3. Click On "Choose Another App"

Howdy! This program was made to avoid having to put in Java when you've already gotten it bundled with Minecraft. This program was made using Autohotkey and was designed for Windows 10. This may increasingly or may not work on newer or older Home windows variations.

Have fun! - Gyfen

Usage

1. Proper-click on a .jar file.

2. Hover over "Open with".

3. Click on on "Choose one other app".

4. Tick the box saying "All the time use this app to open .jar information".

5. Click on "Extra apps".

Changing THE JAVA EXECUTABLE PATH

The default path for the Java executable bundled with minecraft is "C:\Program Recordsdata (x86)\Minecraft Launcher\runtime\java-runtime-alpha\home windows-x64\java-runtime-alpha\bin\java.exe".

Your Java executable may be positioned someplace else, if you probably did a customized install. In that case you would need to seek out and enter the correct path.

Do the next:

1. Browse to the location the place you installed this script. By default it is named "MinecraftJarInstaller.exe".
