

# Valve Is “not Planning To Disable Downloading Old Builds” On Steam

Replace - September 28, 2021: Valve has responded to claims that Steam might be removing the option to obtain older game variations.

September 28 - Valve has shared an announcement with PCGamer that explains the studio doesn't have plans to remove the option to download older recreation builds. “ Best minecraft servers are actually not planning to disable downloading previous builds,” a spokesperson tells the positioning. “What we are working on is an approach on handling edge circumstances involving unowned content, and helping partners extra easily take down builds that must be removed for issues like copyright points. We'll have more to share on that work when it's able to ship.” Unique story follows.

The newest Steam beta has added a characteristic that seemingly removes the power for customers to roll back sport updates or play older variations of video games on Steam. Under the brand new version, customers cannot download depots of Steam video games to play earlier updates of games they personal - and many are sad about this variation.

There are many video games that change radically between updates - there's a complete fan collective devoted to finding and archiving all the varied versions of Minecraft over time, for example, and the likes of Counter-Strike update recurrently with big adjustments.

As of right now, it's utterly doable to download and play older versions of games owned on Steam with the assistance of someplace like SteamDB - all you might want to do is discover the depot of the model you wish to play. Nonetheless, the September 23 beta update of Steam has seemingly put a stop to this observe - so once this replace goes reside in Steam proper no one will have the ability to play older variations on Valve's client.

This was noticed by SteamDB creator Pavel Djundik, who confirms that it will now be not possible to download older sport depots of Steam video games and play them with this new code in place - at least if Steam enforces it for all video games. Pavel also says that this means SteamDB will now must “go again to the instances the place it might solely observe files for what it owns” if it goes ahead. You can learn Pavel's full, detailed clarification over on SteamDB.

Final Steam beta launched an necessary change to recreation downloads.

With this change, it's no longer doable to obtain older game versions, because client asks for a code (GetManifestRequestCode) that rotates each five minutes.
