

# How To Make Use Of The Ban-IP Command In Minecraft

It is the rationale that the IP tackle has been banned. The reason will likely be displayed to the participant in the event that they try to connect to the server from the banned IP address. The explanation will even be displayed within the server logs.

## Examples

- Java

Instance in Java Edition (Laptop/Mac)

Listed below are some examples of the right way to ban an IP deal with on a Minecraft server.

To ban an IP deal with with no motive provided:

To ban an IP tackle with a reason:

To ban the IP deal with of a participant named TheNotWanted that is currently online (with no purpose offered):

To ban the IP deal with of a player named TheNotWanted that is at the moment online with a cause:

## How you can Enter the Command

### 1. Open Server Console

To run a server command, the directions vary depending in your version of Minecraft:

- For Java Version (Computer/Mac), open a server console. Use Command Immediate in Home windows or Terminal on a Mac.

### 2. Sort the Command

We are going to cover examples of how to use the `/ban-ip` command so as to add an IP address to the server's blacklist utilizing an IP deal with as properly as the identify of a participant that is online.

## Ban an IP using the IP Address

The simplest method to ban an IP handle is by specifying the IP deal with within the `/ban-ip` command.

For example, you could possibly ban an IP tackle with the following command:

As soon as the command has been entered, the IP tackle 172.16.5.128 will probably be added to the server's blacklist and banned from the server. Any players (ie: TheNotWanted) which can be linked to the server with that IP deal with shall be instantly disconnected from the server with the following message:

Ban an IP Deal with utilizing a web-based Player

If you understand the title of the player that is at present online whose IP address you wish to ban, you'll be able to enter the participant title within the command instead.

For instance, you might ban an IP deal with using the participant title with the next command:

In this instance, we've entered the participant name TheNotWanted. For the reason that IP address for TheNotWanted is 172.16.5.128, this IP deal with shall be banned and added to the blacklist (or ban list). For this command to work, the participant Must be on-line if you challenge the /ban-ip command utilizing a participant identify.

To enter the /ban-ip command in Minecraft, you will need to enter it as a server command (see beneath):

You should see the message "Banned IP tackle 172.16.5.128 belonging to TheNotWanted" appear within the server console.

Now any players which might be connected to the server with that IP address of 172.16.5.128 will be immediately disconnected from the server with the following message:

In this instance, the participant named TheNotWanted will see the message "Connection Misplaced. More You will have been IP banned." in the sport window.
