

What Makes Quickcharge Pro Adapters Are Different?

You do not want your smartphone or tablet to take too long to charge. QuickCharge Pro lets you charge your device to 70 percent in just 30 minutes.

The adaptive fast charge reduces the speed of transfer of power when the battery is full. This means quicker charging. This technology is safe for your device, and will ensure that your device can charge quickly without overheating the battery.

QC 3.0 Technology

The QC 3.0 technology that the [Quick Charge Pro](#) adapters utilize is among the top charging solutions on the market in the present. It has been developed over the past few years and is able to charge multiple devices from 0 to 70 percent in just 35 minutes.

QC 3.0 uses intelligent Negotiation for Optimum Voltage (INOV) to provide an accurate voltage that your portable device needs and maximizes the effectiveness of charging. You can also choose from 3.6V all the way to 20V in 200mV increments.

However this version of QC 3.0 is proprietary and requires a license for use. It isn't possible to fully enjoy the features of QC 3.0 in the event that your device doesn't allow it.

Fireproof Design

One of the reasons QuickCharge Pro adapters are unique is their fire-proof design. The technology for fireproofing is the use of a magnetic shield that stops the power surges from damaging the device or even short-circuiting the circuitry. The technology is created to offer a smooth, fast and secure charging experience.

There are other options that the company offers to make sure your devices are in top shape. This includes a micro-USB cable of premium quality and a dual-circuit [charger](#) that is the best mobile charging solution that is available. The best part is that QuickCharge Pro adapters can charge your tablet, phone and other electronic devices in a jiffy. These adapters are essential for anyone in motion. Take advantage of them today! We'll be glad to answer any questions you have.

Intelligent Current Recognition

The feature that recognizes the current of QuickCharge Pro adapters detects the kind of device connected and adjusts the output in line with. It provides the optimum amount of current and voltage to charge devices at an ultra-fast speed while protecting them from overheating and blowing out.

This intelligent charging system supports QC 3.0 technology and is compatible with QC 2.0 and QC 1.0. It is also possible to plug in devices from previous generations to charge them easily.

This is one of the best advantages of QuickCharge Pro adapters. It lets you quickly recharge your device from 0% to 70 percent in less than one hour.

Multi-current System

A lot of people own multiple electronic devices that need to be recharged. A good charger is essential for anyone who does not have an outlet. While the latest smartphones come with hefty prices but the capability to charge them with an ordinary wall outlet can keep your technology satisfied and your pocketbook is stuffed with. With an eye catching nameplate and the latest in technology, your phone can be fully charged in no time at all. You can pick the most advanced technologies and let your geek side shine as you chat with your buddies. Apart from the above sexy benefits, the best aspect of this entire event is that you'll be able to thank your bank account for the night.

Intelligent Surge Protection

One of the main features that set QuickCharge Pro adapters apart is their smart surge protection. These adapters are made from top-quality materials that are fireproof. This ensures they can stand up to extreme temperatures and stop devices from overheating or bursting while being charged.

Surge protectors are an essential part of any electrical system. They protect your business or your home from damage and fire caused by brief jolts of electricity. These jolts can fry electronic components, make electrical outlets flicker and buzz and can even cause fires that could be dangerous.

The best smart surge protectors come with comprised of features that can be controlled via an app or voice commands with Alexa and Google Assistant. TP-Link makes an especially good one with its Kasa Smart Power Strip that is available in the range of three or six outlets with the capability of controlling each one individually.
