

Microsoft Shows Users How To Set Up A Minecraft Server In Azure

Minecraft is one of the most popular games in the world. It's easy to see why- Minecraft lets players use their imagination to shape the world however they see fit. Even Microsoft saw its potential when it bought the company that developed it for \$2.5 billion last year. People all over the world play it, a lot of the time they're playing on a multiplayer server with their friends. But did you know that there's a quick and pretty easy way of setting up a Minecraft server on Microsoft Azure? Amanda Lange, technical evangelist at Microsoft has posted a video tutorial that shows Azure users exactly how to set up a Minecraft server. It takes just minutes. She also explains how the whole process works and how you can configure individual settings for your Minecraft server.
