Solutions to Resolve Office Error Code 30068: Office.com/setup
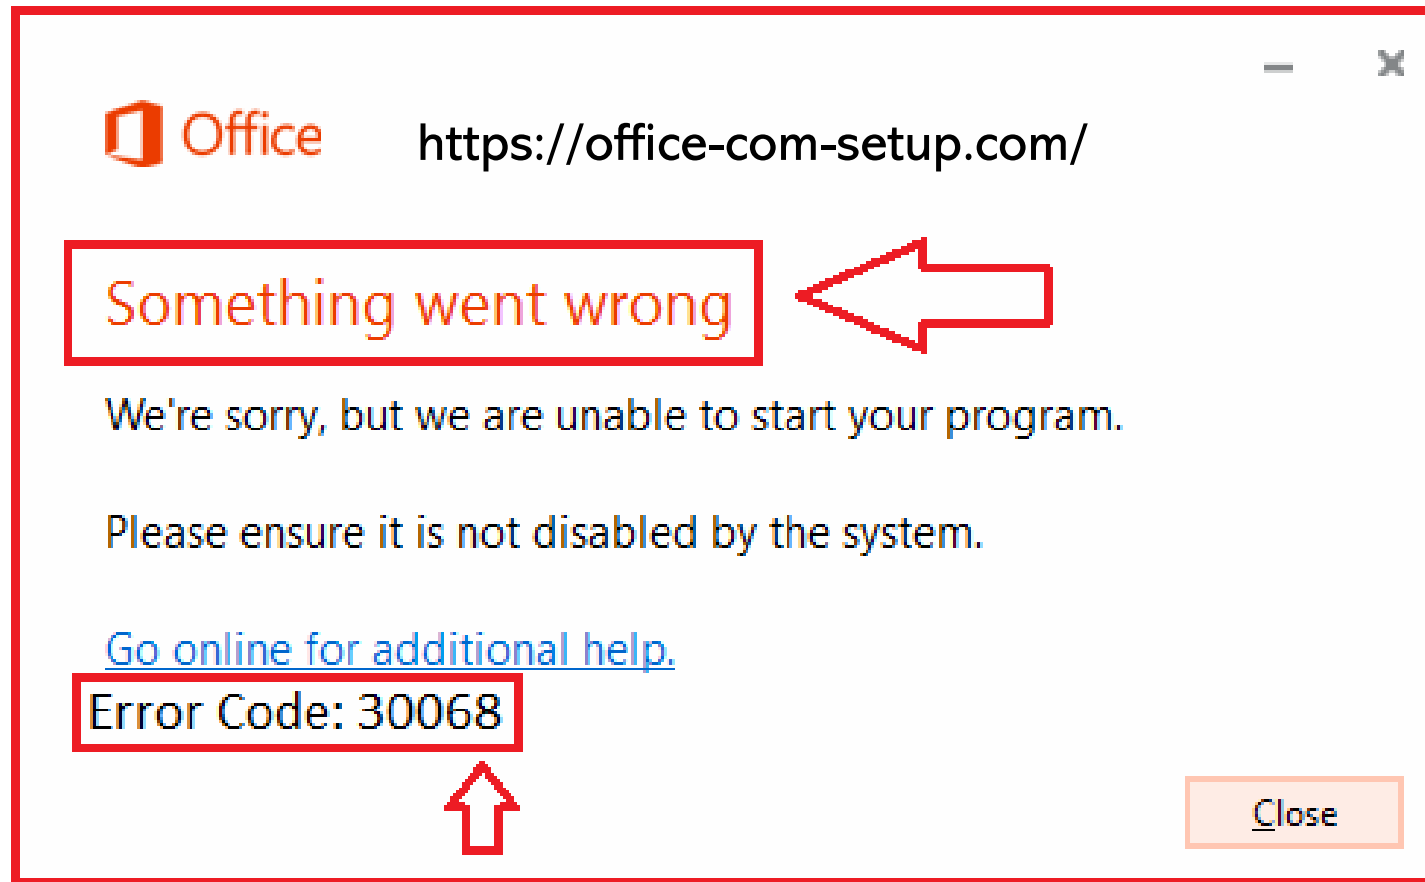

1. Restart PC and Try to Install MS Office Again:

First, you should restart your Computer system because restarting your computer can fix many issues. When your computer restarted, then you should try to reinstall office suite. If you face any problem in installing office online, then you should do it offline installation just by using office set up.

2. Check the Status of Click-to-Run Service:

You should press Win + R key at the same time just to open the Run dialog box. After this, type "services.msc" in the open field and tap on Enter or OK button to open services. Now, you should check for the Microsoft Click-to-Run services in the list in the services section and then just double click on it. At this point, you should go to the General tab and then in the Startup section, just click on the drop-down menu and here you should select Automatic. Then, you should click on Apply button, and then choose OK, just to save the changes. After this, you should try to reinstall the office suite and just check if the problem is fixed or not.

3. Uninstall MS Office and Try to Reinstall:

If you want to uninstall MS Office suite, then you should download the Microsoft Office Uninstall tool from the official website of Microsoft and then just run the setup. This will delete the incomplete Office installation and all the unwanted files. But if the Uninstaller tool shows you, "Office installation is missing", then you should check if there is an ongoing installation of Office.

4. Start Full System Scan Using ASR.:

For this, you should switch on the computer. In case, the computer is already on, then it should be rebooted. After this, the BIOS screen will appear but if the Windows pops up then you should reboot the computer and again try it. When you're on the BIOS screen, then you should press F8 key and it will show you the Advanced Options dialog box. Now, you should go to the Advanced option and then you should select Safe Mode with Networking and then just click on it. Here, the Windows will try to load the SafeMode with Networking. After this, click on the start menu and then open RUN option. This will open up the MS Windows Run Box. In the Run dialog box, you should type in the URL address and then click on Enter or Ok button. Now, the program will be downloaded, and when it is downloaded, you should open the launcher to install the program. When installation process complete, you should run ASR to perform a full system scan. After this, you should click on the "Fix, Clean & Optimize Now" button.

The above method will [solve the Office Error Code 30068](). If you want any kind of help or support, then jut contact to the customer care of MS Office via [www.office.com/setup]().
