

The BS of solutions that are being propagated to remove grapheme---this is totally useless and a money grab—and nothing to validate any of this and in fact this will further exasperate nano poisoning--- Other supplements that can be taken to assist in the removal of graphene oxide are:

- 1. Nano-Colloidal Silver and Gold** ---engages nano to assemble and further integrate nano integration
- 2. Potassium Iodide and or Potassium Iodine** ---does little lugols will support glandular reinforcement
- 3. Glutathione** ---not going to do anything in regard to nano orr injections
- 4. Reduced Hydrogen as Potassium Hydroxide or KOH-** never use hydrogen THz freq will utilize this as a super conductor causing DNA damage
- 5. Reduced Oxygen as Sodium Chlorite or NaCLO2** ---if your really trying to remove graphene then USE PAA which oxidizes graphene and removes it
- 6. Sodium and Potassium Bicarbonate** this will do little to stop graphene
- 7. Chlorophyll from Mulberry Leaf** ---again nothing to stop nano or graphene total waste of money
- 8. Zinc with B6** total waste of money
- 9. Terra pHirma Montmorillonite Clay** this will introduce silica to be used as nano assembly and causes DNA damage
- 10. L-arginine with L-ornithine and L-citrulline** increases inflammation
- 11. Astaxanthin** does nothing
- 12. Milk Thistle** will help liver
- 13. Quercetin** will help liver
- 14. Vitamin D3** Useless
- 15. Vitamin K1**---USELESS
- 16. N-acetyl-cysteine (NAC)**1 increases immune support but little to graphene
- 17. Quantum Link Pendant for EMF Protection**---TOTALLY USELESS

So when you see things like this being propagated then you know you are about to be financially drained
All you need is disengagement and PAA --long run economical and effective---but if injected never use the tech ---
no one knows the full impact of what tech will do since none of them are really dealing with the cause but symptoms
then NONE of them have a clue
