## WHAT IS COOLSCULPTING ?

**Coolsculpting** is a treatment which is based on Cryolipolysis (the freezing of fat). The treatment is scientifically proven to safely and effectively eliminate fat cells. It involves cooling technology, which works by cooling areas of body fat, to break down fat cells. The method of freezing triggers the fat cells to die and the body then naturally eliminates them through the lymphatic drainage system. This results in a reduction of body fat to the treated area, without damage to surrounding tissues.

The effect takes several weeks to be seen as the body flushes out the fat cells over a 12 week period. However, results are permanent and can result in up to **40% reduction**.

This treatment is non-invasive, there are no long-term side effects and no need for anaesthesia or pain relief.

### Consultation and Aftercare

The most crucial part of the treatment is the aftercare, this requires the client to drink 2-3 litres of water per day, for the 12 week period, to flush out the fat cells. All clients must complete a consultation form as well as reading and signing the declaration before treatment can be undertaken.

# ILEYA BLOW OUT SALES!!!

*Promo*

Para orientação baseada em ensaios clínicos, recomendamos para os estados agudos um tratamento de até 2 semanas, para os estados crônicos até 4 semanas. Nos equinos hipersensíveis a agentes ambientais recomenda-se o uso de PULMONIL® GEL cada vez que o animal apresentar episódios alérgicos.  
Today' s Exercise: Again I walked to work and home again. I also went for a lunch walk as well. It was a bit tougher today as I decided to walk up a steep hill. Think I' m not ready for that yet and that might of be a step too far. Even though it was hard I completed it and that' s the most important thing.

☐☐ These drinks claim to increase the growth, stamina, boost intelligence among children and whatnot.
