Do You Want To Give Us Your Opinion?

Minecraft Server is basically a free alternative to Minecraft Realms with which you can create your own server within Minecraft's open world, so that you can play with your friends online and craft collaboratively.

Total control over your Minecraft world.

If you're fed up of playing alone in this sandbox game, with this software for Windows you can generate a totally customizable server, where you choose the rules and to which you can invite any user on your same local or domestic network.

What things can you configure with Minecraft Server

The server.properties.exe files that are located in the folder containing the Minecraft Server.exe executable file can be used to configure the server as you wish. You can have full control of banned, allowed, and penalized players as well as the ability to send all members messages at once.

- Maximum amount of players per server. - Maximum height of the buildings. - Game mode.

- Level type.

- Difficulty Level.

- Map size.

- Server name, IP and port.

- Requires Minecraft.

- Requires Windows XP, or higher.
minecraft-servers-list.co

- Requires Java 1.6.0.

- To run the server, you must open the EULA text file. Accept the user conditions and change the field false to true.
