

Crypto bitcoin scam

Premise: bitcoin is a NON reversible type of payment, most of the centralized remote payments ARE reversible: it follows, therefore, that whoever sends the NONreversible payment in exchange for the REVERSIBLE payment, is automatically disadvantaged, because in the event of an error, can no longer fix the situation. Consequently, if you have to sell bitcoins, protect yourself first of all by taking your time to implement the appropriate checks.

scam : never trust anyone known from a distance, if in fact in reality (face to face meeting) the social engineering techniques are quite complex, on the internet, through proxies, temporary emails, identity theft, etc ... it is really easy to hide.
