-Gaining Karma by:

   -uploading a song or cutting a sample

   - telling the saucy part of a song

   -by uploading funny accents

-

- The program learns by your Laughs and Reactions and by the Amount of Samples you save divided by the amount you listen so it never overwhelms you with info, If you`re hearing samples and not having fun or saving anything it starts teleporting you to high value playlists and relaxing videos related with your content

-Label songs by the amount of times dropped, the amount of times people went back to a specific part of a song and saved it (Most Saucy) , How inspiring they Are(people start singing them), (how funny they are- people laughed when they listened tot he track) , by the amount of Loves and Special (double love- click love on the playlist again)

Premium Account Features - "You gotta pay Pro to Run with Scissors if you know.."

- Voice commands to favorite or skip music without using the mouse

- Save Your music In many folders with voice commands

- Have a Symbol tool for Vernes Diagram to organize maps into what you want (Ex> in Animal sounds, intersect birds and Amazonian jungle)

-With scroll wheel up and down (when hovering the specific dot, {the mouse scroll is normally used for common zoom outside of the dots}), travel between many Soundboard realms related with that specific sound you`re scrolling (If youre hearing a bird in animal sounds`s map, the next board is the sound of the bird (sample variation2)in the city, the next is an artist that saved it in his memory tree, the next is a person that save dit in a different soundboard that relates to you etc)

- Create your Own(s) Shuffle button(s) according to the Search of songs by the amount of times dropped, the amount of times people went back to a specific part of a song and saved it (Most Saucy) , How inspiring they Are(people start singing them), (how funny they

are- people laughed when they listened tot he track) , by the amount of Loves and Special (double love- click love on the playlist again), also the most viewed, the most related with more samples or songs,the most related with favorite maps of yours or songs.

-

- Lots of Data Vizualization (Flower Dots and Tree , Images , Maps , inverted piramidal)

Have access to Audio Research maps:

-Similarphonic Transition Sound map (It organizes similar sounds in a rainbow and if possible a software is build that is sensible with the tempo and transitions the samples with good fade ins.)

–Language fusion (Ex: Japanese Portuguese English : Domo Obrigado Gozei Much)

-Asshole Hussle Lesson (broken phone String tracks/tree)

-cliche sentences modified (How bitch to met you?) (Dutch/English)

-Rap Entonation and pauses Mapping Research

-Singing Entonation and pauses Mapping Research

-

- Search songs by the amount of times dropped, the amount of times people went back to a specific part of a song and saved it (Most Saucy) , How inspiring they Are(people start singing them), (how funny they are- people laughed when they listened tot he track) , by the amount of Loves and Special (double love- click love on the playlist again), also the most viewed, the most related with more samples or songs,the most related with favorite maps of yours or songs.

-See the Songs containing a specific sample and do realm jump between soundboards and songs.

- When you have listened to 85% of the songs of an artist, you can possess his skin to gain different search engine based on the favorites of the artist and interelated people like you were the artist browsing.

- Search by The HIstory Tree of a Golden Age genius Discovering lots of songs when your music was loved (The Golden genius have a period of their daily search history tree where they favorited a high number of songs per songs viewed)
-Learning your BlueThiefPrint - Your non responsive clicks and inputs are separated by color and grouped by time with similar users, we see the specifics and hint with a texst box first, if the problem persists theres a personal design change to suit the temperament of the person.If you are progressing(or not at all) It shows a graph of the time you will spend if making the same mistake/or

the time you`ll save and a graph og potential health dangers related to excessive clicking and use of the program. Have popup buttons with your learned automation clicks by the PC.
- Have a track viewer with symbols for instrumental, (rap/voice)templates , with instrumental,

- Superusers and low users with superuser mindset have the chance of telling or voting what features they would like best for us to addon.

- Downloadable everything click button on sellected folders

- Option to merge folders and to move parts of a folder according to the categories to create another saved playfolder

- Access the rap template tree and the singing template tree- it breaks down rap songs into their templates ()

Premium Master Features

- Fuse one or more artist with your tastes so you create a Super Search Persona.

- Get acess to Modular Music`Scool – Break down Ex "Classical" music into modules that can be put together or fused into different ones. It allows you to learn music from your favorite Songs and related songs and for you to compose with a simplified editor to learn music composition

For the Future

- Make Instrumental voice removing software
- Make software to glue rap templates or instrumentals in different orders
- Learning by mistake and offering a new design layout . Machine Learning
- Make software to generate continuous different parts of the lighter falling rythm with related water sounds.EX
- Checking your accents to see where they are from with some fluff about the specific caracter so you know something about yourself
- Have Different visuals(ex, pull down an airpolane to simulate 0G and put a 920 speaker with non newtonian fluids on it and 360 cameras so it can be used for big data vizualization of songs!)
- Have houdini Specs about numerous numbers of Counters.
