6 Days Until Votes Counted in Missouri US Senate Race to Replace Retiring Roy Blunt, Republican Schmitt 9 Points Atop Democrat Busch Valentine:

Republican Eric Schmitt defeats Democrat Trudy Busch Valentine 50% to 41% in an election for US Senate in Missouri today, 11/02/22, according to SurveyUSA's latest exclusive polling for Gray Television's Missouri stations (KMOV-TV in St. Louis, KCTV-TV in Kansas City, KYTV-TV in Springfield, KFVS-TV in Cape Girardeau, WGEM-TV in Quincy, IL; and KYOU-TV in Ottumwa, IA), and for KRCG-TV in Jefferson City and KOAM-TV in Pittsburg, KS.

Compared to SurveyUSA's previous polling in September , Schmitt is up 3 points; Busch Valentine is up 5, and the number of undecided voters has fallen by more than half, from 14% to 6%. 3% today say they will vote for another candidate, down from 4%.

Among men, Schmitt had led by 19 points, today leads by 26; among women, Schmitt had led by 4, now trails by 7 points – an 11-point swing to the Democrat, and a 33-point gender gap. There is little poll-on-poll change among the youngest voters , where the race remains effectively tied, while Schmitt moves from a nominal 2-point deficit to a 7-point advantage among 35 to 49 year-old voters . Among those 50 to 64 , Busch Valentine improves from a 30-point deficit to a 19-point deficit, and among those 65+ , typically the most reliable voters, Valentine had been 13 points behind Schmitt and now trails by just 5 points – movement that is unlikely to overcome Schmitt's advantages. Voters in greater Kansas City have moved toward Schmitt; Busch Valentine had led by 11 points here, now is tied with Schmitt. In Greater St. Louis, Busch Valentine had led by 3 , now leads by 9. Elsewhere, Busch Valentine makes small gains but remains far behind in Southwest and Southeast Missouri, while Schmitt adds to his lead in the northern part of the state.

On the issues, Busch Valentine leads by 39 points among the 18% of likely voters who say abortion is the issue that will have the most influence on their vote for US Senate, down from a 43-point lead in the previous poll; Busch Valentine also leads by 27 points among the 8% most focused on healthcare, up from an 8-point advantage, and by 92 points among the 6% who say investigations into former President Trump is their most important issue. Schmitt, however leads by 45 points among the 36% of voters who say inflation and the economy is their top issue, up from 40%; by 21 points among the 7% most-focused on crime, up from 5 points; and by 92 points among the 6% who are most focused on immigration, up from 78 points.

Busch Valentine leads 67% to 30% among the 7% of voters who say they have already cast their ballots, but trails 53% to 39% among the 70% who say they are certain to vote, and by 45% to 39% among the 23% who say they are almost certain to vote.

Full results follow ...

About the Poll / Filtering: SurveyUSA interviewed 1,200 Missouri adults online 10/27/22 through 11/01/22, using sample provided by Lucid Holdings LLC of New Orleans. Of the adults, 991 were identified as being registered to vote. Of the registered voters, 791 were determined to be likely to vote or to already have cast their ballots in the November 8 general election and were asked the questions which follow. The pool of adult survey respondents was weighted to US Census targets for gender, age, race, education, and home ownership.

Statement of Methodology: SurveyUSA is an independent, non-partisan, apolitical research company that conducts opinion surveys for media, academic institutions, commercial clients, non-profits, governments, agencies, and elected officials. SurveyUSA opinion research is conducted using a methodology optimized for each particular project. In some cases, this means data is collected 100% by telephone; in some cases, 100% online; and in other cases, a blend of the two. For those projects that are conducted "mixed-mode" (or "multi-mode"): Respondents who have a home (landline) telephone are interviewed by phone, sometimes using live interviewers, other times using the recorded voice of a professional announcer. The youngest male is requested on approximately 30% of calls to home phones, the youngest adult is requested on approximately 70% of calls. This method of intra-household selection reduces the potential for age and gender imbalance in the unweighted sample. Re-attempts are made to busy signals, no-answers, and answering machines. Landline telephone sample is purchased from Aristotle of Washington DC. Respondents who do not use a home telephone are interviewed on an electronic device, which means, for some projects, that call-center employees hand-dial cell phones and interview respondents verbally on the respondent's cell phone, and means, for other projects, that SurveyUSA displays the questions visually on the respondent's phone, tablet, or other device. Sample for respondents who do not use a home telephone is purchased from Aristotle or from one of several other research companies that provide access to cell respondents. Where meaningful, SurveyUSA indicates the percentage of respondents who use a home phone and the percentage who do not, and crosstabs by this distinction. Responses are minimally weighted to U.S. Census or voter file targets for gender, age and race. Target (cell) weighting is used. On questionnaires that ask about political party identification, SurveyUSA may or may not weight to Party ID, depending on client preference. Where necessary, questions and answer choices are rotated to prevent order bias, recency, and latency effects. On some studies, certain populations are over-sampled, so that the number of unweighted respondents exceeds the number of weighted respondents. Each individual SurveyUSA release contains the date(s) on which interviews are conducted and a release date. If interviewing for a particular study is conducted in Spanish, or in any other foreign language, it will be noted on the specific release. If no notation appears, interviews are conducted in English. Where respondents are filtered, such as adults, filtered to registered voters, in turn filtered to likely voters, SurveyUSA describes the filtering on the specific release. On pre-election polls in geographies with early voting, SurveyUSA differentiates between respondents who have already voted and those who are likely to vote but have not yet done so. On research completed prior to 12/31/16, SurveyUSA assigned to each question within the instrument a theoretical margin of sampling error. Effective 01/01/17, SurveyUSA assigns to each question within the instrument a credibility interval, which better reflects the sampling uncertainties associated with gathering some percentage of respondent answers using non-probability sample. Though commonly cited in the presentation of research results, "sampling error" is only one of many types of error that may influence the outcome of an opinion research study. More practical concerns include the way in which questions are worded and ordered, the inability to contact some, the refusal of others to be interviewed, and the difficulty of translating each questionnaire into all possible languages and dialects. Non-sampling errors cannot be quantified. This statement conforms to the principles of disclosure as recommended by the National Council on Public Polls (NCPP). Questions about SurveyUSA research can be addressed to editor@surveyusa.com.
