MHL is a connect top that can be found in certain popular Android Smart mobiles. Its portion of micro USB port and some people do not notice it directly. Also many Android phones contain micro-HDMI port which also allows you to connect your phone to Monitors or even HD Television. Though this program can help to work HD videos in your Android phone to a bigger screen, the drawback is that you just require a more cable and also an Adapter to be sure you have flawless display of videos.

Most of these Android smart phones consist of micro HDMI (High Definition Multimedia Interface) ports that can be employed to send signals to your HD tv that one can be used for projecting videos or photos your Android phone. The following article explains how to connect a Motorola Droid X Android phone to your HD TV using HDMI port.

First you should take the High-Definition Multimedia Interface cable provided along side your device and connect it into the HDMI port in your Android mobile which is going to be located on right spine in Droid X. This is a micro HDMI port which demands a type-D connector using one side of the cable and you can connect to your TV that has regular HDMI port using the type A connector found on other side of the HDMI cable.

Another thing to do would be to launch your Gallery App on your own Android phone and choose the list of videos or photos that you'll really like view on your HD [TV](#). After choosing the video you can view pair of controllers over the screen that allows you to navigate through videos or photos on your device as your display them. They'll automatically disappear after certain idle time and you can tap any dark area of screen in the event that you prefer to redisplay them. Should you want to launch the player controls you can tap the Play icon present at the top left corner that has HDMI caption about it.

Now click on the Pause/Play button for playing with the videos or photos on your HD TV that get streamed in the Android phone. You can also change the settings including refresh rates and screen-resolution in the event the default settings are not working correctly for you.

You should also remember that certain Apps do not permit HDMI output including popular Apps like YouTube and Blockbuster. You can also play Music from the Android phone onto your TV speakers with the default Music App on your own screen.

There is also option called Mirror On Display that allows you to duplicate the while screen output from your Android device to HD TV or HDMI screen. This program can be quite suitable for those who want rented movie from NetFlix or other Video on Demand websites.

You'll find also other options which are coming recently like Miracast that's a wireless technique that allows mirroring the monitor output of your Android Device entirely on your HD TV and it's also similar to Airplay option available in I phones. This option is available just from Android 4.2 Jellybean and also other later version and necessitates wifi internet connection in your home. These are a few choices for connecting your Android mobile to TV.
