

SEO Is Not For Dummies: Smart Tips For Smart Webmasters

Search engine optimization helps you get ahead of the competition. Knowing what to do involves learning the most effective strategies. Apply [Unsure How To Proceed With SEO? Consider These Tips!](#) in this article to your website and expect to see your search engine rankings shoot up in no time.

You will need to make your website pop up in the google search results. Build a really solid website and use search engine optimization to get it found. If other local businesses in your area don't have this, you will stand out like a shining star from the crowd.

When choosing a domain name for your site, you should never settle for something irrelevant just because your preferred domain has been taken. The closer your domain name is to the subject of your site, the better you will do in the rankings. Turn on that light bulb above your head and choose a great, relevant domain name.

Optimizing your website for search engines will improve the profitability of your affiliate marketing programs. By focusing on certain keywords and tweaking the contents of your web pages, you can significantly improve your website's ranking on search engine results pages. This will direct more visitors to your site, increasing your own exposure and pulling in more potential customers for your affiliates.

When optimizing a website for search engine rankings, be sure to check out what your competitors are doing. Follow the links on the first page of results for the search terms you're interested in optimizing for. The source code and content of those pages can tell you a lot about how the search engines rank pages.

Make sure your keywords are both relevant and specific to site content. A tag containing a more generic keyword phrase (i.e.: Classic Rock Music) will face very heavy competition in the SERP, where as something more specific (i.e.: Rolling Stones Music) will likely get your higher up the list. A higher ranking is one way to increase traffic to your site.

Site maps are perfect for facilitating page indexing by search engines. [Find Out Everything You Need To Know About Search Engine Optimization](#) can make your site easier to use. Although you may have a small website, you can use a site map to have a bigger effect on search engine ranks.

Study popular websites to see what techniques they are using to optimize their websites for search engines. They probably offer special features or resources that set them apart from other sites. They most likely have an intricate navigation system. Duplicate some of their ideas on your site so that it is viable against your competition.

Choose an easy to remember domain name relating to your product line. For instance, "widgetsrus.com" works well for a site selling widgets. Not only will it be easier for customers

to find your website, but search engines will pick up on the related words to direct a lot more traffic your way.

As much as possible, stay away from frames in your website. Search engines can't index framed pages. The best that they will be able to do is to index your home page. This means that, if the majority of your site uses frames, then the majority of your site will not be indexed.

Live by the rule that no page on your site should be more than two clicks away from your home page. Search engines hate deep links and often times ignore them. As well, by sticking to this rule, you help guarantee that all of your pages get to enjoy some residual page rank value from your home page.

Use your keyword phrases wisely when attempting to write content. Phrases are a lot longer than just one or two keywords, so they definitely look out of place when you start to stuff three, four or more into one article. One longtail keyword is more than enough to get the job done for the average piece of content.

If you are looking to get more traffic to your site, a great way to do so is to list your site on a pay per click program like Google AdWords. With programs like this, your site gets advertised at the top of searches for a small price per visitor.

Putting your website in a prime place to be found is what search engine optimization is all about.
