

Salient features of Highster mobile device

Cell phone tapping technology is growing in leaps and bounds and people deal with all required operations to successfully tap a cell phone. Cell phone tapping software keeps growing and there is a great demand for well-built tapping software which supports various applications. Highster mobiles possess a

unique feature which secretly track and spy on virtually any cell phone quickly and easily completely undetected. Remote access is the added advantage of the Highster mobile, information is accessed from other phones at distant locations without possessing the phones. With the help of Wi-Fi connection and a simple network the operation can be performed.

Text messages: Highster mobile tracks the details of all text messages which are received and sent from the phone. All the message correspondence details are recorded and stored in a separate database log. The log can be accessed through online and the details can be displayed on a laptop or [iPhone](#) and viewed for investigation. The deleted

message information is also obtained with all details.

Call details: An excellent call tracking facility is available in Highster mobiles. Details about the incoming and outgoing calls are recorded and stored for future reference. The **Highster mobile help** the user to access the call details of other phones from a distant remote location. Information about photos and videos are accessed quickly. The saved pictures and images can be viewed through computer systems which are present in the distant location. The Highster mobile helps the user to view the email correspondence details. The email details which are passed and received are observed and viewed through online mode. Go to <http://highstermobilereviewsworld.com/> to find out details of this cel spy software.

Remotely lock phone: Using this option, the phone devices can be controlled from distant location. This option is helpful in situations when the particular device is lost or stolen. The phone can be locked from a distant location which prevents the access of unauthorized people. Using Highster mobile phone GPS facility is activated. [Global Positioning System \(GPS\)](#) is used to determine the location of person, vehicle or other asset

to which it is attached. Highster mobile interacts with the satellite and sends signals to a GPS system device which then calculates the current position by latitude and longitude.

These varied application systems are used by cops, detective persons, corporate bodies and office executives who are involved in constant monitoring of their employees. Many best results are obtained with the *Highster mobile phones* and there is a great demand for this unique product.
