## Us Size

Hot water washing , chemical cleaning, and ironing are all traditional methods of sterilizing fabrics for hygiene purposes. Clothing protects against many things that might injure or irritate the naked human body, including rain, snow, wind, and other weather, as well as from the sun. Garments that are too sheer, thin, small, or tight offer less protection.

Mass-manufactured clothing is less expensive than the labor required to repair it. Many people buy a new piece of clothing rather than spend time mending. The thrifty still replace zippers and buttons and sew up ripped hems, however. Other mending techniques include darning and invisible mending. Fashion shows are events for designers to show off new and often extravagant designs.

## Winter Clothing
