

ABOVE AND BELOW

Rule Book

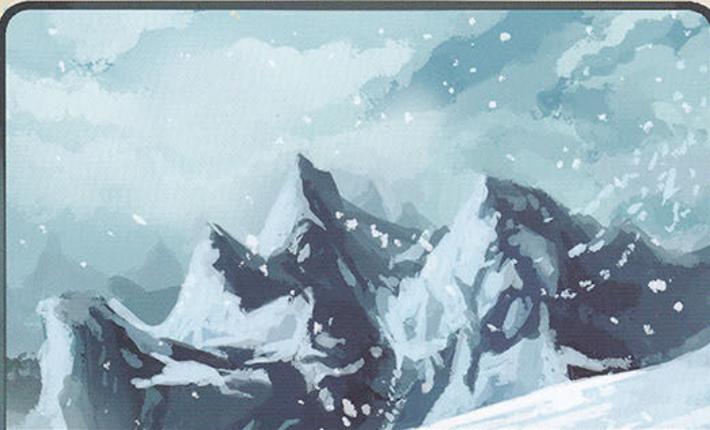

Your last village was ransacked by barbarians. You barely had time to pick up the baby and your favorite fishing pole before they started the burning and pillaging.

You ran from that place in the dark of night.

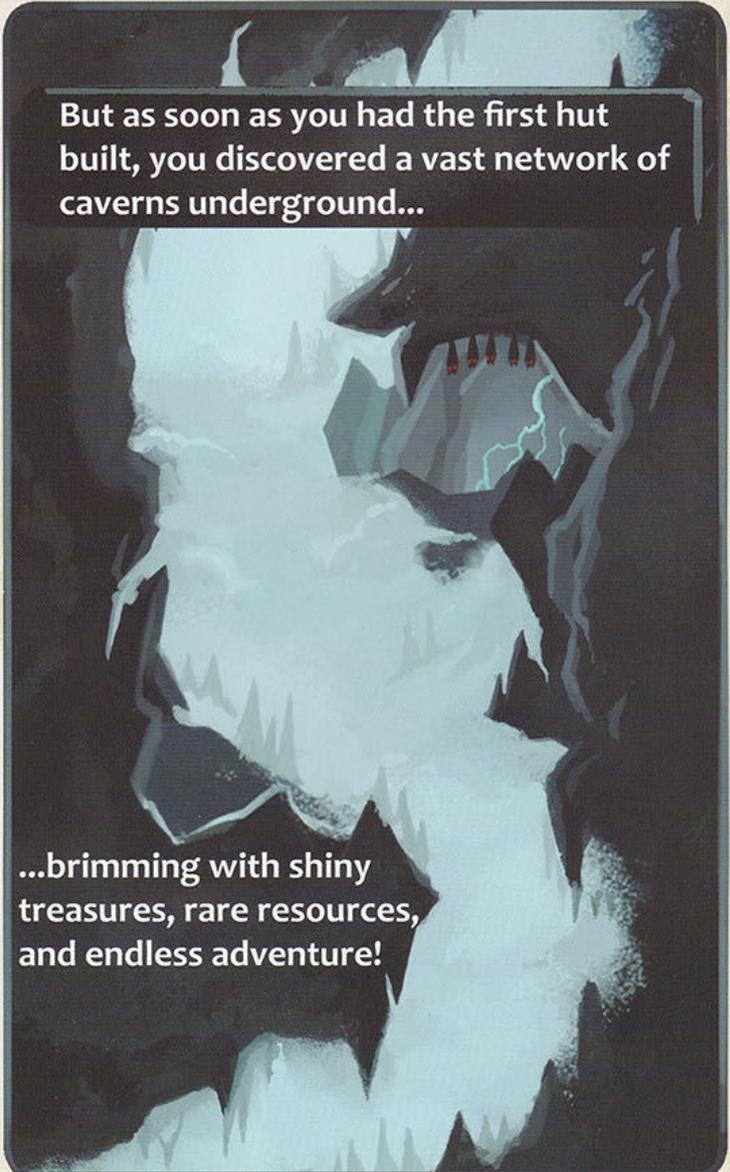

And wandered over a cruel desert....

Braving frozen peaks and crossing a rough sea filled with sharks.

Then you found it! The perfect place to make your new home.

But as soon as you had the first hut built, you discovered a vast network of caverns underground...

...brimming with shiny treasures, rare resources, and endless adventure!

Now, you're organizing expeditions and building your village above and below...

1 Reputation Board

25 House Cards

4 Starting House Cards

81 Goods Tokens

(12 fruit/fish/mushroom, 10 pots/rope/paper, 8 ore, 7 amethyst)

24 Outpost Cards

7 Dice

10 Cider Tokens

1 Round Marker

24 Outpost Cards

9 Key House Cards (Notice the Key Symbol)

4 Cubes (in 4 colors)

20 Potion Tokens

1 First-Player Card

Coins (36 ones, 6 fives, 8 tens)

6 Star House Cards (Notice the Star Symbol)

4 Player Boards

25 Cave Cards

1 Encounter Book (not pictured)

12 Starting Villagers
18 Villagers
6 Special Villagers

Setting up the Game

1. Give each player a player board, seven coins, 1 starting house card, and 1 of each type of starting villager (3 villagers total for each player). The starting villagers have a house on the back of the token. The 3 villagers should have the symbols depicted at “1A” (opposite page), and start in the large grass area furthest to the left on the player board--the “ready area”.

If playing with four players, place the two starting villagers that do not have a hammer symbol in the grass area with a moon symbol--the “exhausted area”. (In the first round of play, each player will only be able to use one villager. The two villagers that start in the exhausted area will move to the “ready area” at the end of round one. The symbol pictured below can be found on the reputation board next to the round track and is meant to remind you of this rule.)

2. Place the 6 star house cards face up on the table in a row. Shuffle the 9 key house cards and draw 4 at random, placing them in a row, face up, below the star house cards. The remaining key house cards are placed in the box and are not used for this game.

3. Put the reputation board in the center of the table. Put any unused starting villagers in the box. Place the special villagers aside (special villagers have a cave on the back of the token). Place the remaining villagers face down in a pile and draw five, putting them along the top of the reputation board in a row.

4. Place the round marker on the top chamber in the string of seven caves on the reputation board.

5. Place the coin tokens, goods tokens, cider tokens, and potion tokens near the side. This is the supply. Place one cider token on the reputation board in the area with a cider symbol.

6. Shuffle the cave cards and place them in a pile face up next to the reputation board.

7. Give each player a wooden cube that matches the color of the banner in the top left corner of their player board. Each player places this cube on the torch space on the reputation board.

8. Decide who will be the first player. Turn order is in clockwise direction. Give the first player the first-player card.

If playing with two players, give the second player one extra coin.

If playing with three players, give the second and third players one extra coin.

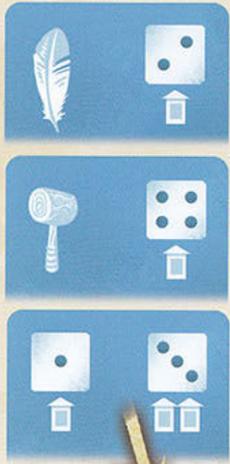

If playing with four players, give the fourth player one extra coin.

9. Shuffle the house cards and the outpost cards and place them in two piles face down underneath the reputation board. Draw the top four cards of each deck and place them face up in a row next to their respective decks.

10. Place the encounter book and dice near the play area.

Playing the Game

Above and Below is played in rounds.

Each round, players take turns assigning their villagers to take actions. When a player wishes to take no more actions in the round, he states that he wishes to pass. When all players have passed, the round ends (this means that some players will sometimes have more turns than others).

After seven rounds, the game is over.

Perform the following steps each round.

1. Player Actions: Starting with the first player (the player with the first-player card) and continuing in clockwise order, each player may take one action per turn until all players have passed. The available actions are:

Explore

Villagers explore the cavern in an attempt to find a place for an underground outpost.

First, the player draws a cave card from the top of the cave card deck and places it to the left of his player board (near the rocks in the corner). He then slides two or more villagers from the ready area on his player board to the card (there is no limit to the amount of villagers he may send exploring, but he must send at least two).

He then rolls a die and compares it to the grid of numbers on the lower half of the new cave card-- the resulting number indicates which paragraph should be read to him from the encounter book. The player to his left turns to the indicated paragraph in the encounter book and reads it to him. The reader reads the entire paragraph, including any choices below the description (in **BOLD CAPS**) AND the associated explore numbers. The only thing the reader does not read aloud are the possible rewards after each explore number (in parentheses).

An encounter paragraph might look like this:

You descend a deep chasm until you reach a wide, dark chamber. Rancid, cloudy water covers the cave floor, and soon you see glowing red eyes in all directions. You raise your lantern and realize that you're surrounded by giant rats, their brown, oily coats slick and wet. They close in, ready to make your party their next meal. Do you try to run and hide from the rats, or do you stand and fight?

RUN AND HIDE: *Explore 3* (coin), *Explore 4* (mushroom)

STAND AND FIGHT: *Explore 7* (five coins, ore)

After reading the description, the reader reads the two available choices like this: "Run and hide-- explore 3 or 4. Stand and fight-- explore 7."

The active player then selects one of the available choices (for example: "run and hide"). He must state aloud his choice. The active player must then attempt to meet or exceed at least one of the explore numbers following that choice.

The active player rolls one die for each villager that was sent into the cavern (on the cave card). **He must indicate for which villager he is rolling each time he rolls.** Once rolled, he places the die on the villager. The amount of lanterns gained by the villager depends on the roll, as described below:

This villager could give either 1 or 2 lanterns (not 3).

After all dice have been rolled, the player adds the total number of lanterns from his villagers. If the total is equal to or greater than one of the explore numbers associated with his choice, he succeeds. If he does not have a sufficient number of lanterns, or he wants more lanterns to reach a higher explore number, he may then choose to **Exert** one or more of the villagers from the cave card to gain extra lanterns.

Place Goods that you want to sell here.

Player Color

Explore Action (you need at least 2 villagers)

Harvest Action

Build Action (you need a villager with a hammer)

Train Action (you need a villager with a quill)

Labor Action

Starting Income
(increases when you place goods in the advancement track)

Village points you gain for each good in this slot. The coin symbol on the right is your current income.

Ready Area

Exhausted Area

Injured Area

To **Exert** a villager, the player removes the villager from the cave card and places him or her in the injured area on his player board. Each exerted villager gives the player one extra lantern.

If the final total of lanterns meets or exceeds one of the explore numbers associated with the player's choice, he succeeds and gains the rewards from the highest-reached explore number.

For example, if the player chose "run and hide" from the explore paragraph on page six, and he rolled a total of 5 lanterns, he would gain the reward from "Explore 4": a mushroom.

After the player gains the reward, he moves any villagers remaining on the cave card to the exhausted area on his player board. He places the cave card to the right of his player board, underneath his row of houses, in the same row as other cave cards and outposts he already owns.

If the player does not have enough lanterns to meet or exceed at least one of the explore numbers associated with his choice, he fails and does not gain the cave card or any rewards. He moves any villagers remaining on the cave card to the exhausted area of his player board and puts the cave card at the bottom of the cave card deck. Some paragraphs have failure descriptions, which must be read if a player fails a specific choice. If the failure description includes a penalty, this is applied to the player.

NOTE: For more details on reading encounters, see the first page of the encounter book.

Card Cost

If a player wants to purchase an outpost, he must have an open, available cave card (that he gained from a previous explore action). He places the new outpost on top of the available cave card.

Houses, key houses, and star houses are placed in a row next to the starting house.

Outposts are placed in a row underneath the row of houses.

Build

A villager builds a house, a star house, a key house, or an outpost.

First, the player slides one of his villagers from the ready area of his player board to the exhausted area of his player board. The villager must have a hammer symbol.

The player may then choose to purchase one of the available house cards, star house cards, key house cards, or outpost cards. He must pay an amount of coins to the supply equal to the cost of the card.

Houses, key houses, star houses, and outposts give the player a special ability, increased income, and/or other benefits. These are described in the "Symbols" section on pages 14-15.

After the player has finished placing his new card, if he built a house or outpost, he then must draw a new card so that there are four available choices for the next player.

Harvest

Villagers harvest goods from houses or outposts.

First, the player slides one or more of his villagers from the ready area of his player board to the exhausted area of his player board.

For each villager the player exhausts, he may take one goods token from one of his houses or outposts. He places that good next to his coins and may either keep it there for later, place it for sale in the top left corner of his player board, or place it in his advancement track.

Placing goods in the advancement track is described further on page 12. Selling and buying goods is described later in the "Free Actions" section.

Train

A villager trains a new villager.

First, the player slides one of his villagers from the ready area of his player board to the exhausted area of his player board. The villager must have a quill symbol.

The player may then pay to train a new villager from the reputation board. He may select any of the available villagers. He must pay the cost in coins to the supply. The cost is listed on the reputation board below each villager.

The player places the newly-trained villager in the exhausted area of his player board.

The player does not draw a new villager for the reputation board. (This will be done at the end of the round.)

Labor

Villagers labor to gain more coins.

First, the player slides one or more of his villagers from the ready area of his player board to the exhausted area of his player board.

For each villager the player exhausts, he gains one coin. Additionally, the first player to labor each round gains the cider token on the reputation board. If there is no cider on the reputation board, the player only gains coins.

Free Actions

Free actions can be performed on a player's turn without exhausting villagers. A player may perform as many free actions as he likes *before* he performs a normal action. After he performs a normal action, he may not perform any free actions.

Buy From a Player

A player may purchase from another player any good, cider, or potion that has been placed for sale in the top left corner of the seller's player board. The player may bargain, make offers, etc, but may only pay in coins, and he must pay at least 3 coins. The seller may refuse the offer for any reason. If the seller agrees to sell the good, potion, or cider, the player pays him the agreed upon amount of coins and takes the good.

Put Something for Sale

A player may place one of his goods, a cider, or a potion for sale by placing it in the circle at the top left corner of his player board. Other players may attempt to purchase it on their turns.

A player may remove the good that is for sale, or replace it with something else, only on his turn.

A player may only have one good for sale at a time.

Refresh Building Row

If a player wants new options of houses or outposts to purchase, he may pay one coin to replace all four available cards in one of the rows. He takes the four current houses or outposts in the row and places them at the bottom of the deck, then draws four new cards from the top of the deck and places them face up in the row. **He may do this only once per turn. It is not possible to refresh the key houses or star houses.**

Pass

When a player is done taking actions, he declares "I pass". He may not take any more actions or free actions in this round.

A player that does not have any villagers in the ready area of his player board at the start of his turn must choose to pass. He may take free actions before he passes.

2. End the Round: When all players have passed, the round ends. Follow these steps before the next round starts:

Round Marker

Slide the round marker one chamber down the string of seven caves on the reputation board. If the round marker cannot move, the game is over. Follow the instructions in the section titled "Game End" on page 13.

Cider

Place a cider on the cider icon on the reputation board if it does not already have one.

New Villagers

Slide any remaining villagers on the reputation board to the left so that they occupy the lower cost slots and fill any open slots to their right by drawing new villagers from the villager pile.

Rest Villagers

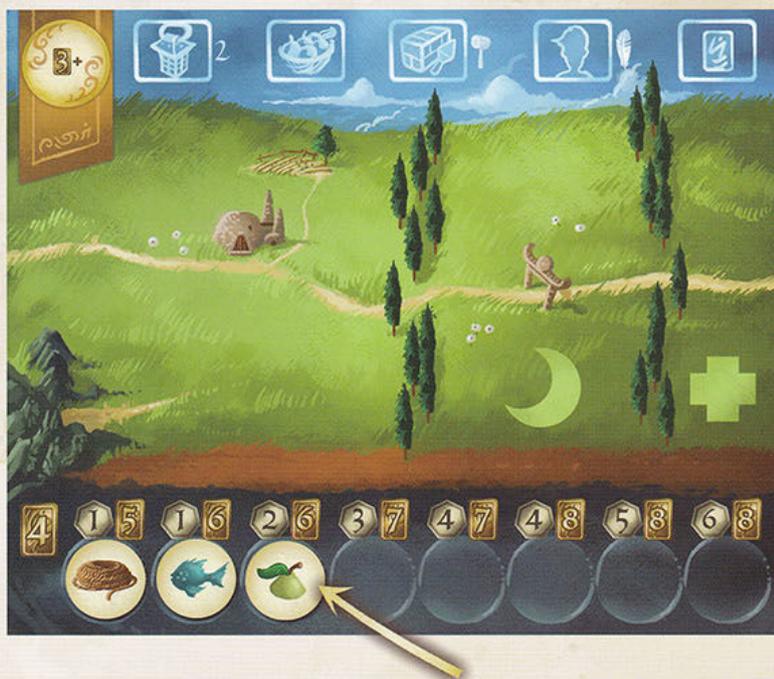

Now all players may refresh the villagers on their player boards.

First, players may spend any potions or ciders. If a player spends a potion, he may move one villager from the injured area to the exhausted area. If a player spends a cider, he may move one villager from the exhausted area to the ready area. A player may use both a potion and cider on the same villager.

Now, players may move one villager from injured to exhausted, or from exhausted to ready for each bed he has on his house and outpost cards. A villager cannot sleep in two beds (the villager wouldn't be able to move from injured to ready by using two beds).

Collect Income

Now all players collect coins based on their income level. Players start at 4 income, but their income level increases depending on the number of different goods in their advancement track at the bottom of their player board.

Three Goods on the Advancement Track

A player with an advancement track as depicted above would gain 6 income instead of 4.

Players also collect income from any house or outpost cards that give extra income.

+1 Income per round

Refresh Goods on Buildings

If any player owns a house or outpost with an arrow symbol next to a good, and there is currently not a good on the card, place one of the appropriate goods there.

Pass First-Player card to the Left

The first player passes the first-player card to the player on his left, who places it face up in front of him.

Start the Next Round

If seven rounds have not passed, begin the next round.

Other Rules

Advancement Track

A player's advancement track is the row of circles along the bottom of his player board. A player may place available goods on this track at any time. He must place goods from left to right, not leaving any empty slots. Once a good has been placed, if the player wishes to place another good of the same type, it must go on the same slot (slots can contain multiple goods of the same type). Goods can be placed in any order.

In the example below, any future fruit goods that the player chooses to place in the advancement track would have to be stacked on the third slot from the left. If the player wanted to place a mushroom good next, he would have to place it in the fourth slot from the left.

There are two numbers at the top of each goods slot. The left number indicates how many village points each good in that pile is worth at the end of the game. In the example below, if a player had two fruit goods at the end of the game, each of those goods would be worth 2 village points (for a total of 4 village points).

The right number above each slot is an indication of the player's current income. In the example below, the player would collect 6 coins (listed above fruit), at the end of each round (*he would not also collect the coins listed above any of the other goods-- only the good furthest to the right*).

Once a good has been placed in the advancement track, it cannot be removed.

Special Villagers

There are six special villagers in the base game. They are the Liquid Woman, Glogo, Cave Cat (two of these), and Metal Man (two of these) villagers. At the start of the game, place these villagers face up near the play area. They can only be obtained through specific encounters in the encounter book. Each of these villagers has special rules.

Liquid Woman: The liquid woman is unsettling. When she joins your village, you lose one reputation.

Glogo: The glogo is adept at building. If you use him to build, pay one fewer coin than normal.

Cave Cat: The cave cat doesn't like to obey orders. Each time you use the cat you must roll a die. If you roll a 3-6, the cat will perform the task you assign it. If you roll a 1-2, the cat moves to the exhausted area without performing any task. If the cave cat does not perform the task, you do not lose your action this turn. You may exhaust another villager to perform an action.

Metal Man: The metal man uses his own bed each day. He does not use beds on your buildings. He cannot use cider or potions.

Reputation

The reputation track is a measure of how well-known and esteemed a player's village is. All players start on the torch symbol on the track. If a player gains reputation, he moves his cube down the track, toward the bottom of the cave. If a player loses reputation, he moves his cube up the track, toward the surface.

Players with higher reputation will earn more village points at the end of the game.

Reputation is gained or lost as a result of choices made during the Explore action.

Game End

After seven rounds have passed, the game ends and players count up village points. Players gain village points for the following:

Advancement Track

Players count up village points for each good on the advancement track. The amount each good is worth is indicated just above the slot on the board. In the example below, if a player had four fruit on the third slot, he would gain 2 village points each for a total of 8 village points. If he had one rope and one fish, he would gain 1 village point each.

Buildings

Each building is worth 1 village point. This includes houses, key houses, star houses, and outposts. This does not include empty cave cards a player owns. This does include a player's starting house.

Reputation

At the end of the game, the player with the most reputation gains 5 extra village points. The player with the second-most reputation gains 3 extra village points. The player with the third-most reputation gains 2 extra village points. If playing with two players, only the player with the most reputation gets the bonus: he gains 3 points (this is why there is a person symbol with the number "2" in this village point symbol). If players are tied for reputation, add the two appropriate reputation rewards together and divide by 2 (rounding up), giving each player an equal number of points. *Example: Tom and Sarah are tied for most reputation. They add 5+3 village points (because they are "1st" and "2nd" place), divide by 2, and each player gets 4 village points.*

Players also gain or lose village points indicated by a smaller village point symbol next to their position on the track. *For example, if a player ended the game with his cube on the highest space on the track, near the surface, he would lose 2 village points.*

Card Bonuses

Some buildings give bonus village points. In many cases, the points are simply listed at the bottom of the card. The card below would give the player 2 bonus village points.

Some cards give bonus village points for owning specific items. The card below on the left gives a player 4 bonus village points, plus 2 bonus village points for each potion and each ore he owns (to give points, goods must be in the advancement track or in the player's supply--not on a building). The card below on the right gives a player 3 bonus village points, plus 2 points for each house/key house/star house he owns. *Remember: each house or outpost also gives 1 additional village point because it is a building.*

Compare Total

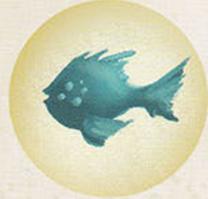

Players compare their total village points. The player with the most village points is the winner! *If tied, the player with the most coins wins the tie. If still tied, the player with the most villagers wins the tie. If still tied, the player with the most buildings wins the tie.*

Symbols

COMMON GOODS

Mushroom

Fish

Fruit

Village Points: The player with the most village points at the end of the game is the winner. A card with this symbol would give 3 extra village points.

Coins: Coins are used to purchase buildings and train new villagers. They can also be used in some encounters

Beds: For each bed symbol on a card a player owns, he may move one villager from "injured" to "exhausted" OR "exhausted" to "ready" on his player board.

UNCOMMON GOODS

Rope

Clay Pot

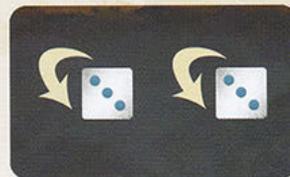

Paper

Train to Ready: If a player owns a card with this symbol, he may place newly-trained villagers in the "ready" area instead of the "exhausted" area.

Gain a Coin When Building: If a player owns a card with this symbol, he gains 1 coin after he purchases a building card. He must pay the full amount for the building before collecting the bonus coin. A player does not collect a coin when he builds this card (only other cards).

Reroll: These symbols allow a player to reroll when performing an explore action. He must always keep the re-rolled number. (In this case, because there are 2 symbols, the player could reroll twice per encounter).

RARE GOODS

Ore

Amethyst

Gain a Coin when Exploring: If a player owns a card with this symbol, he gains 1 coin after completing a successful encounter.

Cider/Potions as Coins: A card with one of these symbols allows the player to spend ciders or potions as if they were coins.

NOTE: The order of goods from top to bottom indicates how often they appear in the game, with mushrooms being the most common and easiest to obtain.

Explore: These symbols represent how adept a villager is at exploring. For the left symbol, a roll of 1 or higher would give one lantern. For the right symbol, a roll of 4 or higher would give two lanterns.

Hammer: A villager with this symbol can complete the Build action.

Quill: A villager with this symbol can complete the Train action.

Hammer/Quill Plus: A villager with one of these symbols can complete a Build/Train action, and he pays one fewer coin when doing so.

Cave Cat: This symbol belongs to the cave cat. It means that each time a player assigns the cave cat to do an action, he must roll a die. On a roll of 1-2, the cat does not complete the action and is placed directly in the "exhausted" area.

Bad Reputation: A villager with this symbol causes the player to lose one reputation when the villager is gained.

Metal Man: These symbols belong to the Metal Man villager. They represent that this villager has his own bed, and that neither cider nor potions can be used on him.

Gain Reputation: When a player buys a card with this symbol, he immediately gains 1 reputation (only once).

Village Points for Villagers: This symbol gives 2 village points per villager the player owns.

Goods (on card): When a player buys a card with this symbol, he immediately places 2 goods of the specified type on it. The goods can be harvested from the card. The card never makes additional goods.

Replenishing Goods (on card): When a player buys a card with this symbol, he immediately places 1 good of the specified type on it. The good can be harvested from the card. At the end of the round, if the card does not have a good on it, the player places 1 of the specified good on it.

Income for (Goods): This card grants one income for each amethyst and one income for each ore the player has in his advancement track.

Potion (on card): When a player purchases a card with this symbol, he immediately gains 1 potion.

Potion Income (on card): At the end of each round, the player collects one potion.

Income (on card): If a player owns a card with this symbol, he collects 1 extra coin at the end of each round.

Village Points for Things: If a player owns a card with this symbol, he gains bonus village points for owning specified goods/etc. In this case, the player would gain 2 village points per potion and 2 village points per ore he owned at the end of the game.

Village Points for Empty Caves: This symbol gives 1 village point per empty cave card (with no outpost) that the player owns.

ABOVE AND BELOW

EXPANDED EDITION RULES

MODULAR VARIANTS: You may add any or all of these variants to the game at your discretion. Each variant is listed below:

EXPANDED EDITION VILLAGERS: There are seven Expanded Edition villagers in total. Add these to the random pile of villagers at the start of the game.

QUESTS: During game setup, place the five quest tokens face up to the side of the reputation board. As soon as a player fulfills the requirements of a quest token by owning the pictured goods/items, he claims the quest token and places it near his player board. At the end of the game, the player gains the listed number of village points. *Example: The first player to gain a paper and a pot would claim the token to the left. The player would gain 4 village points at the end of the game.*

TOOL TOKENS: During game setup, place the tool tokens in a pile face down near the reputation board. Shuffle the pile. At the start of each round, place one of these tool tokens (face down) on top of the cave card deck. The first player to successfully Explore in the round gains the tool token. He flips the token face up and places it to the side of his player board. The player may use the tool token once per round. When he uses it, he flips it so that it is face down. At the end of each round, he flips any used tool tokens he owns face up. The abilities of each token are described below.

Mystical Walking Stick: Using this tool allows a player to add 1 to an Explore action die roll. The player may choose to use this tool after he has rolled for all of his villagers. *Example: Tom flips the walking stick to turn a die result of 4 into a result of 5.*

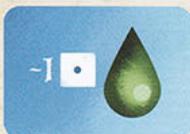

Book of Knowledge: A player may use this tool when he sends a villager to complete the Train action. The villager he sends instantly has the "Quill Plus" ability, which means the villager can Train for one fewer coin. Also, the villager does not need a quill to Train.

Basket of Plenty: A player may use this tool when he sends a villager to complete the Harvest action. The villager may Harvest two goods instead of one. The villager may Harvest from multiple cards.

ABOVE AND BELOW

VILLAGER STATUS: At the start of the game, place these tokens to the side of the reputation board. Villagers gain these status tokens as effects of certain encounters in the “Desert Labyrinth” and “Underforest” encounter books. When an encounter states that one of your villagers gains a status, place the appropriate token on the villager. The status cannot be removed for the rest of the game, and the following effects apply to that villager. NOTE: You must use this variant if playing with the “Desert Labyrinth” and “Underforest” tokens.

Poisoned: A villager that is poisoned has a -1 to his die roll during the Explore action.

Melancholy: Each time you use a villager that is melancholy, you must roll a die. On a roll of 1 or 2, the villager does not complete his action and you must place him in the exhausted area on your player board. If this happens, you may immediately choose another villager to take an action.

Greedy: If you gain coins on an Explore action, and a greedy villager is in the group of explorers, you gain one fewer coin.

Coward: A villager with the coward status cannot be injured when performing the Explore action.

DESERT LABYRINTH / UNDERFOREST: During game setup, place these tokens in a pile face down (number side down) near the reputation board. Each time a player uses the Explore action, place a Desert Labyrinth or Underforest token on the card. The paragraph numbers on the token replace any on the card. *Example: the token to the right would replace a die result of 1, 2, or 3 when determining what paragraph to read.* You must read the listed paragraph from the Desert Labyrinth and Underforest Encounter Book, available through the Kickstarter.com page for Above and Below.

SUPPLIES: During game setup, place these tokens in a pile next to the reputation board. Supplies are gained as rewards in the Desert Labyrinth and Underforest Encounters. Players may spend them in later Explore actions to add 1 to a die result. Supplies are also worth 1 village point per two that a player owns at the end of the game.
