NEP most likely acts as each a dopamine and norepinephrine releasing agent or reuptake inhibitor. This allows dopamine and norepinephrine to build up within the mind, leading to stimulating and euphoric results. Additionally, it has been speculated that it could possess some serotonergic properties, as customers have described experiencing gentle entactogenic results on common to robust doses of this compound. The stimulating results of N-Ethylpentadron are believed to mainly be caused by its activity as a norepinephrine–dopamine reuptake inhibitor . The reported entactogenic results it displays can also be because of its activity as a serotonin reuptake inhibitor or releasing agent in average to excessive doses, although this has yet to be confirmed scientifically. It is commonly white or off-white in colour, and can appear in powder, crystalline or pill varieties. Smtim rfrd t Dimitri, thi drug rdu fft imilr t th f hdli, lik LSD nd mgi muhrm.
