

Introducing cocopit method for growing Vegetables” Nursery

Recently we have been imparted theoretically and practically training on coco pit Method for growing vegetables nursery, especially on Tomatoes by Dr. Govind Yadav of GDS and we introduced on sample basis among ten farmers of our operational area at Maniyarpur, East Champaran (Bihar).

Many years ago, on seeing the “RAINBOW” in the sky William Wordsworth composed a poem, namely THE RAINBOW and he used the line - My heart leaps up when I see a rainbow in the sky – presently, the hearts of our involved farmers leap up when they see their tomatoes nursery which have been grown by adopting cocopit method.

Almost 100% Seedling has grown and all the seedlings are strong and healthy. There is a proverb – morning shows the day it will be proved by coco pit method for these tomatoes seedling. It seems that these seedlings will produce of not only a good product after transplantation but quantity will be much also. We believe that after the

Training on Cocopit for Farmer Club Members

Cocopit based farming by Farmer

adoption of this method for tomatoes, our farmers will use the method for other product of vegetables too. If we impart hard labor and consequent upon that a good result comes, we feel happiness; they will get more income due to more production, which is their ultimate goal. By virtue of adoption of this coco pit method they may attain economic sustainability and if once they attain that they will be able to

afford the educational, living, medical expenses of their family members too

which remains the target for a human being, further as our country predominantly depends on agriculture, by inspiring the farmers to go on this technology our country will develop in view of the mounting prices of vegetables as vegetable cost much more than the cost of food grains now-a-days. Can we imagine that after few years' tomatoes other vegetables will be much dearer? In present scenario tomato costs Rs. 100/- per Kg. How many of us are able to afford that? In our opinion if the productivity will increase, price will come down certainly, which is the theory of economics.

Further for healthy life vegetables are essential for us and resisting capacity of the body increases by in taking of vegetables and all the credit will go to GDS and JTT who provided the opportunity for adoption of this coco pit method.
