

How to update your MIB3 infotainment system

Items required:

8GB+ USB storage device (Some updates require 16GB of available USB storage – take note of the file size!). Do **NOT** use USB A to USB C adapters, or SD card to USB adapters.

PC/LAPTOP

WINRAR installation

0. Please confirm you have a compatible USB device, take note of whether your car uses USB A or USB C

1. Download the update from the link you receive from us
2. Extract the update files using WINRAR
3. Insert the USB storage device and format as FAT32 (exFAT for larger devices)
4. Drag the 2 folders within the download container folder onto the root of the USB device. You should see “Meta” & “data” folders at the root of the SD if you have done it correctly.
5. Remove the USB device from PC and place into one of the vehicles front USB ports.
6. Start the engine (or just switch on ignition if your battery is strong)
7. Hold menu, press “software versions/updates” (The unit may enter the red engineering menu for this. It can take a minute to do so.
8. Press “Update”
9. Press “USB”
10. Press the software version it presents then press start
11. Once update is complete, press back then cancel software version management
12. **DO NOT REMOVE THE USB DEVICE UNTIL THE UNIT IS BACK TO NORMAL OPERATION**
13. Once back to normal operation, remove the USB device. You’re good to go!

Name	Date modified	Type	Size
Data	07/10/2022 17:55	File folder	
Meta	07/10/2022 18:07	File folder	

Your USB storage device should look something like this when prepared. Please check the file path – files are at the root of the USB device. (File/folder names may vary. Drive letter may vary. This is an example only.)
