nCPAP for treating babies has developed a great deal in the past 20 years. The Viomedex  nCPAP Generator builds on the experience of the past to allow caregivers a cost-effective solution for supporting premature and sick babies.

Many pre-term babies will require respiratory support once they are born. nCPAP can help early extubation and weaning from ventilators and prevent babies needing further ventilation.

The Viomedex  nCPAP Generator consists of a nCPAP generator that benefits from established fluidic principles to provide non-invasive respiratory support to the neonate, along with Circuits, Headgear, Bonnets, Masks and Prongs to facilitate ease of use.
