

Here's the Problem with Today's Human Clinical Trials

NUZZEL ► Fortune – Mar 20, 2018, 3:57 PM – LAGUNA NIGUEL, Calif.—The cost to develop and gain FDA approval for a new drug today is more than \$2.5 billion, according to the Tufts Center for the Study of Drug Development. Driving much of that cost are human clinical trials. They're... **NUZZLE** ► <https://goo.gl/zJxnNo>

Here's the Problem with Today's Human Clinical Trials

Mar 20, 3:57 PM

Here's the Problem with Today's Human Clinical Trials

According to **SOURCE ANDREW NUSCA**, "Between 3% and 5%—and certainly under 5%—of adult patients are under clinical trial (CT), *Fortune* editor-in-chief Clifton Leaf said Tuesday at a luncheon at *Fortune's* Brainstorm Health conference. That's a very low threshold compared to pediatric trials. Sure, you're deliberately narrowing the selected group to reduce the number of variables, he said. But there's more to it than that. COMMENT ► <http://bit.ly/2IJvENS>

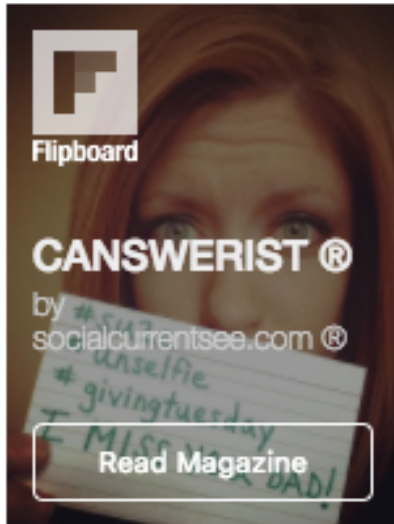

"They're (CTs) necessary, from a regulatory standpoint as well as an intellectual one. And of course it's a good idea to evaluate treatments before unleashing them on the broader public. But people aren't enrolling in them.

"The cost to develop and gain FDA approval for a new drug today is more than

\$2.5 billion, according to the Tufts Center for the Study of Drug Development. Driving much of that cost are human clinical trials."

Megan Rasmussen, left, Vivian Gama, PhD, and colleagues are studying a protein's role in helping stem cells maintain the ability to differentiate. Credit: Joe Howell MCL-1 is a member of the BCL-2 family of proteins important for blocking apoptosis, or ... ★ NUZ ★ <https://goo.gl/7va1Tc>

THE HEALING CELL is an easy to read, carefully researched, and clear-eyed view of medicine many decades in the making that is now paying off with treatments that repair damaged hearts, restore sight, kill cancer, cure diabetes, heal burns, and stop the march of such degenerative diseases as Alzheimer's, multiple

sclerosis, and Lou Gehrig's disease. The emotionally and intellectually stimulating stories throughout the book dramatically illustrate that stem cell therapies can change the way we live our lives after being afflicted by a disease or trauma. The book is the result of a unique collaboration between the Vatican's Pontifical Council for Culture and the Stem for Life Foundation. It includes a special address by His Holiness Benedict XVI, urging increased support and awareness for advancements in adult stem cell research. ► [AmazonXng](#)®
