

Voicedocs

Voicedocs develops speech recognition, voice control, natural language understanding and other technologies for different languages. Our goal is to integrate these technologies into various products and spread systems which use voice user interfaces -- more natural way of [automatic transcription](#).

Automatically transcribe an interview, meeting or video

Save at least 4x time and budget

Try free

Log in

Transcription of meetings

Focus on what being said, not on taking notes. Search for what was said on required topic via keyword search in audio. Automatic transcription helps you in meetings which contain sensitive information

Interview transcription for news and research

Focus on creative work instead of transcription and publish quickly. Upload the recording just after the interview and get automatic transcription before returning the office. Protect the private data in interviews without sharing with anyone

Automatic video subtitling

Upload your video, get automatic subtitles with timestamps, review and edit the subtitles easily with subtitle editor. Download the subtitle in SRT format for use in Youtube, Adobe Premiere and etc.
