in some aspects it's one of the deepest dating sims on the SNES-CD in addition to being one of the most epic RPGs.

The plotline is similar to OTL's with some changes (more changes are introduced in North America due to content issues with the localization). The game touches on the history of the continent Jugdral, at one time ruled under the peaceful Gran Republic when a dark wizard

arrives and shatters the republic. He establishes an empire and rules over the people as his slaves, only for 12 brave warriors to battle him and restore the Gran Republic as the new nation of Granbell. This leads in to the main storyline of the game, 200 years after the evil empire was destroyed. The main character is the Knight Lord Sigurd, descended from the Holy War's hero Baldur. The game starts out as Sigurd goes to free his friend Aideen, Duchess of Jungby, from a horde of bandits. This simple mission turns into a massive quest when war breaks out. Sigurd unites with an army of friends to protect the freedom of Granbell. Eventually, after a victorious campaign, Sigurd is assassinated after having a son, Seliph, to carry on his legacy. This begins the second part of the game, though unlike IOTL where the events of *Fire Emblem: Thracia 776* are a separate game, here they are integrated into the middle of the game as a sort of intermission quest, forming several chapters of their own and adding to the game's epic scale. Following the Thracian chapters, the game's second part, taking place 16 years after the first, is largely as IOTL, with Seliph and other heroes' descendants setting forth on a quest of their own to restore freedom to Granbell. The new characters encountered during the Thracian chapters are involved in this part as well, adding new character dynamics that did not appear IOTL.

The major controversy of *Fire Emblem: The Holy War*, and the issue that may have precluded any chance of an OTL localization for the game, was the relationships between a number of love interests that were clearly intended to be incestuous. Despite the somewhat more relaxed attitude toward game censorship present IOTL, this was still considered unacceptable for European and North American sensibilities, and certain plotlines and dialogue had to be significantly altered for the localization. The plot device of Alvis and Dierdre being half-siblings was altered somewhat controversially and clumsily, altering certain scenes to make it appear that Sigyn had only birthed Dierdre and not Alvis. In addition, any attraction between half-siblings Seliph and Julia later in the game was also edited out, somewhat less clumsily, through dialogue alteration. Fans of the original Japanese version largely did *not* appreciate these changes and for many years afterward a fierce fandom war erupted between fans of the North American version and fans of the original Japanese version in a debate mirroring the common "subbed vs. dubbed" anime debates from both IOTL and TTL. Fans of the Japanese version largely saw the alterations as a "copout", while fans of the North American version were just grateful to get to play the game.

*"You have to remember what time this was done in. It was the spring of 1996 and Bob Dole and Pat Buchanan were on the prowl for primary votes. An incest-laden game on a Nintendo system would have made video games THE big topic of controversy in the 1996 presidential election! Clinton and Dole would've torn our hobby apart. Look how they reacted to Resident Evil for the Saturn which came out around the same time. The ESRB wouldn't have been enough, we would have gotten federal censorship."*

*"My ass, Nintendo should've shown some damn balls and not cut out some of the most important scenes of the game. They RUINED the North American version with some of the bullshit dialogue they cobbled together."*

*"Ruined? It was one of the best reviewed games of the year. If you think one of the most brilliant strategy RPGs of all time was ruined by not having incest in it, you need to get your priorities straight."*

*\*someone posts a picture of Jim Carrey hilariously eating popcorn from The Mask II\**

-excerpted from a thread on the *Fire Emblem: The Holy War* for SNES-CD board on

## April 22, 1996

*Fire Emblem: The Holy War* is released for the Super Nintendo CD, having been one of the most hyped games thus far during Nintendo's "Year of the RPG", with extensive coverage in *Nintendo Power* magazine including the cover of the April 1996 issue, a mini-strategy guide spread across the April-June 1996 issues that details the first half of the game, and a demo of the first chapter in *Nintendo Power CD*, along with television and magazine advertisements. The game is one of the fastest selling JRPGs to date in both North America and Japan. In North America, it's April 1996's second biggest selling SNES-CD game (behind *Monkey Island 2: LeChuck's Revenge*). The release of *Fire Emblem* in 1994 for the Super Nintendo was a decent success, the release of the sequel in 1996 for the SNES-CD is a bonafide sleeper hit and proves the series' financial viability in North America.

-

The spring of 1996 was extremely crowded for the Super Nintendo CD, and aside from the big RPGs, the most anticipated games of that spring were a pair of sequels to 1994 hits *The Secret Of Monkey Island* and *Jewels of the Realm*. Ever since *The Secret Of Monkey Island* proved one of the SNES-CD's biggest success stories, selling over two million copies overall, it was inevitable that the critically-beloved sequel *Monkey Island 2: LeChuck's Revenge* would also get the porting treatment. And it did, in April of 1996. Along with *Fire Emblem* and *Jewels of the Realm 2*, it was one of the most hyped SNES-CD games of the month. Critically, it lived up to the hype. The game was highly praised and though it didn't quite blow people away like the port of the original game had, it still averaged somewhere around a 9 out of 10 from most publications of the time. The game itself, which continued the hilarious adventures of Guybrush Threepwood and Elaine Marley, was arguably better than the first, with a more involved plotline and significantly more challenging (and clever) puzzles. Despite all that, the game didn't even manage to sell half of what the original did on the SNES-CD. It WAS still the biggest selling game of the month (well, if you don't count the Saturn's *Resident Evil* which eventually sold five million copies in North America alone), and considered a success, but sales were still somewhat disappointing, especially considering that pirate games were in vogue after the success of *Tales Of The Seven Seas*. It seemed that a lot of casual SNES-CD fans were looking for a bit more action in their games, which is why they SHOULD have loved *Jewels of the Realm 2*.

*Jewels of the Realm 2* largely picked up where the previous game left off, continuing the story of Chris and Lily, the kid heroes who saved their realm in the previous title. This time, they had to contend with two evil kids, Gliss and Larry, who were also using magical jewels, but they were using them for evil and mischief. It was a fairly fun plotline and the story had improved from the previous game, but the game mechanics were somewhat changed and it proved to be controversial. Now, you could be (somewhat) arbitrarily locked out of using certain jewels. It was supposed to add an element of strategy and difficulty to the game but it often left players stuck in certain levels forced to use combinations that really didn't fit what they needed to have to clear the level, and some boss fights were near impossible to beat! The game was still very fun and reviews hovered around 8/10, but the game doesn't hold up nearly as well today and sales, while good, were still a disappointment, not even beating out *Fire Emblem* in North America (which *Jewels 2* was easily expected to do). For the third game, which wasn't released until 2000 on the Ultra Nintendo, the developers went back to the drawing board to a largely positive response, but *Jewels of the Realm 2*, supposed to be one of 1996's biggest hits, ended up only being a middling hit.

-excerpted from "1996: Year Of The RPG, Or Year Of The Saturn?", an article on Gamesovermatter.com

-

"I'm not sure we can call it *Soul Edge* in North America, there's a company called *EDGE Games* that-

"Tell them to go fuck off. They try to sue us, they'll lose. Trademark squatting's a crime. We'll countersue for their whole company."

-from a conversation between Shinobu Toyoda and Tom Kalinske in 1995 at Namco headquarters. Sega's lawyers successfully intimidated *EDGE Games* into not suing Namco or Sega, and the company would fold in the year 2000.

*Soul Edge* was originally intended as an experimental game by Namco, but after Sega execs saw the game in progress and took a liking to it, it became a major arcade hit and would become a key release for the Sega Saturn in 1996. It was a weapon-based fighting game, the second after Sony's *Battle Arena Toshinden*, but was a huge step up from that game in terms of graphics, using Namco's arcade hardware (and later the Saturn's hardware) to great effect. The game was developed with a Saturn port in mind from the getgo, and thus the Saturn version was released in Japan just a month after the initial arcade release, and in April 1996 in North America. Featuring high-definition (for the time, anyway) graphics and full voice acting to accompany the game's detailed character based storylines, it was compared to *Mortal Kombat* in terms of story depth and to *Tekken* in terms of combat style (though the addition of weaponry made *Soul Edge*'s combat significantly deeper). The game featured twelve heroes and a villainous pirate named Cervantes de Leon, giving it one of the biggest rosters of any Saturn fighting game (*Tekken*'s was larger but none of *Soul Edge*'s characters were clones). *Soul Edge* benefitted significantly from the Saturn price cut, upon its release on April 1, 1996, it became the fastest selling fighting game on the Saturn since *Virtua Fighter* and aside from *Virtua Fighter* and *Virtua Fighter 2* it was the best-selling Saturn fighting game of 1996. Though five games were released for the Saturn in North America in April 1996, *Resident Evil* and *Soul Edge* topped them all by a significant margin, making *Soul Edge* one of the defining games that made the Sega Saturn a force in the North American console market.

-excerpted from "The Top 25 Fighting Games on the Sega Saturn: #7- *Soul Edge*" on IGN.com

-

With its first season now winding down, Nickelodeon's *Phineas and Ferb* is the network's #2 rated show, closely following fellow Nicktoon *Rugrats* in the ratings. The show has been a hit for Nickelodeon since its release last fall, following the efforts of two young boys to have what they call the "best summer ever" by creating dozens of wacky inventions and schemes while their sister attempts to tattle on them and their pet platypus Perry battles an evil scientist named Dr. Doofenschmirtz. The show aims at a slightly older demographic than *Rugrats* does, as its main characters are primarily elementary school students as opposed to the babies and toddlers on *Rugrats*. Series co-creator Dan Povenmire attributes the show's success to "including something for every child, as well as their parents, to be entertained by", and its mix of light-hearted fun and edgy (but not TOO edgy) humor has won over fans

all across the country. It's proven to be a bigger success than the previous two Nicktoons, 1994's *Aaah! Real Monsters*, which has enjoyed only moderate ratings success, and *Rocko's Modern Life*, which Povenmire worked on, a show that started off a hit but its ratings have dipped in recent months. With *Ren and Stimpy* and *Doug* having already ended their runs of new episodes, and *Rugrats* airing only sporadic specials such as a direct-to-video Las Vegas vacation special, it's *Phineas and Ferb* leading the pack for Nickelodeon in terms of exciting new content, with a new season set to start in June and a video game on the way for the Sega Genesis, the Super Nintendo CD, the Nintendo Game Boy and the Sega Game Gear. The video game is your basic action fare, featuring Phineas and Ferb traversing several levels as various enemies and obstacles bar their path. Reviews are tepid, but fans of the show are likely to buy it in droves. As for Nickelodeon, this fall they've got a pair of new Nicktoons on the way: *Kablam!*, a compilation of shorts that the network hopes could potentially be developed into shows of their own, and *Action League Now!*, a superhero comedy created using a process that its creators call "chuckimation". It was originally intended to be a featured short on *Kablam*, but after test audiences responded very positively, the short was expanded into a full order of episodes for its own show. Nickelodeon is also in talks with *All That* co-creator and showrunner Dan Schneider on creating a potential Nicktoon, one that would presumably debut next year. For now, the future of Nickelodeon, its Nicktoons, and particularly *Phineas and Ferb*, is a bright one indeed.

-excerpted from an article in *TV Guide* magazine, April 13-19, 1996

-

"Heroes leaping into action! VideoVision! The ultimate game!"

-from the theme song from *VideoVision*, featured in a TV commercial for the game

Infogrames' *VideoVision* was hyped big time as the "next big thing" when it debuted in April of 1996 for the Super Nintendo CD and the Genesis Mega Charger. It starred a kid named Ralph who had the ability to leap into any screen, be it a movie screen, a TV show, or a video game, and like any overly excitable 10-year-old boy, he used this ability exceedingly. The game basically consisted of Ralph entering various worlds to mess around with the people in them, using a variety of weapons and items to attack bad guys and protect himself from the various aggressive denizens of those worlds. He was your typical wisecracking 90s hero kid, not quite as vulgar as Bart Simpson but definitely a step up from Dennis the Menace. Despite being a fairly typical action game, there was actually a lot of creativity in the level and weapon design. Ralph didn't visit the standard collection of worlds, like caveman world, desert world, Paris send-up, etc. This game was a love-letter to the 90s. He visited cheesy soap operas like a hilarious skewering of *Melrose Place*. He visited a super rainy super-grungy version of Seattle and did battle with *Nirvana* look-alikes (astonishingly, in a later interview Kurt Cobain said he played the game and found the Seattle level hilarious). He met the cast of TV's *Friends*...and beat them up! It was one of the funniest SNES-CD games ever made and Ralph's voice acting (by ubiquitous 90s voiceover artist Kath Soucie, using a slightly deeper version of the voice she used for Phil on *Rugrats*), was side-splittingly hilarious. While *VideoVision* wasn't the mega hit that Infogrames had hoped for, it still sold a pretty solid amount of copies, slotting in just behind *Fire Emblem: The Holy War* and *Jewels Of The Realm 2* on the sales charts that month.

-excerpted from "The 50 SNES-CD Games You Must Play Before You Die", an article on Dorkly.com, December 13, 2010

-

John Walden: *Soul Edge* is one kickass fighting game. There's weapons galore and a ton of great characters.

Brittany Saldita: And don't forget the excellent storyline. Cervantes is the best fighting game villain since M. Bison.

John: He makes LeChuck look like Chuckie from *Rugrats*.

Brittany: \*laughing as she makes her voice all nasally\* Tommy, I'm scared!

John: The strategic depth, the great graphics, all combine to make for one sweet fighting game. I give *Soul Edge* a 4.5 out of 5.

Brittany: I give it a 4, I loved the storyline and the characters, the music could've used a little work, I really wanted to hear something classic like Guile's Theme or whatnot but this was still a really good fighting game.

-excerpted from the April 2, 1996 episode of *GameTV*

(...)

Ted Crosley: And *Resident Evil* is without a doubt the best looking video game I've ever played, which adds greatly to the fear factor.

Alex Stansfield: I definitely recommend playing at night. You'll have a heart attack and die, but you'll die with a smile.

Ted: While screaming for your life.

Alex: The multiple endings, I think nine in all? Maybe more depending on who you save? They really add to the replay value of this game.

Ted: Just being such a good game added to the replay value of this game. As soon as I beat it, I wanted to go back and play it again...I couldn't because I had more games to review, but I wanted to. I wanted to so bad.

Alex: This is the game that shows off what the Saturn can do. This game and *Panzer Dragoon*, but this game in particular is just a showcase of the Saturn's next-gen power.

Ted: That it is. I'm giving it a 5 out of 5.

Alex: And I'm giving it a 5 too.

\*sirens go off\*

Ted: Aaaaaaaaaah (expletive)!

Alex: Still jumpy after playing this game?

Ted: Yes! That scared the (expletive) out of me!

Alex: \*laughing\* Well you know what that siren means, another one for the Hall of Fame!

Ted: Geez, didn't we just do this last month?

Alex: That we did, but we're gonna do it again. \*the other hosts appear as they hang up a framed copy of *Resident Evil* on the wall\* There we go, our first Saturn game in the GameTV Hall of Fame!

Ted: Hopefully our first of many.

(...)

Brittany: I can tell you really didn't like *Steam Agent*.

Alex: I really didn't like it. I just thought....I thought it was way too tough and I know what you're gonna say.

Brittany: That you suck and should get good?

Alex: There's no excuse for the difficulty of the enemies, especially in the first part of the games!

Brittany: I've learned that Atlus games, for the most part, are somewhat tougher than Squaresoft games. *Shin Megami Tensei* was an ordeal. At least this game has some really nice graphics and music to make up for it, and the characters were really fun.

Alex: They were cookie cutter!

Brittany: Alexandra was not cookie cutter, she was a beautiful inventrix and-

Alex: Inventrix?

Brittany: Female inventor. And her inventions were really cool.

Alex: Lucca ripoff.

Brittany: *Steam Agent* came out in Japan before *Chrono Trigger* did!

Alex: The graphics compared to *Chrono Trigger* are awful.

Brittany: ...they're not as good as *Chrono Trigger's*, you're right. This game's no *Chrono Trigger*.

Alex: It's not even an *Ys V*.

Brittany: It's a really fun, really compelling, amazingly beautiful steampunk RPG with brutal but fair difficulty and a cast of fun and awesome characters.

Alex: It's a tremendously boring slog through repetitive environments with primitive graphics and uninspired characters. I give it a 2 out of 5.

Brittany: And I give it a 4.5. What in the hell is wrong with you? \*begins ranting at him in Spanish\*

Alex: I know half of those words are bad!

-excerpted from the April 16, 1996 episode of *GameTV*

Alex: Top to bottom, *Fire Emblem: The Holy War* blew me away. It was an epic adventure spanning multiple generations of heroes, the character pairing system is INCREDIBLY addictive and the graphics and soundtrack are typical Nintendo: high quality and beautiful.

Ted: I'm surprised you're okay with the permadeath mechanic.

Alex: Playing *Fire Emblem*, you know what you're getting into. There's a lot of strategy involved and I rarely thought the game was unfair.

Ted: Because last week with *Steam Agent* you gave it a two because-

Alex: The difficulty in *Fire Emblem* is way different than the difficulty in *Steam Agent*.

Ted: Well, either way, *Fire Emblem* is a really solid game. It's fun to play, the plot gets a bit confusing but the meat of the game is in its battle mechanics and in planning your army and your strategy and those aspects of the game were fantastic. You WILL get frustrated but it's rewarding enough to keep you satisfied all the way through.

Alex: I give *Fire Emblem: The Holy War* a 5 out of 5.

Ted: And I give it a 4.

-excerpted from the April 23, 1996 episode of *GameTV*

*"Eheh, I remember the original version of the episode had us talking about the Japanese version of the game with all the incest in it. But Nintendo caught wind of it and sent a memo to MTV, they didn't want us to mention it at all. We had this whole bit where we were gonna make fun of the game. But Nintendo deep-sixed that and what you got instead was something pretty boring. We did get a really nice interview with Nintendo's localization team for the game that took us into the Treehouse, but I still wish we could've made some of those incest jokes. C'est la vie."*

-Ted Crosley, in a Kotaku.com interview on February 23, 2013

-

*"And the campaign trail continues as Bob Dole, now the presumptive Republican nominee after surviving a bit of a scare from Pat Buchanan in the early weeks of the campaign, made a speech in Topeka, Kansas today. Bob Dole emphasized the ongoing need for more morality in America, continuing a crusade that began last year against what he believes is an increasing level of gratuitous sex and violence in movies, television programs, video games and popular music. He's seeking to motivate his electoral base in the run-up to November's election which will see him facing off against President Bill Clinton. For the most part, Clinton has kept popular culture on the backburner of his campaign, instead focusing on the need to stay the course as America's economic growth continues. Recently, a video game on the Sega Saturn called Resident Evil has drawn scrutiny for its graphic violence*

*and use of strong language, and Senator Dole mentioned the game by name in a recent news interview.*

*Dole: 'Well, there's this game I've been told is called Resident Evil, and right there in the title, is the word evil and I think that might be reflective of the influence these games are having on our children. It's just this ongoing issue in our culture and I think Americans are getting increasingly sick of the permissiveness we're seeing.'*

*One critic has even blamed the game for the recent shooting in Australia, where Martin Bryant took 32 lives in Port Arthur, Tasmania before taking his own life last week. However, the Australian media dismisses this claim, saying that Bryant did not play video games. Most in the Australian media cite a lack of gun control as the main factor in the shootings, another issue which will inevitably be a factor in America's November election as well. Bill Clinton signed a ban on assault weapons into law in 1994, a law that Senator Dole opposes."*

### **SNES-CD Power Charts: April 1996**

1. Donkey Kong Country 2: Diddy's Kong Quest
2. The Legend Of Zelda: Ocarina of Dreams
3. Ballistic Limit
4. Super Mario World 3
5. Donkey Kong Country
6. Super Mario World 2
7. Mega Man X3
8. Twisted Metal
9. Doom
10. Tales Of The Seven Seas
11. Killer Instinct
12. Rage
13. Front Mission
14. Klepto: The Invisible Thief
15. Samurai Shodown II
16. Final Fantasy VI
17. Victory
18. Mickey Mania: The Timeless Adventures Of Mickey Mouse
19. Street Fighter Alpha
20. Secret Of Mana

-

*"And so for the first time, we unveil to the world the Ultra Nintendo Entertainment System. This device, created with the cooperation of Nintendo and Sony, will revolutionize video gaming forever. It contains a new high powered graphics chip from Hitachi, custom-built to maximize the power behind games such as Super Mario, The Legend Of Zelda, and many others that we hope to bring to this new game machine. We will be demonstrating our new Mario game, Super Mario Dimensions, here at the show. In addition, we will also be demonstrating Mario Kart R. Both games will be playable at the event. I sincerely apologize*

*that we do not have any other Ultra Nintendo games to play at this time, but our software partners are hard at work creating the next generation of games for our new system. The Ultra Nintendo will also utilize a new game disc technology that will allow more memory than ever to be stored on our game discs. We cannot reveal many specifics at this time, but the memory capabilities will exceed significantly the 650 megabytes available for Super Famicom CD games. We hope that you will enjoy the games and that you will enjoy the show."*

-excerpted from a translation of Nintendo president Hiroshi Yamauchi's keynote speech at the Nintendo Spaceworld show on April 29, 1996

*"So now I will reveal the Ultra Nintendo controller. As you can see, this controller is an evolution of the design of the Super Famicom's controller that was also used for the Super Famicom CD. It is largely the same basic button scheme, with a D-pad and four buttons, A, B, X, and Y, with Start and Select in the middle and L and R buttons on the top. But you can now see in the center of the controller and on the sides, we have added some very important features that will allow us to create entirely new experiences on the Ultra Nintendo! First, on the sides of the controller we now have handles for greater ergonomic comfort, one on the left under the D-pad and one on the right under the four main buttons. These handles allow for players to hold the controller in a way that will allow them to reach the new inputs much more quickly while increasing their comfort while playing. Now, in the middle, the two analog sticks. These are not like the joysticks in the arcade, these are designed with the thumbs in mind and can be used to move a character, such as Mario as you can see in this demonstration of Super Mario Dimensions, can move him very easily in all directions. Or...if you push on the stick slightly, he walks slowly, but if you push with a lot of force, he can run! This frees up the other buttons for other functions. One used to be a run button but now we can do that with the sensitivity of the left analog stick. The right analog stick has a variety of functions, in some games, not in Mario but in some games it can be used for movement. In Mario, it is used to control the camera, and as you can see the camera can be moved in any direction. There are two camera options for Mario, toggled with the R button, you can have a fixed camera where you can look in a first person perspective, or move the camera out, or you can have a free camera where the stick is used to look in different directions or face the direction you see fit. And now here on the back of the controller are the two trigger buttons, ZL and ZR. And these are used to give additional functionality, in a shooting game they can fire a gun or a bomb, in role-playing games they can be given different functions or etcetera. These are a lot of buttons but it will allow for an incredible amount of flexibility in our next generation of games! There are other functions, as you can see at the bottom of the controller there is a slot for a memory card device, but also the controller may have other functions that I am not allowed to reveal yet!"*

-Ken Kutaragi, translated, speaking at 1996 Nintendo Spaceworld

Violet Berlin: This is the 1996 Shoshinkai games show, one of the largest video game events in the world, where Nintendo is showing off all of its upcoming hardware and software for the coming months. The big news at Shoshinkai? The long-anticipated Ultra Nintendo, the next generation games system set for release sometime next year.

\*footage from various Nintendo games is shown as the camera pans out over the show\*

Violet: This was the very first time that Nintendo's shown off their new games console, and so it's the first time that journalists from around the world are going to get to play it. A bit of bad news, however, as the system still isn't ready for a full exhibition. That means that only two games were playable: *Super Mario Dimensions*, and *Mario Kart R*. I was a bit disappointed to learn that Nintendo would only have these two games available, but I've

been waiting for a long time to check out the Ultra Nintendo, so let's get started, shall we?

\*Violet sits down in front of a console where *Super Mario Dimensions* is playable.\*

Violet: The Ultra Nintendo controller's a bit bulkier than the one on the Super Nintendo. It's got handles on the sides, which make it a bit easier to hold, and some new buttons on the back, just under the familiar L and R buttons on top. There's also the addition of a pair of analog thumbsticks, smaller but similar to those found on arcade consoles. With all that in mind, let's see how this new game plays!

\*Violet takes Mario through his paces, running him up a hill as a group of Goombas come down at him\*

Violet: As you can see, these all new 3-D graphics bring a whole new level of detail to Mario's incredible world. This isn't pre-rendered, this is what you actually see when you play the game! There's a real wow factor when you're seeing it all for the first time. It very much reminded me of the 3-D graphics on Sega's Saturn system, but perhaps with a bit more color and smoothness.

\*Mario is now in a sort of space level, surrounded by stars that come down from the sky and attack him, Violet gets hit by one but is able to roll and leap out of the way of the others.\*

Violet: Mario can move in all eight directions, but unlike in last year's *Super Mario World 3*, it feels very natural and smooth and quite easy to pick up.

\*Now Mario is in a water level, swimming around.\*

Violet: As you dive under the sea, look at how beautiful everything looks while Mario's swimming around. The graphical detail and ease of movement are amazing, and Mario's never looked better than this.

\*Finally, she stops playing and turns back to the camera\*

Violet: \*smiles\* I think I did all right, didn't I? *Super Mario Dimensions* was certainly impressive, and a great sign of just how far graphics in Nintendo games have come over just a few years' time. Again, I wish there were more games to play. Nintendo had video of a few upcoming Ultra Nintendo games here at this year's event \*these videos, including *Cruisin' USA*, *Extreme-G*, *Ultra International Superstar Saga*, *Body Harvest*, *Ultra Bomberman*, and the skeleton fighting demo of *Ultra Legend Of Zelda* (a preliminary title) play while she speaks\*, and there was even a preview video of the highly anticipated *Final Fantasy VII* \*shows a quick video of a spiky-haired blonde, a woman with long, black hair, and a man with long, silver hair fighting a huge stone golem\*, but nothing playable of these games, which was a shame. That said, what I did see of the Ultra Nintendo looked very impressive, and the fact that I felt so disappointed about a lack of more playable games indicates just how excited people are getting for this new system.

-excerpted from an episode of the UK show *Bad Influence* that aired on May 11, 1996, based on this real-life excerpt from an OTL episode of the show covering Spaceworld 1995 ( <https://www.youtube.com/watch?v=MtLPrazftds> )

**Live From Spaceworld 1996!**

Nintendo was pulling out all the stops at their latest games reveal show in Tokyo, including the unveil of the highly-anticipated Ultra Nintendo and previews of some of their biggest SNES-CD games of the year. The Ultra Nintendo was shown off and some playable demos were finally made available. Though only *Super Mario Dimensions* and *Mario Kart R* were playable at the show, the parts we did get to play left us hungry for more. *Super Mario Dimensions* looks to be the full realization of the 3-D trend Nintendo attempted to get going in *Super Mario World 3*, and finally it looks like there's a console that can handle what Nintendo wants to do. In the levels we played, Mario was running and jumping across big, beautiful, wide-open worlds. Even in this clearly alpha version of the game, the graphics surpassed most Saturn games we'd played, including the highly-touted *Resident Evil*, and we estimate that this new Ultra console may be packing 100 megahertz or more under the hood. As for *Mario Kart R*, we could only play two levels, a basic Mario Circuit-like level and a haunted house level, but both were exciting and we loved the new power-drift functionality of the karts, which should enable tighter turns and more strategic racing. We even saw a demonstration video of *Final Fantasy VII*. More of a tech demo than anything, the footage showed three unnamed heroes battling a huge stone monster, and the graphics, like all the other Ultra games we'd seen, looked extremely impressive.

As for the SNES-CD front, Nintendo's slate of games showed that they're not done with their current system, not by a longshot. We got our first chance to play *Donkey Kong Country 3*, and it looks like Dixie Kong is returning, along with a new big baby Kong who seemed to be following Dixie around. Does this mean that Donkey Kong AND Diddy Kong are being held captive this time? Either way, the game plays the same as the last two *Donkey Kong Country* outings, with exciting new worlds to explore and some very cool new enemies. We also got to take the SNES-CD version of *Policenauts* for a spin. Created by Hideo Kojima, it's the follow-up (not a sequel) to the 1994 hit *Snatcher*, featuring fully animated cutscenes and what already seems like a compelling new storyline. There were a couple of RPGs with a lot of buzz at Spaceworld: Square's new RPG *Soul Matrix*, which should be out in Japan by the time you read this article and out in the States sometime this summer, and of course, *Super Mario RPG*, featuring Mario and his friends (and Bowser) on an epic quest. The game features the same kind of isometric graphics and gameplay as *Super Mario World 3*, but with Final Fantasy-like RPG gameplay, making it a very interesting hybrid that looks and sounds amazing. We had a lot of fun journeying through Bowser's castle just before it got impaled by a giant sword, which looks to be the starting impetus for the game's events. One of the best games of the show was an SNES-CD game called *Aria*. Visually stunning and featuring several fully-vocalized music tracks, it appears to be an action game utilizing notes and rhythm, where the player must time jumps and attacks in time with the songs as a beautiful girl traverses a series of gorgeous levels. It was one of the most stunning games we'd seen, and the developers tell us that the game will likely need to use three discs because of the highly detailed music and graphics of the game. If that's true, it would make *Aria* the biggest SNES-CD game to date and certainly one of the most intriguing, it's set to release in Japan in May and a North American release has not yet been announced.

Finally, there was some surprise news at the show: the announcement of a new model of Game Boy, featuring full color and slightly more internal memory. Called the Game Boy Color, the device is set for release in Japan in June and in North America in September. We got to play several games on it, including *Donkey Kong Land 2* and a fun little RPG called *Pocket Monsters*, both of which were utilizing the new Game Boy's color capabilities to bring vivid hues to the game's backgrounds and characters. While this new Game Boy doesn't quite match up to Sega's Game Gear in graphical fidelity (it's essentially just the regular Game Boy but smaller and with color added), it's still a long-overdue addition to Nintendo's

handheld repertoire and the enhanced memory could open the way for more detailed games down the road. Nintendo's Gunpei Yokoi spoke briefly about the Game Boy Color at the event, and sounded very excited about the device's potential. 1996's Spaceworld definitely gave us all reason to be excited about Nintendo's prospects, and we hope to at the very least play more Ultra Nintendo games down the road.

-excerpted from an article in the June 1996 issue of *Electronic Gaming Monthly*

-

*"The Saturn is fleshing out its library with some really good games as of late. There's something for everybody, and most of the big guns haven't even been fired yet. We're expecting the Saturn to make a big splash at the upcoming E3 show."*

-from an editorial in the June 1996 issue of *Electronic Gaming Monthly*

*"If you're looking for Tactics Ogre on the Super Nintendo CD, prepare to shell out some dough. Complete copies of the game typically run for \$200 on Ebay, and if you want a sealed copy, you'll need to fork over more than a thousand big ones."*

-excerpted from the article "The Most Valuable SNES-CD Games" on CollectibleCrazy.com, December 17, 2014

*"I'm Ken Griffey Jr., and this is my game."*

-Ken Griffey Jr., from the introductory video to *Ken Griffey Jr.'s Winning Run*

*"I do think we are devoting much more of our resources toward the Ultra Nintendo now, even our Super Famicom CD development has been influenced by what we are currently developing for the Ultra."*

-Squaresoft president Hiranobu Sakaguchi, discussing his company's current game philosophy with a Japanese technology program, May 11, 1996

-

## **Art Of Fighting 2**

Andrew: 6.5

Mark: 7.5 (quote: "It's got fantastic graphics and sound, but it's hard to enjoy the game when the computer is always kicking your ass!")

Mike: 6.0

Sushi-X: 6.0

## **Axelay 2**

Andrew: 8.5 (quote: "Brilliantly designed, very difficult levels make this a worthy successor to the SNES classic.")

Mark: 8.5

Mike: 8.0

Sushi-X: 8.0

## **Ken Griffey Jr.'s Winning Run**

Andrew: 9.0  
Mark: 9.0  
Mike: 9.0 (quote: "An awesome baseball game and one of the SNES-CD's best sports titles.")  
Sushi-X: 8.0

### **Pinocchio**

Andrew: 4.0  
Mark: 4.0  
Mike: 5.5  
Sushi-X: 6.0 (quote: "It has its charm but this Disney game just doesn't match up to other platformers.")

### **Prince Of Persia: Calnor's Destiny**

Andrew: 8.0  
Mark: 8.5 (quote: "You'll need to draw your own maps but Prince of Persia has never looked so good.")  
Mike: 7.5  
Sushi-X: 8.5

### **Tactics Ogre**

Andrew: 8.0  
Mark: 8.0  
Mike: 6.5  
Sushi-X: 7.0 (quote: "While this game is harder to get into than the more intuitive Fire Emblem, those who stick with it will be rewarded for their persistence.")

### **The Need For Speed**

Andrew: 7.0  
Mark: 9.0 (quote: "The best looking racing game on the SNES-CD, bar none.")  
Mike: 7.5  
Sushi-X: 7.5

### **Whizz**

Andrew: 3.0  
Mark: 2.5  
Mike: 4.0  
Sushi-X: 4.0 (quote: "This bunny needs to go back into his hat.")

### **Fatal Strike: Touch Of Death**

Andrew: 8.5  
Mark: 9.0  
Mike: 9.5 (quote: "This beat-em-up has one of the SNES-CD's best soundtracks and storylines and is an absolute must have for just about anyone.")  
Sushi-X: 9.5

## **Kyuriadan**

Andrew: 7.0

Mark: 7.0

Mike: 8.0

Sushi-X: 8.0 (quote: "While Squaresoft will always be known as an RPG company, this quirky action title is quite a good game.")

## **Mechanix**

Andrew: 6.5

Mark: 6.5 (quote: "I loved fighting the huge bosses in this game but it's still fairly uninventive.")

Mike: 6.0

Sushi-X: 6.0

## **Hacker Jack**

Andrew: 8.0 (quote: "It's a platformer at heart but it's also one of the funniest games I've ever played.")

Mark: 5.5

Mike: 5.0

Sushi-X: 6.0

## **Samurai Buster**

Andrew: 9.0

Mark: 9.0

Mike: 9.0

Sushi-X: 9.0 (quote: "This game is one of my sleeper hits of the year. It's absolutely superb.")

## **Skater Girl**

Andrew: 7.0

Mark: 7.5 (quote: "This game features some surprisingly competent voice acting and the main character, who seems like an annoying teenage girl to start off, really grew on me.")

Mike: 6.5

Sushi-X: 6.5

## **Parachute To The Princesses**

Andrew: 5.0

Mark: 4.0

Mike: 5.0 (quote: "While there was some fun humor in this game, it got really old really fast saving all of those princesses.")

Sushi-X: 4.0

-*Electronic Gaming Monthly's* reviews of May 1996's SNES-CD games in the June and July 1996 issues

-

*"Ken Griffey Jr.'s Winning Run is a huge step up from the previous cartridge-based Griffey title. This game brings 3-D graphics, realistic crowd noises, real-time commentary (and a tutorial mode voiced by Ken Griffey Jr. himself) and even four player action, a first for a baseball video game. It's right up there with Frank Thomas' Big Hurt Baseball on the Saturn, even though Winning Run doesn't feature the real MLB players like Big Hurt Baseball does. If you're craving baseball on the SNES-CD, your wait for the perfect game is finally over. Ken Griffey Jr.'s Winning Run is it."*

-excerpted from the 47/50 review of Ken Griffey Jr.'s Winning Run in the June 1996 issue of GameFan

*"You can't blame Ken Griffey Jr. for smiling. He's having what might be the best year of his life. Last month, he earned the all-time MLB record for home runs in a single season with 62 and won the AL MVP award. But Griffey says that even that legendary record pales in comparison to the Seattle Mariners winning the 1996 World Series. He's even the name behind one of today's biggest video game franchises, having released one of the year's top sellers for the Super Nintendo CD. Is there anything Ken Griffey, Jr. can't do?"*

-excerpted from an article in the October 28, 1996 edition of Sports Illustrated

-

*The Sega Saturn version of Desert Tank is a clear improvement over the arcade title, with a new storyline, more levels, and some of the best graphics yet seen on the system. With all of that said, even the most intriguing missions can get pretty old pretty fast, and this is all in all a fairly strange port to bring over. As far as tank video games go, the Super Squadron X titles are still the gold standard despite their inferior production values.*

Graphics: 5.0

Sound: 5.0

Play Control: 4.0

Fun Factor: 3.0

Challenge: Intermediate

*Kudos to SNK for partnering with Sega on this excellent port of the NeoGeo's Metal Slug. The game plays fantastically on the Saturn, making excellent use of the system's 2-D capabilities. Let's hope this game is a sign of things to come in terms of run-and-gun action on the system.*

Graphics: 4.5

Sound: 4.0

Play Control: 4.5

Fun Factor: 5.0

Challenge: Advanced

*Descent is a pretty game but it's not the best first person shooter out there. Still, the Saturn's been lacking in FPSes and hopefully this is what gets the ball rolling for them down the road. It's fun if you're a fan of the genre, if not you may want to look elsewhere.*

Graphics: 4.5

Sound: 4.5

Play Control: 4.0

Fun Factor: 3.5

Challenge: Advanced

-excerpted from *GamePro's* reviews of three of the Sega Saturn's May 1996 releases in the June 1996 issue

"The summer of 1996 for the Sega Saturn was definitely all about *NiGHTS Into Dreams*, but aside from that classic title, what do you remember from around that time?"

"Playing *Resident Evil* over and over again for the multiple endings."

"Isn't that about when *Desert Tank* got ported over? I remember having a great time playing that with one of my friends. The multiplayer was a lot better than the single player which got really repetitive after a while."

"I remember playing *Metal Slug*. It was pretty remarkable that Sega got that thing ported pretty much simultaneously with the Neo Geo release."

"Sega did make a deal with SNK to port some Neo Geo games before they made it to the SNES-CD. IIRC, it worked out pretty well for them."

"Didn't Saturn see a couple of RPGs come out around that time? I know they had some commercials where they kinda bashed RPGs, and most of their really good ones didn't come out until 1997 or 1998, but I remember a few, one came out in May called *Lost Faerie* that was really good."

"Once Working Designs stopped working with Sega it really hurt them on the RPG front. Their localizations were pretty shoddy for a while, *Lost Faerie* included but the game did have its charm."

"Back then the Super Nintendo CD did have a higher quantity of games, but the Saturn was slowly but surely gaining on them and I think they had more quality titles around this time, especially if RPGs weren't your bag. Give me *NiGHTS* and *Resident Evil* over *Tale Phantasia* and *Chromo Trigger* any day. Once that price came down, most of the Sega hardcores bought in even before *Sonic 4* came out. With the Genesis having done so well, especially holding out against the SNES-CD as long as it did, Sega fans had faith in the Saturn. Their commercials blew Nintendo's out of the water too. Nintendo was still winning in sales, but Sega fans had a lot more to look forward to, and who knew when the Ultra was coming out?"

-comments from a video game message board topic on June 21, 2013

-

### **Do you think the release of *Fire Emblem* hurt *Tactics Ogre in the West*?**

Oh, considerably. The two games played a lot differently and both were excellent games, but if you only looked at them for a few minutes, *Fire Emblem* appeared to be the prettier, faster paced game, and obviously Nintendo was giving it heavy promotion at the time. I can't blame them, it was THEIR game, but it still helped to further cement Enix's decision to go exclusively with Sega.

### **How disappointed were you when the sales figures came in for *Tactics Ogre*?**

We weren't expecting much, because *Ogre Battle* had performed underwhelmingly, but it was still rough even by our low standards. We sold....I believe it was just a shade under 15,000 copies in North America? It was terrible. The game was well reviewed but most stores didn't even stock our game. It's a huge collector's item now because of how few of them there are.

**And so by now, Enix's relationship with Nintendo was just about done.**

We could see the writing on the wall. Nintendo was doing everything to push Squaresoft games and very very little to push Enix's games. That *Terranigma* was able to achieve what it did in early 1997 was a miracle. And of course that game would land on the Saturn later that year, along with...just about every game we released on a Nintendo system. Saturn played host not only to a ton of Nintendo remakes and ports, but all of our new products as well. It was about to become a very busy time to work for Enix.

-excerpted from a Gaming.moe interview with Robert Jerauld, former Enix USA producer, November 24, 2014 (OOC: inspired by this OTL interview from November 15 <http://gaming.moe/?p=331> )

-

*In 1996, during the "Year Of The RPG", Squaresoft began to do something very strange...it began releasing games that weren't RPGs. 1996 would see the first year that major non-RPG titles would be released for the SNES-CD by Squaresoft. It was part of a growing "experimental movement" within the company, one that was partially in response to the receipt of the Ultra Nintendo development kits in 1995. Inspired company employees began branching out, creating games that didn't necessarily fit the mold of the company's usual fare. The results were mixed, but one of the first things to come out of Square's new design philosophy was a game called Kyuriadan.*

*Kyuriadan* was released in Japan in January 1996, and in North America in May of that same year. The game was about a young boy named *Kyuriadan*, who is destined for greatness and can use abilities in a variety of disciplines, including martial arts, swordplay, and magic. When evil befalls the land, *Kyuriadan* ventures through 12 levels to battle the Dark Mist, and within each level he teams up with a master of a certain discipline. These masters converse with *Kyuriadan* and accompany him. They help in battle, but only rarely, encouraging the boy to learn and fight on his own. Each master has their own musical motif, and each level does as well. Along with the typical boss themes and other musical tunes there are nearly 40 different songs in the game, making *Kyuriadan's* soundtrack, composed by Nobuo Uematsu but other composers contributing on various tracks (about half the soundtrack is Uematsu, while the other half is shared by about five different artists, making for excellent variation in musical stylings), one of the SNES-CD's best. The gameplay itself was fairly basic, and despite *Kyuriadan* being able to learn a huge variety of attacks, ultimately you could win by spamming two or three of the best. The game is beloved, however, for its beautiful graphics, fun characters, and excellent soundtrack. It wasn't a huge success, either in the United States or in Japan, but Squaresoft's pedigree allowed the game to earn decent sales that it otherwise wouldn't have.

-excerpted from "Not Just RPGs: Squaresoft's Complex Library", an article on Gamesovermatter.com, November 11, 2004

-

The month of May 1996 saw two excellent hack-and-slash classics released for the SNES-CD. Both were highly lauded by critics, but while one succeeded, the other faded largely into obscurity. They both featured intuitive combat, excellent soundtracks, and compelling storylines, so why did one do so well and the other had to settle for cult classic status?

*Fatal Strike: Touch Of Death* was the sequel to Koei's beat-em-up hit *Fatal Strike*, one that scored well with critics and moderately well with fans, winning praise for its tough but fair AI and highly intuitive combat system. *Touch of Death* saw Notukaga returning to the Kingdom of Hasai to defeat a warlord who had taken over the land and was ruling with an iron fist, using his one-touch kill technique to slay all who opposed him. *Samurai Buster* was a much more violent game, starring a samurai named Matsuhito. Disgraced into ronin status after his master betrayed a benevolent lord, Matsuhito seeks to redeem himself by working underground in a city teeming with brutal murders and slavers. The game is known as one of the most violent and mature on the SNES-CD, with lots of blood and some rather graphic adult themes. It's probably that that made the game a hard sell. Despite SNES-CD fans being willing to play gritty titles with lots of blood and adult themes, *Samurai Buster* lacked a lot of the hype and promotion that other mature titles had on the system, and though it's beloved by all who play it (and the numerous remakes on handheld and mobile platforms have sold quite well, though those are usually under \$10), it was a very tricky sell at the time. *Fatal Strike: Touch Of Death*, being a sequel to an already popular game, was much more accessible and had a built-in audience. Proving the point further, when a similar title, Telenet Japan's *Samurai Rush*, was brought over later in the year, it sold somewhat better than *Samurai Buster*, probably due to the fact that it had a more diverse cast of characters, higher production values, and much less violence (it's also universally considered an inferior game).

- "Why did *Samurai Buster* do so poorly when similar SNES-CD titles released around that time succeeded?" from the FAQ on SamuraiMatsuhito.com

-

Alex Stansfield: Whether you're playing it on the Neo Geo or the Sega Saturn, *Metal Slug* is a really fun time.

Kazzi DeCarlo: It's a frickin' gun fest! It's just like, "pow pow pow!" all over the place!

Alex: Has the Neo Geo actually outlasted the other two systems? I mean, SNES, the cartridge one, is pretty much dead. Genesis has *Vectorman 2* and a few other big games still coming, but Neo Geo's showed no signs of slowing down. This very well good be the best Neo Geo game ever.

Kaz: That's why I've always loved the Neo Geo! The fighting games are the best and every once in a while you get something really cool like *Metal Slug*.

Alex: If you've got a Sega Saturn though, save your quarters at the Pizza Hut and just wait until you get home. It's a much better experience on the Saturn, with added voice acting and a lot more stuff going on on screen.

Kaz: But there's nothing better than hopping on the Neo Geo machine while you've got a full belly of pizza. Or while you're waiting for them to seat you.

Alex: I guess that is true.

Kaz: My Pizza Hut doesn't even HAVE a Neo Geo machine anymore, they replaced it with a jukebox full of country music. \*looks disappointed\*

Alex: That should be a crime!

Kaz: Yeah, you should have to go to....friggin' Pizza Hut jail, or something.

Alex: Do they serve pizza in Pizza Hut jail?

Kaz: Yeah, but you still have to watch yourself in the shower. You definitely don't want to drop your pizza in the shower.

Alex: That's good advice even if you're NOT currently in Pizza Hut jail. And it's also good advice to play *Metal Slug*, I'm giving it a 4 out of 5.

Kaz: And I'm giving it a 4 too, it's a damn fun game!

(...)

Brittany Saldita: So, I...I wasn't really feeling *Tactics Ogre*, as much as I LOVED *Ogre Battle*, I felt this was a potentially great game marred by some poor interface choices.

Ted Crosley: I agree, I really felt this game could've been a lot better. Um, it was a good challenge, but a lot of that challenge felt artificial due to the trouble I had navigating the menus. The graphics were primitive, I know you didn't have a problem with that but compared to say, *Fire Emblem*...

Brittany: There's no comparison.

Ted: There really isn't.

Brittany: I liked the strategy, I liked the options for customizing your army but the rough menus made doing that a major chore.

Ted: This game, to me, felt...rough.

Brittany: And where *Ogre Battle* succeeded, this game stumbled. I'm giving it a 3.5 out of 5.

Ted: I won't be quite that generous, I'm giving it a 3.

-excerpted from the May 7, 1996 episode of *GameTV*

Ted: So, what did you think of *Axelay 2*?

Alex: I was kind of disappointed, it wasn't as good as the first! Graphically, it's fantastic. Soundwise, it's fine. But the levels did get a bit repetitive and I also felt they could've tried harder with the storyline.

Ted: Yeah, no cutscenes, what gives? You've got 600 megabytes of space, use it!

Alex: The classic shooting, gameplay, that hasn't changed. It's still a brutally difficult game and it's all the better for it, but I just wish they could've been as imaginative as they were with the first game. They didn't need to REMAKE the first game for CD, they already did that back in 1993 and it was awesome! Do something new!

Ted: Sometimes more of the same is good, if the original is good. And it was, but we both wish it could've been even MORE, am I right about that?

Alex: You're absolutely right.

Ted: Sega is better than Nintendo.

Alex: Don't press your luck!

Ted: \*laughs\* Axelay 2 gets a 3.5 out of 5.

Alex: Same here, 3.5 out of five. We both liked it, but it needed to REALLY take advantage of the technical abilities of the SNES-CD.

-excerpted from the May 14, 1996 episode of *GameTV*

John Walden: I found *Prince of Persia: Calnor's Destiny* to be a lot of fun, but with some flaws.

Alex: I enjoyed the game TREMENDOUSLY. It finally brought Prince of Persia, a classic franchise, into the optical age and did it in style. Calnor is an excellent new protagonist, Princess Vyseria is one of the loveliest and toughest ladies in video games, and the tricky dungeons will test all your courage and then some.

John: Princess Vyseria was annoying, I had to save her ass more times than I could count.

Alex: If you had to save her ass, you messed up. No spoilers, but if you play the game right, she can save herself.

John: That's another thing that bugged me, it promised storyline interactivity but it hardly tells you anything! I get not wanting to tell you where to go in the dungeons, that's part of the challenge, but it doesn't tell you where you can affect certain things and then stuff happens and you've got no idea what the hell you just did wrong!

Alex: ...you do have a point there, I do think the game could've been a bit more forthcoming about those segments. Like, in the Seeker's Labyrinth, I kind of stumbled onto the switch you need to use to get Vyseria the weapon she needs.

John: See, I had no idea there even WAS a switch and she ended up getting trapped. It's poor game design and it mars what would've otherwise been one of the year's best games.

Alex: I still think *Prince of Persia: Calnor's Destiny* IS one of the year's best games and I give it 4.5 out of 5.

John: I give it a 3.5, it's a lot of fun IF you can figure out what to do to have the most fun.

Brittany: \*dancing onto the screen\* I have the most fun when I go dancing on Saturday night. Ha! \*swinging her hips around\*

Alex: You still gonna be going out to the club after *Tale Phantasia* comes out in a few weeks?

Brittany: Hell no, I'm gonna be eating ice cream and sitting on my couch and unhooking my phone after THAT one comes out.

Alex: You can't unhook your phone, how am I supposed to bug you at three in the morning asking for help?

Brittany: Geez, I should be unhooking it right now shouldn't I?

Kaz: You should get a cell phone like the one I have in my car!

Brittany: Forget it, the car is the only place people don't ask me how to beat any games! And speaking of beating games, me and Alex are gonna show you how to kick butt in *Soul Edge* when we get back from the commercial break. Not only are we gonna show you how to beat Cervantes, we'll also show you how to unlock him.

Alex: \*appears back on screen wearing a pirate hat, an eyepatch, and holding a shovel\* Yarrr!!!

Brittany: What the hell are you doing?

Alex: We're gonna unlock a pirate, that involves buried treasure right?

Brittany: \*facepalms and shakes her head\* I'm gonna bury you....

-excerpted from the May 28, 1996 episode of *GameTV*

*"Tonight on NBC Nightly News: an American tragedy. Martin Lawrence, one of the biggest stars in comedy, gunned down by police at the age of 31 after charging an armed police officer with a knife. Tonight, we'll discuss the impact of Lawrence's death on the entertainment world, and we'll also take a look at the growing and troubling phenomenon of "suicide by cop", where troubled individuals brandish weapons at police officers in an attempt to trigger them to respond with deadly force. Was Lawrence's death a suicide, or was it a nervous breakdown at the worst possible moment?"*

-Tom Brokaw, from the May 8, 1996 edition of the *NBC Nightly News*

-

Joe Asamuna: I think the prototype dismissed any doubts about the game, the smooth gameplay transitions were what really impressed Nintendo. Remember, this was on just a regular Super Famicom, this was before we were able to put *Tale Phantasia* on CD. Some of the people from Nintendo who didn't know actually asked us if we were using the Super Famicom CD or a computer for the prototype of the game.

Famitsu: So needless to say they were impressed?

Joe: Yes. \*laughs\* Something similar happened to our producer, Takeda-san, when he went to visit with a team in North America and showed them the prototype for the Super Famicom, they were also quite impressed with it, particularly the audio, they wanted to know how we were able to do what we did there.

Famitsu: That was the sound programmer's work?

Joe: Correct, especially Hatsushiba-san, he wanted to implement voices into the game even while it was in the Super Famicom stage. He came up with a programming trick to use voice samples on just a normal Super Famicom cartridge, very low memory but very realistic sounding. He had some extra development time and was able to find a solution to enable that.

Famitsu: So what ultimately caused *Tale Phantasia* to move from the Super Famicom to the Super Famicom CD?

Joe: There were a lot of reasons for it, mostly because Nintendo wanted it, Takeda-san also wanted it and he really loved Gotanda-kun's work. Cost also became a factor, if we'd gone with our original idea it would've almost certainly required a 32-megabit cartridge or larger, perhaps even 48, and at that stage cost was a factor. Even now it's cheaper to do a 4800-megabit CD than a 48-megabit cartridge.

Famitsu: So ultimately it got too ambitious for the Super Famicom.

Joe: That's right, not only was Nintendo heavily interested in the game, but Sony was as well, and Nintendo wanted to make it a flagship title for the Super Famicom CD.

(...)

Genyo Takeda: After wrapping up the work on *Startropics II* for the Super Famicom, I was talking to Yamauchi-sama and Yokoi-san, along with some other board members, about creating an RPG for the Super Famicom CD. Yamauchi-sama initially had some reservations about putting me on the project, but I persuaded him that I could help make the game as good as it could be, especially with the help of the team from R&D3 who'd just finished up work on *Solus*.

Famitsu: Yamauchi-sama usually has big expectations for all Nintendo games, was this any exception?

Takeda: It certainly wasn't, he's always very direct with his opinions, especially when devoting so much time and resources to a project like this.

Famitsu: Didn't Miyamoto-san have reservations about it as well?

Takeda: And Yokoi-san, who was one of our biggest critics at the time \*laughs\*, of course considering their track records their doubts were understandable and I knew I had to do a lot to persuade them. But our track record was very good, we had *Super Punch-Out* and *Startropics II* under our belts, so this would be our biggest title yet.

Famitsu: Were there any more major obstacles before the game was approved for the Super Famicom CD?

Takeda: The initial release date of the game was to be during the holidays in 1994, but there was another major game at that time, *Super Donkey Kong CD*, not only that but we would be competing with other role-playing games during that time as well.

Famitsu: What do you think ultimately convinced them to approve the game?

Takeda: Sony's involvement helped, they really pushed the game hard for us, in exchange for a share of the profits, which for Nintendo published games did not usually occur. We gave them an additional share of our cut of the game's profits and they assisted us with several technical things, the game became a major collaborative effort and I think that will show in the finished product.

-excerpted from *Famitsu's* interviews with Joe Asamuna and Genyo Takeda in the April 1995 issue of *Famitsu* magazine which covered *Tale Phantasia's* Japanese launch

*It's Finally Here!*

*After more than a year, the RPG that took Japan by storm, Tale Phantasia, is finally coming Stateside! We'll have plenty of coverage of Tale Phantasia in next month's Epic Center, including part one of our three part strategy feature to help get you through the first part of the game! Don't miss it!*

-from the "Coming Next Issue" page in the May 1996 issue of *Nintendo Power*

-

*"In retrospect, that Coolio performance at E3 1996 was just about one of the dumbest things I'd ever seen. But at the time, we were all so hyped up on the Saturn that we didn't even care that the performance totally sucked."*

-Dan "Shoe" Hsu

*"I guess E3 1996 was the transition between primarily 2-D gaming and primarily 3-D. Both next-gen systems were highlighted and for the first time in four years, the Super Nintendo CD took a back seat. Sega's head start, then, was a serious boon."*

-Nintendo historian Jeff Ryan, in an interview with Gamespot.com, February 23, 2012

*"That's a bit of an old chestnut to be dusting off, isn't it?"*

-Nintendo's Leslie Swan, speaking to a fellow Nintendo employee in the crowd at Sega's E3 1996 keynote address

*"It's all so intimidating, I've never seen this many people in my life! I um, feel like kind of a rock star I guess?"*

-Jennifer Stigile (18 years old at the time), during an interview at Nintendo's Tale Phantasia booth at E3 1996

*"No, I'm not gonna fire Jaleel White just because someone saw him playing Mario Kart at Nintendo's booth. I'm Console War Eisenhower, not Console War Stalin."*

-Tom Kalinske, overheard during E3 1996

*"Final Fantasy is a series that is and always will be exclusive to Nintendo."*

-Hiranobu Sakaguchi, speaking at the Ultra Nintendo booth at E3 1996

-

## **May 16, 1996**

*"Hello, I'm Howard Lincoln. Today is a good day. Today is indeed a historic day, because for the first time on American shores, the next generation in video game hardware is being shown. Today is the day that we are unveiling the Ultra Nintendo Entertainment System!"*

*\*the crowd applauds as the system is shown, it looks like a hybrid of OTL's Nintendo 64 and Sony Playstation, the system is colored black with a somewhat taller base than OTL's Playstation system, four controller ports with a slot for inserting discs in the front of the system\* "The Ultra Nintendo is the most technologically advanced game device ever made, featuring state-of-the-art custom built co-processors to provide the latest in 3-D visuals. We project that the system will have at least five times the processing speed of the Super Nintendo CD, and more than twenty times the graphics processing power, enabling the system to run top-of-the-line graphics with no slowdown. The new controller, seen here, will enable players to move in any direction with incredible precision, while controlling the way they see these new worlds with the dual-analog stick system previously only seen in advanced simulation games for the PC." \*the screen begins to show Super Mario Dimensions, in an early alpha stage but still with excellent, very smooth graphics\* "Here we have Super Mario Dimensions, Mario's latest quest. You'll explore 21 different worlds. Here we have a large tower stage..." \*this is similar to TTL's Whomp's Fortress\* "And as you can see, these are real time graphics. No pre-rendering, this is what you actually get when you*

play." \*the crowd is very impressed\* "I'm going to move Mario in all eight directions now, here he is running in a circle...now, you can do a variety of moves with this new controller." \*he takes Mario toward a wall, performing a wall kick quite easily, the crowd seems impressed with this as well\* "So not only do we have a wide-open world to explore, but new challenges with the element of verticality involved. This is something we sort of touched on with last year's Super Mario World 3, but only now does the technology truly allow us to create this huge open world for Mario." \*Lincoln continues to play through the level for a minute or two, continuing to talk as he does, before finally putting the controller down\*

"Looked fun, didn't it?" \*the crowd applauds\* "Well, you'll all get your chance to take Mario for a spin. Super Mario Dimensions is one of three playable Ultra Nintendo games we have at our booth today. Another of our games is Mario Kart R, sequel to our Super Mario Kart game which was a launch title for the Super Nintendo CD. It's been one of our most successful titles to date with nearly eight million copies sold worldwide. Mario Kart R will expand upon that classic game, allowing four players to play all the stages, something that was impossible in the original game. As you can see from our brief video, these stages are big and beautiful, in full 3-D just like Super Mario Dimensions, and you'll be able to use a variety of new items to add a layer of strategy to an already fun and challenging racing experience. Finally, we are very proud and honored to be hosting the first playable demo anywhere in the world of Final Fantasy VII." \*the crowd bursts into loud applause\* "Squaresoft, one of our most valuable third-party partners, has been working overtime to put together this special demo for our E3 attendees. This game is massive, and what you will be playing in the two demo programs we have is just a small slice of the huge world Square has created for the series' first foray into 3D. You'll first get to explore a factory that your team's been tasked with shutting down. In the second demo, you'll come face to face with one of the game's epic boss monsters, a huge slithering serpent that can wreak havoc with powerful attacks. You'll need to use your awesome summoned monsters to have any hope of victory. These three games aren't the only games we'll be showing off here at E3. We have a preview video of Star Fox 2 on display, as well as video footage of Cruisin' USA, Killer Instinct 2, Nightsquad 2, and our brand new watersports franchise Wave Race, among several others. Last but not least we have a very brief but very impressive demonstration video for our new Legend of Zelda title-" \*another round of loud cheering interrupts Lincoln's speech\* "right now it's in the early concept stages but we're hoping to have something playable at next year's E3. Unfortunately, we're not going to have the Ultra Nintendo ready for release in 1996, and things such as pricing details and technical specifications are also not yet ready for this year's show. We hope that everyone continues to have patience and remember what our great visionary Shigeru Miyamoto once said, that great things truly are worth the wait."

\*Lincoln turns to the stage and picks something up, then returns to the podium\* "We've got something else we'd like to show off today, a lot of you have been playing the Game Boy for seven years now, and it's still the most popular handheld console on the market today, with hundreds of hit games such as the Super Mario Land series, Kirby's Dreamland, The Legend Of Zelda: Link's Awakening, Metroid II: Return Of Samus, Tetris, Donkey Kong and Donkey Kong Land... but something's been missing. These great worlds haven't lacked for excellent gameplay, but they've been devoid of color. The Super Gameboy was able to bring a limited color palette to a few of these games, but now, you can hold brilliantly colored worlds in the palm of your hand. I'd like to introduce the Game Boy Color." \*holds it up to applause\* "The Game Boy Color features a new colored screen that can bring colors to any old Game Boy game...in addition, our newest games will feature customized color palettes, starting with Donkey Kong Land 2 this September. We have a number of games lined up to take advantage of the Game Boy Color's improved palette, including a fun new puzzle game

*called World of Color, adaptations of the hit animated films Toy Story and Pocahontas, a version of our hit Super Nintendo CD fighting game Battle Arena Toshinden, and many more. The system also features numerous technical improvements, including more internal memory and a vastly improved sound chip from our hardware partners at Sony, a chip that can be utilized by software programmers to create lifelike musical scores for certain Game Boy Color games. We already have a pair of role-playing games lined up next year from Squaresoft and from Game Arts that take advantage of the new sound chip, and there's a listening booth at the Nintendo display to hear samples of the music that this new Game Boy Color is capable of. The new Game Boy Color will be released in September 1996, it'll retail for \$89.99-" \*the audience cheers at this\* "and Donkey Kong Land 2 will be included as a pack-in title." \*more cheers\**

*"Last, but absolutely not least, our upcoming plans for the Super Nintendo CD, our flagship gaming device. The Super Nintendo CD has sold over 30 million units worldwide, either as a peripheral, as part of the Playstation Combo Set, or as its own device, which we just released last year. It remains the top selling video gaming device in the world, and we're not finished yet. In fact, the Year of RPGs is only a third of the way through, with three of our major titles still remaining for release. We'll be talking about all of them today, but first, I'd like to show off a game that Argonaut has been working on for more than a year now." \*the crowd cheers, already knowing what it's going to be\* "It's the sequel to one of the most successful games on the Super Nintendo CD and part of the SNES-CD's most popular original franchise. This is Squad Four: Eclipse." \*a video plays on the screen\**

*\*The scene shows the Planet Lockstar, seemingly at peace\**

Marcus: When we returned from Planet Velna, we returned triumphant.

Rebecca: We'd liberated a planet and saved billions of innocent lives.

Lane: We never imagined our deeds would come back to haunt us.

*\*A shadow begins to fall over the capital city of Lockstar. People begin to look up.\**

Shad: But the only thing that's certain in this galaxy we call home...is revenge.

*\*A shadow is coming over the sun, bringing the city and the planet into darkness. From a balcony in the Lockstar Space Defense HQ, Squad Four looks on with trepidation.\**

*\*A fleet of ships begin to pour from the sky. Scenes of gameplay with Squad Four shooting at aliens in an urban environment play briefly on the screen.\**

Marcus: And now...

Rebecca: The planet we must liberate...

Lane: Is our own.

## **SQUAD FOUR: ECLIPSE**

Shad: *\*looks back at his teammates\** Squad Four...let's go!

*\*The team leaps into battle\**

October 1996, only for Super Nintendo CD

\*metallic sounds, robot voice\* **Nin-ten-do**

\*the crowd applauds as the teaser trailer ends\*

*"Squad Four: Eclipse is a game designed to push the Super Nintendo CD to its limit, with 3-D graphics and cinematic sound, along with even more voice acting than the previous game. It sees Shad, Marcus, Rebecca, and Lane charging into battle against an endless horde of aliens invading their home on Planet Lockstar, and will have you battling your way through incredible urban environments as you try to kick the aliens off your world. We've got plenty of demo booths set up at the Nintendo display, so you'll get your chance to try this game out as soon as this presentation is over. Now, the Year of the RPG has gotten off to a great start. Games like Chrono Trigger and Fire Emblem: The Holy War are tearing up the sales charts, and we're just getting started. Next month will see the release of Tale Phantasia, our collaboration with Telenet Japan and the excellent localization team at Working Designs. This game is just about ready to ship, last year you got to play the Japanese version but this year you'll finally get to play it in English and it looks and sounds amazing. It's another time travelling adventure as Cless Alvein and his friends rise up to challenge the tyrannical dark lord Dhaos. The battle system is unlike anything you've played in an RPG before, it's real time combat, no waiting for your turn, you'll attack as fast as you can press the button and you'll need to press it fast because as you can see in our preview video, some of the bosses hit VERY ferociously. Tale Phantasia is just one of the great role-playing games we've got for you this year. We've also got Super Mario RPG, and right now here's another quick preview video." \*the video shows Mario and Bowser about to fight when suddenly Exor descends upon Bowser's castle in the form of a giant sword, tossing the two rivals to the winds along with Princess Toadstool\* "That sword you see there was sent by the evil weaponsmith Smithy, who is seeking to bring the entire world including the Mushroom Kingdom under his control. Mario will need to team up with new heroes, along with some surprising old ones, in order to take Smithy down. The battle system in this game also incorporates lightning quick action, I'm going to demonstrate here..." \*Howard Lincoln takes the controls, he gets into a battle with a Goomba and shows off the game's system of timed hits\* "As you can see, if you press a button at just the right time, Mario will hit twice as hard. Also, when you're on defense, if you hit the button at the right time you'll block the enemy's attack!" \*the crowd looks impressed at this\* "Super Mario RPG is just another example of how the Super Nintendo CD has totally changed the game for role playing games. Another example of this is the long-awaited sequel to our hit 1993 title Secret of Mana." \*more loud cheers from the crowd\* "Elements of Mana is not only one of the most epic quests yet seen on the Super Nintendo CD, it's one of the most replayable RPGs ever made, because you'll get to pick your team from among six heroes, and the way the quest takes shape will greatly depend on which heroes you choose. The game not only features multiple endings, but multiple villains, each with different motivations depending on your chosen hero. Elements of Mana has a battle system that is even faster paced than the original game. Unlike in Secret of Mana, where you had to wait for your next attack to reach 100 percent, in Elements of Mana you can attack at any time for maximum damage, making battles much more exciting and fun. Elements of Mana is one of the most visually beautiful games ever released, and with an all new soundtrack featuring over 50 new songs, it's also one of the most beautiful sounding. ...you think we're done with the RPGs? Not by a long shot! Squaresoft's also got a brand new franchise releasing in just two months. It's called Soul Matrix and it takes place in a futuristic world where certain people have their ability to project their spirits into the aether. You star as Alice, a young woman who discovers her*

soul projection powers just as a new president comes into power wanting to hunt down and kill Alice and all those who share her gift. It's a sci-fi epic with one of the most complex storylines ever featured in a video game. Also coming from Squaresoft is Romancing SaGa, a game that might be familiar to you if you've played the Final Fantasy Legend titles on Game Boy. Romancing SaGa is part of the same series, but now featured on Super Nintendo CD, it's got a huge cast of characters each with their own goals and adventures, and you get to choose whose story you pick up first. From Konami, we have the role-playing game Suikoden, a game that will allow you to recruit your own army to do battle against an evil invasion force set on conquering all. Recruit all 108 Stars of Destiny and choose your favorites. There are many, many more RPGs still coming out for the Super Nintendo this year, and we've got most of them playable at our booth, so check them all out if you possibly can!

I'd also like to show off a game that's been previewed in our Nintendo Power publication. It's from our partners at Sony, developed by the talented folks at a company called Naughty Dog, who if you recall also did our hit Tales Of The Seven Seas game from last year. This title is about a boy, and his dog, setting out on an incredible adventure." \*a brief video of the game appears on the screen, the boy is riding on top of an oversized shaggy St. Bernard, with big floppy ears and a huge tongue\* "This boy is named Clark and his dog is named Woofle, and together, the two of them must make their way home after Clark ends up in a strange world with only his new four legged friend for company." \*there's some laughter in the crowd as Woofle uses some fairly humorous moves on enemies, licking them into submission or pouncing on them, with the same friendly face the whole time\* "In Dog Dash, you'll guide Woofle and Clark through more than twenty levels, you'll meet a lot of bad guys, you'll meet a few pals, and hopefully you'll have a great time. We look forward to making Dog Dash one of our big titles for later this year." \*the video then switches to show some scenes from Donkey Kong Country 3, drawing more cheers from the crowd\* "And here we've got Donkey Kong Country 3. Rare's been working very hard to have a playable demo of this game ready for our booth, and you'll be able to take Dixie and her new pal Kiddy for a swing after the presentation. The graphics have gotten a bit of a boost from last year's title, and the Northern Kremisphere, where Dixie and Kiddy have journeyed in the hopes of rescuing Diddy Kong and Donkey Kong, is full of secrets that you'll need every trick in the book to find." \*the video switches again, now showing off a very well polished basketball game\* "Coming this July is our big new sports title, Grant Hill in NBA Basketball. Grant Hill is still resting up after his team's unfortunate loss to the Chicago Bulls in the NBA playoffs-" \*this draws a few cheers from Bulls fans in the crowd\* "-so he unfortunately can't be here at E3, but he has been helping us greatly with this title and you'll see a lot more of him in the run-up to its release two months from now. The game features a mix of realistic simulation and arcade-style action, letting players choose what kind of basketball game they want to play. With an interactive tutorial from Grant Hill himself, even the most novice players can become experts and even masters at this fun new basketball game." \*Howard Lincoln briefly covers a few more upcoming SNES-CD games, including Tetris Attack, Kirby Super Deluxe, Policenauts, and Roadstorm\* "Finally, those of you who enjoyed Fire Emblem: The Holy War will be very excited to know that we are already hard at work localizing the next title in the series, Fire Emblem: Keepers Of The Light, which we very much hope to have ready for a Spring 1997 release. For the past decade, Nintendo has been about pushing the envelope in game design to create the most fun and exciting experiences for people all over the world. Next year, we'll talk a LOT more about the Ultra Nintendo and we're sure we'll have plenty of new Super Nintendo CD and Game Boy games to talk about as well. No matter how you choose to play, Nintendo will continue to have the very best video games on the market. Thank you and I hope to see all of you at our booth enjoying all the great games we have to offer!"

-keynote speech from Howard Lincoln at E3 1996

*"All right, I'm Tom Kalinske and I already know what you all want to see, so I'm just gonna cut the bullshit right off the bat."* \*loud laughter comes from the crowd\* *"Here it is, the world premiere preview video for Sonic the Hedgehog 4."* \*loud laughter is replaced with very very loud applause and cheering\*

\*A blue streak, barely slow enough to see, whizzes by on the screen.\*

\*The same blue streak whizzes by in the opposite direction\*

\*The blue streak comes by again, finally Sonic slows down and stops, he walks up to the camera and taps on it a few times.\*

Sonic: \*smirks\* Hey! Check this out! \*zooms off the screen again, the blackness fades into the first footage of the game\*

\*The footage shows Sonic quickly picking up speed and racing through a 2-D world, it looks a lot like previous Sonic games but with much better animation and 3-D backgrounds and objects, Sonic is 3-D as well but the game's a sidescroller, though with a lot more obstacles and items, there's more sound effects and a lot more stuff going on on the screen, Sonic is going faster than he ever has, rocketing through multiple loops before leaping across a huge gap as a large enemy takes a swipe at him, landing on a platform and continuing to run. This continues for a bit until Sonic reaches a boss area, there's a loud roar and a huge chimera coming out of the foreground, suddenly the screen turns and Sonic finds himself in a fully 3-D arena, running and moving in all directions as the boss begins to attack. The boss breathes some very impressive looking fire, its four heads all with their own distinct animations as Sonic leaps and dives to escape the attacks and fully orchestral majestic sounding boss music begins to play, complete with a choir punctuating the dramatic moments. The crowd gasps as Sonic narrowly misses getting hit with a huge fireball. He rolls into an icon with Tails' picture on it and suddenly Tails appears to distract the enemy, giving Sonic free reign to hit it with impunity. Soon the boss is defeated and the end-of-stage victory animation plays. The preview then shows brief snippets from multiple levels, some of them featuring Sonic and others with playable Tails, Knuckles, Amy, Corona, or Big the Cat, other levels featuring Tails or Amy as helpers, either in boss fights or during the side-scrolling portions of levels, one level has Knuckles running through a fiery volcano level as Corona rains down beams of energy from above, another has Amy wielding a hammer to smash up some robots and then a scene shows Amy in a 3-D boss battle using her hammer against a giant mechanical gorilla as Corona hits it with her beams, there's a brief snippet of various voiced cutscenes as well, before a final scene plays with Dr. Robotnik cackling as Sonic and his friends stare him down.\*

## **SONIC THE HEDGEHOG 4**

### **Coming to the Sega Saturn**

**Sonic 4sday, November 7, 1996**

\*The crowd cheers wildly as a gleeful Tom Kalinske begins to speak again.\*

*"Sonic the Hedgehog 4 is the culmination of nearly two years of effort to create the perfect Sonic the Hedgehog game. We know you've been waiting a long time for this game, but we*

wanted to make it as good as it can possibly be, and when you play it both at our booth and when it's released in November, you'll see why we've spent so much time releasing this game. We decided to both go back to the basics and to try something new. As you can see, the normal stages are in the classic side-scrolling Sonic the Hedgehog style...obviously with a few fresh coats of beautiful new paint. But once you come up against one of the game's big bosses, you'll enter a fully 3-D world where you'll need to learn an all new set of skills to come out on top. You'll be able to try your luck against that giant chimera boss at our booth and trust me, he's no pushover. Sonic the Hedgehog 4 is also a tribute to the series' success over the last five years, incorporating storylines from our previous games and even our animated television series, so fans who've been extensively following the Sonic universe will have some nice little easter eggs waiting for them. However, the game's storyline itself is all new, so you don't need to have played the original games or watched the television show to be able to jump right into the action as Sonic and his friends once again do battle with the evil Dr. Robotnik. That being said, I can tell from the reaction to the announcement of this game that most of you here are the kinds of big-time Sonic fans who have made Sega such a success over the last few years, and you have my sincerest gratitude for all your support." \*loud applause\* "The Saturn itself has been largely a success, especially over the last couple of months which have seen hardware sales increase dramatically. Resident Evil is still the top selling video game in the world and it shows no signs of slowing down over the next few months. Speaking of the next few months, I'd like to talk about all the awesome games we have planned for the Sega Saturn, both in this year and beyond! First up is a title that we're releasing just next month, called NiGHTS Into Dreams." \*the crowd cheers as another preview video plays, showing off the finished game's high-quality 3-D graphics, including the character himself flying through large, beautiful levels\* "NiGHTS is our newest franchise and it revolves around the mechanic of flight, as demonstrated by the fluid moves of our titular character. NiGHTS is a Nightmaren, created by the evil wizard Wizeman to steal dreams from children. But he rebels, and instead joins forces with two young children, Claris and Elliot, to stop Wizeman's plans! You'll fly through eleven huge levels, flying through rings and collecting items to get one step closer to your goal of bringing Wizeman down. We showed off a tech demo of this game last year, but now it's fully playable and the first three levels are all ready to play at our big Sega booth!"

"There's another game that I think might be my personal favorite out of all the games we're showing off this year. It's about a woman named Lara Croft who explores hidden ruins all over the world in search of treasure and ancient secrets, and it's called Tomb Raider. Created by our friends at Crystal Dynamics, Tomb Raider is full of puzzles and mystery and we think you'll agree that Lara might just be the most kickass video game heroine ever created." \*a gameplay video showing Lara exploring a temple and shooting mummies with her twin uzis is shown\* "As you can see, it's not all puzzle solving and treasure hunting, Lara's activities have disturbed some pretty nasty creatures and if she wants to survive she'll need to take them all down. Crystal Dynamics has been working on Tomb Raider ever since before the Saturn was released in Japan, and now it's just about ready to go. They've spent a lot of time working on these gorgeous temples and ruins, it's a HUGE 3-D environment for Lara to explore, one of the very first fully 3-D games we have on the Sega Saturn, and it's a really good demonstration of just how powerful the Saturn truly is. Now, we've got plenty of other games coming out for the Saturn, including a pair of sequels to some of our most popular launch titles." \*someone from the crowd yells out VIRTUA FIGHTER 2!, and Kalinske laughs\* "We do indeed have Virtua Fighter II coming out in August and it's even better than the last game, with all new characters and much better 3-D. It's a huge hit in the arcades and it's the game Resident Evil knocked out of first place in Japan. I've played it, I've gotten my ass kicked at it but I still had a really fun time and I'm sure those of you who are actually good at fighting games will have even more fun with it

than I did. Not only do we have Virtua Fighter 2 on the way but we've also got the newest entry in our acclaimed Panzer Dragoon series, Panzer Dragoon II Zwei. Panzer Dragoon II Zwei will feature multiple routes through the game, so you can play it over and over again as I'm sure all of you did with the original Panzer Dragoon title. We have some video available to show off just how much better the graphics look, I think you'll agree..." \*the video begins to play, the crowd sounds very impressed at the graphics which look even better than those in NiGHTS or Sonic 4\* "I think you'll agree that the Sega Saturn is the most technologically advanced system on the market by a long shot. I'd like to show you another game, this from the creators of Doom..." \*there's some murmurs and quiet cheers in the crowd, thinking the game is Quake which hasn't even been released yet for the PC\* "This is Commander Keen." \*there's a mixed reaction, some groans of disappointment but also mixed with cheers from the Keen enthusiasts in the crowd\* "Commander Keen: The Universe Is Toast, sees the classic hero return to a new 3-D world and fighting both familiar and unfamiliar foes." \*a brief video shows some of the gameplay and the impressive 3-D visuals\* "Commander Keen will join Sonic the Hedgehog and NiGHTS as one of our big flagship platforming games for 1996, making the Sega Saturn THE go-to system for action games. As many of you know, the Saturn is also the go-to system for sports titles, and once again, we have a full slate ready for 1996, including new installments of NBA Live, John Madden Football, and of course a new installment in EA's NHL series. NHL '96 was one of the top selling Saturn games and until Resident Evil was the best reviewed game on the Sega Saturn, we know hockey fans all over the world will be pleased to see the series make its return to the Sega Saturn this fall."

\*Kalinske shows off several more Saturn games, including Virtua Cop 2, and Hexen, before doing another quick teaser for a 1997 title.\*

"Sega's well known for its big roster of original characters, and with Namco's help we've built up one of the biggest rosters of fighters in all of video gaming. Next year, we're going to bring the pain in a big way. Here's a little taste."

\*A brief video plays showing characters from Tekken, Virtua Fighter, and Soul Edge briefly fighting one another in 2-D fights, this gets some cheers as the title of the game is shown\*

## **FIGHTERS MEGAMIX**

*Coming to arcades and the Sega Saturn - 1997*

"And also coming to the Saturn in 1997 is the latest installment of one of the most popular RPG franchises in history. When Ultima: The Worldly Lord was released at the Saturn's launch, it became one of the most popular and critically acclaimed launch titles we released. Here's a quick preview of the next Sega Saturn Ultima title."

\*There's another brief video showing a woman waking in what appears to be a modern city, she walks over to a mirror only for a jeweled hand to grab her wrist through the mirror. She screams as she is pulled in, her head looking through the mirror only to see an enormous medieval world on the other side. The figure pulling her forward, a cloaked person, is unable to get her all the way through the mirror. She kicks him away and flies back, and the cloaked figure emerges through the mirror and removes his hood to reveal a decrepit and withered looking Lord British.\*

Lord British: Please...come with me...my world does not have much time...

\*The woman looks at him with great concern, only to see a ball of magical energy forming in her hand. Her eyes go wide.\*

## **ULTIMA: SCION OF BRITANNIA**

1997

*"So as you've already seen, the Sega Saturn is the best video game console on the planet, capable of doing things that no other console can do. We saw Nintendo's presentation a little while ago, and, well, frankly, we weren't very impressed. And after seeing the Saturn in action, I don't think a lot of gamers are really impressed with what Nintendo's console can do either. That's why we're going to start a new campaign where we, well, we sort of educate all those still debating about whether or not to get the Sega Saturn about just why the Saturn is clearly the only smart choice."*

\*another video begins to play\*

\*This video shows off footage from some of the SNES-CD's recent games. *The Legend Of Zelda: Ocarina of Dreams*, *Super Mario World 3*, *Eternal Night*, etc. Then the screen zooms out and another TV is shown, showing off footage from the Sega Saturn. *Panzer Dragoon*, *Magiquest*, *NHL '96*... the screen showing off the SNES-CD shows footage from *Alone in the Dark*, which stutters and skips while the Saturn shows off cutscenes and gameplay from *Resident Evil* running smoothly and flawlessly. *Twinblade* is shown next to *Soul Edge* on the Saturn, *Killer Instinct* next to *Virtua Fighter 2*, in all cases the Saturn games looking supremely better. Then it shows two kids playing each of the consoles, the kid playing the SNES-CD keeps looking over at the screen of the Saturn player's TV, looking more and more disappointed. Finally, he throws down his controller and tries to take the Saturn player's controller, prompting a brief scuffle that ends in the kids' big brothers coming in and separating them.\*

Nintendo player: It's not fair, he won't let me play!

Nintendo player's big brother: Well, you gotta learn to share.

Nintendo player: But his is better!

Sega player: Hey, it's not my fault!

Nintendo player: Huh? Not your fault what?

Sega player: That Saturn does what Nintendon't. \*smirks, meanwhile the audience watching the commercial begins to cheer as this part plays\*

Nintendo player: ...where'd you hear that from?

\*The Sega player looks up at his smiling big brother, who's proudly wearing a "Genesis Does What Nintendon't" t-shirt. The Nintendo player's big brother, as if suddenly recalling a very bad memory, frowns and looks down at the ground.\*

Nintendo player: \*looks up at his big brother who starts sniffing and crying\*

Nintendo player's big brother: ...it's not fair! \*runs out of the room sobbing\*

Sega player's big brother: \*just shakes his head and brings out two more controllers, hooking them up to the Saturn so all three of them can play it together\*

Narrator: Stunning 3-D visuals. Incredible sound. The latest and greatest arcade games, uncut and uncompromised. With dozens of hits already here and hundreds more on the way, one thing is clear.

### **SATURN DOES WHAT NINTENDON'T.**

\*Cut to the Nintendo player's big brother, sobbing in the corner. He curls his hands into fists and cries out the "SEGA!" scream.\*

\*Loud cheers from the audience as the commercial ends.\*

*"You heard the commercial and it's plain to see, Saturn does what Nintendon't. And we'll keep doing what Nintendon't for the rest of this year and for many years to come. The Sega Saturn is our future. And now, here's chart-topping rapper Coolio here to let everybody know exactly what it is that we do."*

\*The crowd's attention is directed to a curtain, which lifts to reveal Coolio with his backing band, about to perform for the crowd.\*

Coolio: Yeah, yeah, let's make some noise up in this place!

\*the crowd cheers, Coolio begins rapping\*

Coolio: When I say Saturn, you say does! SATURN!

Crowd: DOES!

Coolio: SATURN!

Crowd: DOES!

Coolio: When I say Saturn, you say does! SATURN!

Crowd: DOES!

Coolio: SATURN!

Crowd: DOES!

\*Coolio then launches into an original rap song extolling the virtues of the Sega Saturn while heavily dissing Nintendo, called (obviously) "Saturn Does What Nintendon't". The song, or at least a snippet of the chorus, becomes part of the Sega Saturn's 1996 marketing campaign.\*

-keynote speech from Tom Kalinske at E3 1996

-

Brittany Saldita: And we're back with GameTV's coverage of E3 1996! And I'm standing here with the amazing, the awesome, the guy who plays Urkel on TV's *Family Matters*, Jaleel White!

Jaleel White: Hey there, how's it going?

Brittany: It's going fantastic. Now of course you're here to help show off *Sonic the Hedgehog 4*, and you'll be playing the voice of Sonic in the game. I've already gotten to play some of the game and you do an excellent job. What's it like voicing for a video game as opposed to a cartoon?

Jaleel: There's a lot more grunting involved. You've gotta make a different sound for all the different hits Sonic can take, so I spent a lot of time in the booth just making like "oof!" or "unngh!" noises and we did a lot of different takes of those.

Brittany: Was it really exhausting for you?

Jaleel: Well, yeah, it's the first game I've done so I'm not used to doing all of that repetitive work, but it was still really fun.

Brittany: Have you gotten to play *Sonic 4* yet?

Jaleel: I'm a BIG fan of all the *Sonic* games so of course I've played it, what kinda question is that? \*laughing\* That's one of the first things I said when I agreed to do the voice, I was like 'you guys are gonna let me play it first, right?', so yeah, I've played more of the game than most of the people here are getting to play. It's a really fun game, I think it's the best Sonic game ever.

Brittany: Okay, now before we go, can you do a little Urkel for me?

Jaleel: \*gives her an annoyed look\*

Brittany: \*starts laughing\* I'm just screwing with you! \*she keeps laughing and kind of grabs his shoulder\* That must get annoying! I'm sorry, I swear I was just messing with you.

Jaleel: \*starts laughing\* I can actually do some Urkel if you really want.

Brittany: No, no, PLEASE don't. \*shaking her head and still laughing a bit\*

(...)

Alex Stansfield: We're here at Nintendo's booth and we're about to play *Mario Kart R* for the very first time.

Ted Crosley: Alex and I both loved the original *Super Mario Kart* so we're both really psyched to play this game.

\*They sit down with Ultra Nintendo controllers and begin to play a course that looks like OTL's Mario Circuit, Alex picks Mario and Ted picks Wario\*

Ted: Wario is in this game, that's really neat.

Alex: Well, Mario always beats Wario so this shouldn't be too hard for me.

Ted: I'm going all over the place!

Alex: It says you can actually do a power slide by holding down the R button and jiggling your stick back and forth.

Ted: Hey, this is *Mario Kart R*, not *Mario Kart* rated-R!

Alex: The analog stick. \*groans and he shows off how to do a power slide\* You even get a little boost at the end if you do it right.

Ted: What?

Alex: Yeah. \*by now he's significantly in the lead, having got the hang of it way faster than Ted\*

Ted: You gotta be kidding me! \*goes over some item boxes and gets a Star\* All right!

Alex: \*gets a Fake Item Box\* Okay, this is neat, if you put this amongst a crowd of item boxes it LOOKS just like an item box but once they go over it, they explode. \*sets it down amongst the next group of item boxes while Ted comes out of invincibility\*

Ted: That's dumb, who's gonna fall for- \*he goes right over it and gets blasted into the air\* Ah, (expletive)!

Alex: \*laughing as he finishes the first lap\*

Ted: Wario's one of those guys with crappy controls, isn't he? Like how Bowser was in the first game? Hold on, I'm gonna be Toad. I wanna be Toad, this isn't fair.

Alex: \*really has the hang of it now, zooming around the track\* *Mario Kart R*, a game that will certainly end lots of friendships, coming next year hopefully to the Ultra Nintendo.

(...)

Alex: I'm here with Mark Cerny from Naughty Dog and we're taking a look at *Dog Dash*, the new platformer for the Super Nintendo CD.

Mark Cerny: This game's all about just having lots of whimsical fun. It's a straight-up platformer but this dog here, this dog is the real star of the game.

Alex: He's very big and very cute, I've got a dog at home who's a lot like him, kind of lays around the house a lot.

Mark: Well, Woofle doesn't lay around. He can run, he can jump, and this tongue here he can do all kinds of stuff with his tongue. You press A to make his tongue come out.

Alex: \*presses A and Woofle's tongue goes straight forward\*

Mark: Now depending on what buttons you press along with A, Woofle's tongue can do all

kinds of things. He can smack the enemies with his tongue, he can give them a little lick which can melt certain enemies and just kind of gross out other ones, he can grab someone with his tongue and send them flying-

Alex: I just did that, just now, look. \*Alex uses Woofle's tongue to grab a gangster and fling him into the air into a pair of other gangsters, knocking all three of them down\* That was pretty cool!

\*Clark's voice is heard saying "Good job, Woofle!" as he pats the dog on the head\*

Alex: Whoa!

Mark: Whenever you do something particularly cool, Clark will actually give Woofle some praise. There's a really close bond between these two, we really try to convey that during the game.

Alex: That is VERY cool.

Mark: The game's marketed toward kids but we designed it with all gamers in mind. We're hoping it becomes a success with all ages, like *Tales of the Seven Seas* did.

Alex: Speaking of *Tales of the Seven Seas*, how's progress coming on the sequel?

Mark: Well I can't announce anything officially but we're definitely looking into the possibility of a sequel.

(...)

John Walden: Right now I'm here with the man, Nintendo's Howard Lincoln himself, and this is the booth for *Grant Hill in NBA Basketball*. I got my Grant Hill jersey on \*showing off his Boston Celtics Grant Hill jersey\* and so I'm ready to play.

Howard Lincoln: Right, so let's get started! Now this game was developed over the course of about a year and a half, right here in North America with the cooperation of Grant Hill and of the NBA. It's got all the licensed teams and all the players except for one.

John: Right, right, I know which one that is. \*is referring to Michael Jordan who instead appears as B-Ball Player in this game, on the Bulls with the same stats as Jordan would have\* But yeah, the graphics look really slick and the gameplay's really fun from what I've seen.

Lincoln: We took an approach where you can sort of play either arcade-style basketball or play it closer to how a real game would play, sort of the same way our *Ken Griffey* games are.

\*John and Lincoln get into a quick game, John as the Celtics and Lincoln as the Sonics, John takes a quick early lead as Lincoln plays really awkwardly\*

John: Get up, get up! \*is having Grant Hill go up for a rebound against Shawn Kemp\* Get it, get the ball, get it! \*Hill grabs the offensive rebound and in the same motion slams it back down into the hoop, making it 8 to 2\* Yeah!

Lincoln: It's a lot of fun, isn't it?

John: The animation's so fluid. I love the level of detail in the crowds too.

Lincoln: We really hope this game and *Ken Griffey* become part of a sports franchise for us.

John: Think we'll see an NFL game next?

Lincoln: Maybe so, maybe so.

(...)

Kazzi DeCarlo: \*is playing a game at the Saturn booth\* This is *Blood Omen: Legacy of Kain*, and this is one of the best games I've seen at E3. You play as a vampire who's out for revenge, and let me tell you, this is a bloody, violent, brutal vampire game and it kicks ass! \*Kain is going around sucking the blood out of some helpless villagers\* I mean, look at this! You go around and just drink the blood right out of their bodies, you can see it flying out of them! What a game. I'm here with Denis Dyack, director of *Legacy of Kain* and I have to say it again, your game kicks ass!

Denis Dyack: Well thank you. \*he laughs\* *Legacy of Kain* is being released for the Saturn, we think in January 1997 but we're not sure, but we're hoping that it's going to be very popular because of the big huge world we've created.

Kaz: I'm definitely getting some, kind of *Ultima* vibes from this game I think.

Denis: It's more of a straight-up action/adventure title than *Ultima*, but we did take some inspiration, yeah.

Kaz: You didn't take inspiration from like, the Anne Rice novels for this did you?

Denis: \*laughing\* No, no, this is much more like the old scary gothic vampires from the 1800s. It's more of a fantasy horror game.

Kaz: Nothing more scary than a vampire sucking the blood out of a whole village!

(...)

Ted: There are some GREAT PC games here at E3 1996, we already showed you what Microsoft's cooking up with their new line of games for Windows, but now here's the game that most of you probably wanted to see and that's *Quake* and here's John Romero and he seems really excited to show me this game.

John Romero: Hey Ted, and hell yeah, let's show these people some *Quake*.

\*Ted begins playing the game which looks very nice on the computer that's been set up, the 3-D visuals trump pretty much every other game at the show.\*

Ted: It looks a LOT better than *Doom*, I imagine you guys had 3-D in mind every step of the way with this game.

Romero: We absolutely did, we're hoping to do for PC graphics what the original *Doom*

game did back in 1993, we want to be the new benchmark for what games can be.

Ted: It's really dark. It's really spooky. \*picks up a gun and opens a door\* Okay, let's see how I- \*sees some mad dogs coming at him\* Oh, crap! \*shoots at them frantically\*

Romero: \*laughing\* We want players to have a lot of "oh crap" moments when they're playing *Quake*.

Ted: Should I be wearing a diaper when I'm playing this game?

Romero: \*laughing harder\* To each his own, I'm not gonna judge. Usually when someone says "oh crap" they don't mean it literally. I guess in *Quake* that expression might take on a new meaning!

Ted: Is there going to be multiplayer in *Quake*?

Romero: Absolutely. And hopefully if it comes to consoles down the road we'll be able to have some form of multiplayer there too. The game's less scary when there's other people in the room, isn't there?

Ted: There's like a thousand people in this room and I'm still scared!

Romero: \*laughs\*

-excerpted from the May 21, 1996 episode of *GameTV*

-

*Nintendo Power was all over E3, and we're back with the latest news on the hottest games you'll be playing later this year! Check out this month's issue of Nintendo Power CD for a 12 minute video feature with even more highlights, along with playable demos of some of the games at the show!*

*Kirby Super Deluxe-*

Kirby's back in his first ever outing on the Super Nintendo CD! It's 10-games-in-1, as Kirby explores a variety of worlds and game genres in one of the biggest SNES-CD games yet! *Kirby Super Deluxe* brings back old foes like King DeDeDe and Meta Knight, along with dangerous new enemies like the mysterious galactic tyrant Marx!

*Tetris Attack-*

It's a brand new puzzle game, coming to the Super Nintendo CD and the Game Boy! Match three colors in order to send a big stack of blocks crashing down on your opponent! The Game Boy title is also Game Boy Color compatible!

*Iron Combatant-*

Hop into a mechanized combat suit to battle enemies in this exciting sci-fi adventure. You're playing as Layla, a no-nonsense colonel who's the last line of defense between her country and an army of evil conquerors in their own souped-up mechsuits.

### *World Of Color-*

A beautiful new puzzle game for the Game Boy designed to take full advantage of the Game Boy Color's capabilities, in this game you have to organize multi-colored shapes in order to create pathways and even new realms to explore. Features both a story mode and a high-score mode, with the option to hook up two Game Boys with the Link Cable for competitive multiplayer!

### *Bahamut Lagoon-*

Another exciting new title from Squaresoft, this game is a sort of hybrid of *Fire Emblem* with dragons...lots and lots of big dragons!

-

## **The Future Of Gaming Is Here!**

*E3 1996 was full of huge announcements, big surprises, and plenty of excitement. There was too much news at E3 to fit into one magazine, but we'll cover all the biggest stuff right here.*

*First up was Nintendo, with their announcements of the Ultra Nintendo and the Game Boy Color. The Game Boy Color was probably the biggest surprise of the show, and with the Game Gear pretty much dead in the water, it's surprising to see that Nintendo felt the need to upgrade the Game Boy, even if it's just with the addition of a color screen and a better sound chip. Still, games like Donkey Kong Land 2 and the excellent new puzzle game World of Color play great on it, with Donkey Kong Land 2 in particular showing off the capabilities of the sound chip. The sound wasn't as good as what we hear in typical SNES-CD or even Super Nintendo games, but it actually sounds like real instruments rather than electronic noises, and that should bring some epic soundtracks to upcoming portable titles. The Ultra Nintendo was the centerpiece of Nintendo's booth, and they proudly showed off the new Super Mario game, Super Mario Dimensions. The graphics blew us away, full 3-D with amazing detail in backgrounds and with characters. The three levels we got to see at the show looked huge and with the announcement of 21(!!!) levels in all, clearly this is going to be one of the biggest Mario games of all time and we'll bring you updates on this game as soon as they come in. We also got to play Final Fantasy VII, and even though the gameplay is classic Final Fantasy, with the ATB battle gauge returning and turn-based combat also back, the graphics are hugely stepped up. Everything's in 3-D, enemies and characters have realistic (if a bit stiff) movements, and the music thus far is impressive. We didn't get any details on the characters or plot, though those should be revealed as the game gets closer to release. There were plenty of Super Nintendo CD games being shown off as well, most notably Squad Four: Eclipse, Super Mario RPG, and Elements of Mana. Squad Four: Eclipse looked incredibly impressive, with 3-D visuals approaching the quality of some Saturn games. The game revolves around an alien invasion, and there were plenty of new enemies for the heroes to fight, we even saw Squad Four team up with some soldiers to take a squad of alien invaders down. Out of the RPGs shown off at E3, Elements Of Mana looked extremely impressive and should be as good or even better than Secret of Mana, which will make it a serious contender for the year's best title.*

*The Sega Saturn had an even MORE impressive lineup with a mix of new original titles and*

*sequels. Sonic the Hedgehog 4 was the biggest game featured at Sega's booth and probably the biggest game featured at E3. With a mix of classic side-scrolling elements and 3-D movement (in the game's boss fights, which feature some enormous looking bosses and fierce combat action), the game seems to be sticking to what worked in the first three Sonic titles while giving the presentation a MASSIVE upgrade. Another sequel we really liked was Virtua Fighter 2. We've played it in the arcades, but the Saturn version looks even more impressive, adding more characters and a new storyline mode to test even seasoned arcade players' mettle. Among the original titles we saw and enjoyed was a new action platformer called Sun and Moon, featuring a pair of twins with the power to control light and darkness. The game seems to be geared toward playing with a friend, though from what we saw the AI is capable of controlling the other character and a single player can switch back and forth between the two. Sun and Moon is said to be releasing in August and should give players who are through with NiGHTS Into Dreams something to do while waiting for Sonic 4. We also LOVED Tomb Raider, its heroine Lara Croft is one of the most compelling new protagonists we've seen in a game and the game itself looks like the perfect mix of action and exploration.*

*While we continue to wait for the Ultra Nintendo, the Sega Saturn looks to be making a big move to take advantage of its technical superiority during the last year it'll be alone in the next-gen market. This holiday season looks to be lucrative for both Nintendo and for Sega, and right now it's anyone's guess who's going to come out on top.*  
-excerpted from a report in the July 1996 issue of *Electronic Gaming Monthly*

All right, here's what happened at E3! I'm surprised I was even able to get in with my somewhat flimsy press credential, I really gotta thank my friend Jake for going out on a limb for me so I could get in. Anyway, it was REALLY crowded and a lot of the booths had huge lines, but I tried to play all of the big games I could. I DID manage to play a little bit of Final Fantasy VII despite it being pretty much the most crowded booth there, and WOW! It looked really awesome. I had to choose between the gameplay mission which was like a factory or doing a boss battle. I did the factory because it showed off more of the games. There's three characters, this guy with spiky yellow hair, this girl with black hair and this big black dude with a gun arm who both looks and talks like Mr. T. Apparently in the boss battle there is also this girl with long brown hair and a big ponytail. Anyway, the dungeon looked great, it was nice being able to roam around in 3-D and the factory looked really cool, this game's clearly going for a modern-day cyberpunk aesthetic and I liked it, at least what I saw so far. The battle system is typical Final Fantasy, wait your turn and then attack. Battle animations were cool, they took a little long though but I guess they were trying to show off the system's power. I caught a glimpse of the boss battle and saw Shiva coming out...holy CRAP, the animation was awesome but it took a long time. I also got to try out Sonic 4 after waiting in another huge line, it was probably the most fun of any game at the show. If you loved Sonic 3 (and who didn't?), you'll love Sonic 4, describing it doesn't do much justice, you really need to see it in action. The graphics were fantastic, everything had polygons and the boss battle was spectacular. It was in a fully 3-D arena, there was this huge monster with four heads breathing fire and Sonic was running around trying to avoid it while looking for an opportunity to strike. SO much better than the boss battles in other Sonic games.

I also hit up the big Super Nintendo CD RPGs. The Tale Phantasia booth was pretty crowded but while I was waiting I got to meet a couple of the voice actors, the guy who did Alex in Lunar on Sega CD was there, along with this blonde girl who I'm told sings the theme song and voices another character in the game. They were really nice and seemed to be having a

lot of fun talking to people although the blonde girl didn't like when people crowded around her a bunch and eventually some security guy had to kind of push people back. Tale Phantasia is awesome, the voice acting's decent and the game itself is a lot of fun. Combat was AWESOME, it's a lot like a fighting game with combos and special moves. Not QUITE Street Fighter or anything like that but a damn sight better than any other RPG I've ever played except for Secret Of Mana. Speaking of Secret of Mana, I got to play the sequel over at another part of Nintendo's booth. They actually had us playing three people at once, and one of the people playing with me was the cute girl from that video game show on MTV, Brittany I think her name is. She was really friendly and seemed to be having a LOT of fun, she picked this big guy with a sword and I picked a thief with two knives while the other guy with us picked some chick with a spear. The combat's a lot better than the original Secret Of Mana, you can hit so much faster, especially my thief guy who was racking up tons of hits and criticals. We ended up fighting this huge boss, a big spider looking thing called a Full Metal Hugger, the animation on him was great and we had a blast fighting him, I almost got killed a couple of times and Brittany ended up saving our asses after the dude with the spear chick got killed. There were actually quite a few celebrities there, I saw a couple guys from the Dodgers, Kirsten Dunst was checking out the new Super Mario game and Jaleel White was playing Mario Kart. I think he wasn't supposed to be over there because he was hiding his face with a hood and somebody told me he was over promoting Sonic 4 earlier. Toward the end of the day I got to play the new Game Boy Color and it was all right, the biggest improvement is actually the new sound chip they put in, the color looked kind of washed out on a non-backlit screen (in other words, Game Gear still looks better). Sega had some Venuses set up at their Genesis booth, they were showing off Vectorman 2 and a couple of sports games but there weren't many people over there.

So that's E3! If you guys have any questions for me, post a reply and I'll try to answer as best I can.

## **E3 1996**

The second Electronic Entertainment Expo took place between May 16 – May 18, 1996 at the Los Angeles Convention Center.

Since the last E3, Nintendo had seen a huge spike in sales driven by a series of hit games for their Super Nintendo CD console, which had gotten an economically-priced stand alone version during the 1995 holiday season. Sega's Saturn console had had a disappointing launch, but after a price drop in the spring of 1996, sales had begun to pick up.

Nintendo started off the proceedings by showing off their Ultra Nintendo system. Though information on the system's specifics including price weren't available, they did have a few games available to play, including *Super Mario Dimensions*, *Mario Kart R* (later changed to *Ultra Mario Kart*), and *Final Fantasy VII*. All in all, despite the lack of information, the Ultra Nintendo and its three playable demos were very well received and generated a lot of buzz for the system even though launch was still more than a year away. Nintendo also revealed its Game Boy Color system (more like an incremental update to the Game Boy) to a slightly less enthusiastic but still largely positive response, and a slew of SNES-CD games, including *Super Mario RPG*, *Elements Of Mana*, *Dog Dash*, and *Squad Four: Eclipse*.

Sega FINALLY revealed the long-awaited *Sonic the Hedgehog 4* to by far the most positive response at the show. Other games, including *Ultima: Scion of Britannia*, *Tomb Raider*, *Panzer Dragoon II Zwei*, and *Commander Keen* were shown off, all of them receiving positive responses (though *Ultima* only got a teaser trailer and wasn't playable at the show). Sega took a more heavy-handed approach to E3, featuring celebrities such as Coolio and Jaleel White (who created some controversy when he was later seen playing *Ultra Mario Kart* at Nintendo's booth), with Coolio hosting a brief rap concert to promote the return of Sega's "Does What Nintendo't" campaign.

PC games had a big presence at E3 as well, with *Quake* drawing large crowds. Bill Gates showed up to promote a new line of Windows games to push the new operating system as a must-have for PC gamers. One of the big games featured in their line-up was *Close Combat*, a World War II simulation that at the time looked better than anything Nintendo or Sega had in the genre, even Koei's World War II games looked rather spartan next to Microsoft's sim. With the idea of a "third console" somewhat dead at the time, PC software and hardware makers were in prime position to win over those disillusioned by Nintendo and Sega, and the mid to late 90s would be a successful time for them.

E3 1996 was characterized by the large crowds and long lines for many of the big demo booths. Though E3 1995 only had about four or five games with overly long lines, more than 20 titles at E3 1996 had hour-long waits or more, including all three Ultra Nintendo games, *Sonic 4* (of course), *Virtua Fighter 2*, *Tomb Raider*, *Panzer Dragoon II Zwei*, *Squad Four: Eclipse*, *Super Mario RPG*, *Elements Of Mana*, *Dog Dash*, and even *Policenauts*. Even with the large convention space, the sheer number of people present on the convention floor made it a chore for media outlets to report on every single game, and organizers would be a bit stingier with the lanyards for E3 1997, largely in response to the long lines for games at E3 1996. Though the long lines and big crowds were annoying, it was a promising sign for the video game industry, and with another new console on the horizon, business was poised to pick up even more.

-excerpted from IGN's E3 1996 article (based on this real-life article on IGN.com about OTL's E3 1996: [http://www.ign.com/wikis/e3/E3\\_1996](http://www.ign.com/wikis/e3/E3_1996))

-

*The Marvel Universe was at its nadir in 1996 if you were not Spider-Man or the myriad X-Men titles. Both franchises had successful animated series on Fox Kids, their respective titles in top ten, and films on the horizon. However, both the Fantastic Four and Iron Man animated series that comprised the Marvel Action Hour ended due to low ratings and the respective merchandise consigned to toy store bargain bins. Despite Mark Waid's acclaimed run on Captain America, it appeared that the Avengers titles and Fantastic Four were flagging in both popularity and sales. Marvel's attempt to jumpstart Avengers and Iron Man with "the Crossing" by making Tony Stark/Iron Man a traitor and replaced him with a teenage version of himself alienated readers. However, Marvel suffered from "quantity over quality" with titles like Fantastic Force, Thunderstrike, and War Machine, which many fans at the time considered redundant. With the contraction of the market leading to the mass cancellation of redundant titles and Ron Perelman's financial abuse of the company that would leave it bankrupt by year's end, Marvel could not be in more dire straights.*

*Mark Gruenwald, who served as Editor-in-Chief from 1995[1] until his deteriorating health forced him to resign in 2002, made the boldest decision of his career: kill the Avengers and*

*Fantastic Four. At least that was what early advertisements for Onslaught insinuated would happen with the tagline, "Can Earth's Mightiest Heroes survive the coming Onslaught?" Marvel had been laying the groundwork for the crossover for nearly three years beforehand in the X-Men titles when Charles Xavier wiped Magneto's mind in the "Fatal Attractions" arc. In releasing his fury against his one-time friend, he opened a dark part of his psyche he kept repressed since the Phoenix Saga of the first Claremont/Cockrum run. Deteriorating relations between baseline humans and mutants, as evidenced by the presidential campaign of rabid mutant hater, Graydon Creed, caused him to snap under the strain.[2] Taking on a distorted mirror image of Magneto, the newly christened "Onslaught" dragged the Fantastic Four and Avengers into his war against humanity by kidnapping and forcing a psychic merger between him, Nate Grey (AKA X-Man), and Franklin Richards, son of the Invisible Woman and Mister Fantastic.*

*It is worth noting that Onslaught marked the last appearance of Peter Parker as Spider-Man. After his retirement in the Spider-Man titles, Tom DeFalco, then-writer of Fantastic Four, moved the Parkers to title as supporting characters after Reed Richards offered Peter a position at Fantastic Four Inc. Both Peter and Ben Riley donned their respective costumes and battled Onslaught alongside the Avengers, Fantastic Four, and X-Men. However, unlike the Fantastic Four and (most of the) Avengers, the Spider-Men did not "sacrifice" themselves but rescued X-Man and Franklin after the heroes forced a merger with the Onslaught entity and the X-Men "destroyed" it.*

*However, the Fantastic Four and Avengers did not die. Through the unconscious influence of the omnipotent Franklin Richards, they "shunted" into a pocket universe created by the four-year-old's desire to save his family and their friends, hence the birth of the Heroes Reborn universe. Marvel outsourced Heroes Reborn to Image founders and former Marvel alumni Jim Lee and Marc Silvestri. Marvel approached Rob Liefeld at one point, but Liefeld had since left Image after an acrimonious falling out with the other founders and focused his efforts on new company Awesome Entertainment. Silvestri worked on Fantastic Four and Captain America while Lee handled Avengers and Iron Man. The best way to describe the titles was that it was a bizarre marriage of early Marvel and nineties tropes. The origins of the characters remained the same but with a few minor tweaks; for example, Lee's Avengers was essentially a copy of Stormwatch where the titular team operated under the aegis of that world's S.H.I.E.L.D. instead of the UN.*

*However, Heroes Reborn was influential in the sense that some elements crossed over into the Marvel films Fox released in early oughts. For example 2001's Captain America (starring Casper Van Dien of Starship Troopers fame) used certain elements like Cap's leadership of the Howling Commandos. Bucky was also aged up to his late teens to give both the comic and the film a more realistic tone as the film also drew inspiration from Steven Spielberg's Saving Private Ryan. Similarly, 2003's Iron Man (starring Tom Cruise as Tony Stark and Gene Hackman as Obidiah Stane) similarly changed the setting of Iron Man's origins from Southeast Asia to the Middle East as Heroes Reborn did to keep it contemporary.*

*However, the biggest contribution Silvestri made to the Captain America's was the "revival" of Bucky as the Iron Cross, a neo-Nazi cyborg assassin brainwashed by the Heroes Reborn version of Baron Heinrich Zemo (not to be confused with Baron **Helmut** Zemo, his son in the mainstream Marvel Universe.) His ongoing conflict with the Star-Spangled Avenger and Cap's attempts to "save" him formed the overall arc of his twelve-issue run on the title. This iteration of the character proved popular enough for him to make the leap from the Reborn universe to the mainstream Marvel Universe for Heroes Return as well as form the basis of the film's sequel.*

*As for Fantastic Four, Avengers, and Iron Man, most fans look at their Heroes Reborn as middle of the road. They were better than the post-Crossing Avengers, but it was largely a re-telling of the Silver Age stories moved into what was then the present. Sales still substantially improved and many of these titles appeared on the newsstands once dominated by Spider-Man, X-Men, Superman, and Batman and gained a more significant share of the direct market. Moreover, it set the precedent for how Marvel would market its titles over the coming years: restart the numbering of their titles with a new "#1" to generate interest with the readership. To date there have been at least seven volumes of Captain America and six of Iron Man along with multiple volumes of Daredevil, Amazing Spider-Man, and even X-Men.*

*Personally, I have always preferred DC's approach, which was the opposite of what Marvel had done. For example, Justice League picked Justice League of America's numbering (261 issues) after its one hundred thirty-eighth issue to become Justice League #400. Similarly, the second volume of the Flash resumed the numbering with #150 becoming the Flash #500 (fitting, considering that the first volume continued the numbering of the Golden Age Flash Comics.) Wonder Woman (vol. 2) #171 became Wonder Woman #500; Green Lantern (vol. 2) #176 became Green Lantern #400, and so forth. It suggested that the title had history, legacy, and continuity where the constant Marvel relaunches seemed to be a cynical attempt to inflate sales. In any case, it appeared that Marvel would copy DC's reconstructionist approach. Kurt Busiek's work on Marvels earned him an acclaimed run on Avengers that many fans compare to the Waid/Perez Justice League (despite its rotating roster of artists) for Heroes Return in 1997.*

*-from the blog "The Musing Platypus" by B. Ronning, May 7, 2015*

--

*[1] Butterflies fluttered Mark Gruenwald's heart attack in 1996 away so he lives a few years later than he would have IOTL.*

*[2] Apparently, the X-Men writers wanted Onslaught to be Xavier's dark side only and not a fusion with Magneto's psyche but editorial insisted. Not the case ITTL.*

-

*"Truly, if there is evil in this world, it lurks within the hearts of men."*

*-Edward D. Morrison (voiced by John Truitt), from the intro to Tale Phantasia (same exact intro quote as IOTL)*

*"Wow, this is a gem mint condition unopened special edition of Tale Phantasia. This game was a big hit for the Super Nintendo CD back in 1996. Nintendo released two editions, they released the normal edition, which sold nearly a million copies, and then this limited edition box set, with the game, and the soundtrack and the strategy guide and everything. They didn't think this would sell very well, so they only made like 10,000 of them. Those all sold out. So they did a second run of 20,000 and sold those only through their Nintendo Power catalog. Those also sold out. Now, the thing is that most of those were opened and played. People didn't really buy them to collect them. The people who did, the thing with those is that a lot of them come from that second run, in the mail, and you know, postman drops it off, it gets banged up, dented, you know how that is. This one's totally in mint condition,*

*you can see how it's graded by the video game grading company, a perfect 10. I've seen...three of these sealed and this is the only one I've seen that's mint like this. This game...it's such a popular game. People wouldn't buy this box for the game, there are so many copies out there and it's been remade a lot, so you can play the game relatively cheaply. But the collector's value of this sealed box is through the roof. This is one of the most sought after items among video game collectors. I'd put the value of this, if I were selling it at my store, at right around...probably \$5,000."*

-Johnny Jiminez, appraising a sealed copy of the limited edition of *Tale Phantasia* on the Pawn Stars episode "Fail Phantasia", which aired on October 16, 2014

*"Tale Phantasia was a kind of combination big break and last chance for us. I'd burned so many bridges at Sega and Nintendo was already so cautious, if we fucked this up I'd probably have been done in the industry. Thankfully, I didn't fuck it up."*

-Victor Ireland, in an October 18, 2010 interview with IGN.com

*"In retrospect, that was my bad. The original Saturn analog controller was approved by me. Thinking, you know, Americans with our big hands would need something like that. Already in Japan there was a smaller controller, but, you know, I thought the bigger one would work. To our credit, we did get plenty of the smaller one here for the holiday season, so it was more of a speed bump than a fiery crash. But yeah, um...not one of my best decisions."*

-Tom Kalinske, from an interview with Sega Retro

*"Oh...oh my god! There's a huge earthquake! I think...I think...yes! Someone just dropped the new Sega Saturn controller on the ground and it is chaos everywhere! I need to find somewhere to duck and cover!"*

-Kazzi DeCarlo, playing a frantic news reporter in a segment in the June 18, 1996 episode of *GameTV*

*"At that time, we were thinking handhelds and we thought the acquisition would help us in that aspect of the business. We'd just helped Nintendo out with the new model Game Boy and we needed games to put on it. So that was the logic behind that acquisition."*

-Ken Kutaragi, speaking of an acquisition made by Sony in 1996

-

*"Certainly, Sonic Team worked extremely hard during those times when we were working on both Sonic 4 and NiGHTS. We divided into two teams, I headed the NiGHTS team and then as soon as production finished on that game, I moved right over to oversee the latter parts of Sonic the Hedgehog 4. My number one goal was to make sure that neither game suffered because of the division of labor. Once NiGHTS was released, I knew that I had succeeded in half of my goal. The difficult part, then, was the waiting to see if Sonic 4 would live up to the astronomical expectations placed on it."*

-Yuji Naka

## **June 17, 1996**

*NiGHTS Into Dreams...* is released for the Sega Saturn, simultaneously with the Saturn Enhance, a game controller featuring an analog stick in addition to the normal D-pad and six-button layout. The original North American version of the Enhance controller is large and strangely shaped, and though most players responded well to the analog controller, a significant portion of Saturn fans believed the controller to be too big, and began importing a smaller analog controller from Japan (this practice largely stopped once Sega introduced

the smaller controller to North America officially in the fall). *NiGHTS* retains the same basic gameplay as its OTL counterpart, featuring the protagonist, a Nightmaren named NiGHTS, flying across magical dreamscapes while collecting items and avoiding enemies. However, in TTL's version of the game, the ground-based parts with the children Elliot and Claris are significantly expanded, and in some levels, the children even find weapons that allow them to fight off the monsters chasing them. The game features 11 levels, as opposed to the seven in OTL's version of the game, with five focusing on Claris, five on Elliot, and then one level featuring both children. Still, the vast majority of the game focuses on NiGHTS and the flying segments, which are both more complex and more beautiful than IOTL. Indeed, the game is regarded as the most graphically beautiful console game to date, even exceeding *Panzer Dragoon* in terms of graphical fidelity. With the game's music (which can be altered by NiGHTS' performance in the various levels) also highly regarded, reviewers consider the game a feast for the eyes and ears, and just as much an experience as an actual game (though this DOES hurt the game with some reviewers who believe the beautiful visuals to be a distraction for the gameplay's flaws). Ultimately, the game becomes another success for the Sega Saturn, and another boost for the system's sales. In some markets, it had begun to seriously challenge the Super Nintendo CD, and with Genesis sales added in, Sega had drawn nearly even to Nintendo in terms of overall market share.

-

\*An animated cutscene shows a group of young heroes facing a giant tree.\*

*A quest beyond imagination...*

\*The heroes, Cless, Chester, Mint, Arche, and Claus, look up to the sky to see energy beams raining down around them. They take fighting stances as the evil lord Dhaos descends, bringing darkness in his wake.\*

*The ultimate battle between good and evil begins.*

\*The heroes leap up to clash with Dhaos as a wave of light energy slams into a wave of darkness. The game's vocal theme song, "The Dream Will Not End", plays as scenes from the game begin to flash on screen.\*

Narrator: It's the role-playing game that broke records in Japan, now coming to our shores. *Tale Phantasia*, a quest spanning three worlds and two discs. A quest that will bring freedom to our world or cast it down into darkness. Take control of heroes like never before with the all new Active Battle System where you control every spell, every slash, every step. Jam-packed with over 100 hours of gameplay.

\*The heroes are shown traveling through time as they continue to battle alternate forms of Dhaos, a few more scenes from the game are shown, demonstrating the game's voice acting and the animated cutscenes.\*

Narrator: It's finally here, and it's only on Super Nintendo CD. *Tale Phantasia*. The ultimate quest has arrived.

**TALE PHANTASIA**

**June 24**

\*robot voice, metal sounds\* **Nin-ten-do.**

-the North American commercial for *Tale Phantasia*, which began airing in June 1996

### **Tale Phantasia: The Basics**

*Tale Phantasia* is largely the same as its OTL counterpart *Tales of Phantasia*, though with many graphical, gameplay, and presentation enhancements. The game is the second Super Nintendo CD game to be on two discs in North America. The original Japanese version spanned only one disc, numerous cutscenes and voice cues were added to the North American version that prevented it from fitting onto only one disc (Nintendo released this version in Japan in early July 1996). The game features around ten minutes of anime cutscenes, all fully voiced, with even more voice acting outside of cutscenes than Chrono Trigger. The game also features four fully lyrical songs, far more than any previously released SNES-CD game. The localization work was done by Working Designs, their first job for the Super Nintendo CD, utilizing their translation (which, like their OTL work, contains a few pop culture references, though not nearly as many as OTL's *Lunar* localizations, Nintendo didn't approve of having very many) and voice actors. Cless is played by Ashley Angel (who played Alex in OTL's original *Lunar* game), Mint is played by Kathy Ostrander (who voiced Lemina in OTL's *Lunar 2: Eternal Blue*), Arche is played by Jennifer Stigile (who also performs all of the game's lyrical themes and sang the themes for the *Lunar* games IOTL), Chester is played by Mark Zempel (who voiced Hiro in OTL's original *Lunar 2* dub), Klaus is played by John Truitt (who voiced Ghaleon in OTL's original *Lunar* dub), and the villain Dhaos is voiced by Ty Webb (who played the voice of Leo in OTL's *Lunar 2*). As typical of a Working Designs release, the company worked with Nintendo to produce a special limited edition box for the game, which was released alongside the game's normal edition. The limited edition contained the game, a selected soundtrack CD (24 tracks), a 30-minute making of video CD, a *Tale Phantasia* t-shirt, a cloth map of the game world, and the 184-page Official Nintendo Power Player's Guide (which was also sold separately in stores). Unlike the normal edition, which was produced in mass quantities and sold for \$59.99, the limited edition was priced at \$79.99 and shipped only to specialty game stores like Babbage's and Electronics Boutique, along with a few independent stores, some KB Toys stores also got copies. After the initial 10,000 copy run of the limited edition sold out within a few weeks, Nintendo did a re-print for the Super Power Club catalog that sold for \$90 (and also quickly sold out). The game itself is visually stunning, similarly to how the OTL game pushed the OTL Super Nintendo to its limits, this game does so for the Super Nintendo CD, with high-quality animation and excellent sprite work rivaling even what can be done on the Sega Saturn. The game features high-quality CD audio in nearly all of its tracks, the extra disc space allows for most of the soundtrack to be upgraded in terms of quality. The gameplay itself is somewhat faster than IOTL in battle, attacks that would stop the battle such as Indignation do not do so IOTL, instead the user of the attack is shown in a tiny window in the upper left hand of the screen and the battle continues without pause.

The plot itself is mostly unchanged, though a few key details, mostly toward the end, are altered a bit. The game begins with the dark lord Dhaos doing battle with a group of ancient warriors. He is defeated, and travels into the future where he is met by the warriors' descendents and sealed away. Some time later, an evil warlord begins a campaign of conquest with the goal of reviving Dhaos utilizing special pendants held by the descendents of those who sealed him away. The warlord razes several villages, slaughtering all those within, including the families of Cless and Chester. Cless and Chester are separated and Cless ends up captured in a dungeon, where he meets up with Mint whose mother was also slaughtered by the warlord. The two of them aren't strong enough to prevent Dhaos'

revival, but a man named Trinicus, one of the heroes who sealed Dhaos away in the past, send Cless and Mint back to the past before Dhaos was sealed away, in the hopes that they'll get strong enough to beat him. Cless and Mint eventually meet a summoner named Klaus and a magician named Arche. Together, the four heroes overcome numerous trials and adventures, eventually taking part in a massive sky battle against Dhaos' forces (this part is expanded significantly from IOTL, showing off the animation capabilities of the SNES-CD, fully a third of the game's animated cutscene time is during this battle which involves the heroes riding winged horses into battle). They then raid Dhaos' castle and defeat him. However, Dhaos escapes to the future once more, and the group is forced to find a time machine. They do so and arrive back in the future (Cless and Mint's present), reunite with Chester, and stop Dhaos seemingly for good. However, they are then presented with a vision of an even darker future where Dhaos has taken over. They once again travel to the future, arriving in an oppressed world and teaming up with two more party members, a ninja girl named Suyu (voiced by Kelly Weaver, OTL's Lucia voice in *Lunar 2*) and a freedom fighter named Zarui (voiced by Blake Dorsey, OTL's voice of Dragonmaster Dyne in *Lunar*), both characters join the party as playable characters in this version of the game (Suyu didn't IOTL, and Zarui is a totally new character). After traversing a few more dungeons, Cless earns the Eternal Sword, which prevents Dhaos from doing any more time traveling. They confront him in his final stronghold and defeat him for good, but with his dying breath, he reveals the purpose for his conquests. His own world, Derris-Kharlan, is being sucked dry of energy, its people being slaughtered. He merely sought enough energy to liberate his own world. Using the power of the eternal sword, the Summon Spirits, and Dhaos' last energy, Cless and the group journey to Derris-Kharlan to battle Krios, the dark force consuming Dhaos' world. Krios is a dimensional being who seeks out worlds to consume, his only thought is of consumption and he has turned into a mindless being with only one purpose. After another incredibly fierce battle, Krios is defeated and all the energy he has taken is returned to the great world tree that binds the dimensions together, to be recirculated through the universe. Eventually, Derris-Kharlan will be healed utilizing the liberated energy. With evil finally destroyed, Cless and his friends return to their own times and worlds, their adventure at last over. The game ends as Cless and Mint both return home to their families, having used the time machine to return to just before they were killed (and with no Krios or Dhaos, there's no evil force compelling the warlord to destroy the towns).

-

## **June 24, 1996**

*Tale Phantasia* is released in North America for the Super Nintendo CD. Initial reviews are excellent, though overall the game is just a smidge lower than *Chrono Trigger* in critical acclaim. Fan opinion on the two games is heavily divided. Though most RPG fans love both, everyone's got a favorite and the two games are inextricably linked in fan debates for many years to come. *Tale Phantasia* does top *Chrono Trigger* in first day, week, and month sales, breaking many of the North American sales records that *Chrono Trigger* set due to Nintendo heavily hyping the game. The success of the game instantly catapults Telenet Japan from a fairly obscure producer of niche games into a household name (at least among the video game community). Though the company is still lower in the pecking order than big companies like Squaresoft, Capcom, and Konami, it achieves a visibility that would definitely boost the profile of its next few releases. The release of *Tale Phantasia* also comes at a time that Nintendo needed a hit to counter the success of *NiGHTS into Dreams* on the Sega Saturn, and once again, Nintendo struck a heavy blow in the console wars. *Tale Phantasia* would ultimately go on to be one of the Super Nintendo CD's top-selling RPGs in North

America and would be regarded as one of the greatest video games of its time.

### **Cotton's Flying Adventure**

Andrew: 7.5

Mark: 7.5

Mike: 7.0 (quote: "This is definitely a cute and fun on-rails game, but it doesn't have the same innovative feel that *Panorama Cotton* did, and a game that looked amazing on the Sega Genesis only looks so-so on the Super Nintendo CD.")

Sushi-X: 7.0

### **Fatal Fury 3**

Andrew: 8.0

Mark: 8.0

Mike: 8.0

Sushi-X: 8.0 (quote: "It's definitely a good translation from the arcade version, and while series vets may need a bit of time to get acclimated to some of the changes, it's definitely worth your time and effort!")

### **FIFA '97**

Andrew: 6.5

Mark: 8.0 (quote: "FIFA's back and looking even better! Even though it lacks the high-def visuals of its next gen cousin, the animations are still quite realistic and it definitely has the feel of a great soccer game.")

Mike: 7.0

Sushi-X: 7.0

### **Pocahontas**

Andrew: 5.0

Mark: 3.5 (quote: "I've seen the colors of the wind, and they're ugly and boring.")

Mike: 5.0

Sushi-X: 3.0

### **Power Rangers Zeo**

Andrew: 4.0 (quote: "This bland beat-em-up is a serious disappointment compared to previous Power Rangers games.")

Mark: 5.5

Mike: 6.0

Sushi-X: 4.0

### **Spider-Man: Power And Responsibility**

Andrew: 8.5 (quote: "This excellent beat-em-up game should set the tone for all future Spider-Man titles, and it features one of the best storylines ever in a superhero video game.")

Mark: 7.0

Mike: 8.0  
Sushi-X: 6.0

### **Tale Phantasia**

Andrew: 9.0  
Mark: 9.5  
Mike: 9.0  
Sushi-X: 9.5 (quote: "One of the deepest, most involved RPGs I've ever played and easily the best battle system of any game in the genre.")

### **Vandal Hearts**

Andrew: 7.0  
Mark: 6.0 (quote: "It's certainly not a bad game but really could've used a lot more action to make it truly epic.")  
Mike: 6.0  
Sushi-X: 7.0

### **Universalizer 2**

Andrew: 9.0  
Mark: 9.5  
Mike: 9.0 (quote: "This game sets a new bar for graphical excellence in its genre.")  
Sushi-X: 8.5

### **Knightstar 2: Revenge Of The Dragon King**

Andrew: 5.5 (quote: "Plays okay but innovates NOTHING. Compared to some of the other RPGs next year it's extremely bland.")  
Mark: 5.0  
Mike: 5.0  
Sushi-X: 4.0

### **Dino Dudes**

Andrew: 3.0  
Mark: 1.5  
Mike: 1.0  
Sushi-X: 3.5 (quote: "Who were they trying to fool with this Battletoads ripoff? Certainly not anyone with a functioning brain.")

### **Agent Number 9**

Andrew: 6.5  
Mark: 6.5 (quote: "As far as shooters go it isn't really all that bad. Not quite on the level of Doom, but some of the missions are pretty well made.")  
Mike: 8.0  
Sushi-X: 7.0

### **Tropical Trouble**

Andrew: 3.0 (quote: "Just what we needed, another generic platformer.")

Mark: 5.0

Mike: 5.0

Sushi-X: 5.5

### **Stealth: Dangerous Mission**

Andrew: 7.0

Mark: 2.5

Mike: 7.0

Sushi-X: 6.0 (quote: "I expected a lot more from this game but what I ultimately got was a rather simplistic flying sim that might've been too ambitious for the Super Nintendo CD.")

-

*Panorama Cotton* had been one of the strangest games on the Sega Genesis and the very definition of a niche title, selling fewer than 20,000 copies in North America. It was, then, very surprising to see the sequel, *Cotton's Flying Adventure*, turn up on our shores, and even MORE surprising to see it turn up on the Super Nintendo CD! Of course, by then, Sunsoft was trying to build a whole franchise out of the *Andrekah* series, and *Andrekah* and *Cotton* were about to become inextricably linked, so it was ultimately out of the desire to further the success of *Andrekah* that *Cotton's Flying Adventure* landed in North America. It was essentially the same as *Panorama Cotton* in terms of gameplay. The titular character, a young and somewhat rude witch named Cotton, flies around increasingly weird worlds, blasting anything and everything she can with magic spells, leveling up within levels and eventually battling very large and very strange bosses. *Panorama Cotton* had been a technological marvel on the Genesis, what with its very detailed animations and high frame rate, and while *Cotton's Flying Adventure* looked great on the SNES-CD, for the system it was on and the time it came out it really wasn't that special. It even looked a bit inferior to *Andrekah*, which had been developed a year before. Fans who played *Andrekah* did see the girl from that game pop up in a few of the later levels, and a nice character dynamic was established between them, with *Andrekah* the nice one and Cotton the mean and snappy one, it was cute to see the two of them interacting and even teaming up in an optional secret level. As far as rail shooters go, the game was certainly fun, but if you REALLY wanted to play a good shooter in the summer of 1996, you needed look no further than *Universalizer 2*, the sequel to 1994's very difficult but incredibly fulfilling shooter game. With *Axelay 2* having been good but somewhat of a disappointment, it fell to *Universalizer 2* to carry the space shooter torch, and did it ever! It LOOKED stunning, and expanded on the first game's intergalactic travel theme by sending the hero into alternate dimensions and even through time to battle endless hordes of alien ships. It was just as trippy and just as hard as the first game, with really powerful new weapons to help you battle the enemy waves (and you would definitely need them, this game featured some of the most seemingly-OP weapons out of any bullet hell game and it was STILL one of the hardest to ever be released on a console). The game sort of slipped into the cracks in the month of *Tale Phantasia*, but its loyal fans still bought up about 75,000 copies when all was said and done (more than double what *Cotton's Flying Adventure* sold in North America). It was good to see that fans of space shooters still had plenty to love on the SNES-CD, which ultimately proved to be one of the best consoles for that genre of games.

-from "The Space Shooters Of 1996", an article on Gamesovermatter.com

-

*Finally!*

*It's good to see that the world of video games has finally caught up to the world of comics. I'm talking about, of course, Ben Reilly who was properly introduced to the gaming world in "Spider-Man: Power and Responsibility" for the Super Nintendo CD, a game worthy of this new Spider-Man and everything he brings to the table. I thought angry Peter Parker fans would keep Nintendo away from bringing on Ben, but he's an awesome new Spider-Man and his new game is great too, being an awesome re-telling of the comic book storyline (they took some liberties, but it IS a video game after all). I hope you guys aren't getting any angry mail from Peter Parker supporters, I'm sure he'll be back in a game sometime down the road, but for now, it's the Ben Reilly era, baby!*

*-Zach Brennan*

Zack,

Thanks for the letter! The editorial staff at *Nintendo Power* has been pretty torn over Spider-Man ourselves. We definitely have people on both sides of the debate, but for those who miss Peter Parker, there are plenty of SNES, SNES-CD, and Game Boy games featuring the original Spider-Man! We're glad you loved *Power and Responsibility*, we loved it too and we can't wait for the next great Spider-Man game (which will probably be on the Ultra, which makes us even MORE excited!)

-a letter featured in the September 1996 issue of *Nintendo Power*

-

Brittany Saldita: \*shaking her head\* What went wrong with *Stealth: Dangerous Mission*?

John Walden: Pretty much everything in my book. Blocky graphics, glitchy gameplay, repetitive missions...we were hoping this would be THE definitive combat flight-sim on the Super Nintendo CD, but it fell way short.

Brittany: And this plane's got no parachute to bail out the developers. Some of the things in this game, there's just no excuse for. I was worried when there wasn't a booth for this game at E3 after it had been hyped for quite some time, obviously now we know why. The intro screen theme song is probably the best thing about this game.

John: Ocean games are always great in the musical department, even the *Flintstones Movie* game had decent music, so that's no surprise there.

Brittany: Well, let's not go THAT far, this game's not as bad as the *Flintstones Movie*.

John: The game? Or the movie?

Brittany: Both. But it's still a serious disappointment and I can't recommend it for anyone. 2 out of 5.

John: I'm giving it a 1.5.

(...)

Alex Stansfield: *Vandal Hearts* is a pretty fun strategy game with a few somewhat crippling flaws.

Kazzi DeCarlo: A few?! This game is pure crap! Compared to *Fire Emblem*, which was really good, the characters are generic, the missions are generic, it's basically just "go here, kill this, then do it all over again". It didn't even have a good storyline to make all the bad stuff tolerable.

Alex: It wasn't that bad. There were a good variety of characters and battles I thought went by pretty quickly. It was easier to play than *Tactics Ogre*, which I really appreciated. It wasn't as confusing, it was pretty straightforward and I got through missions really fast.

Kaz: The graphics are crap...

Alex: The graphics are better than *Tactics Ogre*.

Kaz: The graphics in *Tactics Ogre* were crap too! These tactical games, unless you have gameplay and storyline twists like, say, *Fire Emblem*, get INCREDIBLY old incredibly fast. It was a chore to play through, a chore to figure out anything good about it, and I give it a 1 out of 5.

Alex: Wow, WOW it doesn't deserve a 1. This was a quality game.

Kaz: Oh no, noooo it wasn't. You compare it to all the other tactical RPGs that came out this year and you tell me it deserves anything better than a 2.

Alex: I gave it a 3.5.

Kaz: WHAT?! Aaaaaaaaaaagggggh! \*holding his head like he's in pain\* Why?!

Ted Crosley: \*yelling from off-screen\* I told you you'd be pissed at him, I told you he liked the game even though it sucked.

Alex: You played it too?

Kaz: Ted, you didn't even have to play it, it sucked!

Ted: I played a bit of it and what I played I didn't like.

Alex: What didn't you like?!

Ted: It was boring.

Kaz: I told you!

Alex: No! You guys are...no! *Vandal Hearts* isn't the most innovative strategy RPG but it's still a solid game! It's worth playing! It's really fun! The storyline is good! It has pirates!

Ted: So does *Tales of the Seven Seas*!

Brittany: \*yells from off-screen\* Yeah, just play *Tales of the Seven Seas*!

Alex: You guys!

-excerpted from the June 4, 1996 episode of *GameTV*

(...)

Ted: And that's why *NiGHTS into Dreams* was a freakin' amazing game.

Alex: It is a gorgeous, fun, inspiring, beautiful, heartwarming game with the type of heart you don't usually see in an action title.

Ted: Yeah, even I shed a tear at the end. It's such a beautiful game, takes me back to my childhood when I was getting woken up and taken to dream worlds by magical nightmare harlequins.

Alex: ...when you put it that way it makes the game sound creepy.

Ted: Well, it kinda is. The bad guy's really creepy.

Alex: All creepiness aside, *NiGHTS* is fantastic and every bit as good as the tech demo we saw at last year's E3. It is the most beautiful game on the Saturn, even moreso than *Panzer Dragoon*, and it raises the bar for *Sonic 4* later this year.

Ted: If *Sonic 4* is better than *NiGHTS*, it's Game of the Year.

Alex: I give *NiGHTS* a 4.5. It was almost a five BUT I did find the parts with Claris and Elliot dragged on just a little bit.

Ted: There was a bit of frustration there but the later stages where you get the weapons for them made me feel like a badass. Especially since, if you can beat enough enemies, *NiGHTS* gets a power boost and he can go around the stages at hypersonic speed. The final level, I'm not gonna spoil, but oh man make sure you kick ass with Claris and Elliot. Oh man oh man oh man.

Alex: You havin' a *NiGHTS*-gasm?

Ted: I'm havin' several. The game gets a perfect 5 from me. It's a masterpiece.

Alex: Well, go take a cold shower and when you come back, we're gonna take a look at *Spider-Man: Power and Responsibility* for the Super Nintendo CD and the Sega Genesis.

-excerpted from the June 18, 1996 episode of *GameTV*

(...)

Ted: I'm Ted!

Alex: And I'm Alex!

Ted: And why do we have our co-host Brittany all taped up? \*the two of them are carrying her, Ted holding up her back while Alex has her legs, she's sloppily wrapped up in duct tape with a strip of it covering her mouth kind of loosely, giving comical struggles\*

Brittany: \*glares at them\*

Alex: Well, she got so much into *Tale Phantasia* that she didn't want to stop playing and come in to do the review, so... we kinda had to come to her house and kidnap her.

Brittany: Mmrph!

Ted: You know, I think that's a good sign for how good the game is.

Alex: And a bad sign for workplace productivity.

Brittany: Mmph...mmrrph! \*thrashing\*

Ted: Anyway, today on GameTV, we'll be reviewing the Saturn games *X-Men: Children of the Atom* and the space shooter *Darius: Evolved*. We'll also be giving our two cents on the all new *Power Rangers Zeo* game for the Super Nintendo CD. And, in a GameTV exclusive interview, we meet up with Yu Suzuki and chat about the next generation of Sega arcade hardware.

Alex: Me and John'll be taking a look at this year's huge line-up of sports games, AND we're gonna give you a crash course on *FIFA '97* so you can school all your friends.

Brittany: \*kicks Alex in the side of the head, causing Ted to laugh\*

Alex: \*selling the kick like it hurt\* Hey....! \*glares at Brittany\* And YOU and I are gonna review *Tale Phantasia*.

Brittany: Grmm...mleh! \*pokes the tape off her mouth with her tongue\* 5 out of 5, now put me down! \*looks frantic to get back home to her game, over-exaggerating her distress like an addict on withdrawal\*

Alex: The idea behind a review is that we take our time, show the audience everything about the game, and you're not leaving until the show's over!

Brittany: Uh, uh... I think you guys left the oven on at my house, lemme just go back and-

Ted: Your house is just gonna have to burn down, we're not stopping this train for anything!

Brittany: You lousy sons of- \*is cut off by Ted awkwardly sticking the tape back on\* - bmmph!

Ted: We're bringing you previews, reviews, and news to help you choose. This...is *GameTV*! \*the two of them carry a furiously thrashing and kicking Brittany off the stage, she gets the tape off her mouth again and starts yelling at them\*

Brittany: I'm gonna kick your asses...! You two are in so much... you guys are \*bleep\*holes!!!

-intro segment to the June 25, 1996 episode of *GameTV*

(...)

Brittany: *Tale Phantasia* is one of the greatest games I've ever played, period. Once you start playing you won't be able to tear yourself away and I can tell you that from experience.

Alex: The voices, the music, the visuals, everything comes together perfectly to create a magnificent RPG that ranks among the very best games ever made. This is the first role-playing game I've played where I don't get tired of random encounters. The battle system is just so fun that I find myself grinding pretty much without even needing to.

Brittany: That MIGHT be why they made some of the latter bosses so powerful and tough, because they KNEW people would grind! My dudes were way up in levels and I still had trouble with some of the last few bosses. This is the best RPG on the Super Nintendo CD, bar none.

Alex: I think *Chrono Trigger* might still be a bit better.

Brittany: No.

Alex: I think the pacing in *Chrono Trigger* is better, it's a bit less grindy, um, the storyline is better.

Brittany: That's debateable.

Alex: Well, we're debating right now, right?

Brittany: The thing I loved about *Tale Phantasia* in terms of its story is that all of these worlds are tied together so intimately. What affects one world affects the other, and it's not like in *Chrono Trigger* where it's kind of blatant, in this game it's a lot more subtle and at the end everything comes together in this beautiful sort of way. Don't get me wrong, *Chrono Trigger* is AMAZING but in the end there's no better RPG than *Tale Phantasia*. I think it might be my favorite game of all time and as I said at the very start of the show, it's a 5 out of 5 for me. The easiest 5 I've ever given.

Alex: It's a pretty easy 5 for me too. Despite a few nitpicky things, I have very few qualms with this epic, epic game.

\*Sirens begin to go off\*

Ted: \*runs over with Kaz and John\* Is Brittany trying to escape? Do we need to tape her up again?

Brittany: \*rolling her eyes\* No, it's time to put *Tale Phantasia* in the GameTV Hall of Fame!

Ted: Oh yeah, I figured that was gonna happen.

\*The group takes *Tale Phantasia* to the wall where Brittany hangs it up right next to *Resident Evil*\*

Brittany: And that makes five! And a very deserving fifth game at that. \*turns to the group\* Now that that's over, can I PLEASE go home and play *Tale Phantasia* now?

Ted: Uh, Brittany, the thing is...the janitor kind of complained about the huge mess from you knocking over a bunch of stuff earlier...

Brittany: You were carrying me into the room!

Alex: Sorry but you made the mess and you have to stay here tonight to clean it up. The janitor will be back to get you in the morning.

Brittany: WHAT?! \*she runs after the other four as they quickly flee\* You gotta be kidding me! You guys...!!! \*they run out the door which locks behind them, she tries to get out but she can't\* Dammit! \*pounds on the door for a few seconds\* You guys are gonna pay for this! \*she sighs\* Well this is just a bunch of.... \*she sees a Super Nintendo CD still hooked up to the big screen, and looks over at the Hall of Fame wall\* ...hmmm... \*goes over to the wall and sees the *Tale Phantasia* game up on the shelf\* .... \*she grabs the frame and looks around for a few seconds, then smashes the glass frame on a table and gets the game out\* Hehehe... \*has a smirk on her face as she goes over and puts the game into the SNES-CD, then sits down on the very comfortable looking couch and begins to play as the credits roll\*

(NOTE: The following dialogue comes from Mr. E., one of our readers who sent this in to us. We edited it up a bit but the dialogue and idea of the conversation itself comes from him.)

**June 30, 1996**

Satoshi Tajiri had had a good past few years. He, and his collaborator Ken Sugimori, had turned their popular game fanzine "Game Freak," into a gaming company in 1989, and had been churning out games every year for the past 6 years. Their most successful finished product thus far was *Pulseman*, which was a major success in Japan and in America, despite the release of *Mega Man X2* at the same time. Tajiri was feeling pretty good. His dream project, a creature collecting game called *Pocket Monsters Red and Green* had just been released. The game had been inspired by his childhood collecting bugs in the suburbs of Tokyo. It was a game that he had pressed Nintendo to make for over 4 years, and (with a little help from Shigeru Miyamoto) finally got the go-ahead to develop. And which his company almost went bankrupt trying to create. He was relieved. The technology for the Gameboy had become primitive compared to the SNES-CD, (which he personally witnessed when he was developing *Pulseman*), and now the Ultra Nintendo. He didn't want to develop his game for those systems, because they lacked the connectivity the Game Boy link cable provided. Furthermore, Nintendo didn't have high hopes for the property, and Tajiri was worried that his project would bomb. That fear turned out to be false. There had been modest sales at first. However, that changed when Mew, (added by programmer Shigeki Morimoto late in the game's development) was discovered. The gaming magazine *Corocoro* had a contest the previous month where twenty entrants would get the elusive Mew, and sales were now exploding. This success had peaked the interest of a certain company. And that's what brought Tajiri to a Machida Coffee shop. He waited, and when he saw someone, he got up, and shook his hand.

"Kutaragi-san, it is a pleasure to see you again."

"It is a pleasure to see you too, Tajiri-san."

The two had previously met when Sony and Game Freak had discussed a *Pulseman* sequel. Whilst the discussions went nowhere, Tajiri had mentioned that he was working tirelessly on a game where the players could capture creatures, and have them battle. Apparently, Sony had been following the production of the game since. As *Pocket Monsters* continued to garner high profits, Kutaragi had called and requested a meeting with Tajiri.

"So, I hear you've been some success with your little bug catching game."

"Yes, that's right."

Ken Kutaragi asked, "So, do you have plans to release more?"

Tajiri wasn't sure, but he knew about the numerous bugs in the original games, and if given an opportunity, would love the chance to create another version of the game to fix those bugs.

"So, you said that *Pocket Monsters* almost bankrupted Game Freak."

"Yes, That's right."

"Well, based off what we have seen, the massive sales figures for the game, we think that the effort was well worth it. And we want to help you make more games. The new model Game Boy, it's a device that we helped with so that we could try our hand at working with portable games. I think a new *Pulseman* game would work well, similar to how Capcom released many *Mega Man* titles for the Game Boy. And your *Pocket Monsters* game is extremely intriguing."

Kuturagi leaned forward:

"I have a proposal for you..."

-

### **Sony Acquires Game Freak**

The Japanese electronics company Sony acquired yet another video game publisher, completing a merger with the video game maker Game Freak yesterday. Details of the deal have yet to be revealed, but it's another edition to the company's growing stable of developers.

-excerpted from an article in the July 10, 1996 *Wall Street Journal*

-

*The Legion of Super-Heroes is something of a curiosity in the DC Universe. It began life as a throwaway story by Otto Binder in 1958 where the nascent "Legion of Super-Heroes" inducted Superboy into their ranks through a series of trials. It eventually replaced the Boy of Steel in Adventure Comics where it would gain its own rogues gallery and iconic elements like the inverted rocket clubhouse. They would move to Action Comics by the end of the sixties, then to Superboy where the title would become Superboy and the Legion of Superheroes, and then eventually oust Superboy from his own title by the dawn of the eighties. At the height of its popularity, some claim the Legion was seconds in sales to only the Marv Wolfman and George Perez's New Teen Titans. However, Crisis on Infinite Earths was not kind to the team. The removal of both Superboy and Supergirl created the mother of all continuity snarls as Superboy was the inspiration for the team and Brainiac 5's complex relationship with Supergirl was a longstanding subplot. Paul Levitz attempted to rectify this with the Pocket Universe saga, which worked as something of a stopgap measure, and then the "Five Years Later" story arc sparked a series of retcons that fed into Zero Hour.*

*DC wiped the slate clean and assigned Grant Morrison to the Legion titles: the fourth volume of Legion of Super-Heroes and Legionnaires. Well, Morrison himself wrote LoSH while writers like Mark Millar and Tom Peyer scripted his plots for Legionnaires. Despite protests from Superman editorial (Superman and Batman's editors were notorious for being uncooperative with the characters in their stables), Grant Morrison restored Superboy to the Legion of Super-Heroes in a roundabout way. Since the clone Superboy already appeared in his own book and the Superman titles, Morrison reused the Kent Shakespeare and Laurel Kent characters as the Superboy and Supergirl of the 30th century though no one explicitly referred to them by those appellations in-story. Instead, Morrison used the now-vacant codenames Valor and Andromeda to distinguish them from their contemporary counterparts. The setup was simple: Earth of the 30th century was utopian society free of hunger, war, disease, and other societal ills under the cyclopean eye of the "benevolent" Solaris, the Living Sun. Kent Shakespeare had everything he ever wanted: a stable hoe, loving parents, and a girlfriend until a trio of strange teenagers whisked him away and revealed the truth of his "perfect" existence.*

*Cosmic Boy, Saturn Girl, and Lightning Lad exposed Solaris' true nature. The tyrant sun brainwashed countless worlds into submission while his army of stellar computers were subjugating the galaxy. Part of his plans included "programming" the various superhero "dynasties" into compliance. Kent and Laurel was members of the Superman dynasty, the greatest of the heroic houses. Over time Morrison introduced characters from the Flash with Impulse's cousin, Rush, and with James Robinson's blessing, retroactively made Thom Kallor (AKA Star Boy) a member of the Starman dynasty. With the veil over his eyes lifted, Kent dedicated himself to the overthrow of Solaris.*

*Some fans often derisively call his take on the team, "the Justice Legion" because of its overt use of legacy characters from the Justice League. Interestingly, Morrison himself would appropriate the name for a future project. Morrison's Legion was something of a sleeper hit for DC Comics; it garnered critically acclaim that compared his run to science fiction pulps like Flash Gordon and Bryan Hitch's panels introduced the "widescreen" look that gave the book a cinematic feel. He would alternate with Morrison's frequent collaborator, Frank Quitely, for a two year run before he moved on to Adventures of Superman. However, the penultimate arc involved a concept that would reshape DC Comics over the next two decades: the introduction of Hypertime.*

*After the Legion had finally defeated Solaris, Kal Kent, the Superman of the 853rd century, arrives at Legion headquarters to enlist the aid of Valor, Andromeda, and the Legion founders for a mission to stop the Chronovore an eldritch abomination that fed on time. Many fans criticize the story for having little to do with the Legion itself, but it introduced the Fortress of Solidarity where various "discarded" versions of Superman and his supporting cast (including previous versions of the Legion) gathered to combat threats to Hypertime.*

*Kal Kent described it as this, "Imagine time as a river where you throw a stone and the ripples change its course. The main timeline changes but the old timeline exists as a ripple... an echo that exists independently of the changed timeline; every possibility exists within Hypertime and it is the mission of the Superman Squad to protect all of it."*

*By "ripple," Kal obliquely refers to the events of Crisis on Infinite Earths and Zero Hour, and the appearances of the Superman: The Animated Series, Christopher Reeve, Dean Cain, and Bruce Campbell versions of the Man of Steel enforce that these versions are all exist within the Superman canon. Morrison essentially revived the DC Multiverse; the original Superman from Action Comics #1 now existed in his own timeline, as did the 50s version of Superman, the Silver and Bronze Age versions—hell, Supermen from obscure "Imaginary Stories" existed in their own timelines. In many ways, it more resembled the Marvel Multiverse that took the many-worlds interpretation with branching timelines rather than the pre-Crisis DC Multiverse though the possibility that Earth-2 and those other Earths still spun somewhere out in Hypertime was present. However, DC would not fully explore this idea for nearly a decade.*

*The idea was not without controversy either. Alan Moore was working on Supreme, a Rob Liefeld pastiche of Superman who had spent much of the nineties as a violent anti-hero, accused Morrison of plagiarizing his work. Moore's grand arc on Supreme included the idea of the Supremacy; a limbo-like dimension where various versions of Supreme (themselves mirror images Superman's various incarnations) went after reality "revised" itself. Similarly, Morrison criticized Alan Moore's complaint as, "ludicrous considering the character he was writing was himself a copy of Superman." The point became moot as a lawsuit from Marvel/NewsCorp over the long-forgotten Joe Simon/Jack Kirby creation, the Fighting*

American, bankrupted Awesome Comics when its larger investors backed out and Disney (of all companies) ultimately bought its properties in 1999. Moore would leave his run on both *Supreme* and the new *Youngblood* unfinished... but I digress.

*Justice League* might have been the best-selling title of the mid-to-late nineties, but *Legion of Super-Heroes* was arguably the most influential. Many elements from his *Legion* run carried over into other titles such as the expansion of the superhero dynasties in Mark Waid's run on the *Flash* and James Robinson's *Starman*. *Solaris* would plague the *Justice League* and *Superman* when he forced them to build his past incarnation as part of a convoluted time travel plot in 1998's DC *One Million* crossover and the idea of "rippling Hypertime" played into his 1997 "[evolution](#)" of the *Superman* titles that saw many changes (including the controversial removal the red briefs from the uniform) to the *Man of Steel* that rivaled John Byrne's 1986 reboot. However, one of the most notable was the third season *Superman: TAS* episode "Must There Be A Superman?" three-parter that aired in the spring of 1999.

As mentioned earlier, *TAS* version of *Superman* appeared in Morrison's final *Legion* arc and "Must There Be a Superman?" adapted it from the perspective of the *TAS* *Superman*. After Lois is hospitalized in an Intergang attempt on her life; a distraught *Superman* has a crisis of confidence when two imposter "Supermen" appear in Metropolis voiced by Christopher Reeve and Bruce Campbell as special guests. After a brief battle, he follows them through the lightning door to the Fortress of Solidarity where he meets Valor (voiced by Christopher Daniel Barnes), Andromeda (Mary Kay Bergman), and the Legion (Lightning Lad voiced by Jason Priestly, Saturn Girl by Melissa Joan Hart, and Cosmic Boy by Chad Lowe.) The story follows Morrison's nearly verbatim and boasts some of the most fluid animation since "World's Finest." However, Paul Dini wrote an epilogue that answered the question "Must There Be A Superman?" where the *TAS* *Superman* speaks as the lightning door closes.

"Must there be a Superman, Kal? The answer is yes. Even as an idea, every world needs a Superman."

"Must There Be A Superman?" is a personal favorite of mine and many other fans. Not only did it "canonize" the Morrison story, it also received a mention in 1999's *Man of Tomorrow* film. Grant Morrison's *Legion* run had far-reaching consequences on not only the comic books but on other media as well.

## **The Blockbuster Summer '96 Movie Season**

The summer of 1996 was perhaps the biggest summer blockbuster season since 1989, largely due to the success of three huge films. Going into the summer, the two films with the most hype behind them were the sci-fi alien action film *Independence Day*, starring future A-lister Will Smith, and *Superman: Last Son of Krypton*, the superhero's return to the silver screen nine years removed from the disastrous *Superman IV: The Quest For Peace*. Though Christopher Reeve had to step down from the lead role (due to age and due to starring in the moderate CBS hit *Extracurricular*), fans still clamored for the hero's return to the big screen after a very popular trilogy of *Batman* films in the interceding period. The

*Superman* film was expected to be the summer's biggest hit, with *Independence Day* a very close second, but an unlikely blockbuster interceded and *Superman* ended up having to settle for third. That film was *Twister*, a film which, along with *Independence Day*, renewed the "disaster film" genre and ended up as the year's second highest grossing film, with over \$250 million at the North American box office. *Independence Day* scored first, with over \$300 million, while *Last Son of Krypton* had to settle for a "mere" \$235 million in domestic receipts (though its \$60 million opening weekend did break *Batman Forever's* opening weekend record). Aside from the "big three", theaters remained packed due to a big glut of lesser but still successful hits. Tom Cruise's *Mission: Impossible* scored nearly \$200 million in domestic receipts, and action hits like *The Rock*, *Eraser*, and *Barcode* (a dystopian sci-fi thriller starring a young actress named Milla Jovovich about an android who had to flee from a pro-human government that sought to scrap her) all made north of \$100 million in North America. On the comedy front, the big hit film was expected to be the Jim Carrey sequel *The Mask II*, but despite a big opening weekend that saw more than \$40 million in box office receipts, the film barely limped past \$120 million at the North American box office. Instead, it was the Eddie Murphy film *The Nutty Professor* that reigned supreme, beating out *The Mask II* by \$12 million (and doing even better overseas). Elsewhere on the comedy front was the family film *Schemers*. Starring Matthew Broderick and at the time *All That* star (now *Saturday Night Live* actor) Kenan Thompson, the movie depicted Thompson as a young con artist who manages to sucker his hapless high school teacher (played by Broderick) into helping him with a huge score, only for the two to end up together on a cross-country flight from the authorities (and a group of much more dangerous criminals). The movie only made \$90 million domestically, but that was a huge success considering its \$12 million budget, and it would receive a sequel in 1998. Disney's *The Hunchback Of Notre Dame*, while one of the summer's most lucrative films, was somewhat of a disappointment after the huge success of 1994's *The Lion King* and the disappointing but still decent performance of 1995's *Pocahontas*. While *The Hunchback of Notre Dame* was mostly well received by critics, it still drew some flak for its changes to the original story (which included a "kinder, gentler" Phoebus, who was still one of the film's antagonists until Esmeralda and Quasimodo saved him from a hanging at the hands of Clopin and his fellow gypsies in the Court of Miracles, and also saw Quasimodo and Esmeralda paired up together in the end, which was a complete reversal of the grim ending of the book and seen as "typical, predictable" Disney fare). While critics may not have loved the summer of 1996 (*Barcode* and *Last Son Of Krypton* received the highest praise, with scores of 91% and 87% respectively on Rotten Tomatoes), it was the most attended in ticket sales since 1996, and set the bar quite high for the summer of 1997.

"You know, he really is a hell of a player. I'll give credit where it's due. I'm still the better basketball player but I can see him having a bright future once I'm out of the league."

-Michael Jordan, in a post-game interview with Hannah Storm after Game 6 of the 1996 Eastern Conference Semifinals

The 1996 NBA Playoffs weren't quite as exciting as the 1995 playoffs, but they did see a number of excellent young superstars exhibiting their talents and taking their teams on deep playoff runs. Coming into the playoffs, the overwhelming favorite was the Chicago Bulls, who had just rattled off their second consecutive 70-win season behind the trio of Michael Jordan, Scottie Pippen, and Chris Webber. The only threat to the Bulls' hopes of repeating as NBA champs were the Orlando Magic, who'd won 58 games in the Atlantic

Division and had easily bested the declining New York Knicks for the division title. Reggie Miller's Pacers had won 54 which was good for the third seed. The West was a war, with the Seattle SuperSonics having won 62 games, good for first place, with the Golden State Warriors also winning 62 but losing the tiebreaker. The San Antonio Spurs had grabbed 59 wins, and the Utah Jazz were close behind them with 57.

The first round of the playoffs had little in the way of drama. The Bulls, Magic, Warriors, and Sonics all easily swept their series and the Pacers beat the Cleveland Cavaliers in four. The Boston Celtics, led by Grant Hill, beat the New York Knicks in a three-game sweep, though the West's 4-5 series was an exciting slugfest that saw the Jazz barely beating the Rockets in a game five overtime thriller. In the conference semifinals, the Pacers and Magic played what was probably the best series of the playoffs, though the Pacers ended up bowing out in seven games for the second straight year. Despite flashes of brilliance, Grant Hill could only carry the Celtics to game six, where the Bulls blew out the Celtics at the brand new Fleet Center. In the West, the Jazz managed to upset the Sonics in six, while the Warriors went all the way with David Robinson and the Spurs. In game 7, played in Oakland, Horace Grant had a dominating performance with 19 points and an incredible 27 rebounds, and the Warriors beat the Spurs in the deciding game, 132-109. In the conference finals, the Magic were stomped by the Bulls in five games, while the Warriors only needed five to beat out the Jazz, setting up an NBA Finals between the Chicago Bulls and the Golden State Warriors. It was thought to be Mitch Richmond's chance to prove himself as an NBA superstar, but despite pushing the Bulls to six games, Chicago's tough trio was too much for the Warriors to handle. Michael Jordan famously shouted "Fuck you, Mitch Richmond!" in the celebratory aftermath of Game 6, proving once again his dominance over yet another pretender to his throne, and the Bulls had won their fifth championship in just six years.

### **High Drama At The 1996 NBA Draft**

The annual NBA draft saw a flood of excellent talent from both the collegiate and high school ranks entering the league, and teams were clamoring for spots, with the first round seeing plenty of trade action that started pretty early in the night. After the night's first pick, which sent Allen Iverson to the Washington Bullets, all bets were off. The 76ers sent their number two pick, which ended up being Shareef Abdur-Rahim, to the New York Knicks for a package of players that included John Starks and New York's number-one picks for 1998 and 2000. Marcus Camby was grabbed up by the Dallas Mavericks, and New Jersey and Toronto swapped the fourth and sixth picks, which were Ray Allen and Lorenzen Wright respectively. The Nets seem to be hoping that Wright can give them the big-time center they need, while the Raptors seemed very happy to be adding both Ray Allen and Derrick Coleman to their growing young nucleus that includes Damon Stoudamire. There was a bit of high drama concerning Kobe Bryant, who had previously stated that he wouldn't play for any other team except the Los Angeles Lakers. That didn't stop the Western Conference champion Golden State Warriors from trading Chris Mullin up to pick him, and after some lengthy negotiations it seems that Bryant is happy with playing by the Bay. The Indiana Pacers seemed to be going with the hometown favorite Brian Evans with their first-round pick, but then they traded up to obtain Steve Nash from the Atlanta Hawks, sending Derrick McKey and their second rounder along with Evans. The trade was criticized in some circles, as the Pacers already have a capable point guard in Mark Jackson, but GM Donnie Walsh tells the media that Nash will make an excellent addition to the Pacers' second unit, where he'll be able to learn and grow. Overall, analysts seemed to pick the Raptors as the draft's

biggest winners, with the Bullets, having obtained the consensus best player, as a close second. Only time will tell if this draft ends up as a major turning point for the NBA or a major disappointment for a lot of hopeful teams.

Narrator (Don LaFontaine): Last year, *Sailor Moon* took America by storm. Now, after nearly a year, *Sailor Moon* is back.

\*Scenes play from the first two episodes of the Makai Tree saga\*

Narrator: New villains. New powers. New threat. Can *Sailor Moon* and her friends re-unite in time to save Tokyo, or will the world be overgrown?

\*Shows the Makai Tree spreading its roots\*

Narrator: Find out when *Sailor Moon* comes to prime-time, this Friday, June 14th in a one hour special, *The Return of Sailor Moon*. Only on Fox!

-a *Sailor Moon* promo commercial that aired during early June 1996 on Fox

### **When Fox Kids Kicked Butt**

During the fall of 1996, Fox Kids kicked off a new campaign to promote their lineup, particularly of action-oriented shows. A series of promos began to air bearing the new slogan: "Fox Kids: Where Kids Kick Butt!" The lineup was largely to promote the new weekday line-up, which included *Sailor Moon*, *X-Men: The Animated Series*, *Power Rangers Zeo*, and a brand new cartoon from Craig McCracken called *The Buttkickin' Girls*. Originally called *The Whoopass Girls*, and known as *The Powerpuff Girls* when a pilot short aired on Cartoon Network's *What A Cartoon!* anthology series, the show depicted three young girls who were created in a science experiment by a man named Professor Utonium. With their new superpowers, the three girls, Blossom, Bubbles, and Buttercup, fought crime together against a horde of strange and hilarious villains. The new Fox Kids slogan earned some controversy, particularly from Brent Bozell's Parents Television Council, who claimed that the slogan promoted violence and weren't pleased with the gratuitous use of the word "butt". Fox Kids was very proactive in clarifying the meaning of their new slogan, however, explaining that "kicking butt" didn't just mean literal fighting, but also meant that kids took an active role in self-improvement and community involvement, through staying in school, picking up litter, and other positive acts (in a similar way to Nickelodeon's *Big Help* campaign). They even aired a series of public service ads featuring various Fox Kids stars. The most famous and most effective such ad was the one featuring *Power Rangers* stars Jason David Frank and David Yost. It was an anti-bullying ad that featured the shocking admission that Frank had bullied Yost during their time together on the show, and showed Frank earnestly and humbly asking for Yost's forgiveness. It didn't specify the exact reason for the bullying (which, down the road was revealed to be related to the fact that Yost was gay), but was still seen as a very effective and honest commercial, and probably contributed to Yost remaining on the show after *Power Rangers Zeo*. The slogan itself wasn't especially effective and the campaign was quietly phased out in late 1997, but it remains one of the more memorable times in the history of Fox Kids.

-from an article on the website Kids' TV Memories, posted on September 15, 2008

\*Two young women are seen walking down the sidewalk at a crowded park.\*

Catherine Sutherland: Hello, I'm Catherine Sutherland, you might know me as Kat the Pink Ranger on *Power Rangers Zeo*!

Lalainia Lindbjerg: And I'm Lalainia Lindbjerg and you might know me as the voice of Sailor Venus on *Sailor Moon*.

Sutherland: You might know Fox Kids as a place where kids kick butt, but "kicking butt" isn't just about winning a fight or beating up bad guys.

Lindbjerg: Kicking butt is about being the best you that you can be! Staying in school, studying hard, volunteering in your community, all of these things are a great way to kick butt each and every day!

Sutherland: In fact, let's see how these kids from a local elementary school are kicking butt right now by volunteering to help clean up this beautiful park.

\*The two walk over to the group of kids who are picking up trash that's been left by various park-goers, they begin chipping in to help as well\*

Sutherland: Making your community a more beautiful place to live helps everyone living there! It makes for a more healthy environment, it helps people feel better about where they live, and it makes the park safer so it can be enjoyed by people of all ages!

Lindbjerg: And when you help make the world a better place, it makes others want to pitch in and help out too.

\*The two actresses and the kids finish up cleaning the park and are now standing together under a big tree.\*

Sutherland: So remember, while you may not be a superhero and while you may not come across evil monsters in your every day life....

Lindbjerg: You can still be a hero if you devote yourself to being the best you you can be, help out where you can and make the world a better place for everyone!

Everyone: And that's why kids kick butt!

(...)

\*A young woman is walking down the sidewalk in a neighborhood.\*

Saffron Henderson: I'm Saffron Henderson, and I play the voice of Sailor Jupiter on the show *Sailor Moon*. But what a lot of people don't know is that I've been fighting a battle every day since I was a young girl.

\*Henderson walks up to a little girl and her mother.\*

Henderson: You see, I've been fighting a battle against diabetes. Keeping it in check is a full

time job, but that's what "kicking butt" is all about. It's about taking care of yourself so that you can be the best you you can be.

\*Henderson begins to talk to the young girl, who also has type 1 diabetes.\*

Henderson: It's not an easy fight, but with the right attitude and a lot of courage, you can handle even the toughest of challenges. \*to the little girl\* So you already know what you have to do every day, don't you?

\*The girl nods and smiles, and she and her mother go through the various steps to inject the girl with her daily insulin.\*

Girl: It's easy to get discouraged, but my doctor says that as long as I take care of myself, I can do almost anything I want!

Henderson: That's right, you can. You're very brave. \*she smiles and she does some of her Sailor Jupiter lines for the little girl, who smiles and then the two of them do some Sailor Jupiter poses together\*

Girl: I like Sailor Jupiter the best because she's really brave and no matter what happens to her she always stands up and protects her friends!

Henderson: \*to the camera\* Stacie here kicks butt every single day, and there are thousands of kids out there just like you who are also dealing with diabetes and other serious diseases like cancer, HIV, and congenital heart defects. Sometimes it might seem like it's hopeless. I know it did for me when I was first diagnosed. But if you keep your chin up, remember to take care of yourself, and never lose hope, you can kick butt just like Sailor Jupiter and just like Stacie! And even if you don't have a serious disease like diabetes, it's important to eat right and get plenty of exercise so that you can stay healthy and strong well into the future!

\*Henderson, Stacie, and her mom strike one more Sailor Jupiter pose together and shout "Kids Kick Butt!" into the camera.\*

### **From MTV to *Mad TV***

Kazzi DeCarlo has been cast to join the second season of *Mad TV* when it returns to Fox in the fall. DeCarlo, known for playing Kaz on the hit MTV video game news show *GameTV*, will be leaving that show some time in July. In addition to his reviewing duties, DeCarlo often played wacky characters in the various sketches on the show, providing much of the comic relief in contrast to the shows' straight-man hosts Ted Crosley and Alex Stansfield. Though the loss of DeCarlo will be felt, *GameTV* should weather it relatively well. The show is currently the second highest rated show on MTV behind hit cartoon *Beavis and Butthead*, and the show will be getting a new co-host, Gary Westhouse, to replace DeCarlo after he leaves.

*\*Lisa, Bart, and Homer are running from a pack of wild dogs. They quickly slip into a room but the walls begin closing in on them.\**

*Lisa: We're trapped!*

*Bart: Game over man, game over!*

*Homer: No it's NOT! \*begins punching the walls angrily, when this doesn't work he starts ramming his head into them\**

*Lisa: I don't see how giving yourself a concussion is going to help us!*

*Homer: I don't see how it's NOT going to help us! \*keeps doing it\**

*Lisa: \*she rolls her eyes and sees something\* Bart, help me up!*

*\*Bart lets Lisa climb on his shoulders and she manages to grab a long pole from a shelf, she props it between the walls and this gives them time to think of a way out of the room. Lisa and Homer make it out but Bart is very nearly crushed, they pull him out at the last second.\**

*Bart: Whoa, man, I was almost a Bart sandwich!*

*Homer: Mmmm....Bart sandwich...*

-excerpted from the "Resident Annoying" segment of *The Simpsons* episode "Treehouse Of Horror VII", based on the video game *Resident Evil*, which aired on October 27, 1996. The segment was seen as an excellent send-up of the game, which included Milhouse as a parody of the traitorous Albert Wesker, and as the best of the episode's three segments.

-

*"And it seems that the Latin music craze of the past year is showing no signs of stopping. Los Del Rio's earworm dance hit Macarena has just topped the chart for the tenth straight week, one of the longest runs in the modern era. And what song has been the runner-up for the past three weeks? Selena's hit "Moonlight Romance", from her album Dreaming Of You. The album has sold nearly five million copies thus far and looks to be a front-runner for next year's Grammy Awards, though Selena herself has expressed some misgivings about the success of Macarena, saying in an interview 'I think the song depicts a somewhat harmful relationship and then completely glosses over it by making it the background of a catchy dance beat, it's not the kind of song that should be coming out of the Latin music community.' While some music critics agree with Selena, others attribute her attitude to jealousy. Though it's clear to see that it's very hard to achieve such chart success without attracting some measure of controversy."*

-excerpted from an MTV News report on September 30, 1996

Brittany Saldita: *\*wearing a Bikini Kill t-shirt\** And it's just an honor to have you guys here today.

Kathleen Hanna: Well thanks, it's great to be here on the show.

Brittany: Aaaaand performing after the interview.

Kathleen: \*she laughs and smiles\* We'll do our best.

Brittany: So explain to a lot of the people watching what the riot grrrl movement is all about, because I think, you know, even with a lot of girls watching this show, most people who play games are guys who might not have been exposed to your particular sort of brand of music. Which is a real shame because you guys kick more ass than a lot of the bands with a lot more exposure.

Kathleen: It's cool, we're not really used to being in the spotlight, we get that our message is pretty subversive and we're just gonna keep playing until one day it isn't. But anyway, the riot grrrl movement is about empowering women, it's about addressing a lot of the issues that effect women today and inspiring women and girls to express themselves, to use their voice because every woman HAS a voice, even if you have to shout as loud as you can, to just keep shouting and keep being heard because it's a message that HAS to be heard. A lot of our music addresses things like rape, like domestic abuse, things that women have to confront every single day. At a lot of concerts, women can't have a good time like the men can because whenever they're in a crowd, they're getting groped, they're getting assaulted verbally and physically and a lot of what we do is about creating safe spaces where women can feel free to rock out and feel the music and not have to worry about being touched or insulted just because they like the same kinds of music as guys do.

Brittany: It's a big problem and I know from personal experience, going to concerts and not feeling comfortable getting in the middle of the crowd because I know there's going to be some \*bleep\*hole there who wants to touch me or whatever. And at a Bikini Kill concert I know that's not gonna happen to me.

Kathleen: \*she smiles\* I remember you from the front row a couple of times.

Brittany: \*smiling, she looks at the camera\* Full disclosure, I am an ENORMOUS fan of this band.

Kathleen: You're a riot grrrl yourself aren't you?

Brittany: Well, aside from not performing music, yeah. But you know, I feel that video games are becoming an increasingly safe space for women. There's still a lot of chauvinistic stuff there, obviously, guys still saving the princess and women being treated like garbage, but then you have games like *The Darkest Ritual*, and *MagiQuest*, and *Tomb Raider* is coming out pretty soon and that looks like there's a really good female protagonist there.

Kathleen: Oh, *MagiQuest*, Kurt Cobain and me got together and played some of that a while back.

Brittany: You saw Kurt Cobain again?

Kathleen: We're not dating again, not right now anyway, but he's been kind of chilling out, going around and performing with some of my friends and one night he just wanted me and Billy and Tobi to come play some games with him and we spent a lot of time messing around in *MagiQuest*. It's a little cutesy for me but it's pretty fun. I don't play many games because, you know, I don't think there's enough representation of women there, but I know

it's getting better. You're a HUGE part of that, you know that, right?

Brittany: \*blushing\*

Kathleen: Stop it! \*laughs\* I'm serious, I hear little girls talking about games and mentioning your name. They love you.

Brittany: I think Bikini Kill is doing WAY more for women in music than I'm doing for women in games. And then Bratmobile, did you see the charts? They just got a song to No. 38!

Kathleen: I don't really follow the charts but I did hear that "Sail Over The Waterfall" did really well.

Brittany: I swear to God, I almost passed out when I heard Casey Kasem actually talking about Bratmobile on his top 40.

Kathleen: Shut the \*bleep\* up. Shut the \*bleep\* up, no \*bleep\*ing way!

Brittany: Right now, "Sail Over The Waterfall" is the number 38 song in America.

Kathleen: See, and a lot of that is Kurt's doing because he helped get them back together. That's the thing about riot grrrl, a lot of people think we hate men, but no, we don't hate men. I \*bleep\*ing love men. We're about elevating women, not bringing down men. We're about full equality so that men and women can be together and be good to each other and not have to worry about the \*bleep\* that anybody says about it, saying that you're less of a man for not treating women like \*bleep\*. You're more of a human being if you treat other human beings with dignity and respect, women and men.

Brittany: I've never felt more safe or comfortable than when I'm doing this show with Ted and Alex and John and Gary, and Kaz back when he was still on. They're awesome.

Kathleen: See? But you do really need to have a few more women on here with you.

Brittany: Do you want to be on the show? I think we could make room for you guys.

Kathleen: Is that a serious offer?

Brittany: \*looks a bit nervous, smiling nervously\*

Kathleen: \*she laughs\*

Brittany: I mean if it was up to me-

Kathleen: I know, I know. \*she laughs again and gives Brittany a hug\*

Brittany: Well, everybody, it's time for Bikini Kill to take the stage. So here they are, performing their latest song "Reject All American", it's Bikini Kill!

\*The band performs, Kathleen even pulls Brittany up on stage to sing a verse with her at one point.\*

-

On July 28, 1996, Nickelodeon premiered the show *Swashbucklers*, a pirate-themed live action comedy/drama that ended up becoming one of their most popular shows of all time. Building off of the pirate craze kicked off by video games such as the *Monkey Island* series and *Tales Of The Seven Seas*, the show was criticized at first for being a bit of a ripoff of the *Seven Seas* game, but soon found its own footing and ended up as a critical and commercial success. It featured six orphaned youths, ranging in age from 12 to 18, three girls and three boys from various backgrounds, as they set out on-board an abandoned pirate ship and soon found themselves stranded at sea. It was sort of regarded as a hybrid of *Tales Of The Seven Seas* and Nickelodeon's sci-fi show *Space Cases*, though unlike in *Space Cases*, the kids on-board the ship, called the *Sea Spirit*, had no adult supervision most of the time. The main cast was largely unknown, with the most famous among them being Scottish actress Kelly MacDonald, who had just finished her work on the film *Trainspotting* when Nickelodeon cast her in the show. She played the fiery character Emma Stanton, who was the sort of co-leader of the group of kids, along with the young man Balthasar who was Emma's rival (and eventual love-interest). The show featured plenty of guest star appearances, including a young Angelina Jolie as an adventurous treasure hunter in the show's third season who ended up being one of the show's most memorable and wicked one-shot villains. Though *Swashbucklers* started out as a Sunday night show on Nickelodeon's "Nickel-O-Zone" block (airing right before *Nick News*), it would eventually make it to SNICK in 1997, replacing *Space Cases* (which ended up barely getting a concluding third season in its own right, returning to SNICK in early 1998 for a one-night marathon of its final three episodes). *Swashbucklers* remains one of Nickelodeon's most beloved shows. It ended its run in 2001 after four successful seasons, the ending of the show largely seen as the end of Nickelodeon's "Golden Age" which lasted from the mid 80s to the early 2000s.

-excerpted from "Nickelodeon Memories: The Network's Greatest Shows", an article on TVTubeTime.com in 2009

### **Nickelodeon's Late Night Line-Up For Fall 1996 ("Nickel-O-Zone" on Monday-Friday and Sunday, "SNICK" on Saturday)**

Monday Night (8:00 PM): Rugrats  
Monday Night (8:30 PM): Rugrats

Tuesday Night (8:00 PM): Phineas And Ferb  
Tuesday Night (8:30 PM): Phineas And Ferb

Wednesday Night (8:00 PM): The Adventures Of Pete And Pete  
Wednesday Night (8:30 PM): The Adventures Of Pete And Pete

Thursday Night (8:00 PM): Jessie's Jeans (a show featuring a young Amber Tamblyn as a girl running her own clothing shop, it was a decently successful kid sitcom that lasted two seasons)  
Thursday Night (8:30 PM): Live! With Stick Stickly (a Space Ghost Coast to Coast-like talk show featuring Stick Stickly sketches and interviews with celebrities, it only lasted a year)

Friday Night (8:00 PM): Kablam!  
Friday Night (8:30 PM): Action League Now!

Saturday Night (8:00 PM): The Secret World Of Alex Mack  
Saturday Night (8:30 PM): All That  
Saturday Night (9:00 PM): Space Cases  
Saturday Night (9:30 PM): Are You Afraid Of The Dark?

Sunday Night (8:00 PM): Swashbucklers  
Sunday Night (8:30 PM): Nick News With Linda Ellerbee

-  
*"So, we're getting ready to air The Real Adventures Of Jonny Quest, and a big aspect of the new show is the character of Jessie, who's Race Bannon's daughter. Everyone's real excited about her, wanting her to be popular with critics, but I noticed that the first episode we had, the one critics were going to see, was The Darkest Fathoms, an episode that saw Jessie getting captured by pirates and rescued by Jonny. Now, how are we supposed to sell Jessie as being Jonny's equal if he's saving her in the very first episode? So I convince them to move Darkest Fathoms to the fifth episode in order and have Escape To Questworld as our big premiere. It does a lot of things, it introduces Questworld properly right away and it has Jonny, Jessie, and Hadji all saving the day together as equals. The critics loved it and conversely, they loved the show and loved Jessie. I like to tell people I 'saved' The Real Adventures Of Jonny Quest. Would we have gotten three seasons, including a big finale TV movie, if I hadn't gotten them to make that change? Maybe, maybe not. But every little bit helped, considering how close we were to getting canceled after season two."*  
-Peter Lawrence

Toonami debuted on Cartoon Network in the fall of 1996 as a weekday action-oriented block on the network, largely conceived to run counter to the action-packed Fox Kids weekday block. It ran from 3 to 5 initially, though in 1997 it moved to 4 to 6 in order to capitalize on kids returning from school later in the afternoon. The very first line-up consisted of *Robotech*, *Reboot*, *Slayers*, and *The Real Adventures Of Jonny Quest*. Of particular interest was *Slayers*, which had to be fairly heavily edited in order to get down to a TV-Y7 rating, but was still considered probably the edgiest show to air on kids' TV. *Sailor Moon* had paved the way for somewhat edgy anime series to air in North America a year before, but getting *Slayers* on Cartoon Network in 1996 was still a feat of incredible editing acumen and it was a small miracle Cartoon Network pulled it off without butchering the primary plotlines and character traits. The block itself was received well, though ratings in the early days lagged behind what Fox Kids was offering, and it was *Jonny Quest* that largely propped up the block. It was an intriguing choice to use the character Moltar to introduce the shows, he'd largely been seen as the backstage producer in *Space Ghost Coast to Coast*, but his deep voice and space-agey look did a lot to sell Toonami as something "cool" to that generation of kids. Cartoon Network had initially considered *Dragon Ball Z* for the block, but they went with *Slayers*, which they believed would be more popular with young girls (another choice influenced by the popularity of *Sailor Moon*). *DBZ* languished in syndication for a couple of years before being picked up by Toonami in 1998 and becoming one of its biggest hits, but it all began with that fateful choice in 1996 to air a weekday block of action cartoons.

-excerpted from a 2008 article on TVTubeTime.com

### **Kids' WB Aims To Challenge Fox Kids For Saturday Morning Supremacy**

Last year, Warner Brothers started a new block of Saturday morning cartoons, and this year, Kids' WB is looking hotter than ever with a huge block of Saturday morning shows as

they look to knock reigning champ Fox Kids off its perch. The network is banking heavily on the success of *Superman: The Animated Series*, but shows such as *Animaniacs* and spin-off *Pinky and the Brain* are also planned to be a major part of Kids' WB's fortunes in the near future. Many shows are castoffs from Fox Kids, which used to air many Warner Bros. shows until the formation of Kids' WB, including the acclaimed *Batman: The Animated Series*, which makes the block its new home starting in the fall. There are also a pair of shows airing on the block based on hit video games: *Earthworm Jim* and *Jewels Of The Realm*. With a mix of Looney Tunes-style comedy and major superhero action, Kids' WB is eschewing the live-action shows that have helped to make Fox Kids such a major success, but they might just have the strongest block of animated shows on all of television.

-

*We were recently granted an interview with Joss Whedon, whose upcoming show Buffy the Vampire Slayer will be premiering early next year.*

(...)

*You've mentioned getting inspiration from video games a few times when discussing plans for your new show. Exactly which games have been the inspiration for Buffy?*

Joss Whedon: Well, definitely a big one is this role-playing game called *The Darkest Ritual*, about these two girls who get caught up in magic and unleash a horde of demons on their school. That one I found quite a bit of inspiration from, the characters were great and it was really well-written. Also, um, *Secret of Mana* was a great game. They even named one of the vampire bosses after Buffy from the movie! I thought that was a neat little tribute, so I mined that game for some ideas. Credit where credit's due, of course. I really liked *Castlevania: Rondo Of Blood*, but I'm not sure if the setting's compatible with what I'm trying to do, maybe there'll be a reference or two in there somewhere. And of course *Snatcher*, I think a lot of us young writers were inspired by that game. I'm waiting for *Policenauts*, I want to see if there's anything cool in there.

*So Buffy might go into space?*

Whedon: \*laughs\* I wouldn't rule anything out!

-excerpted from an interview with Joss Whedon in the September 1996 issue of *Wizard* magazine

-

The final episodes of *Neon Genesis Evangelion* were known for their bizarre nature, though the final two episodes are largely considered a triumph. The history of the show's production issues is well documented, despite being a critically acclaimed anime series, the show was running out of funds by the time the last few episodes were set to be produced. Enter Sega. Flush with cash after the Japanese success of the Sega Saturn, the company propped up the production of *Evangelion*'s final two episodes, which is evident from the increased production quality seen in them. As a consequence of this injection of funds, Sega gained a measure of control over the production of the show during its later stages, namely in the company's insistence that creator Hideaki Anno seek help for his issues with depression. At

the time, Japan was notorious for the large number of suicides among workers (it still is), and executives at Sega, particularly Norio Ohga, were concerned that Anno might take his own life before production on the series ended. The resulting creative disputes between Anno and Sega delayed production of the series for nearly three months, though when it finally began airing in January 1996, the resulting series became one of the most popular and acclaimed anime of all time. The final two episodes themselves reflect the continued internal struggle Anno was facing at the time, though despite Sega's interference, he largely got the ending he wanted. Episode 25 took place largely in Shinji's mind as the Human Instrumentality Project, to merge all human souls into a single entity, got underway as Shinji and his companions each confronted their own reasons for existence. In Episode 26, which was the episode most affected by the added funds from Sega, Shinji emerges from his shell, having rejected Instrumentality, only to be confronted by an enormous Angel constructed from the soul energy of those humans who had chosen not to reject it and who now formed a collective being of immense power. Shinji once again pilots EVA-01 in a seemingly suicidal effort to stop this being, but just as hope seems lost, it is Asuka, piloting a reconstructed EVA-02, who embraces her own individuality to help Shinji penetrate the huge entity's armor. Shinji emerges into the core of the beast, where he is confronted by Rei, who has not come to accept her own individuality and who has created this creature to ensure humanity's survival. As Asuka struggles to survive on the outside, Shinji engages in a fierce battle with Rei (their battle of the wills is depicted as a battle between two glimmering angels featuring some of the best special effects ever seen in anime at the time). Through sheer force of will, Shinji convinces humanity to reject Instrumentality and reject Rei. She fades into the aether and into nothingness as humanity is freed. Shinji re-emerges alone on a beach and finds Asuka, having fought the huge creature with everything she had, seemingly dying on the sands. Shinji staggers over to try and comfort her, but she rejects him, asserting her own individuality by turning away from Shinji in her final moments. When he tries to insist on helping her, she begins to strangle him with the last of her strength, only stopping when she realizes the gravity of what the two of them have accomplished together. She fades away, giving him one last smile before dying in his arms. The final scene of the series is of an uncertain Shinji holding Asuka with a contemplative look on his face as a large group of people, led by Misato, run up to congratulate him for freeing humanity. The ending of *Evangelion* was definitely controversial, though fans of the series largely embraced it, with the most controversial aspects being the deaths of Asuka and Rei. Anno later stated that their deaths and Shinji's reaction symbolized his own feelings about "aspects of myself that needed to die in order for me to start a new phase of my own life". He also has come to state on repeated occasions his gratitude to Sega for providing the funding to help him finish the series and encouraging him to get help for his depression, understanding that their involvement with the ending of the series wasn't out of a desire to produce a more commercially-friendly ending but out of concern for his well-being. He would later write several games for Sega beginning in 1999.

-excerpted from "When Games Met Hollywood: A History Of Video Game Companies' Involvement In Your Favorite Movies And Shows", a book published in 2007

-

*"By 1996, the Internet was definitely 'a thing', and I knew Sega needed to get involved in it at some point. There was the Sega NetLink, which wasn't really a success for us but at least got our foot in the door, but I knew our internet presence would be important to the continued success of our company going forward, and if we could get online before Nintendo and Sony did, all the better."*

-Tom Kalinske

*"You know, we've gotta stay on the cutting edge in technology and that's something I'm determined to do, because being #2 is not acceptable. I'm working around the clock brainstorming ideas for the next version of Explorer and Microsoft has hundreds of people working around the clock on doing nothing but that, coming up with ideas to make surfing the web with Explorer the best possible experience it can be."*

-Bill Gates, in a July 2, 1996 interview with a reporter from CNN

## **Browser Wars Heating Up?**

With more and more people accessing the Internet every single day for news, sports, and weather updates, in addition to checking their electronic mail, the web browser business is becoming more and more lucrative by the week, and the top two companies in browsing the web are Netscape and Microsoft. Netscape's Navigator browser is the industry leader, with over 60 percent of the current market share, but Internet Explorer is gaining by the day due to its inclusion with the radically successful Windows 95 operating system.

A surprising new front in the browser wars is the world of video games, with Sega set to release a new internet peripheral for their Sega Saturn gaming console. Sega has announced that its new NetLink device will include a proprietary internet browser developed by Sega itself, though it's been rumored that Netscape offered a \$50 million deal to include a version of their browser with the NetLink device. Microsoft has been making inroads into the video game industry itself, developing a series of best-selling computer games. When asked if Microsoft would jump into the console business itself, Bill Gates offered no comment, though industry analysts say that entering the video game market at this time would be unwise, and point to Apple's decision, now universally considered to be the correct one, to reject Bandai's offer to enter the market with a console of its own nearly three years ago. Bandai forged ahead with its own console which has proven to be a market flop, selling less than 250,000 units worldwide and costing the company more than \$200 million dollars. As for Nintendo, the company currently has no plans to include internet capabilities with its upcoming Ultra Nintendo console, though those plans could change as the device draws nearer to an expected release some time next year.

-excerpted from an article in *Time* magazine, July 8, 1996

-

*"Squaresoft isn't just about Final Fantasy, and I think a lot of people are beginning to understand that. Of course, Chrono Trigger and Secret Of Mana were quite successful and people still call us the Final Fantasy company!"*

-Hiranobu Sakaguchi, in an interview in the July 1996 issue of *Famitsu* magazine

*"Where are the games? Where are the games? We gotta keep giving people reasons to buy the Saturn! If you see a great game in Japan, localize it! If you see an American studio with a lot of talent, let's go talk to them! I want the Saturn to have a bigger library than the SNES-CD. I want us to have a bigger library than the Ultra when it comes out. Let's keep churning out those games!"*

-Tom Kalinske, in an August 4, 1996 staff meeting

*"Right now we don't have any plans to bring Sim games to the Sega Saturn. The technology is very good, but right now the Ultra Nintendo shows far more promise. Maybe that'll change in the future."*

-Will Wright, in an August 1996 interview with *Electronic Gaming Monthly*

*"And there, there's Muhammad Ali with the torch! Look at that, one of the towering athletes of the 20th Century is going to light the Olympic Flame! This is truly incredible!"*

-Bob Costas' commentary on Muhammad Ali lighting the Olympic Torch for the 1996 Summer Olympics, somewhat different from OTL's commentary but with the same person lighting the torch

-

*Nintendo is teaming up with NBA superstar Grant Hill to bring you the greatest basketball experience on Super Nintendo CD! In Grant Hill in NBA Basketball, take control of your favorite NBA teams like never before! Grind through an 82-game season, or team up with your friends for some arcade-style action! When you're playing Nintendo's new NBA basketball game, there are tons of ways to play!*

#### *Game Modes-*

In *Grant Hill in NBA Basketball*, there are numerous ways to play. In Exhibition mode, you can play a no-pressure single game with any of the 29 NBA teams, or take one of the game's special teams onto the court, including the NBA All-Star Teams, this year's Olympic Team, or even your own custom team! In Season mode, you can play through an entire NBA season. Play 28 games, 56 games, or go all the way through an 82-game season, just like in real life! Or, you can jump straight into the playoffs with Playoffs mode. You can pick your own playoff teams, use the teams from the 1996 NBA Playoffs, or have the CPU pick 16 teams at random! In Grant Hill's All-Star Challenge mode, you can play a 3-on-3 streetball style game, enter a skills challenge, or have an all-star style 3-point shootout.

#### *Options-*

On the Options screen, there are plenty of options to choose from to play the kind of game you want to play. You can tweak the rules to make games as realistic or as outlandish as you like. Prefer to have the refs look the other way on offensive fouls? Want to make traveling legal? Or would you like to play an anything-goes arcade-style game? How about tweaking the shot percentages to make even Reggie Miller shoot free throws like Shaquille O'Neal? It's totally up to you!

#### *Roster Editing-*

In the Roster Editing mode, you can tweak NBA rosters any way you wish. You can even create your own custom players and teams! Note that while you can play through a season with say, an LA Lakers team with your own custom players, you can't play through Season or Playoffs mode with a created team.

#### *Marco Jondell?-*

Unfortunately, a certain Chicago Bulls superstar is not present in this game (rumor has it that he was last seen being stuffed into the trunk of a car by a blue hedgehog). However, there is a player on the Chicago Bulls named Marco Jondell, and for some reason he's quite good at a lot of things. His number is even #23! If you like, you can even go into Roster Editing mode and do a bit of creative name changing...

### *Rookies-*

This game came out a bit too early for this year's latest crop of rookies to make it in. However, the Roster Editing mode will let you create any player you like, and you can save up to 50! That's enough for most of this year's rookie class, and we've taken the liberty of creating ten of this year's hottest rookies and listing their profiles here for you to put into your game.

### *The Play's The Thing-*

During a game, you can press the L button to bring up a selection of plays from each team on your screen. Grant Hill and the Boston Celtics actually helped Nintendo include some real plays from lots of NBA teams, so you can run your offense and defense just like the pros do!

### *Good Teams, Bad Teams-*

While you can certainly be successful with any team in the game, if you're looking for a leg up, pick the Bulls, the Magic, Grant Hill's Celtics, the Spurs, the Warriors, the Rockets, or the Jazz. However, if you're looking for a bit more of a challenge, the Bullets, 76ers, Timberwolves, and Mavericks are your best bet.

-excerpted from the *Grant Hill in NBA Basketball* article in the July 1996 issue of *Nintendo Power*

-

"Free Your Soul.../A Game Too Big For One Quest!"

-from Squaresoft magazine ads touting both *Soul Matrix* and *Romancing SaGa*, their dual July 1996 releases

You knew it was the Year of the RPG when Squaresoft was doing two releases in a single month! Back in July 1996, the company best known for its awesome RPGs decided that one game just wasn't good enough, so they went ahead and released two of them. *Soul Matrix*, a strangely esoteric sci-fi epic, and *Romancing SaGa*, a fantasy-based remake of a Super Famicom game touting eight quests in one. Many of us who had to rely on our parents to buy games for us had to choose, and which one you picked largely depended on what kind of a gamer you were. If you preferred the classic medieval fantasy games, or if you were a fan of the *Final Fantasy Legend* titles and knew that *Romancing SaGa* was one of them, you picked *Romancing SaGa*. If you preferred strange looking sci-fi titles, you picked *Soul Matrix*. Which game was better? Most will tell you *Soul Matrix*, but it was a fairly close call.

*Soul Matrix* told the story of Alice, an 18-year-old girl who discovers that she is a Soulscaper, a person with the ability to project her soul into a place called the Aether, a realm where one could access the spiritual energy of godlike beings known as Espers. Alice is one of dozens of Soulscapers, but these gifted individuals are being hunted down by President Lituya Chen, who finds them a threat to her growing lust for power. Chen is seemingly being manipulated from behind the scenes by a young man named Ark, and it's Ark that eventually becomes the true antagonist of the story. He's a Soulscaper himself and is hunting down and killing Espers to take their power. The game itself is a sort of cyberpunk game, though it's a rather clean cyberpunk world, not like the later somewhat dirty aesthetic of *Final Fantasy VII*. Though the game is very beautiful graphically, comparable to *Chrono Trigger*, it doesn't feature cutscenes or voice acting, instead relying

on its expressive character models and facial animations accompanying text boxes to tell its story. The battle system itself is quite fast paced for an SNES game. Though battles are technically turn-based, commands can actually be entered as soon as an attack or spell animation finishes, so there's very little wait time between commands. Of course, this means that enemies get to hit fast and furious as well, so there's little margin for error in some of the game's tougher battles. It's a very fun game, though it didn't sell well enough to garner a sequel, even in Japan.

*Romancing SaGa* is a remake of the Super Famicom cartridge version of the game, and aside from adding some slightly better graphics, better music and a sidequest or two, it's somewhat primitive compared to *Soul Matrix*. That being said, the game's eight quests offer somewhat more playtime than *Soul Matrix*'s single story. The game is also HIGHLY non-linear, much more so than *Soul Matrix*, allowing you to play through certain dungeons and bosses in any order. That does make it a bit tougher to get a handle on the game, but for certain types of players, allowing more freedom is definitely a plus. In all the quests, your ultimate goal is to take down an evil wizard named Saruin. The battle system is fully turn-based, with one attack per turn per character. Interestingly, as you use your characters' skills, they can learn more, better skills, and will also level up according to what stats you require most often in battle. It's an innovative combat approach and is used in future *SaGa* games. The game itself sold rather poorly, worse than *Soul Matrix*, but that didn't stop Squaresoft from bringing over *Romancing SaGa 2* and *3* in a bundle disc in 1997, and later *SaGa Frontier* in 1998, where it was Squaresoft's final SNES-CD game.

-

"The Year Of The RPG **Saturn**"

-the headline on the cover of the July 1996 issue of *Electronic Gaming Monthly*, "RPG" is crossed out with a red line and "Saturn" is written under it with red spray paint, with a mischievous looking Sonic the Hedgehog standing nearby with a can of spray paint and a smirk

*It's been a pretty good year for Sega. Though the Saturn continues to trail the Super Nintendo CD in sales (and has been for quite some time), things have been looking up, especially after the release of Resident Evil, which is a front-runner for our Game of the Year and one of the Saturn's best selling games to date. Sega had an excellent show at E3 (more on that later in the article), and they just released a brand new action game called NiGHTS Into Dreams... that should already be on store shelves by the time this magazine reaches your hands. Check out our Review Crew article to see what we thought of it (hint: it's Game of the Month). While those of you used to Nintendomination may not believe it, we feel the Sega Saturn is definitely the system to own right now, and over the next 16 pages, you'll learn exactly why.*

-Dan "Shoe" Hsu's introduction to the Sega-featured cover article of the July 1996 issue of *Electronic Gaming Monthly*

(...)

*Tom Kalinske is used to having his back against the wall. Even within his own company, his division, Sega of America, had long been seen as the "little brother" to the big boys in Japan. But under Kalinske's watchful eye (and sometimes his iron fist), the division has*

*transformed itself into the driving force behind promoting change and innovation at Sega. We talked to Kalinske at this year's E3, and he gave us some juicy information about where Sega's been and where they're going next.*

EGM: It's good to talk to you again, how have you been?

Tom Kalinske: Pretty good!

EGM: That's good to hear. Were you nervous about this year's E3?

Kalinske: Quite honestly, no. I was excited, actually! I was excited to finally show off *Sonic the Hedgehog 4*. I knew our fans would love it, and from the reception we got I was right to be excited. It was pretty hard keeping everything we'd been working on under wraps for so long, especially since that's all everything was asking about in interviews since even before the Saturn's release. I've got a lot more to talk about now!

EGM: Well, might as well ask. What can you tell us about *Sonic 4*?

Kalinske: \*laughs\* Plenty! This is definitely our biggest project to date, even bigger than *NiGHTS* which is itself an enormous game. *Sonic 4* is going to feature 36 levels across nine worlds, and those are JUST the storyline worlds, I can't go into detail about the secret worlds but they do exist. We're featuring all the old characters you know and love, and a lot of new ones too. There's been lots of creative energy going into this game and yes, we also took fan input into account. This is going to be the *Sonic* game that everyone wants to play. We've been working on it even since before the release of *Sonic 3*.

EGM: Just how high are you setting the sales bar for this game? *Sonic the Hedgehog 3* set a record with a million sales on the first day, is that the goal for *Sonic 4*?

Kalinske: Well, we know that even with the upswing in sales, there probably won't be as many Saturns in households as there were Genesis systems when *Sonic 3* came out in 1994. We know that. With that said, I don't think there's any reason why we can't sell a million copies of *Sonic 4* on the first day at least, considering how much demand there's been for this game. We're planning on having a pre-order program with some very nice incentives, we're going to roll out a huge ad campaign, and it's the game every Saturn owner's been waiting for. So a million sales on the first day, even with a lot fewer Saturns out there, is something I think is definitely in play.

EGM: Speaking of Saturn sales, the Saturn only recently started selling more after the price cut and the release of *Resident Evil*. Is there anything planned, such as an additional price cut, to get people to buy the Sega Saturn?

Kalinske: Right now, \$299 is the price I see the Saturn being for the foreseeable future. Will there be more bundles? Special offers? Certainly everything is on the table. Right now I think the Saturn is a great deal, it comes with *Virtua Fighter* which is one of our most highly regarded games, and it also comes with a demo disc and a coupon for a future Saturn game, so you can play a few other games, see which one you want to buy and then save some money when you finally do purchase a game. Also, the games coming out later this year are an enormous incentive. Many of the launch titles are getting sequels and there's also great original stuff like *NiGHTS* and *Tomb Raider*. So there really is no better time than right now to buy a Sega Saturn.

EGM: Besides *Sonic 4*, which upcoming Saturn game are you personally most excited or?

Kalinske: That's quite a tough question, you're asking me to pick between a lot of great games! But if I absolutely HAD to choose, I'd go with *Tomb Raider*. We love Lara Croft as a character and the game itself is like nothing you've ever played before, certainly not anything possible on Nintendo's system right now.

EGM: You're bringing back your old marketing campaign from the Sega Genesis...

Kalinske: \*laughing\* Right, right, Saturn does what Nintendon't!

EGM: What's the primary reason behind bringing back that campaign?

Kalinske: Well, it's the truth! The Saturn is easily the most advanced game console ever created and it's far beyond anything the Super Nintendo CD's capable of. I'm not bashing the SNES-CD. Certainly, they have plenty of good games, Nintendo's always been tough competition. But the Saturn's technological capabilities put it far beyond Nintendo and with our Saturn games you can see how Nintendo just doesn't match up. Right now the SNES-CD's outselling us but we're going to change the game and show consumers that a Saturn really is the right decision. It's the ONLY decision, in my book.

EGM: Fair enough. What do you think of Nintendo's new Ultra system?

Kalinske: Well, I'd sure like to know when it's coming out! That's the thing, Nintendo is promising so much with the Ultra, and I'm sure it'll be impressive when it finally does come out. But there's no clue when that's going to be. It may not even come out in 1997 and it's definitely not coming in 1996, even Nintendo's confirmed that. So, whatever the Ultra does, the consumer has to realize that here's the Sega Saturn staring them in the face. And I saw the Ultra games, they all looked good but remember that we haven't even scratched the surface of the Saturn's capabilities. So whatever the Ultra is, you have to realize that it may not be better than what the Sega Saturn can do. Right now, all you have to go on is what the SNES-CD is, and it's definitely nowhere near the Sega Saturn.

EGM: How big of an advantage do you feel that Sega's partnership with Namco will be for the Saturn going forward?

Kalinske: It's absolutely huge. Here's the thing, a lot of our Saturn games are games that were hits at the arcade already, so you've got that built-in fanbase who plays the games in the arcade and then buys them for the Sega Saturn. With the Saturn and with those games, you know exactly what you're going to get, and with that promise that all of these arcade games will be coming to Saturn, there's a huge built-in lineup of great games there.

-excerpted from *Electronic Gaming Monthly's* interview with Tom Kalinske in the July 1996 issue

*While the Super Nintendo CD may have more games on the way than the Sega Saturn, the Saturn seems to have higher quality games, and we've got plenty coming to keep us playing the Saturn well into 1997 and beyond.*

*Tomb Raider-*

Sega's upcoming action/puzzle/exploration game seems to be their biggest hit for the

holiday season, and it's one of the most highly anticipated games to date, with Lara Croft already showing up everywhere months prior to the game's release. If this game is what we expect it to be, Lara could be Sega's biggest new star since Sonic the Hedgehog.

#### *Panzer Dragoon II Zwei-*

The more we see of this game, the more we want to play it! We loved how smooth and pretty everything looked at E3, and the replay value seems to have skyrocketed from the first game, which featured one short (albeit very good looking) campaign.

#### *Virtua Fighter 2-*

The arcade hit finally makes it to Saturn in August, and everything tells us that this game's going to be as kickass as the first and possibly the best fighting game of the year. With tons of new characters added, we're going to be kicking each other's asses even more than we did the first time.

#### *Worms-*

One of the most amusing titles featured at E3 was this splendid shooting game featuring worms and lots of them. This might be the most addictive puzzler since Tetris, and even though it's coming to both the SNES-CD and the Sega Saturn, it looks like, as with a lot of other cross-platform titles, the Saturn version will be the one to get.

#### *Alien Trilogy-*

This intense looking FPS is coming only to the Sega Saturn, though it seems to be somewhat of a follow-up to 1994's SNES-CD hit *Alien vs. Predator*. You step into Ripley's shoes in this game, playing out the events of the three *Alien* movies in a game that's one of our most anticipated titles of the year.

#### *Commander Keen: The Universe Is Toast-*

This action game from the makers of *Doom* is much less bloody and intense than the FPS classic, but it appears to be just as fun, and amused us greatly when we played it at E3. This update of the classic PC series could be one of the year's biggest sleeper hits.

#### *Virtua Cop 2-*

Sega's sequel to one of the most popular Saturn launch games is likely to drop in December, and with upgraded gameplay it's looking even better than the original, especially with its improvements to its competitive multiplayer mode.

#### *Sun and Moon-*

This quirky little action title featuring a pair of twin protagonists was also a surprisingly fun game to play and allows two players to take control at once, making for a very amusing multiplayer experience where the twins can work together to solve puzzles and battle scary bosses.

#### *Shining Wisdom-*

A whimsical dungeon crawler set to release in North America in July, *Shining Wisdom* is somewhat reminiscent of *Zelda*, though its graphics are superior to last year's *Ocarina of Dreams*, and if the gameplay is anywhere as good, we could be looking at one of 1996's best games.

*Uroborus-*

We're really excited about the surprise sequel to the Sega CD's (and later Mega Charger's) 3-D space shooter *Silpheed*. The game looks intense, with some of the best shooter gameplay we've yet seen, and it's said to be releasing in December.

-excerpted from *Electronic Gaming Monthly's* Saturn previews in the July 1996 issue

(...)

*A Match Made In RPG Heaven?*

Sega's partnership with Enix is set to yield its first fruit later this year, when *Ogre Battle* and *Tactics Ogre* are set to be ported to the Sega Saturn. Next year, we're expecting to see the first of a wave of *Dragon Warrior* re-makes, starting with the first three. Early screenshots show the games looking even better than the SNES-CD's *Final Fantasy* titles. We're also expecting an original RPG from the company and perhaps even a port of the upcoming SNES-CD title *Terranigma*. With Enix to begin making games exclusively for the Saturn starting in 1997, it seems Saturn could have a partner to rival the tight relationship between Nintendo and Squaresoft. Only time will tell if Saturn's deal will draw RPG players to Sega's console.

-from *Electronic Gaming Monthly's* July 1996 Saturn coverage

(...)

*NEXT MONTH-*

*Electronic Gaming Monthly: August 1996*

We're giving you the first look at Mario's latest adventure, an epic RPG for the ages! We'll be covering *Super Mario RPG*, a collaboration between Nintendo and Squaresoft that's sure to have you jumping for joy and right into those question-mark blocks!

*EGM2: August 1996*

It's a *Tale Phantasia* kind of month for this month's EGM2! Skip the strategy guides, we're the only magazine that'll give you a full walkthrough of *Tale Phantasia*, from the very first village to the final battle, we've got you covered! We'll also have plenty of strategies for *NiGHTS*, *Universalizer 2*, *Spider-Man: Power And Responsibility*, and *X-Men: Children of the Atom*!

*The Official Saturn Magazine: August 1996*

Rejoice, Saturn fans! Next month is the debut of the only monthly magazine dedicated to the Sega Saturn! Along with our HUGE cover article on *Virtua Fighter 2*, we'll be covering plenty of Saturn games past, present, and future. Each issue contains a free demo disc jam-

packed with demos of upcoming Sega Saturn games!

Demo disc includes:

- Virtua Fighter 2
- Sun and Moon
- Shining Wisdom
- Madden '97
- The Legend Of Oasis
- and more!

-from the next issue preview section at the end of the July 1996 issue of *Electronic Gaming Monthly*

-

Ted Crosley: As RPGs go, *Soul Matrix* is a good one, but plenty flawed as well.

Alex Stansfield: Yeah, for me, I felt the storyline was rather convoluted and there weren't enough good characters. Alice was good and President Chen was pretty compelling, but there were too many silly twists and it did a disservice to a lot of the characters. Where *Chrono Trigger* was a really clean and straight-forward game, *Soul Matrix* was all over the place.

Ted: Like they spent too much time on the atmosphere and not enough on the story.

Alex: Exactly.

Ted: I also had a beef with the fighting system, on the one hand it moves by really quick and can be lots of fun, but on the other hand some later battles were pretty frustrating.

Alex: As I mentioned before, it feels like they were kinda stuck between something like *Final Fantasy* and something like *Tale Phantasia* and it didn't quite work.

Ted: This game has a lot of things that don't quite work.

Alex: Like on my grandpa!

Ted: Yes, but unlike your grandpa, this game doesn't have any cool stories about fighting Nazis in the war. I'm giving it a 3.5.

Alex: I'm giving this game a 3.5 but I'm giving my grandpa a 5 for being awesome and for actually watching this show even though it's about something that I'm sure really bores him!

Ted: My grandparents think this channel's for the devil.

Brittany Saldita: And speaking of the devil, me and Kaz are gonna be summoning the devil when we take a look at *Shin Megami Tensei: Devil Summoner* for the Sega Saturn, right after the break!

Ted: If Bob Dole's watching this, I'm sure he's taking notes.

(...)

Brittany: *Shin Megami Tensei: Devil Summoner* is a really challenging but really rewarding RPG that's light on graphics but very heavy on strategy and spooky atmosphere. It's a big step up from the original *Shin Megami Tensei* title on the Super Nintendo CD, and one of the best RPGs yet released on the Saturn.

Kazzi DeCarlo: I really liked this game too, and, um, you know, just the huge variety of creatures you can unleash on your opponents made me giddy!

Brittany: This game made you giddy?

Kaz: I summoned a giant dick monster!

Brittany: Did you now?

Kaz: I did and I have a picture! \*he brings up on screen, the demon Mara which resembles a giant penis, it's blurred out on TV\*

Brittany: \*she breaks into laughter and has to cover up her mouth to stifle herself from giggling ferociously\*

Kaz: It's really strong too!

Brittany: Kaz.... \*she keeps laughing\*

Kaz: You'll never beat off a giant dick monster!

Brittany: I'm sure, I'm sure you do that on a daily basis Kaz. \*trying not to cry she's laughing so hard\*

Kaz: \*starts laughing too\* It's just way too hard!

Brittany: \*barely keeping a straight face\* You just whip that thing out and enemies go running?

Kaz: Well, not all of them.

Brittany: \*she rolls her eyes\* Well....\*snickering\* ...dick monsters aside, this game's got a ton of demons to use and it's a big part of the strategy choosing which ones are appropriate for which fights. There are...likely a lot of places where that thing \*points at the screen\* would not be appropriate. I'm giving *Shin Megami Tensei: Devil Summoner* a 4 out of 5.

Kaz: Me too, 4 out of 5 from me.

Brittany: \*takes one more look at the screen and facepalms, still snickering\* Ay dios mio...

-excerpted from the July 9, 1996 episode of *GameTV*

John Walden: So *Grant Hill in NBA Basketball*, while being a really fun game to play, isn't quite the definitive NBA basketball game I was expecting it to be.

Ted: The graphics and sound effects at least, were fantastic. I loved the dynamic crowd effects, where the home crowd gets louder if you're going on a run, or they quiet down if the visiting team drains a huge shot. That was really cool.

John: Yeah, presentation-wise the game was fine, I just expected a bit more from a gameplay perspective. It's *NBA Live 96* with a Nintendo coat of paint, pretty much.

Ted: Which is too bad, since the game itself is a lot of fun.

John: Right, it's just not as good of a basketball game as say, *Ken Griffey Jr. 's Winning Run* is a baseball game.

Ted: That, I can definitely agree with but I'm still giving it a 4 out of 5.

John: For me, it's a solid 3.5.

-excerpted from the July 16, 1996 episode of *GameTV*

(...)

Alex: Some puzzle games are easy to learn but hard to master. In *Stackector*, it's hard to do BOTH.

Ted: Yeah, I just wasn't having a lot of fun with this game. In a lot of these types of games you can learn how to get big combos pretty quickly, but here it just seemed really arbitrary.

Alex: It's a shame because this game's got a lot going for it. Graphically, it's really pretty, with some nice 3-D effects, but it's hard to enjoy all the polish when you're too frustrated to make it past level four.

Ted: Pulling off big combos is NOT easy and on some stages I'm not sure it's even possible.

Alex: Just wait for *Tetris Attack*. I'm giving *Stackector* a 2 out of 5.

Ted: And I'm giving it a 2.5.

Alex: You know, the scale I use to determine how much I liked a puzzle game is how addicted I got to it. Like, when I first played *Tetris*, I didn't eat. I didn't sleep. I think I grew a pretty gnarly beard because I didn't want to shave.

Ted: And with *Stackector*?

Alex: I stopped playing when I saw an interesting dog outside.

Ted: Yeah, I think, um, a puzzle game you don't lose meaningful sleep over can't get more than a 3 from me.

(...)

\*The *GameTV* hosts are gathered on stage.\*

Ted: That's it for *GameTV* but before we go...we have to say goodbye to our very good friend.

Alex: The man, the myth, the legend, Kaz, Kaz is going away...

Brittany: He's leaving us! \*bows her head sadly\*

Kaz: Guys, it's been....I've had such a blast with all you guys, I'm gonna miss you all so much. It's been...what, it's been more than a year now?

Alex: Barely a year!

John: You left us after barely a year, man!

Kaz: I know, I know, it's gonna be rough out there but I'm heading for a new thing.

Ted: \*wraps his arm around Kaz's shoulder\* It sucks to see you go, man.

\*A brief montage of Kaz's best moments on the show plays, when the montage ends all five hosts are standing real close together, everybody has an arm around Kaz who is looking pretty sad as everyone begins kind of rocking back and forth.\*

Ted: We'll see you guys next week, minus Kaz, we'll have a new host but there's no filling your shoes buddy.

Brittany: Who would want to, they stink!

Alex: Got a tip, for your next job, Odor Eaters man. \*laughing as he pats Kaz on the back\*

Kaz: I just wanted you guys not to be sad I was going! \*laughing\* I had a real blast here, I'm gonna miss this place a lot! Goodbye everybody!

\*The credits begin to roll as everybody hugs Kaz goodbye, Brittany gives him a kiss on the cheek and so does Ted, followed by a big ol' bro hug, the five hosts are still talking as the credits end.\*

-excerpted from the July 23, 1996 episode of *GameTV*

Ted: It's *GameTV*, I'm Ted...

Alex: And I'm Alex.

Gary: And hey there, I'm the new guy! I'm Gary Westhouse and this is my first week on *GameTV*.

Ted: Oh good, we get to haze the new guy!

Gary: Haze?

Alex: Well, you played *WWF In Your House* for the Super Nintendo CD, right?

Gary: Uh.....oh. \*he shudders\*

Alex: Yep, that was your hazing. And now you gotta review it.

Gary: \*gulps\*

Ted: Yeah, sorry buddy. Hope you don't wanna quit!

Gary: Will I have to play any more games like THAT?

Ted: Lots more!

Gary: Ugggghhhh...\*bows his head in dismay\*

Alex: This week on *GameTV*, we're reviewing *Shining Wisdom* for the Sega Saturn, we'll be looking at a pair of fighting games in *Street Fighter Alpha 2* and *Honorbound*, and yes, we'll also be reviewing *WWF In Your House*.

Ted: We'll be starting on four straight weeks of *Virtua Fighter 2* coverage when me and Brittany give you the run-down on all the old characters and how they've improved from the first game.

Alex: And we're gonna take a look at some of the best video game endings of all time. We'll give you plenty of opportunity to change the channel if you don't want spoilers, but be sure to change it back because we're going to give you an exclusive *GameTV* preview of the new arcade game *Dead or Alive*.

Ted: We're bringing you previews, reviews, and news to help you choose. This...is *GameTV*!

Gary: Can you guys please choose a better game for me to review next time?

Alex: But then...how would we save enough good games for us to review?

Ted: Yeah, that's how it works around here, we get all the good games, newbies get the bad ones.

Gary: But I'm the only newbie! Guys...! Guys...!!! \*they walk off, leaving him there to complain\*

20. Killer Instinct

-

### **July 19, 1996**

The Summer Olympics begin in Atlanta, Georgia, with a huge opening ceremony featuring a performance of the Olympic theme song, "The Power Of The Dream", by Celine Dion, with Muhammad Ali as the person to light the Olympic Flame. The Olympics showcase the world's best athletes, with the Dream Team (sans Michael Jordan and featuring new basketball stars like Penny Hardaway and Grant Hill) returning to take the gold medal in the basketball event, while at the 100 kg freestyle wrestling event, Kurt Angle took the gold. Namibian track-and-field runner Frankie Fredericks became known as the "world's fastest man" after winning the 100m and 200m events over Canadian Donovan Bailey and American Michael Johnson respectively.

### **July 27, 1996**

Richard Jewell groaned as he uneasily shifted in his bed. He'd been feeling miserable for the past 24 hours, his stomach roiling in agony as he let out a loud groan. While he'd been enjoying his job as a security guard at Centennial Park, there was no way he'd be able to come to work feeling as terrible as he did. He reached over to the dresser by his bed and grabbed a glass of water, taking a large swig before setting the glass back down and trying to get back to sleep.

At Centennial Park that night, the concert by the band Jack Mack and the Heart Attack was still going on stage, and a huge crowd of park-goers were milling around the stage, enjoying the show. It was a warm summer night, the world had come to Atlanta to have a good time, and everyone seemed to be in a great mood as the band's tunes echoed through the park. Two young women were standing near the sound tower. They had to scream to understand each other but were still having a great time as they engaged in conversation.

"Gonna go see the basketball game tomorrow?" asked one of them, smiling as she rocked back and forth to the music. "I'm hoping I can get Michael Jordan's autograph!"

"He ain't playin', I think," replied her friend, shaking her head somewhat disappointedly. "He's skipping the Olympics this year!"

"Why's he skipping the Olympics?"

"I think he's still filming that movie with Bugs Bunny!"

"Awww, man," said the young woman, sadly shaking her head. "Hey, maybe Scottie Pippen's there, I bet we can get one from-"

An enormous explosion shattered both women's eardrums instantly, along with the eardrums of dozens of others standing near the sound tower. The explosion sent hundreds of nails ripping through the crowd, the shrapnel tearing flesh and lacerating organs as it went out in all directions. The band, playing on stage, ducked for cover, though lead singer Max Carl barely had time to react before a nail went into his forehead, killing him instantly.

That day, he and seventeen others lost their lives in the deadliest act of terrorism on American soil in many years and the deadliest act of terror at an Olympic Games, surpassing the infamous Munich massacre 24 years earlier. Hundreds were injured.

-

*"This cowardly act of terror has shattered lives forever. But it will not shatter the spirit of brotherhood symbolized by the Olympic Games. Rest assured, those who perpetrated this murderous act will be caught and they will face justice. And though we mourn, and though the peace of the Games has been shaken, the Olympic Games will continue. The peace and brotherhood they represent will continue. And the American spirit will continue. Thank you."*  
-President Bill Clinton, in a speech on July 28, 1996

-

*"The key to being king of the arcades was, of course, to start building your OWN arcades. Sega Gameverse was a natural extension of Sega's goals. Even though the arcade scene was declining in North America at the time, Sega was hoping that these new Japanese-style mega arcades would kick off a new golden age."*  
-Arcade historian Keith Smith, "The Three Ages Of The Arcade", published in 2013

*"Everyone says that it was Sonic 4 that began to turn the tide for the Saturn. No. It was Virtua Fighter 2. That game comes out, blows everyone away, and kicks Super Mario RPG in the teeth. For the first time, a Saturn blockbuster had gone up against a Super Nintendo CD blockbuster and had come out on top. I think everyone at Nintendo had a collective 'uh oh' moment when they saw the first sales figures."*  
-Adam Sessler, on an X-Play TV special, "The Console Wars"

*"These dogs, they think they should be entitled to win a game simply because they bought it. I'll never make my games that way. Absolutely not."*  
-Tomonobu Itagaki, in a translated interview with a Japanese game publication that appeared in the September 1996 issue of *GameFan*

*"Did we think people would buy Tobal just for a chance to play the next Mana game? Ehh....at the time, yes we did."*  
-Tobal No. 1 producer Koji Yamashita, on the decision to include a demo of *Elements of Mana* with the North American version of the game

*"I am Princess Peach Toadstool of the Mushroom Kingdom!"*  
Princess Peach, giving her name in *Super Mario RPG*, the first time the name Peach was

used to refer to the character in a North American game

*"I'll whip you moles into shape! Now find me that Star!"*

Smithy Gang member Lashina, bossing around a group of enslaved moles in Moleville in *Super Mario RPG*

*"Tear Up The Road!"*

the tagline from a magazine ad for the Super Nintendo CD (and later Sega Saturn) game *Road Storm*

-

*"And the manhunt continues for the perpetrator of one of the worst terrorist attacks in American history. Though the Olympics are over, the person or persons who planted the bomb in Centennial Park that claimed 18 lives and injured over 600 people is still at large. FBI director Louis Freeh spoke at a brief press conference today. He says that while there are no suspects as of yet, all angles are being explored. So far, no group or individual has claimed responsibility for the attack, and there is an unease that whoever committed this crime might strike again. In the meantime, security has been stepped up at numerous national landmarks and at sporting events, with bag checks implemented at Major League Baseball games."*

-Dan Rather, on the CBS Nightly News, August 7, 1996

-

(NOTE: A thanks to Cataquack Warrior for contributing some ideas for *Super Mario RPG*, particularly the Axem Rangers' airship dungeon idea, which was quite superb. You'll be seeing some of his contributions showing up as Saturn games toward the end of 1997 too!)

### **Super Mario RPG: The Basics**

*Super Mario RPG: Legend Of The Seven Stars* is a collaboration between Nintendo and Squaresoft. It is in many ways similar to OTL's game, with five playable characters: Mario, Mallow, Geno, Bowser, and Princess Toadstool, known in this game and in all subsequent Mario games as Peach. The game is graphically very close to *Super Mario World 3*, with 3-D isometric gameplay and quite detailed backgrounds (in other words, a lot like OTL's *Super Mario RPG* in graphical style, but somewhat smoother and with more background 3-D and object animation). The soundtrack, composed by Yoko Shimomura, is a whimsical mix of Mario music and original compositions (identical to OTL's soundtrack save for a couple small changes due to butterflies, and a few added songs due to the additional areas present). The game features some limited voice acting, including narration from Leslie Swan (the voice of Peach), and a few phrases from various heroes (Mario says "Lucky!" when he gets a Lucky flower in battle, for example). The game's battle system is the same as OTL's, featuring turn-based combat and timed hits and defending. However, there is an added element, certain attacks that can be defended can also be countered, allowing Mario and his allies to score an extra hit on a foe after blocking their attack. A few enemies and bosses are damaged extra by counter attacks and the damage from regular attacks is reduced, making this a strategically important element of the game.

The plot itself is largely similar to OTL's. Princess Peach is kidnapped by Bowser and Mario raids Bowser's castle in order to save her, only for a giant sword to crash down from the sky, scattering the three to the winds. The sword announces that Bowser's castle is Smithy

Gang property now, kicking off the events of the story. Mario ventures to the Mushroom Kingdom first, where he meets up with Mallow and eventually liberates the castle from a dagger-shaped foe named Mack. Next, Mario and Mallow visit Toadfcucus, who tells Mallow that he is not actually a frog as he believes and advises him to go with Mario on his journey. After some more adventuring, the group comes across Rose Town, which is under siege from an evil bow-shaped foe named Bowyer. Mario and Mallow team up with a mysterious doll/man named Geno, defeating Bowyer and liberating the town. Here's where the game begins to divert from OTL somewhat. The next place the group visits is Moleville, but unlike in OTL's game, the town is under siege from an evil lady with a whip named Lashina, another member of the Smithy Gang. After going through the Moleville Mines and defeating Punchinello, the group realizes that Lashina has the third Star and they must go to her factory in order to get it back. While at the factory, the group sees that Lashina is furious after a breakup with a man named Booster, who dumped her after Princess Peach landed on his tower. After defeating Lashina (before the group can face her, they must once again fight refurbished clones of Mack and Bowyer) and claiming the third Star, Mario and friends venture to Booster Tower (recruiting Bowser just outside). They venture up Booster Tower and meet Booster himself, who in this game must actually be defeated to advance (and he's not easy, though Knife Guy and Grate Guy are omitted from this game). After a chase up a hill, the group reaches Marrymore, where Mario crashes Booster's wedding and rescues Peach. The group returns to the Mushroom Kingdom, where Peach joins the group for the next part of their journey, a trip to Star Town, where a clue about Mallow's true home is said to be. The clue, however, is a trap laid by the fourth member of the Smithy Gang, a cannon-like man named Boomer, who abducts Mallow and takes him to Star Hill, which, instead of being a peaceful place like IOTL's game, is a battlefield wrecked by explosions from Boomer and his minions. Eventually, Mario and friends reach Boomer. After beating him in battle, he gives them a choice: they can save Mallow or the Star. The group picks Mallow, but thanks to Mario's slick jumping they manage to save both. After that, the group ventures to a seaside resort where the next Star seems to have been pilfered by a pirate named Jonathan Jones. After a trip through a sunken ghost ship and a confrontation with the pirate himself, the star is claimed, but upon the group's return to Seaside Town, they are threatened by Yaridovich, who demands they hand over the star or the townspeople will be in danger. They give Yaridovich the star, but stop him before he can make his escape and defeat him in a tough battle. The heroes then venture through Land's End, Monstro Town, and Bean Valley to make their way up to Nimbus Land, where Mallow's real family lives (though Mallow doesn't know it yet). These areas are largely the same as IOTL, though there is a small difference: the group encounters the Axem Rangers for the first time at Land's End, and there is a boss battle in this area: a pair of Chargin' Chucks. Finally, the group reaches Nimbus Land and uncovers the intrigue of Queen Valentina, an imposter to the throne who has locked Mallow's parents in a dungeon. After Valentina is beaten, the group journeys to Barrel Volcano. They defeat the Czar Dragon and are about to claim the Star when the Axem Rangers suddenly arrive and take the Star away, forcing Mario and friends to chase them to their airship. Unlike ITTL, the airship is a dungeon of its own, with similar music to the classic airship theme in Super Mario Bros. 3. At the end, the Axem Rangers are confronted, but once you defeat them, their Breaker Bot is its own boss, and one of the toughest in the game at that. Finally, the sixth Star is claimed, and Mario and friends return to Bowser's Castle. They venture through the castle, defeat the giant sword Exor, and make their way to Smithy's Factory. As you venture through the factory, beating tough bosses along the way, Smithy's backstory is revealed. He is said to be the wish of a realm that watched all the other realms advance in technology while they were left in the dust. The entire realm wished for a way that it could elevate its technology to those of its neighbors, resulting in the birth of the robot Smithy. It began to build, and build, and build, but soon it became too powerful to control, and started wiping out the neighboring realms

before turning on the realm that wished it into being. Smithy's factory was built on the ruins of this realm, its people trapped as mindless slaves (and Geno is the only free person of this realm that remains). After Smithy is defeated, Mario and friends use their wish to restore this realm and its people, and Geno can at last return home, while the Mushroom Kingdom and Princess Peach are safe once again.

### **August 12, 1996**

*Super Mario RPG* is released in North America for the Super Nintendo CD. Despite a significant amount of pre-release hype and advertising, the game doesn't succeed quite as much as *Chrono Trigger* or *Tale Phantasia*, critically or commercially. It's still regarded as an excellent game, but doesn't quite rise to the level of the two earlier major RPGs to be released that year. Criticism primarily revolves around the simplicity of the game's storyline, which is considered somewhat juvenile compared to the previous two major RPGs, even with Smithy's somewhat darker origins. Despite these issues, the game is still the top selling Super Nintendo CD game of the month and comes to be regarded as an RPG classic.

-

### **College Football '97: The Road To New Orleans**

Andrew: 6.0 (quote: "The inclusion of all the teams helps out the realism factor of the game, but the gameplay itself doesn't quite match up.")

Mark: 7.0

Mike: 7.0

Sushi-X: 5.5

### **Madden 97**

Andrew: 7.5

Mark: 7.5

Mike: 7.5 (quote: "Another decent game, but the series is showing its age on this system.")

Sushi-X: 7.0

### **Ninja Gaiden IV: Escape From The Forbidden City**

Andrew: 8.5

Mark: 7.5

Mike: 8.5

Sushi-X: 8.0 (quote: "While the difficulty is definitely frustrating at times, no game gets you closer to being a ninja than this one.")

### **Olympic Games '96: Atlanta**

Andrew: 4.0

Mark: 2.0 (quote: "An utterly horrible tie-in game with absolutely no effort whatsoever. The controls are miserable and the graphics look really ugly.")

Mike: 2.5

Sushi-X: 5.0

### **Pac-Man CD**

Andrew: 7.0 (quote: "A neat mix of classic arcade gameplay and action platformer fun, this whimsical game brings the classic series to the SNES-CD in a great way.")

Mark: 6.0

Mike: 7.5

Sushi-X: 7.5

### **Silverload**

Andrew: 5.5

Mark: 4.0

Mike: 9.0 (quote: "While the controls may not please action-loving gamers, the dark atmosphere and haunting score makes this Western-style point and click a true classic.")

## August 26, 1996

*Virtua Fighter 2* is released in North America for the Sega Saturn. Arriving on a tide of strong sales and good will for the Sega Saturn, and released around the same time as the improved, smaller Saturn analog controller (though it's also released with an optional fight stick accessory), the game is an immediate hit and the fastest selling Sega Saturn game to date. Reviews are stellar, topping those of the first, and the game is considered even better than the original arcade version, adding two characters original to the home console version of the game. It becomes the best selling game of the month, topping *Super Mario RPG* in sales despite only being out for six days in the month of August. In September, the Saturn Virtua Arcade Set has *Virtua Fighter* replaced with *Virtua Fighter 2*, driving sales for the bundle as well (it also helps that many stores clearance out the old *Virtua Fighter* sets at \$349 or even \$299, the same price as the Saturn base set). Though the Super Nintendo would still outsell the Saturn for the month of August, the week of August 26-September 2 is the first week that the Saturn outsells the Super Nintendo CD in North America.

(...)

### *Character Strategy- Ralph Burce*

Ralph Burce is one of the two Saturn exclusive *Virtua Fighter 2* characters. He's a master of slow but powerful strikes, particularly his punches, so you'll need to be very precise to use him properly. That said, with his added power he can easily take down an opponent who isn't concerned about blocking and insists on charging forward with offensive strikes. When on the defensive, keep your guard up, weather your opponent's attack, and then strike back with a furious counter!

### *Character Strategy- Cynthia Grennel*

Cynthia is a very technically savvy character exclusive to the Saturn version of the game. She can move fairly quickly but you need to know her advanced combo techniques to utilize her abilities to the fullest. Cynthia's lithe frame can withstand a surprising amount of punishment, so you don't have to be afraid to go on offense if your opponent leaves themselves open.

(...)

Official Saturn Magazine: Explain the two new characters, what was the reasoning behind adding them, besides giving those who waited two years for the Sega Saturn version of this game an extra reward?

Yu Suzuki: We felt they added a lot to the story of the game, which was also given added emphasis in the Saturn version. Ralph is a sort of heroic character who just tries to help out where he can, he's a bit of a dope but he is the most purely heroic character in the series so far! And Cynthia, she is a pure femme fatale. We added her for sex appeal more than anything! \*laughs\* But she does have a good heart deep down and so she kind of appeals to many different types of fans, those who want a wicked woman and then those who also think 'well, maybe she's not so bad, I want to see her redeemed'. Both of them will be added to supplemental material later on of course.

(...)

*Sun and Moon is a brand new action game from Treasure! You can team up with a friend for co-op action, or take on the game's challenges by yourself while switching back and forth. Be careful, this game contains horrors beyond imagination! There are 14 levels in all, we'll cover the first five to get you started. You can even play through the first level for free on this month's demo disc and then transfer the save to the full game!*

(...)

### *Level 3: Atavan's Arc*

Level 3 is the first really tricky level of the game. If you're controlling Sun by yourself, you'll need to have him light up the pathway to the ship before you can advance. If you're controlling Moon, you can concentrate more on the difficult enemies that are blocking your path. Circle around the large stacks of crates and have Moon protect Sun by using her Darkness attacks as Sun lights your path. Two players can usually coordinate this pretty easily.

You'll have trouble with the game's second Gorgon enemy as soon as you get on the ship. Try to blind it with Sun's rays, or if you're controlling Moon, let Sun get out in front of the Gorgon while Moon hits it from behind with magic. There are two Runes to collect on the ship's deck but you can save them until after the Gorgon is dead.

(...)

### *Level 5: Nightshade Forest*

(...)

The boss here is exceptionally tricky. The huge tree will immediately try to wrap up Sun or Moon in its vines and the boss can't be damaged unless both are working together. Sun will be able to burn through the boss' vines, so it's probably better if it grabs Moon first. If the boss grabs Sun, you'll need to have Moon gather up enough materials for a Darkblaze spell (the Nightshade Roots and Deathcaps that constantly fall from the boss during battle should be able to fuel such a spell pretty quickly). Once both Sun and Moon are free, use their strongest spells in combination to damage the boss while dodging its swinging vines and the roots that come out of the ground. Remember, if one of the kids dies while the boss has the other wrapped up, it's game over.

(...)

*Each game is reviewed by our staff, who then discuss their individual opinions on the game to come up with a composite score from 1 to 10, with 1 being truly atrocious and 10 being a masterpiece. There are no half-points given.*

## **Virtua Fighter 2**

*This amazing fighting game has been tearing up arcades since 1994, and it's finally here on the Saturn, where it's better than ever. This is the Saturn's best fighting game to date.*

Score: 9/10

## Sun And Moon

Treasure's tricky twin title is best played with a friend, but even when you're playing by yourself, it's a real treat despite its difficulty.

Score: 8/10

-excerpted from the August 1996 issue of *Official Saturn Magazine*

(...)

## Sega Teams With Universal For New Arcade Chain

Sega, which has been slowly rising back up the sales charts with its Saturn console, is now looking to bring back the arcades after their system promised to bring the arcade hits home. The company is teaming with the film studio Universal to build a chain of large arcades in various cities in North America. Known as *GameVerse*, the chain will have both the latest arcade games and a myriad of Sega classics, while also offering various interactive attractions and even a full-service restaurant in some locations. The company originally planned to collaborate with Dreamworks, but that company recently announced a deal with Sega's rival Sony to produce computer animated films, forcing Sega to go in with Universal alone. The first locations are set to open in the spring of 1997, and could signal a new step in Sega's plan to conquer both the arcades and the living room.

-excerpted from the September 1996 issue of *GamePro*

-

Everyone seemed to compare *Tobal No. 1* to the Saturn's *Virtua Fighter 2*, since they both came out in the same month. That's a shame, because even though yes, *Tobal* is the inferior game, it also has its own charm and things that *Virtua Fighter 2* lacked. Its soundtrack, which included contributions from Yoko Shimomura and Yasunori Mitsuda, was superior, and its Quest Mode, while not really too terribly engrossing, was still an innovation that Saturn's flagship fighter lacked. Of course, at the time of its release, most of the buzz surrounding the game had nothing to do with the game itself, but the demo of *Elements of Mana* that was included with all first-run copies of the game. The demo allowed you to play right up to the first boss, Full Metal Hugger, a spectacular arachnid-like creature that filled up the screen and showed off just how far graphics had come since the original *Secret of Mana*. And even that demo didn't drive *Tobal* sales much. In fact, it was probably Square's least successful North American game of 1996, it even sold less copies here than the cult RPG game *Soul Matrix.*, *Tobal No. 1* is a unique and fun title that showed off what the SNES-CD could do (it might be the best looking fighting game on the system outside of *Star Wars: Masters Of Juyo*), and even though it included a demo of one of the most hyped games of the year, it still got far less sales than it deserved.

-“The Top 20 Most Underappreciated Super Nintendo CD Games- #7: *Tobal No. 1*”, an article on IGN.com, posted on June 3, 2011

-

*The open road beckons in this exciting new motorcycle racing game published by Infogrames! In Road Storm, pick from one of 12 racers as they make their way across 14 tracks all across North America!*

-the introduction to the *Road Storm* article in the August 1996 issue of *Nintendo Power*

*Road Storm* is one of those games that kind of came out of nowhere, though it should've been expected based on the reception it got at E3. *Road Storm* was based on a concept by the software company Ocean, though after Infogrames bought Ocean in 1996, it took the game and improved greatly upon it before its release in late summer of that year. While leaving Ocean's stellar musical score, the company greatly improved upon the gameplay, and most importantly, gave each of the game's twelve characters a personality and a storyline, making them somewhat like the characters in fighting games in terms of how emotional their journeys were as they raced across the game's stages. The gameplay itself was pretty simple, it was a motorcycle race along a paved road (though some stages went off-road). There were some combat elements but it wasn't like *Road Rash*, you could bump and jostle other racers and this would affect them somewhat, but the primary focus was on racing. The storyline involved a million dollar cash prize and a series of illicit road races commissioned by a mysterious billionaire named Jurgen. Each of the twelve characters had their own reasons for winning, here are brief summaries of each of them.

Jack- The game's main character, a 26-year-old man who needed the money to pay off some gangsters threatening his family. He's got a good heart though, and finds himself torn when other characters seem to need the money even more than him.

Gourman- A somewhat morally ambiguous character, Gourman is considered Jack's rival, though unlike the rivals in a lot of games who happen to be about the same age as the main character, Gourman's a 40-year-old man and he's even somewhat overweight, also, he doesn't need the money nearly as badly as any of the other characters.

Jessica- A 23-year-old woman with long black hair and a tough look about her, Jessica is Jack's primary love interest but she'll stop at nothing, even crashing Jack out, to get the prize money, which she needs to cure her cancer.

Rizzel- A 19-year-old redheaded woman, Rizzel is quite wild and fun, but she has a dark secret beneath all her playfulness and needs the money to settle a debt from her past.

Breckin- A 25-year-old reckless daredevil, he's seeking glory more than money, but he's still a fierce opponent.

Dr. VanCombe- A 37-year-old scientist who needs the money for research into alien technology. He's a bit ruthless and eccentric but he's become a fan favorite over the years.

Jillian- A 14-year-old girl and also Gourman's estranged runaway daughter. She's super hyper and energetic and wants to win the money to spite her dad.

Lord- Lord is a grizzled, 65-year-old biker gang captain and probably the most evil character in the game outside of Jurgen. There's a rumor he may have been the primary inspiration for Clay Morrow in *Sons of Anarchy*, but the creator of the show denied it when someone asked him at ComicCon.

Viv- A 46-year-old woman and mother of three kids, she actually has her kids following her around in an RV from race to race. She's like a femme fatale soccer mom and one of the best characters in the whole series. She flirts with Dr. VanCombe CONSTANTLY, the two have a love-hate thing going on throughout the series.

Reck- An 18-year-old frat brother who makes a LOT of potty-related jokes. Probably the least popular of the original twelve in the series, he plans to use the money to buy a skyscraper-sized keg of beer. It's very satisfying to see him lose.

Shade- A seemingly generic 29-year-old man but with a deep, dark past, he's actually a ninja and is planning to use the money to save his young daughter from a cruel master. He's also become a fan favorite.

Ken- A 35-year-old man who joined the races to escape a monotonous blue collar life. It seems like he's in the game to fulfill the game's "token black guy" quotient, and he probably is, but he's not stereotypical at all and he's actually a pretty likable character, if a bit generic.

Though *Road Storm* only did moderate sales, its positive reviews and devoted fanbase ensured that it would get a sequel (which it did, in 1998 on the Ultra Nintendo and the Saturn). It would also pick up lots more characters along the way, becoming pretty much the quintessential motorcycle racing series (though I guess you could say *Bikerz* was first, *Road Storm* is a far superior franchise). It even got its own animated series and comic book.

"You DOG! Did you truly think you were worthy of challenging me? You are pathetic! Ha ha ha ha!"

-Shogun Gatsu, after killing Irene Lew in the "Dog Mode" ending of *Ninja Gaiden IV*

When *Ninja Gaiden* finally came to the Super Nintendo CD, it came back in style. The game once again starred Ryu Hayabusa, who learned that an evil shogun named Gatsu had taken over a huge part of Tokyo and had carved out an area for himself called the Forbidden City. He'd even taken Ryu's love interest Irene Lew captive, intending to make her his bride. Ryu would have to battle through Gatsu's armies to save Tokyo and his love in 13 tough but fun levels. The game was the first to feature (albeit limited) voice acting, with phrases spoken by Ryu, Irene Lew, and Gatsu, among others. It also featured pseudo 3-D, especially for the game's boss battles, which often took place in enormous multi-platformed battlegrounds.

*Ninja Gaiden IV: Escape From The Forbidden City* was not only the best game of the series thus far, it was easily the toughest. The game included three difficulty modes to start with: Normal, which was extremely hard, Hard, which was intensely, catastrophically hard, and Ninja, which was an exercise in masochistic pain. There were also two hidden difficulty modes. If you got three Game Overs on Normal mode, the game opened up the Dog Mode difficulty, which was significantly easier (but still somewhat tricky). Once you reached the final battle with Gatsu, you defeated his first form and went to save Irene Lew, just as in previous modes. However, in Dog Mode, instead of triggering the start of Gatsu's second form, Gatsu simply stood up and beat Ryu into submission, before impaling Irene Lew through the chest (this was shown in silhouette). As she fell dead to the ground, Ryu cried out in agony as Gatsu taunted him with that classic "You DOG!" quote, and the game practically scolded you for playing through it on easy, telling you to go back and try again "if you dare" in a harder mode. However, if you conquered Ninja mode, it opened up TRUE Ninja mode, which was...it was more difficult than Ninja mode, moreso than Ninja mode was more difficult than Normal mode. That's how hard it was. And if you could beat it without losing a single life, you got to see a secret ending. It's been done (it's even been done without taking a single hit by people who clearly have no lives), but... I can't imagine how most players ever could. Normal mode is hard enough for most gamers. Still, despite the insane difficulty, the game was really fun, properly introduced Ryu Hayabusa to the fourth generation, and featured the best storyline of any *Ninja Gaiden* game up to that point.

The summer of 1996 was one of the NBA's most interesting summers. It featured that classic NBA draft with players like Allen Iverson and Kobe Bryant, but it also featured one of the most bizarre and in retrospect hilarious storylines of the 90s: how the Orlando Magic kept Shaquille O'Neal around.

By the summer of '96, Shaq's contract was up and he was looking for a change of pace. He was becoming disgruntled with fellow superstar Penny Hardaway, and the team's loss to the Chicago Bulls in the NBA playoffs didn't help. He offered the Magic an ultimatum: "get rid of Penny or get rid of me". But even though Orlando capitulated with Shaq's demand, trading Penny to the Boston Celtics in exchange for Dana Barros, a few scrubs, and some draft picks, Shaq wanted more. Not just a big money contract (which ended up being the most lucrative in league history to that date), but he wanted a sign of appreciation from the team. That was the story behind "Shaq Day" at Walt Disney World, where the Magic paid Disney to make September 28, 1996 a day devoted to Shaq. He got a parade through the Magic Kingdom and was honored in a big ceremony by Mickey Mouse. There's a pretty famous picture from "Shaq Day" of the face character Esmeralda (from *The Hunchback of Notre Dame*) giving Shaq a big kiss on the cheek. One wonders if maybe Shaq wanted to be compared to Quasimodo? Either way, despite the farce that was Shaq Day, the move seemed to secure the Orlando Magic's immediate future. They'd also acquired Dennis Rodman in the off-season, which would give them perhaps the league's most intimidating frontcourt. Only time would tell if the Magic could live up to the hype and topple the Bulls.

Alex Stansfield: So what's your verdict on *Tetris Attack*?

Ted Crosley: My verdict is, it's fun as hell! It's even fun to play by yourself which was my only beef with the original *Tetris*, that you can only play multiplayer if you have two people with Game Boys. Here, on the SNES-CD, you can play single player and it's a lot of fun!

Alex: But of course, the multiplayer is best.

Ted: Well, yeah. You can make killer combos, dump bricks all over your opponent, it's a blast!

Alex: It's caused...incidents here at *GameTV*.

Ted: Yeah, um...there has been violence.

Alex: We're not allowed to play in the studio anymore, things have been broken.

Ted: People have been killed.

Alex: Let us remember, those lost in the great *Tetris Attack* incident of 1996. \*shaking his head sadly as sad music begins to play\*

\*Ted and Alex bow their heads as the sad music plays, having a "moment of silence"\*

Alex: ...okay, so what's your score?

Ted: I give it a 4.5. The combos are so easy to make, the game is super fun, it's absolutely a blast to play.

Alex: And I'm also giving it a 4.5. Definitely the best puzzle game I've played in a while.

-excerpted from the August 6, 1996 episode of *GameTV*

*"We caught some flack for the Tetris Attack segment. It came like a week after the Atlanta Olympics bombing, and people called in and said we were mocking the tragedy by having that little moment of silence bit. We weren't even THINKING about that when we came up with the segment. I guess that was kind of the problem, somebody should've said something but at least all we got was a stern talking-to. When they did the Saturday afternoon rerun of the episode, they took that bit out, so the review looks kinda dumb. But, that was our bad for not thinking."*

-Alex Stansfield

(...)

Brittany Saldita: When all's said and done, I thought *Super Mario RPG* was a really good game. I don't think it matches up to a lot of the RPG classics, but it's still lots of fun and a great tribute to the Mario series.

Ted: I think I liked it a little more than you did. The timed hits system is great-

Brittany: Well yeah, I mean, that was the best part of the game I thought. I loved being able to increase my damage by pressing the button at the right time, and countering attacks is really fun too. So that was a big plus.

Ted: The soundtrack is superb, I thought it was well paced...

Brittany: Some parts dragged on. I thought, later in the game some of the dungeons got a bit repetitive.

Ted: And I know you didn't like the villains.

Brittany: Why not have, like, Kamek as the villain? We didn't get to see Kamek killed in *Yoshi's Island*, I thought, well, if Bowser's a good guy, maybe they're fighting Kamek!

Ted: Well, all spoilers aside, I thought the villain turned out to be pretty good.

Brittany: I like that Peach finally got a proper name. Princess Toadstool is an awful name. Thank God, thank God she's Peach now.

Ted: Peach Toadstool is still just about the dumbest name I've ever heard.

Brittany: Engelbert Humperdinck.

Ted: I stand corrected. But I'm still giving this game a 4.5.

Brittany: And I'm giving it a 4.

-excerpted from the August 13, 1996 edition of *GameTV*

(...)

Brittany: You know, after the awesomeness that was *Tale Phantasia*, I expected a bit more from Telenet Japan. *Valis: Soldier Of Light* was just a solid action game. Nothing more, nothing less.

Gary Westhouse: Yeah, I wasn't too impressed. Graphically, gameplay-wise, it's pretty much just your standard fantasy platformer.

Brittany: Which is a shame, because, again, *Tale Phantasia* was so awesome.

Gary: You're not going to be comparing ALL of Telenet Japan's games to *Tale Phantasia* from now on, are you? It might be more fair to just compare, you know, the RPGs.

Brittany: Point taken. That said, controlling Reiko WAS a decent change of pace. She actually handles a lot differently from Yuko and so you get two different ways of approaching the game depending on your playstyle. Even Mario Brothers doesn't do this with Mario and Luigi. So that's ONE thing the game has going for it. I liked the music, a little bit.

Gary: As far as action games go, it's just average.

Brittany: I'll actually give it a 3.5, which is more than I usually give an "average" game but the effort they made to have Reiko control a lot differently was a plus.

Gary: I'll give it a 3.

(...)

John Walden: So yeah, *Sun and Moon* is a game that you pretty much have to play with a friend. The AI is decent but in a game this tough, without a partner some of the latter stages are exercises in frustration.

Alex: It's such a creative game, full of some brilliantly designed bosses, excellent levels, and awesome music. I will concur that it's a lot more fun if you play it with two players but it is at least doable with one. I think if you play with one character you need to use Moon, her spells are much more easily controlled by a human. Sun doesn't do as much and so the AI can handle him better.

John: I tried both, was frustrated with both. It's a good game though. It's just...

Alex: It's a Treasure game. These guys made *Gunstar Heroes*, they're definitely known for doing this with their games. I heard next year's *Troublemakers* was going to be a bit easier, we'll see if that's the case.

John: With a partner though, this game's a blast. Alex and I got together one night, beat the whole thing, had a ball.

Alex: Yeah, I mean, this is the kind of game that can restore the friendships that *Tetris Attack* has broken apart. If your friend will still let you come over to play on his Saturn after you've schooled him at *Tetris Attack*, recommend this game. I highly recommend it, I give it a 4.5 out of 5.

John: And I give it a 3.5.

-excerpted from the August 20, 1996 episode of *GameTV*

(...)

Gary: *Virtua Fighter 2* is kickass, it's so kickass! Even when you're getting your ass kicked, it's still a kickass game!

Ted: I think I've wasted an entire Saturn's worth of quarters on this game at the arcades. Now, finally, I can come home, sit on my ass, kick back and enjoy this game on my TV and not have to worry about getting bumped off the machine by some spoiled 12-year-old whose mom dropped him off at the machine while she rummages through the 75% off rack at Nordstrom. This game rocks.

Gary: Did that actually happen to you, getting bumped off a machine by a 12-year-old kid?

Ted: Yeah.

Gary: And you'd admit that on national TV, that a 12-year-old kid beat you at *Virtua Fighter 2*?

\*There's loud laughing from Alex, Brittany, and John in the background\*

Ted: Hey, shut up! Shut up, he got lucky!

Gary: Well, it's okay, now you can get beaten in private and no one will have to witness your embarrassment.

Ted: Well, what's your most embarrassing *Virtua Fighter 2* story?

Brittany: \*yelling\* The time Tracy Grandstaff came in and beat him on the office machine and she's never played before!

Alex: \*yelling\* I remember that!

Ted: Oh man, you got beat by Daria?

Gary: At least she's a grown person!

Ted: At least when Mike Judge beat me, he had actually played the game before.

Gary: Did he do the Butthead voice?

Ted: He did the Butthead voice and it was humiliating. But anyway, see, that's the great thing about *Virtua Fighter 2* is that anyone can pick it up and play but only a truly skilled

person can master it.

Alex: \*yelliing\* Which doesn't include either of you!

Ted: I give *Virtua Fighter 2* a 5 out of 5.

Gary: And I give it a 4.5.

## **Pocket Monsters To Receive Anime Adaptation**

The *Pocket Monsters* games for the Nintendo Game Boy, which continue to be best-sellers in Japan, will be receiving an anime series that will begin airing in spring 1997. This news was confirmed by Nintendo, which shares partial ownership of the series with the software company Game Freak, itself owned by Sony. The series is said to closely follow the storyline of the games, with a special emphasis on the character Pikachu, one of the 150 creatures that appear in the games. It is not clear whether Sony or Nintendo will be handling the creative aspects of the series itself, though the series is intended to be aimed at children, who make up the vast majority of the game's fanbase. It is still unclear whether or not the game or the anime will be coming to Western shores, though with the continued success of the games and Sony's stated intention to make all of its game releases worldwide, it seems overwhelmingly likely that American gamers will be playing *Pocket Monsters* sometime down the road.

-from an article in the October 1996 issue of *Electronic Gaming Monthly*

*"Tales Of The Seven Seas was certainly a massive hit for us and an unexpected classic, but Dog Dash was the game we expected to be a hit all along."*

-Jason Rubin, of Naughty Dog, in a February 1999 interview with *Electronic Gaming Monthly*

*"Thanks to the assistance from Sony, the Game Boy Color was the first handheld ever to have rich, detailed sound. While the graphics were still somewhat primitive, the music was a major leap from anything possible before."*

-Gunpei Yokoi, in a May 1999 interview with *Famitsu* magazine

*"Wait, we're in competition? We're on the same team, aren't we? \*laughs\*"*

-Masahiro Sakurai to a reporter who asked him what he felt about the debate between *Kirby Super Deluxe* and *Dog Dash*

*"This is it, Kirby! This time it's the end of you! Now take THIS!"*

-King Dedede, just before the true final battle in *Kirby Super Deluxe*

*"Whoa, whoa boy! Hey! Hey! ....naughty dog!!"*

-Clark to his dog Woofle in a brief animation that plays before the Naughty Dog logo appears in the intro to *Dog Dash*, Woofle would become the official mascot for Naughty Dog and a variation of this intro would play before every Naughty Dog game in the future

\*A boy and a dog run through a field with one another.\*

Narrator: You've heard the story of a boy and his dog....

\*The ground begins to shake. The dog and the boy look at each other and nod, then forward again at a landscape that's become a volcanic jungle filled with enemies.\*

Narrator: Now there's a new twist.

\*Scenes from the game begin to play as Clark rides Woofle through the game's various levels, leaping over huge gaps, taking out enemies, and battling bosses.\*

Narrator: In *Dog Dash*, a boy and his dog must fight their way home across more than 20 sprawling levels. Collect power-ups, save innocent bystanders, and discover secret paths, it's all in a day's work for this heroic duo.

\*The commercial shows the boy and his dog again, walking back home with their hair all messy and dirt all over them.\*

Boy: Ready for level two, boy?

\*The dog woofs.\*

## **DOG DASH**

## **Only for the Super Nintendo CD.**

\*metal sounds\* **Nin-ten-do**

-the commercial for *Dog Dash*, which played on various kids' TV shows during September 1996

### **Dog Dash: The Basics**

*Dog Dash* is a game created by Naughty Dog and published by Sony for the Super Nintendo CD. The game is a standard side-scrolling platformer like the *Mario* and *Sonic* games, featuring 21 levels spread across six worlds, each world containing a boss at the end. Levels are fairly long, usually with 1-3 checkpoints. You start with five lives and when you lose them all, you go back to the start of the world, though lives are fairly plentiful if you know where to look. Levels also contain secret items, including power-ups that give Clark's dog Woofle more attacking power and more health, and secret collectibles that you can gather up throughout the game. The distinct element of *Dog Dash* is the sheer number of moves Woofle can perform. Along with the standard jump, Woofle can lick with his long tongue, pounce on an enemy, swipe with his paws, throw enemies with his tongue, etc. There are also temporary power-ups that let Woofle breathe fire or ice, that make him invincible, or that give him the ability to make earthquakes wherever he walks. Woofle has a health bar, when it's depleted, you lose a life. Occasionally, there are parts of the game where Woofle is incapacitated and Clark has to fight on his own, he can use sticks or his fists but typically the player will need to slip by enemies to avoid tough confrontations. Woofle can leap very long distances but he doesn't have a lot of height, levels are designed around this with big bounding gaps designed for players to leap across in some pretty cool moments. There are objects like springboards to help Woofle leap higher into the air. The game features a somewhat unique graphical style that looks more like art than highly technical pseudo-3D, the game is known as one of the better looking games on the SNES-CD, and the soundtrack is fairly well received also. There is plenty of voice acting, Toran Caudell (who IOTL was the first voice of Arnold in *Hey Arnold* and later King Bob on *Recess*) plays the voice of Clark, while veteran voice actor Frank Welker makes all the dog noises for Woofle (who doesn't talk). Various other characters are voiced as well, including some of the bad guys and supporting characters like Clark's parents. This game is Grey Delisle's first voice acting job ITTL, she voices the evil queen Nefertara.

The game itself begins as a 10-year-old boy named Clark moves to a new city with his parents, but is lonely and unable to make friends. He's also been having fights with his parents, so he decides to run away. This turns out to be an ill-fated decision, as Clark finds himself getting sucked into a wormhole, where he ends up in a mysterious land surrounded by bad guys. Just as he's about to be done in, a big friendly dog pounces the bad guys and wants Clark to hop onto him. Clark does so, and he and Woofle soon come to a city where the mayor tells him that their two worlds are parallel and that in order to get home, Clark will have to find another wormhole. However, he'll have to watch his back because the wormholes are being created by a mad scientist named Klavenstein (voiced by Tim Curry), who was Woofle's original owner but performed cruel experiments on him which forced Woofle to flee. This begins the journey of Clark and Woofle across six worlds, which are as follows:

*World One: Big Dog City – A sprawling city with urban-themed worlds. The boss is a large robot deployed by Klavenstein.*

*World Two: Rococo Jungle – A jungle with many fiery volcanoes. The boss is Hunter Jake, an evil hunter who wants to make Woofle his prey.*

*World Three: Fantastic Fun Park – An amusement-park world with some circus themes. The boss is an evil game show host.*

*World Four: Blizzard Glacier – An icy world with many caves. The boss is a huge abominable snowman.*

*World Five: Blazing Desert – A desert-themed world. The boss is an evil queen, Nefertara, who you fight after climbing a huge pyramid.*

*World Six: Klavenstein's Lab – The evil mad scientist's lair and the desolate forest leading up to it. The boss of this world is also the final boss of the game, Klavenstein.*

After defeating Klavenstein, Clark uses the wormhole machine to get back to his home and to his parents, who he misses very much. He brings Woofle along and his parents decide to let Clark keep the big dog.

-

December of 1996 saw the beginning of what's known as The Great Game Show Shuffle. Some people blame a dog, particularly a video game dog. In the game *Dog Dash* for the Super Nintendo CD, there's a bad guy about midway through the game that seems to be a parody of Bob Barker. He seems obsessed with neutering the hero's dog (they don't actually say neuter, it's a kid's game, but it's strongly implied), and the hero, a young boy named Clark, has to team up with his dog Woofle to stop him. Bob Barker, at that time the legendary host of *The Price Is Right*, did not approve, and even considered suing to get the game pulled. Did the stress over the game controversy lead to Barker's fatal heart attack on December 13, 1996? Almost certainly not (hell, more people blame Friday the 13th), but if the game WAS to blame, it caused one of the more interesting times in TV game show history. With Barker's sudden death, CBS needed to find a quick replacement. The front-runner was former *Family Feud* host Ray Combs, who had even joked about *Price is Right* in his very first episode in 1988, but by that time Combs was part of the cast of the NBC sitcom *Fair Play* and after his somewhat rude ouster from *Family Feud* in favor of original host Richard Dawson, he didn't want to have anything more to do with CBS. Eventually, the network chose *Supermarket Sweep* host David Ruprecht, who began hosting *The Price Is Right* in the fall of 1997. Ruprecht, of course, lasted 12 years before moving on. He was followed by Rosie O'Donnell, whose very unpopular two year stint nearly tanked the show, though the hiring of John Walden, the current host, in 2011 has seen the show's ratings recover. In the meantime, Lifetime selected none other than Marc Summers, most well known for hosting the Nickelodeon game show *Double Dare*, to replace Ruprecht on *Supermarket Sweep*. He did well enough at first, though in his second season the show became a lot more gimmicky (Summers introduced *Double Dare*-style physical challenges to the show, which the Lifetime viewership largely balked at) and the show was eventually canceled in late 1999.

-“The Great Game Show Shuffle”, an article posted on TVFreshness.com in June 2015

-

**Kirby Super Deluxe: The Basics**

*Kirby Super Deluxe*, which is known IOTL as *Kirby Super Star*, is the follow-up game to *Kirby's Adventure 2* and is a lot like OTL's game but with a decent number of differences. The first difference is that unlike IOTL's game, which had eight games (the five main games, two mini-games, and the Arena), this version has ten: (the eight from OTL, along with *Kirby's Showdown*, where you can battle it out against a friend or against the CPU by picking one of Kirby's transformations, and *King Dedede's Revenge*, somewhat similar to the version found in the OTL DS game *Kirby Super Star Ultra*, which unlocks after beating the Arena and is a super-tough final quest featuring a climactic showdown with King Dedede at the end, making HIM the true final boss of the game instead of Marx). Also unlike OTL's game, the five main games from OTL are highly specialized in terms of genre, making them a lot more like actual distinct games within a game. While *Spring Breeze*, an enhanced remake somewhat of the original *Kirby's Dreamland*, is largely as IOTL, *Dyna Blade* is much different, taking on more of a shooter feel. While Kirby still acquires power-ups and transformations, there are many segments of the game where you use them in a sidescrolling shooter-like fashion, making the game somewhat of a *Ballistic Limit* send-up. Then there's *The Great Cave Offensive*, which is massively expanded from IOTL and turned into a full-on Metroidvania-styled action RPG, complete with damage numbers appearing above enemies' heads, several more bosses, and largely expanded levels that are unlocked as you progress. Kirby even levels up as you play through the game and collect treasures. *Revenge of Meta-Knight* is turned into a multi-leveled game with a very strict time limit and a boss at the end of each level, leading up to the final showdown with Meta-Knight. It's extremely fast-paced, which is unusual for a Kirby game, and considered the toughest of the sub-games outside of *King Dedede's Revenge*. Finally, *Milky Way Wishes* is a mix of all four genres, changing itself up as you progress from planet to planet. There are twelve planets in all, with three planets in each "genre" (three in classic Kirby style, three in shooter style, three in RPG style, and three in fast-paced arcade style). The battle with Marx himself, however, is done in classic Kirby style, as is *King Dedede's Revenge*, which ends with a multi-staged battle against King Dedede (the Masked Dedede from *Ultra* is used but is only the FIRST part of the battle, in part two you have to defeat a giant robot and in part three you have to defeat a magic-slinging Dedede who attacks like an enhanced version of Marx).

-

*"While Kirby Super Deluxe represented a new game for one of Nintendo's marquee franchises, the company chose to make Dog Dash the massively hyped game of the month, showing how much faith the company had in Sony and how much confidence they had in the game. Nintendo truly believed Dog Dash could become a major franchise and...they were right. It was one of the biggest selling original games of the year. Kirby Super Deluxe sold fairly well, meeting expectations, but it wasn't the smash hit that Dog Dash was, despite scoring nearly as well with critics (some critics, notably MTV's GameTV, actually ranked Kirby Super Deluxe better). The fact of the matter is that both games were excellent and rightfully rank among the Super Nintendo CD's best. While Kirby Super Deluxe was largely the easier game (though it has difficulty spikes that top anything in Dog Dash if you want to 100% the game), it was also much more complex and diverse in its game styles. That said, Dog Dash was pure platforming perfection, both a joy to watch and to play. What the 'showdown' between the two games really represented was that Sony had truly assumed a place as an equal partner with Nintendo, both in hardware AND software. The two companies were truly intertwined, and Hiroshi Yamauchi had to be glad to have Sony in HIS corner."*

-excerpted from the book "Partners: The Super Nintendo CD Story"

-  
"What's up with Nintendo? A barking dog? A pink puffball? Commander Keen's gonna blow them both outta the water. This game'll be a huge hit."

-Tom Kalinske, talking to *Commander Keen* creator Tom Hall at a release party for *Commander Keen: The Universe Is Toast* at Sega of America headquarters

*Commander Keen is facing some stiff competition, but with three excellent games in one, Commander Keen: The Universe Is Toast is the only action game you'll need this month. We'll take you through the first few levels of each of the three games to give you a leg up, and we'll also tell you where some of the game's most jealously guarded secrets can be found. If you like what you see, make sure to try out the game in this month's demo disc, with the first level from each game included!*

-the introduction to the *Official Saturn Magazine's* September 1996 cover article on *Commander Keen: The Universe Is Toast*

"I remember back when *Commander Keen* came out for the Saturn, Nintendo had all these action games coming out that looked really good, and I kinda felt myself regretting to get a Saturn instead of an SNES-CD. But then I played *Commander Keen*. It was tough...definitely tougher than the games on Nintendo. There were a ton of tricky stealth spots, nothing like in *Dog Dash*. The voice acting was great too, and I remember the cutscenes being really funny. The game just had a lot of attitude, way more than Nintendo's cutesy action games. While I did eventually get to play *Dog Dash* and *Kirby Super Deluxe*, in my opinion, neither of them can compare to the fun I had playing *Commander Keen*."

-a user commenting on a Kotaku.com Talk Amongst Yourselves article asking about their best Saturn memories, November 13, 2014

## **Commander Keen**

*Billy Blaze is back and better than ever! This game is actually a collection of three games, giving you a lot of bang for your buck. This game combines precision platforming, run-and-gun action with uproarious humor, making it one of the year's best action titles.*

Score: 8/10

## **Alien Trilogy**

*This spooky FPS might just be the best video game adaptation of *Alien* to date. Fans of the trilogy should definitely play it and fans of shooters in general should definitely give it a try.*

Score: 8/10

-excerpted from the September 1996 issue of *Official Saturn Magazine*

-  
September 1996 was an absolutely HUGE month for the Super Nintendo CD. In addition to seeing the release of *Kirby Super Deluxe* and the *Mario Paint* sequel *Mario Artist*, it also saw the release of Naughty Dog's *Dog Dash*, the first game in what would become one of the

company's biggest franchises. But, amidst the month's giant releases, a bunch of quality games got lost in the fold. Though some of them sold decently well, others slid painfully into obscurity. We'll take a brief look at five of these titles.

*Darkstalkers: The Night Warriors*- This fighting game was a LOT like *Street Fighter II*, though instead of featuring brawling humans, it featured fearsome demons and vampires battling it out. While it's easily dismissed as "just another 2-D fighting game", and indeed, a lot of players did, it sold rather poorly, it's probably one of the best 2-D fighters on the SNES-CD. With detailed animation and full voice acting, the game has excellent production values for the time, and characters like Morrigan and Felicia have become instant classics among fans (and some of gaming's biggest sex symbols). The game came to the Sega Saturn in 1997 (and sold somewhat better), but surprisingly, the graphics weren't really updated from the SNES-CD version. Still, the SNES-CD version is excellent and right now it's a tough game to find.

*Phantasmagoria*- People don't remember, because the game flopped so badly, but *Phantasmagoria* was a highly anticipated title when it was first announced for an SNES-CD port. People wondered how they were going to port it, since the game (on PC) was SEVEN discs and at the time there were only three two-disc games on the Super Nintendo CD. Seven would've been completely infeasible. Well, Sierra decided to take a lot of the cutscene content out and replace it with in-game rendered graphics, while keeping the gameplay and puzzles largely intact. The plot (including the game's most controversial scenes of sex and violence) was kept COMPLETELY intact, but the game itself really suffered for the removal of the cutscenes and was regarded by a lot of reviews as a clunky mess. The game sold decently in its first week, though sales fell apart soon afterward and it ended up being one of the Super Nintendo CD's most disappointing games, which is largely a shame for such a highly anticipated port. It is another example of a game that did a LOT better on the Saturn, whose fans were undaunted by the game's six discs.

*Suikoden*- Konami's RPG was perhaps the biggest success story of any of these games due to its sales actually EXCEEDING expectations. Granted, the expectations weren't much, but 88,000 copies in North America has to be considered a success for a non-Squaresoft RPG. The game involved a fairly simple storyline and was somewhat short, but had a lot of characters to recruit and some fairly strategic gameplay. It also featured some fairly good character animation, though the graphics weren't as good as games like *Tale Phantasia* and *Chrono Trigger*. It also lacked voice acting, though it had an excellent musical score. *Suikoden* would go on to get a number of sequels, becoming a beloved, if somewhat niche RPG series. It's worth noting that some of the deeds of *Suikoden II*'s Luca Blight make *Phantasmagoria*'s horrors look like an episode of *Sesame Street*.

*Popful Mail*- *Popful Mail* was one of two Working Designs localized games to be released this month for the SNES-CD, and easily the least popular of the two. It was a whimsical anime-styled action game where you play as a girl named Mail who has magical powers. It featured voice acting...quite a bit of voice acting, and can be compared somewhat with the *Valis* series from Telenet Japan, though *Popful Mail* had significantly more RPG elements to it. Though it was liked by critics and promoted well (it even had a commercial on Fox Kids!), it just didn't have the wide appeal to achieve sales success. It's a shame and somewhat of a surprise, since it seemed like the perfect game to appeal to the rising contingent of girl gamers and the anime crowd that loved *Sailor Moon* so much at the time, but its somewhat pedestrian graphics and quirky story made it a hard sell. Much less so than Working Designs' other localization of the month...

*Samurai Rush*- This anime-styled game was developed by Telenet Japan and localized by Working Designs, and it's about a samurai named Nokaji who teams up with a group of friends to save a kingdom under the oppression of a warlord. There are lots of anime cutscenes, plenty of voice acting, and Nokaji's friends all have likable properties (and they all help you out at various times during your adventure). The gameplay can be best compared to *Pocky and Rocky*, though with a bit of an influence from the *Final Fight*-style brawlers at the time. It's much more lighthearted and fun than *Samurai Buster*, the game it gets compared to quite often. It was one of the month's top selling games for the SNES-CD, though it's still fairly obscure these days and only got one sequel in 1999 for the Ultra Nintendo.

-

*"And this is from Saturday night's chaotic scene on Las Vegas Boulevard where more than a dozen people have been injured and five people have been killed in what is believed to be an attempted drive-by shooting on the rapper Tupac Shakur. Four men ranging in age from 19 to 23 have been arrested and charged with multiple counts of murder in what is one of the worst mass shooting incidents in American history."*

-from the CBS Evening News on September 9, 1996

The East vs. West hip-hop rivalry had been a defining element in the world of gangsta rap throughout the 1990s, but the rivalry came to a head in the form of two tragic incidents, incidents that could have taken the lives of two of hip-hop's most talented artists, but instead tragically took the lives of more than a dozen innocent bystanders between them, leading to the most storied truce in music history.

It began with the incident on the night of September 7, 1996. Tupac Shakur and his entourage had just left the Mike Tyson vs. Evander Holyfield fight that saw Tyson defending his heavyweight title in a brutal first round knockout that would eventually lead to Holyfield's retirement from the sport the following year. As Shakur was leaning out the window of the car he was riding in to curse at a group of hecklers, a car pulled up beside his. Seeing a potentially dangerous situation, the driver of Shakur's car began to speed off, triggering a hail of gunfire from the other car. Seven bullets were put in Shakur's car, injuring the leg of Suge Knight, a member of his entourage. The remaining bullets went into a nearby crowd, cutting down four people immediately and gravely injuring another, while 16 others suffered gunshot wounds of various severity. After the incident, Shakur initially refused to speak to police, in accordance with the "no snitching" policy many hip-hop artists had at the time. However, upon learning that three of the dead were fans of his, with one of the dead being a 13-year-old girl who had owned nearly all of his records, he relented, giving police information that helped identify the would-be assassins. The incident left Shakur deeply shaken, though it wouldn't be until another incident six months later that the biggest feud in hip-hop began to come to an end.

That incident was on March 9, 1997, in Los Angeles, California. Biggie Smalls, known as The Notorious B.I.G., had been presenting at the Soul Train Music Awards. Sometime after the show, Smalls was walking down a sidewalk with his entourage when he stopped to sign some autographs for a group of his fans. While he was doing so, an SUV pulled up and a man leaned outside of the car, firing wildly at Smalls, who was pushed out of the way by one of his bodyguards. Smalls' bodyguard, along with eight others at the scene, were killed in the hail of gunfire before police shot the driver of the SUV dead. The tragic incident was

the second mass shooting to result from an attempt on the life of a controversial hip-hop artist in just six months, and it caused an enormous public outcry. Two months later, Smalls would be contacted by Shakur, who reportedly told him "this shit used to be between you and me but now it's our fans gettin' killed, and that ain't cool". Over the next few months, the rift between the two former friends turned bitter rivals began to close, though the end of their feud didn't become public until the two made a surprise appearance together at the 1997 MTV Video Music Awards, embracing on stage and performing their new song, "Increase the Peace", together. "Increase the Peace" would go on to top the charts for many weeks and would eventually win the Record of the Year award at the 1998 Grammys.

-

Brittany Saldita: *Suikoden* is definitely a good game, but is it a great game?

Alex Stansfield: I'm not sure. Honestly, I thought it was pretty simplistic. I thought there were too many characters and I thought there were a lot of unnecessary elements. The constant weapon sharpening...

Brittany: Yeah, that was a pain in the ass. But I did like the level of strategy that you get from having so many characters and despite there being so many of them, the storyline was still good. Simple, yes, and WAY too easy.

Alex: Oh, yeah, that too, you can blaze through it really fast.

Brittany: It's the kind of game that does just enough to skirt by...

Alex: Like me in college!

Brittany: Precisely!

Alex: But at least it never got drunk and stuck its bare ass out the fraternity at the dean as he walked by.

Brittany: Did YOU ever do that?

Alex: No, I'm just making up an example!

Brittany: Uh huh....

Alex: I was a good boy in college! I slacked off but I was good!

Brittany: And that describes *Suikoden*. It's good, but it definitely slacks off. I'm giving it a 3.5 out of 5.

Alex: And I'm giving it a 3.

-excerpted from the September 3, 1996 episode of *GameTV*

(...)

Ted Crosley: *Commander Keen: The Universe Is Toast* is a really tough but really fun action game with lots of different elements that make it stand out from the other games in its genre.

Gary Westhouse: It's not *NiGHTS* but it's not really trying to be, it stands on its own two feet and it's a great comeback party for a really fun classic character. It's three games in one, which is a serious bargain, and it's not three games in one in the way that *Kirby Super Deluxe* pushes itself as being ten games in one but really it's just one game across a lot of different genres.

Ted: Well, *Kirby* was great but *Commander Keen* is great in its own way. It has a WICKED sense of humor and I loved the stealth levels, I think some people will get frustrated with them but I was having a blast.

Gary: I'm not sure I liked the fact that you had to avoid combat in many points, that made some sections a real chore.

Ted: It's a good change of pace, I think. Again, it's another difference between *Commander Keen* and *Kirby*.

Gary: Are we gonna keep comparing them?

Ted: Well, you brought it up first.

Gary: I liked both, I really did! It's just, there were some parts in *Commander Keen* that weren't as fun as the rest of the game and if you're buying it, you need to know that.

Ted: Well, you also need to know that you don't have to play the other games to get into this one. It's really designed to introduce the character to a new generation of players, and I think *Keen* fits right in on the Saturn. I'm giving *Commander Keen* a 4.5 out of 5.

Gary: And I'm giving it a 4.

-excerpted from the September 17, 1996 episode of *GameTV*

(...)

Ted: So Alex, are you going to the dogs?

Alex: Well, *Dog Dash* is really fun but it's not without its flaws. I did have trouble getting used to the jumping, it's not like it is on Mario, it's a bit harder to do some of those precision jumps in the later levels.

Ted: Yeah, even after I'd gotten the hang of it there were still some frustrating moments. But mechanically it's mostly fine. The combat is great, better than any platformer I've played, certainly better than in Mario or Sonic.

Alex: The characters are great too. You can really feel the love between Woofle and Clark.

Ted: Yeah, this game made me want to play with my dog more and that's always a plus.

Alex: And the villains are hilarious, from the evil mummy queen in the desert world to Klavenstein himself...

Ted: Voiced by Tim Curry!

Alex: \*laughing\* I was hoping they'd do some Rocky Horror Picture Show stuff with him but they didn't.

Ted: Well, it is a kids' game.

Alex: That said, even though its a kids' game, it's fun for all ages. It's not perfect but it gets a solid 4 from me.

Ted: And I'll give it a 4 as well. It's a lot of fun, definitely check it out.

-excerpted from the September 24, 1996 episode of *GameTV*

(...)

Brittany: \*she is drawing a picture of herself zapping Ted with a magic wand\* Let's see if I can animate this...

Ted: \*he watches as Brittany makes the picture come to life, showing a few frames of Brittany zapping Ted like in a flipbook\* You know, that is really cool even if you're killing me.

Brittany: I'm supposed to be turning you into a frog, hold on... \*keeps playing around with the mouse\*

Ted: Well, the sheer number of things you can do in *Mario Artist* is really staggering and the CD really gives it a boost. You can do a LOT more with music and the mini games are really fun, giving you a ton of distractions from the painstaking work of animating yourself turning your co-host into a frog.

Brittany: I can't believe I'm getting paid for this. \*giggles\*

Ted: While *Mario Artist* isn't as robust as the paint tool on your computer, it's still a really great tool and just like the original *Mario Paint*, you'll get many hours of fun out of it.

Brittany: Okay, I'm not gonna get this done in time. \*sighs and stops clicking on the mouse\* But you can see, it's really easy to get sucked in!

Ted: Yeah, and that's why I'm giving *Mario Artist* a 4.5 out of 5.

Brittany: Wow, a 4.5.... well that's what I'm giving it too. If you loved the original *Mario Paint* this is an absolute no-brainer, *Mario Artist* exceeds it in every single way.

Ted: Now it's my turn... \*deletes Brittany's drawing and begins doing his own\*

Brittany: Hey, hey HEY!!!

Ted: I'm gonna turn you into a snail.

Brittany: I'll slime you!

\*In a black and white scene reminiscent of *The Wizard Of Oz*, a young girl who looks like Dorothy is playing *Super Mario Land* on her classic Game Boy. Her little dog is sitting next to her.\*

Girl: Ohh...!

\*The girl continues to play when suddenly the house shakes.\*

Girl: Oh my goodness, a twister!

\*The house is picked up and dropped somewhere else. The girl steps out of her home and into a world of color, again like in *The Wizard Of Oz*. She looks down at her Game Boy, which has turned into a Game Boy Color. She begins to play, it's now *Donkey Kong Land 2* in full color on the screen.\*

Girl: Toto, I don't think we're playing Game Boy any more!

\*A witch who looks like Glinda comes down in a bubble.\*

Glinda: Oh, but you are!

\*As she continues to speak, scenes from various Game Boy Color games begin to play on the screen.\*

Glinda: The Game Boy Color brings full color to all of your favorite Game Boy games, including brand new games like *Donkey Kong Land 2*, *World of Color*, and *Toy Story!*

Girl: Wow! This is magical!

Glinda: Now, if you wish to go home, just click your heels together three times and-

Girl: I don't want to go home, I want to stay here and keep playing!

\*The girl, accompanied by her dog, skips down a yellow brick road still playing the Game Boy Color as "Optimistic Voices" from *The Wizard Of Oz* plays in the background. "Color Your World", the Game Boy Color's official slogan, is shown on the screen, along with the date of its release, September 15.\*

-the commercial for the release of the Game Boy Color, which began airing in late August 1996

(...)

Ted: *World of Color* is without a doubt the best puzzle game released on the Game Boy since *Tetris*. I was hooked from the beginning and I've been hooked ever since.

Alex: The single player modes are stellar, I love the "adventure" mode but the real meat of the game is in its endless score attack modes where you try to rack up combos and shift an increasing number of color blocks together.

Ted: The game even plays good on the regular old black and white Game Boy! For a game that seems to revolve around color, the option to play on the Game Boy with symbols instead of colors is welcome for people who might not be able to get the Game Boy Color until, say, Christmas, or who might not be able to convince their parents that the Game Boy Color is enough of an upgrade over the original Game Boy to buy it.

Alex: The jury's still out on the Game Boy Color being enough of an upgrade, but maybe once more exclusives come out...? I'm AMAZED this wasn't an exclusive.

Ted: I'm glad it wasn't. EVERYBODY should be playing this game! I give it a 5 out of 5.

Alex: Same here. *World of Color* is getting a 5 from me.

\*Sirens begin to go off\*

Ted: Whoa, whoa, whoa! It looks like it's time for another Hall of Fame entrant!

Alex: The first ever portable Hall of Famer, and well deserved at that!

\*The two of them, accompanied by the other three hosts, head to the wall to hang up a framed copy of the game. However, Ted notices that the *Tale Phantasia* frame is...somewhat damaged.\*

Ted: Uh...

Brittany: \*nervously laughing\*

Alex: \*takes *Tale Phantasia* off the wall\* Why's the frame cracked...? What's all this duct tape doing on here?

Brittany: ....maintenance guy.

Ted: \*shrugs\* Sounds about right! \*hangs *Tale Phantasia* back up and puts *World of Color* next to it\* And that's it, *World of Color* is in the GameTV Hall of Fame!

Alex: Coming up next, our final verdict on the Game Boy Color. Should you go out and spend 90 bucks or should you wait until some exclusive titles come out?

John Walden: I think we need to spend 90 bucks on a new frame for *Tale Phantasia*...

Brittany: Or we COULD get a cheap two dollar frame...

Ted: This is the Hall of Fame, we don't cheap out on anything! It's okay, we'll take it out of the maintenance guy's salary.

Brittany: ....\*she looks guilty\*

(...)

Ted: And so that's it, by a four-to-one margin, our verdict on the Game Boy Color is wait. Wait until some exclusives come out or at least wait until Christmas when you can have Santa bring it to you, I don't think Santa cares that it's not that much of a technical improvement over the original Game Boy.

Alex: Well, that's it for *GameTV*. We have *Tale Phantasia* up in a brand new frame, it was 150 bucks but that's okay, the maintenance guy who broke it doesn't HAVE to eat this week!

Brittany: Wait...! \*bowing her head\* You guys, uh....I broke the frame. After you left me locked in, I kind of smashed the frame and started playing.... it's not like I had any choice, I didn't want to stay here all night with nothing to do!

Ted: \*snickering\* Oh, we knew you broke the frame.

John: Yeah, who else could it have been? I noticed it was broke the day after.

Alex: We were kind of wondering how long it would take you to fess up.

Brittany: Well, I guess I'll pay for the frame but you guys are still jerks for locking me in here!

Ted: \*shrugs\* It's okay, we just took it out of the new guy's wallet when he wasn't looking.

Gary: Wait, WHAT?!

Brittany: Ha!

Gary: You....you guys...! \*looks in his wallet\* Ah, dammit!

Ted: We'll see you guys next time!

Gary: I didn't do anything! I need that money for stuff! Guys...!!! \*keeps complaining as the credits begin to play\*

-excerpted from the September 17, 1996 episode of *GameTV*

### **September 15, 1996**

The Game Boy Color is released in North America, along with two "launch titles", *Donkey Kong Land 2* and the puzzle game *World Of Color*, both of which achieve excellent critical reviews and achieve more than a million sales. Though the release of the Game Boy Color does give Game Boy sales a significant bump throughout late 1996 (especially for the Christmas season) and early 1997, over the next few months few games are released to take full advantage of the system's graphical capabilities and new soundchip. Despite this, the Game Boy Color continues to sell well due to a lack of competition from Sega's Game Gear (which is quietly discontinued around this time) and Sega's Venus (which is still considered too expensive and too much of a battery hog to catch on). Meanwhile, in Japan, *Pocket Monsters* is slowly becoming a major cultural phenomenon, continuing its march toward an eventual worldwide release...

-

*"The fantastic 3-D visuals paint a very detailed cityscape despite the significant amount of pop-in. Visually, it looks like a Sega Saturn or even an Ultra Nintendo game in certain segments. It's clear that Argonaut squeezed every last drop of power they could get out of the Super Nintendo CD, which, at just under 22 megahertz, is an incredibly impressive feat considering the results."*

-excerpted from "Games That Pushed The Limits (SNES-CD): Squad Four: Eclipse" on racketboy.com (based on this OTL webpage: <http://www.racketboy.com/retro/games...-limits-part-1> )

*"Even the eclipse itself, the iconic imagery of the game, was a graphical trick designed to help us add detail to the enemies and buildings. The constant darkness enabled us to limit what we would allow the player to see."*

-Argonaut's Dylan Cuthbert, discussing *Squad Four: Eclipse* in the December 2007 issue of *GameInformer*

*"Tomb Raider threw the female video game action hero into the mainstream for the first time and was an enormous step forward in the portrayal of women in games. Lara Croft is a fierce, resourceful, intelligent, and strong woman and the narrative of the game went a long way toward giving her credibility as one of gaming's most well developed heroes. Yes, she became a sex symbol, but not by design. This is evidenced in the game development documents that show how Lara's breast size was reduced as the game gained graphical fidelity later in development. They could've easily given her a massive chest to attract more male players, but instead, she was portrayed realistically both physically and in terms of her personality."*

-Anita Sarkeesian, "Tropes vs. Women In Games (Part 4): Women In Games Done Right", posted on May 28, 2015

*"Lara Croft is a heroine I'd be proud for my daughters to look up to. That's a big part of the reason why I wanted this game on Saturn so badly."*

-Tom Kalinske, in an interview with *Time* magazine, December 9, 1996

*"Well, Snatcher was sort of lightning in a bottle, wasn't it? I do know by that time the Super Famicom CD was in decline, so that explains why Policenauts didn't do quite so well. It WAS a success, but I was a bit worried that it wouldn't match up to Snatcher and unfortunately that was the case."*

-Hideo Kojima, in an interview in the February 1999 issue of *Famitsu* magazine

*"If you insist on stopping me, I guess neither one of us will get out of here alive!"*

-Jade Bessemer, just before the final boss fight in *Tomb Raider*

-

*"Only on Sega Saturn: An Adventure Like No Other"*

-the tagline for *Tomb Raider* that began appearing in magazine ads during the summer and fall of 1996

## **Tomb Raider: The Basics**

*Tomb Raider* is quite a bit different from its OTL counterpart, owing to its creation with a higher-powered Sega Saturn in mind as opposed to the Playstation IOTL. Its graphics are significantly better than the OTL version of the game, areas are much larger and presented with much more detail and Lara's graphical design is more detailed as well, looking less boxy and jagged than in OTL's game. The gameplay is largely the same, though Lara has a couple of additional melee moves and can counter enemy blows and animal lunges, making her less dependent on firearms for offense. She also moves a bit more fluidly, making jumping sections (which are more numerous and complex than in OTL's game) easier to navigate. There are also more puzzles than IOTL's game, both environmental and logical. Like IOTL's game, the save system only allows the player to save at certain checkpoints and like IOTL, this receives some criticism and is fixed for the sequels and for later ports. The game, like OTL's, contains voice acting, Lara Croft is voiced by Olivia D'Abo while Jade is voiced by Moira Quirk.

The plot itself is also largely altered from IOTL. Entire plot points are changed wholesale, with new characters introduced and different landmarks and artifacts explored. Instead of the main villain being Jacqueline Natla, the villain is a woman named Jade Bessemer, who is not only a rich industrialist but a skilled tomb raider in her own right. The quest is set off when Lara steals an artifact from a temple in Peru, the first of seven legendary artifacts that are said to unlock the secret of immortality. Lara is contacted by Jade Bessemer, who offers Lara a great deal of money for the artifact and the other six if she is able to find them. Lara turns down Jade's offer, but that night, Lara is attacked at her mansion by Jade and her thugs. Jade nearly kills Lara, but Lara manages to wound Jade, who escapes with the stolen artifact and vows to find the others. Lara sets out to find the remaining six artifacts which are in the following areas: Greece (in Europe), Ayers Rock (in Australia), Chaco Canyon (in North America), the Congo (in Africa), Lake Vostok (in Antarctica), and finally Xanadu (in Asia). In Antarctica, the sixth level, Lara has a climactic showdown with Jade, only for the two of them to be attacked by an ethereal being (the spirit within the artifacts, which does not want to be disturbed). The two work together to survive and there's a point where it seems that Lara and Jade are about to settle their differences, only for Jade to betray Lara and leave her for dead, taking all six artifacts to Xanadu. After a spiritual journey, Lara awakens and goes to Xanadu for the final showdown. It's an enormous temple complex with numerous puzzles and difficult dungeon sections, but finally Lara confronts Jade in a one-on-one battle. Lara defeats Jade, but Jade manages to harness the power of the spirit and she transforms into an angel-like being to confront Lara once more. After this second boss fight, Jade is defeated and Xanadu begins to collapse. Lara is forced to leave the artifacts behind and there is a timed escape sequence, once she escapes, the ending shows Lara returning to England with a few treasures in her bag, after the game credits, Jade's hand is shown emerging from the rubble of the temple.

### **October 10, 1996**

*Tomb Raider* is released in North America for the Sega Saturn, amidst a massive slew of hype and a huge advertising campaign. The game proves an immediate hit with fans and sells extremely well, even faster than *Resident Evil* earlier in the year. Though critics don't respond to the game as well as they did to *Resident Evil* and *NiGHTS* (*Tomb Raider* averages in the high 8s, low 9s with critics), it's still regarded as an excellent game and another hit for the *Sega Saturn*. A special *Tomb Raider* edition of the Saturn is released with the game packaged in, while promotional events for the game's release all over the country are hugely attended events and the game (and its very popular heroine) receives a huge amount of mainstream attention, dwarfing the media coverage of September's *Dog Dash* on the SNES-CD (and a significant part of the attention for that game came from the controversy over the Bob Barker parody). It's clear that, at least in the eyes of the mainstream media, the Sega Saturn is the video game system to get. The Super Nintendo CD is still leading in sales, but the gaming media now agrees that it's only a matter of time before that changes, and *Sonic 4* is still on the horizon...

-

### **October 14, 1996**

At Nintendo headquarters in Kyoto, the company had called a meeting of some of its most important people. In addition to the top Nintendo brass present, Sony's Ken Kutaragi was there at the meeting to update the men on his progress regarding the GPU for the Ultra Nintendo and other issues regarding the new system.

"Sales in North America for the Super Nintendo CD are dropping," said Howard Lincoln, showing the men at the table a chart. "Without any major breakout hits, we aren't moving as many consoles as we did in 1995. *Dog Dash* is giving us a bit of a bump, but now we've stabilized again."

Nintendo's "Year of the RPG" had been a success...in terms of software sales. The company had taken what was normally a niche genre and had bolstered its success significantly in North America. *Tale Phantasia* was on its way to being a million-seller in the territory, and *Chrono Trigger* could potentially still limp there over the course of the next year or so. Even middling hits like *Soul Matrix* and *Suikoden* were selling better than they could've without the extra promotion. And *Elements of Mana* was still on the way. However, the additional RPG sales hadn't moved many extra Super Nintendo CD consoles. They were simply selling a few more games to people who already had the console.

"It is the same in Japan," Minoru Arakawa added. "*Seiken Densetsu 3*, *Terranigma*, and *Dragon Quest VI* are all selling like crazy here in Japan but it's not moving any extra hardware units...and soon we will not have Enix making games for us anymore."

Meanwhile, the Saturn was continuing to sell majorly in both Japan and North America. Even in Europe, the Saturn had drawn even with Nintendo's CD console. It was clear that the decline would continue until the next generation of Nintendo hardware was ready.

"Super Famicom CD sales are still strong enough to make a good profit," said Hiroshi Yamauchi, choosing, for once, to look on the bright side of things. He was in a good mood, all things considered, having recently seen the uptick in Game Boy sales generated by the release of the new model. "Kutaragi-san, how is Sony's progress coming on the Ultra Nintendo components?"

"It's finished, sir," said Kutaragi, passing a document across the table. "The new Sony GPU is the most powerful such unit ever created for a home gaming console. It surpassed even my lofty expectations. The work by our technicians has been superb."

Yamauchi took a brief look at the document and his eyes, for a moment, betrayed his expression.

"Is this really how fast the new graphics processor will be?" asked Yamauchi, somewhat skeptically.

"It is," Kutaragi replied proudly. "In conjunction with the custom SH3 processor from Hitachi, the Ultra Nintendo will dwarf the Saturn in power. Its graphical capabilities will be unparalleled."

Howard Lincoln smiled, and asked to inspect the document. He looked over it and began to speak.

"The Hitachi SH3 CPU, codenamed 'Hippolyta', will be capable of a clock rate of 140.5 megahertz. Sony's GPU, codenamed 'Artemis', will be capable of a 102 megahertz clock rate," Lincoln read, grinning now. "Isn't the Saturn's CPU only capable of--"

"86.75," said Kutaragi.

"And with only four megabytes of RAM," said Lincoln. "If Rambus is capable of giving us the price for RAM they quoted before, the Ultra Nintendo will be able to have 16 megabytes of RAM."

"That's still a big if," said Yamauchi. "Make sure they stick to that price, I do not want to charge too much money for the Ultra Nintendo."

"May I add something?" said Kutaragi, raising his hand for a moment. "If I may... we've also been able to perfect the new proprietary format for the Ultra Nintendo's game discs. The Sony Gigadisc can hold up to one gigabyte of data and the discs are somewhat more durable than CDs. It will allow games to contain more graphical detail while remaining on the same number of discs as corresponding Sega Saturn games."

"And what is the expected release date for this new console?" asked Yamauchi. "Surely it will be ready before the end of 1997."

"It will," said Arakawa. "We expect to release the Ultra Nintendo in Japan in June 1997 at the latest, and it will be ready for release in North America and Europe in time for the 1997 holiday season."

Yamauchi nodded with approval at this news. It still gave the Saturn eight more months to have the market to itself, but he'd already resigned himself to the fact that Sega would probably win Christmas. If he had anything to say about it, it would be the last Christmas they ever won.

"We need to counter *Sonic 4* with everything we have," said Yamauchi, his face growing stern as he sized up everyone at the table. "Next month will be very important for us."

"We've got *Elements of Mana* and *Donkey Kong Country 3* both releasing in November," said Howard Lincoln, referring to two of the most anticipated SNES-CD releases of the year. "And of course *Squad Four: Eclipse* coming at the end of the month. All three games should sell extremely well."

Gunpei Yokoi, who at the moment was in the process of developing an SNES-CD game, *Days Of The Hunt*, and a Game Boy game, *Serfa's Root*, both expected to be released some time in 1997, exchanged a look with Shigeru Miyamoto. Miyamoto, of course, was hard at work on both *Super Mario Dimensions* and *Star Fox 2* for the new Ultra system.

"As long as Nintendo continues to do what it always has done, which is continuing to innovate and design fun new games, we will be victorious over Sega," said Miyamoto. "Their *Sonic 4* looks very similar to past Sonic games. Not much has changed. Fans will tire of it. *Super Mario Dimensions* is like no Mario game before it."

Yokoi, of course, was still considering ideas for the next *Metroid* game. He knew it would be too late to produce one for the Super Nintendo CD, and his mind was racing with ideas for what the new technology of the Ultra could provide. He had intended to retire from Nintendo earlier in the year, but his time working with Sony had changed his mind. They were at the cutting edge of technology, and it stimulated his creative drive like no other. He couldn't wait to see what the future would bring.

But for right now, Nintendo's immediate future was preoccupied with the looming shadow of the blue hedgehog and the imminent release of their next gaming console.

"I expect everyone to be working many hours to keep Nintendo in front of Sega this year," said Yamauchi, who rose from his chair to adjourn the meeting. "We'll have another meeting after the release of the new *Squad Four* game to discuss this month's sales. Goodbye for now."

-*Electronic Gaming Monthly's* reviews of October 1996's SNES-CD games in the November

and December 1996 issues

-

With *Snatcher* becoming one of the most influential video games of all time, it was only a matter of time before Kojima's follow-up game, *Policenauts*, got a port to the SNES-CD and got localized in North America. And, in the fall of 1996, it did, joining games like *Elements of Mana*, *Donkey Kong Country 3*, and *Squad Four: Eclipse* as one of the fall's most anticipated games. It was expected to be a big sales success, and while it DID sell a decent number of copies (260,000 in North America, nothing to sneeze at), it failed to match the sales figures and critical acclaim of *Snatcher*. Instead of becoming an instant classic, it had to settle for being just another of 1996's good games. What happened? It seemed that *Snatcher*, a game about robots stealing the likenesses of humans and slowly taking over the world, had a more attractive concept than a game about police astronauts. *Snatcher* sounded cool, *Policenauts* just sounded...weird. Advertising tried to play up the similarities between *Policenauts* and *Lethal Weapon*, but the *Lethal Weapon* franchise wasn't as big as it was in the late 80s/early 90s, so that fizzled out as well (in addition to the game itself being nothing like *Lethal Weapon* other than the appearances of the main characters). In the end, while *Snatcher* was a cultural phenomenon, *Policenauts* was a mere historical footnote, and a stepping stone on the way to Kojima's eventual blockbuster success with *Metal Gear Solid*.

-excerpted from the article "Kojima and Nintendo: A Profitable Partnership" on Gamesovermatter.com

-

### **October 15, 1996**

Hideo Kojima let out a sigh as he sat on his couch. *Policenauts* had just been released for the Super Nintendo CD in North America, and while critical reception was largely positive, it was apparent that the game wasn't going to be the breakout success that *Snatcher* had been. Combine that with the failure of *Project Overkill*, and Konami was having a fairly rough month. But, things WOULD get better. Kojima had been made privy to the final expected specs of the Ultra Nintendo, and it was now clear on which system his next *Metal Gear* game would be.

There was nothing on the market quite like the Ultra Nintendo. Sure, there were plenty of computers that could top it, but in terms of home consoles, the Ultra clearly outclassed the Saturn, and he wanted *Metal Gear Solid* to be as good as it could possibly be. It was as simple as that.

"I just hope we have enough time to produce a trailer in time for E3 next year..." thought Kojima, imagining all the buzz it would generate if he were able to steal the show with the first footage of his new game. "We will need to begin immediately."

-

### **October 16, 1996**

Jim Lehrer: This next question is for President Clinton.

Allison Kohler: Um, I'm Allison Kohler and I'm a mother of two boys from Providence, Rhode Island. One is 12, and one is 10. And I'd like to know, Mr. President, with the increasing prevalence of violence in the media, on TV and in video games, what do you intend to do to limit the exposure of vulnerable children to this harmful element? Thank you.

Bill Clinton: Well, that's a very good question and one that I think has many different answers, I'm sure my opponent has an answer to your question as well, but as for me, as a father myself I'm very aware of the effects that exposure to violence in the media can have on our children. As you know, I signed legislation just this year requiring the V-chip on all new televisions sold in the United States that will give parents the power to block these violent programs if they so choose. You know, and I think, certainly acting, within the first amendment and with the power that the FCC has to regulate certain shows, I think it's best to use that power to encourage networks to make the right choices in terms of teaching kids the right lessons. I'm very supportive of including educational messages in these shows, that if these shows choose to show violent content that they make it very clear that in the real world, the world we live in, that kids need to treat one another with dignity and respect. And as it pertains to video games, of course these games are becoming very violent. Certainly the industry is attempting to label these games with content ratings, but stores are still selling them to kids and I think that perhaps in my second term, were I to receive a second term, we could work with these stores and maybe have penalties for selling these games to young kids. But also, I think we need to take a proactive role in getting kids up off of the couch and outside doing physical activity. That is so important. If they're up and about, running and playing sports and exercising, then they're not in front of the TV playing violent video games and that solves two very big problems. And I'm going to lead by example, I'm, I'm cutting down on the fast food and getting a lot more exercise. \*some laughs from the audience\* We all have to lead by example to create a better America. Thank you.

Bob Dole: Mr. President, I don't think that's good enough. When a child is given the choice between a brand new video game with all its bells and whistles and blood and guts, and going out and running around, most of the time kids these days will choose the video game. And parents aren't going to always be there to say no. Certainly, Mrs. Kohler, I think you are an excellent parent and I'm sure you already monitor what games your children play, but there are so many parents in this country who can't, or won't do that. And so kids are playing these games, these terrible games, I've heard of one game now where you're in a mansion shooting people in the face and there's blood everywhere and it's the most popular game! It's the most popular game and kids aren't going to be able to say no to that. So I think, legislation is definitely needed to punish these stores that sell these games to kids. Any store that sells a violent game to a child, and I don't necessarily trust the game makers themselves to rate these games, but I think a government council of concerned parents should be involved with this, any store that sells a game determined to be violent should be heavily fined, and maybe even put the clerk in jail for 30 days or so. Because these games, and these violent television shows like *Power Rangers* and *Sailor Moon*, these shows are hurting our kids and if parents can't or won't do anything about them then maybe it's time for the government to step in. And I am absolutely a small government conservative, but this is one issue where I think the government needs to play a role.

Bill Clinton: Well, Mr. Dole, I agree that there is a problem but I did recently host some actors from the *Power Rangers* at the White House and that show has positive messages for young people. There is some violence, yes, and I think maybe they could cut down on the violence, but it's also presenting positive messages, which is what I said before, that some of these kids' shows do at the very least show to kids that this kind of violence is entirely in

a fantasy setting and that in the real world, conflicts are best solved with words and with compromise. And it also encourages physical activity which is important for the future of our nation's children. I don't think the government should play an active role in the content of these shows and games, but I do think that we could encourage these companies to take on more of a role of responsibility.

Jim Lehrer: Next question is for Senator Dole.

Kevin Baker: Senator Dole, my name's Kevin Baker, I'm a college student at California Berkeley and I'd like you to clarify your comments that you made on October 7th, about the possible link between the Atlanta Olympics bomber and certain Christian militia groups. Um, when a member of the Army of God came forward and said that he might know the identity of the bomber, you commented in an interview that it was impossible for any true Christian to commit an act of terrorism, which, in the face of several abortion clinic bombings over the past few years, is clearly not the case.

Bob Dole: Well, you know, I erm, that's.... certainly what I said has been taken out of context by a lot of folks in the media and I'm going to say right now that I absolutely realize that certain...very, very extremist elements of the Christian faith may have been responsible, in the past, for absolutely reprehensible and intolerable acts of violence.

-excerpted from the second presidential debate on October 16, 1996

-

### **Squad Four: Eclipse- The Basics**

*Squad Four: Eclipse* is the sequel to 1994's *Squad Four*, developed by Argonaut Software and released exclusively for the Super Nintendo CD. The game picks up where the first game left off, following Shad, Rebecca, Marcus, and Lane on their quest to liberate Planet Lockstar from an invasion by a vengeful armada of Krills, the evil aliens defeated in the first game of the series. The gameplay itself remains largely the same: a rail-shooter with some first-person exploration components, though this game is somewhat more streamlined than the original: 22 missions, less than the 26 of the first, and containing much more rail-shooter elements than the first game, with only a few open exploration areas. However, this tightening of the gameplay focus has led to a major refinement of the gameplay and graphics. The graphics themselves are superb, considered the best on the Super Nintendo CD. The game pushes the console to its absolute limits, with graphics rivaling many OTL 1995-1997 Playstation games. In terms of gameplay, the combat has increased in complexity, with more large enemies to fight and the addition of a "special" meter that allows the player to use a powerful move after charging up for a time. The specials are:

**Blaster Array (Shad):** Shad's special is a move that fills the entire screen with aiming reticles, locking onto enemies as dozens of bursts of blaster fire are fired off at once. A great way to deal with large groups of enemies.

**Automatic Shotgun (Marcus):** Marcus' shotgun becomes automatic, and can fire at will at a very rapid rate. Good for taking out hordes of enemies or directing lots of fire at a single one.

**Whirlwind Rush (Rebecca):** Rebecca swings her twin blades in a flurry, striking enemies around her with numerous blows. Great to use on bosses.

Stunbolt (Lane): Lane uses his taser to zap enemies on screen, freezing them in place and readying them to absorb attacks from his bolt thrower. Quite useful for both defense and offense.

The game gives you a lot more choice as to which character to use in a level, allowing for more strategy. Only eight of the game's missions require you to use a certain character, letting you choose which character to use for the other 14. The combat is somewhat faster paced due to Argonaut being able to bump up the frame rate, allowing more complex attack animations and noticeably faster attacks. This refinement is likely the reason the game is so much more well received than the first. With the addition of allowing free-roaming for many of the game's boss monsters, it resembles OTL's *Sin and Punishment* more than any other game. It contains even more voice acting than the original *Squad Four*, in both cutscenes and in battle.

The game starts off with the first mission, which is actually to finish the mission given to Squad Four in the original game, liberating a planet from a group of space pirates. The first mission introduces you to the basics of the game and finishes off with a tricky but fairly easy battle against a space pirate mecha. Squad Four returns to Planet Lockstar and after a couple of cutscenes showing the team's happy return, it flash forwards to six months later. After another cutscene, the sun is blocked off by an eclipse...signaling the arrival of a huge army of Krills on the planet, led by Warmaster Zarx, who appeared as a minor villain and boss in the original *Squad Four*. Zarx, now exiled from his own planet along with an army, has gathered some of the galaxy's deadliest weapons to bring to bear on Planet Lockstar, and his hordes soon overrun the capital city. Over the next few missions, Squad Four concentrates on defending and rescuing civilians caught in the crossfire, but it's soon apparent that Zarx's forces are too strong, and the Squad and much of the Lockstar army is beaten back. The Squad decides to infiltrate the capital city to undermine the invasion. They aren't given much help at first, but eventually a faction of the army led by the brash General Vasher decides to lend its might in support of the squad. Eventually, Squad Four fights its way to the Presidential Palace, where Zarx is ruling the planet with an iron fist. In a fierce fight against Zarx's huge mech, he is beaten, and the Lockstar army repels his armies from the planet. But all is not saved yet... Zarx has been chased back to his mothership, where he decides to simply destroy Lockstar with a superweapon in revenge. Squad Four makes their way up to Zarx's mothership, where the final two missions take place. After fighting their way to Zarx and defeating him once more, Squad Four dons some spacesuits and in the final battle of the game, must battle the mothership itself to bring it down before it can destroy Lockstar (this spectacular multi-stage space battle is considered one of the SNES-CD's crowning achievements in graphical presentation, final boss music, and action gameplay). Once again, Squad Four has saved the planet, and they are given a victory parade through the streets of the capital city, having truly proven their worth as Lockstar's greatest heroes.

## **October 28, 1996**

*Squad Four: Eclipse* is released for the Super Nintendo CD, becoming the fastest-selling SNES-CD game of the year and one of the fastest selling games of the year overall. It is showered with praise from critics, regarded a true classic as opposed to the good-to-great reception received by the original game. It cements the series as one of Nintendo's flagship franchises, and is labeled the SNES-CD game of the year in some publications, even topping some of the great RPGs released for the system such as *Tale Phantasia* and *Chrono Trigger*. It even generates a sale spike for the Super Nintendo CD that ensures that it emerges from

October the number one selling game console in North America, despite the huge Saturn release of *Tomb Raider* earlier in the month.

*"Squad Four: Eclipse proves that Nintendo can absolutely still blow us away with their excellent games. It's the latest in a line of spectacular games for the Super Nintendo CD, and a top-flight contender for Game of the Year."*

-Andrew Baran in his 9.5/10 review of *Squad Four: Eclipse* in the December 1996 issue of *Electronic Gaming Monthly*. The game would win the magazine's Game of the Month award in a month that also saw the magazine's review of *Sonic the Hedgehog 4*.

-

(...)

Alex Stansfield: *Tomb Raider* lives up to the hype but it isn't without its flaws. Certain dungeons and certain types of puzzles got sort of repetitive, especially by the time I got to about the fifth dungeon.

Ted Crosley: Yeah, when I got to that one I was definitely groaning "oh god, no, not this again!" which is not what you want to be hearing yourself say ever when you're playing a video game. That said, it finished really strong.

Alex: It did, it absolutely did but I'm not going to spoil any of the late game twists.

Ted: It was like a movie, wasn't it? All those twists and turns, the action sequences and the great, great graphics, this game really was a lot like a movie!

Alex: And, like a movie, it had a somewhat boring middle only to turn things around for a great finish.

Ted: Let's talk about who's hotter: Lara, or Jade?

Alex: I like bad girls. I think Jade is pretty good looking. She's got that whole evil rich lady thing going on.

Ted: \*he smirks\* And would you ever marry an evil rich lady?

Alex: Well, probably yeah.

Ted: Imagine, you marry an evil rich lady and you plan out all the stuff you're gonna buy, and then just when you go to buy everything she takes the money away! It wouldn't be fun!

Alex: Yeah but maybe we could BOTH be evil and then she wouldn't take the money. We'd be like Boris and Natasha.

Ted: Were they rich?

Alex: Well they had all those machines they used on Bullwinkle and Rocky didn't they?

Ted: Yeah, you got a point. But now, now I think she'd want to spend it on machines. Anyway, I prefer Lara because of her sexy British accent.

Alex: Dude, they BOTH have sexy British accents.

Ted: Oh yeah. Well I'd still pick Lara. Isn't she rich too?

Alex: But she's not as fun as an EVIL rich lady.

Ted: Speaking of fun, *Tomb Raider*, despite some repetitive puzzles, is still a very enjoyable game. So much so that I'm giving it a 4.5 out of 5.

Alex: Yeah, it's flawed but it's got a LOT of things going on for it, enough for me to give it a 4.5 as well.

-excerpted from the October 8, 1996 episode of *GameTV*

(...)

Gary Westhouse: And so that's *Flame Squad*, which to me was basically *Major Hazard* with flamethrowers but not nearly as fun. You would think adding flamethrowers to a game would make it a lot of fun but no, enemies went down WAY too easily and I ended up just being bored out of my mind.

John Walden: Oh, no, there was nothing boring about this game! For me, it was 13 levels of awesomeness from top to bottom. I loved the number of things it let you burn and the enemy screams were super hilarious.

Gary: There were only like five different screams! How many variants of "aaaaaaahhh!" or "owwww!" could you hear before thinking "meh"?

John: Well, they also made little comments like "my buns are burning!", the guy running around with his ass on fire while yelling it had me rolling.

Gary: You'd think they could've used more than one animation for a guy with his ass on fire.

John: It's a damn good animation! This game was insane!

Gary: Well, if the definition of insanity is, as they say, doing the same thing over and over again and expecting different results, then you're right, this game is insane. For me, it's just a 2.5 out of 5.

John: It's a solid 4 for me. Play *Flame Squad*, you'll have a blast.

-excerpted from the October 15, 1996 episode of *GameTV*

(...)

Gary (dressed up like Butthead from *Beavis and Butthead* for *GameTV*'s Halloween special): *The Basement* had to be the scariest video game I've ever played. While the graphics are pretty primitive next to *Resident Evil*, the game uses them to chilling effect and the Lovecraftian references are also really well done.

Alex (dressed up like Lex Luthor from *Superman: Last Son of Krypton*): It is really well done horror, and while the gameplay's somewhat of a slog, I can't find too much fault with the

atmosphere. Plus, the bosses are literally out of this world.

Gary: There's just one thing though, the name itself is a bit misleading since you only spend about half the game in basements, and most of those are technically tunnels.

Alex: It was named *Descent* in Japan, but here the Saturn got a shooter named *Descent* and they had to change it. Curse you Sega, taking away everything good from us!

Gary: Dude, your fanboyism is showing.

Alex: I bet that Superman plays Nintendo...I'll get him! \*he goes over and "grabs" Brittany who is dressed as Arche from *Tale Phantasia*\* I have Lois Lane!

Brittany: Lois Lane? \*scoffs and pushes him away with her wand\* Indignation!

\*There's a bright flash of light and when it fades, Alex is left "scorched" on the ground, his costume in tatters\*

Brittany: Who needs Superman now? \*smirks and walks away\*

Gary: Heh heh, magic's cool. Heh heh.

Alex: \*staggeres to his feet\* I give *The Basement*... 4 outta 5. \*collapses back to the ground\*

Gary: And I give it a 4.5 out of 5. *The Basement* kicks ass. Heh heh. Heh heh.

(...)

Ted (dressed as Wesker from *Resident Evil*): *Squad Four: Eclipse* just...friggin' floored me. I mean there's not much else to say.

Brittany: The graphics are positively fantastic, the soundtrack is WAY better than the first game and the gameplay itself is really improved. *Squad Four* has embraced its genre. It's a rail shooter game and it's superior to *Star Fox* in that regard.

Ted: It still doesn't have any Muppets.

Brittany: Well, no game's perfect.

Ted: Still, *Squad Four: Eclipse* is as close to perfect as they come. For its amazing presentation and fantastic gameplay, I have no choice but to give it a 5 out of 5, and an easy one at that.

Brittany: Well, I'm giving it a 4.5. It's...not without its flaws, and though they're nitpicky, there were just enough of them for me to deny the 5. The biggest one is that...Lane's kinda useless. I mean, he's not BAD to use but he's significantly harder to use than the other three characters and the two missions that require him were a bit of a chore. He was a lot better balanced in the first game, but with the faster combat, Lane's tech skills leave a bit on the table. His bolt thrower is quite slow to damage bosses, you REALLY need to use his special to get much use out of him but even then, it's just...slower to use him. I like a good challenge but not when it's flat-out time consuming.

Ted: You have over 120 hours on your *Tale Phantasia* file.

Brittany: That is (bleep)in' different!

Ted: You collected all the individual treasure chests in the game. Talk about time consuming.

Brittany: \*points her wand at Ted\*

Ted: Oh sh-

Brittany: INDIGNATION!

\*zap, flash\*

## **November 4, 1996**

It was just three days before the release of *Sonic the Hedgehog 4*, and Tom Kalinske and his team were in a meeting room at Sega of America HQ, finalizing their plans for the big day. "Sonic 4sday" would be Sega's biggest game launch ever, with events taking place around the country. The big one, of course, would be in Los Angeles, where celebrities and Tom Kalinske himself would celebrate the hedgehog's big day.

"Saturn sales have been strong this quarter," said Shinobu Toyoda, thumbing through a document full of sales figures that was in front of every person at the table. "But *Sonic 4* preorders lag somewhat behind those for *Sonic 3*. It is not likely we'll sell a million on the first day, simply due to how few Saturns are out there compared to how many Genesis systems there were for *Sonic 3*."

It was a disappointment, to be sure, but *Sonic 4* was still set to have the biggest launch day of the year, with projections easily surpassing those of the year's current holder of that title, Nintendo's *Squad Four: Eclipse*. *Sonic 4* was set to smash *Eclipse*'s opening day, meaning that Nintendo's game would only hold the title for ten days. A smile crossed Kalinske's face at the thought.

"Those kids have nothing on Sonic," said Kalinske, "and if THOSE graphics are the best the Super Nintendo CD can offer, *Sonic 4* is gonna make them look like an 8-bit game. Make it part of the new ad campaign, show *Squad Four: Eclipse* side by side with *Panzer Dragoon II*. We've booked Rachel Leigh Cook to do the new holiday ad for us, right?"

"She is booked and we're filming next week," said Diane Fornasier. "This new commercial is going to be in-your-face, we're going to directly challenge Nintendo players on why they're still sticking to the old system."

"Great," said Kalinske, "though next year we're gonna have to get proactive. We've all seen the rumored specs for Nintendo's new machine... it's powerful, but Nintendo still doesn't have the kinds of games that we've got. The arcade hits, the big movie-like hits like *Resident Evil* and *Tomb Raider*, and they don't have Sonic. They'll never have Sonic. And Sonic is still the hottest franchise in the gaming world."

"Three days, you guys," said Al Nilsen, pounding his fist on the table. "Let's get fucking hyped!"

A raucous cheer went up at the table and the Sega execs exchanged high-fives. Sega board meetings, at least Sega of America board meetings, weren't stuffy, formal affairs like the stone-faced meetings held by Hiroshi Yamauchi in Kyoto. At least not most of the time, and especially not when Sega was about to celebrate its greatest victory yet.

Bring on the monkeys. Bring on *Mana*. In three days, none of those games would matter.

"And oh, yeah," said Kalinske, "remember that whoever wins the election tomorrow, we

gotta get a photo op with Sonic. Bill Clinton I know is down for it, I'm not sure about Dole."

"He's not gonna win," said Fornasier, referencing the latest poll results that indicated an easy Clinton victory. "Hey, hey, what if it's Ross Perot? He's polling at like...8 percent."

The execs gathered at the table exchanged a hearty laugh, all of them imagining Ross Perot and Sonic the Hedgehog standing together.

"I don't even know if Ross Perot's even heard of video games," said Kalinske. The Sega execs laughed again.

-

*"It was a fantastic month for new games here at EGM, perhaps the best month ever! The Review Crew's been working overtime to play all these games, and our Game of the Month might not be what you expect. That said, there were a lot of contenders this month, which means a lot of games vying for your holiday dollars. We really burned the candle at both ends to make sure you know as much as possible before you buy!"*

*-Andrew Baran, in the mini-editorial before the Review Crew column in the December 1996 issue of Electronic Gaming Monthly*

*"What a huge show of support from all the Sonic fans around the world! Everyone here at Sega is extremely grateful for making Sonic 4sday such a huge success!"*

*-Tom Kalinske, speaking in front of a gathered crowd at the Los Angeles launch of Sonic the Hedgehog 4 on November 7, 1996*

*"And Sonic the Hedgehog is another great example of the role of technology in improving lives all over the world. I join the kids of America and Japan and everywhere else in saying that we love Sonic the Hedgehog!"*

*-President Bill Clinton, meeting with Sonic the Hedgehog at the White House in a November 8, 1996 photo-op*

*"Robotnik, this is unforgivable! I've had it with your schemes!"*

*-Sonic the Hedgehog, in Zone 6, Act 4 of Sonic the Hedgehog 4*

-

The 1996 presidential elections didn't see gaming become a big issue, though it was brought up in the second presidential debate, when a question about violent video games saw the two candidates, Bill Clinton and Bob Dole, give their responses about how they would handle the issue. While Clinton took a more moderate approach, saying that he'd consider putting pressure on retailers to avoid selling violent games to young children, Dole (running as the "culture warrior" candidate) took a much stronger stance, saying that he might use the power of government to put content restrictions on games. This didn't win Dole much love from the gaming community, and seeing that it was the first presidential election since the Super Nintendo CD and the Sega Genesis helped bring voting-age gamers back into the hobby for the first time since the Crash of 1983, in an extremely close election it might have cost Bob Dole the presidency. However, it was not an extremely close election. Bill Clinton won by taking 49.6% of the popular vote and 384 electoral votes, beating out Dole handily. Even Bob Dole's Atlanta bombing gaffe in October probably didn't

cost him the election (though it probably did cost him Georgia, where Dole lost by just 3,000 votes). Meanwhile, his "culture warrior" stance didn't sway voters away from the popular President Clinton, who was overseeing a major economic recovery (I remember how well we were doing at the time since my parents were able to afford both a Sega Saturn and an Ultra Nintendo for me). It might have won Dole Kentucky (by just 400 votes), but to everyone else, it was "the economy, stupid", and Clinton easily won his second term. Despite the Clinton victory, the Republicans kept control of the House, losing only six seats in 1996 to maintain a 224-209 majority. They even gained two Senate seats to maintain their majority, bumping it up to 55-45. How did Bill Clinton celebrate his presidential victory? By hosting Sonic the Hedgehog at the White House, of course! The photo-op was to celebrate the release of Sonic the Hedgehog 4, with Bill Clinton, Sonic the Hedgehog, some Sega execs, and a whole bunch of kids gathered around as the president gave a speech promoting technological progress. Considering that Sega had plans to meet with Bob Dole if Dole had won the election, one can only imagine how awkward that speech would've been....

### **Sonic The Hedgehog 4: The Basics**

Sonic The Hedgehog 4 follows the events of Knuckles: Renegade and the previous three Sonic games. It's a side-scrolling platformer with 3-D elements, particularly in the bonus minigame stages and the boss fights. The graphics are fully polygonal, objects and backgrounds are in full 3-D while the game features highly detailed sound effects, more than 25 music tracks, and full voice acting and rendered cutscenes. Though the game plays similarly to the Genesis titles in many respects, it introduces a new "combo" system for Sonic, allowing him (and his allies) to rack up multiple hits on enemies in a row to score massive amounts of rings and charge up for special attacks. Sonic can transform into Super Sonic for brief periods of time with enough combos, while Tails can use a laser gun on enemies, Knuckles gains fierce melee attacks that can knock out powerful enemies in a single blow, Amy's mallet gets super-sized, Corona gains a 360-degree energy wave attack, and Big the Cat can pound enemies into submission with giant fist attacks. Movement has been altered to allow Sonic to go through loops much more easily and allowing for more spectacular and fast-moving stages. The stage structure is such that most levels have Sonic and only Sonic playable, about a third of the levels allow you to choose certain other characters and a few even require you to use someone other than Sonic. In some levels, characters such as Tails, Amy, or Corona play the role of helpers, attacking or distracting enemies or helping you to find secret passages. The game has numerous secret items that you can collect for the purpose of opening up bonus minigame stages, although if you collect ALL of the secret items in every single level, you can open up an entirely new world to play through with a super tough boss at the end. The voice cast of the game is largely shared with the animated series, with Jaleel White reprising his role as Sonic, Bradley Pierce as Tails, and Jim Cummings as Dr. Robotnik. In addition, Amy Rose is voiced by Katie Leigh, Corona is voiced by Cree Summer, and Big the Cat is voiced by Rob Paulsen. The game features several lyrical songs, including the theme song "Race To The Power".

The plot of the game is that Dr. Robotnik, tired of Sonic's constant thwarting of his plans, has devised the ultimate weapon: an enormous machine that sucks the very life essence from the world. To fuel the machine, Robotnik has begun kidnapping massive amounts of

creatures from all over, draining their energy to power the evil machine until he can gather up the Chaos Emeralds for a more permanent power source. Robotnik's machine has turned entire continents into lifeless wastelands filled with evil monsters that Sonic and his friends must defeat as they journey across nine worlds to thwart the mad scientist's plans. The worlds, nine in all, each containing four acts, are as follows:

#### World One- Terra Firma Zone

A basic grassland/jungle zone with mixed areas of lush vegetation and nightmarish desolation. The boss of this area is the giant chimera featured in the E3 demos.

#### World Two- Steamwork Zone

A factory/coast zone where the marine wildlife has been turned into vicious carnivores and mechanical monstrosities due to Robotnik's machinations. The boss of this zone is an enormous mechanical shark that spits dozens of vicious barracudas at you.

#### World Three- Ancient Ruins Zone

A huge temple complex that Robotnik is attempting to convert into his private vacation land. You'll have to battle evil mummies and stone golems roused from their eternal slumber by Robotnik's machine. The boss of this zone is Dr. Robotnik, who has mounted an enormous stone golem to attack Sonic and his friends.

#### World Four- Eternal Sun Zone

An oppressive desert land where the sun beats down constantly, Robotnik is building a mirror array to focus the sunbeams to use for his own vile purposes. The boss of this zone is an enormous desert-dwelling fire breathing sand dragon.

#### World Five- Misty Forest Maze Zone

This zone takes place in a seemingly endless forest that Robotnik is harvesting with his huge machine. You'll need to battle your way through winding forest paths and even a haunted mansion. This zone is limited to Corona and Amy, as Sonic, Knuckles, Tails, and Big have been abducted by Robotnik prior to exploring this zone. The boss of the zone is an evil witch who lives in a huge mansion in the middle of the forest.

#### World Six- Mobius City Zone

This zone takes place in a ruined cityscape and contains the most references to and continuity from the SatAM Sonic series. Knuckles and Corona are heavily involved in this zone that also sees Robotnik taunting Sonic over Princess Sally's death. The boss of this zone is Robotnik in a huge arena, deploying robotic clones of himself to battle Sonic. This is portrayed as a climactic battle and a "fake final boss" to fool players, though after this world, Robotnik reveals that he has gained all the Chaos Emeralds, enough to power his machine and finish his work.

#### World Seven- Chaotica Zone

The Chaotica Zone is an other-dimensional realm Robotnik throws Sonic and his friends into following the events of World Six. You'll have to rescue Sonic's friends one by one over the course of this world, while also confronting their worst fears and regrets over their past. The boss of this world is a battle against shadow versions of Sonic's friends, defeating them releases them from their nightmares and enables Sonic and his friends to continue the fight against Robotnik.

#### World Eight- Robotnikopolis Zone

When Sonic and his friends return to the world, it's in the far future, and Robotnik has

transformed it into his vision of paradise: a world where all are forced to obey him. This world contains bright environments reminiscent of earlier games' Casino zones, though underneath all the bright lights it's a terrible world of oppression and fear. The boss of this world is the TimeFiend, a huge humanoid monstrosity pulsing with electricity. Once he's defeated, Sonic and his friends are enabled to return to the present to stop Robotnik before he warps the world into Robotnikopolis. However, he still has his machine and the Chaos Emeralds...

#### World Nine- Egg Labyrinth Zone

Sonic and his friends plunge into the depths of Robotnik's labyrinth to defeat him across the final four acts. This world contains a boss in every act, with two heroes teaming up on each one: Amy and Big team up to take out a huge mechanical heart boss in act one, Knuckles and Corona team up to take out a flying helicopter boss in act two, and Sonic and Tails team up to fight Robotnik in act three. The final act is just the final battle, with Sonic getting help from all of his friends in a big multi-staged fight against Robotnik's mech. The fight has seven stages where each Chaos Emerald must be knocked out of the boss one by one. In the final stage, Robotnik dons the final Chaos Emerald in a mechanical suit and battles Sonic by using energy weapons and a big glowing sword on him. After Robotnik is defeated, his mech is destroyed. Robotnik's prisoners are freed, their energy restored by the Chaos Emeralds, which then disperse. The world is saved from Dr. Robotnik and Sonic and his friends decide to kick back and have a big party together to celebrate.

#### World Ten- Legendary Zone

The final secret world, accessed when all the secret items from the other nine zones are collected, this Zone contains some of the game's toughest challenges, culminating in a battle against the Legendary Champion, a golden knight that wields the power of the Chaos Emeralds. Despite his somewhat small size, he is incredibly tough to defeat.

-

Ted Crosley: I'm Ted Crosley...

Alex Stansfield: And I'm Alex Stansfield, and we're here for the launch of Sonic the Hedgehog 4 here in Los Angeles. Right now there's an enormous crowd gathered around the stage enjoying the festivities, there's a concert by Smashing Pumpkins, and there are plenty more celebrities here.

Ted: Yeah, Rachel Leigh Cook is here and I'm going to try and get an interview with her.

Alex: Jonathan Taylor Thomas is here too and right now he's playing the game at one of the many kiosks set up. Our Brittany Saldita is actually over there talking with him right now, Brittany?

\*Brittany is standing next to Jonathan Taylor Thomas as he plays through Zone 1, Act 2\*

Brittany: So are you here just on your own or did Sega actually ask you to come?

JTT: Well, Sega invited me but I woulda come on my own, I love Sonic! \*he leaps over a couple of flying ladybug robots on the screen, running Sonic through a couple of loops\*

Brittany: One thing I've noticed is that this game moves really fast, faster than any Sonic game before it but as we said in our review a few days ago, it still feels perfect, you can

control Sonic easily and you've got plenty of time to jump over these enemies and find hidden items. Are you having any trouble at all?

JTT: Oh, no way, I've got this down.

Brittany: Are you sure? 'Cause it's okay to admit if you need help with the game.

JTT: \*laughing\* No, no, I've been playing Sonic since the first one, I'll be fine.

Brittany: What do you like best about the game so far?

JTT: The graphics are awesome, everything looks so colorful and real. The 3-D is great, it looks really cool and there's so much stuff going on. And the theme song too, the theme song's really cool.

Brittany: You wanna sing it with me?

JTT: \*laughing loudly\* Oh, no, no way.

Brittany: Oh come on! You sang in The Lion King!

JTT: That...that wasn't me singing.

Brittany: What?!

JTT: That was some other kid, I didn't actually sing for Simba in that movie.

Brittany: \*she is exaggerating how shocked she is\* Wha....no! No, everything I know is a lie!

JTT: Ohhhh, I'm sorry, I'm sorry-

Brittany: I thought you could sing! \*she's pretending to cry\*

JTT: \*laughing as he finishes the stage\* Aww man, I'm really sorry to disappoint you!

Brittany: Ted, Alex, I'm standing here...with a complete fraud...! \*JTT and Brittany both start laughing as they put their arms around each other's shoulders\* This guy is a liar and a fraud, and nothing is real anymore. \*JTT is doubling over with laughter and shaking his head\* Back to you guys.

Ted: Okay, well that was enlightening. And now I'm going to try to talk to Rachel Leigh Cook. Can she sing?

Alex: I have no clue.

Ted: Well anyway.... \*some yelling is heard\* huh? \*he looks up toward the stage\* We gotta....?

Alex: \*looking up too and looks a bit nervous\* Uh, okay, we're being told....we're being told we have to get back from the stage. I don't know why but....

Ted: We better move, that cop looks pissed. \*doesn't know what's going on\*

Alex: Uh, we'll be back in a few moments I guess...?

-excerpted from the GameTV Sonic 4 launch special which aired live on the afternoon of November 7, 1996

"Disaster was narrowly averted today at an event for the release of the video game Sonic the Hedgehog 4, when an explosive device was found near the stage. The bomb was discovered by LAPD officer Mark Fuhrman, who is being called a hero tonight after discovering the device and moving it a safe distance away so that it could be safely destroyed by the LAPD bomb squad. Fuhrman, who works for the LAPD as a detective, had been assigned as the head of security for the event and was making one last sweep near the stage during the Smashing Pumpkins concert when he spotted the device near a stage support, in the middle of a large crowd of attendees, many of them children. Police are now alleging the device had been planted by this man, Eric Rudolph, \*a picture is shown\* who was caught acting suspiciously a half mile from the event and was being detained by LAPD officers when word of the attempted bombing came in. Rudolph is also a suspect in the Centennial Park bombing at the Atlanta Olympics that killed 18 people, after police reported that he took credit for the bombing in an initial interrogation. We'll have more news on these events later in tonight's broadcast."

-Dan Rather, from the CBS Evening News on November 7, 1996

(...)

Ted: Okay, we're back, uhhhh..... I guess.... there was a bomb threat called in or something?

Alex: Hmmmm....

Ted: You know, I did see a Bob-Omb walking around the stage a few minutes ago.

Alex: You're saying Mario had something to do with this?

Ted: Well, who else would it be?

Alex: Okay, well, while we try to solve this mystery, and while Ted keeps trying to get that interview with Rachel Leigh Cook, let's check out more footage from Sonic 4.

-excerpted from the GameTV Sonic 4 launch special which aired live on the afternoon of November 7, 1996

### **November 7, 1996**

Sonic The Hedgehog 4 launches worldwide amidst enormous hype and glowing critical reviews, including a 39/40 from Famitsu and a 9.25/10 from Electronic Gaming Monthly. The game sells over a million copies worldwide on the first day, though it falls short of that mark in North America, selling a "mere" 700,000 (which instantly made it the fourth highest selling Saturn game in North America to date, and that counts the pack-in sales of Virtua Fighter and Virtua Racing). Though Sonic 4 isn't made a pack-in game immediately, a Sonic 4 Saturn bundle is expected to be released around Thanksgiving. The launch is accompanied by a massive worldwide release party that includes 15 North American launch events,

including the main one in Los Angeles (which continues despite an attempt by Olympic Park bomber Eric Rudolph to detonate an explosive device at the event, he later claims that the fact that the Saturn had a game called Devil Summoner was his primary reason for the attempted bombing, this event has major negative repercussions for the Christian right, particularly Brent Bozell's Parents Television Council, which goes under after repeated offensive comments on various news channels draw the mainstream media's ire and bring the organization down by late 1997). Sonic the Hedgehog 4 is the final push that the Sega Saturn needs to surpass the Super Nintendo CD in monthly sales in North America. Indeed, there would never again be a month in which the Super Nintendo CD outsells the Saturn in the territory.

(...)

(Authors' Note: The following segment was contributed by our reader **Mr.E!**)

"So, Sonic 4 was HUGELY hyped in 1996. I remember TV ads every other day, the Saturn Magazine having interviews with the staff. Archie's Sonic Comics (which will play a minor role later on in this review) made a 3-D(!) comic adaptation of the game. (I already looked at that in detail, in its nearly unreadable glory). For my part, I must have seen that E3 footage on tape at least 10 times. Tom Kalinske said it best when he said that Sega was going to make "the perfect Sonic game." It was the most innovative Sonic game up to that point, with beautiful graphics, unparalleled speed sections faster than any before a complex story, little tributes to all of the franchises success, but most notably 3-D cutscenes and boss battles, which were revolutionary for a Sonic game at the time. A game of this quality should have been the game that would truly make the Saturn a breakout. And it did. People credit it with increasing Saturn sales. And it was critically acclaimed. Most publications gave it 9s and 10s, and the burgeoning game website IGN named it one of the best games of the year. It was even a contender for Game of the Year in 1996's EGM awards. This was the definitive Sonic game. This will probably make this a contentious review, because this game is good. But I don't think it is as incredible as people thought at the time. It hasn't aged well.

So, as you may or may not know, this is a side scrolling platformer, with some 3-D elements to it, such as the minigames and boss battles. The graphical elements have been upped from previous games. It is brighter, more colorful, more interesting to look at. There is also the sound effects, which hadn't been heard in a Sonic game before. The music was far better than the other games before it. Hell, what other Sonic game had songs with lyrics to them before? There was also the voice acting, including the always fantastic Jaleel White as Sonic. However, let's go into the main parts of the game. Despite the fact that Sonic now has the ability to do a number of combos, it still hasn't progressed much beyond the same gameplay of the first three games. You still run, you still use the Sonic dash attack, you still jump on the enemies, and you still have to collect rings. It isn't much different from the first three. The only point of innovation is the addition of new characters and the 3-D sections. Yeah, some people hate it, but you know what, it gives variation to these levels, more than the rest of the game has. Although, the fact that you could only play as (new) characters like Amy, Big and Corona for a few levels at best. The 3-D sections still are very fun to play, and provide a nice break from the more typical side-scrolling platformer. However, the 3-D really hasn't aged well. The 3-D looks nice, particularly the backgrounds and the cutscenes. However, let's compare to a game like Super Mario Dimensions. That had full 3-D gameplay throughout the game, and it was far more distinct from other Mario games before it. The 3-D still looks incredible in that game. In this game, it really looks dated, like it feels like a Saturn game, and in the end, it doesn't feel distinct from the other Sonic games. Despite

this, those particular 3-D scenes have more innovation and more technique required than the rest of the game. The end boss fight with the Legendary Champion is still perhaps the hardest boss I have ever had. None of the 2-D stuff is bad, but other than the boss fights, it doesn't have much difference from the core gameplay of the previous three games. Following Sonic 3, considered now to be one of the greatest Sonic Games of all time, doesn't help. The sidescrolling sections are beautiful to look at, that's for sure. But it really isn't as revolutionary as Sonic 3.

The story follows Sonic and his new friends, after Doctor Robotnik creates a device to completely drain the lifeforce from the world. He kidnaps many different animals to fuel the machine, until he could get a hold of the Chaos emeralds, which he could use as a permanent energy source. Sonic, Tails, Knuckles, Corona, Amy, and the new character Big the Cat go to stop him. You travel around a jungle, a desert, some ruins... Yeah, that's another thing. Those are the same level designs that we had in the other three games. Well, at least those ones. Let's be fair to those levels, those have many more worlds, than the other games, and they have many different facets that you could get to with other characters. Starting with the Mobius Zone, we do get more unique level designs. But even then, they are still too reminiscent of the zones in other games, like the Metropolis or Casino Night Zone. The Egg Labyrinth and Legendary Zones are the most interesting levels in the whole game. There, you have to team up various characters to defeat the bosses, particularly Eggman. After you defeat him, the Chaos Emeralds are dispersed, and you can go back, and get them. I didn't even know about the Legendary Zone, until I looked at a guide, and collected all the items I couldn't collect. Of course, there are many references to the SatAM series, including a reference to Princess Sally's death. Let me go on a tangent for a minute. Now, Sega wanted to have the story game be close to the popular animated series. However, most of the creators of that show had moved on from Sonic at that point. So, they went to the Archie Comics, considered the official successor to SatAM, and once again, Ken Penders was brought on to advise the game's story, and make it like the SatAM/Archie series. I talked a little about him during the Archie retrospective, and in my Knuckles Reneges review. Penders was not allowed to bring any of his characters into the game. However, he definitely had influence in the story. Knuckles and Corona's relationship is very similar to that in the comics. Eggman (Yeah, I know people complain about me calling him, but you know what, Eggman and Robotnik are same person.) has a certain degree of sadism that he had in the Comics, particularly with his plot to literally drain the Earth of life itself, and replace it with machinery. Even Sonic's personality had elements of comics in them. There are little allusions to comics in the game's backstory. Penders had a wider influence on the game than people often give him credit for. All while still writing the comic (he wrote that terrible 3-D adaptation of 4, if you recall). In fact, I think the reference to Princess Sally's death eventually caused her death in the comics. I find this particularly interesting. And this game is part of his complicated legacy amongst Sonic fans.

I don't hate this game. In fact, I actually like this game a good deal. I played many times on my Sega Saturn. But, looking back, it actually isn't as good as I remember. Sonic 3 was an amazing game, and it would be hard to top it. Being on the Saturn, a newer console, didn't help matters. It was built as a demonstration of the Saturn, and it works, I suppose, but it really seems disappointing, when compared to the awesomeness of Sonic 3.

Ultimately, it isn't, in many respects, revolutionary, and it does play it very safe. But, once again, it still is a good game. Just one that was unfortunate to have come out when it did. I still have my Saturn, and I still play Sonic 4 many times."

- "Sonic Boom: Blog about a Hedgehog," entry entitled, "Review: Sonic the Hedgehog 4," dated June 11th, 2010

-

### **Sonic The Hedgehog 4**

What else can we say? This game is absolutely incredible. It sets a new bar for graphics and gameplay in a Sonic title, and it's got more levels than any Sonic game before it, providing hours of fun. This game is highly recommended for any Sega Saturn owner and if you don't have a Saturn, here's your reason to get one.

10/10

### **Beat Rush**

Namco's fighting/RPG arcade adaptation is somewhat reminiscent of Guardian Heroes, though it's much faster paced and plays much more like a sidescrolling Tekken than a game like Final Fight. That said, we wish this game were a lot less repetitive, as while the combat is pretty fun, you'll definitely tire of seeing the same enemy types over, and over...and over again.

7/10

### **Uroborus**

This Silpheed sequel dazzled us with some fantastic graphics and the story was quite enthralling, but it was definitely a lot shorter than we would've liked. Uroborus gives us a delicious taste of its beautiful world, but just as we're starting to savor it, the plate is snatched away. Add to the fact that the replay value is somewhat diminished compared to other shooters in its genre, and we were left more than a little disappointed.

7/10

-excerpted from reviews of some of November 1996's Sega Saturn releases in the December 1996 issue of Official Saturn Magazine

-

### **The Official Saturn Magazine Buzz Chart – November 1996**

6. NiGHTS Into Dreams...
7. NHL '97
8. Beat Rush
9. Virtua Cop 2
10. Turok: Dinosaur Hunter

-

\*Ted Crosley and Alex Stansfield are standing outside of an office building, the Iguana headquarters.\*

Ted: We're about to give you guys an EXCLUSIVE look at Turok: Dinosaur Hunter for the Sega Saturn.

Alex: That's right, the game's still a few months away but you're getting a special sneak

peek, so let's go talk to some of the guys at Iguana and check it out.

\*The two of them are inside now with David Dienstbier.\*

Ted: All right, we're inside Iguana headquarters with the man himself, the lead designer for the Turok game, David Dienstbier.

David: Hey guys, so this is where all the magic happens, this is where we've been working on Turok now for more than two years, it's almost ready for release and you guys are some of the first outside people to see it.

Ted: Which means that the millions of people watching at home will be some of the first.

David: Absolutely right.

Ted: \*looks at the camera\* You see? You watch GameTV, we take care of you.

\*So now the three of them are facing a television screen showing footage of the game as one of the testers plays through an early level.\*

David: This is level one of Turok, we've got fifteen levels in all to explore.

Alex: Fifteen?

David: And they're huge. The CD-ROM on the Saturn gave us a lot of space to work with, so we sort of went nuts. Actually, right now we're just working on ironing out the final bugs.

Alex: Right, with a game this big, you know, not everything is 100% at first.

Ted: I have a question. Are there any ACTUAL bugs in this game?

David: You know, it's funny you should ask that question because there is actually a giant acid-spitting praying mantis boss that you have to fight.

Ted: Oh, sweet!

Alex: Oh man. \*shudders\*

Ted: My man Alex here, he's scared of bugs.

Alex: Hey!

David: If you're scared of bugs you won't want to play Turok, there are lots of creepy crawly bug monsters crawling about in very dark places.

\*Scenes are shown of Turok being attacked by dozens of bugs that he's desperately firing his shotgun at to try and kill them before he's eaten alive.\*

Alex: Damn! Why not take THOSE bugs out of the game?

David: \*laughing\* We're going to add even more of those kinds of bugs just for you.

Ted: Well, bugs are cool and all, but what about dinosaurs? There's "dinosaur" right in the title of the game, why not have some dinosaurs to fight?

David: You will be fighting LOTS of dinosaurs in this game, don't worry.

\*More scenes from the game are shown of all the dinosaurs that appear, including raptors, a triceratops, and a brief snippet of the T-rex fight from near the end of the game.\*

David: And you'll be using lots of different weapons to do it. We have over 35 weapons in this game, including a gun that fires a nuclear explosion. That's called the Fusion Cannon, you won't be getting it until late in the game, but when you do...

Ted: \*faking an Arnold accent\* You will crush your enemies, see them driven before you, and hear the lamentations of their women.

David: Exactly.

Alex: What's the lamentation of a dinosaur woman sound like?

Ted: \*making a dinosaur noise\* Like that, maybe?

\*The two are now sitting down in front of a TV, Ted has a controller in his hand and is playing through level one.\*

David: So here you'll be controlling Turok and heading through just the first part of the first level. You're looking for a key so you can open up level two later on.

Ted: So this game...it reminds me a lot of Doom but it takes place in this big, open world, which is really cool.

Alex: Like Doom by way of Zelda.

David: That's sort of a good way to put it, yeah.

\*Ted takes down the first two enemies, some bad guys with pistols, using a pistol of his own.\*

David: As you play through the game, you'll get stronger and stronger weapons, which you keep once you find them. So it's like "leveling up" in a way.

Ted: Kinda reminds me of Metroid if it was a first-person game.

Alex: Do you think Metroid could work as a first-person game?

Ted: Well, if Turok works maybe we'll have our answer. Right now I'm having a lot of fun just exploring this world. It really is a huge world.

David: You WILL have to go off the beaten path to find these things, it's not a straight-forward path.

Ted: Yeah, I can already see where this branches off.

Alex: Is there multiplayer in this game?

David: There isn't, and I know I would've liked to have had it in there, but graphics-wise this game's already pushing it. This game, we feel it pushes the Saturn harder than any game before it.

Alex: It is really impressive looking. Check out these graphics, everybody.

\*The camera zooms in to show the game's impressive 3D visuals, though there is some fog that clouds the path further out, the game does look like one of the best Saturn games so far.\*

David: There is some distance fog but-

Ted: Actually it's kind of a cool effect, to see these creatures coming out of the mist. It's a necessary evil with some of these games, but you guys are using it to your advantage here I think. ...oh (bleep), a raptor! \*struggling to kill it with his pistol\*

Alex: This looks like a hard game!

David: It's definitely a challenge but we think Saturn players can handle it.

\*Ted hands the controller to Alex, who plays for a while longer. The scene then switches to the Acclaim motion capture studio as the two begin the next segment of the interview, talking with the mo-cap coordinator and one of the stuntmen.\*

-excerpted from the November 19, 1996 episode of GameTV

-

*"I think that sometimes when you spend so much time working on a game and it has so much anticipation from fans, it's always going to be a disappointment no matter what you do. I feel, and many others felt, that the game was a masterpiece. I'm very happy with Seiken Densetsu 3 and there isn't a thing I'd change about it."*

-Hiroki Kikuta, in the January 1997 issue of Famitsu magazine

*"So, while developing Biohazard, I kept thinking of ideas for Super Famicom CD games, because Capcom wished for a big seller on both main consoles and they did not have as much faith in Mega Man 7 as they did initially. It did not take me a long time to think of the idea for Iron Combatant. It was the little details that were hard to work out!"*

-Shinji Mikami

*"You run out of ways to push the technology, past a certain point anyway. We saw what Argonaut was doing with Squad Four: Eclipse and we knew that we had hit kind of a wall. And by then we were working with the Ultra and going way further than we ever knew was possible. The development of Donkey Kong Country 3 made Goldeneye a no-go on the SNES-CD. By then, we said to ourselves, 'well, Tomorrow Never Dies will be out before we get this game finished'. But by 1996 we knew for sure that Goldeneye had to be on the Ultra."*

-Ken Lobb

*"Ohohohoho! You heroes greatly amuse me but once I have the power of the God Beasts I will become the new goddess of the world!"*

-Bigieu, *Elements Of Mana*

-

-reviews of November 1996's SNES-CD games in the December 1996 and January 1997 issues of *Electronic Gaming Monthly*

-

"Amidst the huge releases of Nintendo's big holiday tentpole games *Donkey Kong Country 3*, *Squad Four: Eclipse*, and *Elements of Mana* came a mecha action game from Capcom called *Iron Combatant*. Starring a badass woman who piloted an even more badass mecha suit, the game managed to be the third best selling new SNES-CD game of November 1996, and one of the best selling new IPs of the year. It remains one of 1996's most highly regarded games, and started one of Capcom's most enduring franchises. In fact, apart from *Resident Evil*, it was Capcom's most successful home console game of the year, beating out two *Mega Man* titles and a *Street Fighter* game! How the hell did it do it? Never underestimate the power of a good ad campaign."

-excerpted from "The Best Marketed Video Games Of All Time", an article on the website The Business Of Gaming

Though *Iron Combatant* was conceived to be a game that would give Capcom a hit on the SNES-CD to parallel the expected success of *Resident Evil* on the Saturn, it was anything but an afterthought. Designer Shinji Mikami worked on the game throughout the last half of 1995 and the first half of 1996, and he would later on go to say he enjoyed working on it just as much as he did *Resident Evil*. The game was conceived as a shooter/action title, somewhat similar to games such as *Major Hazard*, that saw the player navigating a large battlefield, following mission objectives to take down hordes of enemies. However, it also had a side-scrolling action component for some of its levels, and in other levels, its protagonist Layla even climbed out of the house-sized mecha suit to fight enemies on her own. The game featured anime cutscenes with much higher production values than the much-maligned ones in *Mega Man X3*, and they were even better received than those in *Mega Man X4*, though this is largely in part due to the performance of Layla's voice actress in the first game, Sheri Candela (Candela would later be replaced by the much more well-known and prolific Jennifer Hale in 2000's *Iron Battalion* for the Ultra Nintendo). The game featured fast paced combat, Layla's mech was no lumbering behemoth, it was agile and very well-animated, allowing it to rapidly dash and run across battlefields, taking down hordes of enemies as it went. The combat is sort of similar to a 3-D *Metal Slug*, with dozens of enemies appearing and quickly being destroyed by the mech's many, many different types of weapons. In side-scrolling mode, the combat could be compared to *Contra*, though both Layla and her mech are far more versatile and mobile. The game is also known for featuring large bosses, though the toughest (and most fun) boss fights are largely considered to be Layla's battles against her fellow "Iron Combatants", the six human antagonists who don mecha suits of their own to battle Layla with. The plot of the game is that Layla is a survivor of an apocalyptic war along with her fellow colonists, living in a small village that mostly subsists on finding and salvaging scrap. When a neighboring, much larger empire looks to absorb Layla's village and enslave its people, she alone must defend it using the mecha that she and her friends have managed to unearth. That's pretty much the game, in terms of plot twists there aren't too many, though there are a few instances of friends becoming foes and foes becoming friends, with one character (Layla's love interest Albrecht) even going back and forth between the two numerous times before the penultimate boss battle when Layla is finally forced to put him down after realizing he's irredeemable. The game is also memorable for its magazine ad campaign which featured numerous artworks of Layla just generally being badass. Most of the artwork showed off Layla, her body lined with lean muscle but still very much feminine, clad in a green tanktop and baggy brown pants and riding her mecha suit into battle. Her face became etched into the minds of gamers throughout the year (she was seen as the SNES-CD's equivalent to Lara Croft in a lot of ways) and when the game finally was released, it sold extremely well. Surprisingly, the game did better in North America than it did in Japan, though it was

considered a success in both territories and in Europe when it released there in the spring of 1997. *Iron Combatant* is remembered as one of the best games to be released in the waning days of the SNES-CD, and for those who eschewed the *DKC* and *Mana* hype to give it a try, their curiosity was very well rewarded.

*"Before we begin, this Counselors' Corner video contains some HUGE spoilers for Lufia II: Rise Of The Sinistrals, so if you haven't played the game yet, do NOT watch this! I mean it, it will completely spoil the game's biggest secrets for you!"*

*Okay, a LOT of people have been asking if there's a way to somehow keep Maxim and Selan alive at the end of Lufia II. And the answer is...yes! IF you're willing to put in a lot of work. At the end of the game, Maxim is told by Iris that he can save the world from the falling Doom Island if he can reach the controls at the island's core. However, what she does NOT tell Maxim, UNLESS you have beaten the 100 level Ancient Cave, is that there are three hidden emblems that Maxim can find and press on his way to the island's core. Now, here's the thing. You do NOT need to have beaten the Ancient Cave to activate those emblems. The intention of the game was that you will need to beat the Cave to learn about their existence, but since you have the counselors of Nintendo to help you out, you've just learned about them! However, they are well off the beaten path, and finding and pressing them will take you right to the edge of the time limit that the game gives you, so follow these exact steps to locate them. \*tells you how to reach all three of them in time\* Once you have activated all three emblems, activate the core and the game will end as normal. You'll get the normal ending, the world will be saved, Maxim and Selan's sacrifice is remembered through the ages, yada yada yada. However... now that the emblems have been activated, the game will ask if you want to save outside of Doom Island. Say yes and now you will end up just outside of Parcelyte. After you load the game, there will be a cutscene of an enormous island tower rising up from the ocean in the center of the three Triangle Islands. This is Sinistral Tower and this is the tower you will need to climb and beat if you want to unlock the game's secret ending.*

*Make your way to Sinistral Tower, you can access it via submarine. Sinistral Tower is a 25-floor tower with lots of puzzles and the game's toughest enemies. It is tougher than Doom Island, though, in this counselor's opinion it is NOT tougher than the Ancient Cave. It does not, for example, contain the super cheap Gold Dragons that lurked at the end of the Cave with their instant kill attacks that relied on luck for your party to survive. Now, a detailed strategy on Sinistral Tower would make this video too long for Nintendo Power CD. However, we DO have a guide on how to beat this tower's puzzles in this month's Epic Center, so look for that guide in the magazine. You should be around level 80 to challenge Sinistral Tower, beat up on Cores to get your party to this high level. Once you reach the top, Arek the Absolute, true leader of the Sinistrals, will be waiting. He is incredibly dangerous, with the attack Hell Storm and twice as much hit points as Daos, the normal final boss of the game. Use your strongest special attacks like Octo Strike to take him down. Once Arek is beaten, you'll automatically evacuate Sinistral Tower as it sinks into the sea. Then, just beat the game again as normal. After fighting your way through Sinistral Tower, Doom Island and the Sinistrals will be an absolute cinch. Once you beat Daos, enjoy your well-earned secret ending. We won't show it here, but rest assured, Maxim and Selan make it out alive. Obviously, this isn't the OFFICIAL ending of the game, since the events of the*

*first game show Maxim and Selan falling at Doom Island, but for those of you who can't stand sad endings, this video has shown you how to earn a happier one. Good luck!*

-from the Counselors' Corner video "Can I save Maxim and Selan in *Lufia II: Rise of the Sinistrals?*" in the July 1997 issue of *Nintendo Power CD*

-

## **Elements Of Mana: The Basics**

*Elements Of Mana*, known in Japan as *Seiken Densetsu 3*, is the sequel to the acclaimed RPG *Secret Of Mana*, and plays largely the same way, but with many key differences. The game is an action RPG, featuring real-time combat against enemies. Combat is considerably faster than *Secret Of Mana*, due to the elimination of the need to charge up attacks before using them and also the replacement of combos with special attacks that are charged by damaging enemies. The game continues to utilize the "ring" item system from *Secret of Mana* and also continues the item storage system that appeared in the game IOTL and in *Secret of Mana* ITTL, allowing the player to enter a menu outside of combat to transfer items into their battle bag. Among the differences in the game from the OTL version: like in *Secret of Mana*, three characters can be controlled by humans at the same time, unlike only two as IOTL. All characters, not just magic characters, possess "magic", though physical characters like Duran, Kevin, and Lise have physically-based "magic" abilities, similar to the Force characters in *Chrono Trigger*. The game retains some of OTL's more criticized aspects, such as the random items required for character class changes and the enemies toward the end of the game that can utilize potentially party-wiping attacks. However, Hawkeye's critical attack glitch, which severely reduced his OTL effectiveness, is discovered early in production and fixed. The game's graphics are significantly better than IOTL, and are on par with the graphics in *Legend of Mana*, similar to *Chrono Trigger*, with even better character animation. In battle, attacks display a combo count and a "total damage" count, allowing the player to see numerically the number of hits they've landed in a short span and even enabling them to recover magic points for making large combos.

The biggest change from OTL's version of the game is the plot, and though many of the basic elements of the game remain, many things are fundamentally overhauled, making for a game that's a significantly different experience from IOTL's game. First off, though the six playable characters are the same as IOTL, they now represent three different 'factions', the same factions laid down in the original *Secret Of Mana*: The natural world, the human world, and a balanced approach. Lise, princess of the valkyries, and Kevin, a beastman hybrid, represent the natural world. Charlotte, a half-elf of Light, and Hawkeye, of the thieves' guild, represent the balanced approach, and the human knight Duran and the ice princess Angela represent the human world. Lise and Kevin's main enemy, and the final boss of the game if you choose one of them as your main character, is the Dragon Emperor, who represents the crushing advance of humanity and the oppression that will destroy nature if technological progress is not kept in check. Charlotte and Hawkeye's main enemy is the Dark Witch Bigieu (who replaces the Dark Prince as the main villain from IOTL), who represents the worst mix of Mana energy with human ambition, and Duran and Angela's final enemy is the Mana God and its avatar, the Archmage Seivre, who represent the cruelty of nature and its desire to destroy mankind and halt technological progress. Depending upon the main character you select, the game's action is set off either by an attack by the Empire's forces on the Holy City of Wendel (the natural path), a mysterious series of magical killings in a desert village (the balance path), or an assault by beastmen on the port town of Jadd (the humanity path). Either way, the first half of the game involves your three

chosen characters on the hunt for the eight Mana Spirits as the Empire, the Dark Witch, and Seivre battle both the heroes and each other for control of the world. Once the Mana Spirits are found, the conflict eventually comes to a head at the Mana Holyland, where an enormous battle between the Empire, Bigieu, and Seivre and his army of Beastmen is taking place. Unlike in OTL's game, where two of the factions are totally destroyed in the battle, here, all three main enemies survive, though one of them (Bigieu in the natural path, Seivre in the balance path, and the Empire in the humanity path) is left to battle you after the eight God Beasts are released after the events that transpire. After defeating one of the factions for good at the Mana Holy Land, the game once again branches off into three paths. Eight God Beasts must be defeated, but their locations and forms depend on which path you take through the game. In the humanity path, the God Beasts will appear largely as they do in OTL's *Seiken Densetsu 3*, though they'll be attacking different cities and you must stop them there (after fighting through a dungeon created smack in the middle of the city being attacked). In the balance path, the dungeons where you fight the God Beasts appear largely as they do IOTL, though their forms have changed as Bigieu has mutated them hideously with her dark magic. In the natural path, the God Beasts are being controlled by the Dragon Emperor to absorb the very elements of Mana from the Earth, and you must go into different large factory complexes to battle them, where they will appear as enormous, dangerous machines. During the game, the party, depending on which party members you choose, all have their own opinions about how the world should be, and they will quarrel with one another throughout the game, though unlike the villainous factions, the party members will come to all work together as a team to stop the evil that's taking over the planet. Once four of the God Beasts are defeated, the game takes a side trek as one of the two remaining main villains (Seivre in the natural path, the Empire in the balance path, and Bigieu in the humanity path) threatens to destroy the world and the party must take a break from their quest to defeat the God Beasts in order to handle this new peril. Once the villain is stopped, the game continues, with the remaining God Beasts hunted down and destroyed, only for the main villain to enact the final part of their plan: Seivre unleashes a horrible Mana plague to kill all the humans, Bigieu absorbs the Mana Sword to become a goddess, and the Dragon Emperor launches an assault on the Mana Tree. The final quest involves the party storming the final dungeon and finally defeating the main villain. Whatever happens, the ending is bittersweet: though the heroes all survive and the world is at peace, the events of the game have had severe consequences on the planet, which must recover for 1,000 years afterward.

### **November 11, 1996**

*Elements Of Mana* is released in North America for the Super Nintendo CD. It becomes the second fastest-selling JRPG in North America, after *Tale Phantasia* and ahead of *Chrono Trigger*, but initial sales soon fade somewhat as word of mouth and critical reviews indicate that the game isn't quite as good as *Secret Of Mana*. Though a significant faction of fans do claim the sequel as superior, many more claim it to be a disappointment, despite largely excellent reviews from game publications. It's likely increased competition from other highly acclaimed RPGs that hurts the game's reputation somewhat (as when *Secret of Mana* was released, there weren't nearly as many RPGs to compare it to), but whatever the reason, *Elements of Mana* isn't considered a Game of the Year contender and it doesn't move SNES-CD systems nearly as well as *Secret of Mana* did three years before.

-

The success of the Super Nintendo CD put Capcom in a bit of a bind when it came to their classic *Mega Man* series. They'd intended to release *Mega Man 7* as an SNES cartridge as

their swan song for the system, but seeing how poorly the SNES version of *Mega Man X2* performed led them to scrap their plans for *Mega Man 7* entirely in favor of creating the game for the Super Nintendo CD. When it was finally released, in Japan in April 1996 and in North America in November, it was less of a continuation of the series and more of a "love letter". The game combined elements and brought back Robot Masters from each of the six previous games: Cut Man (MM1), Heat Man (MM2), Top Man (MM3), Pharaoh Man (MM4), Star Man (MM5), and Yamato Man (MM6), revamping them to give them a weakness to one of the five other Robot Masters in the group. After Mega Man defeated these six, a NEW group of six new Robot Masters appeared after Bass and Treble, who'd been Mega Man's allies throughout his battle against the first six Robot Masters, betrayed him. However, Mega Man gained a new ally in Proto Man, who would advise Mega Man in his fight against these six new Masters: Burst Man, Cross Man, Fade Man, Scythe Man, Quake Man, and Gold Man. After defeating the six new Robot Masters, Mega Man then had to battle his way to Dr. Wily, first taking down Bass and Treble, and then being forced to battle against a brainwashed Proto Man before finally doing battle with Wily. The game, which featured graphics on par with *Mega Man X3* and even some animated cutscenes, was considered a mild success, though it's clear *Mega Man's* stature had faded from its days on the NES. Despite this, it was considered to be one of the best games in the series and long-time fans of the series loved the callbacks to the original NES games. *Mega Man 8* would be released in 1999.

-from the article "*Mega Man 7: Tribute Or Trouble?*" on Gamesovermatter.com

-

The fading days of the Super Nintendo CD also saw the fading days of the detective game genre, and with it came the final installment of the *Dark City* trilogy, known by many as the pinnacle of the genre. This game, though not going to the human trafficking depths of its predecessor, still covered some pretty dark territory with a straight-up mob story. *Dark City: A Death In The Family* had the protagonist hired by a mob boss' beautiful daughter to find out the identity of her father's killer. As it turns out, the killer was a rival mob boss who begins coming after the detective's friends and family, leading him to question if he truly desired to remain on the job. It was a well-plotted and well-paced game and though hardcore purists disliked its drop in difficulty compared to the previous two games, most people praised it for being much more intuitive, and they enjoyed that in this game they could actually get to reach the ending, which provided a satisfying book-end to the series as a whole.

The month of November 1996 also saw the release of *Stolen In Shadow*, the sequel to 1995's cult hit *Daughter of Pearl*. In this game, protagonist Corrine Pearl is abducted by an evil syndicate similar to the real life myth of the Illuminati, and in order to earn her freedom, she must unravel the group from within. It's one of the most brilliant character studies in the history of video games, certainly ahead of its time, and also maybe the best deconstruction of the "secret society" trope that exists in all of fictional media. That said, with how brilliant the game's plot and characters were, the gameplay itself was a slog compared with the tight, intuitive gameplay of *Daughter of Pearl*. *DoP's* great action sequences are almost entirely absent in the sequel, and the puzzles in *Stolen in Shadow* are frustrating at worst and boring at best. Those willing to get through the crappy gameplay to uncover the game's secrets were rewarded with an amazing storyline payoff, but the game itself sold horribly and it's a miracle the franchise wasn't killed (it's likely that the low-budget nature of the games enabled the making of further sequels).

It's clear that by the end of 1996, video games were transforming. The detective genre,

which had thrived in the early days of the CD-based systems, was fading away as the novelty of FMV gave way to the rendered cutscenes and advanced animation techniques made possible by systems such as the Saturn and the Ultra Nintendo. Though detective games and visual novels would always have a presence in gaming thanks to the groundwork laid during the fourth (and a half?) generation, they'd remain a niche genre until new technological opportunities arose to bring them back to prominence.

-excerpted from "Detective Games: A Fascinating History (Part 1)", an article on [Gamesovermatter.com](http://Gamesovermatter.com)

-

*"Before we get into the Mask II review, I know I've been getting a lot of comments and e-mails from people wanting to see a review of Space Jam. But to be totally honest, Space Jam just...wasn't that bad of a movie. Michael Jordan's acting was pretty bad but they knew that and put him in situations where it wouldn't be that much of a problem. There were a few jokes that fell flat, but the movie itself was pretty decent and there's not much material I can use for a review. So...sorry, Space Jam haters...or, I guess, fans with a masochistic streak? I won't be doing Space Jam, at least not for the foreseeable future. So with that out of the way, here's my review of The Mask II!"*

-Doug Walker, in the November 13, 2007 episode of *The Nostalgia Critic*

*Space Jam* was released on November 22, 1996. The movie saw Michael Jordan team up with the Looney Tunes to save Looney Tune Land from an alien invasion by playing a game of basketball against an evil group of space aliens called The Monstars. Now, while that doesn't sound like a good concept for a film, the movie itself touched on some of the more interesting aspects of Michael Jordan's personality, making it a decent character study in addition to a reasonably fun film about the Looney Tunes and basketball. The movie spent a lot of time dealing with Michael Jordan's defeat in the 1994 NBA Finals at the hands of the Houston Rockets, and takes place between the 1993-94 season and the 1994-95 season. The superstar, mired in doubt over not being able to lead his team to victory, finds himself leading a new team when the Looney Tunes take him to their world to help them defeat a group of space aliens led by the evil Swackhammer (played by Danny DeVito) who wants to abduct the Looney Tunes to make them part of his interplanetary theme park. By this time, the Monstars have stolen the talents of Patrick Ewing, Muggsy Bogues, Larry Johnson, and Charles Barkley, but when Michael Jordan arrives, he shows off some moves that leave even the giant Monstars in the dust. But Swackhammer, who has been watching footage from the 1994 Finals, decides to have the Monstars complete their team by stealing the talents of Hakeem Olajuwon, the "only man ever to beat Michael Jordan". Once the Monstars steal Olajuwon's talent, it leads to a crisis of confidence for Jordan, who must take a trip back to his childhood home and talk with his father James (played by James Jordan himself) over a one-on-one game of Horse. The sequence, considered the best segment in the film (the two play Horse together while Bugs and Daffy go to retrieve Jordan's old North Carolina jersey) involves the two men discussing what made Michael Jordan so good: it's that he elevates his teammates and enables them to carry some of the weight for him, and that he doesn't have to shoulder the burden of losing alone. The sequence includes a flashback to the aftermath of the 1990 Eastern Conference Finals, where Michael Jordan went back to the team bus and cried in his father's arms, and shows a moment of vulnerability for Jordan that was uncharacteristic of his brash image (Jordan didn't want to do the scenes at first, but Phil Jackson and Jordan's agent both recommended that he show a softer side to fans, who were becoming antagonized by Jordan's arrogance during the 1995-96 season). The pep talk gives Jordan the confidence he needs to lead the Looney Tunes to victory, and the

NBA superstars' talents are returned. The film ends with showing scenes from Michael Jordan and the Bulls' sweep of the Houston Rockets in the 1995 NBA Finals. The movie was well received by fans, crossing \$100 million at the domestic box office. The filming also led to a friendship between James Jordan and Bill Murray, the two can still be seen hanging out at golf tournaments today.

-

### **Donkey Kong Country 3: The Basics**

*Donkey Kong Country 3: Dixie Kong's Double Trouble*, is the third game in the *Donkey Kong Country* series and plays similarly to the first two. It sees Dixie Kong, friend to Donkey and Diddy, teaming up with the young Kiddy Kong to rescue their two friends after the two of them are abducted by aliens. It's the first *Donkey Kong Country* game that doesn't feature K. Rool as a villain, instead the villain of the game is the alien lord Konqueror. The game takes place in the Northern Kremisphere, a land that's similar to Canada and the Pacific Northwest, and involves the two Kongs travelling between locations via various watercraft that are earned throughout the game. Just like the previous two games, *DKC3* is chock-full of secrets, including collectible bonus coins and a secret world, and the two Kongs also interact with the Brothers Bull, 15 anthropomorphic bulls who team up with the Kongs to help them rescue their 15 girlfriend cows who were also abducted by the aliens. If the Kongs can rescue all 15 cows, the Brothers Bull help them to open the secret world, the ninth world of the game. The eight worlds are as follows:

#### *World One: Funny Farm*

A farm-based world that introduces the basic gameplay of the game. The boss battle takes place in a giant barn against a huge barrel named Belcha (the exact same boss from World One of OTL's game)

#### *World Two: Kremwood Forest*

A forest-based world similar to OTL's second world of the same name. The boss of the world is a giant spider named Arich (again, the same as IOTL)

#### *World Three: Barrel Bay*

A huge ice-bound bay similar to Hudson Bay, featuring ice and water based levels. The boss of this world is a giant polar bear who throws barrels.

#### *World Four: Konghenge*

A sprawling ruin/toxic waste laden field where many aliens lurk. The boss of this world is a huge multi-tentacled alien beast named Kongthulhu.

#### *World Five: Razor Ridge*

Similar to OTL's Razor Ridge, with many cliffside levels and sharing the urchin boss Barbos from OTL's game.

#### *World Six: K3*

Similar to OTL's K3 world, this is an ice-bound mountain stage with lots of slippery terrain. The boss of this world is the evil snowman Bleak, similar to OTL.

### *World Seven: Kremling City*

An urban-themed world with some allusions to the Game Boy's *Donkey Kong* game, depicting an attack on a Kremling-populated city by alien forces. The boss of this world is a massive UFO, and after the Kongs defeat it, they actually steal it and use it to enter the Mothership.

### *World Eight: The Mothership*

A sci-fi themed world featuring lots of electrical-based hazards and alien enemies. The final boss of the game is Konqueror himself, a huge alien with lots of weapons.

### *World Nine: Krematoa*

Similar to OTL's Krematoa, this is the secret world of the game with six very tough levels. The final boss is a souped-up version of Konqueror, though he's not as tough to beat as K. Rool in *DKC2*'s secret world.

## **November 18, 1996**

*Donkey Kong Country 3: Dixie Kong's Double Trouble* is released for the SNES-CD, and while it is well received by critics with mostly 8s and 9s, it, like *Elements of Mana*, is somewhat of a commercial disappointment compared to its predecessors. It's a hit, but not a runaway one, and by now it's clear that the SNES-CD is somewhat of an outdated system, despite a continuing stream of quality games. Where the previous two games broke new ground in graphical prowess, *DKC3* looks dated despite being technologically better than the previous two games. Soon after the release of *Donkey Kong Country 3*, Rare announces that *Donkey Kong Country 4* is in production for the SNES-CD for late 1997, despite coinciding with the expected release of the Ultra Nintendo. Rare is determined to make the game as good as it can possibly be so that it serves as a swan song for the now late-age console. Despite the disappointment of *DKC3*, the Super Nintendo CD is still selling quite well, seeing an uptick in sales due to the impending holiday season. With the Ultra Nintendo entering the latter stage of its development, the mood at Nintendo is optimistic, and company brass are getting ready to send the Super Nintendo CD off into the sunset.

-

Brittany Saldita: *Elements Of Mana* is a really, REALLY good game and I love that you can pick your party and that the game differs so greatly based on who you pick. Seriously, it's worth playing through three times for that reason, you get a different experience every single time.

Alex Stansfield: I just didn't like how, especially toward the end, there are random enemies who can and WILL kick your ass. It sucks losing a half hour of work because some enemy you thought was a joke decided to whip out Vacuum Sword and cut your party to ribbons. You call it challenge, I call it bad game design.

Brittany: If you know which enemies can do it-

Alex: No, no, because sometimes they can do it while hiding out behind a tree or something!

Brittany: I have never been killed by an enemy hiding behind a tree.

Alex: I have and it sucked. This is a great game but there are some nasty flaws that *Secret*

*Of Mana* didn't have.

Brittany: And once again, you're bashing a game because you aren't good at it.

Alex: I beat the game three times! It was just a lot harder than it needed to be!

Brittany: If you stay prepared....you can take nine full party heals into battle with you. There's magic to heal and you have nine magic restoring items too. There is no reason you should be caught unaware at any point in the game. You have everything you need to get through it.

Alex: No, this...this is worth docking a point over. I give *Elements of Mana* a 4 out of 5. It is a great game but seriously, seriously flawed.

Brittany: I'm giving it a 5, it's my third favorite RPG of the year.

-excerpted from the November 12, 1996 episode of *GameTV*

Ted Crosley: *Donkey Kong Country 3* is the same fun Donkey Kong Country gameplay that I've come to expect from the series, but man...man, not a lot has changed.

Alex: If it's not broke, why fix it?

Ted: It doesn't need fixed but it could use a fresh coat of paint. And I don't just mean graphically. And even that looks like crap compared to *Sonic 4*.

Alex: I'm gonna agree that this game didn't do much to push the limits like, say, *Sonic 4* did. I was hoping for some kind of 3-D boss fight but the closest thing to that was the snowball fight against Bleak.

Ted: If a snowball fight is the most unique aspect of your game, you've got issues.

Alex: Yeah, and even that snowball fight is wholesale copied from one of the minigames.

Ted: \*laughing\* That minigame is one of my favorite things about this game, seeing Cranky ranting and raving as you kick his ass is hilarious. The game had a lot of good humor, but it just didn't mix things up enough to really wow me. I'm giving it a 3.5 out of 5.

Alex: I'm gonna be a bit more generous and give it a 4, but wow, this is the first *Donkey Kong Country* game not to get a *GameTV* recommendation.

Ted: Well, if you want me to recommend you, you gotta mix it up a bit more.

(...)

Brittany: We're about to give you all an exclusive first look at *Turok*, but before that, we've got a *GameTV* exclusive music video that we put together, featuring some of the fine ladies of this holiday season's biggest games. Here it is, set to Blackstreet's hit song "No Diggity", this one goes out to all the girls out there!

\*cue a music video of video game moments featuring Lara Croft from *Tomb Raider*, Rebecca from *Squad Four: Eclipse*, Corona and Amy Rose from *Sonic the Hedgehog 4*, Dixie Kong

from *Donkey Kong Country 3*, Lise, Angela, Charlotte, and Bigieu from *Elements of Mana*, and a few others, set to a somewhat abridged version of Blackstreet's *No Diggity\**

SOUL EDGE- \$29.99

TEKKEN- \$19.99

-excerpted prices from Best Buy's day after Thanksgiving sale ad on November 29, 1996

*"These shoppers are waiting outside of Wal-Mart this morning for the doors to open on what is considered by many to be the first shopping day of the Christmas season. Dubbed 'Black Friday' by some within the industry, so-called because it is said to be the first day that retailers turn a profit during the year, it's ranked as one of the year's top five shopping days since the early 90s, and for the last few years retailers have begun taking advantage of the day by offering sales on certain popular items. Appliances, furniture, and electronics all see price cuts today. One of the biggest selling items is expected to be the Sega Saturn. It normally retails for \$300, but today in stores like KB Toys, Best Buy, and right here at Wal-Mart, it's being offered for \$250, fifty dollars below its normal retail price. With hot games like Tomb Raider and the brand new Sonic the Hedgehog 4 being offered on sale as well, Sega games are going to be a hot commodity this holiday season. We're also seeing Star Wars toys becoming popular again in the wake of a theatrical re-release of the trilogy beginning in January of next year...."*

-excerpted from a report from KWOC-TV on the morning of November 29, 1996

-

Here's a list of the Nintendo Power covers for 1996.

January 1996: The Year Of The RPG

February 1996: Battletoads: Dark Queen

March 1996: Chrono Trigger

April 1996: Fire Emblem: The Holy War

May 1996: Ken Griffey Jr.'s Winning Run

June 1996: Tale Phantasia

July 1996: E3 Special

August 1996: Super Mario RPG

September 1996: Game Boy Color

October 1996: Squad Four: Eclipse

November 1996: Elements Of Mana

December 1996: Donkey Kong Country 3: Dixie Kong's Double Trouble

-

*"While sellouts are impressive, we also wanted everyone who wanted to buy a Saturn for Christmas to be able to have one that year. So that was a BIG focus for 1996, keeping supply well ahead of demand and keeping our fans happy. Because when our fans were happy, we were VERY happy."*

-Tom Kalinske, in a 2013 interview with Kotaku.com about Sega's 1996 holiday season

*"And while Sega does have a huge dearth of arcade hits and fighting titles, for those looking*

*for Star Wars games, Nintendo's your best bet, with ports of some of the best PC Star Wars games and a Star Wars fighting game planned for later this year."*  
*-quoted from "Comic-Consoles: Which One Should A Sci-Fi Fan Buy?", an article in the January 1997 issue of Wizard magazine*

-

"If there's anything I remember about Christmas '96, it was Sonic the Hedgehog. Sonic was EVERYWHERE. You couldn't go into a mall, a department store, or a toy store without seeing Sonic and his friends plastered over everything. Not just Sonic 4, either, but toys, clothes, all kinds of stuff with Sonic on it. To a lesser extent, Sega was everywhere that year. Resident Evil, Tomb Raider, NiGHTS, in plenty of stores you had signs and posters with all the characters from those games on them. Sega was really trying to hammer home that the Saturn was the console with all the coolest games and all the best characters, and at the time, they really were. Nintendo didn't have much to push that Christmas, I think I remember Dog Dash and Squad Four showing up a lot but that's about it and those ads looked lame next to Sega's. Even on TV, Sega was everywhere. You had Sonic being advertised during kids' shows, and Resident Evil and Tomb Raider advertised on prime time. I saw huge lines at Saturn demo kiosks and kids looking at the posters in awe. I don't think Sega was trying to get Genesis owners to buy the Saturn, they were already gonna do it. I think they were trying to lure in people who were getting sick of waiting for the Ultra Nintendo to show up. All those cool posters, they were saying 'hey, sick of the same old crap from Nintendo? Check out the cool games you could be playing with us'. I'm sure with a lot of people it worked."

-a Youtube comment on the video "1996 Sega Christmas Ad!"

## Once Again, Video Games Among Top Selling Toys This Holiday Season

It's another major Christmas for retailers, with sales up significantly from last year. And once again, video games are among the top-selling devices. Topping the list of biggest sellers is the Sega Saturn, a next-generation game console with hit games like "Sonic 4" and "Resident Evil". The Saturn is proving to be a major hit despite the steep \$299 price tag, and it's hard to find in some stores. Sega says that the asking price is justified due to the advanced technology under the hood, and Sega seems to be banking on the popularity of its mascot Sonic the Hedgehog to drive family sales. It's not just kids buying the Saturn: adults make up a majority of players, and games like "Resident Evil" and "Tomb Raider" are giving them plenty of reasons to play. In a close second, however, is the ever-popular Nintendo, driven this year by "Squad Four: Eclipse" and the latest game in the "Donkey Kong Country" series. Their Nintendo CD device is much cheaper than the Saturn, the system is selling for \$99 and comes with a game and two controllers. However, many shoppers are holding out for the newest Nintendo device, which is said to play brand new games and the games of the current Nintendo CD. Nintendo does have an advantage: it's the only system selling the new Star Wars game, "TIE Fighter", which puts you in the shoes of an Imperial soldier who must choose whether to lead a rebellion against the Empire or defend his life. With Star Wars one of the fastest selling toys this holiday season due to an upcoming theatrical re-release of the original trilogy and rumors of a prequel movie, those games could give Nintendo the edge on its edgy rival.

-excerpted from an article in the December 17, 1996 Chicago Tribune

-

\*A girl (Rachel Leigh Cook) enters a big, dark room lit by screens with video games playing on them. The games are Nintendo games, and she looks at one of the screens and scoffs.\*

Girl: You're still playing games on Nintendo?

\*The girl looks across the room to a pedestal with a Sega Saturn on it. She takes a controller and turns the system on. New screens pop up, showing footage from Sega Saturn games in comparison with the Nintendo footage.\*

Girl: Get a Sega Saturn.

\*The girl begins to play through the sweeping landscapes of Panzer Dragoon II Zwei.\*

Girl: What does the Saturn do? It does this.

\*Rapid-fire footage from various Saturn games begins to flash on the screen.\*

Girl: And you can't do this on Nintendo.

\*Footage from Sonic the Hedgehog 4 begins to play, showing Sonic zooming through the beautiful 3-D world and battling the huge bosses. A TV displaying footage from Dog Dash begins to spark before going static.\*

Girl: Or this.

\*Footage from Daytona USA begins to play, showing a car racing smoothly around the

track. Footage from SNES-CD's NASCAR Racing is playing on another TV that soon malfunctions\*

Girl: Or this....

\*Footage from Tomb Raider plays, showing Lara Croft leaping across a chasm and shooting at a tiger. Footage from The Legend Of Zelda: Ocarina of Dreams plays before the TV sparks and goes staticy.\*

Girl: Or this.

\*Footage from Resident Evil plays, showing Jill nearly getting tackled by a zombie. Footage from The Basement is shown alongside it before the TV showing it sparks and goes out.\*

Girl: Or this.

\*Footage from NiGHTS plays, showing Nights flying through the colorful world. Footage from Super Mario RPG plays before the TV showing it sparks violently.\*

Girl: And don't even TRY doing this on Nintendo.

\*Footage from Panzer Dragoon II Zwei plays, showing the beautiful graphics of a complex shooting section. The TV next to it showing footage of Squad Four: Eclipse sparks violently and then explodes, throwing a shower of sparks that the girl walks through like a badass.\*

Girl: \*looking right at the screen as the TVs with the Sega footage continue to play behind her amidst a bunch of sparking, smoking, and broken TVs that used to be playing Nintendo footage\* Saturn does...what Nintendon't.

\*cue the Sega scream\*

## **SEGA!**

-a commercial that aired on North American TV beginning in late November 1996 and continuing through March 1997

-

Panzer Dragoon II Zwei inhabits a beautiful world that definitely builds upon what the first game achieved in both technological prowess and gameplay innovation. Unlike the previous game, there's no set path through this one, with numerous paths to take and levels to conquer. And your dragon changes as you play, enabling you to take on more and more challenges. Our only complaint with the game is that it's fairly short, with even a novice player usually able to play through the game in less than two hours. Yes, there are multiple ways to play, so there's some replay value present, but we were disappointed that this thrilling ride ended so soon, as we were expecting a game with far more epic length. Despite this shortcoming, the game itself is a masterpiece. It's easily the best looking title on the Sega Saturn and that's definitely saying something. The music is atmospheric, beautiful, and poignant. The game thrilled us at times, but we wish there could have been more.

Our score: 9/10

(...)

Tempest Revolution is one of the year's most pleasant surprises, but in the end we shouldn't have been all that worried. Tempest 2000 is known as the best game on the ill-fated Atari Jaguar, receiving ports to the PC, the 3DO, and the Super Nintendo CD. When we learned that the Saturn wouldn't be getting a port of the game, it was disappointing, but when we learned it was because Jeff Minter and his team were making an all NEW Tempest game for the Sega Saturn, with the same amazing arcade-style shooter gameplay but also featuring an amazing new soundtrack and, get this, an actual storyline? We were blown away, and when we played this game, we were doubly blown away. Tempest Revolution may not be as pretty as, say, Panzer Dragoon II, but it more than makes up for it with its incredibly addictive gameplay, its huge supply of stages, and a compelling storyline featuring a crew of likeable space cadets on a seemingly impossible mission against endless waves of enemies. The boss stages are exciting and fun, and the game itself features a variety of addictive modes, including an endless mode (for high score purposes) and a four-player competitive multiplayer mode. It also features a hidden easter egg in the form of a port of the original arcade version of Tempest! All the hard work Minter's team put into this amazing game was worth it. For our money, this is one of the best Sega Saturn games ever made.

Our score: 10/10

-excerpted from Official Saturn Magazine's reviews of two of December 1996's Sega Saturn games in the January 1997 issue

-

### **Sega NetLink Is Here!**

Releasing in stores on December 1st, the Sega NetLink accessory will let you play online with millions of Sega fans from all over the world! For only \$129.99, the device will add a 28.8 kbit/s modem to your Sega Saturn, which works with your standard phone line to hook up your Saturn to the internet. Initial games compatible with the device include Daytona USA, Virtua Fighter 2, Tekken, and Tempest Revolution, with more games coming later on. Sega also plans to sell a special Sega Saturn bundle including the device and Virtua Fighter II for \$379.99.

-excerpted from an article in the December 1996 issue of Official Saturn Magazine

-

Bahamut Lagoon finally launched in the USA today! My first impressions of the game are that the graphics, while not quite as good as in Chrono Trigger, still really fit with the game's mood and style. The gameplay is quite fun, comparable to Fire Emblem but maybe more complex? The voice acting is...interesting. Working Designs has done work for Nintendo before with Telenet Japan's game but this is the first time they've done work for Squaresoft and it's an interesting mix. Basically, the game has briefly voiced skits/cutscenes in between levels and then characters say short lines on the battlefield as they're about to attack or if they're about to get killed. Some of the voices don't seem very appropriate for the characters, but I haven't seen all the characters because I've only played a little ways into the game. I'll have a full review some time down the road, but this game may take quite a while to get through.

-from The UnOfficial SquareSoft HomePage on December 2, 1996

RPGamer.net: So, Bahamut Lagoon was your first collaboration with Squaresoft. It wouldn't be your last, but what was it like as opposed to working with Telenet Japan or Game Arts?

Victor Ireland: Squaresoft wanted to exert a lot more control, as I expected. There weren't any pop culture jokes in the game, for example, though we did get to have some fun with a few of the characters. We got to inject some humor into it, characters like Anastasia and Mist got some really funny lines and so I think there's some well-needed comedy relief in certain parts, which is good as it's a really serious game.

RPGamer.net: You were also considering doing Treasure of The Rudras around that time, but nothing seems to have come of it.

Victor Ireland: Well, unfortunately Squaresoft decided not to bring that game over. It's a real shame, since we'd have been willing to do it. Still, I'm glad that because of us, certain games were brought to the West that Squaresoft would've otherwise neglected.

RPGamer.net: I know you were all really busy at the time with all the work on Tale Phantasia and Bahamut Lagoon. Did the work on those games teach you anything when you did the work on Starseekers of Exion?

Victor Ireland: We learned a lot working with Squaresoft and that definitely carried over to Exion, it also carried over into our work on the two Lunar games for the Ultra. I got to be good friends with Ted Woolsey and we even collaborated on a couple projects together later on. Localizing games, it's definitely an art and I know a lot of the best cut their teeth on the Super Nintendo CD.

-excerpted from RPGamer.net's 2003 interview with Victor Ireland

-

The end of 1996 saw the release of two of the Super Nintendo CD's most obscure cult hits, games that sold extremely poorly but were embraced by devoted fanbases and critics alike.

Telenet Japan's Strange Seed was one of the last pure FMV games to be released, and one of the most beautiful. The game plays similarly to other FMV games such as Time Gal, though it also has similarities to the much more commercially successful Galaxy Fraulein Yuna series on the Sega Saturn. It is the story of Cassandra, a mysterious young woman who possesses the universe's last Khyber Seed in her body, a seed that if planted at the core of the galaxy will bring peace and prosperity to all the worlds within it. Cassandra must reach the galactic core before two powerful civilizations tear each other apart. It's a somewhat cliched plot but the ending, which features a journey into a black hole and through space and time, is truly inspired and the game has a bittersweet conclusion that fans still debate about to this day (though the Ultra Nintendo sequel, released as a traditional JRPG, answers most of the questions raised).

The other game released that month that was very good and yet very unsuccessful commercially was Aria. The game was the first three-disc Super Nintendo CD game (indeed, it was one of only two three-disc games for the SNES-CD to be released in North America, the other being Game Arts' RPG classic Starseekers of Exion). The game consisted of 14 semi-platforming levels, though the game wasn't so much a platformer as it was a rhythm-based game, with a different song for each level. The game featured 14 lyrical songs, all of

them sung in Japanese, with more of the song revealed as the player pressed buttons in time with the music, guiding a young girl named Aria through 14 mysterious and visually stunning levels. The game was actually somewhat hyped before its debut, appearing at E3 1996 and in numerous gaming magazines in the months leading to its release, but as the release date approached, the hype withered and it released with virtually no fanfare. The game sold well enough in Japan to recoup most of its large (for the time) budget, scoring a 36/40 in Famitsu and being quite well known when it was released there in spring of 1996, but its US release saw it sell less than 10,000 copies. It's a shame, because those who have played it call it the best rhythm game of all time and some even call it one of the best video games of all time, period.

-excerpted from "Unearthing The Classics: The SNES' Most Obscure Games", posted on Alex Stansfield's blog on November 19, 2013

-

(Author's Note: We have to thank reader **Lavanya Six** for his Star Trek: Rubicon idea! I definitely think that it'll have some interesting ripple effects down the road...)

"It's a full-on fuckin' horror renaissance, man. Between that zombie video game, that vampire show on TV that's coming out soon, and *Scream*, people can't get enough of being scared shitless. It's great. This is my time and I'm lovin' every minute of it."

-Wes Craven, in an interview in the January 16, 1997 issue of *Rolling Stone* magazine

This Friday there's two big movies coming to the box office, and we've got the scoop on both of them and which one you should see. First up, there's *Scream*, a sort of spoof horror film directed by Wes Craven. Featuring a group of teenagers who are being stalked by a mysterious killer who has an affinity for scary movies, it's not only a thrilling movie in its own right but it's an excellent skewering of its own genre for a generation who's increasingly aware of cliches and tropes in a genre that's become rather stale as of late. Next up, it's *Star Trek: Rubicon*, a new *Star Trek* film with a bit of Roman flavor to it, as Picard and his crew end up in the time of the Roman Empire, just before Caesar famously crosses the Rubicon and starts the Roman civil war. Ed Harris puts in an excellent performance as the then-general Caesar, while Patrick Stewart is always solid as Captain Jean-Luc Picard. The film itself, however, which sees the crew of the starship *Enterprise* teaming up with Caesar's legions to battle a Borg invasion, is somewhat of a disappointment, and the novelty of the crew in Roman times soon degenerates into a bit of a slog, especially since it seems like they just took what could've been a two-part episode of the show and turned it into a movie. The special effects and costumes are decent, which helps make this film worth it for *Star Trek* fans but not necessarily a must-see for anyone else. If you have to go to one movie this weekend, make it *Scream*. You'll be on the edge of your seat and you'll even get a few laughs when you're not screaming your head off.

-excerpted from a KERO-TV entertainment news report on December 20, 1996

-

Brittany Saldita: Squaresoft's *Bahamut Lagoon* is a lot of fun and compared to other strategy RPGs, it's a lot faster paced which was a big plus for me.

Gary Westhouse: I liked it, but.... there were some issues. I like to explore in RPGs and the format the game took, for me it just wasn't very much fun. Even in *Fire Emblem* I felt more freedom to roam the world.

Brittany: And there is something that really disappointed me and that was the voice acting. And I'm surprised, because this is the same crew that did Tale Phantasia, so what gives? Maybe there just wasn't as much and they couldn't get into a good rhythm? I know the game has a lot of characters.

Gary: Right, sometimes it was hard to keep track of what was going on and that took me out of the action too.

Brittany: I liked feeding my dragons, it was kind of like feeding the capsule monsters in Lufia II but even more involved.

Gary: Yeah but I just wished I could get them to follow simple orders!

Brittany: On the one hand I guess that's part of the idea on the game but on the other hand I agree with you, sometimes the dragon didn't do what I wanted and it really pissed me off. But once I learned to feed it in a way that made it obey me, it did help. Ultimately, Bahamut Lagoon can be really rewarding if you're willing to put in the work and I give it a 4 out of 5.

Gary: And I give it a 3.5.

(...)

Ted Crosley: Panzer Dragoon II Zwei is an amazing game! Unfortunately, it MIGHT not be worth 60 bucks.

Alex Stansfield: And I felt the first game had this problem too, that it was just too short!

Ted: Know what you're getting into, if you buy this game you will have fun...

Alex: TONS of fun.

Ted: BUT you are going to plow through the game pretty quick. It's challenging, but not so much that you're likely to get stuck, and so what happens is that you'll likely beat it in a couple of hours.

Alex: That said, you should play through it and I played through it more than once to see all the levels. It's stunningly gorgeous...I mean absolutely on another level in terms of graphics, it looks amazing.

Ted: You can see out to the horizon, the sky effects are outstanding, the water looks great, the Saturn is really showing off what it can do. So definitely buy it and play it, but yeah, just watch out that it'll probably be over all too soon. I give the game a 4.5.

Alex: I'm giving it a 4.5 too. Short but oh, so sweet.

-excerpted from the December 3, 1996 episode of GameTV

(...)

Ted: Star Wars: TIE Fighter, what did you think?

John Walden: This game kicked ass! You know I'm a big Star Wars fan and this game, I've played it on PC already but the SNES-CD version, just as good.

Ted: Yeah, they did the same control scheme as they did for X-Wing and it translated over really well. As far as ports go, it's a superb one. The sounds are all there, the graphics are pretty much identical, it's one of the best shooters available for the system.

John: Right, and everything's there, all the missions, the training simulator, it's just this big huge package for everyone who loves Star Wars.

Ted: I can already tell what you're gonna give this game, I'll go ahead and give it a 4.

John: It's a 5 for me. The PC version is just about my favorite game ever and this is one of my top games of the year for the SNES-CD.

Ted: And speaking of Star Wars, we're gonna give you guys a GameTV exclusive look at some cool stuff from Star Wars and Nintendo that's coming down the bend for next year.

John: We've got all the info on the brand new fighting game by Rare coming out in 1997: Star Wars: Masters of Juyo. And we've also got a look at the Star Wars-themed Super Nintendo CD.

(...)

John: \*standing with a representative from LucasArts as they show off the Star Wars SNES-CD on a pedestal, it's designed to look like the Millennium Falcon\* Now this thing is really cool.

LucasArts Rep: Not only will you get a special limited edition Super Nintendo CD, but this will come with three games: Star Wars: X-Wing, Super Star Wars Trilogy, and Star Wars: TIE Fighter. It'll retail for \$159.99, and we're planning to release it around the time that Return of the Jedi will be hitting theaters next year, so some time in March you'll be able to get your hands on this.

John: This is amazing, is this working right now?

LucasArts Rep: Yep, you can plug it in and play it right now.

John: Awesome. I think I'm gonna fire up some TIE Fighter on this thing, you guys stay tuned as we've got a review of PowerSlave for the Sega Saturn, coming right after this!

-excerpted from the December 10, 1996 episode of GameTV

(...)

Ted: You know, I was pretty disappointed with this. I've always liked Duke Nukem but I think they should've done something a bit lighter instead of trying to port over Duke Nukem 3D.

Alex: I think after Doom was ported over so well, 3D Realms thought "maaaaaaaaaaybe this thing can play Duke 3D". And it can, and it's a fun game, it's just not as fun as it is on PC.

Ted: It's a decent port. I liked playing it, it's a fun game. I can't complain about the game itself, the game's fantastic and if you've got an SNES-CD and nothing else, go for it. It's not Alone In The Dark. They did a decent job.

Alex: Yeah, if that's all you've got....I mean, the Saturn version drops in February so I'm probably getting that.

Ted: Well, if you've got a Saturn there's no need even to be watching this, you've wasted five minutes of your life.

Alex: We are handsome enough guys that watching us for five minutes is not a waste.

Ted: You're right about that. In fact, we're so handsome that we're going to spend the next minute just posing and flexing so you all feel you've gotten your money's worth. \*begins flexing his arms and making manly grunts alongside Alex\*

Brittany: \*yells from off the screen\* Take your shirts off!

Alex: We don't love our viewers THAT much. \*stops posing\*

Ted: But yeah, Duke Nukem 3D is a great game and there's not much that can change it, even a low frame rate. I'm giving it a 3.5 out of 5.

Alex: I'm gonna be a little less generous and give it a 3. Good game, solid port, but if you've got a Saturn you can wait.

-excerpted from the December 17, 1996 episode of GameTV

### December 31, 1996

"And the ball is about to drop live here at Times Square!" shouted Dick Clark jubilantly, standing on a balcony overlooking the massive gathered crowd. Flanking him were a number of celebrities, including recording artist Selena who had just performed a concert to promote her new album which would be debuting next month. "Just 60 seconds to go now until we ring in 1997!"

Selena smiled and clapped her hands, giving a loud cheer. Nearby was Celine Dion, the woman whom the media had been trying to provoke a feud between, due to the fact that their albums, Selena's Dreaming Of You and Dion's Falling Into You were front-runners for that year's Album of the Year Grammy. Despite the prodding, the two women had become friends, albeit not terribly close friends, due to their shared love of singing and music and the fact that both of them were enjoying a great deal of success without their sales seriously affecting each other's.

"50....49....48....!" Selena counted down, reaching over to take her husband Chris' hand. The two of them had remained extremely close, especially since Selena's near deadly ordeal nearly two years earlier.

"45...44...43..." Also up on the balcony was NBA superstar Shaquille O'Neal. His Magic had been going through somewhat of a rough patch and were currently in a three-way battle with the Celtics and Heat for number one in the division, but he and Dennis Rodman were the top rebounding tandem in the league despite their personal friction. "Hey, hey, Dick Clark, uh, what about my new album coming out soon?"

Dick Clark laughed. He wasn't much of a hip-hop fan, but Shaq was naturally charismatic and the two had been cracking jokes whenever the camera was off them.

"Well, you might not be as good of a singer as Selena here..."

Selena and Shaq both laughed.

"I can't rap though, I think he's very good, maybe my husband would like to give rapping a try though?" asked Selena, playfully nudging her husband as the ball continued to drop to usher in the new year.

"Give it a try, come on, make a New Year's resolution right now that you'll give rapping a try. I wanna hear Celine Dion make a resolution too."

"No, no, no way! Ahahahaha....I would be terrible!" laughed Dion, taking a glance at the big countdown clock. "20... 19... 18...."

"We are just moments away now from bringing in 1997! 15! 14! 13! 12! 11!"

Everyone in the balcony began to count down now.

"10! 9! 8! 7! 6! 5! 4! 3! 2! 1! HAPPY NEW YEAR!!!"

Everyone in the balcony and everyone down in Times Square began to cheer as confetti fell from the sky and "Auld Lang Syne" started to play. Selena and her husband Chris shared a passionate kiss in the balcony while Dick Clark and his wife did the same. Out above Times Square, among the dozens of advertisement signs for various companies and products, were two that might catch the eye of a gamer watching the festivities. One was a large, colorful electronic light advertisement for Sonic the Hedgehog 4. The other, a large black banner with a cryptic logo on it, which read "Ultra is Coming..." with "1997" under it at the bottom of the banner.

Across the country at the Kalinske household, Tom Kalinske didn't notice the Ultra ad. He was too busy kissing his wife as his daughters blew streamers and clapped their hands in excitement for the new year. After the kiss was through, he looked at his oldest daughter and then his other two, trying his best to form a stern "dad" voice.

"All right, we let you guys stay up, but it's time for bed, head up there and get ready."

"Oh, I think we can let them stay up for another half hour," said his wife with a smile. "They're so excited now they won't be able to fall asleep until then anyway."

"...okay, just a half hour and then bed," said Kalinske, who heard the phone begin to ring. "Who'd be calling now...?"

He walked over to the phone and picked it up. It was his boss at Sega of Japan, Hayao Nakayama.

"I hope I did not wake you, though I am sure you are up celebrating the New Year, am I correct?"

"Ahaha, yes, that's right," said Kalinske, hoping he wasn't being called about some urgent news regarding the Saturn. It had been doing so well as of late, the sales figures they'd gotten predicted that Sega would win its first holiday over Nintendo since 1992, the year Sonic the Hedgehog 2 was released. Once again, the blue hedgehog had brought victory to Sega, and Kalinske hoped the streak would continue even as Nintendo prepared to release a new generation console. "Something going on?"

"Only that we are having our best sales year in the company's history and it is largely thanks to you, my friend," said Nakayama, a gracious tone in his voice. "I simply called to thank you for everything you have done for this company. We could not have enjoyed such success without you. I wish you and your family the happiest of new years."

Kalinske couldn't help but be a bit choked up at what he was hearing. His job at Sega hadn't always been an easy one, he'd steered the company through some of its lowest times, and the end of the previous year seemed like the biggest struggle to date. But just a year later, Sega was thriving, the Saturn was the word on everyone's lips and Sonic the Hedgehog 4 was the biggest game in the world. He didn't know what the future would bring, but the present was extremely bright.

"Uh....um, thank you....and...happy new year to you too, sir."

"Enjoy this time with your family. We'll meet in two weeks to discuss our plans for 1997. For now, please, get some rest and have some fun. You have earned it. Thank you again."

"I certainly will," said Kalinske, smiling as he set the phone back down. He turned to his family.

"Who was it?" asked his wife, wondering what could possibly be making her husband smile so big.

"It was my boss, he said happy new year and have fun and I'm the luckiest man in the world to have you guys."

Tom Kalinske gave each of his daughters the biggest hug he could give before giving his wife another passionate kiss.

"Are you guys trying to make us go to bed?" groaned Kalinske's middle daughter, rolling her eyes before covering them up with her hands. "Geez guys!"

*"1996 is always going to be remembered as the Saturn's year. It's when Sega showed off the system's full potential and when the third parties were churning out hit after hit. Sonic 4 might have aged a bit, but games like Resident Evil and Tomb Raider had timeless appeal."*  
-Dan "Shoe" Hsu, in an editorial in the January 2002 issue of *Electronic Gaming Monthly*

*"In retrospect, was pushing a 'year of the RPG' really the best way to counter the Sega Saturn? Despite the popularity of the Final Fantasy games and Secret of Mana, role playing games were still a niche genre at the time. Also, though games like Tale Phantasia and Chrono Trigger frequently pushed the limits of what the Super Nintendo CD could do, 2-D RPGs tended to be a somewhat technologically backward genre of games, and compared to games like Resident Evil and NiGHTS, looked downright primitive to new buyers trying to choose between the SNES-CD and the Sega Saturn."*

-from "Games With James #17: Saturn vs. Ultra Nintendo", on the Angry Video Game Nerd website on August 14, 2013

*"Choosing our overall Game of the Year was no small task. In recent years there's been a dominant game: Street Fighter II in 1992, Secret Of Mana in 1993, Donkey Kong Country in 1994, and The Legend Of Zelda: Ocarina Of Dreams in 1995. Not so this year, in fact, there were more than 20 games we found worthy of consideration for this award, spanning the SNES-CD, the Sega Saturn, the Sega Genesis, and even the Game Boy. It was our toughest decision yet, and we know not everyone will be happy with our selection."*

-from the January 1997 issue of *GameInformer*, before choosing *Squad Four: Eclipse* as their game of the year, the only major publication to do so

*"Is the Ultra Nintendo out yet? \*laughing\* I need something to do when Matt's away shooting Titanic."*

-Robin Williams, from an interview on the set of *Good Will Hunting*

-

**Top Selling Super Nintendo CD Games of 1996** (pack-in sales included, only North American sales during the 1996 calendar year are counted)

1. Donkey Kong Country
2. The Legend Of Zelda: Ocarina Of Dreams
3. Super Mario World 2
4. Donkey Kong Country 2: Diddy's Kong Quest
5. Squad Four: Eclipse
6. Dog Dash
7. Super Mario World 3
8. Tale Phantasia
9. Super Mario Kart
10. Chrono Trigger

-

**1996 Nintendo Power Editors' Choice Top Ten SNES-CD Games**

1. Tale Phantasia

*Telenet Japan's beautiful RPG blew us all away with its engrossing battle system and epic storyline spanning space and time.*

2. Squad Four: Eclipse

*The sequel to 1994's hit game broke new ground for what the Super Nintendo CD could do as the four heroes battled an alien invasion.*

3. Chrono Trigger

*Squaresoft's time-travel RPG was a true masterpiece, following Crono and his companions on a journey across millions of years to battle a world shattering space parasite.*

4. Super Mario RPG

*In the Year of the RPG, even Mario got his own epic adventure! The plumber's quest to battle Smithy was a hit with Nintendo Power staff and players alike!*

5. Donkey Kong Country 3: Dixie Kong's Double Trouble

*Squad Four wasn't the only team battling an alien invasion, as Dixie Kong and her new pal Kiddy battled to rescue Donkey and Diddy from some nasty extraterrestrials.*

## 6. Fire Emblem: The Holy War

*Tactical battling took a big step forward in this strategy RPG spanning two generations of heroes!*

## 7. Eternal Night

*Konami's dark journey took a combat-ready noble through deep dungeons and even into the depths of the underworld to battle some truly scary foes.*

## 8. Elements Of Mana

*Square's sequel was a real delight, giving us a choice of heroes and a step-up in graphics and sound as we battled to take down eight fearsome elemental beasts.*

## 9. Kirby Super Deluxe

*Kirby came back in a big way with ten games in one, ranging from classic Kirby action to a wonderful RPG to a super-addictive racing mini-game!*

## 10. Dog Dash

*The Super Nintendo CD went to the dogs in this heartwarming tale that saw a young boy having to rely on man's best friend to make it home.*

December 21: I Believe I Can Fly by R. Kelly  
December 28: I Believe I Can Fly by R. Kelly

(Author's Notes: Noche Amor, Endless, Beyond the Blue, and Car Crash are all original songs TTL. Toni Braxton's "Unbreak My Heart" is completely butterflied away, she just never writes it and consequently is much less famous than IOTL. Beyond The Blue is the theme from *Superman: Last Son Of Krypton* (it is a much, much better Superman song than that godawful Five for Fighting song from IOTL).)

-

### **Electronic Gaming Monthly Editors' Choice Awards 1996:** (selected)

Game of the Year: Chrono Trigger  
Runners-up: Tale Phantasia, Resident Evil

*This was a tough call. Two classic RPGs and a brilliant horror game on the Sega Saturn that had us thrilled for weeks. You could make a case for any one of these games, but in the end, it was Chrono Trigger that wowed us the most with its great soundtrack and awesome storyline.*

Super Nintendo CD Game Of The Year: Chrono Trigger  
Runners-up: Tale Phantasia, Squad Four: Eclipse

*It was another close three-way race but we gave it to Chrono Trigger. Tale Phantasia is an excellent game and Squad Four: Eclipse was a technical marvel, but Chrono Trigger edged them both out.*

Sega Saturn Game Of The Year: Sonic the Hedgehog 4  
Runner-up: Resident Evil, Virtua Fighter II

*Another razor-thin race saw Sonic 4 beating out Resident Evil to take the award for Best Saturn Game. Both games were amazing but we loved the action and storyline of Sonic 4 which took us to new worlds of wonder.*

Handheld Game Of The Year: Donkey Kong Land 2  
Runners-up: World Of Color, Dynastar

*The color enhancements given to Donkey Kong Land 2 by the new Game Boy pushed it over the addictive puzzler World of Color and the challenging shooter Dynastar.*

Best RPG: Chrono Trigger  
Runner-up: Tale Phantasia, Super Mario RPG

*Chrono Trigger beats Phantasia once again, though we have to emphasize that we adored both of these games. And don't count out Super Mario RPG, which was a role-playing game fitting of Mario's great reputation as an icon of gaming.*

Best Fighting Game: Virtua Fighter II  
Runner-up: Soul Edge, Tekken

*Sega Saturn brought it big time in the fighting games department. We knew a Saturn game had to take this, and Virtua Fighter II took it by a mile, seriously improving the graphics and adding fun new characters to the mix.*

Best Adventure Game: NiGHTS: Into Dreams  
Runner-up: Samurai Rush, Commander Keen: The Universe Is Toast

*There were some epic adventures this year, but NiGHTS Into Dreams... wowed us so much with its beautiful landscapes and high-flying action. Samurai Rush was a close second and we also loved the return of Commander Keen.*

Best Action Game: Resident Evil  
Runners-up: Squad Four: Eclipse, Tomb Raider

*For thrilling action, three games stood above all the rest, and we loved Resident Evil just a hair more than the thrilling Squad Four: Eclipse and the exploration-heavy Tomb Raider.*

Sidescrolling Game Of The Year: Sonic the Hedgehog 4  
Runners-up: Donkey Kong Country 3, Guardian Heroes

*It was a great year for the side-scroller and for the second time in three years, it was a battle between Sonic and Donkey Kong for the crown. This time, the hedgehog won. His Saturn game was his biggest adventure yet and innovated quite a bit more than Donkey Kong Country 3.*

Best Graphics: Sonic The Hedgehog 4  
Runners-up: Panzer Dragoon II Zwei, NiGHTS Into Dreams

*The Saturn really showed off what it could do with these three games, but in the end, the hedgehog's trip through nine beautiful new worlds impressed us even more than the beautiful but brief Panzer Dragoon II Zwei.*

Best Music: Chrono Trigger  
Runner-up: NiGHTS Into Dreams, Sonic the Hedgehog 4

*NiGHTS and Sonic both featured excellent soundtracks, but Chrono Trigger just might be the best we've ever heard in an RPG. This was an easy award to call.*

### **Electronic Gaming Monthly Readers' Choice Awards 1996:**

Game of the Year: Resident Evil  
Runner-up: Chrono Trigger

Super Nintendo CD Game Of The Year: Chrono Trigger  
Runner-up: Tale Phantasia

Sega Saturn Game Of The Year: Resident Evil  
Runner-up: Virtua Fighter II

Handheld Game Of The Year: World Of Color  
Runner-up: Runic Gold

Best RPG: Chrono Trigger  
Runner-up: Tale Phantasia

Best Fighting Game: Virtua Fighter II  
Runner-up: Soul Edge

Best Adventure Game: NiGHTS: Into Dreams  
Runner-up: Eternal Night

Best Action Game: Resident Evil  
Runner-up: Tomb Raider

Sidescrolling Game Of The Year: Sonic the Hedgehog 4  
Runner-up: Donkey Kong Country 3

Best Graphics: Resident Evil  
Runner-up: NiGHTS Into Dreams

Best Music: Chrono Trigger  
Runner-up: Aria

-

### **Gamepro 1996 Readers' Choice Awards**

### Best Role-Playing Game:

*This was clearly a hotly debated category. In the end, Tale Phantasia won...by just three votes! Obviously, our readers loved both of these epic RPGs, and we can't blame them! Super Mario RPG was able to carve out a respectable third.*

Tale Phantasia: 30%  
Chrono Trigger: 30%  
Super Mario RPG: 17%  
Elements Of Mana: 11%  
Fire Emblem: The Holy War: 8%  
Lufia II: Rise Of The Sinistrals: 2%

### Best Sports Game:

*With big time NBA and MLB games, the Super Nintendo CD really brought it in the sports category this year, a category usually won by Sega titles! It was Ken Griffey's debut on the SNES-CD that won by a pretty decisive majority.*

Ken Griffey Jr.'s Winning Run (SNES-CD): 36%  
Grant Hill In NBA Basketball (SNES-CD): 17%  
NHL '97 (Saturn): 15%  
Frank Thomas' Big Hurt Baseball (Saturn): 10%  
Madden '97 (Saturn): 10%  
College Slam (Saturn): 4%  
NBA Live '97 (SNES-CD): 4%

### Best Fighting Game:

*This one was the biggest landslide of the year. Virtua Fighter 2 won by a mile! Not only was it the biggest arcade hit of the last year, it was easily the biggest home console smash and it dominated your voting.*

Virtua Fighter 2: 51%  
Soul Edge: 14%  
Twinblade: 12%  
Tekken: 9%  
Ultimate Mortal Kombat Trilogy: 7%

### Best Action Game:

*Sonic 4 was the most hyped game of the year and the results of this poll clearly reflect that! Sonic trounced his competition, beating back his Saturn rival NiGHTS and this year's Donkey Kong Country title for a huge victory.*

Sonic the Hedgehog 4: 48%  
NiGHTS Into Dreams: 20%  
Donkey Kong Country 3: 17%  
Dog Dash: 9%  
Kirby Super Deluxe: 3%

Best SNES-CD Game:

*Once again, it was Tale Phantasia and Chrono Trigger, and once again, it was very close, but you liked Tale Phantasia just a bit more.*

Tale Phantasia: 23%  
Chrono Trigger: 21%  
Squad Four: Eclipse: 14%  
Super Mario RPG: 14%  
Elements of Mana: 9%  
Donkey Kong Country 3: 6%  
Eternal Night: 5%  
Dog Dash: 3%

Best Saturn Game:

*Sonic 4 won but it wasn't easy! Resident Evil was extremely popular for most of the year, but Sonic wouldn't be denied his crown.*

Sonic The Hedgehog 4: 29%  
Resident Evil: 23%  
Virtua Fighter 2: 12%  
Tomb Raider: 7%  
NiGHTS Into Dreams: 7%  
Commander Keen: The Universe Is Toast: 4%  
Soul Edge: 4%  
Guardian Heroes: 3%  
Panzer Dragoon II Zwei: 3%

Best System Overall:

*In another incredibly close vote, you chose the Saturn as your top system of the year! But look at that! The Game Boy got seven percent of the vote. Guess some people really like the new color upgrade!*

Saturn: 40%  
SNES-CD: 39%  
Genesis: 9%  
Game Boy: 7%  
Super Nintendo: 4%

Best Game Overall:

*Sonic 4 won, but it wasn't an easy win, and it might have been the split between Tale Phantasia and Chrono Trigger that gave him the victory. Still, the hedgehog had to deal with his own votes being siphoned by our fourth and fifth place winners, so Nintendo fans can't blame the split entirely!*

Sonic The Hedgehog 4: 20%  
Tale Phantasia: 18%  
Chrono Trigger: 17%  
Resident Evil: 10%

Virtua Fighter 2: 8%  
Tomb Raider: 5%  
Squad Four: Eclipse: 5%  
Super Mario RPG: 4%  
NiGHTS Into Dreams: 4%  
Donkey Kong Country 3: 2%  
Elements Of Mana: 2%

-

*Sonic the Hedgehog 4 is out and it's the biggest hit of 1996, but is the hedgehog slowing down in 1997? Come on, you know Sonic NEVER slows down! Just recently, Sega announced not one, not two, not three, but FOUR Sonic the Hedgehog games making their way to the Saturn in 1997, and whether you're a fan of classic Sonic or a fan of any number of other popular game genres, there's going to be a game for you starring Sonic and his friends.*

### **Sonic Jam**

Sonic Jam is a compilation release containing *Sonic the Hedgehog 1*, *Sonic the Hedgehog 2*, *Sonic the Hedgehog 3*, *Sonic CD*, and several other Sonic games that have yet to be revealed. The games will all feature enhanced musical scores and new bonus levels!

### **Sonic Fighters**

This is a 2-D fighting game featuring your favorite Sonic characters, from the blue hedgehog himself to characters like Knuckles the Echidna and Corona the Butterfly. It's scheduled for a spring 1997 release.

### **Sonic RPG**

There is a *Sonic the Hedgehog* role-playing game in development for late this year! Not too many details are yet known but the game is said to combine elements from nearly every game in the series into a truly epic quest.

### **Sonic R**

*Sonic R* is a kart-racing game somewhat similar to Nintendo's upcoming *Ultra Mario Kart*, featuring Sonic the Hedgehog characters racing across a number of different zones. The game is to support four-player racing and will be released sometime this fall!

-excerpted from the February 1997 issue of *Official Saturn Magazine*

-

*Development on the Ultra Nintendo is rumored to be nearly complete, and though the company has been largely mum about details on the console, they've begun to give certain media outlets a limited degree of information on the new console's specs, outside of what we've already gathered from trade shows like E3. From what we've seen, this console will definitely be the most powerful home gaming device to date, and its release is sure to be the biggest gaming event of the year.*

## Hardware

The Ultra Nintendo's hardware is rumored to be based off of an existing Hitachi-made CPU capable of over 130 megahertz of clock speed, which is vastly faster than the CPU found in the Super Nintendo CD. Such a fast processor would easily be capable of 3D graphics even better than the ones seen at E3. From the demonstration of *Star Fox 2* shown at the San Jose Tech Conference in November, it's clear that the 3D in this game makes the 3D in games like *Squad Four: Eclipse* look utterly primitive. The console features impressive anti-aliasing capabilities that make for very smooth shapes, while the frame rate is impressively fast. Compared to the Saturn's *Panzer Dragoon II Zwei*, *Star Fox 2* features faster movement and much more impressive shading, especially in stages taking place over water. The water in *Star Fox 2* is highly reflective, demonstrating beautifully the console's graphical capabilities. *Final Fantasy VII* looks incredible, as seen at the 1996 Tokyo Game Show. The characters are rendered in full, detailed 3D, while the backgrounds contain a level of detail unheard of in even the most impressive Super Nintendo CD games. In addition to the powerful CPU, the Ultra Nintendo is running an enormously powerful graphics processor. Codenamed "Artemis", the chip runs at over 100 megahertz, easily the most powerful graphics chip in a home console and more powerful than a lot of midrange gaming PCs. It's the Artemis that likely makes much of the advanced graphics of the Ultra Nintendo even remotely possible. Compared to the Saturn's co-processors, the Ultra Nintendo's co-processors enable the system to do a significant amount more work, and things that would be very taxing for the Saturn are much smoother on this system. Again, we're talking about a two year technological gulf, and Nintendo's decision to make gamers wait for the Ultra might well pay off. Even current arcade games, which run on significantly improved technology from the Sega Saturn, don't look as good as what we've seen from the Ultra Nintendo.

## Software

The Ultra Nintendo will definitely have at least one major hit available at launch, likely *Super Mario Dimensions*, which looked to be in a late stage of development as of E3 1996 and is probably nearing completion for the Japanese launch in June. We're not sure what other games will be available for the holiday season, but out of *Ultra Mario Kart* and *Final Fantasy VII*, it's likely we'll see one or both of those games available in the launch window. *Star Fox 2* is likely a spring 1998 release, though Argonaut has told us that they're working overtime on the game and not to be surprised if it's ready for the American launch, though they also told us they won't rush anything. Naughty Dog, developer of the hit game *Dog Dash*, says that they'll have a platformer ready for launch, while WayForward, who's been working on the Game Boy Color game *Shantae*, says that the sequel to their 1995 hit *Nightsquad* is in development as we speak. We've seen no less than a dozen impressive looking games for the Ultra Nintendo, with *Super Mario Dimensions* leading the pack. The game is shaping up to be massive, and it plays incredibly well, with the Ultra Nintendo much more well-suited to handle 3D gameplay than the Super Nintendo CD which tried with mixed results in *Super Mario World 3*. We're also fully hyped for *Final Fantasy VII*, which will be the first *Final Fantasy* game to take place in a modern world. Konami is said to be fully on board with the system, they're developing a new Castlevania game that they hope to have ready for launch, and Hideo Kojima tells us to "expect a surprise" at E3 1997. The only potential stumbling block for the Ultra Nintendo on the software front could be the new proprietary "Gigadisc" format, which packs a gigabyte of data onto a single disc. Sony has promised that the new format is largely similar to the CD-ROM, and so far we haven't heard any complaints from developers, but any new format can be tricky to work with at first, and time will tell if Nintendo and Sony's decision proves a wise one. Whatever happens with the

Ultra Nintendo, it's clear that there won't be any shortage of quality games, something that slowed the Super Nintendo CD down early until *Super Mario World 2* was released.

-excerpted from an article in the March 1997 issue of *Electronic Gaming Monthly*

-

Ted Crosley: Okay, okay, no more teasing. It's now the time you've all been waiting for.

Alex Stansfield: It's time to count down *GameTV's* top 10 games of the year!

Gary Westhouse: There was a lot of fighting, biting, arguing, death threats, but we finally made our decision.

Ted: Now remember, what two of us rated a game earlier in the year doesn't necessarily reflect what all five of us ranked a game for this list. Soooo, if a Hall of Fame game finishes below a non-Hall of Fame game, it's not us being inconsistent and fickle.

Brittany Saldita: It is TOTALLY us being inconsistent and fickle.

Ted: Well, with that in mind, let's start the countdown!

Narrator: \*in a big booming voice\* **GameTV's Top Ten Games Of 1996.**

Ted: And we start off the countdown with our number ten game... **Elements Of Mana.**

Brittany: The *Secret Of Mana* sequel was a beautifully crafted epic RPG that gave you the choice between six main characters, each with their own strengths, weaknesses, and storyline.

Alex: That's right, depending on who you chose, you'd end up fighting to preserve the natural world of Mana, advance the technology of humanity, or strike a balance between the two.

Ted: The game featured the same super fun fighting system from *Secret of Mana* and once again let you take two friends into battle with you, making it one of the year's best multiplayer games as well.

John Walden: At number nine, we had **Eternal Night.**

Alex: Konami's violent, bloody castle crawler had you playing as a count who had to purge the forces of evil from his castle by any means necessary.

Gary: Yeah, and then you got to take the fight straight to the devil himself in Hell.

Brittany: Yeah, any game that turns the phrase "go to hell" into a good thing gets a thumbs up in my book.

Ted: It takes all the style of the classic Castlevania series and turns it up to eleven, making for one of the year's most thrilling and spooky games.

Alex: At number eight, the Sega Saturn's **NiGHTS Into Dreams...** didn't disappoint. It

lived up to the hype and then some, thrusting us into a magical dream world where anything was possible.

Ted: It showed us how beautiful a Saturn game could be and also featured some of the most impressive boss fights of the year.

Brittany: It featured a huge 3-D world that you could fly through, making flying not just something restricted to rail shooters any more. It was also a heartwarming tale of two kids and their protector, punctuated with a beautiful musical score that truly brought video game magic to life.

Ted: It moved at a bit of a slower pace than its cousin *Sonic the Hedgehog*, but that just gave us more time to explore the beautiful world and all its incredible sights and sounds.

Brittany: Our number seven game of the year, believe it or not, was a handheld game! **World of Color** on the Game Boy is one of the most addictive puzzlers we've ever played and showed off the new Game Boy Color's capabilities in a big way.

Gary: In *World of Color*, you have to create a path by bringing differently colored shapes together in order to guide your cursor through the stage before the world collapses in on itself. It's fast paced and it takes a lot of skill, but it's surprisingly easy to learn, the hallmark of a truly great puzzle game.

Ted: You can play through on endless mode or you can enjoy the 88-level campaign, where the difficulty ramps up gradually as you go along. This game got into our Hall of Fame earlier this year, and for good reason. It's the best handheld puzzle game since *Tetris*, and we're still picking it up and playing it today.

Alex: Hell, I'm playing it right now! \*holding his Gameboy\* Can you believe I'm getting paid for this?

Ted: Well put that thing away, it's your turn to reveal the next game on the list.

Alex: Uh....right, right....sure! Number six was **Virtua Fighter 2**, the hit arcade fighting game that became an even bigger hit on the Sega Saturn.

John: With vastly improved graphics, faster combos and characters galore, *Virtua Fighter 2* makes its predecessor, an excellent title in its own right, look pretty outdated. That's probably this game's only real flaw, the rest of it is pure fighting perfection.

Gary: It even introduced new storylines for each character that made us feel like we really got to know these guys we were beating the hell out of each other with.

Ted: *Virtua Fighter 2* provided the perfect balance of skill and intuitiveness, so that whether you're a fighting game expert or a total rookie, you could still have a great time.

Brittany: Our number five game of the year was **Squad Four: Eclipse** for the Super Nintendo CD. While the original *Squad Four* was somewhat larger in scope, *Eclipse* provided a perfectly streamlined experience that made the game a non-stop rush of hard hitting action.

Ted: It seemed like aliens were everywhere this year, from *Independence Day* to the new

*Donkey Kong Country* game, but nowhere was an invasion more fun than in this awesome sequel that let us blow away gigantic bosses and hordes of invading soldiers as we fought to liberate the galactic capital.

Alex: Not only that, but the game featured some truly incredible graphics and a final boss fight that was completely out of this world.

Ted: All right, we're down to the top four. And I gotta tell you, this top four was really close.

Alex: That's right, only a single ranking point separated each of these four games from each other. In other words, all four of these games are worthy of the title Game of the Year. Each of these games was somebody's favorite game of the year, the #1 game was chosen by two of us which gave it the edge, but you can see how close it was when each of us has a favorite among them.

Ted: So without any further ado, let's count them down. And the #4 game of the year was Alex's top choice.

Alex: Number four of the year was **Chrono Trigger** for the Super Nintendo CD. It's a classic RPG with a killer soundtrack and some truly great characters. The battle system, which let you string together dozens of two-character and three-character combos, made every fight a strategy goldmine, and the incredible environments made this one of the most beautiful RPGs ever made.

Brittany: Yeah, Chrono Trigger was a masterpiece in no uncertain terms. You could time travel between six different eras, and your actions affected events in each one as you went along. The voice acting was superb and this game was definitely worthy of all the hype.

Alex: Chrono Trigger is a truly brilliant game, and was my personal pick for Game of the Year. Sadly, it finished fourth, but these next three games are awesome too. John, you're up.

John: Well, my top choice for Game of the Year and our overall #3 was **Sonic the Hedgehog 4**. The blue hedgehog came back in a major way, with all new moves and a great new 3D perspective for this game's epic boss fights. Seriously, check out this fight against that huge dragon. That's only one of the more than a dozen bosses you'll face in this game, and that's not counting the hidden world you can open up by collecting all the hidden stuff.

Ted: Gamers have been waiting for this game for a long time, and it DEFINITELY lived up to the hype. It contained everything that we've loved about Sonic over the last five years and was the perfect killer app at a time Saturn needed it most. And speaking of Saturn killer apps, Gary, your top pick is coming up.

Gary: That's right, my #1 pick and our overall #2 was **Resident Evil**. This survivor horror game was unlike anything we've seen before, putting players in a mansion inhabited by mutated creatures and homicidal zombies. It brought a new level of fear through its gameplay which pushed players to their absolute limits, keeping them on the edge through the deprivation of resources and constant tension.

Alex: Resident Evil was a fantastic game, it forced players to relearn everything they thought they knew about action games if they wanted to make it out of this spooky mansion

alive.

Gary: I loved Resident Evil, I wasn't on the show when you guys reviewed it but it's clear from the perfect score it was given that all of us here at *GameTV* felt the same way I did, that this game is a masterpiece that'll be loved for years to come.

Ted: And now we get to the big one, the number one game of the year, and...I gotta say, I'm surprised I ended up liking this game more than everything else because it's not usually the type of game I go for. But, but, that's how good this game was, that it completely defied my expectations for it and rose to become one of my personal favorite games of all time. And Brittany, I know you loved it too.

Brittany: I did! This game was my number one favorite and I'm thrilled to hear it was your favorite too. \*she gives Ted a hug\*

Ted: The *GameTV* number one game of the year was... **Tale Phantasia!**

Brittany: And what an amazing game it was. It took players to a magical world where the evil Dhaos threatened to conquer all. The innovative battle system made every fight a thrilling life and death struggle and this game had so many twists, turns, and secrets that it took more than 100 hours to uncover them all!

Ted: *Tale Phantasia* broke new ground for its genre with its unique battle system and vast world. Its graphics were some of the most beautiful we've ever seen and the voice acting was full of humor and emotion, making us truly care about these characters who embarked on this epic journey.

Alex: *Tale Phantasia* was my number two game of the year, right behind *Chrono Trigger*, and it was REALLY hard to pick between them. I agonized over the decision but ultimately it didn't matter because *Tale Phantasia* was number one anyway, and a worthy number one it is.

Ted: Again, this year was full of amazing games. Any one of these games could have been number one, you could even have made a case for *Squad Four: Eclipse* and I'm sure there are some *World of Color* fans out there who are throwing their Game Boys at their TV screen right about now. Whether you're a Sega fan, or a Nintendo fan, you had some amazing games to play last year and this year doesn't look any different.

Brittany: That's right because you've got the ULTRA Nintendo coming out finally!

Alex: And next week we'll be here to review *Terranigma* for the SNES-CD, so don't miss that one.

-excerpted from the January 7, 1997 episode of *GameTV*

-

*And once again, we look back on a great year in games with our countdown of this year's ten biggest stories from the world of video gaming.*

*#10: A Monster In Your Pocket*

When *Pocket Monsters Red and Green* launched early last year in Japan, few suspected that it would become a major phenomenon with millions of sales and a hit anime series on the way, while also persuading Sony to acquire its creator company Game Freak. We have yet to hear official news on the franchise's arrival in the West, but an announcement to that effect seems like a matter of time.

#### *#9: Saturn Does What Nintendon't*

Sega brought back its classic "Nintendon't" campaign for the holiday season and it was likely a major part of the company's success, topping Nintendo in sales over the holidays for the first time since 1992. Everyone loves the classics!

#### *#8: Games Find Their Voice*

This year saw a surge of video games to feature professional voice acting. Though the craze seemed to start with the rise of optical gaming media in 1992, this year it blew up with high profile Saturn games and SNES-CD titles alike, and now this craze seems to be here to stay.

#### *#7: Sega Goes Online*

The introduction of the Sega NetLink service to link up Saturn gamers with the World Wide Web is one of the more promising innovations in recent memory. Though sales of the expensive modem device have been slow, they're liable to pick up as more games are added to the service.

#### *#6: Color Your World*

The launch of the Game Boy Color brought full-color games to the handheld and enhanced sound capabilities as well. Hit games like *Donkey Kong Land 2* saw a big boost in sales from the new Game Boy, and it's likely that *Pocket Monsters* will benefit greatly as well if it ever sees a North American release.

#### *#5: Resident Evil*

The survivor horror game became a huge phenomenon and the Saturn's first killer app when it launched in April, garnering numerous Game of the Year awards and millions of sales. A sequel has yet to be announced but like any good horror franchise, it seems inevitable.

#### *#4: Games Court Controversy*

Though the video game violence debate was largely settled in 1993 with the birth of the ESRB, video games still found themselves in the middle of political debates, including the 1996 presidential campaign. And let's not forget the near-tragedy at the official *Sonic the Hedgehog 4* launch when a disgruntled bomber attacked the festivities in part due to his opposition to the Saturn's game *Shin Megami Tensei: Devil Summoner...*

#### *#3: An Ultra Revelation*

Nintendo formally unveiled their new Ultra Nintendo console at E3, and games like *Super Mario Dimensions* and *Final Fantasy VII* were playable for the first time. The system looks impressive and will no doubt be a huge hit when it's released later this year.

## #2: *Sonic Boom*

*Sonic the Hedgehog 4* was undoubtedly the biggest release of the year, selling millions of copies in its first month of release and spurring a huge holiday season for Sega's Saturn console. The game received rave reviews and proved that Sonic is still one of the biggest if not the biggest face in gaming.

## #1: *The Saturn Surges*

And the biggest story of 1996 was the incredible performance by the Sega Saturn, which sold more than ten million units worldwide over 1996. Spurred by a price drop and a series of smash hits including *Resident Evil*, *Tomb Raider*, and last but certainly not least, *Sonic the Hedgehog 4*, Sega got a big year when they needed it most, and now the ball is in Nintendo's court to respond.

Final Fantasy VII - Fall '97  
Nightsquad 2 - Fall '97  
Super Mario Dimensions - Fall '97  
Ultra Mario Kart - Fall '97  
Star Fox 2 - 1998  
Tale Phantasia 2 - 1998  
Zelda - 1998

-excerpted from the January 1997 issue of *Nintendo Power*

-

*"1996 was a time of transition in the gaming world, particularly for Nintendo, whose fans would have to wait another year for the release of their next-generation console. Nintendo kept fans satisfied with some of the best Super Nintendo CD games, including Chrono Trigger, Tale Phantasia, Super Mario RPG, Squad Four: Eclipse, Eternal Night, and Dog Dash, but Super Nintendo CD sales finally began to go into decline due to the impending release of the Ultra Nintendo. Sega saw an opportunity and capitalized by releasing an unrelenting wave of hits including Sonic the Hedgehog 4 and Resident Evil. Sega positioned the Saturn as the "cool" system for a new generation of gamers, and became the first home games console whose user base consisted of a majority of adult players. On the PC front, Microsoft became a huge presence with a lineup of games for its Windows operating system, though it was Quake that proved to be the most popular and well received game of the year on computers. The game sold millions of copies and even challenged Sonic 4 and Chrono Trigger for Game of the Year in publications that included PC games in their considerations. While the year is largely remembered as being the year that Sega "came back", it will also go down in history for seeing the beginnings of many of the most beloved and enduring gaming franchises of all time. Though Sega had won the battle, the Ultra Nintendo loomed large, and though the Saturn would continue to hold the lead over Nintendo throughout 1997, Nintendo's new console was a shadow that would only grow as the year went on."*  
-*"The History Of Console Gaming: Year-By-Year (Part 6)"*, Wired.com, June 19, 2012

-

Squad Four: Eclipse: The sequel to Nintendo's 1994 hit Squad Four, the team has returned to the capital planet, only for an army of invaders led by a Krill warlord hungry for revenge to invade the planet. Now Squad Four has to repel the invasion. The game is generally considered even better than the first and is one of the very best games on the SNES-CD in terms of graphics and general production values.

Cat Jackson Comes Back: The sequel to Sony's 1995 mascot platformer, Cat Jackson Comes Back features the feline hero trying to save his girlfriend once more. Basically more of the same in terms of graphics, sound, and gameplay and gets middling to good reviews.

Warriors and Conquerors II: Champions Of War: The sequel to 1995's strategy sim, featuring a new gimmick in the form of combat by champion, army leaders can engage each other in one-on-one duels. The game is better received than the original, though it's still no Civilization.

Hotel Havoc 2: A sequel to Hotel Havoc, this game features the same puzzle-based gameplay as the original, though the graphics are better and there are three playable characters instead of one.

Universalizer 2: The sequel to 1994's well received shooter game, this game ups the stakes by sending players into alternate dimensions and even back in time, with time travel being a huge part of the gameplay. This game is as highly praised as the original was, with some of the best graphics seen in an SNES-CD shooter game.

Jewels Of The Realm 2: This sequel sees the main characters from the original game once again traveling through various stages and collecting power jewels, this time in pursuit of a pair of evil children. This game makes a few gameplay changes that are criticized and while still a good game, it doesn't do as well critically or commercially as the original.

Bumblebee: Save The Queen!: The sequel to Zooble's Hive, it has the hero Zooble attempting to rescue the queen of the hive after she's kidnapped. It's a solid platformer game but nothing special.

Science Fighters 2: Sequel to the silly 1994 cult classic, it introduces a bigger cast of fighters, 17 in all, but the novelty has worn off a bit and the gameplay is somewhat lacking.

Major Hazard: FUBAR: Major Hazard is back, this time getting stuck across enemy lines with a squad of bumbling infantrymen and having to fight his way back through hordes of enemy soldiers. It's considered a step-up from the original in terms of gameplay and humor.

Day of Malcarius II: The sequel to the original Day of Malcarius, this RPG takes place 300 years before the original and features a much darker storyline, with a group of young vampire hunters caught up in intrigue and terror when they're trapped in the domain of a dangerous death lord. It's not successful commercially but it's remembered as an RPG classic.

Icebiter 3: This, the third Icebiter game, changes up the formula somewhat by heavily featuring two main characters, a man and a woman, and a new behind the character viewpoint, turning the game into a sort of full-on run and gun with platforming elements.

It's a fairly polarizing game, seen as the series black sheep by some and a classic by others.

**Knightstar 2: Revenge Of The Dragon King:** The villain from the first Knightstar game returns in this sequel to plague a new generation of heroes. Despite the game's decent production values, it's super generic and drowns commercially in a sea of great RPGs.

**Fatal Strike: Touch Of Death:** Notukaga returns, this time to save the realm from an evil warrior king who knows a touch that can kill with one strike. With the same great gameplay style as the original it's a fairly big hit for Koei.

**Monster Wars II: Risen From The Grave:** A sequel to the monster strategy game from 1994, it's basically the same game but with significantly improved graphics, voice acting, a lot more monsters and a really good campaign mode. It's considered one of the best strategy games of the year.

**Slumlord: Back II The Streets:** The sequel to 1994's somewhat controversial Slumlord game, this game is far worse than the original and is considered one of the year's worst games.

**Dark City: A Death In The Family:** The third and final installment in the cult hit mystery series, this game has the lead detective contending with a powerful mob boss who comes after those he cares about most.

**Stolen In Shadow:** The sequel to Daughter of Pearl, this visual novel/action game has the main character caught up in another worldwide intrigue when she's kidnapped by an unknown criminal syndicate and must discover their secrets if she wishes to be safe again.

**Extreme Deerhunting 2:** The sequel to 1995's Extreme Deerhunting game, it's basically identical gameplay with different settings and some bigger species of deer.

**Bikerz 2:** The sequel to 1995's kid-friendly biker gang racing game features a lot more tracks and characters and is generally better received than the original.

**Slaughterbox:** An isometric beat-em-up fighting game that takes place in a series of small rooms and is quite bloody, with a variety of brutal wrestling moves and even the involvement of bladed and bludgeoning weapons. Becomes probably the most controversial SNES-CD game since Mortal Kombat, the gameplay is rated somewhat above average.

**Soul Matrix:** A Squaresoft RPG about a young man and woman who are born on opposite sides of the world but are drawn together by a strange psychic connection that gives them mysterious powers. The two start out as enemies but later bond and become friends and possibly even lovers. You can start the game as either one of them and the quest differs

depending on which one you pick. While the game isn't quite as big as Elements Of Mana or Chrono Trigger, it's a very well reviewed game and a decent new IP for the company.

Kyuriadan: Another Squaresoft game, this one an action/platformer featuring a young boy named Kyuriadan who journeys with a series of guides across numerous levels to find his destiny. It's praised heavily for its beautiful artstyle and wistful musical score, though the gameplay itself is only decent.

Mechanix: An action game where you take control of one of five car mechanics who have to battle various monsters and enemies with different tools and weapons. It's a fairly mediocre game though some of the bigger bosses have decent animation.

Tunnel Vision: A rail-shooter game about a plucky young hero who pilots a ship through a series of monster-infested tunnels. Actually somewhat like Sewer Shark in terms of gameplay but without all the FMV cutscenes. The gameplay itself is fairly fun though the graphics and music are somewhat generic.

Samurai Rush: This game from Telenet is an action-RPG about a samurai who wields dual blades as he fights his way through a cartoonish version of feudal Japan to protect the innocent and uphold justice. It's one of two games that Working Designs works on in concert with Telenet in 1996, the first being Tale Phantasia, the game features a fun cast of characters and lots of voice acted scenes. The game is marketed well and ends up being a decent-sized hit.

The Basement: A horror game taking place in an island mansion and the tunnels underneath, it plays somewhat like a dungeon-crawl/puzzler but has some combat sequences as well. Features some fairly advanced sprite-based graphics for the SNES-CD. It's compared somewhat to the Saturn's Resident Evil, and though Resident Evil is considered the superior game for tech and gameplay reasons, The Basement's more cosmic-horror type elements win it some fans.

Road Storm: A motorcycle-racing game taking place in a variety of locales. Featuring twelve characters and customizable bikes, it actually turns out to be quite a hit due to its fast-paced racing action and gameplay, and it becomes a franchise.

Hacker Jack: A puzzle/platformer where you play a nerdy teenage boy named Jack who goes around with his computer infiltrating various places and hacking into them, he starts out as a petty criminal but eventually becomes a hero. Though the gameplay is somewhat frustrating at times, the game does have its charm.

Dino Dudes: A sort of Battletoads ripoff starring three anthropomorphic dinosaurs. The dialogue is horrible, gameplay is bad and it's inferior to Battletoads in every possible way.

Agent Number 9: A first-person shooter about a secret agent sent on various missions to kill enemy soldiers and spies. The plot is somewhat generic and the gameplay isn't as fun as games such as Wolfenstein or Doom, indeed, the graphics aren't as good as those games either.

Strange Seed: An FMV game from Telenet, one of the very last for the SNES-CD, about a space war and a mysterious woman that holds the key to ending that war. Though it features the same rather generic gameplay of other FMV games, the artwork and story is very highly praised and it's considered perhaps the best FMV game on the system. The game would receive a "sequel" in the form of a full-on RPG for the Ultra Nintendo later on.

Killer Robot Stanley!: From Sunrise Games, it's a follow-up to their Jaguar game Attack of the Mutant Penguins, where the player must gather up forces of lawn gnomes to defeat a killer robot named, you guessed it, Stanley. The game is extremely strange but the graphics receive some praise.

It Was A Dark And Scary Night...: A silly horror-based board/party game featuring a variety of spooky traps, funny cutscenes, and weird mini-games. It's considered decently fun, though not quite as good as Thrillseeker.

Maze Mice: An action/puzzle game where you take control of a mouse in a series of mazes. Though the gameplay is rather simplistic, it does have some addictive puzzle solving elements that earn the game a few good reviews.

Tropical Trouble: A group of people get shipwrecked on an island and have to dodge the natives and an increasingly scary variety of creatures in order to escape. This silly platformer is as generic as they come and gets average reviews and poor sales.

Dog Dash: From Naughty Dog, this is an action platformer starring an energetic boy who rides on top of a giant dog, the dog can attack in a variety of ways, using his big tongue, his huge paws to pounce, or with supersonic barks, the dog is big and cute and cartoony and there are a variety of cutscenes showing the boy and the dog bonding. This is the game made by Naughty Dog in lieu of Crash Bandicoot, a game that they decided to shelve for the launch of the Ultra Nintendo due to technological reasons. Dog Dash is still one of the best looking SNES-CD games and becomes an enormous hit due to its excellent gameplay, lovable characters, and silly humor.

Honorbound: A fairly generic fighting game featuring a group of fighters in a tournament for their survival, with the unique gimmick being that all the fighters are considered "good guys" and are given their own sympathetic reasons for being in the tournament. Despite this attempt at creating good characters, the game is largely considered a Mortal Kombat ripoff.

Flame Squad: A top-down strategy-esque game somewhat comparable to Cannon Fodder

where you command a group of flamethrower-wielding soldiers across a variety of maps littered with enemies. The art style is actually quite cartoonish and the game is played for pure laughs, the gameplay is praised and the series becomes a franchise.

**Eternal Night:** From Konami, this is an action game that is somewhat similar to Castlevania but much faster paced with a focus on fighting huge scary bosses, you play as a black-garbed baron who ventures through haunted castles and even the netherworld to battle hordes of terrifying demons. The graphics, a dark landscape of haunting imagery with 3-D effects and lots of animation, is considered among the system's best, the soundtrack is an all time classic and the gameplay is widely praised, making this one of the year's biggest hits.

**Stealth: Dangerous Mission:** A flight-based game where you play a stealth bomber on various missions into enemy territory, the gameplay is considered somewhat spotty and overall the game is a disappointment after being hyped for several months beforehand.

**SimZoo:** From Will Wright, it's another game in the Sim series, this one putting you in charge of running a zoo. Acquire exotic animals, include rides, decide what to charge for admission and souvenirs, it's all up to you.

**Shopping Spree:** An action game geared toward young girls, the game takes place in a variety of stores, malls, etc, you create a teenage girl character with the goal of spending as much money as possible. Action segments give your character more money to spend. The game's reviews are truly horrendous and the graphics are barely SNES-CD quality.

**Twinblade:** A weapon-based fighting game using 3-D graphics. Featuring a variety of characters and weapons, it's considered somewhat similar to the arcade game Soul Edge, though with less detailed graphics. The gameplay is considered excellent and the graphics among the best on the system. The game is promoted heavily and becomes a major success.

**Stackector:** A fast-paced puzzle game where you have to build large stacks of chained blocks in order to form combos and rack up points. It's considered a significantly more complex puzzler than Tetris Attack, though this makes it somewhat less intuitive. The graphics are also better, with some nice pseudo-3D and shading effects. It's well reviewed and gets decent sales.

**Filliard:** A game that takes place on a track and has you leaping from track to track, dodging obstacles while targeting enemies. The game is extremely fast-paced and quite difficult but the gameplay is considered somewhat addicting and it gets good reviews for its music and how fun it is.

**Dead End:** An action/stealth/shooter game where you're one of two dueling spies attempting to corner the other while in pursuit of assassins, criminals, and terrorists. The

game features branching paths and difficult gameplay and gives you multiple ways to confront your rival spy. While some parts of the gameplay are quite generic, other parts are praised and the graphics and voice acting are considered quite good.

King Of The Jungle: A game where you're a lion who's setting out to restore balance to the jungle after it's attacked by a horde of terrible beasts. You team up with a group of jungle friends to fight the beasts across many platforming levels. It's a fairly standard action platformer but it's popular amongst younger players.

Samurai Buster: A hack-and-slash beat em up game where you're a samurai out to bring justice to a city of criminals and slavers. A rather violent game with lots of blood and a very mature storyline, it's still considered quite an excellent game in both graphics and gameplay and Matsuhito, the main character, becomes rather well loved among SNES-CD fans.

Natalia: Teardrop of Fate: A fairly obscure RPG quietly localized and released amidst the slew of other RPGs released this year. Though a decent enough game, it pales in comparison to many of the others released this year and reviews are only average while sales are very bad.

Everest: The World's Bravest: A mountaineering action game where you have to climb Mt. Everest, facing a myriad of obstacles along the way. Rather fantastical (featuring the Yeti as a final boss), it's considered a decent action game but nothing special.

The War Between The States: A US Civil War real time strategy game from Koei. Featuring dozens of Civil War battles, it's considered one of their very best strategy games, letting you take control of the Union or the Confederacy in some of the most famous battles of the war.

Skater Girl: An action game starring a bubbly teenage girl who loves to roller skate as she fights off a variety of enemies who are menacing her friends. Fully voiced and featuring numerous animated cutscenes, it's praised for its graphics and production values but the gameplay itself is fairly ordinary and sales are low.

Steam Agent: An RPG from Atlus taking place in a steampunk world, you're a group of detectives out to stop a vicious murderer and his gang from taking over the city. Featuring fantastical weaponry, it's a cult classic game but sales are really low compared to other RPGs that year.

Belle Weather: An action/adventure game about a girl who can control the weather to help her battle enemies and bosses. Deploy rain, lightning, burning heat, even tornadoes on your enemies as you trek through 17 levels. The weather controlling mechanic is considered quite unique and the game is well received.

**Aria:** A music-based action game where you play as a beautiful girl named Aria and use musical notes to advance through levels. Featuring over 100 minutes of vocal music, it's the first three-disc game on the SNES-CD (the first two-disc game being Chrono Trigger) and is quite an obscure game, though it's considered beautiful and innovative by reviewers.

**Klepto: The Invisible Thief:** A top down puzzle game where you play a thief who tries to steal from various buildings in a sort of stealth-puzzle based gameplay. You can utilize various items to make the thefts easier. Moderately well received with good sales.

**Chainsaw:** A horror game where your character is trapped in the wilderness and has to make his way back to civilization while being chased by a killer with a chainsaw. The chainsaw-wielding killer can appear at any time, adding a unique element of tension to this game.

**Parachute To The Princesses:** A somewhat generic action game where you're a cartoony paratrooper who has to rescue princesses across various levels. Gameplay is somewhat frustrating and the game gets below average reviews.

**VideoVision:** A colorful and fun action game where you're a kid who leaps into video screens to discover new worlds and defeat a variety of villain. With dozens of weapons and abilities at his disposal, you have lots of ways to defeat these enemies and the game itself is quite well reviewed and successful.

**Iron Combatant:** In this action game, you take the controls of a huge mechanized powersuit as you battle enemies across various stages. The game features several cutscenes and its main character is a badass female colonel named Layla. It has quite a good storyline and it gets very good reviews and sales.

**The Human Body:** As the title describes, it's an action game that takes place inside the human body, battling viruses, parasites, and other enemies. Not well received at all.

**Off-Track:** A racing game featuring big wheeled trucks on dirt tracks. Pretty simplistic and the graphics aren't much to look at either.

**Quizmaster:** An original quiz game that takes the form of a game show with a snarky announcer and a variety of minigames. It has lots of questions to avoid too many repeats but the game itself gets only average reviews and below average sales.

**Tree Town:** An educational game taking place in a town with lots of houses and stores, it's made for elementary-school aged kids and features quizzes and fun characters. It's actually not a bad game, but sales are pretty lousy.

-

*"As development on Legacy of Kain went on, we saw what was going on over at Nintendo with all of their successful RPGs, and that helped to shape what we ended up doing with our game. Just subtle touches here and there, but we wanted to bring the game in line with successful games like Secret of Mana. As fate would have it, we released during the same month as Terranigma, and Sega thrust us right up for comparison."*

-Denis Dyack, creator of the Legacy of Kain series

*"Nothing made me sadder about losing Enix than seeing Terranigma. That was an incredible game and it represented the end of an era for Nintendo. Nintendo thought, maybe doing right by Enix to promote this game might help get them back, but by then it was too late."*

-Dan Owsen, translator of the English version of Terranigma

*"Why Sega? Why not? I mean, the Ultra had the better tech, but we liked what they were doing over there at Sega."*

-Sam Houser

*"And despite improvements in technology that bring home consoles closer and closer to arcade-level graphics and sound, the arcades are still popular. Much of that popularity can be attributed to Sega, whose partnership with Namco has made the company the market leader in arcade board technology."*

-from the January 19, 1997 episode of Computer Chronicles

*"The Ultra Nintendo is coming by the end of the year! But what will you be playing on Nintendo's newest system? Here's the scoop on many of the Ultra's biggest games, including games first introduced right here in the pages of Nintendo Power!"*

-from an article in the January 1997 issue of Nintendo Power

-*Electronic Gaming Monthly's* reviews of January 1997's SNES-CD games in the February and March 1997 issues

-

"*To Save The World, You Must First Rebuild It...*"

-the tagline for the North American release of *Terranigma*, which appeared in magazine advertisements for the game

## **Terranigma: The Basics**

Enix's *Terranigma* launched for the Super Nintendo CD in North America on January 13, 1997. The action RPG is almost identical to OTL's in terms of gameplay and storyline, the main changes from OTL are somewhat improved sprite animations, limited 3-D in certain boss battles (particularly the battle with Dark Gaia), about five minutes of *Granstream Saga*-style anime cutscenes, and more references to God, the Devil, Heaven, and Hell in the game's English translation, owing to the more lax censorship standards in TTL. The game still tells the story of a boy named Ark, who is born in the Underworld and must rebuild the surface of the Earth, which was destroyed in a conflict eons ago. After emerging from the Underworld and taking on quests that rebuild the continents and guide the Earth's lifeforms back through their evolution to a technologically-based human civilization, Ark comes into conflict with the evil scientist Beruga, who froze himself into cryosleep before the first destruction of the Earth and seeks to reshape the world in his own image by contaminating it with a virus that kills all "weak" lifeforms and preserves the rest as mindless, immortal

slaves. The primary villain of the game is Dark Gaia, implied to be this game's version of Satan, who has been using Ark to resurrect the world so that it can take control. Through sacrificing himself and all his friends back in the Underworld, Ark is able to defeat Dark Gaia and protect the lifeforms on the surface. In the end, it is implied that the people of Ark's village, and eventually Ark himself, will come back to life someday, and in a final animated cutscene after the credits, Ark's friend Elle gets a knock on her door. As she begins to turn the knob, the cutscene ends, leaving it up to the player to decide if Ark has returned or not.

The game is promoted heavily by Nintendo, who realized in the process of translating the game that it could be a major success, and that they didn't wish to lose Enix as a software partner. However, Enix's exclusivity with Sega was a done deal by that point, and despite Nintendo's promotion of the game, *Terranigma* would be the second-to-last Enix game to appear on a Nintendo system. It receives stellar critical reviews and it is considered by many to be the SNES-CD's best game of 1997, even after the year is all said and done. It exceeds 300,000 sales in North America, making it one of Enix's top-selling games in the territory. When added to the 200,000+ sales in Europe and over 700,000 Japanese sales, the game becomes a million-seller for Enix. The game would later be ported to the Saturn as an enhanced remake in late 1997 in Japan and 1998 in North America.

-

It's hard not to compare the Saturn's new action-RPG *Blood Omen: Legacy of Kain* to the new Super Nintendo CD action-RPG *Terranigma*. Both games feature single protagonists from a top-down perspective, exploring the world, battling enemies, solving puzzles and the like. And though *Legacy of Kain* features an entirely connected world, compared to *Terranigma*'s overworld screen, traveling from place to place in Kain's bat form is somewhat like using an overworld map to get around. Of course, *Legacy of Kain* covers much darker material, and the game is far more violent. Blood spews from everything you kill, and there are even spells that drain entire screens full of enemies of their blood and transfer it to Kain. In the end, however, the production values of *Kain* far exceed the SNES-CD's admittedly inspired RPG. The world of *Kain* is far bigger, the voice acting is far, far better, as are the graphics. We played both and though we'll be the first to admit we're somewhat biased, *Blood Omen: Legacy Of Kain* is the superior game. In fact, it might just be a contender for Game of the Year.

OSM Score: 10/10

(...)

Official Saturn Magazine: So, a lot of the RPG elements were a late addition?

Denis Dyack: Indeed they were. The damage numbers you see when striking an enemy or getting hit? That was a late add, as were some of the weapons. Initially, you could collect only five swords for Kain, but once we decided to make the game a bit more like an Eastern RPG in certain ways, we decided to add a few more swords and now there are twelve. We also made the combat just a bit smoother, though that can also be attributed to the power of the Sega Saturn.

OSM: Was this always a Saturn game?

DD: No, in fact our initial wish was to put this game on the 3DO, but when that system went belly-up, we switched to the Saturn. The Super Nintendo CD was never considered,

there were things we wanted to do that we couldn't have done. A lot of the full-motion video, we couldn't have done the 3-D like we wanted unless we were on the Saturn, and the load times on the SNES-CD would've been hideous. We wanted to make the load times as short and as infrequent as possible.

OSM: There are a lot of comparisons to some of the games on the Super Nintendo CD, but there really aren't many games like *Legacy of Kain* on the Saturn. *Magiquest*, *Ultima* perhaps, but *Legacy of Kain* is quite unique compared to most of the other games on the system. Did that help in your decision to bring the game to Saturn also?

DD: Honestly no, we didn't really worry about if there would be other games in this genre on the Saturn, because we knew *Legacy of Kain* was going to be the best game regardless. This game has been three years in the making, it's a real passion project for all of us and I'm overwhelmed with the reception so far. In fact, we're hoping it encourages more games like this to come to the Sega Saturn!

-excerpted from the *Blood Omen: Legacy of Kain* cover article in the January 1997 issue of *Official Saturn Magazine*

Moderator: I think we have, in the third row someone here has a question...

Anna Gunn: Oh, yes, hello!

Moderator: Do you have a question for Mrs. Gunn?

Fan: Um, sure, thanks, you are...an AMAZING voice actress but I'm wondering, if you've ever considered doing on-camera work. I know a lot of people don't consider voice acting to be "real" acting, though I think most of the people here understand all the passion and effort and skill that goes into voiceover and it's as real as any other kind of acting. But...you know with your talent I think, I think you'd definitely be able to make it doing on-camera work so I'm wondering if that was ever...if you'd ever considered on-camera work before?

Gunn: Well first off thank you, I, um, you know it's really nice to hear when the fans let us know that they consider voice acting to be synonymous with acting because it really truly is, it's hard for people who don't know what goes on in the booth, all the moving around we do and all the emoting and everything else, to understand that it really is no different from what you see on-camera. On-camera work, I mean....in my early career I actually did primarily on-camera work, and I've done a few things, little guest things here and there. But, after doing *Legacy of Kain*, I think that was when I made the transition to doing primarily voice, that game just did so well and a lot of job offers came in, that's when voice acting in video games REALLY blew up and now 18 years later, there are so many jobs in it. So I'm glad to have had the career I've had. I mean, just to be mentioned alongside, you know, Jennifer Hale, Moira Quirk, actresses who are my friends and who are some of the legends in this industry, that is amazing and so I've loved every second of my voiceover career and I can't wait to see what awesome characters I get to do next!

Fan: Thank you, thank you and you are amazing at your job. You are an amazing Samus.

Gunn: Thank you very much!

### ***Virtua Cop 2* A Big Hit**

It was *Virtua Cop 2*-mania at the Toys-R-Us in Long Beach, California yesterday. The game, which launched at arcades in 1995, finally came to the Sega Saturn to the excitement of hundreds of Sega fans lined up waiting their turn to bring one of their favorite arcade games home. The game, a sequel to the 1995 Saturn hit *Virtua Cop*, puts the player in the shoes of a police officer as they hunt down criminals, kidnapers, and terrorists in order to save their city. The game gives you the option of playing with a normal controller or using a realistic electronic gun to aim at targets on the screen. The game has drawn some controversy for its violent content, but Saturn owners are no stranger to violent video games. Earlier this month, the vampire adventure *Blood Omen: Legacy Of Kain*, sold more than 150,000 copies in its first week, despite the graphic violence depicted in the game. The Sega Saturn has appealed largely to older male players, though *Virtua Cop 2* does introduce a female officer to the series in an attempt to convince players of both sexes to play the game. Most of the people lined up at the Toys-R-Us were boys and young men who ranged from their early teens to their late 20s, with some parents lined up to purchase the game for their kids. Despite warnings from clerks about the game's level of violence, few, if any parents were deterred from purchasing the game. The Sega Saturn has been the top selling game console now for the past two months, and industry analysts predict that it will remain so through the month of January.

-from an article in the *Long Beach Press Telegram* on January 31, 1997

### ***Tekken 3* Soars Into Arcades, Saturn Release Not Yet Scheduled**

While Saturn owners are getting ready for *Tekken 2* to hit home consoles next month, *Tekken 3* is getting ready to make its way into arcades. It's scheduled to make its North American premiere at the grand opening of the first Sega Gameverse location in Seattle in early March, with a rollout into arcades across the country over the rest of the month. After the major success of the previous two *Tekken* games, it's set to be one of the biggest arcade launches ever, and should help to propel Sega's new arcade into the public eye as well. Sega is inaugurating the *Tekken 3* launch with a major tournament at Gameverse, where the company also plans to hold a mini-press conference announcing a few of their games for later this year. EGM will have an article on *Tekken 3* in next month's issue, and we'll also be there at Sega and Namco's launch event in March to give our readers the scoop on all the big announcements.

-from the January 1997 issue of *Electronic Gaming Monthly*

-

The decision by LucasArts to launch a new *Sam and Max* game for the Super Nintendo CD was somewhat unexpected, especially considering the commercial performance of the port of *Sam and Max Hit the Road* on the console in 1994. Though critically beloved, the port had done underwhelming numbers, especially compared with how well *The Secret Of Monkey Island* had done. Still, though adventure games as a genre had declined on the system, LucasArts decided to take a risk, especially since there were no further plans for *Monkey Island* games on the console. The game would be designed with the SNES-CD in mind from the very beginning, maintaining the 2-D graphics and voice acting used in the original game, but with an optimized control scheme and references to Nintendo within the game's

dialogue. It saw Sam and Max contracted to solve five cases, which were tied in with an overarching mystery plot about a mysterious feline woman and a treasure buried beneath an abandoned old hotel (an allusion to "Al Capone's Vault", which Geraldo famously opened up and found largely empty, though in *Freelance Police* the treasure, belonging to a gangster named Rochester Ralph, was very much real). The critical reception to the game was good, though not QUITE as good as *Sam and Max Hit The Road* had been. However, commercially, the game was a surprise success, more than doubling the sales of the SNES-CD port of *Hit The Road*, and becoming one of the top selling new SNES-CD games of the month, trailing *Terranigma* and finishing a close second to *World Championship Boxing*. The game would eventually receive a PC version in 1998 (with an extra two cases but with the Nintendo references excised) and it paved the way for a third *Sam and Max* game in 2001. The inexplicable disappointment of the first *Sam and Max* game on the SNES-CD had been reversed by the inexplicable success of the second (though it's likely that clever advertising for the game played a role).

-excerpted from "Sam And Max Hit The SNES-CD" on gamesovermatter.com

-

Brittany Saldita: *Terranigma* is a damn good RPG and out of the three Enix action RPGs, it's the best of the series.

Ted Crosley: Wait, wait, it's part of a series?

Brittany: According to Quintet, yes, *Terranigma* is the third game of a loosely-connected series of games that includes *Soul Blazer* and *Illusion of Gaia*.

Ted: See, I thought *Soul Blazer* was connected to *ActRaiser* because they both had The Master in them.

Brittany: Well....they're sorta all connected.

Ted: \*holding his head\* Why can't they just be numbered like normal sequels?

Brittany: They're not sequels, per se....

Ted: \*groaning\*

Brittany: I know, I know, it IS confusing, but there was nothing confusing about how good *Terranigma* is. The story is amazing, I won't spoil what hasn't already been revealed in the review, you just have to play the game. It's outstanding, I give it a 5 out of 5.

Ted: Well, I'm not quite so thrilled about it, I'm giving it a 4. Yes, the game had an excellent storyline and excellent music, but the battle mechanics are a bit unbalanced, you're gonna have a lot of trouble killing anything in the late game until you level up but if you level up too much you'll be really overpowered.

Brittany: I didn't mind that, I thought it cut down on level grinding more than you absolutely had to.

Ted: The problem is that you don't know if you have to, you either get your ass kicked or you can beat the final boss with one hand.

Brittany: Didn't you beat *Tomb Raider* with one hand?

Ted: ...that was Alex!

Brittany: Don't lie, I saw you, one hand on the controller and the other one...buried in a bag of Doritos.

Ted: I was hungry!

Brittany: You got Dorito dust on the controller! And IN the controller!

(...)

Alex Stansfield: And I KNOW you're gonna compare this game to *Terranigma* because the two of them are quite a bit alike.

Ted: I REALLY preferred *Legacy Of Kain*. The gameplay was better, the world was bigger, and the voice acting, holy crap!

Alex: Yeah, the guy who did the voice of Kain was amazing and even the dude who played Frollo in *The Hunchback Of Notre Dame* shows up as one of the characters.

Ted: So yeah, I loved this game. It kicked a ton of ass, the vampires in this are way better than those vampires in the Anne Rice books.

Alex: Yeah, Kain's a badass, everyone in this game is a badass pretty much.

Ted: And you FEEL like a badass when you play. I mean...look at this spell! He sucks the blood out of EVERYBODY on the screen at the same time! That's the most badass thing I've ever seen in a video game!

Alex: More badass than Sub-Zero yanking a dude's head off in *Mortal Kombat*?

Ted: Way more badass than that. He even has a cool catchphrase.

Alex: Vae victis!

Ted: What's that even mean anyway?

Alex: It means "woe to the vanquished".

Ted: Oh, SEE?! That is badass! I'm giving *Blood Omen: Legacy Of Kain* a very badass 5 out of 5.

Alex: I'm also giving it a 5 out of 5. This game is REALLY good, all the way around. The graphics, the music, everything about it is just killer. Definitely check it out, it's the best RPG since *Tale Phantasia*.

Ted: Agreed.

\*a siren sounds\*

Ted: To the wall!

\*Alex and Ted bring up a framed copy of *Blood Omen: Legacy of Kain* to the Hall of Fame wall as Brittany, Gary, and John gather around.\*

Gary Westhouse: I take it you guys liked the vampire game?

Alex: It's going on the Hall of Fame Wall so indeed, we liked the vampire game.

John Walden: Sweet, let's get that thing up there!

\*The game is mounted on the wall.\*

Ted: *Blood Omen: Legacy of Kain* is an absolute, must-play game, an instant classic that belongs in any Saturn owner's collection and is a VERY good reason to buy a Saturn if you don't already have one.

-excerpted from the January 14, 1997 episode of *GameTV*

(...)

John: And we're here in New Orleans for Super Bowl week!

Brittany: GameTV's here for the very first time to interview some of the players from the Packers and the Dolphins about the upcoming game.

John: And by that we mean what video games they play, because this is a video game show and that's all you guys care about, right?

\*John is shown with Packers quarterback Brett Favre\*

John: So what kinds of video games do you play?

Favre: \*laughing\* Honestly, I can't say that I play any video games. Football takes up a lot of my time, I wish I had time to play them because some of them look pretty fun, but I mostly focus on football.

John: Well, you've been lighting it up this year, you're the MVP, so all that hard work has definitely paid off. Lemme ask you this, if you DID play video games, which one would you play?

Favre: Uh, Mario, I guess maybe? That looks kinda fun. You'd have to show me how to play.

John: Everybody can play Mario! Come on, if you can beat the Dallas Cowboys in the NFC Championship, you can play Mario.

\*Next up, John is shown interviewing Dan Marino from the Dolphins\*

John: All right, Dan Marino! I know we don't have much time but I'd like to ask if you like to play any video games.

Marino: Awww, man, you know, I don't, but my kids play. My kids play all the time, they like to play uh, Mario, and there's this game with a silly looking dog that my sons have been playing.

John: Oh, *Dog Dash*, that's a real good one!

Marino: Yeah, they have a blast playing it.

John: Hey, congrats on beating the Broncos and good luck in the Super Bowl. I'm supposed to be unbiased but I'm rooting for you guys since I'm from Florida.

Marino: Hey, yeah, sure thing.

\*Now Brittany is shown with Packers kick returner/wide receiver Desmond Howard.\*

Brittany: This is Desmond Howard and I've got some questions for you about video games.

Howard: Sure, sure, I love video games, go ahead.

Brittany: If you could be any video game character you wanted, which one would you be?

Howard: I'd be myself in Madden '97.

Brittany: \*laughing\* Yourself?

Howard: Yeah, I go for 300 yards a game in Madden. If I was going for 300 yards a game, man, we'd never lose!

Brittany: That's a really good point! So are you a Nintendo guy or a Sega guy?

Howard: Sega Saturn all the way, think you can tell me anything about Turok? I'm really looking forward to Turok.

Brittany: It's gonna be awesome, there are t-rexes and there's a gun that fires a nuclear explosion.

Howard: Really? \*he looks quite excited\* Now I REALLY wanna play Turok!

Brittany: It's coming out in March!

Howard: Think you could hook me up early?

Brittany: \*laughing\* I wish! I'd probably look MYSELF up first, I'm looking forward to playing Turok too! Hey, good luck in the game Sunday!

Howard: Thanks, thanks!

-excerpted from the January 21, 1997 episode of *GameTV*

(...)

John: So *Virtua Cop 2*, not quite as...revolutionary as the first, but still a pretty solid game.

Gary: Yeah, I mean, the graphics have improved, the gameplay's somewhat better, there's more characters to pick from...I dunno, I feel like there should be more to it.

John: It was short.

Gary: Right. There's like, three friggin' levels, and I just....I don't know if you can justify paying that much for such a short game.

John: The multiplayer's fun.

Gary: The multiplayer IS fun if you have a buddy who's around your skill level.

John: And since all four of us are way better than you, you didn't have much fun with it?  
\*smirks\*

Gary: I am not THAT bad at the game, I beat it, didn't I?

John: Let's show another brief clip of Gary trying to get through *Virtua Cop 2*.

\*John and Gary are shown playing together, John is dominating in the points while Gary hits two civilians in succession\*

John: You're supposed to be saving the hostages, not shooting them!

Gary: I'm....I'm putting them out of their misery!

John: What?

Gary: They look like they've been held hostage for like two hours, they gotta be bored as hell by now, I'm ending their boredom!

John: \*laughs\* I think....I think....I think maybe they could've waited, I dunno, at least a few more hours to get back to their families.

Gary: What if their kids are REALLY bad? Like Dennis the Menace bad?

John: I still don't think-

Gary: You don't think Mr. Wilson was wishing just once for someone to end his misery? Here comes Dennis messing up the car again! Some of those comics, he looked REALLY miserable.

John: \*laughing\* Well, okay, if Dennis the Menace shows up, you might be onto something there.

\*the flashback ends\*

John: Now I kind of want to shoot Dennis the Menace.

Gary: Well, regardless, this isn't a BAD game. It's decent and if you liked the first, you'll like the second. Just know that there's not much to the game. I give *Virtua Cop 2* a 3.5 out of 5.

John: Yeah, I agree, a solid 3.5 from me too.

(...)

Ted: Well, that's it for this week's episode of *GameTV*. Before we go, we want to give a special shout-out to the Green Bay Packers who won the Super Bowl 45-17 over the Miami Dolphins.

Brittany: And to Desmond Howard, who won the MVP after taking TWO kickoff returns back for touchdowns! Enjoy your offseason and enjoy playing Turok when it comes out in a couple of months.

Alex: And we also want to give a shout-out to Gunpei Yokoi who was gracious enough to let us interview him for our Days of the Hunt feature, that's coming next week along with our review of the game, we'll also be previewing a game coming out in April that was written by, get this, a former writer for the show *Clarissa Explains It All*.

Ted: Yes, we'll be explaining THAT and lots more next week on *GameTV*!

-excerpted from the January 28, 1997 episode of *GameTV*

### **February 3, 1997**

It had been about six months since DMA Design had turned down an offer from Nintendo to collaborate on games for the Ultra Nintendo. The company had wanted to keep its options open, and saw the rising Saturn sales and public interest in the system as a sign that they should focus on developing games for the Saturn console, at least for the moment. At the time, the company was developing a game for both the Saturn and for the PC, a game that they planned on releasing late that year.

The game was called *Race'n'Chase*, a game where the player could assume the role of a cop or a criminal as they completed various tasks in a large, open city. The game would focus on car races and cop chases, hence the name, and was coming along nicely. Sega had given DMA some input, though the company would still be free to produce the game as they saw fit. Still, Sega's influence on the game was beginning to show. The racing portions of the game had been expanded, and car chases were extremely fun, both on the law enforcement side and from the criminals' point of view.

"If you ask me, I still prefer playing as the bad guy," said Sam Houser, leaning over a desk where a co-worker was testing out a build of the game. Of course, Houser had always been somewhat of a rebel, and playing as the 'bad guy' appealed to that rebellious nature. Even so, even he had to admit that the game had become even more fun with Sega's suggestions put into place. Furthermore, the company hadn't made any attempts to cut down on the violence. You could still gun down pedestrians or run them over, and could commit crimes at your leisure. The company had no problem with controversy, and Sam and his brother Dan were thrilled that Sega hadn't once tried to censor their game. "I almost think maybe the game should focus more on committing crimes."

"Do we really wanna get rid of the cop chases though? Some of them are pretty fun," said Houser's co-worker. "Giving the player a choice about what side of the law they wanna be on does make the game more about 'freedom'..."

"True," said Houser, continuing to watch the footage on the screen. He was already formulating an idea, probably too ambitious for this game but possible some day down the road, about playing as a criminal, committing a slew of crimes, and then getting to play as the cop who'd be responsible for hunting that criminal down. Maybe playing both sides of the law *could* be fun, for certain players at least. "I'm still not quite sure about the name though...maybe I could run my idea by Dan?"

He had thought about calling the game *Grand Theft Auto*...but if the cop aspect stayed in, it might not be entirely fitting.

"Then again...maybe you could play as a *CORRUPT* cop..." thought Houser, a brief smile

crossing his face. He still had some time to think of more ideas. After all, the game wasn't due out until October...

-

*"Sega's role in kicking off the next generation of fighting games can't be understated. The days when Street Fighter II and Mortal Kombat were the biggest games in town was over, and now games like Virtua Fighter and Tekken ruled the roost. It became the fighting game system, and gamers still loved to play fighting games."*

-Tom Kalinske, "The Chase"

*"It was my work with Sony and my friendship with Kutaragi-san that led me to modify my philosophy on game design to some extent. I had always believed that expensive, powerful technology interfered with creativity in design. But working with Kutaragi, I saw the possibilities that could arise with more advanced technology. While I never abandoned my beliefs about 'lateral thinking' entirely, I was given new ways in which to expand on those ideas."*

-Gunpei Yokoi, in a November 2002 interview with *Electronic Gaming Monthly*

*"3...2...1...Begin The Hunt!"*

-the introduction phrase to every level of *Days Of The Hunt*

-

*"With the release of Tekken 2, the series takes its seat as one of the very best fighting game franchises on the Saturn. It's one of the most vastly improved ports of an arcade game and a must-play for all Saturn owners."*

-excerpted from *Gamepro's* perfect 20/20 review of *Tekken 2*

### **Tekken 2: The Basics**

With *Tekken 2*, Namco poured a great deal of effort into making the game as good of a port as it could possibly be. In contrast with the original *Tekken* port, which featured only slight improvements, *Tekken 2* got a full overhaul, including enhanced graphics and full CGI ending cutscenes for every character. In addition, the Saturn Enhance controller greatly improved the playability of the game introducing full arcade-style controls. The game exceeded even the popular *Virtua Fighter 2* in terms of critical reception, and though sales weren't quite as robust, *Tekken 2* still became the fastest-selling Saturn game since *Sonic the Hedgehog 4*. The release also kicked off what Sega and Namco were calling "The Month Of Tekken", the month spanning the Saturn release of *Tekken 2* and the arcade release of *Tekken 3*, with tournaments, contests, merchandise releases, and even a half-hour television special that aired in syndication. While the television special was mostly remembered for its cheesy acting from actors dressed as characters from the game, it was also an effective promotional tool for both *Tekken 2* and *Tekken 3*. Coupled with a serious TV and magazine advertisement campaign, and the Month of Tekken elevated the franchise in terms of stature, to where only *Virtua Fighter* was seen as being equal to *Tekken* in the eyes of Saturn owners.

(...)

\*Two hosts, a man and a woman, are shown in a somewhat dingy warehouse-like setting.\*

Man: And when *Tekken 2* releases on February 18, Tekken Tuesday, you're going to get to play with some all new characters.

Woman: Characters like Lei Wulong, a fierce martial artist-slash-cop who uses his fighting skills to put the most dangerous criminals behind bars.

Man: Here's a quick peek of Lei in action.

\*Footage is shown from the Saturn version of *Tekken 2*, showing Lei taking out opponents with fierce combos. After the footage is shown, the scene cuts to an actor playing Lei on screen, running into a building as he chases down a criminal.\*

Lei: \*he pursues the criminal into a large room\* Stop, in the name of the law!

Criminal: \*smirks\* You've fallen into a trap...

\*Lei is surrounded by criminals who slowly advance on him.\*

Lei: \*doesn't look fazed\*

Criminal: Why aren't you scared?

\*The criminals rush at Lei, who fights them off with a series of rather goofy looking karate moves as generic techno music plays in the background.\*

Lei: \*does a martial arts pose after taking out the last baddie\*

-excerpted from the syndicated "Tekken Special" show/advertisement, which aired on the weekend of February 8-9, 1997

-

## **Eighth Nicktoon To Air This Fall**

Nickelodeon has formally announced its newest Nicktoon, which will air its pilot episode after the Kids' Choice Awards on April 19. The show is titled *Sam and Kira*, and it follows the adventures of two seventh grade girls as they experience the trials and tribulations of middle school. The show is created by Dan Schneider, most well-known as being a member of the cast of *Head of the Class*, but currently working as the showrunner for Nickelodeon's variety comedy show *All That*.

"There's definitely going to be a lot of humor in *Sam and Kira*, but it's not going to be quite as zany and random as the humor on *All That*," said Schneider in a brief interview. "The girls have real adventures and real problems, and so not every moment is going to be laugh-out-loud crazy, there's going to be some emotional stuff there too."

The announcement of *Sam and Kira* is a departure from Nickelodeon's recent Nicktoons such as *Phineas and Ferb* and *Kablam!*, which have emphasized slapstick humor over serious character development. The show is said to be comparable to one of the first Nicktoons, Jim Jinkins' *Doug*, which was also a comedy but occasionally showed deep glimpses into the mind of its protagonist. The two girls, Sam and Kira, have contrasting personalities but a deep friendship that has existed since the two were in kindergarten. Sam (voiced by *All That* cast member Amanda Bynes), is cautious but also quite silly, while her pal Kira (voiced by *Casper* actress Christina Ricci) is a bit more serious and introspective, and somewhat defiant of authority. A role as a voice in a Nickelodeon animated series might seem like a step down for Ricci, who is considered one of Hollywood's most popular child stars, but the actress eagerly took the role after she was turned down for the main role in Disney's remake of their classic caper film *That Darn Cat!* (losing the role to singer Brandy Norwood). She and Bynes record their lines together whenever possible, and the two have already developed a friendship that Ricci says has helped the characters' chemistry on the show.

"Getting to work directly with Amanda in the studio is really helpful, I can bounce lines off of her and we both have a lot of fun," said Ricci during a break in a recording session.

*Sam and Kira* is scheduled to begin airing weekly in September.

-

*This month in Epic Center, it's a double dose of RPG adventure from Koei and Taito! First, Brandish 2: The Planet Buster is the sequel to 1995's dungeon crawling adventure Brandish. The adventurer Varik once again finds himself in danger when he finds a mysterious sword capable of destroying the planet! This time, he must team up with his rival, the sorceress Alexis, to survive. Then, Taito brings us Energy Breaker, a strategy-RPG where you play as a girl named Myra who must carefully plan her every move in battle, lest she be defeated by powerful enemies who seek to destroy her! We'll have strategies to get you safely through the first few hours of both of this month's releases, and we'll also preview the new RPG from Working Designs and Game Arts, Starseekers Of Exion!*

-The intro to the Epic Center section in the February 1997 issue of *Nintendo Power*

By this time in the SNES-CD's life, we were seeing some fairly obscure games make their way to the system. None of them were major hits. For example, February 1997's two JRPG releases were *Brandish 2* and *Energy Breaker*, which barely sold 75,000 copies between the two of them in North America. Contrast that with the Saturn game *Dragon Force*, which sold well over 100,000 copies by itself. Still, there was life left for RPG fans on the system, including games like *Dragon Quest VI*, and of course, *Starseekers of Exion*, which proved to be one of the greatest RPGs to hit the system and was the swan song for Working Designs on the SNES-CD. RPG fans who owned the SNES-CD and who had gotten used to a steady stream of classics must've been dismayed to see games like *Legacy Of Kain*, *Windborn*, *Krystalshade*, and *Planetary Probe* all come out for the Saturn one after the other. But the Ultra Nintendo, and with it, the most anticipated RPG of all time, *Final Fantasy VII*, was on the horizon, and Nintendo fans were confident that they would have the last laugh.

### **Selina Over Celine At 1997 Grammy Awards**

The hotly-debated, much-anticipated showdown between Tejano superstar Selina and spectacularly gifted diva Celine Dion was finally settled at the Grammy Awards, and it was Selina who took home the big prize of the night, winning Album of the Year for *Dreaming Of You*. After Dion won for Best Female Pop Vocal Performance for her hit song "Because You Loved Me", many thought Selina would come up short. But when *Dreaming Of You* won Best Pop Album, and then Selina went on to win Best Song for the song "Dreaming Of You", it became a foregone conclusion that she would take the night's biggest award. The big win gave her three Grammys in all and cemented her status as one of music's biggest stars. Among the other big awards of the night, Record of the Year went to Alanis Morissette for "Ironic", giving her her second straight year of winning one of the major Grammy awards after her big night last February. Best New Artist went to LeAnn Rimes, whose song "How Will I Live Without You" will appear this summer in the Nicolas Cage film *Con Air*.

Selina accepted her Album of the Year award with a tearful speech giving thanks to her parents and husband, she also thanked her fans. On Grammy night there were massive celebrations in Southern Texas after news broke of Selina's big win. One highly-publicized gathering, which was briefly broadcast on the Grammy Awards ceremony itself, was a huge gathering of 14,000 people at a park in Houston, Texas which was showing the awards show on a massive screen set up for viewing. Dion was gracious in defeat, in an interview after the ceremony she called Selina a "wonderful performer" and an "inspiration", and indeed, the two are said to be friends despite multiple reports in the media of a rivalry between them. Selina's next album, *Last Night*, is scheduled to be released at the end of April.

"Your games come to life with the all new Super Scope 2, only from Nintendo! Use it to play the all new game *Days Of The Hunt*, where you chase some of the most dangerous creatures in the land!"

-excerpted from a commercial that aired in February 1997 advertising Nintendo's Super Scope 2

An obscure bit of video game trivia comes from the files of Nintendo creative director Gunpei Yokoi, who was briefly pondering the creation of a portable 3-D gaming console set to be released some time in 1996. Ongoing development on the Ultra Nintendo killed the idea, but small pieces of it did survive in a somewhat ill-advised update to Nintendo's Super Scope accessory. Dubbed the Super Scope 2, the device used a limited form of stereoscopic 3-D to enable 3-D graphics in a very small selection of games, most notably *Days of the Hunt*, which had a Super Scope 2 mode that could be activated in conjunction with the accessory. The 3-D wasn't very good and produced somewhat of a nauseating effect for some gamers. The device was also used for games like *Gungriffon* and *Independence Day*. Perhaps the Super Scope 2 might've been more widely adopted if the original plan, to use it in conjunction with Nintendo's hit game *Squad Four: Eclipse*, had come to fruition, but the Super Scope 2 wasn't ready in time and it was instead promoted with Yokoi's game *Days of the Hunt*. That game WAS actually a decent success, but not due to the Super Scope 2 (in fact, many reviewers and players found the game much better without it). It's unknown if Yokoi's dream of a 3-D game console would've succeeded had it been made a reality, but the Super Scope 2 showed that even ideas that seem good at the time don't amount to anything without some games to go with them.

-excerpted from an article in the June 2007 issue of *GamePro*

-

Gary Westhouse: *Higrise* was just about the most addicting and fun puzzle game I've played since *Tetris Attack*. The four-player mode is absolutely great and it's one of those games that people will be playing at parties for a long time.

Ted Crosley: Yeah, and in contrast to a lot of other puzzle games where, you know, if your stack gets built up, you lose, it was nice to see a puzzle game where you actually have to build up your stack and keep it from falling down. And the falling down animations are pretty spectacular, seeing blocks and bricks rain down on the heads of the little anime characters down below is a lot of fun, it makes losing and making your opponents lose a lot of fun.

Gary: Sending a cruise missile into the base of your opponent's stack is one of the most satisfying things I've done when playing a video game, it's right up there with dropping a 15-layer brick in *Tetris Attack*.

Ted: The Saturn's not really a system known for its puzzle games, it's good to see them come up with one here. I think some people might be turned off by the anime motif but I loved it, it adds to the quirkiness and the amusement of the game.

Gary: And the tutorial lady is pretty cute.

Ted: Michiko the Tutorial Lady, yeah, she's no Sailor Jupiter but she's quite fine.

Gary: She has a great laugh!

Ted: It's actually a pretty annoying laugh.

Gary: But it adds to the satisfaction in landing a huge blow on your opponent's stack. Their stack falls, Michiko laughs at them....

Ted: \*imitating her cackling laugh\*

Gary: Well yeah, it's annoying when YOU do it!

Ted: Anyway, I'm giving *Highrise* a solid 4 out of 5.

Gary: I'm giving it a 4.5, it's full of addictive puzzle play and has one of the best multiplayer modes of the year.

-excerpted from the February 4, 1997 episode of *GameTV*

Brittany Saldita: You know, as much as I dug the animations and the music in *Dragon Force*, I just couldn't get into the gameplay.

Alex Stansfield: And you know, the game kind of finds itself stuck between that Koei real-time strategy mode of play and that Bahamut Lagoon RPG-like mode of play and you're right, I didn't really feel like this game moved at a pace that I found all that fun.

Brittany: It gets SO repetitive, battles are really just a matter of spamming your best attack, sitting around and waiting for the results.

Alex: And the good animations actually work against this game because they're soooooooooo sloooooooooow!

Brittany: Do that again.

Alex: \*moving like he's in slow motion\* Soooooooooo sloooooooooow!

Brittany: \*laughing\* Battles take way longer than they should and the game isn't very strategic either. It's a shame because I felt like this game really WANTED to be good but in the end... \*she shakes her head\* I'm giving it a 3 but I feel like that might be generous.

Alex: I'll go ahead and give it a 3 too, again, the graphics are fine, it's just everything else that's not very good.

-excerpted from the February 11, 1997 episode of *GameTV*

Alex: *Tekken 2* builds on what worked from the first, improving the graphics and presentation significantly. It's still the same old *Tekken* gameplay, but if you liked the first, you'll LOVE the second.

Ted: Yeah, I felt that when using the NiGHTS controller especially, I had a lot more control. And you can use that controller for the original *Tekken* but it's even better with this new one.

Alex: Absolutely. The moves are a lot easier and I could pull off combos a lot quicker.

Ted: Well, it's not like *Street Fighter* where you really have to know everything. Here, it's much easier to chain up smaller moves to keep your opponent reeling.

Alex: How'd you like the storyline in this one? Better? Worse?

Ted: Do fighting games NEED to have a storyline?

Alex: I thought the cutscenes were pretty neat.

Ted: Well, yeah, I mean they could've used some voice acting but they were still pretty cool. I'm gonna give this game a 4.5 out of 5. It's better than the first *Tekken* and it makes me really excited to play *Tekken 3*.

Alex: Yeah, 4.5 is my score too. A really good fighting game with a LOT to do, it's one of the most fun and most rewarding of all the Saturn fighting games.

-excerpted from the February 18, 1997 episode of *GameTV*

John Walden: When it comes right down to it, what *Days Of The Hunt* is is just a rather simple rail-shooter with the added option of multiple paths through the same level. It's fun but when you compare it to a game like *Squad Four: Eclipse*, it loses a lot of its novelty.

Alex: I enjoyed this game. I didn't enjoy it with the Super Scope 2...\*holds it up\* But I enjoyed this game and I thought the story was really engaging too, you really feel for this girl who's hunting all these monsters.

John: What's the deal with having a gun accessory for a game where you're shooting arrows, anyway?

Alex: I know, I wish they could've made some kind of plastic attachment to make your gun look like a bow.

John: We could do that with some duct tape and some tin foil.

Alex: That is actually a good idea. It might look kind of stupid but it can't be more stupid than shooting arrows with a gun.

John: Anyway, I give *Days Of The Hunt* a 3 out of 5. It was just way too repetitive for my tastes, even with the multiple level paths you ultimately end up having the same experience.

Alex: I'm giving it a 4, I loved the open worlds that many of the levels seemed to portray, I loved the story and some of the monsters were really creative. As far as rail shooters go, you can do a hell of a lot worse.

-excerpted from the February 25, 1997 episode of *GameTV*

John Walden: It's an honor and a privilege to sit down with Mr. Gunpei Yokoi from Nintendo. Thank you again for giving us this interview.

Gunpei Yokoi: \*nods graciously\* Of course.

John Walden: The first thing I'd like to talk with you about is your new game, *Days Of The Hunt*. What was the inspiration for the game and what would you like players to take away from it?

Yokoi: With *Days Of The Hunt*, I tried to imagine the beauty of nature and how this girl, Ana, would survive as she wanders through this enormous forest. These creatures you see, they've all been driven hostile by this mysterious force, and I wanted to contrast the beautiful environments you see with the fear that this girl must be feeling as she is forced to hunt these creatures and try to find a way to make it out of this situation.

John: In that sense it's sort of like the situation that Samus is facing in your *Metroid* games, isolated and needing to fight her way to safety.

Yokoi: That was where I drew a bit of the inspiration, yes. Though Ana is not a battle-tested warrior like Samus is, she has the same bravery and courage.

John: Was it your idea to utilize the Super Scope 2 for this game? I remember that the

game *Solus*, which was played with the original Super Scope, was really loved by a lot of people and this game played in similar ways when you used the Super Scope 2.

Yokoi: The Super Scope 2 was a combination of my work and the work of others at Nintendo... taking one of my old projects and then combining it with some of theirs. I think it enhances the game, but I'm glad that it's not necessary to get full enjoyment out of the game.

John: Are you planning to use the Super Scope 2 in future projects?

Yokoi: I have thought of maybe using it for a future game similar to the original *Mario Bros.* title, but so far there hasn't been any progress on it. Perhaps later on?

John: So even with the SNES-CD nearing the end of its lifespan potentially...

Yokoi: Oh, I don't think we've seen the last of it! You know, I always try to utilize established technology in new ways, so if there's any idea I have for it, I'll try to find a way to put it into action!

John: Well, speaking of technology, I was wondering if you had any plans for the Ultra Nintendo coming up soon.

Yokoi: It's a really intriguing machine, isn't it? There's so much power there, but also a lot of potential. I have a lot of ideas for it too...

John: Can we talk about Metroid? Because I know a lot of people watching this show want to know if you have anything planned for the next Metroid. Is there any chance it shows up on the SNES-CD?

Yokoi: Well, I thought of many potential ideas for the follow up game to *Super Metroid*, but I never settled on anything that could've been possible on the SNES-CD. I think if we do see a new *Metroid* game it would be on the new system. I do have ideas for a new Metroid on the new system but I don't know if we're close to having an actual game ready!

John: I think EVERYONE has ideas for what the new Metroid game could be.

Yokoi: \*laughing\* I get those ideas from people sometimes, I know everyone has their own opinion because the Metroid games are quite popular. I hope that everyone who loved the previous Metroid games will have a bit more patience, you'll know about the new game when it's ready to be announced!

John: Is it ready to be announced yet?

Yokoi: Ahh, still not!

John: All right, all right, let's talk about the new Game Boy. We've seen some recent innovation with the color screen and the new Sony sound chip, but what ideas do you have for something a bit more advanced?

Yokoi: With the Game Boy, my original design philosophy was one of simplicity, to conserve battery power and to make games easier to develop. That philosophy still holds true, you know all the problems Sega's handheld systems have had that have limited their potential.

John: Right, the Venus and its hour-long battery life were really troublesome.

Yokoi: Right, right. And so whatever comes next from Nintendo will have to retain the same philosophy.

John: You think we'll ever see something at least as powerful as, say, the Super Nintendo?

Yokoi: We could release a portable Super Nintendo or even a Super Nintendo CD, but it would be very expensive and would drain batteries rapidly. I think any major advance in handhelds would need major advances elsewhere to be feasible. But I'm always open to new ideas! I'd love to see a much more powerful Gameboy.

John: It's been rumored that you considered retiring at some point, is that true?

Yokoi: Well, I did consider it, but then I began to realize that I'd be stepping down at a really exciting time! I think that as long as Nintendo and Sony are working and creating things together that I want to be a part of that process.

John: Would you have stayed with Nintendo if, say, Sony and Nintendo had split up before agreeing to make the Ultra?

Yokoi: I really can't say!

John: So it wasn't your entire reason for staying.

Yokoi: Right, it wasn't, it was just a part of it. I had other reasons and I'm glad to still be working with Nintendo.

John: So, what's next for Gunpei Yokoi?

Yokoi: Right now I am advising a team that's working on a game for the Ultra Nintendo next year, and I'm also working on new games to utilize the technology in the new model of Game Boy.

John: Have you yourself been playing any games recently?

Yokoi: When I have the time to play, I enjoy *World of Color*, and *Ballistic Limit* is very much like what I might have come up with for a CD-based Metroid, so if you haven't played that game yet and you are very impatient for a new Metroid title you might want to play it! I was very impressed with it and it was the game that introduced me to many of the people working at Sony.

John: Thank you again for your time, this was a really fun interview and I hope we'll get to do it again in the future. \*smiles and leans in, shaking Gunpei Yokoi's hand\*

Yokoi: Of course, thank you too!

-excerpted from the February 25, 1997 episode of *GameTV*

-

*"Anything Nintendo can do, we can do better. We do shooters better. We do fighting games better. We do platformers better. We do RPGs better. The Saturn does what Nintendon't. It's just that simple."*

*-Tom Kalinske, to a reporter from CNN at a press event for the release of Turok: Dinosaur Hunter on March 28, 1997*

*"Was I impressed with Turok? Well, yeah, it's a well made game, of course. Was it a game we wanted to have on the Ultra? I think....I think Acclaim's got something good in store for the Ultra, so don't read too much into Turok for the Saturn. I can't say anything else, but don't take Turok as the end-all be-all."*

*-Howard Lincoln, quoted in an article in the June 1997 issue of Electronic Gaming Monthly*

*"Turok's definitely turned things around for us. Before Turok, things were rough. After Turok, things are looking up. I'm looking forward to seeing what both Nintendo and Sega have in store and to working with them in the future."*

*-Acclaim's Jeff Spangenberg, speaking in an interview on the May 6, 1997 episode of GameTV*

*"Maybe people in America just don't like Dragon Quest, I don't know. The sales of VI were really disappointing, especially after Terranigma had done so well."*

*-Robert Jerauld*

*"So, the producers of GameTV had a problem. Though the hosts had embraced Brittany Saldita as an equal, the producers wanted a woman who could bring in male viewers, and the fiery, opinionated Saldita was bringing in more girls than guys. So, in the spring of 1997, they went straight-up eye candy by bringing in Lyssa Fielding. With her blonde hair, penchant for showing cleavage and her history hosting the game show Singled Out, producers thought they had the girl who could bring in even more drooling males. What they got, however, was a host who was even more opinionated and just as much of a gamer as Saldita. In fact, rather than becoming rivals as the producers thought they might, Saldita and Fielding became best friends very quickly, and the two joined with the male hosts to form a united front against any potentially sexist actions by the producers of the show. The producers could afford to potentially lose Brittany Saldita, but they could not afford to lose Ted Crosley and Alex Stansfield, who were enormously popular with viewers and who threatened to walk if they caught wind of any harassment of Saldita or Fielding."*

*-from the G4 TV episode "Icons: GameTV", which aired in February 2003*

-

*\*Faint footsteps are heard running through a grassy jungle\**

Narrator: Beyond space and time comes a world beyond imagination...

*\*The footsteps keep running as a roar is heard in the background\**

Narrator: A world full of creatures from the distant past...

*\*The footsteps stop.... the man who's running turns and quickly loads up a shotgun\**

Narrator: And horrors that defy description.

\*There's a pause....then a raptor leaps out at the man, who desperately pumps shotgun blasts into it as it leaps on top of him.\*

Narrator: And every moment is a fight for survival.

\*The man manages to push the raptor off, but more are coming. He runs, desperately trying to get away, only to come face to face with a T-Rex. He takes out another gun, a sci-fi looking gun, and blasts the T-rex with energy projectiles as it comes down on him.\*

\*Scenes from the game begin to play, showing the first-person action of Turok and showcasing the game's incredible graphics as Turok ventures through a variety of worlds, ancient temples, lava fields and even futuristic ruins.\*

**Will you survive?**

**TUROK: DINOSAUR HUNTER**

**Own it March 28**

**Only on Sega Saturn**

\*cue the SEGA! Scream\*

-from a commercial that aired on primetime television during the month of March 1997

**Turok: Dinosaur Hunter- The Basics**

Turok: Dinosaur Hunter for the Sega Saturn is a significantly larger game than OTL's game for the Nintendo 64. Rather than the eight levels featured in the Nintendo 64 game, TTL's Turok has fifteen, due to the significantly larger amount of space available on the Saturn CD format (OTL's game was 8 MB, TTL's is over 600). The levels comprise a diverse variety of environments. A plurality of the levels are jungle environments, but others take place in large lava fields, a futuristic alien labyrinth, an ancient temple, there's even one that takes place on an icy glacier. The game features even more music tracks including a few atmospheric pieces, Jeremy Soule collaborated with Iguana's Darren Mitchell on certain tracks (the glacier theme is reminiscent of the Phendrana Drifts music from OTL's Metroid Prime, for example). The game doesn't feature any voice acting aside from a few shouted lines from human characters, Turok does make groans and grunts but cutscenes are not voiced, this is said to be a stylistic choice to allow the player to put themselves in Turok's shoes. The game's graphics are somewhat more detailed than IOTL, again due to the increase in memory. In addition, there is a larger selection of guns and other weapons, more than 40 guns in all (the Cerebral Bore from OTL's Turok 2 makes it into this game) and more bladed weapons including a Japanese-style katana, for a total of 62 different equippable weapons, easily dwarfing the weapon selections found in most other console first-person shooters.

The game's plot is largely similar to OTL's, with a few changes owing to the increase in the content of the game. As IOTL, the main character is a Native American warrior named Tal'Set, who takes on the mantle of Turok and pledges his life to protecting time from evil beings. One such evil being is a warlord who calls himself The Campaigner, who is attempting to find a powerful ancient weapon known as the Chronoscepter. Turok pursues

the Campaigner through space and time, finally tracking him down to a place where the time fields have converged due to the Chronoscepter's influence. Turok must gather a piece of the Chronoscepter from all fifteen levels as he hunts the Campaigner down. Bosses include a deranged soldier in a Humvee, a giant praying mantis, a T-Rex, and The Campaigner himself (all bosses from OTL's game). Other bosses exclusive to TTL's game include a vicious abominable snowman, an alien overlord, a megalodon, a massive flying pteranodon, and an ancient magical cult leader. Turok also meets Shema, a priestess who falls in love with Turok after the two of them meet in the fourth level (an ancient temple ITTL's game). Eventually, Turok battles Shema's father in the eleventh level (he's the magical cult leader), and at the end of the game, Shema sacrifices herself to allow Turok to get the Chronoscepter away from the Campaigner.

### **March 28, 1997**

Turok: Dinosaur Hunter is released amidst excellent critical reviews (the best reviewed game thus far in the year, surpassing even Blood Omen and Terranigma) and a wave of hype to become the fastest selling Saturn game since Sonic 4, even selling faster than Resident Evil did after its release the previous year. Turok becomes a major killer app for the Saturn and a bit of a cultural icon. Just as 1995 was known as the "year of the pirate" and 1996 was known as the "year of the alien", 1997 was somewhat known as the "year of the dinosaur" between the releases of Turok and the Memorial Day release of The Lost World, the long-awaited sequel to the film Jurassic Park. The game is immediately greenlighted for a sequel, scheduled to release sometime in 1998 for the Sega Saturn.

-reviews of March 1997's SNES-CD games in the April and May 1997 issues of Electronic Gaming Monthly

-

Dragon Warrior VI was the last game produced by Enix for a Nintendo system. It was released on the Super Nintendo CD in Japan in August 1996 and in North America in March 1997. The game was a traditional turn-based RPG, somewhat graphically primitive compared to other games of that era, though with extremely detailed character and monster designs and, in a series first, animation for its monsters. The game continues the "Zenithian Era" of the series, which spanned games IV-VI, and it has a somewhat lighter storyline compared to the previous two games as well, depicting the heroes venturing through various dream realms to find a sacred sword that will rend the enemy, Nastinaria the Nightwitch, asunder. The game is the first in the series to feature a female villain, a devious witch who seeks to steal the youth from the beautiful maidens whom various dream realms sacrifice to her in order to keep her evil magic at bay. The hero gains his first companion when he saves a girl from being sacrificed to Nastinaria, the girl (whose name is Beatrice) joins the party and she and the hero gain other companions as they venture forth. Eventually, the heroes come across the ancient King Zenith, who tells them of the path they must take to find the sword. Dreams are a very big part of the game's plotline, in this world particularly strong dreams are made real, while Nastinaria is said to come from a realm that feeds off of nightmares. The game had the same basic RPG gameplay as previous entries in the series, returning the class system back from the third game in the series, enabling the heroes to learn various techniques by spending enough time in a certain class (similar to the "job system" found in certain Final Fantasy games).

Though the game, as Dragon Quest VI, performed extremely well in Japan (becoming one of the top selling SNES-CD games there), it did disappointingly in the states, failing to match the sales of Terranigma, though it was one of the top selling SNES-CD RPGs in North America of 1997. It was clear that in North America, Squaresoft ruled the RPG roost, and Enix had to hope they would find better sales with Saturn owners than they had on the Super Nintendo CD.

*"I wanted us to have all five seasons of Sailor Moon. I truly did, it was making us a lot of money at the time. I just felt that the political environment, at the time, was not conducive to those two characters and I didn't want it harming my other brands, particularly Power*

*Rangers which was still very big at the time. I didn't do it because of homophobia or anything like that. It was a business decision and in retrospect, it was a bad one. I had no way to know that those two characters would be tolerated when they eventually did show up. All the people I talked to said that at the time, 1997, it couldn't be done."*

-Haim Saban, when asked in a 2009 interview with the magazine *Animazing* why he decided not to pick up *Sailor Moon S* in the fall of 1997

In the spring of 1997, *Sailor Moon* was peaking in popularity in the United States. The second season had just finished airing on Fox Kids, merchandise was flying off the shelves, and a brand new video game was set to come out for the Super Nintendo CD. Though it seemed like *Sailor Moon* was about to become the biggest cultural phenomenon in America, there were speed bumps ahead, and though the series continued to experience popularity and prosperity well into the next decade, it never quite reached the love it had from fans in early 1997.

The biggest bump on the road, of course, was the subject of just what Fox Kids and Saban would do with the controversial Outer Senshi, Sailors Uranus and Neptune. The two characters were an integral part of the upcoming season, and the two of them, though not explicitly in the series itself, were easily identifiable as lesbians. At one point, Fox Kids had been willing to go through with airing the third season and later seasons anyway, hoping that the relationship was low-key enough to be ignored by sensitive parents, but just before a decision was to be made, *Ellen* aired its groundbreaking "Puppy Episode", where comedian Ellen DeGeneres' character came out as a lesbian. The issue blew up massively in popular culture, and despite right-wing watchdog groups being somewhat muted by Parents Television Council president Brent Bozell's inflammatory comments on the Olympic bomber Eric Rudolph, the backlash toward DeGeneres was still enough to scare Fox Kids off from licensing the third season of *Sailor Moon*. Thus, the show, despite being the third highest rated on Fox Kids at the time (behind *Power Rangers Zeo* and *The Buttkickin' Girls*), was precluded from airing its third season, and the show continued airing reruns until the rights expired in 1998 and the show was snatched up by Cartoon Network (who was willing and able to order up the show's third, fourth, and fifth seasons for immediate dubbing and localization). But despite the show's success on Toonami, it never quite recovered from Fox Kids and Saban's refusal to localize episodes past the end of *Sailor Moon R*.

In addition, the *Sailor Moon* video game, released in March 1997, was somewhat of a disappointment. Due to the success of the show on Fox Kids, the original beat-em-up SNES video game from Japan was given a fresh coat of paint and somewhat revamped for a Western release. It was ported to the SNES-CD, given added cutscenes right from the show, and even dubbed with the show's English voice cast. And yet, despite lots of commercials for the game on Fox Kids and elsewhere and cover features in both *Nintendo Power* (in March 1997) and *GamePro* (in February 1997), the game was somewhat of a disappointment, both critically and commercially. It sold well enough to turn a profit, but was not the mega-hit that had been expected, and it was another sign that *Sailor Moon* was on the decline. Of course, once the show started airing on Cartoon Network, somebody got the idea to re-do *Sailor Moon: Another Story* for the Ultra Nintendo and even to give it a Western localization...but that's a story for another day.

-*"A History Of Sailor Moon In The West: Chapter 3 (The Speed Bump)"*, excerpted from an article on IGN.com, June 27, 2012

*Did you think there was any way that the first Persona game would come to North America?*

After it came out that the guy who tried to bomb the *Sonic 4* release did it because of *Devil Summoner*, absolutely not. First off, *Shin Megami Tensei* had been a commercial failure in the states, and then we were in a position of having to downplay *Persona*! The fact that the game tripled the sales of the original *Shin Megami Tensei* in North America was astonishing to me since we hadn't advertised it at all. It was entirely on word of mouth and I think maybe the internet might've had something to do with it. I guess the buzz on early Internet forums about this game made a lot of people curious, and also the magazine coverage due to what had happened with *Devil Summoner*. In the end though, there was no controversy about this game, at all. Like, none. We flew totally under the radar. *Shin Megami Tensei* was still far from being on the level of games like *Final Fantasy* or *Mana*, but it was a foothold at the very least, and a good sign of things to come.

-excerpted from an interview on RPGamer.net with the Atlus localization employee responsible for bringing *Shin Megami Tensei: Persona* to the West

-

Marv Albert: And so Grant Hill is about to shoot two free throws, the Celtics lead the Magic, 76 to 74 and Rodman's still talking to the referee.

Ahmad Rashad: And he's gotta be careful because if he gets another technical-

Marv Albert: And he just got one! Rodman just got T'd up and that's his second and he is livid now! Dennis Rodman is furious and he just got ejected from this game.

Ahmad Rashad: And this has been a problem for Dennis Rodman this year, here comes Shaq to try and hold him back from the referee...

Marv Albert: And Rodman now decides he's going to finally leave the court. He's still fuming and he seems to be looking at a fan in the crowd. Someone in the crowd just yelled something and- oh my goodness, Rodman's in the stands!

Ahmad Rashad: Uh oh, uh oh, this isn't good.

Marv Albert: Dennis Rodman is going up into the stands after a fan and it's bedlam here in Boston and now there's a fight on the court! Shaq and Penny are fighting on the court and Penny is down, Shaquille O'Neal just decked his former teammate while Rodman is in the stands on top of a fan!

Ahmad Rashad: Not good, someone's got to get up there and try to control Dennis Rodman!

-from the *NBA on NBC* broadcast of Magic at Celtics on March 16, 1997

"The melee in Boston stands out as one of the defining moments of the NBA in the late 90s. Lemme set the scene: The Orlando Magic had been one of the Eastern Conference's premier teams, but after Shaq demanded that Penny Hardaway be traded in the 1996 off-season, the team found itself in fourth place in the Eastern Conference. They were going into Boston to play the Celtics, who had the division lead by only a game, and the game had been fierce thus far with Shaq and Dennis Rodman dominating the boards. These two guys hated each other but they somehow cooperated well enough to keep the Magic in contention for the

division lead. The Magic jump out to a lead in Boston, but the Celtics roared back in the third quarter and they lead by two when Rodman got called for a very questionable over the back foul on Grant Hill on a rebound. Rodman goes ballistic on the referee, and he'd already gotten one tech for arguing with the refs earlier in the game, he'd grown increasingly frustrated with the calls and finally enough was enough for him and he soon ended up getting tossed. Now, as he's walking to the locker room, an idiot Celtics fan shouts a racial slur down at him from the fourth row. That set Rodman off big time and he charged into the stands, punching the offending fan and tackling him into his seat. Meanwhile, on the court, Penny and Shaq start having words and Penny shoves Shaq, who responds with a punch that breaks Penny's nose and knocks him to the floor. This sets both teams off and a huge melee erupts. Grant Hill ends up holding Penny back, and this isn't one of those "somebody hold me back, somebody hold me back!" kind of things, Penny looked like he literally wanted to kill Shaq and Grant Hill probably saved him from getting Rudy Tomjanovich'd by keeping him from trying to go after Shaq again. (Also, right about now I'm pretty sure Disney regretted their decision to host a "Shaq Day" at Disneyworld after seeing their star-for-a-day break an All-NBA First Teamer's nose on national television.) Finally, security is able to pull Rodman out of the stands and they literally have to handcuff him and drag him off the floor. It's a hideous moment for the NBA and I'm amazed David Stern let Rodman play in the playoffs that year (though he did get suspended for the rest of the regular season). The fan that provoked Rodman did get called out after cameras clearly spotted his lips mouthing the racial slur and he ended up getting a five year ban from the Fleet Center, but the damage had clearly been done, both to the Magic and to Rodman's career. After the Magic's 45-37 finish and their loss to the rising Toronto Raptors in the first round, I'm sure Shaq was wishing he'd gone to the Lakers like he'd threatened before the Penny trade." -excerpted from an article in an Orlando Magic fan blog on October 11, 2013

-

1997 saw two of the SNES-CD's most popular original franchises release their third and final installments on the system, and the performance of both of them is a reflection of how well the franchises held up over the years.

*Deadman Sam 3* was the better of the two by far. It saw Sam and Nellie, still denizens of the dead but occasionally paying visits to the surface world to playfully haunt people, meet a group of three playful and adorable harpies on a sacred mountain under siege from a gang of wicked spirits. It retained the same platforming gameplay of the first two games but the graphics got a significant bump from the previous two games and it's known as one of the best looking SNES-CD games overall, with huge, brilliantly designed bosses and outstanding animation and visual effects. The three harpies became fan favorite characters and fixtures of the series, and reviews were as excellent as the previous two games, cementing *Deadman Sam* as one of the SNES-CD's best trilogies.

Meanwhile, *Gun Warrior: Cannon Fire* was a departure from the series' previous two titles...and not in a good way. As implied by the title, the game focused on cannons, its characters wielding them to take down enemy hordes. And while the cannons provided plenty of big booms, the gameplay was stilted, much slower paced and much more frustrating than the previous two titles. The on-the-fly rapid fire gunplay of the first two games was supplanted by slow, exacting cannon fire that made the game much more difficult than it should've been. Furthermore, while the option to use lighter guns still existed, they did MUCH less damage to the enemies, pretty much forcing cannons on you. While *Gun Warrior* DID get a much better received fourth installment on the Ultra Nintendo and the Saturn, the series' momentum had been severely curtailed.

-excerpted from "SNES-CD Year In Review (1997)", excerpted from a blog post on [Gamesthatdontsuck.com](http://Gamesthatdontsuck.com), January 19, 2014

-

Ted Crosley: I'm Ted....

Alex Stansfield: And I'm Alex.

Ted: And it's a big day on *GameTV* because today, we're introducing a new host to the show.

Gary Westhouse: \*pokes his head on screen\* Wait a second, so I'm not the new guy anymore?

Ted: That's right, Gary, you're not the new guy anymore!

Alex: Well, actually, we're introducing a woman so...technically Gary is still the new *guy*.

Ted: Hmm, guess you're right, so we can keep ragging on him still?

Gary: No! You guys promised you'd stop!

Ted: Well, anyway, we do have a new host and you might recognize her because she used to be the host of the game show *Singled Out*. Here she is, welcome to *GameTV*, Lyssa Fielding!

Lyssa: \*runs onto the stage, clapping her hands excitedly\* Hell yeah, let's get this thing started!

Alex: I like her already.

Lyssa: You better!

Ted: So, is this better than *Singled Out*?

Lyssa: Well, on *Singled Out* I helped people find love, but here I'm going to get re-acquainted with my first love.... video games! I've been playing 'em since *Space Invaders*, and yes, I ALWAYS kill the last guy.

Ted: Well, we're not so sure about that so we brought out a *Space Invaders* machine and you can show us how good you really are.

Lyssa: \*cracks her knuckles\* You got it... \*she begins to play, quite quickly wiping out most of the aliens on screen, not having any trouble as she shoots through her shields and dispatches the last few of them with ease\* Piece of cake.

Ted: Well, today on *GameTV*, you'll be reviewing *Chifighters* and that won't be so easy.

Gary: You guys made me review a bad game!

Alex: Well, we'll find out if it's bad when the two of you review it, we've also got *Command And Conquer* for the Super Nintendo CDand also *Duke Nukem 3D* for the Sega Saturn. Plus, we're going to be going to the Sega Gameverse in Seattle for a behind the scenes look at the arcade before it opens! We'll be showing you all the sweet new games that you'll want to fight the crowds to play.

Ted: So, Lyssa, you think I'd have a chance on *Singled Out*?

Lyssa: Lemme get a good look at you... \*walks around Ted, randomly poking him in various places\* Ehhh... \*looks at his teeth\* Hmm.... well... I dunno, Brittany, would you go out with this guy?

Brittany Saldita: Not a chance in hell! \*smirks\*

Ted: Oh come on!

Lyssa: We're bringing you previews, reviews, and news to help you choose. This...is *GameTV*!

Gary: You let her do the intro on the first DAY?!

Alex: Well, she's got experience!

Ted: No, I agree with Gary, that was just plain wrong!

-intro segment to the March 11, 1997 episode of *GameTV*

Gary: So *Chifighters* is a pretty solid fighting game but not without a few issues.

Lyssa: I gotta say, playing this game is like having Ryu and Ken using the Hadouken all the time. It's pretty neat and you've got to really change up your strategy when you know your opponent can toss a projectile attack with the push of a button.

Gary: I just wish the actual melee fighting was a bit more developed, I get what the developers were trying to do but forcing you to use energy attacks because the punches and kicks are boring is kind of a bad way to go about it.

Lyssa: Y'know, I think I disagree. It's part of the strategy. Energy blast, rabbit punch. Energy blast, rabbit punch!

Gary: I loved the character design.

Lyssa: They ripped off my look! Sandy looks just like me! \*shows a quick juxtaposition of the buxom blonde fighter Sandy and Lyssa doing the exact same fighting stance and pose, Lyssa's hair is even done up like her\*

Gary: Does she host a game show?

Lyssa: No, but she wants to, I can see it in her eyes!

Gary: You can tell someone wants to host a gameshow just by looking into their eyes?

Lyssa: What can I say, I have the world's weirdest superpower. \*shrugs\*

Gary: Well, I give *Chifighters* a 3.5 out of 5. The basic concept is good but the sequel needs to work on the melee moves.

Lyssa: And I give it a 4 for being really fun and having awesome characters even if one of them is a complete ripoff of my look!

(...)

Brittany: So *Command and Conquer* on the Super Nintendo CD and the Saturn are both great. The Saturn port's a little bit more accurate to the original PC game, so if you've got both systems, get the Saturn version, otherwise this game is great on both consoles.

Ted: Yeah, the in-game cutscenes are all there in both versions and that's really the attraction of the game. It's a little hokey but who doesn't love some cheese in a video game cutscene? If you played *Dune* on the PC or the SNES-CD, you'll know what to expect from the gameplay here, it builds off of that and requires a lot of strategy to succeed. I had a ton of fun with it.

Brittany: It's not an easy game but it's really rewarding if you put in the work. The graphics are good, especially on the Saturn, the SNES-CD version looks just a bit backward but it's still just as much fun to play.

Ted: In the end, *Command and Conquer* is a worthy port and I'm giving it a 4 out of 5.

Brittany: No arguments there, 4 out of 5 for both versions. And, you know, it's good to see that the Super Nintendo CD can still play some of the Saturn's games. Even *Duke Nukem 3D* is fairly serviceable on the SNES-CD.

Ted: Yeah, but still, the Saturn has so many games that just aren't possible on the Super Nintendo CD.

Brittany: I know, I know. The Saturn is awesome but the Super Nintendo CD is still really-

Ted: Saturn does what Ninten-

Brittany: \*covers his mouth with her hand\* If I gotta hear that one more time...

Ted: \*just mumbles it through her hand\*

Brittany: Just....just.... \*twitching\*

Alex: \*yelling from off screen\* Is he saying it again?

Brittany: Yes!

Alex: Do we have to show the Ultra Nintendo preview footage again?

Ted: \*pulls away from Brittany\* Saturn's still better!

-excerpted from the March 11, 1997 episode of *GameTV*

Ted: *Turok* is just about as good as it gets. The massive levels, the outstanding music....

Alex: All those weapons...

Ted: Show that beautiful Cerebral Bore footage again!

\*Footage is shown of the Cerebral Bore gutting an enemy's head\*

Ted: YES!

Alex: It's easily the best FPS I've ever played on a console, bar none, hands down. It might be even better than *Quake*. Well....no multiplayer, but still.

Ted: The single-player campaign is worlds, worlds better than *Quake*.

Alex: Right. It's an epic adventure comparable to the *Zelda* games and it's a FIRST PERSON SHOOTER. I was just blown away. 5 out of 5, no question.

Ted: Yep, 5 out of 5 easily.

\*A siren begins to blare\*

Ted: Oh, you know what that means?

Lyssa: Can I do it this time? It's my first one!

Alex: Only the people who reviewed the game get to hang the game up on the wall.

Lyssa: That's no fair!

Alex: Actually that's....perfectly reasonable, really.

Lyssa: Fine, fine, but I get the next one!

\*Ted and Alex hang *Turok* up on the Hall of Fame wall while Brittany, Gary, John, and Lyssa watch and cheer.\*

(...)

John Walden: *Dragon Warrior VI* was good, but I felt like it just didn't innovate very much for an RPG, you know?

Alex: Yeah, it definitely had that old school feel to it but I wasn't feeling it like with games like *Tale Phantasia*. I mean, we just had *Blood Omen: Legacy of Kain* a couple months ago and it's hard to go back to a game like *Dragon Warrior VI* after something like that. Not like it was a BAD game, I mean, the music was awesome, the characters were great, the storyline was excellent, it was really long and epic... what I'm saying is....maybe....maybe an RPG doesn't HAVE to be cutting-edge to be an awesome game?

John: I hear you, but it's still a bit primitive of a game. The music was definitely the best part. The game didn't suck and it WAS good, I was just waiting for something more.

Alex: Enix definitely knows what they're doing, the game sold like hotcakes in Japan. Will it do well here? I dunno, but I'm going ahead and giving it a 4.

John: Only a 3.5 from me, it's a solid game but nothing special.

-excerpted from the March 25, 1997 episode of *GameTV*

### **Final Fantasy VII Details Released**

*Final Fantasy VII*, one of the most anticipated role playing games of all time, is set to release on the Ultra Nintendo in Japan in August, and as the game nears completion, we're

getting more and more details about the game's content. The game will span two of the Ultra Nintendo's 1GB Gigadiscs, making it easily the most massive Ultra Nintendo game released in the system's launch window. The game will also feature a first for the series: fully voiced cutscenes, with a good deal of character dialogue being voiced as well. After a positive reception to the voice acting in *Chrono Trigger* and *Bahamut Lagoon*, Squaresoft has spared no expense on the voice acting for its flagship series. The Japanese voice cast is a who's who of famous "seiyuu", with some of the biggest names in anime among the cast, and Squaresoft intends the English version to be fully dubbed as well. The game is also said to feature multiple paths, depending on choices made throughout the game, and Squaresoft says that the player's actions in the first disc will determine the course of the story in the second. It's clear that the company intends for *Final Fantasy VII* to be their most successful game to date, and it's going to be one of the highest profile releases of the year, especially if it shows up in the Ultra Nintendo's North American launch lineup.

### **Squaresoft's Future**

Squaresoft is also already beginning work on *Final Fantasy VIII*, despite the game not likely to be released before 1999. The storyline has yet to be hashed out, but it's rumored that the company will be tapping Tetsuya Takahashi to develop the bulk of the game's plot. The company is also beginning work on a game for 1998 based on the hit Japanese novel *Parasite Eve*. Squaresoft is likely to position the game as one of their biggest releases of the year when it hits the Ultra Nintendo. Squaresoft has doubled down on Nintendo in recent months, with staff frequently praising the system's technical and graphical capabilities. With rival Enix beginning to develop exclusively for Nintendo's rival Sega, Squaresoft is invested even further in Nintendo's success, and as the console war heats up further with the Ultra Nintendo's Japanese release just three months away, the company is undoubtedly gearing up to produce some of its best work. Future Ultra Nintendo titles slated for release in Japan by the end of 1997 include the fighting game *Bushido Blade* and the shooter *Einhander*.

### **March 31, 1997**

Polly Klaas walked down one of the hallways of Columbine High School, still somewhat saddened by the news she'd seen on that day's ChannelOne broadcast. It covered the story of the Heaven's Gate cult and how 39 of their members had committed suicide after the Hale-Bopp comet had passed near Earth recently. She couldn't imagine the kind of mentality that would lead someone to take their own life, especially over something as beautiful and awe-inspiring as a comet passing by the Earth.

She was shaken from her thoughts by the yelling coming from nearby. They were words all too familiar to her, she heard them all the time from her fellow students. They were cruel words, hardly ever directed at her, but much more often directed at students like the boy she saw out of the corner of her eye, being harassed by a group of boys as he walked with his head down toward his next class.

"Hey....hey! Why don't you look at us, huh?"

"What's wrong with you, you little freak?"

"Stop picking on him," Polly found herself saying, directing a scolding look over at the boys. Her friend Caitlyn stood up for kids who were getting picked on all the time, and she found herself increasingly recognizing that she needed to take a stand against bullying like that too. "Leave him alone, why are you picking on him anyway?"

"He's dressed all fuckin' weird," said one of the boys, glancing angrily over at Polly.

"Says who?" she replied, not backing down from the three bullies even as all of them turned toward her. "What are you guys, the fashion police or something? Leave him alone."

The three boys shrugged, not wanting to waste their time arguing with Polly, and turned to walk in the other direction. The boy who'd been getting picked on just kept on walking, ignoring Polly even as she came right up behind him.

"Are you okay...?" she asked, touching him on the shoulder only for him to twist away from her. "I'm sorry...."

"What the fuck do you even care for?" he said coldly, barely looking over his shoulder at her.

"Sorry... I just....they shouldn't talk about you like that."

"Who cares? I don't even give a shit," the boy mumbled, starting to walk away. Out of the corner of her eye, Polly could see the name written on the side of one of his textbooks.

"Eric...?" Polly said, her voice lined with concern. "It's not okay for them to say those things to you. ....are you sure you're okay?"

Eric could tell this girl was concerned for him, though he didn't think she should be. He didn't get picked on all that terribly often and he *did* have friends, even if he had trouble keeping them. Besides, he could take care of himself....he already felt the anger coursing through him, every time someone picked on him like that it made him want to....

"It's okay, if you don't want to talk....I should probably get to class."

"...no, it's cool," said Eric, letting out a sigh. There was something...calming about this girl, though he still could feel a deep, intense, almost uncontrollable rage at what those bullies had said to him. "You're right, those guys are shitheads. Thanks for speaking up, you're pretty cool."

"Oh...right, yeah sure..." Polly said, letting out an almost nervous giggle. "*What's with this guy...?*"

"See you around," said Eric, turning away from Polly and walking back down the hall. "*She's like those preppy girls who walk around the school, not giving a shit about anybody...but...something's different about her. At least she fucking said something. None of the others ever would.*"

Polly looked up at the clock...she was almost late, she knew she needed to hurry but she couldn't stop thinking about that boy she'd just seen. She could tell that deep down something wasn't right about him but she could also tell he was hurting...was it something going on at home? Or was it just all the bullying?

"Or is he just...broken? Like the guy who broke into my house and tried to..."

Polly's thoughts trailed off. She didn't want to remind herself of THAT terrible moment... however broken the boy she'd just met was, there was no way anyone could be *that* terrible.

It would not be the last she'd see of Eric Harris.

Power Rangers was a staple of my later elementary school years from fourth grade to seventh grade in middle school. I followed the series closely from the first season of *Mighty Morphin'* to the middle of *Lost Galaxy*. The series was beginning a steady decline when *Sailor Moon* and *Kickbutt Girls* began to accrue a greater share of the ratings on Fox Kids. Power Rangers seemed tamer in comparison to *Sailor Moon*, which did not shy away from depictions of death and violence (though they were still sanitized compared to the Japanese originals) whereas Power Rangers generally shied away from death. That changed after the conclusion of *Power Rangers Zeo* when Saban decided to take the series in a more serious direction.

It is worth noting that Power Rangers Japanese precursor, *Super Sentai*, often explored more mature themes and characters died. *Zeo's* counterpart, *Chouriki Sentai Ohranger*, was actually quite dark. Unfortunately, the 1995 Subway Sarin Incident in Tokyo forced constant rewrites that nearly led to the series' cancellation. As such, *Ohranger's* successor, *Gekisou Sentai Carranger*, was much more lighthearted and regarded as a parody of *Super Sentai* itself, which proved a challenge for the American writers who wanted to take Power Rangers in a more serious direction. Saban and Fox decided to bridge *Zeo* with what would become *Turbo* with a film for summer of 1997. Steve Cardenas, who played Rocky DeSantos, wanted to focus on his karate school and planned to leave the series at the end of *Zeo*.

The main plot of *Turbo: A Power Rangers* movie was a space pirate named Divatox looking to awaken a dark force called Maligore so she could marry it and take over the galaxy, of course! In order to do that, she needed a talisman that belongs to a wizard from Zordon's order called Lerigot as well as the sacrifice of five souls of "strength and purity." We learn that two of those souls belong Jason Lee and Kimberly Hart from the *Mighty Morphin'* era; what the audience did not expect that they were meeting with Zach and Trini to surprise Billy and Tommy with an impromptu "reunion." However, Divatox's forces arrive kidnap to kidnap though overwhelming numbers in the establishing scene before the opening credits. Most fans did not expect to see the return of Walter Jones or Thuy Trang to Power Rangers after their fallout with Saban (along with Austin St. John who did return for a stint as the Gold Ranger in *Zeo*) over salary. Their memberships in the Screen Actors Guild was an obstacle, especially to Haim Saban, but 20th Century Fox stepped in and forced him to relent because of the promotional opportunity by uniting the original Power Rangers one more time.

Billy and Tommy arrive on the scene to fight the horde. Longtime comedy relief Bulk and Skull bumble into the fight and even provide some entertaining confusion fu before Divatox's Piranhatrons abduct them along with the MMPR Rangers. However, even with the power of the Red Zeo Ranger, Tommy is barely able to retreat with Billy in tow. Meanwhile,

Rocky is training along with student T.J. Johnson (played by Selwyn Ward) and Adam for a charity martial arts tournament. Tanya and Kat are there with them when Tommy and Billy burst in with the news of their friends' kidnapping. Zordon then summons them to the Power Chamber with Billy, but unbeknownst to the (Zeo) Rangers, T.J. witnessed their exchange and learned of their identities.

Zordon provides the typical exposition to explain the situation to the Rangers, when Divatox contacts the team with an offer: she will exchange Bulk and Skull for Billy on the condition they remain unmorphed. Despite protests from Tommy and the other Rangers, Billy agrees to the exchange and the two parties meet in an underwater cave, however, the meeting place in question is out of teleporter range, forcing the Rangers to walk. While Divatox holds up her end of the bargain, she and her subordinate open fire on the rangers, targeting their morphers. She also planted explosives, which she detonates to implode the cave upon escaping as extra insurance. With their morphers damaged and the Zeo powers failing, Rocky uses the last of his power to buy the others enough time for the other to make it to teleportation range while the cave collapses on him.

Rocky's death was a shock to the fanbase as no one had died on the show up to that point. Death was not that uncommon in *Super Sentai*; for example, Burai the Dragon (Green) Ranger from *Kyōryū Sentai Zyuranger* (the series Saban adapted into *Mighty Morphin' Power Rangers*) died. However, Rocky's death had a greater impact because of the suddenness of it. The Internet was only beginning to penetrate the mainstream culture and most of the show's core audience did not read the trade papers so we had no idea that Cardenas was leaving.

*"I remember getting a sack full of letters from children and parents alike who were upset at Rocky's death after the movie,"* Cardenas told the audience of a panel at Power Morphicon in 2007. *"One even went to say that I ruined her son's childhood. However, you have to look at it this way. We can't shelter children from the fact that everyone has to die sometime. Some people die of old age and some people die to save their loved ones from danger. I'm glad Rocky got to die that way. It made the movie and the character mean something to the audience."*

Indeed, Rocky's death also gave the movie greater weight than its predecessor and established the stakes and that anyone could die. Producers also gave T.J. something a B-plot in the first act where he "borrows" one of Rocky's old communicators from the MMPR days and accidentally transports himself to the Power Chamber just in time to witness Rocky's death on the viewing globe. After the Rangers return, Zordon reveals that Billy finished the creation of a new set of powers before the prisoner exchange: the Turbo powers. Though in disarray, the Rangers agree but ask who the Blue Turbo Ranger will be. T.J. says that he will assume the mantle because, *"It is my responsibility as Rocky's student to finish the work he had started."* The Rangers (with the freshly-inducted T.J.) pursue Divatox to the Nemesis Triangle; Though Zordon informed them that they were under no obligation to assist the Rangers, Bulk and Skull agree to go on a mission to rescue Lerigot. Meanwhile, the Turbo Rangers divert Divatox's main forces away from them. Despite the grimmer tone, Bulk and Skull's mission to infiltrate Divatox's dungeon relies heavily on slapstick comedy and dumb luck to avoid or incapacitate the Piranhatron guards.

Through Lerigot's talisman, she opens up the Dark Pit and offers the MMPR Rangers as her sacrifice. She sends a small army of Piranhatrons to delay the Turbo Rangers long enough for her to drop the MMPR Rangers into the Dark Pit and reawaken Maligore. He reincarnates the MMPR Rangers into his minions and even restores the original Dinozord powers [1] so that they can morph and face off with the Turbo Rangers. The battle is lopsided one could
