

Farmers Became Too Much Happy By Adopting Cocopit Method

The most poor farmers of Maniyarpur Brit village in Tetariya block of East Champaran District are almost dependable for their livelihood on agriculture work and cropping of wheat and paddy. During last one year by farming kisan club by progressive farmers with the support of Jan Nirman Kendra, they decided to grow cash crops but there was a doubt in their mind for its failure due to lack of knowledge but the motivation and inspiration from Jan Nirman Kendra, work a good result as the farming was support to be done by simple scientific process . The scientist Mr. Govind Yadav from GDS imparted a systematic training having practical approach by demon on cocopit method. The result was more than the expectation and from very next day they

started to prepare the seedling of Tomato and Pumpkin by cocopit method with all the required materials by following all the directions and instructions. They used the NPK (Micronutrients) and macoijab in the desired quantity and ratio and the outcome was the solid and healthy seedlings. A day came for planting these and they planted in 2 Acre as per the guideline in systematic lines and 2 months their Tomato field are full of Tomatoes and they are very happy. All the

farmer club separately holds a meetings to decided the marketing issue. but Jan

Nirman Kendra came forward and completely solved the issue by way of marketing arrangement in the local market as well as in the big vegetable market Muzaffarpur (Bihar)in very effective manner . Farmers joy have no ends in view of their bumper production and proper marketing arrangement and their ultimate slogan is – growing farming of vegetable only by cocopit method and they are now the big public relation officer of vegetable grower by cocopit method and as a result of the same the farmers are much eager to adopt the same .
