

SAFETY PRECAUTIONS

SERVICE WARNING

Only qualified service technicians who are familiar with safety checks and guidelines should perform service work. Before replacing parts, disconnect power source to protect electrostatically sensitive parts. Do not attempt to modify any circuit unless so recommended by the manufacturer. When servicing the receiver, use an isolation transformer between the line cord and power receptacle.

SERVICING THE HIGH VOLTAGE AND CRT

Use EXTREME CAUTION when servicing the high voltage circuits. To discharge static high voltage, connect a 10K ohms resistor in series with a test lead between the receiver ground and CRT anode lead. DO NOT lift the CRT by the neck. Always wear shatterproof goggles when handling the CRT to protect eyes in case of implosion.

X-RAY RADIATION AND HIGH VOLTAGE LIMITS

Be aware of the instructions and procedures covering X-ray radiation. In solid-state receivers and monitors, the CRT is the only potential source of X-rays. Keep an accurate high voltage meter available at all times. Check meter calibration periodically. Whenever servicing a receiver, check the high voltage at various brightness levels to be sure it is regulating properly. Keep high voltage at rated value, NO HIGHER. Excessive high voltage may cause X-ray radiation or failure of associated components. DO NOT depend on protection circuits to keep voltage at rated value. When troubleshooting a receiver with excessive high voltage, avoid close contact with the CRT. DO NOT operate the receiver longer than necessary. To locate the cause of excessive high voltage, use a variable AC transformer to regulate voltage. In present receivers, many electrical and mechanical components have safety related characteristics which are not detectable by visual inspection. Such components are identified by a # on both the schematic and the parts list. For SAFETY, use only equivalent replacement parts when replacing these components.

GENERAL GUIDELINES

Perform a final SAFETY CHECK before returning receiver to customer. Check repaired area for poorly soldered connections, and check entire circuit board for solder splashes. Check board wiring for pinched wires or wires contacting any high wattage resistors. Check that all control knobs, shields, covers, grounds, and mounting hardware have been replaced. Be sure to replace all insulators and restore proper lead dress.

HIGH VOLTAGE SHUTDOWN TEST

Apply 120VAC. Connect a jumper wire to XRP1 and XRP2. The set should go into shutdown, losing picture and sound. If set does not go into shutdown the shutdown circuit requires repair. To resume normal operation, remove jumper wire.

The listing of any available replacement part herein in no case constitutes a recommendation, warranty, or guarantee by SAMS Technical Publishing as to the quality and suitability of such replacement part. The numbers of the listed parts have been compiled from information furnished to SAMS Technical Publishing by the manufacturers of the specific type of replacement part listed.

Reproduction or use, without express permission, of editorial or pictorial content, in any manner, is prohibited. No patent liability is assumed with respect to the use of the information contained herein.

Representative Model

Essential coverage for servicing a television receiver...

- Schematics
 - Component locations
 - Parts list

Coverage includes these additional models and chassis:

Models	Chassis
13GP341F21	TX808A
13GP344F11	TX808E
19GT243F11	TX808R

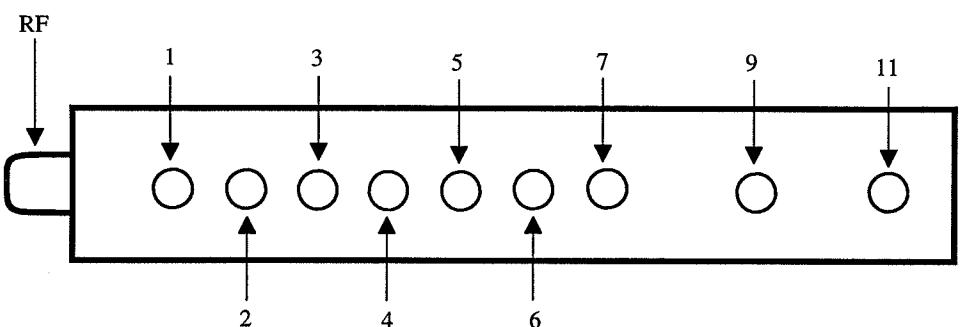

The logo for SAMS Technical Publishing. It features the letters "SAMS" in a large, bold, black, sans-serif font. The letter "S" is stylized with a thick, curved stroke. To the left of "SAMS" is a smaller, solid black square containing a white "S". Below "SAMS" is the word "Technical Publishing" in a smaller, black, sans-serif font.

AUGUST 2001 SET 4477

TUNER INFORMATION**TUNER VOLTAGE CHART**

Pin	VHF Low Band	VHF High Band	UHF Band
1 AGC	2.6V	2.5V	3.0V
2 TU	1.4V	4.3V	5.5V
3 ADDRESS	2.5V	2.6V	2.6V
4 SCL	5.1V	5.1V	5.1V
5 SDA	4.4V	4.4V	4.4V
6 UB (5V)	5.2V	5.2V	5.2V
7 5V	5.2V	5.2V	5.2V
9 VT (32V)	34.3V	34.3V	34.3V
11 IF	0V	0V	0V

NOTE: VHF Low Band voltages taken on channel 2.
 VHF High Band voltages taken on channel 7.
 UHF Band voltages taken on channel 14.

TUNER TERMINAL GUIDE**TEST EQUIPMENT**

Test equipment listed by participating manufacturer illustrates typical or equivalent equipment used by Sams engineers to obtain measurements. This equipment is compatible with most types used by field service technicians.

Equipment	Sencore No.
Oscilloscope	SC3100
Generators	
RGB	CM2125
Multiburst Signal	VG91
Color Bar	VG91
TV Stereo	VG91
Digital VOM	SC3100
Frequency Meter	SC3100
Hi-Voltage Probe	HP200
Accessory Probes	TP212
Isolation Transformer	PR570
Capacitance Analyzer	LC102
CRT Analyzer	CR7000
AC Leakage Tester	PR570
Inductance Analyzer	LC102
Flyback Yoke Tester	TVA92
Field Strength Meter	SL753
Transistor Tester	TF46
Horizontal Analyzer	HA-2500
Video Analyzer	VG91, TVA92

MISCELLANEOUS ADJUSTMENTS

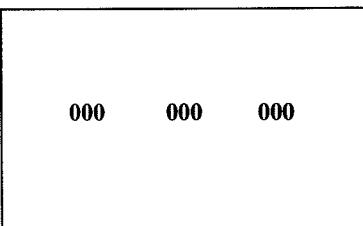

NOTE: All procedures require an antenna connected and power applied to the set.

HIGH VOLTAGE CHECK

Tune in a picture. Set brightness, contrast, and color to minimum. Connect a high voltage probe to the CRT anode. High voltage should measure 22kV to 23kV.

SERVICE MENU

The following adjustment procedures are accessed thru a service menu. To access the service menu, turn the receiver on, press the volume - button on the front panel and hold it down, press and release the channel + button, then the channel - button. The screen will display a one line menu, in the center is the parameter #, and on the right is the value of that parameter. Release buttons. Adjustments are made by selecting the proper parameter and changing the value of that parameter. To change the parameter number use channel + and - buttons. To adjust the current value of that parameter use volume + and - buttons. To access and change any of the adjustments, the proper parameter pass number must be entered.

000 000 000

To exit the service menu press the power button.

NOTE: Before making any changes on adjustments, record the on set values in case you need to restore the set to its original values.

COLOR TEMPERATURE

Tune in a crosshatch pattern. Preset the red, green, and blue bias values to midrange. Adjust screen control for a just visible pattern. Adjust green and blue drives to obtain a white raster. Check the low light to high light gray scale tracking. Repeat the procedure, if necessary, to obtain the best performance.

WHITE BALANCE

Operate the receiver for 15 minutes. Activate the service adjustment mode. Press the channel up button on the remote to select and select service numbers 3, 4, 5, 6, and 7. Set the data values to obtain white screen. Set brightness for a visible raster. Alternately adjust data value of service numbers 6 and 7 until a good gray scale with normal white is obtained. Set the data values for normal color level.

PURITY

NOTE: Operate the receiver for 15 minutes to allow warm-up of CRT. Use a degaussing coil to demagnetize the CRT.

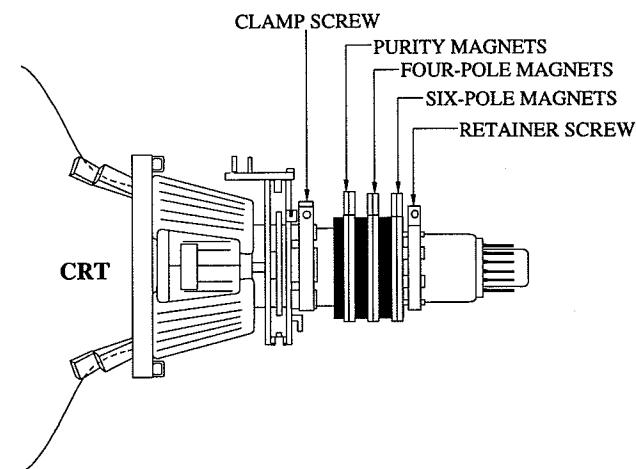

Set contrast to maximum. Set brightness and color to minimum. Tune in a green raster. Loosen the clamp screw and slide the deflection yoke back. Loosen the retainer screw. Adjust purity tabs to center the vertical green band. Slide the deflection yoke forward to produce a uniform green screen. Tighten the clamp and retainer screws.

CONVERGENCE

NOTE: Spread the two tabs of each set of magnets equally and opposite to converge vertically, and rotate both tabs in the same direction to converge horizontally. Since the four and six pole magnets interact, repeat the adjustment until center convergence is correct.

Tune in a crosshatch pattern. Remove rubber wedges between the deflection yoke and CRT. Tilt deflection yoke up or down to converge the vertical lines at the top and bottom of the screen and the horizontal lines at the left and right sides of the screen. Tilt the deflection yoke left or right to converge the horizontal lines at the top and bottom of the screen and the vertical lines at the left and right sides of the screen. Repeat convergence procedure if necessary to obtain the best overall convergence. Replace rubber wedges.

CRT NECK ASSEMBLY

SERVICE ADJUSTMENT PARAMETERS

Parameter No.	Parameter Name	On Set Value	Value Range	Comment
00	Pass number for service adjustment parameters.		Must set to 76	May not advance until value is set to 76.
01	VCO	88	0 - 127	Apply a 45.75MHz signal from a marker generator, with 20mV output level to pin 11 of the tuner (IF output). Adjust until the first three digits on the screen show 111.
02	AGC	36	0 - 63	Tune in a weak signal channel and adjust the value range for snow free picture. Tune in a strong signal channel, adjust LJ04 for maximum audio output with minimum distortion.
03	Red Bias	118	0 - 255	Set to midrange then adjust the value with the other two colors to obtain a white screen.
04	Green Bias	158	0 - 255	Set to midrange then adjust the value with the other two colors to obtain a white screen.
05	Blue Bias	103	0 - 255	Set to midrange then adjust the value with the other two colors to obtain a white screen.
06	Green Drive	109	0 - 255	Adjust the value with the blue drive to obtain a gray scale with normal white.
07	Blue Drive	128	0 - 255	Adjust the value with the green drive to obtain a gray scale with normal white.
08	Peak White (Video Level)	23	0 - 52	Tune in colorbar signal, connect oscilloscope to the base of TI20. Adjust the value range to produce a 2.0Vp-p response on the scope.
09	Horizontal Phase	23	0 - 31	Adjust to center picture horizontally.
10	Vertical Amplitude	22	0 - 63	Adjust for slight vertical overscan at top and bottom.
11	Vertical Phase	07	0 - 7	Adjust to center picture vertically.

Important Parts Information

- The parts listed here are those not usually available from a well-stocked supply cabinet or bin.
- Where items may be replaced with equivalent parts, several alternates are shown from participating vendors.
- On the parts lists, safety items are marked with a # to remind you that only exact replacements are recommended for these items.
- When ordering parts, state the model number, part number, and description.

Obtaining Parts

Many of these parts are available from your local Sams authorized distributor or the manufacturer of the equipment. Call Sams for the name of your nearest distributor:

800-428-7267

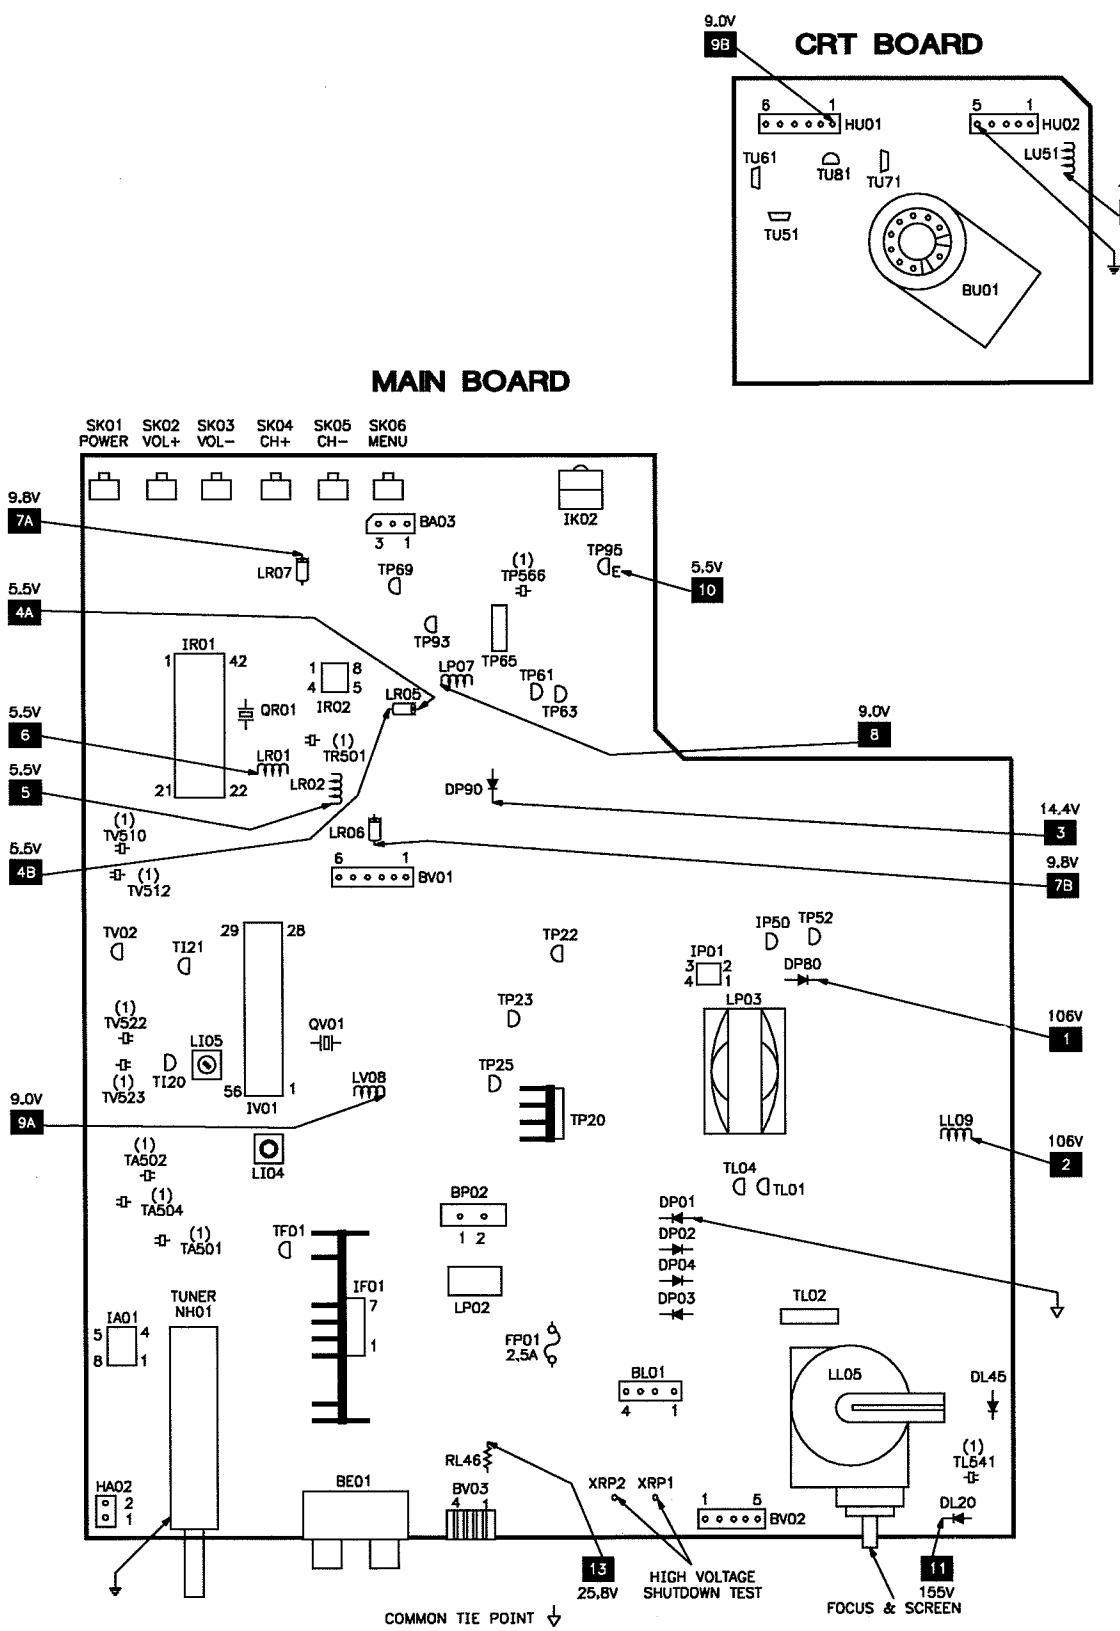

Or consult the Sams Annual Index for the address of the original equipment manufacturer.

Participating Vendors

Information on test equipment and replacement parts is listed in these pages for the following participating vendors. Consult the Sams Annual Index for their current address.

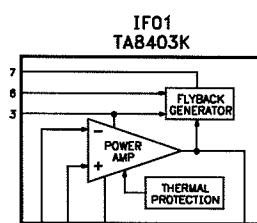

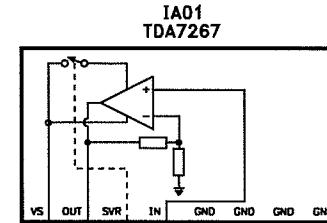

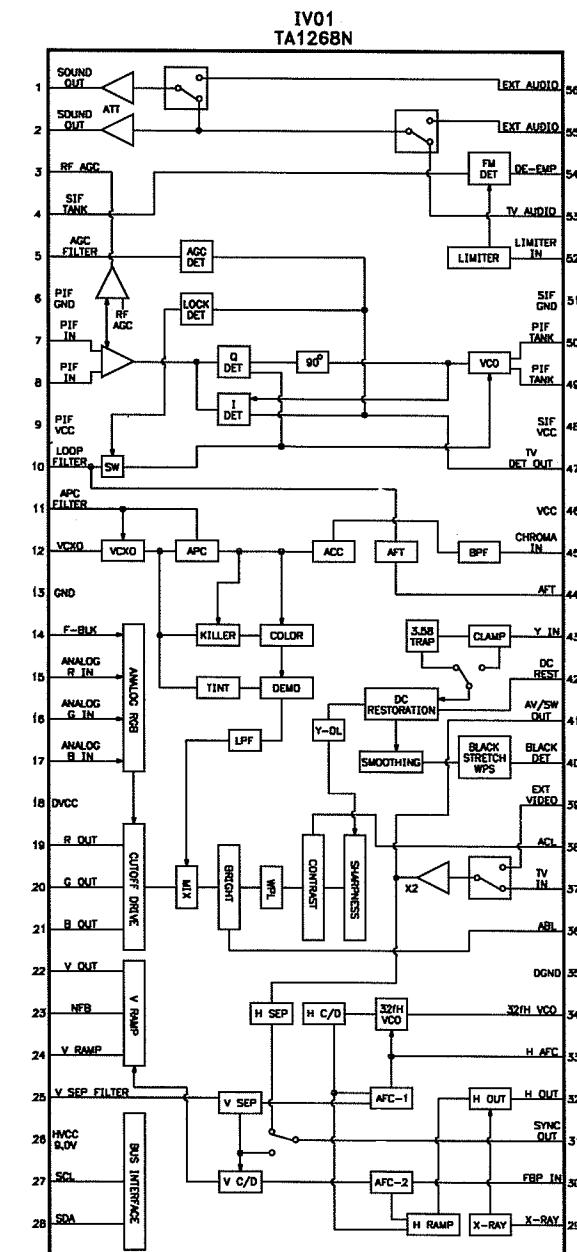

- NTE Electronics, Inc. (NTE)
- Sencore, Inc.

For SAFETY use only equivalent replacement part.

* Lead configuration may vary from original.

(1) Used with chassis TX808A and TXT808E.

(2) Used with chassis TX808R.

(3) Bonded part of CRT.

(4) Screen and focus controls are part of LL05.

(5) Used with chassis TX808A.

(6) Used with chassis TX808E.
