2: configure Dolphin

General:

Dolphin Configuratie   ✕

| Algemeen | Interface Instellingen | Geluid | GameCube | Wii | Pad | ◀ ▶ |

Basis Instellingen

☑ Activeer Dual Core (verhoogt de snelheid)

☑ Activeer Idle Skipping (verhoogt de snelheid)

☑ Activeer Cheats

Snelheidlimiet: [100% (Normale Snelheid) ▾]

Gerbuiksstatistieken Rapportering Instellingen

☑ Activeer Gebruiksstatistieken Rapportering

[Generate a New Statistics Identity]

Geavanceerde Instellingen

CPU Emulatie Motor

◯ Interpreter (traagst)

◯ Gecached Interpreter (trager)

◉ JIT Recompiler (aanbevolen)

◯ JITIL Recompiler (traag, experimenteel)

☐ Forceer NTSC-J Console

[OK]

Interface:

doesn't matter

Sound:

**Gamecube:** (very important to avoid desync with gc games)

Wii: (you can enable SD card, doesnt matter, save games won't load over netplay, didn't cause any desync yet)
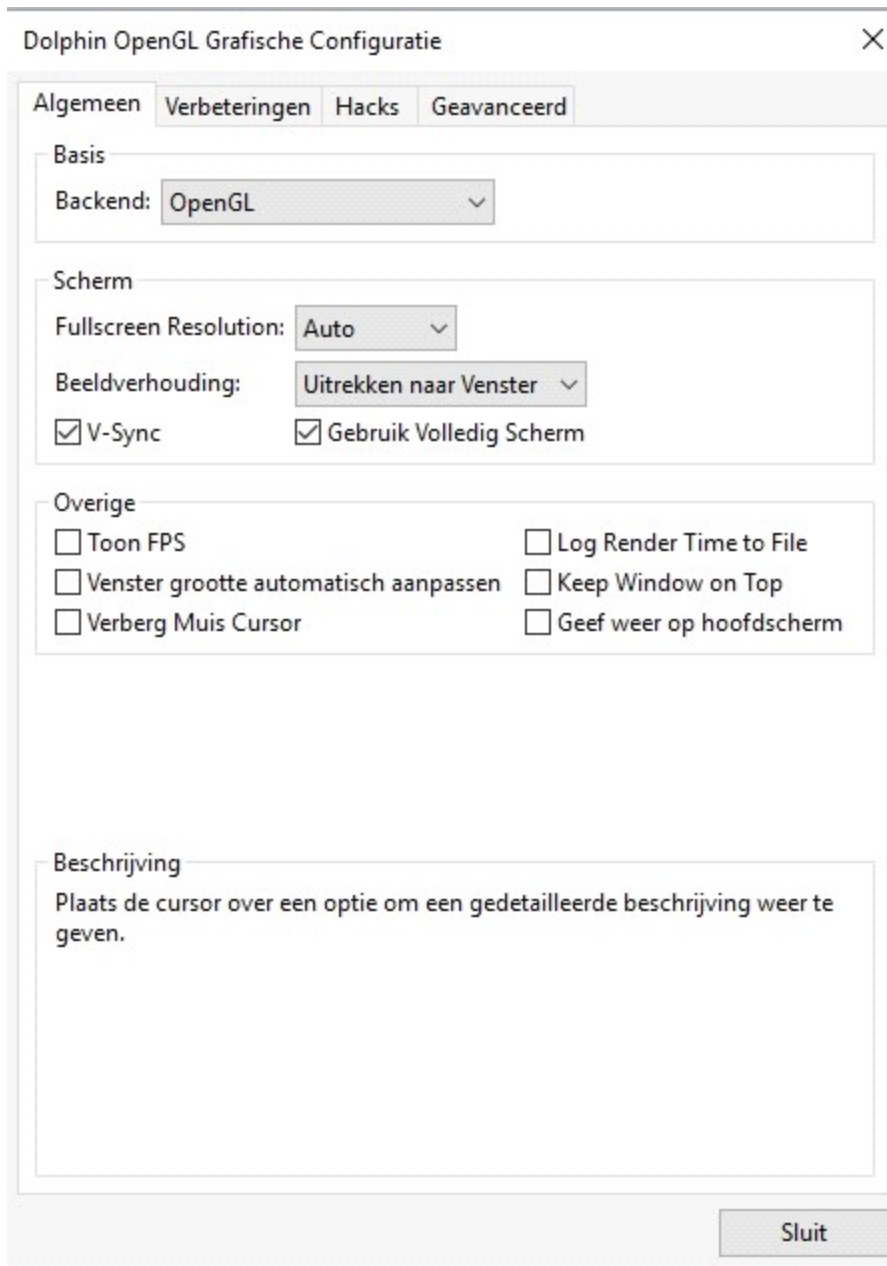

Path: Here you need to select the FOLDER, not the iso, but the folder for the games to show up in the dolphin list

## Advanced:

Dolphin Configuratie

Geluid | GameCube | Wii | Pad | **Geavanceerd**

CPU Opties

☐ Enable CPU Clock Override

Higher values can make variable-framerate games run at a higher framerate, at the expense of CPU. Lower values can make variable-framerate games run at a lower framerate, saving CPU.

WARNING: Changing this from the default (100%) can and will break games and cause glitches. Do so at your own risk. Please do not report bugs that occur with a non-default clock.

OK

Next, open the graphics settings:

Dolphin OpenGL Grafische Configuratie ✕

Algemeen | Verbeteringen | Hacks | Geavanceerd

Basis

Backend: OpenGL ⌄

Scherm

Fullscreen Resolution: Auto ⌄

Beeldverhouding: Uitrekken naar Venster ⌄

☑ V-Sync   ☑ Gebruik Volledig Scherm

Overige

☐ Toon FPS   ☐ Log Render Time to File
☐ Venster grootte automatisch aanpassen   ☐ Keep Window on Top
☐ Verberg Muis Cursor   ☐ Geef weer op hoofdscherm

Beschrijving

Plaats de cursor over een optie om een gedetailleerde beschrijving weer te geven.

How to create a netplay lobby:

Change to traversal server:

**Go to host:**
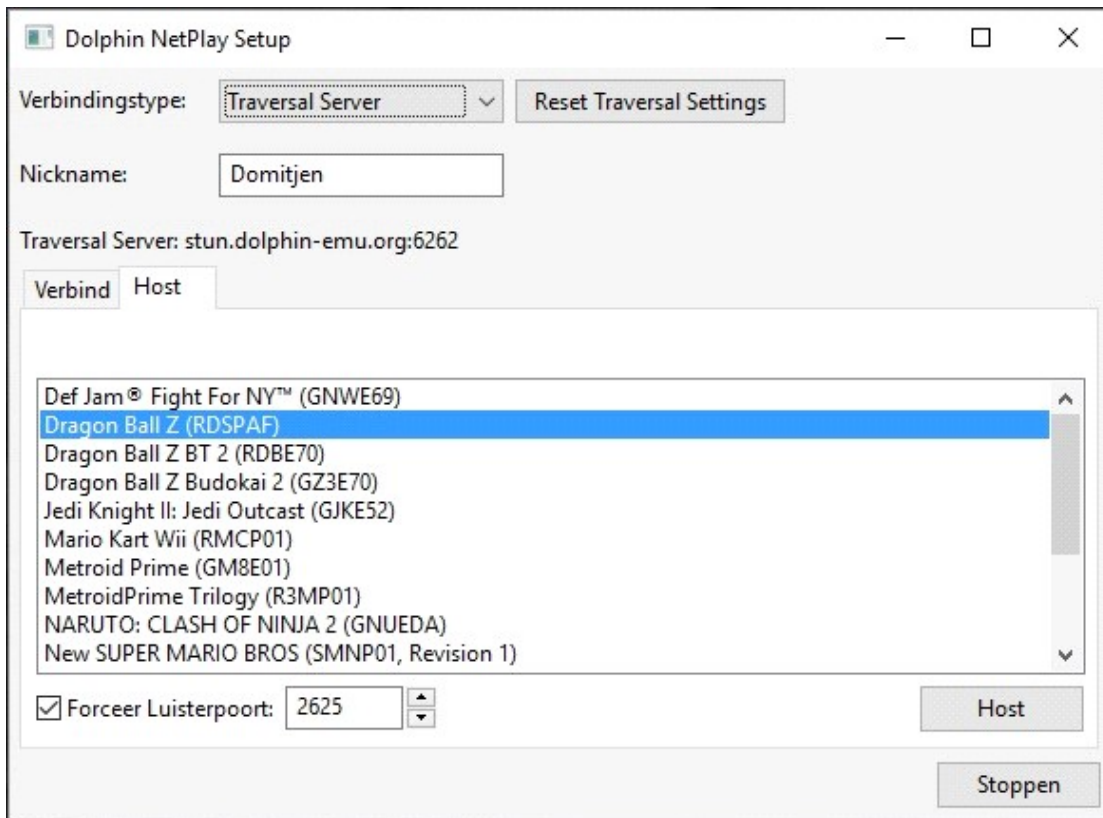

Host the game, a lobby will pop up:

Framebuffer has to be set around 20-40 for minimal lag and input delay.

Copy the code for the lobby to the guy you want to play with on steam or whatever.

Press start on the bottom left when the player entered the room and enjoy the game

Tip: when you enabled Side by Side, you will see 2 images display on monitor, I disabled this now for sake of the screenshot but this is normal. Then you need to fullscreen this, and press F6 in

Bigscreen (SBS mode)
