Smarter healthcare decisions

Saving time ▪ Reducing costs ▪ Safer care

THE PROBLEM

Decision making is impeded by the ability of health care staff to quickly/easily access and use important resources.* Resources are often:

Inaccessible – buried in Intranet, behind login
Poorly used – not easily accessed when needed
Out of date – difficult to keep current
Not actionable – non-standardised/variable
Unmeasurable – unable to measure impact on use

* local clinical guidelines, referral pathways, protocols, triage algorithms, antimicrobial/prescribing guidance, induction/orientation, hospital contacts, dept. SOPs, decision support aids

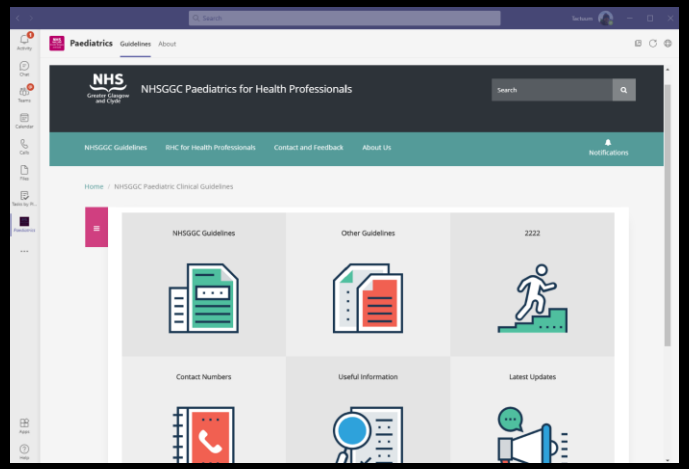
SOLUTION

Make it **quicker**, **easier** and **simpler** for health care staff to access the resources they need, **any time**, on **any device**, **any where**.

SOLUTION always accessible

Accessible from any **browser**, any **mobile device**, the **EHR** (Cerner, Epic, Medway) and through **Microsoft Teams**.

Microsoft Teams



SOLUTION easily used

Clinical staff can access resources at the bedside, at point of care, ‘on the go’, remotely – both **offline and online.**

72%

improvement in use compared to
existing Intranet access

SOLUTION up to date

Robust and proven editorial processes alleviate the burden of keep clinical resources current whilst maintaining **quality control**, **governance** and **assurance**.

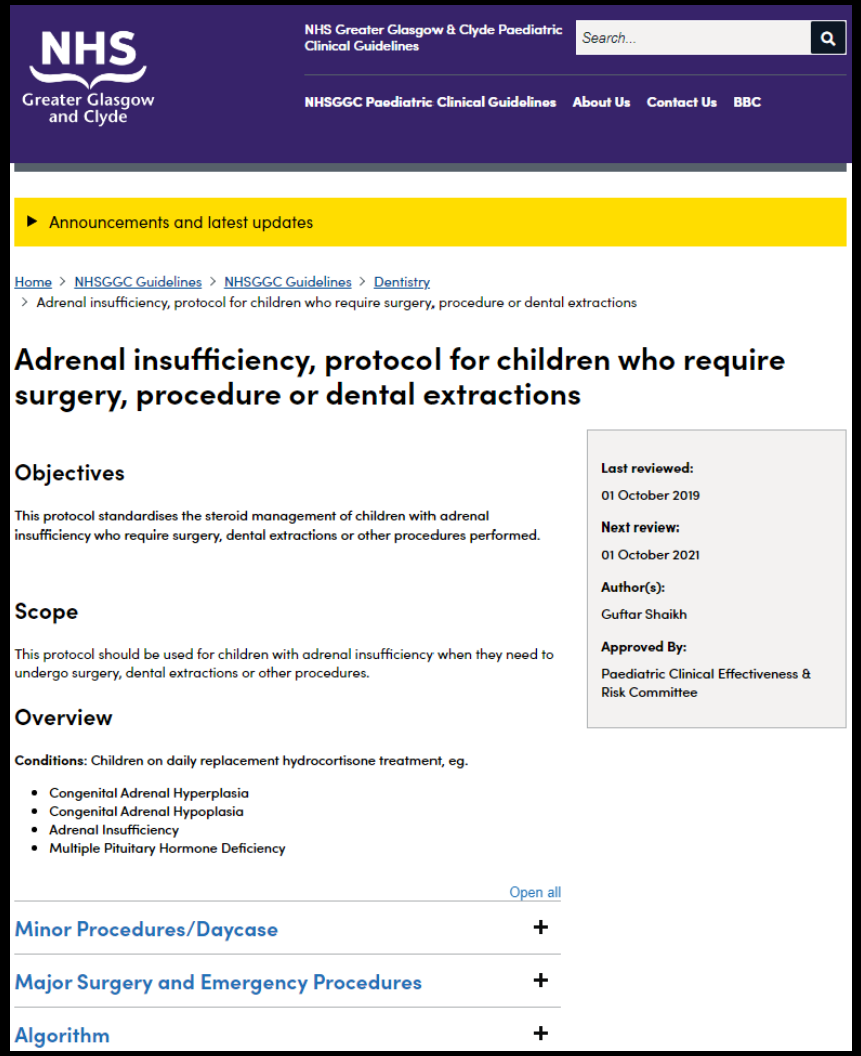
55%

improvement in guidelines being up to date after 9 months.

SOLUTION actionable

Templates based upon international standards ensure that resources are **more actionable/useful** to users, and are **more easily used**.

Use of NHS Digital design system to **improve usability, accessibility** and familiarity.



SOLUTION measurable

Understand **who** is using **what** resources, **when**, **where** and **how**. Measure the impact of change. Discover new needs from clinical staff. Continuously improve.

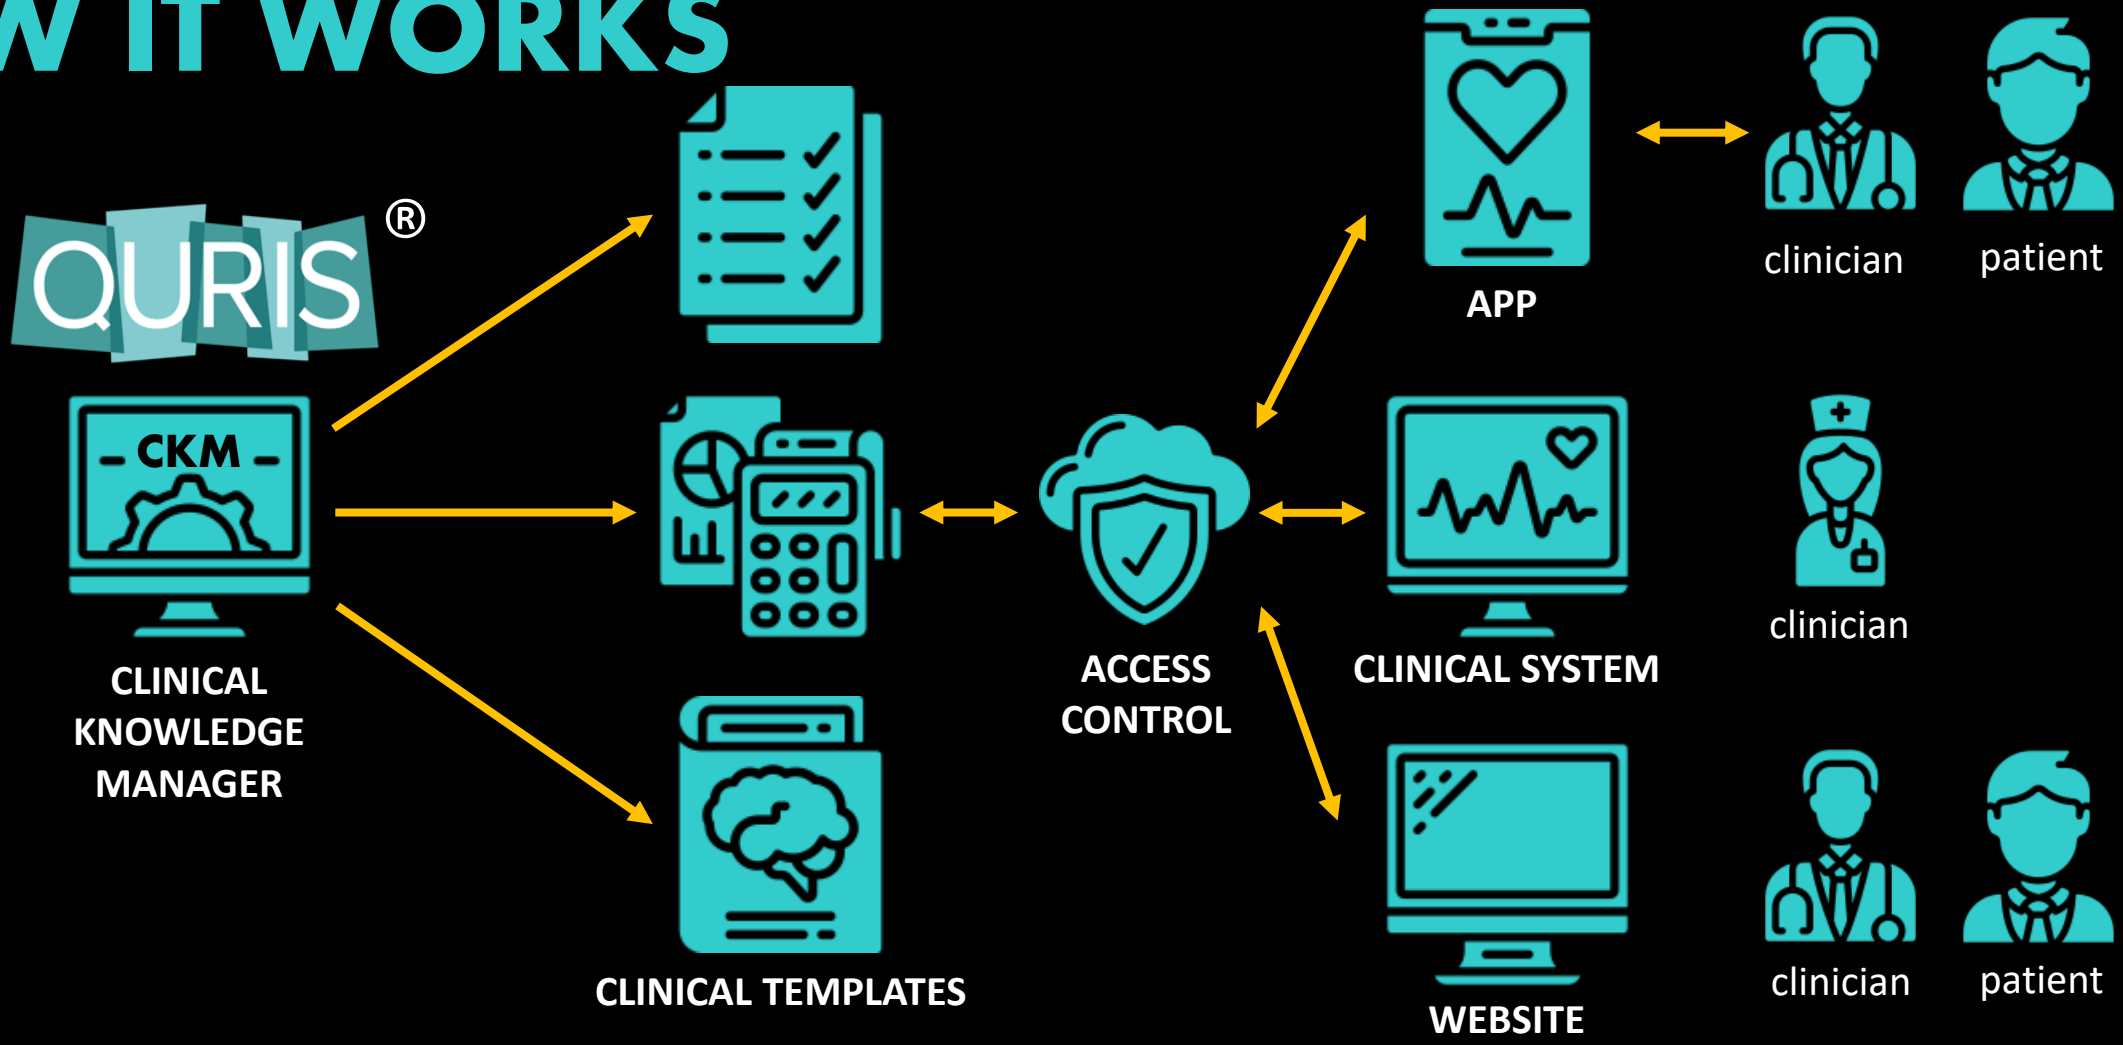
	Page title and screen class	Views	Users	New users	Views per user
9	Paediatric Early Warning Score: PEWS	1,132	926	854	1.222
10	Hip examination and referrals	590	497	470	1.187
11	Guidelines	531	102	21	5.206
12	Cranial ultrasound: a guideline for the performance of routine cranial USS for preterm infants	512	304	251	1.684
13	Urinary tract infection (UTI) : Diagnosis, treatment and management - RHC Glasgow	409	297	51	1.377
14	Eye infections in the neonate: Ophthalmia Neonatorum and the management of systemic Gonococcal and Chlamydial infections	406	336	298	1.208
15	Brief Resolved Unexplained Event or BRUE (ALTE guideline update)	401	312	252	1.285
16	Neonatal pain guideline	389	269	230	1.446
17	RHC for Health Professionals	388	179	38	2.168
18	Peripherally inserted central catheters (PICC Lines) - Neonatology guideline	387	306	266	1.265
19	Haematuria, management and investigation in Paediatrics	384	315	232	1.219
20	High Frequency Oscillatory Ventilation (HFOV) : a guide to the use of HFOV in the neonate	384	255	220	1.506

HOW IT WORKS



1 CREATE → 2 MANAGE → 3 USE

LOW/NO IMPACT DEPLOY

Minimal/No IT department impact
UK Microsoft cloud data centres – quick deploy (same day)
Secure – ISO/IEC 27001, ISO 9001, SOC 1, 2, 3, HIPAA/HITECH
Quality Assured – independently Penetration Tested
EHR integrated (HL7 InfoButtons, FHIR CDS-Hooks)
Accessible through Microsoft Teams
No patient data stored, accessed or messaged
Integrates with key enterprise identity protocols – AD, OAuth, WS-Fed

PRICING

	Pilot	Lite	Department*	Enterprise	Enterprise+
Monthly License US	Free - 3 months	$600	$1,250	$10,000	$13,000
