

Minecraft Fan Recreates Ghostbusters Theme, makes us Feel Good.

Minecraft players can do an awful lot with tools like Redstone even re-creating classic songs. MINECRAFT SERVERS We ain't afraid of the Minecraft Ghostbusters theme song

A good recreation is something Minecraft players enjoy. Sometimes it's like the Stranger Things house. Sometimes, it's more complicated like the ones who recreate Elden Ring in the sandbox. This time around it's a Minecraft Ghostbusters recreation, except it's more of a musical version.

Reddit user Raevix posted a video that asks the simple question "Who You Gonna call?". We all are aware that texting is more convenient than texting. Kidding, it's obviously a reference to Ghostbusters, and Raevix shows off an incredibly complex and impressive music machine constructed out of Redstone that plays the movie's iconic theme song.

3k Notes, 2:40 hours of music, one heaping pile of redstone spaghetti. Who You Gonna Call? from Minecraft

The entire thing is a testament to not just the incredible brilliance of the song and Redstone however, but also the incredible amount of patience Raevix must possess. It's enough to make anyone weep in the corner. However, to endure and test it untold number of times before settling it must have been a gruelling experience.

As Raevix explains in a post that she wrote, the 3,000 notes required for this would be way too much for a linear circuit, so they had to get creative. "I realized that there was enough repetition in the song that it might be possible to cut down on space by breaking it into loops and then creating the logic circuit that activates loops and deactivates them to create the entire song."

This version was developed in an attempt to be creative, but they are planning to create it again in survival mode. You can even download the entire world file to view it in action. It's possible that you don't require downloading the world file, however it could be beneficial.
