

# Metallic epoxy flooring minneapolis

Whether you require hard wearing, a bespoke epoxy floor for your garage floor or warehouse, or a luxurious poured resin floor throughout your home, Epoxy Flooring Minneapolis offers one of the most diverse selections of epoxy finishes and styles within the industry.

Due to its complete practicality, it is not surprising that epoxy flooring is replacing more traditional flooring options, including tiles, carpet, vinyl, and laminate. Since epoxy floors have no joints, edges, or seams, these floor finishes are a great option for Minnesota commercial and industrial settings as well as residential buildings.

At Epoxy Flooring Minneapolis, we specialize in solid colored epoxy floor finishes that come in either traditional plain colors or a more contemporary concrete appearance. It gives any room a completely smooth, extremely adaptable, bright, and modern appearance.

This epoxy floor finish is ideal for any space that requires durable, hardwearing, scratch, abrasion, chemical and stain resistant, easy to clean and maintain, light reflective and safe surface. It is ideal for use in airplane hangars, labs, hospitals, dog kennels, auto repair shops, residential garages, showrooms, retail shops and much more.

## Minnesota Metallic Epoxy Concrete Floor Coating Systems

[Metallic epoxy flooring minneapolis](#) technique turns your new epoxy floor into an engineered work of art. A two-component epoxy, specially formulated with metallic pigment, it's unique finish is roller- or squeegee-applied to your floor. This coating requires a primer coat, followed by a metallic 100% solids epoxy base coat, and finished with an optional layer of UV resistant urethane or another coat of epoxy.

There are 4 Metallic finish options:

### 1. Two-Tone Effect

2. Same Color Effect
3. Pearlescent Base with Effects Colors
4. Fluorescent Options

The finished look is a smooth, glass-like finish with a unique and subtle sparkle. No two Metallic epoxy floors will ever look the same!

## **Metallic Epoxy Concrete Floor COATING SYSTEMS**

Metallic systems are applied using Epoxy-Shell with a Poly-Shell topcoat. Metallic pigments add an elegant one-of-a-kind look to these durable floors.

First, apply a primer coat of Epoxy-Shell Tinted (use Black Knight #950 for dark colors or use a light-colored primer for light metallics). Pigments are then mixed with Epoxy-Shell and applied on top of the primer. A topcoat of Poly-Shell is recommended for additional chemical and abrasion resistance.

Metallics are available in 9 colors that can be mixed to create hundreds of color combinations and custom looks.
