

## What does this accomplish?

Digital money is a quickly growing field of technology. Bitcoin is the most well-known example of this, due to its progress in society and acceptance in the world. Digital money as a whole is moving forward and will need precedents set to further expand this technology.

TrumpCoin shows that other digital currencies besides Bitcoin can be capable of great things. It will be the first to pave the way into political infrastructure and plans to integrate directly into the presidency.

TrumpCoin also plans to integrate digital money into the current election fundraising structure by having a TrumpCoin only political action committee.

## About Us

TrumpCoin's development team consists of a few community members that banded together and took over when the project had no leader. We are firm believers of digital money and support the use of it in government, as well as everyday life. This project is supported by money out of our own pockets and by time out of our daily lives.

**TRUMPCOIN**

TrumpCoin is a digital currency that is based on Bitcoin; it was created on February 20, 2016, in order to honor Donald J. Trump and help him secure the presidency. Now that he has successfully won the election, the community behind TrumpCoin would like to further assist President Trump in accomplishing his goals for The United States.

Our community would love to use TrumpCoin as a worldwide grassroots fundraising tool for projects the president deems fit for improving America.

**TRUMPCOIN**

A MOVEMENT BY THE PEOPLE.

"We have elected to put our money and faith in a mathematical framework that is free of politics and human error." -Tyler Winklevoss  
Entrepreneur

### **Much Faster Transactions**

Bitcoin transactions have been known to take hours due to the slow blockchain. TrumpCoin transactions only take a few minutes to confirm, so business can move much faster.

### **Why TrumpCoin?**

TrumpCoin shares many similarities with Bitcoin; however, there are some important differences.

### **Low Market Capitalization**

At the time of writing this the current market cap for TrumpCoin is \$441,000, compared to Bitcoin which already has a much larger market cap of \$16 billion. TrumpCoins are very cheap, currently at a price of about 7 cents.

### **Stable Growing Coin Supply**

The supply of TrumpCoin is constantly increasing at a fixed rate of 2% per year. The current supply is 6.5 million TrumpCoins, while Bitcoin has a supply of 16 million.

### **Low Fees**

TrumpCoin's fees are virtually nonexistent at a fraction of a cent. Bitcoins fees are much larger, making it difficult to conduct smaller transactions without having to pay a large amount of money for fees.

### **Energy Efficiency**

Traditional Bitcoin mining uses block solving which features complex math that the machine must solve. This is very expensive and power consuming. TrumpCoin uses a different algorithm in which people only must leave their wallet running in order to earn a reward (2% annually) for supporting the network.

### **Alternate Digital Currency**

Bitcoin is very well known as a digital currency; however, what most people are unaware of is how many more different altcoins there are. Many different people from around the world are developing new coins to showcase what digital money can accomplish and its limitless capabilities. TrumpCoin will give insight to this and show what digital money is capable of as a whole.
