

Minecraft Server Hosting

Our control panel is equipped with the most popular Minecraft server versions available. You can refine the software that will run your server's core after you have chosen Java Edition or Bedrock. You'll choose the first version during checkout but can modify it at any time and as many times as you would like.

If you decide to use a Java Edition server that is preferred by PC based players, there are many more options to think about. If you would like to customize your own server plugins are a great way to do this with Spigot, Bukkit or Paper. [Minecraft-servers.biz](https://minecraft-servers.biz) You can make use of one of our packages to create a minigame server such as Paintball or MCMMO. If you're more of a mod person you will make use of Forge as the server version and choose which mods to leverage. There are many amazing modpacks in the panel, so you can give a few a try from the top creators such as Technic, FTB and more.

Don't fret if you're not exactly sure which version you'd like to begin with because our support team is able to assist you in deciding and changing it if you wish to. Each version provides a distinct experience, so we suggest you test a few to ensure that you enjoy playing with your friends on your server.
