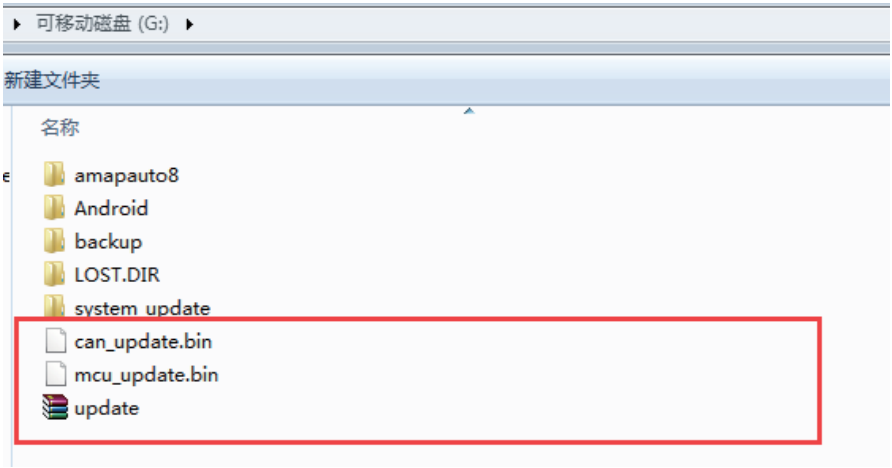
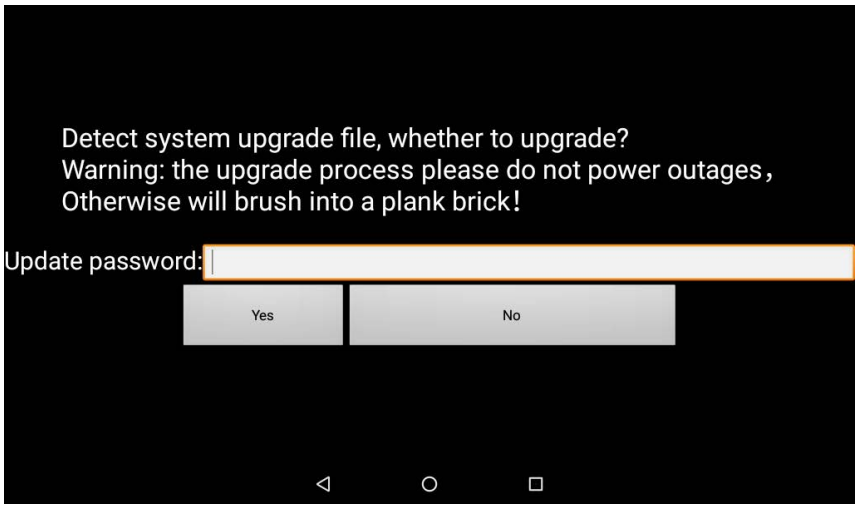
How to Upgrade System

1. Put the upgrade software on the SD card.



2. Insert the SD card, and input the upgrade password '888666'



3. If the machine is finished to restart, that means the upgrade is successful.

Common Problems

1.Why does the machine have no voice?

You need to select the AUX audio source in the original car system, because the machine is sounding through the AUX audio channel, and be sure not to choose the AUX in APPs.

2.Why doesn't the MMI knob work?

You need to confirm your original audi system version, it is HNAV+, HNAV or BNAV, different system use different software, then contact us to obtain the corresponding Can upgrade files.

3.Why is the original car showing abnormal?

First confirm if the lvds line is connected.. If the original car has a display, but the display is not normal, you need to check if the MCU is compatible with this model. And then contact us to obtain the corresponding MCU upgrade file.

4.Why there is no image in the reversing image?

First confirm whether the car is using the aftermarket rear camera or the OEM rear camera, then enter the settings and select the corresponding option.

5.Why is the screen still work after the car stalled?

The machine will keep running within five minutes after the car turn off. If more than five minutes, the machine will be completely powered off and will not continue to consume power.

6.Why is or video not playing properly?

If the music and video files are recognized but cannot be played, please try to restore the factory settings and then play it again.

7.Why does the machine not recognize the U Disk and SD card?

The machine only supports U Disk which compacity is extended to 64G, over this compacity, it will be not recognized.

8.Why 4G card does not recognize?

Pay attention to the insertion direction of the SIM card, the notch needs to be upward, and take care of the magnetic side's direction of the SIM card. If you change the direction and re-insert, you need to restart the machine.

9.Why is the voice assistant unusable?

The voice assistant can be in normal use when the network is properly connected.

10.Why is the GPS signal weak?

Note that whether the antenna port of the GPS has been fastened, and pay attention to the placement of the GPS antenna plate. It is best to attach it directly to the corner of the front windshield.
