

Hi,

This file accompanies the Final Patch which greatly adds to the [Tsunidere] project. Over the years, numerous series and other episodes have been released by me along with minor to major errors inside the sub scripts.

This document is divided into three parts, of which two provide information across files patched by v1.0 (1) and v1.5 (2) and as well, those patched by the script inside the subfolder "loose episodes" (3).

The so-called "Final Patch" will respectively apply fixes throughout my releases and works for the following episodes:

#### Applying the patch:

If you wish to apply the patch on any of the above listed releases, simply move the respective file(s) into the patch folder and start [Tsunidere] Final Patch.bat

xdelta (32bit) will then look for existing files matching the above CRC(s) and patch accordingly. You may delete the old file afterwards as it becomes obsolete upon completion. Once you are done with patching all files you wish, you can move them out of the patch folder and delete said folder. Patching the files may take a while, depending on how many you have put into the folder. The script will first process the files displayed in the upper table and afterwards those in the lower table.

If you are on Linux, grab the source [from here](#) and then patch (parameter: -d).

In case you receive errors during the procedure, open a cmd prompt (Win+R -> cmd) and drag the Final Patch.bat inside for a better overview. Also, please be wary that the patch requires the initial filenames the episodes were named with. If everything else fails, ask me on IRC.

For additional information about the folder “loose episodes”, please proceed with page 3.

Subfolder – loose episodes:

The subfolder 'loose episodes' contains further patches for episodes that came with a patch and the script inside the folder, "[Tsundere] Final Patch [Loose EPs].bat", can be used either before or after running "[Tsundere] Final Patch\_v1.5.bat".
