

# Details of Laser Hair Removal

Laser treatment for removal of hair includes particular laser beam or ray is on the parts of the skin according to the patients. The laser beam passes in the skin and reacts with melanin or pigment present in hair. The beam turns into the heat energy and damages the hair follicle or the U-shaped sac that contains hair. After the hair follicle is heated up and gets damaged permanently, it loses the ability to produce hair further. There are several [laser hair removal clinic in delhi](#) that renders the best remedies to remove hair.

## What are the Necessities of Laser Treatment?

Patients mostly choose laser treatment to remove hair from upper lips, armpits, legs, and also bikini lines. Doctors do not prescribe to remove hair from the parts of the body that has a tattoo.

The success of the laser treatment depends on the colour of the hair and the skin tone. Patients with light skin tone and darker hair colour get the best results from the laser treatment for hair removal. The primary purpose of the hair removal is only to damage the hair follicle so that it is unable to produce hair further. If your skin does not permit or is extremely sensitive to any sorts of laser treatment, you must not do so.

Professional doctors for a [laser hair removal clinic in delhi](#) has the best knowledge and experience as they are in this sector for years. Thus it would help if you always took their opinion before making a move. You can also opt for [full body laser hair removal in delhi](#) after undergoing a skin test. If the doctor finds that your skin tone and the sensitivity can permit the laser treatment, you can easily do so. Having a full-body laser treatment for hair removal is best, as you need not appoint for it after intervals.
