Turinabol Dosage. Many report that the ideal Turinabol dosage for experienced users should be around

50mg a day. It's believed to be the sweet-spot between minor side effects and good results. If you're new to oral steroids, it's recommended that you use 20mg a day for a period of 1 - 4 weeks and assess your tolerance. Anxiety - 2 mg taken 3 times per day (this can be increased to 5 mg or 10 mg 3 times per day depending on the severity of the condition). Insomnia - 5 mg - 15 mg one time per day just before bedtime. Muscle spasms & seizures (adults) - 2 mg - 60 mg per day. 1 mg twice per day for 2 mg. Dosages above 2 mg should be administered 3 times.

How it works. Diazepam, much like other benzodiazepines, works by boosting the effect of neurotransmitters in the brain and nervous system that have a calming effect. As a result, the effects of anxiety are reduced. Diazepam begins to relieve your symptoms of anxiety within 30 to 90 minutes. Diazepam comes in 2 mg, 5 mg and 10 mg tablet strengths.
