# These days, it?s likely your vehicle is sitting parked for an extended period of time and not being driven.

These days, it?s likely your car is sitting parked for a protracted period of time and not being driven. That means there?s an excellent chance that when you do head to fire it up, the battery?s dead and the car doesn?t start. If you don't?ve invested into a battery maintainer to keep your car?s battery fully charged, you?re going to need to jump start your vehicle. If it?s stuck in the garage, using jumper cables might not be the easiest solution. Instead, you?ll want a portable jump starter handy, and quite honestly, it?s a tool you should keep in your vehicle?s glove box since you?ll never know when you need to jump start your car.

In recent years, manufacturers have already been releasing a wide range of compact jump starters, a lot of which comfortably fit inside your glove box and can keep a charge for weeks, if not months. These jump starters could also be used as a portable battery bank for the USB devices, enabling you to charge your phone or tablet while on the go. There are several options out there on the market to choose from, just how do you select the right one?

We recently got our hands on Audew?s latest 2000A portable jump starter, made to be considered a multi-functional device that not only lets you jump start your vehicle in an emergency, but serve as an electrical bank or flashlight when needed. It?s one of the most premium offerings in today?s market, with a 20000mAh battery capacity and offering 2000A peak current. The business says it? Audew Jump Starter s capable of firing up any gasoline engine or a diesel engine around 8.5 liters, as well as RVs, tractors, lawnmowers, or speed boats. When fully charged, it offers around 40 jump starts before you will need to plug it back in for a charge.

Does it live up to expectations? Read our hands-on review to determine.

Before we dive into the way the product functions, let?s take a look at what?s contained in the box. These devices comes well packaged with a durable, hard travel case that houses the charger itself, the intelligent jumper cables, a cigarette lighter adapter, a wall adapter, a USB-A to USB-C cable, and a USB-C to USB-C cable. Unfortunately there isn?t a USB-A to Micro-USB cable included, nevertheless, you likely have an extra one lying around if your device isn?t appropriate for USB-C.

The cigarette lighter adapter could be plugged into the device?s 15V/10A output port, giving you a portable solution for vehicle devices that require 12V power, for instance a portable tire inflator or cooler.
