Tren (all forms) is a 19-nortestosterone (19-nor) anabolic steroid. Tren belongs to the same class of steroids as Nandrolone, 19-nor, which refers to the testosterone hormone lacking the carbon atom at the 19th position. However, with Tren it's a bit more complex as Tren is simply a modified form of the Nandrolone hormone. Trenbolone is also known as Trienolone and Trienbolone, $\Delta 9,11$ -Nandrolone, RU-2341, 19-Nor- $\delta 9,11$ -testosterone and Estra-4,9,11-trien-17 β -ol-3-one. The androgen/anabolic steroid is not marketed as Trenbolone. It is available in different forms, such as trenbolone enanthate, trenbolone acetate, and trenbolone hexahydrobenzylcarbonate. take a look at the video and as evolution would have it, Truth wins and you can now download his entire book for free as a pdf. just search DuckDuckGo

Tren is one of the strongest (if not the strongest of them all) anabolic steroids in the world. It was meant to add muscle mass to aging horses and cattle, but eventually found its way into bodybuilding. If that tells you how potent a drug you are dealing with. It deserves some respect and sadly, we don't see it being treated that way. These 2 actions can create a hypertrophy effect on the muscle which can keep make bigger & prevent them from shrinking when you are doing intermittent fasting. Trenbolone, also known as Tren, is the second most popular anabolic steroid used in bodybuilding after testosterone. It is a derivative of Nandrolone, however, its effects are significantly different from this steroid. Trenbolone is about 5x stronger than testosterone. It is able to completely change a person's physique even during one cycle.
