<b>22 Tests</b>	<b>204</b>	<b>2</b>	<b>182</b>	<b>184</b>	

### Comodo Internet Security Premium custom settings :

**Preset** : Internet Security (by default), box "show less alarms" unticked in first installation window

**Antivirus** : on (Realtime), scan memory on startup : no

**Firewall** : on (Safe Mode)

**Auto-Sandbox** : on

**Virusscope** : on (only monitor sandboxed apps)

**HIPS** : off

**File reputation** : on (autoupload, trust signed apps, detect PUP)

During our test, conducted from 1.11.2016. to 30.11.2016. Comodo Internet Security Premium, accomplished a detection rate of 90,19% , detecting 184 out of 204 samples. Comodo Internet Security Premium was able to detect 2 samples out of 204 with our Static Test (detection without execution), and additional 182 samples on Dynamic Test (upon sample execution).

Out of 202 samples not being able to detect with static scan, Comodo Internet Security Premium accomplished to detect 182 of them by it's behavioral mechanisms (upon sample execution) with dynamic detection ratio of 90,09%. Out of 22 tests, Comodo Internet Security Premium failed to protect the system 1 time.

Tests conducted by MalwareTips AV Tester [Der.Reisende](https://malwaretips.com/members/der-reisende.32430/)  
<https://malwaretips.com/members/der-reisende.32430/>

All tests were conducted in protected virtual environment. Due to the small number of samples used in this tests, you should take results with a grain of salt. MalwareTips doesn't encourage readers to take this test as a proof that tested security product is good or bad as security products are dynamically changing. This test shows how the tested product behaves with certain malware samples, on unique circumstances in given period of time.

Product's malware detection rate is not an equivalent of protection. This should not be mixed up. MalwareTips encourage you to compare these results with others and take informed decisions on what security products to use.
