# Freestyle Edge Rgb Split Mechanical Keyboard

Desktop / notebook computers, tablets, processors, motherboards, digital cameras, camcorders and projectors, 3D printers, 3D scanners, and CD/DVD duplicators may be returned within 15 days of purchase. Merchandise must be in new condition, with original carton / UPC, and all packaging / accessories / materials. If you need to return software, a game or a movie, remember that you may not retain any copies — it’s not legal, and it’s not nice. Well, there’s no use of having RGB lighting if you can’t tweak or control them.
The scroll wheel is grippy but strangely the DPI button is located on the bottom of the mouse which is kind of weird and is a little drawback of this mouse. There are three LEDs on the top behind the scroll wheel that notifies the DPI change level. On the bottom, you will also find the On / Off button to turn off the mouse when not in use to save battery life. The side buttons are removable and come with covers if you do not wish to use side buttons on a particular side, depending upon if you are a right-handed or left-handed user. The RGB lighting on the mouse also looks great but it is better to turn it off for preserving battery life. The Ironclaw RGB also offers more functionality than the mildly equally unassuming Steelseries Rival 310.
By the rule form follows function, we tried to combine the minimum area that we touched while using mouse, then turn it into a fascinatedly new appearance. It not only brings extreme lightweight but also keeps the brilliant feeling of use. Meanwhile, the ambidextrous and compact design are more suitable for claw grip styles. For those who like lightweight mouse, AIRBLADER brings a smoothly control with high precision and a whole new design that nobody has seen before. Take your battlestation aesthetics to the next level with ROG Balteus RGB gaming mouse pad — or upgrade to the ROG Balteus Qi to enjoy Qi wireless charging right on the desktop.
In practice this won't make much of a difference for most people, but it does show how SteelSeries went all in with the Rival 650. The Naga Pro is a bit on the heavier side but weight is less of a factor for MMO gaming and you get a great and expansive set of side buttons so that's not something that we'll hold against this product. It also houses Razer's Focus+ Optical sensorandit's wireless so this is a fantastic mouse to get.

- A great lookin matte black with satisfying primary buttons and scroll wheel along with good thumb buttons.
- That's achieved in part thanks to a cut-out design on the palm and main mouse buttons.
- Two buttons on each side of the main clicks and two buttons below the scrolling wheel.
- Its wireless functionality doesn't hold this version of the Orochi back, either.
- To maneuver the mouse, utilize your entire forearm together with your hand and wrist.

It's Lightweight , wireless, has a small profile, and an incredibly good Hero Optical sensor. Yes, it's wireless, but the sensor and wireless are so responsive I don't notice the difference between the G305 and other wired gaming mice I have. You could use this on your favorite AAA title, at work, or even in a competitive round of Fortnite. Not everyone uses the best gaming mouse to play PC games, but a good rodent in your arsenal can enhance your performance and experience. While choosing the right peripheral can be pricey, you don’t need to settle something basic, as Razer has knocked a pleasing 46% off its DeathAdder V2. I haven’t heard such bad things about it from people with bigger hands, like Geoff and plan to

buy one on Newegg to test it out for myself. Let’s start with the fit, which is better than any mouse I’ve ever used. Considering the range of adjustment options, that should really be a given. It effortlessly glides across my desk and offers plenty of precision for detailed photo editing and more than enough responsiveness for my best attempts at twitch gaming. I did return to my Microsoft Wireless Laser Mouse 6000 to do some side-scrolling in Excel, but the tryst didn’t last. I missed my tailored fit, and more than that, the fact that the Rat feels more like a precision instrument than a conventional PC peripheral.

## Unchain Your Mouse

As with the best gaming keyboards, we’ve chosen a top overall pick, but don’t be afraid to look past it if you want something that fits specific criteria. The weight balance is perfectly maintained, and the model is fitting for both hands, as well as all kinds of grip. Razer Lancehead TE boasts the most up-to-date optical gaming sensor on the market, letting you stay on top of the game with exceptional precision. The rather long battery life of 50 hours makes it possible to enjoy the gaming sessions without any interruptions. The integrated 4 LED lamps let users control the battery level in real time.

You can also program the side paddle to toggle your second ability bar in MMOs or trigger your class ability in a MOBA game. The only thing that gives us pause is the Basilisk Ultimate's high $169 price. If that's too rich for your blood you might want to check out the Basilisk X Hyperspeed, which comes with a slower sensor and mechanical switches, but

adds Bluetooth connectivity for over $100 less. There's a sniper button on the left side, which is a great feature for fans of FPS games. Its excellent click latency provides responsive feeling gameplay, and its low lift-off distance means you can easily reposition the mouse without the sensor picking up unintended movement.

## Custom Mouse Pads Gaming Mouse Pads Customize Size Mouse Pad Anime Mouse Pad Best Mouse Mat

The mouse comes with 7 programmable buttons and the main buttons use SteelSeries Switch, which are rated for a life expectancy of 60 million clicks. There is a DPI button behind the scroll wheel for On-the-fly DPI adjustment in games. The mouse comes with an inbuilt rechargeable battery, and with its fast charging technology, you can get 10+ hours of gameplay with only 15-minutes of charge. It also comes with adjustable weights and you can get the mouse to weigh up to 153g, which I think is very heavy for most of the gamers. However, the mouse is well balanced and with its ergonomic right-handed design, it is suited for both claw and palm grip style.

best mice for gaming

However, the DPI setting is very subjective and depends on the type of the game you’re playing and what speed you prefer. Some gamers opt for lower DPI settings ranging from 1600 to 800, whereas others swear by higher ratings. Luckily, there are a lot of gaming mice that allow you to switch between various DPI settings with a click of a button. Finding a gaming mouse is super easy, but getting your hands on the right one for your gaming needs is a whole different ballgame and it is a lot harder than you might expect. But worry not, in the section down below we’ll run you through the ins and outs of gaming mice and help you pick the one that goes hand in hand with your play style and suits the genre of your games.
