The concept of generating income via investing in residential property has gained traction over time.

However, building and maintaining a successful property portfolio is not a walk in the park and takes extensive planning and consideration before an investment is made.

There isn't just one technique to establish acquiring property as a portfolio. What you can invest, what you want to accomplish, how much risk you are prepared to take and how you plan to construct your portfolio are all crucial factors to consider.

Whether you plan to buy properties to rent out or improve them, increase their value, and then resell them for a profit is another consideration. You should be aware of all the tax ramifications and plan for property income tax if you intend to establish your property portfolio by following the buy-to-let route and becoming a landlord. Call our property tax accountant for further advice.
