Pushing through every bit of pain. Its been a while since ive had severe back spasms but it started up again today. They get so bad in my low back, my legs have actually given out.

Testosterone cypionate is a long acting, single ester testosterone product. It has a length of 8 carbons, and is stored mostly in the adipose tissue when injected intra-muscularly. It is slowly and steadily released in the body after it is injected. The blood levels of cypionate peak 24-48 hours after injection and then decline slowly.

At a dosage as high as 600mg per week can give you massive results. Best results have been achieved at this dose. Increased size, as well as strength, muscle mass, loss of fat, are some of the results achieved by the usage of Testosterone Cypionate. Ultimately, Testosterone Cypionate is a very popular muscle mass gainer anabolic steroid.
