Installing Minecraft 2.Zero In The New Launcher

An incredible job by the Mojang crew for an April Fools joke, and awesomely fun to play at times when Minecraft 1.6.Four with the Dalek mod is just not silly sufficient.
Notice that Minecraft servers is Mojang's version of an April Fools joke!
Now all the tutorials on how to put in 2.0 are principally for older versions (e.g. earlier than minecraft 1.6.1), so i assumed to myself: "how can i do this?"

Sooner or later (i.g. Right this moment) I experimented on downloading minecraft 1.5.1 in the new launcher and installing 2.0 in that listing. And it labored! so here is the right way to do it:
Step 1
Start by downloading 2.0, as a result of it isn't supported by Mojang it is free! :D But in addition for a similar cause, it isn't on the Minecraft web site. D:

Not to worry although, that is what YouTube is for!
http://www.youtube.com/watch?v=JID1LKT3jr0

If you'd like the different variations here is the knowledge for all of them. Like maybe you need the super hardcore mode!
http://minecraft.gamepedia.com/Minecraft_2.0

Step 2
so now that you've got downloaded it go to your launcher choose "Edit Profile" and download 1.5.1.

Step 3
Now exit minecraft and get to your variations folder in .minecraft (please watch a video on YouTube if you do not know the way).
Copy the folder known as "1.5.1" (without quotes) and name the copy "2.0" (with out quotes).

Step four
Open the 2.Zero obtain zip file and put "minecraft.jar" into the brand new "2.0" folder (each without quotes)

Step 5
Delete "1.5.1.jar"
Rename the information so that:
"minecraft.jar" turns into "2.0.jar"
and
"1.5.1.json" turns into "2.0.json"
(all with out quotes).

Step 6
Open "2.0.json" with notepad++

http://notepad-plus-plus.org/
and edit line 2 like so:

"id": "2.0",

it should initially be:

"id": "1.5.1",

All you need to change is the numbers between the quotes. and depart the quotes this time! Save and enjoy!
