

'Minecraft' PSVR Support is Coming This Month

Sony announced on Monday morning that it has lined up an entire week of PlayStation VR game announcements, and it kicked off with the biggest announcement for Minecraft players. The wildly popular sandbox game will get PSVR support in the coming months with a free update that will roll out to all PS4 players.

Mojang has been working on this since Sony gave it the green light to bring cross-platform play and the Bedrock version of Minecraft to PS4 last year. With the help of SkyBox Labs, it's refitting the technology for virtual reality that it uses on other platforms to make it compatible with PSVR.

think of

You'll be in a position to play the entirety of Minecraft in PSVR after the update. There will be two main VR modes that include Immersive and Living Room (i.e. You'll be able to access an interactive screen and other settings to customize the game to your preferences.
