

How to Buy Milkdoge – MOGE on Milkomeda

There is currently two different options when it comes to buying MOGE on Milkomeda. Option one, which is more expensive, is to use a bridge. Option two, which is using Flint Wallet, is cheaper but requires a computer.

TO START: Must configure Milkomeda chain in Meta Mask.

Network Name: Milkomeda Cardano (C1)

New RPC URL: <https://rpc-mainnet-cardano-evm.c1.milkomeda.com>

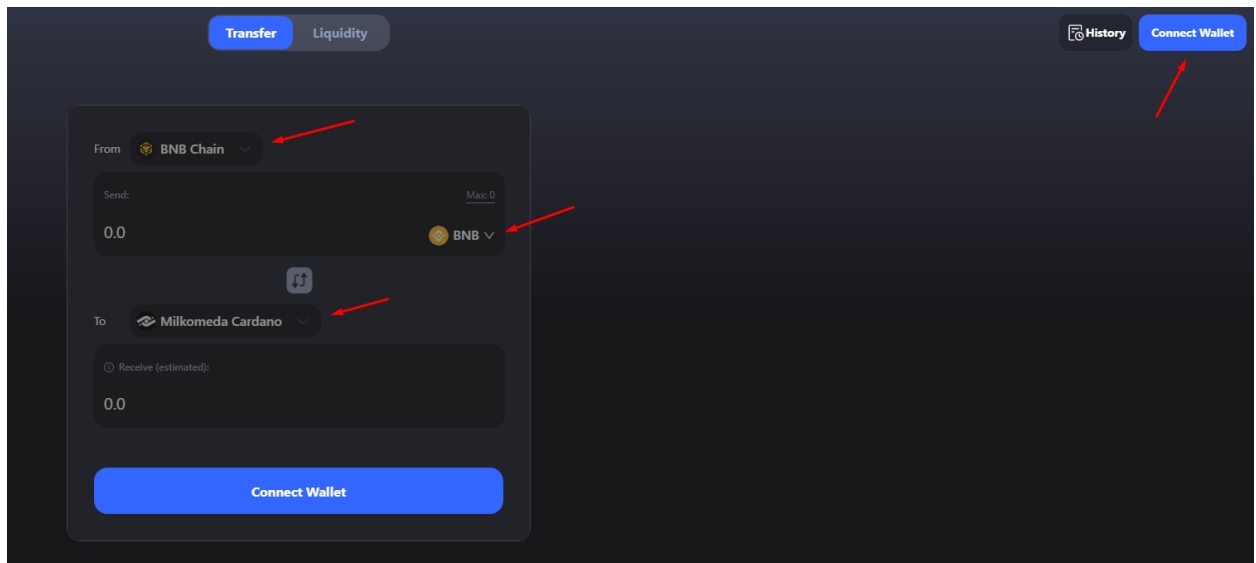

Chain ID: 2001

Currency Symbol (Optional): MilkADA

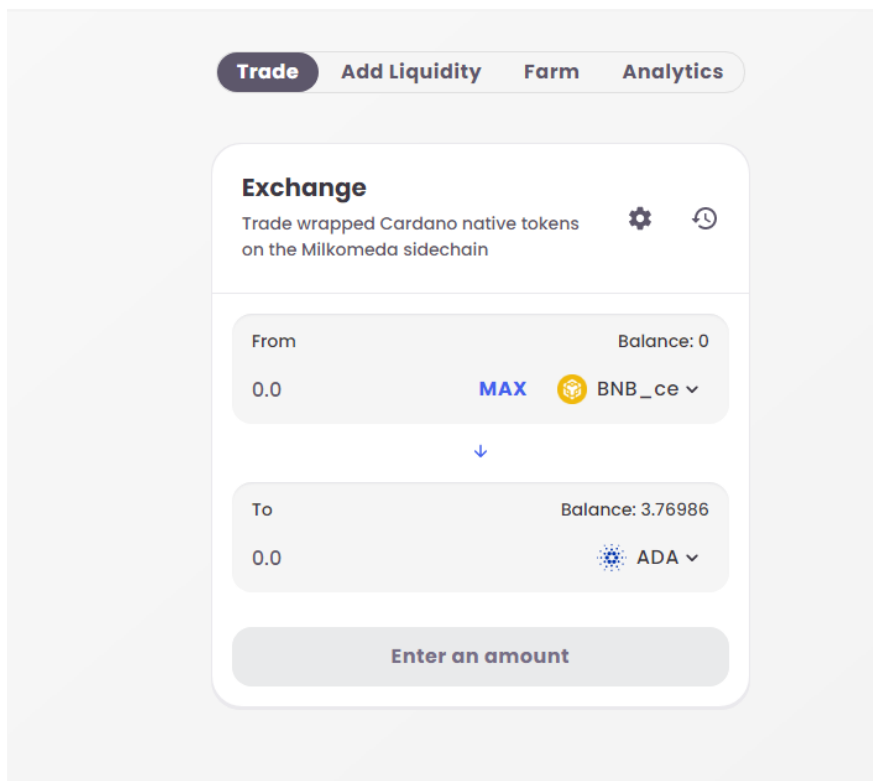

Block Explorer URL (Optional): <https://explorer-mainnet-cardano-evm.c1.milkomeda.com>

Option 1 – CELR Bridge – Binance Smart Chain (BSC) To Milkomeda Cardano (MilkADA)

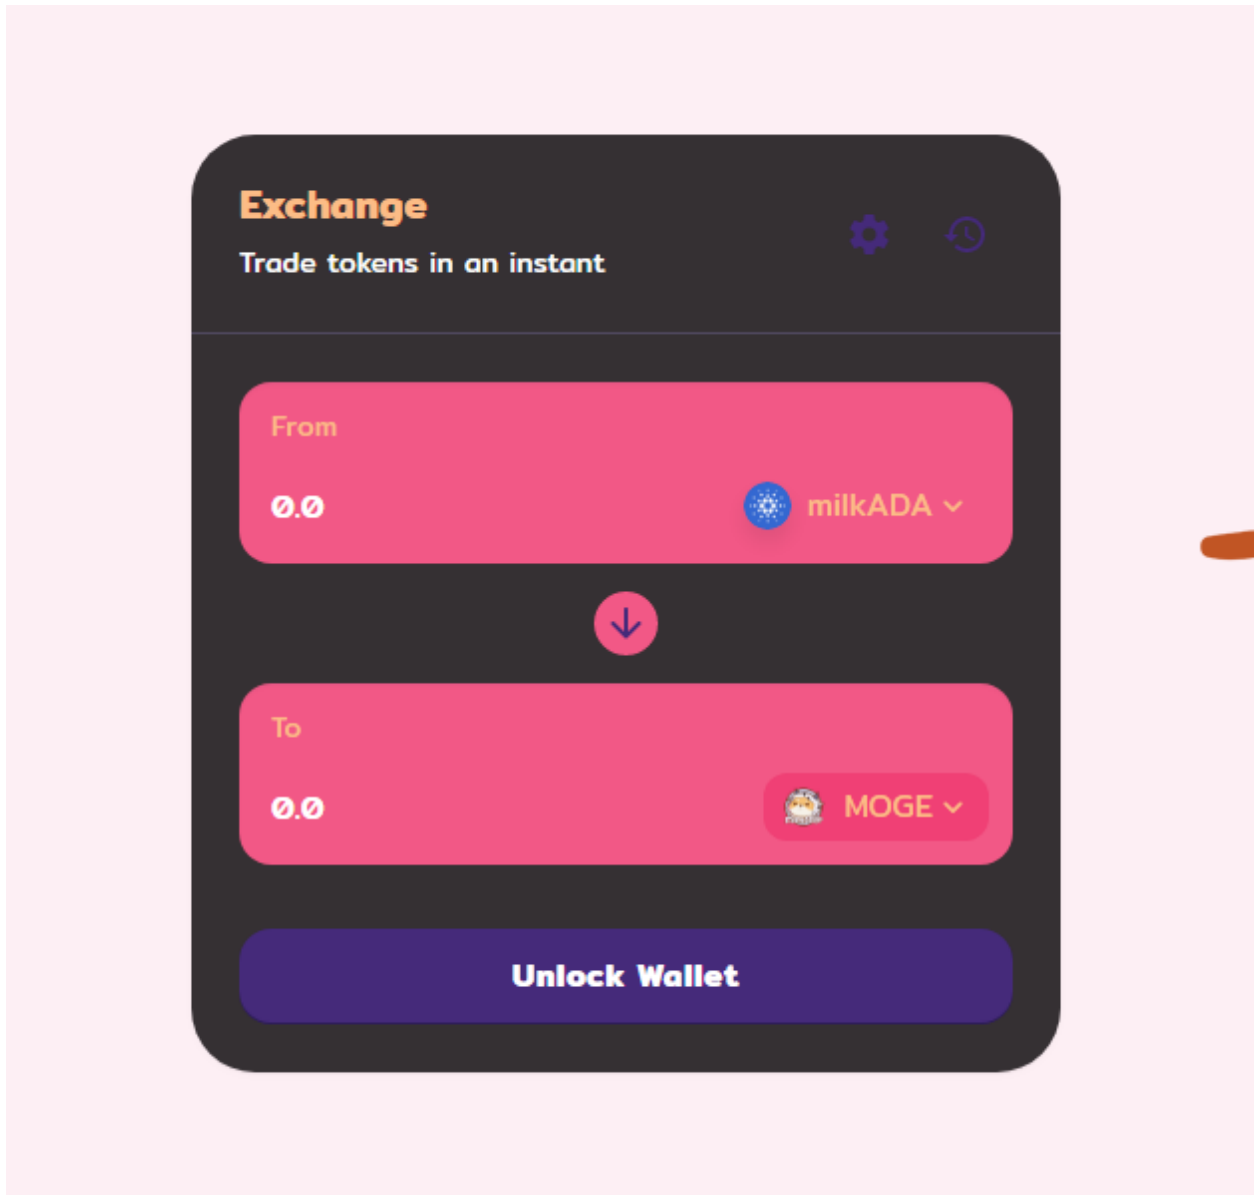

- Load your wallet with BUSD or BNB in Metamask
- Visit site <https://cbridge.celer.network/#/transfer>
- Connect your wallet and ensure it's on the BSC Smartchain network
- Select "From BNB Chain" on the top box.
- Select "To Milkomeda Cardano" in the second box.
- Select which asset you want to bridge. BUSD or BNB.
- Enter amount of BUSD or BNB you want to transfer.
- Click Transfer.
- **NOTE: This option is more expensive than the Flint Wallet option.**
- See below screen shot to see how the Celr bridge looks.

- Wait for assets to arrive in MetaMask under Milkomeda chain.
- Once arrived, now visit <https://milkomeda.muesliswap.com/swap?inputCurrency=0x7f27352d5f83db87a5a3e00f4b07c2138d8ee52>
- Change the asset from either BNB_ce or BUSD_ce depending on the asset you bridged.
- Choose to swap the asset to ADA (Muesliswap calls it ADA but it's really milkADA)

- Now visit MogeSwap to swap milkADA to MOGE. <https://mogeswap.finance/#/swap>

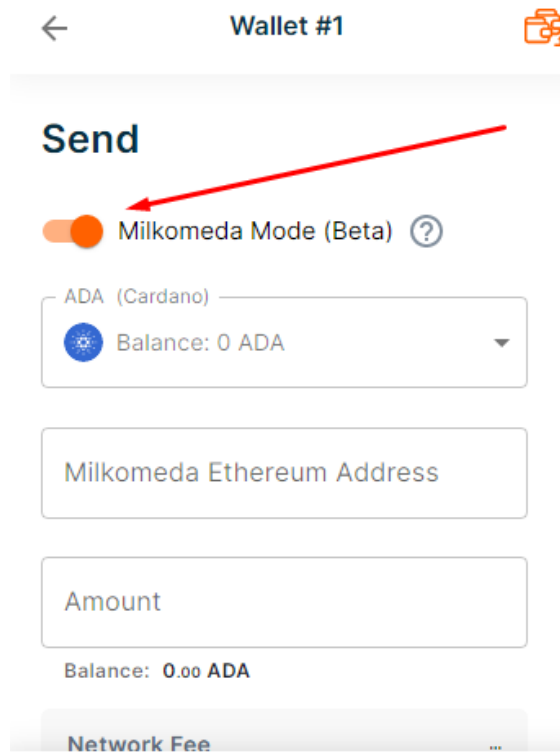

DONE.

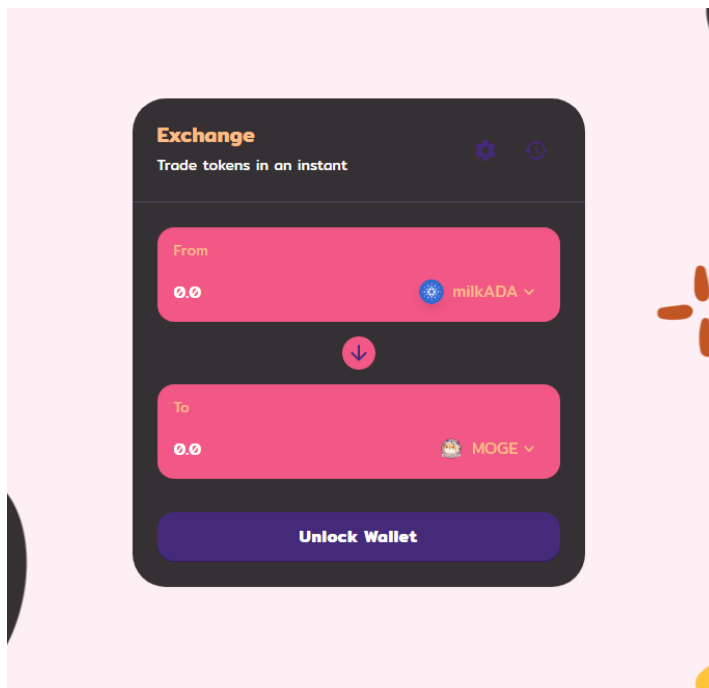

Option 2 – Flint Wallet – Cardano (ADA) to Milkmeda Cardano (MilkADA). Must have a computer to do this. Flint Wallet not available for phone.

- The full process of setting up and installing Flint Wallet is described here, but I will shorten it below. <https://dcspark.gitbook.io/milkmeda-getting-started/for-end-users>
- Download and Install Flint Wallet. <https://chrome.google.com/webstore/detail/flint-wallet/hnhobjmcibchnmgfbldbfabcbgaknlkj>
- Buy ADA on any exchange of choice.

- Send the ADA to Flint Wallet.
- Have your Meta Mask address ready that is set up to work with Milkomeda.
- Send your ADA to Milkomeda MetaMask address using this option:

- Now visit Mogeswap. <https://mogeswap.finance/#/swap> and swap milkADA for Moge.

DONE.

SIDE NOTES

Note 1: Watch the chart here.

<https://dexscreener.com/milkomedacardano/0x2e23ccb5605ad3e06b29976e2c87c2dbe51db53a>

Note 2: If you have assets on another chain you want to bridge and don't want to deal with a CEX, you can use this bridge:

<https://bridge.evodefi.com/>

On that bridge, you can swap USDC/USDT/BUSD from L2 chains like FTM, CRO, Polygon ect to BSC then BSC to Milkomeda.

Note 3: To trade milkADA out of Milkomeda and back into native chain Cardano ADA – use this bridge.
