

CORGI INU

Whitepaper

Created by: Corgi inu

Developer II

Introduction

Corgi inu was started by a small group of developers that had a simple, yet powerful idea to make trading ERC20 tokens easier! We also wanted to strongly encourage community involvement in the project. We believe that any project's success is ultimately in the hands of its community. The development team could not be happier with the community that has formed around our little pup!

The Corgi Crew

Our community members have done a lot to help us from day one. From managing our social media accounts, creating the new token logo, and of course the relentless shilling! We appreciate your hard work and everything the crew continues to do to advance the project on a daily basis.

Marketing

It was brought to our attention that despite our community's efforts the project needed more marketing to get new investors to take notice. After taking a poll we decided to dedicate 1% of the total supply and use it exclusively for marketing! We are currently consulting with crypto marketing professionals and hope to have banner ads as well as influencer endorsement soon.

The Lottery

One way we plan on rewarding the community for their hard work and support is through the lottery. Drawings will be held on a randomly selected day, once every month. Holders will need to add liquidity to the CORGI/ETH pool on Uniswap, with a minimum of .1 ETH and an equivalent amount of CORGI tokens to be eligible. The lottery winner will be selected through the use of a smart contract to ensure the winner is truly random every time. The first lottery will be held on June 15, 2021.

Corgi Swap

Corgi swap will have a similar layout to Uniswap and will use the same liquidity pools. One of the main goals of Corgi swap is to make trading ERC20 tokens easier for new traders. One way we plan on simplifying the process is to add a Debit/Credit payment option. When selecting this option, Corgi Swap will first request your wallet address, then convert your fiat to ETH, and finally convert the ETH to the selected ERC20. In addition to this new payment method BTC will also be accepted. After selecting the desired ERC20 token a BTC payment address will be generated and Corgi Swap will take care of the rest. For more advanced traders Corgi Swap will function very closely to Uniswap, but have additional functionality. We are going to incorporate the lottery drawings into the swap and pick winners live for added transparency. We will also be incorporating a governance system into the swap. This will allow our holders to further control the future decisions made by the development team.

Staking

An additional feature of Corgi Swap will be the ability to earn passive income by staking your CORGI tokens! After locking your tokens you will be rewarded with a percentage of the total tokens staked at the end of the staking period. We will have three different lock up time frames, with the resulting APY positively correlated to the lock up time. After your tokens are locked you will be unable to sell, trade, or transfer them until the lock up period has ended.

Governance

After the release of Corgi Swap we will be using CORGI as a governance token. Governance tokens are tokens that allow token holders to help shape the future of the protocol. Governance token holders can influence decisions concerning the project such as proposing or deciding on new feature proposals and even changing the governance system itself. Community involvement will be the key to our success! The development team wants every decision we make to be what is best for the community.

Future Development

The corgi inu team has big plans after the successful release of Corgi Swap. Including a Corgi Swap application for Android/iPhone users and integration with a new web wallet.

Please stay tuned!
