

Powerful Acne Medication That Can Be Purchased At A Pharmacy

Effective Acne Medication That Can Be Purchased At A Pharmacy - If you have done a variety of ways to cure acne, such as using natural masks, or using beauty products from Biore or other brands and there are no changes, you can try using acne drugs sold at the Pharmacy. But first you are encouraged to consult a dermatologist or dermatologist in your area. The best remedies for acne available at pharmacies must have anti-inflammatory properties, vitamin A derivatives, antibiotics, and topical antiseptics. You can buy drugs with the brand clindamycin (clindamycin), tetracycline (tetracycline), erythromycin (erythromycin), doxycycline (doxycyclin) Why should they contain these ingredients? [Wiki style](#)

Acne medications that contain anti-inflammatory drugs

Anti-inflammation can also be called anti-inflammatory, the anti-inflammatory content in the drug can treat inflammation in your skin, so the acne can get flat and heal faster.

Acne drugs containing vitamin A derivatives

Vitamin A derivatives are also called retinoids, this ingredient is usually used to cure severe acne. but you must be careful when using this drug because retinoids are not suitable for pregnant and lactating mothers, except with instructions from a doctor. Acne medications must contain antibiotics

Antibiotics are used to eradicate the bacteria that are in acne, when using this medicine you must spend the drug according to the time period specified by the doctor, if you stop taking the drug before the expiration period can result in bacteria getting stronger and more immune.

Drug pharmacies must contain antiseptics

If antibiotics are used from the body, antiseptics are ingredients used to kill bacteria from outside the body, usually in the form of ointments or creams.

A powerful brand of acne medicine that can be purchased at a pharmacy

The following are powerful drug brands used to cure acne and are available at pharmacies: maspedia

Clindamycin (klindamisin)

This drug is in the form of a tablet, can be consumed or used for a mixture of cream drugs that are applied to acne. Clindamycin is an antibiotic that can kill bacteria in zits, so that acne can heal faster. to use this medicine you must first consult with your doctor, because it requires the right dosage and usage period to suit your needs.

Tetracycline (tetracycline)

Just like clindamycin, tetracycline is also an antibiotic drug in capsule form. for acne that is already severe the initial dose usually given is 500 mg and taken 2 times a day, the place is 12 hours. When the pimples have started to heal, the dosage will be reduced to 250 mg. or can be stopped using. Tetracycline works by reducing the chemicals in white blood, and reducing free fat concentration in sebum, which functions as an anti-inflammatory for acne.

Erythromycin (erythromycin)

Erythromycin is different from the two drugs above, this drug is used to cure acne that is not severe, and can be eaten after eating, and can be consumed by pregnant and lactating women but before buying acne medication at the pharmacy consult your dermatologist. The content in erythromycin functions as an anti-bacterial and also anti-inflammatory, which can kill bacteria in the pores of the skin, and reduce inflammation in zits. The side effect of this drug is that your skin will be sensitive to ultraviolet light, used in conjunction with birth control pills. Will the properties be reduced or not even feltm, [maspedia](#)

Doksisiklin (doxycyclin)

The effective acne medicine that can be purchased at pharmacy No. 4 is doxycycline ... The function of doxycycline is similar to other drugs as anti-inflammatory and also anti-bacterial, which can inhibit and kill the growth of bacteria inside the skin so as not to cause infection. The side effect of this drug is that your skin will become sensitive to ultraviolet light, so you need to use sunscreen when going out. before using this medication, consult your dermatologist first so you can get the right dose. That's a powerful acne medicine that can be bought at a pharmacy and don't forget to use a prescription so that when the drug is used safely and does not cause injury or unwanted things
