CRYPTOHOPPER CRYPTOSET GUIDE

CONTENTS

HELLO. THANK YOU FOR CHOOSING OUR SERVICES.

At the beginning some very important information:

- If any issue is incomprehensible to you, please contact us at the following e-mail address or Discord private message @Piter

- We prohibit the sharing of settings or guide with another person. If we see such a situation, the consulates will be drawn from it.

- We are a legally operating company registered in UK. Our headquarters is located in London.

Guide version: V3.1

Guide date: 29.03.2019

The first choice before which we will choose the right version of the bot for our expectations. There are 3 options to choose from: Explorer, Adventure, Kangaroo. I will bring each one closer.

WHICH VERSION OF THE BOT TO CHOOSE

EXPLORER

Explorer Hopper

Starter

Price: 19$/mo.

Recommended for capital between $ 100 - $ 500

Only 15 cryptocurrencies do not offer much choice.

When using the bunny version, we have to take into account that we will have to make a large part of the shopping manually.

ADVENTURE

Adventure Hopper

Subscribe now to Explorer Hopper

Medium

Price: 49$/mo.

Recommended for capital between $ 250- $ 1500

In this case, it is wise to select 50 currencies with the largest volumen. The amount of purchases made by hand will be much smaller in this case.

HERO

Hero Hopper

Pro

Price: 99$/mo.

Recommended for capital between $ 1500+

It is possible to select all currencies selected by signals. A very important advantage.

VERSIONS OF CRYPTOSET PRODUCTS

The first is: **SIGNALS** - External applications like Cryptohopper can communicate with your exchange account via API. This package lets you connect your exchange account to Cryptoset signals that are configured on Cryptohopper. The user after purchase can copy all 1: 1 signals without having to click "BUY" rather it's done aquatically. This package also provides you support related to connection.

We currently have 2 versions of signals. **Technical Analysis** and **Knife Catcher**.

TECHNICAL ANALYSIS

The **Technical Analysis** version is selected signals from the market with a possible growth of 8-12% in the coming days. The number of signals depends on the market condition. Usually there are from 3-6. Good to play the greater part of capital due to their limited amount. Most signals occur during the upward trend and consolidation.

Link: https://www.cryptohopper.com/signaller?signaller_id=217

KNIFE CATCHER

Knife Catcher signals are based on the most important indicators influencing price movements. Changes in volumene relative to previous time and price changes. If our internal algorithm detects an opportunity to buy, the signal is automatically added. The algorithm is very advanced and improved for a long time.. The number of signals is from 3-10 a day. These are short term signals with a very high probability of growth in the near future. Most signals occur during the downward trend and consolidation. In addition, the algorithm was enriched (26/02/2019) for signals from the fibontatum's sudden movements. They are extremely effective and perfectly match the strategy.

Link: https://www.cryptohopper.com/signaller?signaller_id=220

It's good to have both to have signals during every market situation

The second set of products that Cryptohopper provides is **Strategies**. Each bot can simultaneously use **Signals** and **Strategy**, while buying opportunities come from 2 sources. We provide 3 advanced strategies tailored to different preferences on the marketplace.

DUMP SNIPER PRO

As the old adage says "Buy low & sell high" - This strategy reflects it perfectly.

It is based on many indicators and in a very good way catching the bottoms on the market and finalizing profits. It is very well suited to any market condition, and updated if necessary. The goal is to buy currencies at the bottom of decline and sales when trending indicators are high and the upward trend ends.

The number of transactions is closely dependent on the trend. The most signals are during the downward trend, then the bot buys in the bottom. During consolidation, there may be 2-3 signals per day. During the upward trend, most signals should be from the signal group. To increase the number of signals, we recommend additionally using the signal group. The strategy is updated in relation to the changing market situation.

In addition, as part of shopping you get 3 months access to the Premium zone on the Discord channel.

SCALP MASTER

For those who like more transactions, we recommend: **Scalp Master** Strategy. Scalping is Small quick profits can add up

The idea behind this scalping strategy is to catch the short wave retracements that take place when the market reaches a peak oversold state. Profits are not huge but they are consistent when the system is correctly applied.

The indicators are set in such a way that they make purchases during temporary drops of a given cryptocurrency but at the same time when the price begins to reverse. The price change from the last 5 minutes must be positive for the purchase to be made.

Cryptocurrency prices are changing dynamiclly, their value is constantly changing.

In addition, as part of shopping you get 3 months access to the Premium zone on the Discord channel.

Cryptocurrency prices are changing dynamiclly, their value is constantly changing.

VALUE HOLDER

The answer is our new **Value Holder** strategy

The option to maintain the value is USDT. It is a special strategy ideally suited for currency pairs with USDT. All used indicators are adjusted in such a way that they work best in these pairs. The number of transactions is strictly dependent on the market situation, the most occurs during consolidation and the downward trend. During the upward trend, most signals should be from the signal group. To increase the number of signals, we recommend additionally using the signal group. The strategy is updated in relation to the changing market situation. This strategy works very well on the version of Hopper. From Explorer to Hero

The last type is "**Templates**". Even the best signals and strategy will not help if our Hopper settings are not correct. You can use free solutions available on the marketplace or in this free guide. However, if you want to achieve the best results, we have something special for you.

DEDICATED CONFIGURATION WITH STRATEGY

Dedicated configuration with Strategy ! It is available at https://crypto-set.com in the bottom panel. In addition to the dedicated configuration, you will also get the source code for the strategy, so you do not need to buy the Marketplace! Configuration fully suited to the capital, the crypto exchange and the base currency. In the best way it allows you to maximize profits obtained from signals and strategies.

If you have already decided on selected products.

Let's go to the bot configuration !

STEP BY STEP UNIVERSAL CONFIGURATION

BASECONFIG – BASE SETTINGS

Name: Enter as we want to be called our bot

(for ex. Cryptoset)

Live bot: ON

BASECONFIG – EXCHANGE

Exchange: We choose an exchange that interests us

Bittrex/Binance API: Enter your API key here (Bittrex / Binance)

Bittrex/Binance API Secret: Enter your private API key here (Bittrex / Binance)

Use ticker rate: Highest bid/Lowest ask

BASECONFIG – NOTIFICATIONS

If you would like to receive notifications via e-mail, check this option. This helps in later shopping control.

Notification on trade: ON

Notification on trade error: OFF

Notify on cancelled order: OFF

BASECONFIG – BUY SETTINGS

Percentage lower bid: 0.16

Max open time buy: 12

Max open positions: 10

Max percentage open positions per coin: 2%

(Max 1 open positions per coin)

Only 1 open buy order per coin: ON

Only buy when there are positive pairs: OFF

Enable cooldown: OFF

BASECONFIG – COINS AND AMOUNTS

Base currency: BTC

Allowed coins: We recommend using cryptocurrencies with a volume greater than 40BTC/day with the Bitcoin base currency and above USD 2,000,000 with the USDT base currency. To choose a currency, go to: https://www.binance.com/en and click on the 24h Volume table. Then, you filter from the largest to the smallest volume. Then we move selected pairs. Currencies: HOT, NPXS, DENT, NCASH, SC, KEY, STORM, MFT, TNB, IOST, VET, FUN, POE, XVG, LEND have been disconnected from adding signals through Cryptoset due to the high variability of individual ticks.)

Last 10 signals

Coin	Exchange	Base	Type	Date
NCASH	Binance	BTC	Buy	02.11.201 17:45:56
MANA	Bittrex	BTC	Buy	02.11.201 16:26:34
MANA	Binance	BTC	Buy	02.11.201 16:26:34
MANA	Poloniex	BTC	Buy	02.11.201 16:26:33
BTS	Poloniex	BTC	Buy	02.11.201 15:02:13
BTS	Binance	BTC	Buy	02.11.201 15:02:13
CDT	Binance	BTC	Buy	02.11.201 13:33:55
SUB	Binance	BTC	Buy	02.11.201 12:10:35
SALT	Bittrex	BTC	Buy	02.11.201 10:52:03
SALT	Binance	BTC	Buy	02.11.201 10:52:03

If you use the Explorer version, We recommend that you manually purchase the currencies displayed on the left: https://www.cryptohopper.com/signaller?signaller_id=217 or https://www.cryptohopper.com/signaller?signaller_id=220 in Last 10 signals if their increase since the addition is not greater than 1.5%

Percentage buy amount:
1% - Conservative
2% - Optimally
2.5%+ - Agressive

BASECONFIG – STRATEGY

Strategy: We choose strategies from the list that we will use together with the signals. All Cryptoset strategies are very well suited to signals.

Baseconfig – Trailling stop-buy

Enable: OFF

BASECONFIG – SELL STRATEGY

Take profit at: 1.5%*

*This take profit only applies to strategy

(the rest is specified in Signal Config)

Max open time sell: 7

Percentage higher ask: 0.05

BASECONFIG – SELL STRATEGY

Sell based on strategy: OFF

Hold assets when new target is the same: OFF

BASECONFIG – STOP-LOSS

Enable: OFF

Personally, I recommend focusing on DCA instead of Stop Loss. With a well-made DCA, our effectiveness can reach 100%, which is equivalent to the lack of Stop Loss. If you already have some currency for a long time and you are not sure about it, write to Discord in the Chat Room section and we will be happy to help you decide what to do https://www.cryptohopper.com/documentation/dollar-cost-averaging-dca

BASECONFIG – TRAILLING STOP-LOSS

Enable: ON

Trailing stop-loss percentage: 0.39%

Arm trailing stop-loss at: 1.2%

Use trailling stop-loss only: OFF

Reset stop-loss after failed orders: OFF

Only sell with profit: ON

BASECONFIG – AUTO CLOSE

Enable: OFF

BASECONFIG - SHORTING SETTINGS

Reset positions afres closed short: OFF

Restore positions after short: OFF

Automatic shorting OFF

*We do not recommend these options due to the re-payment of the BID / ASK commission. If the signal is correct, TP will reach it without the "SHORT" option

BASECONFIG – DOLAR COST AVERAGING

Enable: ON

DCA after X time open: 5min.

DCA max retreis: 4

DCA set percentage trigger: 6-10%*

*Depending on the market condition. If you see that the price of BTC drops and after it other altcoins set% in the area of 10%. If, however, market condition is good, set the area around 6%

DCA buy imediately: ON

DCA order size: Double down

BASECONFIG – ARBITRAGE

Enable: OFF

CONFIG – SIGNALS

Cryptoset - Knife Catcher

Pause signal: OFF

Market order: OFF

Take profit at: Empty

Percentage higher bid: 0.17-0.25

Percentagr lower ask: 0.17-0.25

Sell signals: OFF

Signal configuration: ON

Allow all coins: ON (If you have the highest version)

CONFIG – SIGNALS

Cryptoset – Technical Analysis

Pause signal: OFF

Market order: ON

Take profit at: 7

Percentage higher bid: 0.1

Percentagr lower ask: 0.1

Sell signals: OFF

Signal configuration: ON

Allow all coins: ON (If you have the highest version)

CONFIG – TRIGGERS

We will use 2 Triggers.
2 to enable or disable buying options
1. Edit trigger
Name: Buying enabled
Enabled: ON
Trigger
Select exchange: Binance
Select market: BTCUSDT
Select candle size: 5 minutes
Select indicator: RSI
Trigger when RSI is: Greater than 30
RSI Period: 14
Actions
Set Buying status: Enabled
Cooldown period: 6 minutes
SAVE

2. Edit trigger

Name: Buying disabled

Enabled: ON

Trigger

Select exchange: Binance

Select market: BTCUSDT

Select candle size: 5 minutes

Select indicator: RSI

Trigger when RSI is: Less or equal to 30

RSI Period: 14

Actions

Set Buying status: Disabled

Cooldown period: 6 minutes

SAVE & READY !

CONCLUSION

Join our Discord group. We put there a lot of useful information and advice on signals and maximizing profits. After subscribing, write to @Piter and give him your proof of purchase and give you access to the Premium zone.
