Website: <https://www.sollumtechnologies.com/>

Sollum offers greenhouse growers the only smart LED lighting solution which dynamically recreates, perfects, and modulates the full spectrum of the Sun's natural light. The company is based in Canada where it designs, develops, and manufactures its solution. Sollum works closely with its clients and research partners to create recipes that are adapted to the growth cycle of each crop, regardless of its native climate or the location of the greenhouse. Its SUNaaS cloud platform enables multi-zone light management so growers can implement several different recipes simultaneously in the same greenhouse. The platform automatically adapts the lighting to each zone to the ambient light to match recipe targets
