

You are contemplating an extended trip away from home? If WiFi isn't available be sure to have enough digital content.

I'd like to be able to share a tale which happened to me during a vacation I took on a cruise ship through the Arctic. It sounded wonderful, National Geographic trip thru frozen ice to return, with Polar bears as well as many other animals. There would be ice everywhere, snow everywhere. Man-made machinery was set to fight the elements, and cut through the northern desert that was frozen. <https://www.ytmp3.works> It sounded like an epic undertaking, an epic fight against the north, the weather, the pole.

I was advised by my supervisor to bring along all the technology I could. To extend my working space, I packed my laptop. It was all electric, as they told me. The idea of the first test was somewhat unknown to me.. I didn't realize that I would be disconnected from my internet two days into my 14 day journey and disappear completely from Earth for the next ten days. I was completely stunned when this was over. Any trip, no matter how difficult or remote, shouldn't result in an unexpected disconnect from the technology world, not in 21st century. Not only am I not able to finish my business, but I was also not prepared for it.

Today, no one cares if they have to be offline. Internet is all around. If your connection at home is slow at times, you will be able to find an McDonalds near you and connect to the free WiFi. You can also bring your laptop to lounge at Starbucks throughout the day. There is no restaurant, cafe or cafe will aid you up north. They are hours away from the closest shack that has electricity generated by a weak generator. There isn't any internet connection available. Two alternatives are available in these situations: switch off the internet and bring your satellite access.

I can't afford to purchase an satphone because it's expensive, particularly for Internet. I will prepare a video and audio library to use for the next journey without Internet. In the past, I had two songs. They were both downloaded in a sly way back then, so I only had three jazz songs , and a popular song I didn't even know its name. That's it. Four tunes for two weeks of no-thingness. If I knew this was the case I would have prepared. I would have packed my computer with shows from television and movies as well as lots of music videos. My most loved podcasts were ones that I would listen to for hours. It's simple to download them and then convert to mp3 for saving on my laptop. Then I could lie in my room listening all the things I like at home, but not have the time. This was my golden hour. Two weeks of gold. It ended up being 2 weeks filled with staring at ceilings and rushing passengers to meet them every time they made a sound.

The trip was empty literally and figuratively. I have never been so bored. The ice was way too thick. I knew that this could eventually be the problem. The boat was forced to turn and pull back towards civilization. This was not a surprise however it meant that endless hours of idle time could have been used for listening to podcasts or watch videos for DIY home repair, as well being able to listen to music. The next time I'll convert YouTube videos to MP4 and MP3 on my computer. Music never makes you feel down. Also remember Hulu as well as Netflix apps are able to download films and shows to stream offline. They can also be viewed on the long journey across the arctic. Make sure you don't spend your time sat in a boring place. Have fun!
